TRANSVASATE, Fr. *transvaser*, to turn, pour, shift, remove, out of one vessel into another. Cotgrave. (See **EXTRAVASATE**.)

TRANSVERSE. For the Father and Son are not, as they suppose, *transvasated* and poured out, one into an other, as into an empty vessel; as if the Son filled up the concavity of the Father, and again the Father that of the Son; and neither of them were full or perfect in themselves.

Cudworth. *Intellectual System*, book i. ch. iv. fol. 619.

TRANSU'DE, v. } Lat. *trans* and *sudare*. See
TRANSUDA'TION. } ante, **EXUDE**.

To send or emit moisture (*udus*) through; to emit steam or vapour; to evaporate.

Purulent fumes cannot be transmitted throughout the body before the maturation of an aposthem, nor after, unless the humour break; because they cannot *transude* through the bag of an aposthem.

Harvey, *On Consumptions*.

The drops proceeded not from the *transudation* of the liquors within the glass.

TRANSVE'RSE, adj. } Fr. *transversal*, *transver-*
TRANSVERSE, n. } *saire*; It. *trasverso*, *tras-*
TRANSVE'RSE, v. } *versale*; Lat. *transversus*,
TRANSVE'RSAL, } from *transvertere*, to turn
TRANSVE'RSALLY, } over, across, athwart.

TRANSVE'RSELY, } Turned or turning, ly-
TRANSVE'RT, v. } ing or placed across, or
athwart; or aside; out of its straight line or course.

Ac treuthe þat trespassede nevere. he *transversed* agens þe lawe.
Piers Plouhman. *Vision*, p. 241.

But of one thing I wold faine be expert,
Why mens langage wol procure and *transuert*
The will of women and virgines innocent?

Chaucer. *The Craft of Louers*, p. 559.

Your lordship must take a ruler or a compasse, and set the one foot of the compasse vpon the land or coast whose longitude you would know, and extend the other foot of the compasse to the next part of one of the *transuersall* lines in the orientall or occidental part.

Hakluyt. *Voyages*, &c. vol. i. p. 214. M. Robert Thorne.

Then since within this wide great universe
Nothing doth firme and permanent appeare,
But all things tost and turned by *transverse*;
What then should let, but I aloft should reare
My trophee, and from all the triumph beare?

Spenser. *Faerie Queene*, can. 7.

But the precepts or laws of Christ are like the Radix Prosapiæ, the grand parent of a family; from whom the direct descendants are for ever to be reckon'd to the kindred in the straight and proper line; but when once it goes to the *transverse* and collateral, they not only have no title to the inheritance, but every remove is a step to the losing the cognation and relation to the chief house.

Taylor. *Rule of Conscience*, book ii. ch. iii. fol. 305.

There are divers subtile enquiries and demonstrations, concerning the strength required to be in the string of them, the several proportions of swiftness and distance in an arrow shot vertically, or horizontally, or *transversally*.

Wilkins. *Works*, vol. ii. p. 162. Archimedes.

How rang'd for motion, how for beauty mix'd;
With vital cement how th' extremes are fix'd;
How they agree in various ways to join
In a *transverse*, a straight, and crooked line.

Blackmore. *Creation*, book vi.

But if I looked upon it *transversely*, the plot would appear very green, the upper parts of the peas hindering the intercepted parts of the ground, which, as I said, retained their wonted colour from being discovered by the eye.

Boyle. *Works*, vol. i. fol. 678. *Of Colours*, ch. iii.

Nothing can be believed to be religion by any people, but what they think to be divine, that is, sent immediately from God; and they can think nothing to be so that is in the power of man to alter or *transverse*.

Lestie.

So that a *transverse* section of it has somewhat the appearance of the mark upon cards called a spade, the whole being much wider in proportion to its length.

Cook. *Voyages*, vol. i. book i. ch. xviii. p. 207.

VOL. XXVIII.

It was pleasantly situated in a grove of trees, and appeared to be about thirty feet long, and seven or eight high, with an open end, which represented an ellipse divided *transversely*.

Cook. *Voyages*, vol. v. book ii. ch. i. p. 225.

TRANSU'ME, v. } Fr. *transumpt*, from *tran-*
TRANSU'MPT, } *sumptum*, past participle of *tran-*
TRANSU'MPTION. } *sumere* (*trans* and *sumere*,) to

take over or across.

To take over or across; to change, or take in change, from one to another.

Transumpt—a copy taken. See the old usage of *transumption* in Wilson.

Wherewith, the pretended original breve was produced, and a *transumpt* or copy thereof (signed by three bishops) offered them, to send to England.

State Trials. Henry VIII. Anno 1528. *Divorce of Catharine of Arragon*.

Transumption is, when by degrees wee goe to that which is to be shewed. As thus: such a one lieth in a dark dungeon; now in speaking of darknesse, we vnderstande closenesse, by closenesse, we gather blacknesse, and by blacknesse, we iudge deepe-nesse.

Wilson. *The Arte of Rhetorique*, p. 178.

But lest that die too, we are bid,
Ever to do what he once did.
And by a mindful, mystic breath,
That we may live, revive his death;
With a well-blest bread and wine
Transum'd, and taught to turn divine.

Crashaw. *Hymn for the Sacrament*.

We affirm then, that it was not Paul's design to use these words,—He gave gifts unto men,—by way of citation out of David; but having by a kind of *transumption* and accommodation borrowed those former words of his, He ascended up on high.

South. *Sermons*, vol. vii. p. 28. *Sermon 2*.

TRANSVOLATION, a flight or flying over or beyond.

Such things as these, which are extraordinary egressions and *transvolations* beyond the ordinary course of an eaven piety, God loves to reward with an extraordinary favour; and gives them testimony by an extraregular blessing.

Taylor. *Sermons*, vol. ii. *Sermon 4*.

TRANSYLVANIA, a province of Hungary subject to Austria. It is in length about 160 miles by 120 in breadth, and bounded on the North by the Carpathian mountains, on the South by the principality of Walachia, on the East by Walachia and Moldavia, and on the West by Hungary. It derives its present name from lying beyond the vast forests which border the Carpathian ridges and divide it from Poland. This territory comprised a portion of the ancient Dacia, as many ruins attest, and hence by later Latin writers was called Pannodacia. It lies between the 45th and 48th degrees of North latitude, and 22° and 25° East longitude.

Transylvania was considered a part of Hungary, constituting a grand duchy, until the year 1540, when a treaty was concluded between the Vaivode and Ferdinand of Austria, by which it came to be recognized as a separate state. Stephen Battori being elected Prince of Transylvania in 1571, his family held the sovereignty until 1602. After this it obeyed several elective princes, of whom the most noted was Gabriel Betlem, an Hungarian noble, who conquered a large part of Hungary in 1619. Michael Abassi was the last prince, the second of that name, who yielded the sovereignty to the Emperor in 1694, since which it has belonged to Austria.

The climate is extreme in heat and cold, but healthy, except in level marshy spots, where fever prevails. The winters are very severe; the thermometer in January being sometimes 40° below the freezing point. The summer heats are also for a short time considerable

TRAN-
SYL-
VANIA.

for the latitude, and sufficient to produce in wonderful perfection the grape and water-melon, besides the grain and fruits which are the objects of culture. Still the severity of the climate is less extreme than that of Moldavia, for which it is indebted to the Carpathian mountains which shelter it on the North, North-East, and East.

The inhabitants of Transylvania consist of several distinct races. In the South there is a considerable district peopled by Germans, and thence denominated Saxon Land; their numbers have been estimated at 181,790. The Magyars, reckoned at 358,596, inhabit the centre and West of the province. The East and North are peopled by Szeklers, in number about 123,085, who may be said to share in the provincial government. The Wallacks, scattered over the whole province, have been estimated at 729,316; while the Gipsies, Jews, Greeks, Bulgarians and Armenians have been calculated at 65,772. Other accounts carry the total population up to 2,034,375. That part of the country inhabited by the Germans was peopled by a colony from the Rhine, as early as the XIIth Century, or in 1143, tempted by an offer of religious freedom and a rich soil. The Saxons are diligent cultivators of the earth, and have retained the heavy, plodding, prudent manners of their fatherland. They are the best clothed and lodged of all the races in Transylvania, and their fundamental law is the equality of every individual Saxon born. They retained the municipal government in their own hands until very recently. The Szeklers, or Siculi, inhabit the district styled after them Szekler Land, close upon the Eastern Carpathian barrier. They are known to have occupied the same part of the country as early as the Xth Century, and are supposed to be a portion of some Eastern horde which, after passing the Carpathian chain in predatory warfare, settled down where they now remain. They all lay claim to nobility, and are even now a discontented race of people. The Magyars inhabit the West and centre of the province. The peasantry are a hardworking, oppressed class, and feudality, in many of its more barbarous features, is still in full reign over a large portion of the district.

The soil of this province is exceedingly fertile, and produces wine, corn, and fruit, in great plenty. The country fully justifies the allusions on Trajan's coin, of Ceres with the cornucopia, and the inscription "*Abundantia Dacia*." Mulberry trees are in remarkable plenty, and the forests abound in all kinds of European timber. The Hirom-Szeck of Szekler Land is one of the most beautifully cultivated spots in the world.

The horses of this province are of two breeds; one is wild, with manes that nearly reach to the ground, the other very strong and serviceable. Cultivation, from the want of a market in many places, and the idle habits of the people in consequence, is greatly neglected, notwithstanding the rich nature of the soil. The necessities of life are remarkably cheap and abundant. The natural consequence of these things is, not forgetting the influence of a system of serfship, that the towns are generally, with few exceptions, very mean places. The common people reside in miserable huts: the roads are bad, and taxation to repair them very difficult to establish. It is calculated that not a sixth part of the province is cultivated. Honey, corn, wine, and cattle being abundant, and no stimulus existing for labour, the peasantry and the lower classes are content to wear sheepskin dresses, enjoy their humble sports, and, as absolute

want is unknown, live in contentment with their condition. The Transylvanians are marked by several distinct characters indicating different origins, besides those of their three grand divisions. Among these none is more conspicuous than the Cingars, or Gipsies, as they are styled in England.

The reformed church in Transylvania is governed in a very similar way to that of Scotland. The churches are divided into seventeen circles, each having a presbytery, notary, and four other officials. The ecclesiastical causes of each circle are tried by a presbyter and twelve clerical assessors. The great Calvinistic council meets twice a year to decide upon church affairs. The salary of the clergyman is very small beyond his habitation and a plot equal to a peasant's fief; the peasants giving a tenth of their corn and wine by agreement, and the lord adding a sum equal to ten or twelve pounds sterling. In income and position there is little difference between the Roman Catholic and Protestant clergymen.

The principal rivers which intersect this province are the Mariscus or Marosch, which rises in the Carpathian ridge, near the pass of Ghemes, in the North-East, and, receiving the waters of the Great and Lesser Kokel, falls into the Theiss, near Zegedin. The Alauta, which has two sources, one not far from that of the Marosch, and a second North of the pass of Themes, near Crona, in the Southern branch of the Carpathians, through which it flows afterwards at the pass of the Red Tower, receiving first the tributary Cibari, and falling into the Danube after crossing Walachia. The Szamos, with a double head or source, one near Klaussenberg, the other with a fork branching again near Betlem, falls into the Theiss. There is also the Chrysa, or Krusch, remarkable for its windings. Many of the smaller streams of this province are so deeply impregnated with mineral solutions of various kinds as to be considered extremely unwholesome.

The principal mountains are the celebrated Carpathian chain, a branch of which half encircles the province from the Moldavian pass to the Iron Gate. Through these mountains into Moldavia and Walachia there are seven passes, named the passes of Ghemes, Busa, Themes, Turzburg, the Red Tower, Vulcan Pass, and the Iron Gate. This branch of the Carpathians extends as far as into the Bannat of Temeswar. Between Transylvania and the Bannat of Temeswar many mountains consist of limestone filled with turbinites and marine shells. Near Klaussenberg there are some of slate. The highest ridges in Transylvania fall short of others of the chain more to the Northward, none exceeding from 5000 to 6000 feet. These are generally of grey granite.

The mineral productions of Transylvania are among the most celebrated in Europe. At Krapnik, amidst stony and barren mountains, rich mines of copper are opened. The more ancient veins here contain black and yellow copper, phosphorescent crystallized blende in manganese, rose-coloured spathose iron ore, calcareous spar, and quartz. The more recent exhibit galena, blackish blende, and sulphureous pyrites in brown quartz. In the Kota mountain, a league from Krapnik, there are lumps of native gold sometimes discovered. Felső Banya is one of the most ancient mining districts in the province. The whole mountain is underwrought by galleries, and the mines are in a fine grained sandstone, in veins running from North to South at an angle of 45 to 70 degrees. Lopes Banya is a mountain more

TRAN-
SYL-
VANIA.

Staatsbibliothek
München

TRAN-
SYL-
VANIA.

rich in gold than silver; lead ore and copper are also found there. Nagy Banya is another Carpathian noted for its mineral products. South-East of Klaussenberg there are very productive salt-mines, the mineral lying in waving horizontal beds at Thorda, and at Dees; beds of rolled flints have been found below the salt, when the mines have gone deep enough to pass through it. All the streams of Transylvania and the mountain torrents are auriferous; that of Arauyos is much extolled for its riches. The gold ores of Offenbanya are found in veins running North and South, with an inclination from East to West of from 20° to 30°. The gold ore found here contains in 100 parts, tellurium 60, gold 30, silver 10. The mines of Kirnik are noted for gold found in petrified wood. There are rich mines at Jumeaux, Mont Voulkoy, and Vulcan, the Fazebay, the Barsa and Rusina mountains, near Zalatha, where, and at Abud Banya, the ores are smelted. Abud Banya receives ores from the mines of Voros Patali. The Jesuina and Dimbal mountains all contain mineral treasures, and at Dombrawa are two mines of mercury. The Judenburg, Rudilebaba, Petrasack and Boitza mountains, possess mines. At Csertes and Nagyag, in the mountains of Cetrus, foliated and yellow ores of gold occur. Those of Nagyag have eight veins, are the richest in Transylvania, and are well conducted. The mountains here are composed principally of trap and intermediate limestone. About Topliza the veins consist of auriferous quartz; native gold and fine auriferous red silver ores have been found almost immediately under the turf. The Kropilala mountains are chiefly productive of iron, which is found in nests having an irregular Southern direction.

The capital of the district called Saxon Land is *Hermanstadt*, where six or seven of the dialects of Germany are used in conversation, and the people have an idea that their origin was Flemish. The town is neat and well built, but dull, the trade through Walachia having taken a different route. This place is the head-quarters of the military doing duty in the province, as well as of the port and custom-house. There is here a fine museum and gallery, once the property of Baron Bruckenthal, who, when governor, built a splendid palace here. He bequeathed his library of 13,000 volumes to the public, and also his collection of pictures, which, though not very good, is the only collection in the country. The museum contains some fine mineralogical specimens. The public walks, too, are neatly laid out.

Kronstadt, the second town of Saxon Land, is almost buried in mountains. The vicinity abounds in neat villas and well-trimmed gardens. A noble esplanade conducts to the gate of the town, having avenues of trees and a Turkish kiosk. The gates are triple, and recal in their imposing appearance the times when they resisted the utmost power of the invader. The town encroaches, for want of space, upon the slopes of the surrounding mountains, and possesses, upon an isolated hill, a fortress of considerable strength. The buildings of the town are regular, and stand out from amid the woods and rocks on the mountains in great picturesque beauty. A stream of pure water flows through the streets and turns the mills of several manufactories for making woollen cloth, linen goods, and stockings of a coarse kind. The population of Kronstadt is estimated at 36,000, and is of a very motley character and appearance. Armenian, Saxon, Jew, Wallack, Gipsy, and noble, are encountered at every step in the streets.

The church, used now for Lutheran worship, is a venerable Gothic structure, but with arches more circular than those seen in England; it was erected in 1400. There are companies of trades in Kronstadt that keep up all the privileges of their order. There is also a Lutheran college and a fine Wallack church built in 1751.

Klaussenberg is the capital of the Magyar district, and is a neat town, having a population of about 25,000. It is built in the valley of Szamos and is overlooked by hills, standing round a square, in the centre of which is a very fine old Gothic cathedral. The ample streets branch off from this square at right angles. The houses are never above two stories high. The walls and gates of ancient times are still for the most part entire. On the opposite side of the Szamos to that on which the town stands there is a species of suburb, consisting of miserable gipsy huts. The only public building besides the cathedral is a pillar commemorative of the visit of the Emperor Francis to this part of his dominions. There is a Unitarian college in this town, and the number of this sect in Transylvania is estimated at 47,000. The church is a very handsome building. There is a school where the children of the Unitarians, Roman Catholics, Greeks, and Jews, are taught gratis the first elements of education, and there is a Magyar theatre.

Maros Vásárhely is the capital of Szekler Land. The streets are wide, but the houses are small; both Protestants and Roman Catholics have colleges here, and it is the place of sitting of the Royal Table, the highest legal tribunal of the country. This town contains a fine library, founded by the Chancellor Telaki, whose name it bears; the number of volumes is 80,000, kept in very good order and rich in editions of the Greek and Latin classics. The old Gothic church occupies the centre of the fortress, the town containing no object of interest besides.

Udvarhely, one of the better towns of Szekler Land, lies at the foot of a hill, and has three churches, a town-house, a large college, and a ruined castle, but nothing more worthy of record.

Sepsi St. György is a neat little town with some good houses, and the public buildings are substantial and handsome.

TRAP, v. } D. *trappen*; Ger. *treffen*; A. S.
TRAP, n. } *treppan*; Fr. *attraper*; It. *attrappare*,
to catch. See to ENTRAP. To catch or take; to over-
take, or over-reach; to take in a snare; to ensnare;
to beguile. A trap—

A plaything, with a hollow to take or hold a ball.
Met., a snare, a stratagem.

But to spoken of hire conscience,
She was so charitable and so pitous,
She wolde wepe if that she saw a mous
Caughte in a *trappe*, if it were ded or bledde.

Chaucer. *Prologue to the Canterbury Tales*, v. 142.

But Adrastus sothly thought another
Bet was to send, than himself to gone,
Lest he were *trapped* among his mortal fone.

Id. *The Story of Thebes*, part ii.

Thus he, whom golde hath ouersette,
Was *trapped* in his owne nette.

Gower. *Conf. Am.* book v.

Thei shal be *trapped* and taken in their owne snares and fall into
y^e pitt whiche themselues had digged vp.

Joye. *Exposicion of Daniel*, ch. i. fol. 95.

And so they rode to the barryers of the towne, and within with
the seneshall of Heynaulte, were a fiftie speares, and he caused
the barryers to be opened, and had thought to have *trapped* those
fore ryders, and so fell to chasyng of them.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. 362, p. 590.

TRAP.

TRAP.

The ambassadour, whom they thought to be Captaine, would not goe, nor suffer the trumpets to be sounded, for that he thought it was a *trappe* to take himselfe, and more of his company.
Hakluyt. Voyages, &c. vol. ii. p. 167. The 1. Voyage to Constantinople.

Although our bodies suffer payne in thys lyfe, yet our soules be delyuered from thee deuylles snares lyke as thee sparowe is from the bates and *trappes* of byrde takers that bee aboute to catch her.
Fisher. Seuen Psalms. Psalm 143, part 1.

For on a bridge he custometh to fight,
Which is but narrow, but exceeding long;
And in the same are many *trap-fals* pight,
Through which the rider downe doth fall through over-sight.
Spenser. Faerie Queene, book v. can. 2.

This said, he tooke his mantles formost part,
And gan the same together fold and wrap;
Then spake againe with fell and spitefull heart,
So lions roar enclos'd in traine or *trap*.
Fairefax. Godfrey of Bulloigne, book ii. Stan. 89.

He said; but his last words were scarcely heard;
For Bruce and Longvil had a *trap* prepar'd,
And down they sent the yet declaiming bard.
Dryden. Mac-Flecknoe.

The number of the witnesses being so great, and the Jews having every day opportunity of conversing with them, they might have easily *trapp'd* them in their relations.
Scott. Christian Life, part ii. ch. vii. fol. 553.

Whilst from below the *trap-door* demons rise,
And from above the dangling deities.
Goldsmith. Epilogue by Mr. L. Lewes.

TRAP, v. } *Trappings* (says Skinner), Minshew
TRA'PPER, } derives from the Fr. *drap*, cloth.
TRA'PPINGS. } *Trappours*, by which G. Douglas renders *phaleræ*, the Glossarist derives from the Fr. *draperie*; but Douglas also renders *redimicula*, (*Æn. l. ix. v. 616.*) by this same *trappours*; and hence Lye supposes *trappours* may have been first applied to the *ribands*,—not without their ornaments,—and thence transferred to the *phaleræ* of a horse; what he thence inferred to be the etymology, he does not say. It may be remarked, that *redimiculum* (from *redimire*, to bind round) is also applied as equivalent to *laqueus*, a noose, a snare; and we seem hence to be led to a conjecture, that *trap*, *trappings*, have the same origin—as *trap*, to take, to catch; to hold; *trappings* applied to certain holdings, fastenings, bindings, trimmings of the housings or coverings of a horse; ornamented, decorated. And thence generally—

Any ornaments, decorations, embellishments, ornamented dresses or dressings, or trimmings.

With Arcida, in stories as men find,
The gret Emetrius the king of Jude,
Upon a stede bay, *trapped* in stele,
Covered with cloth of gold diaped wele,
Came riding like the god of armes Mars.
Chaucer. The Knightes Tale, v. 2157.

And euery claspe and naile as to my sight
Of their harneis were of red gold fine,
With cloth of gold, and furred with ermine
Were the *trappers* of their stedes strong,
Wide and large, that to the ground did hong.
Id. The Flower and the Leaf, p. 396.

Copare this commune asses foale that caried Jesus, with so many mules *trapped* with silke, and clothe of golde: with so many royall coursers with great horses.
Udall. Erasmus. St. Marke, ch. xi. fol. 100.

In recompensement wherof, the mayre and burgeyssees of that towne presented the kynge with . vii. stegys, *trappyd* in cloth of sylke and other presandes.
Fabyan. Chronycle, p. 378.

The lorde Courey, the lorde Clisson, and Guy de la Tremoyll, admyrall of y^e see, and dyuers other, on great coursers *trapped* to the erthe in clothe of golde.

Lord Berners. Froissart. Cronycle, vol. i. ch. 369, p. 606.

And foure elephants brauely furnished doe drawe the sayd chariot, before which elephants foure great horses richly *trapped* and couered doe lead the way.

Hakluyt. Voyages, &c. vol. ii. p. 62. Odoricus.

There were many that, to our iudgement, had vpon their bridles, *trappers*, saddles, and such like furniture.

Id. Ib. vol. i. p. 67. The Tartars.

Also they brought many horses and mules vnto him furnished w^t *trappers* and caparisons, some being made of leather, and some of iron.
Id. Ib. p. 69.

At the sudden comming of the Welshmen and Cornishmen, so huge a noise was raised by the sound of bells hanging at their *trappers* and charets, that the Romans astonied therewith, were more easilie put to flight.

Holinshed. Chronicles, vol. i. p. 470. The Historie of England, book iii. ch. xiii.

Why should not I
Doat on my horse well *trapt*, my sword well hatch'd?
Beaumont and Fletcher. Bonduca, act ii. sc. 2.

TOR. If she can make me blest? she only can:
Empire, and wealth, and all she brings beside,
Are but the train and *trappings* of her love.
Dryden. The Spanish Fryar, act iv.

At his command
The steeds caparison'd with purple stand:
With golden *trappings*, glorious to behold,
And champ, betwixt their teeth, the foaming gold.
Id. Virgil. Æneid, book vii.

TRAPA, in Botany, a genus so called by Linnæus from *Calcitrapa*, the Latin name of an instrument called caltrops, furnished with four spikes, formerly used in war to impede the progress of cavalry, on account of the fruit of some of the species being furnished with four spines. It belongs to the class *Tetrandria*, order *Monogynia*, and the natural family of *Hydrocaryes*. Generic character: calyx four-parted; petals four, stamens four, alternating with the petals; ovarium two-celled; cells one-seeded; style filiform; stigma capitate; fruit hard, indehiscent, one-celled, one-seeded, crowned by the indurated segments of the calyx.

A genus consisting of five species, all natives of Asia, except *T. natans*, which is indigenous to the temperate parts of Europe. They are all aquatic floating herbs, having the leaves that are under water multifid, and the upper or floating leaves deltoid and toothed, and disposed in a rosulate manner. The flowers are small, white, and axillary. The nuts of *T. natans* are esteemed farinaceous, nourishing, and pectoral. The kernel tastes like a chestnut; they are sold in the markets of Venice under the name of Jesuit's nuts. Thunberg says, the roots of some species are boiled in broth in Japan. The kernels of all the species are edible, and are much esteemed by the inhabitants of the countries in which they grow. The petioles of the upper leaves are inflated in the middle, probably for the purpose of keeping them above water.

TRAPE, v. } Skinner derives from the Ger. *traben*;
TRAPE, n. } D. *trappen*, to tramp.

To *tramp*; or rather to *trail* up and down, idly, like a slut or sloven. Not uncommonly pronounced as Pope writes—*traipse*.

Two slip-shod muses *traipse* along,
In lofty madness, meditating song,
With tresses staring from poetic dreams,
And never wash'd, but in Castalia's streams.
Pope. Dunciad, book iii.

TRAP.

TRAPE.

TRAPE.

TRASH.

Let him in part be made your pattern
Whose Muse, now queen, and now a slattern,
Trick'd out in Rosciad rules the roast,
Turns *trapes* and trollop in the ghost.

Lloyd. *The Cobbler of Cripplegate's Letter.*

TRAPELUS, from the Greek *τρεπω*, *I change*, Cuv. In Zoology, a genus of animals belonging to the family *Iguanida*, order *Sauria*, class *Reptilia*.

Generic character. General form and teeth similar to those of *Agama*; scales smooth, not spiny, and extremely small.

This genus has been separated by Cuvier from the *Agama*, on account of the minuteness and smoothness of its scales, and of its teeth resembling those of the *Stelliones*, to which it is more nearly allied.

T. Egyptius, Cuv.; *le Changeant d'Egypte*, Geoffr. Is rather more than five and a half inches in length from the tip of the muzzle to the extremity of the tail; the head is triangular, as wide at its hind part as it is in length; the body lengthy, and rather full about the middle; the tail, which is about half the total length of the animal, is wide and depressed at its base, but thence tapering to the tip; the limbs are slender, and each terminating in five toes, armed with sharp curved claws of unequal length; on the hind foot the toes elongate from the first to the fourth, which is thrice as long; the fifth is only as long as the first, and scarcely reaches the first joint of the neighbouring toe; on the fore feet the toes are much less unequal, the middle three being nearly of the same, and the inner and outer of the same length. The scales on the back are so minute as to be scarcely visible without a lenze, but those on the throat, chest, and lower part of the abdomen are distinct, and still more those on the limbs, which are ranged transversely. This species is a native of Egypt, and remarkable for its frequent changes of colour, in which respect it equals, if indeed it do not exceed, the chameleon. It is frequently deep blue, tinged with violet, the tail ringed with black, and the back marked with some indistinct reddish spots, so arranged as to form four or five irregular transverse bands. Speedily it will change to pale lilac, and the head and legs are tinged with greenish.

Geoffroy St. Hilaire says, that this species has been described by Daudin under the name of *Agama orbicularis*, and Cuvier repeats the same; but this is quite incorrect, for Daudin describes his animal as having its whole body covered with prickles, principally about the back and up to the tail, which gives it a hideous appearance; and he also states that it is a native of America.

See Cuvier, *Règne Animal*; Geoffroy St. Hilaire in the *Histoire Naturelle* of the *Description de l'Egypte*.

TRAPEZIUM, Fr. *figure trapèze*. Unequally sided and cornered.

A quadrilateral figure which has not its pair of opposite sides parallel.

Suppose but a man, not to have a perfect exact idea of a right angle, a scalenum, or *trapezium*; and there is nothing more certain, than that he will in vain seek any demonstration about them.

Locke. *Works*, vol. i. fol. 305. *Of Human Understanding.*

TRASH, *v.* } This word has much employed the
TRASH, *n.* } commentators on Shakspeare. Skinner
TRA'SHY. } makes it to be the same word with
dross, as applied to any thing worthless; but he does not attempt to account for the other usages of the word. The Fr. *trasher*, *trasser*, is to *trace*; to put in *traces*, to

confine or restrain in *traces*. A *trash*: any thing (man, dog) *trashed* or *traced*, or confined in *traces*, that it may not, because it would, run or pursue too fast, rashly; like an untrained dog; a worthless hound: hence it is—any thing worthless; any trumpery; unripe, unwholesome things, (fruits, sweets, &c.) are called *trash*. And to *trash* is, generally—

To restrain or hold in, to withhold, to curb, to check; and farther to lop, to prune.

The Fr. *trasser*, is also—To make the first (rude) *tracing*; the outline or profile; and consequentially, unfinished, imperfect; of little value, worthless.

To come *trashing* after, (see Quotation from Puritan,) is to come *tracing* after; following the *track* or *trace* like hounds in a pack: or, as the Editor of the *Ancient British Drama* affirms, like a hound with a *trash* or long piece of rope fastened to his collar, and dragging loose on the ground.

Mr. Brockett and the Craven Dialect say, to *trash* is “to tramp about with fatigue:” it is merely to *trace*, to keep in a *trace* or course, to keep *tracing* about; pacing about.

And so throwyng fourth that *trashe* whych tempted him (if the legende be true), at the last he made her an holy vowesse and veyled nonne to serue the spiritualte.

Bale. *The Actes of Englysh Votaryes*, part ii. fol. xv.

And little else [is] bought or sold in them more than good drinke, pies, and some pedlerie *trash*.

Holinshed. *Chronicles*, vol. i. book iii. ch. xv. p. 411. *The Description of England.*

NEN. And what did you then, Caratach?

CAR. I fled too,

But not for fast; your jewel had been lost then,
Young Hengo there; he *trasht* me, Nennius:
But when your fears out-run him, then stept I,
And in the head of all the Romans fury
Took him, and, with my tough belt, to my back
I buckled him.

Beaumont and Fletcher. *Bonduca*, act i. sc. 1.

Pros. Being once perfected how to graunt suites,
How to deny them: who t' aduance, and who
To *trash* for ouer topping; new created
The creatures that were mine, I say, or chang'd 'em,
Or els new form'd 'em.

Shakspeare. *The Tempest*, act i. sc. 2. fol. 2.

Which thing to do,
If this poore *trash* of Venice, whom I *trace*
For his quicke hunting, stand the putting on,
Ile haue our Michael Cassio on the hip.

Id. *Othello*, act ii. sc. 1. fol. 318.

The words in Greek are not (that you cannot do) but (that you do not), and the sence is either, 1. That this contrariety always interposes some objections to hinder or *trash* you from doing the things that you would, i. e. sometimes the spirit *trashes* you from doing the thing that the spirit would have done.

Hammond. *Works*, vol. i. book i. sec. 3, p. 23. *Practical Catechism.*

The contrary whereto is prolongation of magistracy, which, *trashing* the wheel of rotation, destroys the life or natural motion of a commonwealth.

Harrington. *Prerogative of Popular Government*, ch. xii.

MARY. A guarded lacky to run before it, and pied liveries to come *trashing* after't.

Anonymous. *The Puritan*, act iv. sc. 1.

The persons who now set up for free-thinkers, are such as endeavour, by a little *trash* of words and sophistry, to weaken and destroy those very principles, for the vindication of which, freedom of thought at first became laudable and heroic.

The *Tutler*, No. 135.

How possibly can he bear in his heart any affection to God, who will not for his sake, and at his instance, part with a little worthless *trash*, and dirty pelf?

Barrow. *Sermon* 31, vol. i. p. 552.

For my own part, I have both so just a diffidence of myself and so great a reverence for my audience, that I dare venture

TRASH.

TRASH. nothing without a strict examination; and am as much asham'd to put a loose indigested play upon the publick, as I should be to offer brass money in a payment: for though it shou'd be taken, (as it is too often on the stage,) yet it will be found in the second telling: and a judicious reader will discover in his closet that trashy stuff, whose glittering deceiv'd him in the action.

Dryden. *Epistolary Dedication to the Spanish Fryar.*

In this Cystis was contained a *trash*, not unlike hair or wooll. This person was subject to these preternatural tumours. He had one caused by the waistband of his breeches, which I afterwards cut out: it contained the same kind of *trash*.

Wiseman. *Chirurgical Treatises*, book iv. ch. iv. p. 440.

For sordid lucre, plunge we in the mire?

Drudge, sweat, through every shame, for every gain,

For vile contaminating *trash*; throw up

Our hope in Heaven, our dignity with man?

Young. *The Complaint*, No. 6.

Who steeps the calf's fat loin in greasy sauce

Will hardly loathe the praise that bastes an ass.

Who riots on scotch collops scorns not any

Inspid, fulsome, *trashy* miscellany.

Armstrong. *To a Young Critic.*

TRATTINICKIA, in *Botany*, a genus dedicated by Willdenow in honour of Dr. Trattinick, a German botanist. It belongs to the class *Monoecia*, order *Pentandria*, and the natural family of *Terebinthaceæ*. Generic character: male and female flowers mixed; calyx campanulate, three-toothed; corolla campanulate, three-toothed; stamens five, rising from the torus; ovarium ovate; style awl-shaped; fruit unknown.

This is an extremely doubtful genus, of which only a single species is mentioned, *T. rhoifolia*, a native of Brazil, in the province of Para; it is said to be a large tree, with the habit of a species of *Rhus*, with imparipinnate leaves and terminal panicles of flowers. In consequence of the petals being connected, it would appear that this genus is closely allied to *Hedwigia*.

TRA'VE, } Fr. *travail*. The frame whereinto far-
TRA'VIS. } riers put unruly horses, when they shooe or dress them. Cotgrave. Sp. *trava* or *traba*. See Mr. Moore's Suffolk words. Skinner; *Trave* may be from *trabo*.

Trave or *travis* is also a cross beam, a *traverse*, and a curtain thrown across, (It. *traversa*.) to divide a chamber. It is also written *travers*. See TRAVERSE.

And she sprong as a colt doth in the *trave*;

And with hire hed she writhed faste away.

And sayde; I wol not kisse thee by my fay.

Chaucer. *The Miller's Tale*, v. 3282

And then thei arose, and she went into a *traueis* made on the right side, and he into another on the left side.

Fabyan. *Chronycle*. Anno 1554.

TRA'VAIL, v. and n. } Fr. *travailler*; It. *tra-*
or } *vagliare*; Sp. *trabajar*.
TRA'VEL, } Various conjectures are re-
TRA'VELLER, } corded in Menage's French
TRA'VELLING, n. } and Italian etymologies.

Skinner thinks it is from *trans-valere*, q. d. something beyond the strength, or above that which any one (*valet*) is able to effect: the Lat. *tribulare*, has also been suggested. In the passages quoted below from Wiclif, the Version of 1551 has in the first Example *Vexed*, in the second *diseasest*, and in the third *trouble*. Our Common Version has *troublest*, *trouble*, in the two latter instances. And there seems little reason to doubt, that the A. S. *tribulan*, also written *trifel-an*, to break, to bruise, to pound, to vex, is the root of *trouble* or *traveil*. See TROUBLE.

To *trouble*, to vex, to harass, to molest, to disquiet, or disease, to distress; to toil, to labour; to pain or take pains; to weary. And thus—

To go or pass a wearisome length of way; to take or TRAVAIL make a toilsome or laborious journey; to journey, to go or pass (on foot or in carriage) along the way, the road, through a country over the sea.

For hit com ner þe later, as he hadde y seyð.

For in *trauayl* of hys beryng hys moder was first ded.

R. Gloucester, p. 11.

In þe passion tyme was þe first bataile,

None was þat ilk gere, grete was þer *trauaile*.

In winter time such vehement tempests of winds doe issue, that *traueilers* can scarcely, and with great danger, passe by the same way.

Hakluyt. *Voyages, &c.* vol. i. p. 66. *The Tartars.*

Long time they thus together *traveiled*;

Til, weary of their way, they came at last

Where grew two goodly trees, that faire did spred

Their armes abroad, with gray mosse overcast.

Spenser. *Faerie Queene*, book i. can. 2

TRAVAIL
—
TRA-
VERSE.

Then made he sacred lawes, which some men say
Were unto him reveald in vision;
By which he freed the *traveilers* high-way,
The churches part, and ploughman's portion,
Restraining stealth and strong extortion.
Spenser. Faerie Queene, book ii. can. 10.

ALIN. I am no inquisitor, that were too curious;
Whatever vow, or penance pulls you on, sir;
Conscience, or love, or stubborn disobedience,
The saint ye kneel to, hear, and ease your *travels*.
Beaumont and Fletcher. The Pilgrim, act i.

To what end should any man be sad in this world? give me a
man that when he goes to hanging cries—troul the black boul to
me: and a woman that will sing a catch in her *travel*.

Id. The Knight of the Burning Pestle, act ii.

Gaunt are his sides, and sullen is his face:
And like their grizzly prince appears his gloomy race:
Grim, ghastly, rugged, like a thirsty train
That long have *travell'd* through a desert plain,
And spit from their dry chaps the gather'd dust again.
Dryden. Virgil. Georgics, book iv.

As wasps, provok'd by children in their play,
Pour from their mansions by the broad highway,
In swarms the guiltless *traveller* engage,
Whet all their stings, and call forth all their rage.
Pope. Homer. Iliad, book xvi.

Our naval thunders, and our tented fields;
With *travel'd* banners fanning southern climes,
What do they?
Young. On Public Affairs.

It was the well known remark of the emperor Charles V. who had
travelled so frequently through both countries, that every thing
abounded in France, but that every thing was wanting in Spain.
Smith. Wealth of Nations, book i. ch. xi. p. 280.

Beauties he lately slighted as he pass'd,
Seem all created since he *travell'd* last.
Cowper. Retirement.

Travelling is, unquestionably, a very proper part of the educa-
tion of our youth; and, like our bullion, I would allow them to
be exported. *Lord Chesterfield. Common Sense*, No. 93.

TRA'VERSE, *v.* } Fr. *traverser*; It. *traversare*.
TRA'VERSE, *adj.* } See TRANSVERSE.
TRA'VERSE, *n.* } To turn across; to cross, to go
TRA'VERSABLE. } or move across; to thwart; to go,

Lord Bolingbroke. Works, vol. i. p. 17. Letter to Sir W.
Windham.

Since the 8th of this month, we had twice *traversed* this sea, in
lines nearly parallel with the run we had just now made; in the
first of those *traverses* we were not able to penetrate so far north,
by eight or ten leagues, as in the second.

Cook. Voyages, vol. vii. ch. iv. p. 231.

Thus the land of philosophy contains partly an open champain
country, passable by every common understanding, and partly a
range of woods *traversable* only by the speculative, and where
they too frequently delight to amuse themselves.

Search. Light of Nature. Introduction.

[The subject] may *traverse* or deny the matter of fact itself.
These *traverses* were greatly enlarged and regulated for the
benefit of the subject

Blackstone. Commentaries, book iii. ch. xvii.

TRAVERSE, in Law. A party is said to traverse
when he denies the assertions of his opponent. In
pleading, traverses are of various kinds; the most ordi-
nary kind of which may be called a common traverse,
and consists of what is termed a tender of issue, that is,
of a denial accompanied by a formal offer of the point
denied for decision, and the denial that it makes is by
way of express contradiction in terms of the allegation
traversed. What is familiarly known as the general
issue, is a settled form of plea by which formally the

TRA-
VERSE.

TRA-
VERSE.

whole, or the chief part of the declaration was traversed, without, as is the case with the common traverse above alluded to, "contradicting in terms of the allegation traversed, but in a more general form of expression." (Stephen, *On Pleading*.) In principle, these pleas purport to be a mere denial of something adversely alleged, but modern usage had extended their operation, and under such issues the defendant was suffered to give in evidence any matter of defence (with a few exceptions) which tended to deny his right to the action.

By the rules of court of Hilary Term, 4 Will. IV., the operation of the general issue is greatly limited, "and these pleas have been restrained to their ancient and narrow province." Another species of traverse is that which is known to the pleader under the name of *de injuriâ*, or more properly, *de injuriâ suâ propriâ absque tali causâ*. It tenders issue, but denies in general and summary terms, and not in the terms of the allegation. It occurs in the replication in actions of trespass, trespass on the case and assumpsit, and is the proper form when the plea furnishes merely matter of excuse; but it consists of or comprises matter of title or interest in the land, &c., or the commandment of the plaintiff or authority derived from him or matter of record, the replication of *de injuriâ* is generally improper. There is another kind of traverses, called special traverses. They are, however, rarely used in practice, but the student will find them admirably explained in Mr. Serjeant Stephen's *Treatise on the Principles of Pleading*, pp. 189—214.

There are certain principles which belong to traverses in general, which we now proceed to enumerate.

(1.) It is the nature of a traverse to deny the matter of fact in the adverse pleading, in the manner and form (*modo et formâ*) in which it is alleged, and thus to put the opposite party on proving it true in manner and form, as well as in substance.

(2.) A traverse must not be taken upon matter of law, which is the appropriate province of a demurrer.

(3.) A traverse must not be taken upon matter not alleged, unless indeed that matter is necessarily implied.

(4.) A party to a deed who traverses it must not plead that he did not grant or demise, as the case may be, but must plead *non est factum*, which is the general issue, whereby he denies that he executed the deed. "This," says Stephen, "seems to depend on the doctrine of estoppel," which is, "when a man's own act or acceptance stoppeth or closeth up his mouth to allege or plead the truth." (*Co. Litt.* 352, a.) The party then may allege that the deed is not his, but he must not contradict his own deed.

(5.) Upon a traverse, issue must be tendered. Tender of issue may be what it is called a conclusion to the country, which is reference to a jury; but when the traverse involves the allegation of new matter, the conclusion must be with a verification.

(6.) Traverse must not be taken on an immaterial point, but it often happens that when material matter is alleged with an unnecessary detail of circumstances so connected that they cannot be disjoined, the other party may include in his traverse the whole matter alleged.

(7.) Where there are several material allegations, it is in the option of the pleader to traverse which he pleases.

(8.) A traverse must not be too large nor too narrow: if it involves more of the allegation than is

material, it is too large—if less, it is too narrow. Such are the general principles to which the subject is reducible. It is exhausted by Mr. Serjeant Stephen, to whose excellent work we have already referred.

TRA'VESTY, *v.* Skinner says, concealed from the
TRA'VESTY, *n.* {eyes of men by change of *vest*.

Fr. *travestir*; Se *travestir*, to disguise, to shift his apparel, (*i. e.* his *vesture*), to mask it, to take on him another man's habit; to play the counterfeit. Cotgrave.

To change the *vest* or garb; to put on or assume another dress; (usually in burlesque.)

This gentleman in his first works abused the character of Mr. Dryden; and in his last, of Mr. Pope, accusing him in very high and sober terms of profaneness and immorality on a mere report from Edm. Curll, that he was author of a *travestie* on the first psalm.

Pope. *The Duncaid*, book ii. Remark on v. 268.

Old naturalism, thus *travestied* in the garb of new religion, his lordship bestows, as his last and most precious legacy, on his own dear country: if you will believe him, the only reformed religion that can be called pure, and the only revealed religion that has the mark of truth.

Warburton. *Works*, vol. xii. p. 135. On *Bolingbroke's Philos. Letter 2*.

In 1678 appeared his most celebrated burlesque performance, entitled "Scarronides, or Virgil *Travestie*: a Mock Poem, on the First and Fourth Books of Virgil's *Æneis*, in English burlesque." Hawkins. *Life of Charles Cotton*.

TRAULISM, *n.* Gr. *τραυλιζ-ειν*, *leviter balbutire*; Lat. *traulizare*.

A stuttering.

As for æ æ &c. I know not what other censure to pass on them, but that they are childish and ridiculous *traulisms*.

Dalgarno. *Deaf and Dumb Man's Tut*, (1680,) p. 132.

TRAUMATICK, Fr. *traumatique*; Gr. *τραυματικός*, from *τραυμα*, a wound.

That can or may (heal a) wound.

We subdued the remainder of the fungus, and raised a firm basis, on which we incarnated, with an addition to the foremention'd mundificative; and then applied cerat. aggripæ over the breast, and in few days cicatrized it with a smooth cicatrix, the lips falling in by the benefit of nature, which was assisted the while by *traumatick* decoctions, &c. as in such cases is usual.

Wiseman. *Chirurgical Treatises*, book i. ch. iv. p. 47.

TRA'UNTING, } *Tranty* (Ray and Grose) is
TRA'UNDREL. } wise and forward above their age.
Spoken of children, *i. e.* inventive, contriving. See TRUAND, and—

Traunting may have the same origin.

Traundrels, the idle, *knaveish* followers.

They [Scottyshe] wyll entre into Ingland, within a daye and a nyght, they wyll dryue theyr hole host xxiiii. myle, for they are all a horsbacke, without it be the *traundals* and laggars of ye oost, who folow after, a foote.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. xvii. p. 18.

Nathlesse some hungry squire, for hope of good,
Matches the churle's sonne into gentle blood;
Whose sonne more justly of his gentry boasts,
Than who were borne at two pide-painted posts,
And had some *traunting* chapman to his syre,
That traufiqued both by water and by fyre.

Hall. *Satire 2*. book iv.

TRAUTVETTERIA, in *Botany*, a genus instituted by Fischer and Meyer, in honour of E. R. Trautvetter, an acute botanist, author of *Monographs of Echinops* and *Salix*. It belongs to the class *Polyandria*, order *Polygynia*, and the natural family of *Ranunculaceæ*. Generic character: æstivation imbricate; calyx of four or five petaloid sepals, regular; corolla none; stamens many, all fertile; carpels many, dry, indehiscent; ovula erect.

TRE'ACHEROUR, tises *tricks*, who cousens, cheats,
TRE'ACHOUS. beguiles, deceives.

Spenser's *treachetour* (i. e. *treachour*) must not be confounded with Chaucer's *tregetour*.

Ow! lord þe noble folk, þat ys of þis lond,
Whan heo þe emperour of Rome, þat no lond ne mygte of stonde,
In bataile and al ys ost ouer come tuey,
And euer wolde, as ich wene, uadde ybe *tricherie*.

R. Gloucester, p. 56.

Of all this world is emperour
Guile my father, the *trechour*,
And emprise my mother is.

Chaucer. *The Romant of the Rose*, p. 224.

Redeth Ecclesiast of flaterie,
Beth ware, ye lordes, of hire *trecherie*.

Id. *The Nonnes Preestes Tale*, v. 15335.

For he loveth none heauinesse,
But mirth and play, and all gladnesse;
He hateth all *trechous*,
Soleine folke and enuious.

Id. *The Romant of the Rose*, p. 199.

Now liste through whiche hypocrisie
Ordeined was the *trecherie*,
Wherof this lady was deceiued.

Gower. *Conf. Am.* book i.

To this by theym was answered, that they myght nat come to the counsayll of *trechours* and gaylefull men.

Fabyan. *Chronycle*, ch. 211.

Good Claudius, that next was emperour,
An army brought, and with him batteile fought,
In which the king was by a *treachetour*
Disguised slaine, ere any thereof thought.

Spenser. *Faerie Queene*, book ii. can. 10.

Abide, ye caytive *treachetours* untrew,
That have with treason thrall'd unto you
These two, unworthy of your wretched bands;
And now your crime with cruelty pursew.

Id. *Ib.* book vi. can. 8.

No knight, but *treachour* full of false despight
And shameful treason.

Id. *Ib.* book i. can. 4.

But Talus usde, in times of ieopardy,
To keepe a nightly watch for dread of *treachery*.

Id. *Ib.* book v. can. 4.

And said, Arise, thou cursed miscreant,
That hast with knightlesse guile, and *treacherous* train,
Faire knighthood fowly shamed, and doest vaunt
That good knight of the Redcrosse to have slain.

Id. *Ib.* book i. can. 6.

No lesse did Talus suffer slepe to seaze
His eye-lids sad, but watcht continually,
Lying without her dore in great disease;
Like to a spaniell wayting carefully
Least any should betray his lady *treacherously*.

Id. *Ib.* book v. can. 6.

VOL. XXVIII.

Not faction, when it shook thy regal seat,
Not senates, insolently loud
Those echoes of a thoughtless crowd,
Not foreign or domestic *treachery*,
Could warp thy soul to their unjust decree.

Dryden. *Threnodia Augustalis*.

Nor ended here his toils: his Lycian foes,
At his return, a *treacherous* ambush rose,
With leuell'd spears along the winding shore;
There fell they breathless, and return'd no more.

Pope. *Homer. Iliad*, book vi.

If, notwithstanding these discouragements, thou pursuest thy course, and dost not *treacherously* fall back, assure thyself, tho' thou dost not serve God so much to thy own satisfaction, as thou wast wont, yet thy service is much better.

Sharpe. *Works*, vol. iii. p. 53. *Sermon* 3.

The promontory, or peninsula, which disjoins these two bays. I named Traitor's Head, from the *treacherous* behaviour of its inhabitants.

Cook. *Voyages*, vol. iv. book iii. ch. iv. p. 46.

TRE'ACLE, or } Fr. *triacle* or *theriaque*; D.
TRI'ACLE. } *triaekel*.

See ante, THERIAK. *Triacle* is used by our old writers, met. for—

A remedy, a medicine, a cure. It is now applied to a syrop that subsides in the making of sugar; molasses, q. v.

For treuthe telleþ þat love. ys *tryacle* for synne.

Piers Plouhman. *Vision*, p. 20.

In hire, for we shuld seen his mighty werkes:

Crist, which that is to every harm *triacle*,
But certaine mennes oft, as-knownen clerkes,
Doth thing for certain ende, that ful derke is
To mannes wit.

Chaucer. *The Man of Lawes Tale*, v. 4899.

And therefore as I would wyshe that theire bookes were all gone and myne owne therwyth: so sith I see well that that thyng wyll not bee, better it is I reken that there be *triacle* redy, then the poyson to tary and no *triacle* for it.

Sir Thomas More. *Workes*, fol. 356. *Against Tyndall*.

Venym is defended by the horne of an vnicorne, by *triacle*, and otherwise by vomites: but the poison of yll counsell hath no remedy, and lesse defensiuus.

Golden Boke, ch. xliii.

Offenders now, the chiefest do begin

To strive for grace, and expiate their sin:
All winds blow fair, that did the world embroil;
Your vipers *treacle* yield, and scorpions oil.

Waller. *To King Charles II. on his return*.

Martin himself was caught alive, and try'd
For *treasonous* crimes, because the laws provide
No Martin there in winter shall abide.

Id. *The Hind and the Panther*, part iii.

King though he be,
And king in England too, he may be weak,
And vain enough to be ambitious still;
May exercise amiss his proper pow'rs,
Or covet more than freemen choose to grant:
Beyond that mark is *treason*.

Cowper. *The Task*, book v.

TREASON, in Law, is the crime of treachery and infi-
delity to a lawful sovereign. The word is derived from
the French word *trahir*, to betray; *trahison*, betraying,
contracted into treason. This crime, by the ancient
common law of England, was considered to arise not
only by reason of offences against the king and the
government, but also in all cases where a superior
reposed confidence in an inferior or subject, between
whom and himself there subsisted a natural, a civil, or
even a spiritual relation, and such inferior or subject so
far forgot the obligations of duty, subjection, or allegiance
as to destroy the life of such superior. Hence arose the
distinction between high treason and petit treason. The
offence of high treason, the attack upon majesty itself,
alta proditio, was and is in English law equivalent to
crimen læsæ majestatis of the Romans, and is so deno-
minated by Glanville himself. The offence of petit
treason was considered as proceeding from the same
principle of treachery in private life as would have urged
the offender to have conspired in public against the lord
to whom he owed duty and allegiance. Therefore, for
a wife to kill her lord or husband, a servant to kill his

TREAD.
—
TREA-
SON.

TREA-
SON.

lord or master, or an ecclesiastic his lord or ordinary, were reputed breaches of private and domestic faith, and were denominated petit treasons. This will be sufficient to point out what by the common law was held to be the distinction between the two offences or classes of offence, since, by the statute 9 Geo. IV., c. 31, sec. 2, every offence which before the passing of that Act would have amounted to petit treason, was declared to be murder only.

The commission of treason is the highest civil crime which a man, as a member of the community, can commit, for the safety and tranquillity of the kingdom are highly concerned in the security of the person and government of the sovereign. The laws, therefore, have given every possible security, under the severest penalties, for, as the subject has protection from the king and his laws, so he is bound by his allegiance to be true and faithful. But inasmuch as the crime of treason is the highest known to the law, it becomes of the utmost importance that it should be precisely ascertained; for as Montesquieu, in his *Esprit des Loix*, justly observes, if the crime of treason be indeterminate, that alone is sufficient to make any government degenerate into arbitrary power. The interpretation, however, of the common law on this head was left to the judges down to the reign of King Edward III.; and there are many instances in the books of those functionaries putting very strained constructions upon offences, and holding them to be constructive treason. Thus, in the reign of Edward I., appealing from the King's Court to those of France was solemnly adjudged to be treason, under the notion of subverting the realm. Again, the detention of one of the king's subjects until he paid a sum of money, was held to be treason in the offender, as *accroaching* or attempting to exercise royal power. And killing the king's father or brother, or even his messenger, has also fallen under the same denomination. The case of the *accroaching* was decided in the 21st year of Edward III., only two years before the passing of the statute 25 Edward III., stat. 5, c. 2, by which was defined what offences should thereafter alone be held to be treason.

Before proceeding with an account of this important statute, and two Acts of the reign of Geo. III., explanatory of the same, it may be well to consider who may be guilty of high treason. Every subject of Great Britain, whether ecclesiastical or lay, man or woman, if of the age of discretion, and of sane memory, may be so guilty; as may a married woman, though the treason be committed in the company of her husband and by his command, for in a crime of such magnitude the presumption of coercion by the husband is no excuse. A soldier who obeys a treasonable command of his officer is a traitor. The husband of a queen regnant, as was Philip of Spain, may commit treason; so may a queen consort against the king, her husband, as in the cases of Anne Boleyn and Catherine Howard. Aliens may also commit treason, for as there is a local protection on the part of the sovereign, so there is a local allegiance on theirs, and the law makes no distinction whether or not the alien's sovereign is in amity with the crown of England. If during a residence here, under the protection of the crown, an alien does that which would constitute treason in a natural born subject, he may be dealt with as a traitor. And so it is if he resides here after a proclamation of war; unless he openly removes himself, by passing to his own prince, or publicly renounces the

protection of the sovereign of England, which is analogous to a *diffidatio* or defiance, and then he is considered as an enemy. If an alien, during a war with his native country, leaving his family and effects here, goes home and adheres to the enemies of the sovereign of England, for the purposes of hostility, he is a traitor, for he was settled here, and his family and effects are still under the sovereign's protection. Alien merchants are protected by the statute staple, in case of war, which provides that they shall have convenient warning by forty days proclamation, or eighty days, in case of accident, to avoid the realm, during which time they may be dealt with as traitors for any treasonable act; if after that time they reside and trade here as before, and commit any treasonable act, they may be either treated as alien enemies, by the law of nations, or as traitors by the law of the land. With respect to ambassadors, it is questionable whether their general exemption from the cognizance of municipal tribunals extends to treason, though Lord Coke, a very high legal authority, maintains that it does not, for he insists that, if an ambassador commits treason, he loses the privilege and dignity of an ambassador, as unworthy of so high a place, and may be punished here as any other private alien; and it is generally agreed by writers on the subject, that an ambassador conspiring the death of the sovereign, or raising a rebellion, may be punished with death.

To return to the statute of Edward III.: after reciting that divers opinions having been what should amount to high treason, it enacts and declares, that if a person doth compass or imagine the death of the king, queen, or their eldest son and heir; or if he do violate and deflower the king's wife or companion, or his eldest daughter unmarried, or the wife of the king's eldest son; or if he levy war against the king in his realm, or adhere to his enemies, give them aid and comfort in the realm or elsewhere, and thereof be probably (or proveably) attainted of open deed; and if a man counterfeit the great or privy seal, or his money, or bring false money into the kingdom, like to the money of England, to make payment therewith in deceit of the king and his people; or if he kill the chancellor, treasurer, or any of the king's justices of either bench, justices of assize, &c., being in their places doing their offices; these cases are to be adjudged treason. Of this statute it is laid down by Hawkins in his *Pleas of the Crown*, that nothing can be construed to be treason which is not literally specified therein; nor may the act be construed by equity, because it is a declarative law, and one declaration ought not to be the declaration of another; besides that it was made to secure the subject in his life, liberty, and estate, which by admitting constructions to be made of it, might destroy all.

Under the description of "our lord the king," a queen regnant is included, as being invested with royal power, and entitled to the allegiance of her subjects; but the husband of such a queen is not comprised within these words, and therefore no treason can be committed against him. Although the words of the statute relating to a queen consort are "our lady his queen," those words only refer to the period of the marriage, for they do not extend to a queen dowager. The eldest son means the eldest living son, though not the first son; but if the heir to the crown be a collateral heir, he is not within the statute; nor is a conspiracy against such collateral heir treason by the statute.

The king intended by the Act, is the king in posses-

TREA-
SON.

TREA-
SON.

sion of the throne, without any respect to his title; for it has been held, that a king *de facto*, and not *de jure*, or, in other words, an usurper, is a king within the meaning of the statute, on the ground that there is a temporary allegiance due to him for his administration of the government, and temporary protection of the public; and therefore treasons committed against Henry VI. were punished under Edward IV., though all the line of Lancaster had been previously declared usurpers by act of parliament. But the most rightful heir of the crown, or king *de jure*, and not *de facto*, who has never had plenary possession of the throne, as was the case of the house of York during the three reigns of the line of Lancaster, is not a king within this statute, against whom treason may be committed. Upon this distinction between a king *de facto* and a king *de jure*, Mr. Justice Blackstone pithily observes, "When, therefore, an usurper is in possession, the subject is excused and justified in obeying and giving him assistance; otherwise, under an usurpation, no man could be safe, if the lawful prince had a right to hang him for obedience to the powers in being, as the usurper would certainly do for disobedience." A king who has resigned his crown, such resignation being admitted and ratified in Parliament, is, according to the authority of Sir Matthew Hale, no longer the object of treason, and Sir William Blackstone declares that the same reason holds, in case a king abdicates the government; "or, by actions subversive of the constitution, virtually renounces the authority which he claims by that very constitution: since, when the fact of abdication is once established and determined by the proper judges, the consequence necessarily follows, that the throne is thereby vacant, and he is no longer king."

The words compass and imagine are synonymous terms; the words "to compass" signifying the purpose or design of the mind or will, and not, as in common speech, the carrying of such design into effect. The compassing or imagining is, however, an act of the mind, and cannot possibly fall under any judicial cognizance, unless it be demonstrated by some overt, that is open act, wherefore it is necessary that there appear an open or overt act of a more full and explicit nature upon which to convict the traitor. The statute expressly requires that the accused "be thereof, upon sufficient proof, attainted of some open act, by men of his own condition." Space will not allow in such an article as this of pointing out more than a few instances of what have been held sufficient overt acts whereon to ground a conviction under this statute. Providing weapons or ammunition for the purpose of killing the king is an overt act in imagining, and to conspire to imprison him by force is an overt act of compassing his death. Even mere words have formerly been held such overt acts, but now there is no doubt that neither by the common law nor the statute do they amount to more than a high misdemeanour. If, however, words be set down in writing, it argues more deliberate intention; and it has been held that writing is an overt act of treason; for *scribere est agere*. But even in this case the bare words are not the treason, but the deliberate act of writing them; though the cases in support of this doctrine, it must be admitted, occurred in the worst period of the Stuarts.

With regard to the treason of levying war against the king in his realm, this may be done by taking arms, not only to dethrone him, but under pretence to reform religion or the laws, or to remove evil counsellors or

other grievances, whether real or pretended; and as respects a man being "adherent to the king's enemies in his realm," meaning thereby the subjects of foreign powers with whom we are at open war, many instances might be cited, as sending intelligence, providing arms, delivering up a fortress, or the like.

The killing of the king's chancellor, treasurer, justices of either bench, &c. declared to be treason, relates to no other officers of state but those expressly named; and to them only when they are in actual execution of their offices, representing the person of the king, and does not extend to any attempt to kill, or wounding them. The "places" of the justices to do their offices, are the courts themselves, where they usually, or by adjournment, sit for dispatch of the business of their courts.

The violation of the king's companion means intercourse with his wife, with or without force, and it is high treason in both parties. But a queen divorced from the king *à vinculo matrimonii* is no queen, or "king's companion," within the Act.

The treason of counterfeiting the great or privy seal is now repealed by the Act 11 Geo. IV., and 1 Wm. IV., c. 66, which makes it treason to forge, or counterfeit, or utter, knowing to be forged, the great seal, privy seal, any privy signet, the royal sign manual, &c.; and the treason of counterfeiting money, or bringing false money into the kingdom, is abolished by Act 2 Wm. IV., c. 34, whereby the crime of counterfeiting the money of the realm is reduced to felony.

Such is an account of the important Act of King Edward III., a statute which had for its object the putting an end to a multitude of constructive treasons. In the troubled and disastrous reign, however, of his grandson Richard II., many preposterous acts were passed, all of which were repealed by the statute 1 Hen. IV., c. 10, which abolished the extravagant treasons created by them. It is true that at various times, and, in some instances, for violent stretches of power, Acts were passed creating new treasons, the particulars of which will be found in treatises on the subject, and in other law books referred to at the end of this article, as will also the Acts passed for securing the Protestant religion to the crown, and the Hanoverian succession in the realm. But as our object here is only to give a general notion of the law, they are omitted in this place, and leaving the branch of the subject relating to the mode of proceeding in cases of treason, and the pains, penalties, and forfeitures for the same, we shall conclude by a short notice of the two Acts of King George III., extending in some instances, and explaining in others, the statute of Edward III.

The many treasonable attempts which were made to overawe the government, and to subvert the constitution of this country about the period of the great revolutions in North America and France, induced the legislature to pass an Act, the immediate object of which was to suppress the tumultuous assemblies of the people, the publication and dispersion of inflammatory works and speeches against all branches of the legislature, and the project of overawing Parliament by mobs, and to remove doubts how far the words of the statute of Edward III. were applicable with sufficient explicitness to such attempts. This Act is the 36 Geo. III., c. 7, which enacts, "That if any person shall, within the realm or without, compass, imagine, invent, devise, or intend death or destruction, or any bodily harm tending to

TREA-
SON.

TREA-
SON.TREA-
SURE.

death or destruction, maim or wounding, imprisonment or restraint of the person of the king, his heirs and successors; or to deprive or depose him or them from the style, honour, or kingly name of the imperial crown of this realm, or of any other of his dominions; or to levy war against his majesty, his heirs and successors, within this realm, in order, by force or constraint, to compel him or them to change his or their measures or councils, or in order to put any force or constraint upon, or to intimidate or overawe, both houses, or either house of Parliament; or to move or stir any foreigner with force to invade this realm, or any other of his majesty's dominions; and such compassings, &c., shall express, utter, or declare, by publishing any printing or writing, or by an overt act or deed," the offender shall be deemed a traitor, and punished accordingly. By a subsequent Act, namely, the 57 Geo. III., c. 6, these provisions were made perpetual, and the like attempts to assault the person of King George IV., while Prince Regent, within the realm or without, were declared high treason.

It has been observed that the statute of Edward III. had confined the law of treason within too narrow limits for the protection of the monarchy in a free, advanced, and populous condition of society; an objection somewhat singular to a legislative enactment of the early part of the XIVth Century. Judges, however, had been too readily induced to remedy this so called defect by a latitude of construction wholly departing from the letter of the statute, and in truth creating new treasons by judicial authority, contrary to the express letter of the act of Edward III. Indeed, so admirable had been the provisions of that statute, that it in words declares, that, "because other like cases of treason may happen in time to come, which cannot be thought of nor declared at present, it is accorded, that if any other case supposed to be treason, which is not above specified, doth happen before any judge, the judge shall tarry without going to judgment of the treason, till the cause be shown and declared before the king and his Parliament, whether it ought to be judged treason, or other felony."

The advantage of the statute of 36 Geo. III. is that it has greatly curtailed the doctrine of constructive treason, by converting those dangerous and criminal acts of rebellion and sedition, which had before been so often the subject of prosecution, as overt acts of compassing the king's death, into specific treasons. The law has been at once simplified and rendered certain, and the definitions of the crime made so unambiguous as in a great degree to exclude judicial construction.

Such is a general outline of the law of treason in England, and it will be sufficient to add, that in Scotland since the union with England, the law relating to that crime has been regulated by the English law. The general principles were agreed to in the Articles of Union, and were carried into effect by the 7 Ann, c. 21, which declares that such crimes and offences as are high treason or misprision of high treason within England, shall be construed and judged and taken to be high treason and misprision of high treason within Scotland; and that from thenceforth no crimes or offences shall be high treason or misprision thereof within Scotland, but such as are so in England; and the trial, pains, penalties, and forfeitures of this crime are declared to be the same in both countries.

With regard to Ireland, the provisions of the 25 Edw. III., stat. 5, c. 2, are in force; but those of several subsequent English Acts do not extend to Ireland; and there are some Irish statutes in force which do not extend to England; and no Act has been passed since the Union between Great Britain and Ireland to assimilate the laws of high treason throughout the United Kingdom; but still the recital in the Act 57 Geo. III., c. 6, passed after the Union, would seem to extend the general provisions of that statute, and of the 36 Geo. III., c. 7, to Ireland.

The punishment for high treason, as described by Blackstone, was, by common law, as follows:—That the offender should be drawn to the gallows, and not be carried or walk, though usually, by connivance, at length ripened by humanity into law, a sledge or hurdle was allowed; to preserve the offender from the extreme torment of being dragged on the ground or pavement; that he should be hanged by the neck, and then cut down alive; that his entrails should be taken out and burned, while he was yet alive; that his head should be cut off; that his body should be divided into four parts, and that his head and quarters should be at the king's disposal.

The more revolting portions of this mode of execution are now abolished by statute 54 Geo. III., c. 146, which substitutes the drawing on a hurdle and hanging till dead, and then the remainder as before. Until the Act 30 Geo. III., c. 48, was passed, women convicted of treason were burnt alive, but since that Act they are drawn to the place of execution, and there hanged.

Thomas Brandingham bishop of Exeter and lord *treasuror*, was discharged of his office of *treasurorship*.

Holinshed. *Chronicles*, vol. ii. p. 734. *Richard II.* Anno 1381.

Ne stayd he, till he came unto the place
Where laid his *treasure* he entombed had;
Where when he found it not, (for Trompart base
Had it purloyned for his maister bad)
With extreme fury he became quite mad.

Spenser. *Faerie Queene*, book iii. can. 10.

Some suggested as if he had met with *treasure trove*, or used some indirect means to enrich himself.

Fuller. *Worthies*, vol. ii. p. 462. *Wiltshire*.

Sir, give me leave to tell you, that not a dram, nor a dose, nor a scruple of this precious love of yours is lost, but is safely *treasur'd* up in my breast, and answer'd in like proportion to the full.

Howell. *Letter* 17. book i. sec. 1.

Grave Shirley he ordains lord chancellor,
Both worthy for his virtues, and his race;
And Norbury he appoints for *treasurer*;
A man though mean, yet fit to use that place.

Daniel. *History of the Civil War*, book iii.

King of us all, in all ambition;
Most covetous of all that breath; why shoul'd the great soul'd
Greekes

Supply thy lost prise, out of theirs? nor what thy avarice seekes,
Our common *treasurie* can find; so little it doth guard
Of what our rac'd towns, yeelded us.

Chapman. *Homer. Iliad*, book i.

And who his rival can in arms subdue,
His be the fair, and his the *treasure* too.

Pope. *Homer. Iliad*, book iii.

The Phrygian queen to her rich wardrobe went,
Where *treasur'd* odours breath'd a costly scent.

Id. *Ib.* book vi.

ANT. O thou pretty little heart, art thou flown hither? I'll keep it warm I warrant it, and brood upon it in the new nest; but now for my *treasure-trove*, that's wrapt up in the handkerchief.

Dryden. *Don Sebastian*, act ii. sc. 2.

TREA-
SURE-
TROVE.

Rich men indeed are but the *treasurers*, the stewards, the caterer, of God for the rest of men, having a strict charge to dispense unto every one his meat in due season, and no just privilege to withhold it from any.

Barrow. *Sermon* 31. vol. i. p. 561

There is a *treasury* of merits in the fanatic church, as well as in the popish: and a pennyworth to be had of saintship, honesty, and poetry, for the lewd, the factious, and the blockheads.

Dryden. *Absalom and Achitophel. To the Reader*.

On Friday the 25th, [August,] we celebrated the anniversary of our leaving England, by taking a Cheshire cheese from a locker, where it had been carefully *treasured* up for this occasion, and tapping a cask of porter, which proved to be very good and in excellent order.

Cook. *Voyages*, vol. i. book ii. ch. i. p. 258.

Riches divine

And honours which the Almighty Father God

Pour'd with immense profusion on his Son,

High *treasurer* of heaven.

Watts. *The Bright Vision*.

TREASURE-TROVE, in *Law*, (*thesaurus inventus*), from the French word *trouv  *, found, is defined to be money or coin, gold, silver, plate, or bullion, found hidden in the earth or other public place, the owner whereof is unknown. In such cases, the treasure belongs to the sovereign, and is clearly part of his or her ordinary revenues. If, however, the hider be known, or afterwards discovered, the owner and not the sovereign is entitled to it. Also, if the treasure be found in the sea, or upon the surface of the earth, it belongs to the finder if no owner appears, and not to the crown. From these rules it appears that the fact of hiding, and not that of the abandoning the treasure, gives the property to the sovereign. Bracton defines treasure-trove, in the words of the civil law, to be *vetus depositio pecuni  *.

"This difference," says Sir William Blackstone, "clearly arises from the different intentions which the law implies in the owner. A man that hides his treasure in a secret place, evidently does not mean to relinquish his property, but reserves a right of claiming it again when he sees occasion; and if he dies, and the secret also dies with him, the law gives it to the king in part of his royal revenue. But a man that scatters his treasure into the sea, or upon the public surface of the earth, is construed to have absolutely abandoned his property, and returned it into the common stock, without any intention of reclaiming it; and therefore it belongs, as in a state of nature, to the first occupant or finder; unless the owner appear and assert his right, which then proves that the loss was by accident, and not with an intent to renounce his property."

In ancient times all treasure-trove belonged to the finder, but afterwards it was thought expedient for the purposes of the state, and more particularly for the coinage, to allow part of what was so found to belong to the king, which part was held to be all hidden treasure. But all that was casually lost and unclaimed, and also such as was designedly abandoned, still remained to the finder. This right of the prince to hidden treasure prevails, according to Grotius, not only in England, but in Germany, France, Spain, and Denmark, and is grown to be *jus commune, et quasi gentium*. The finding of deposited treasure was much more frequent, and the treasures themselves more considerable, in the infancy of the constitution, than now; and therefore the punishment of such as concealed from the king the finding of such hidden treasure was formerly no less than death.

Bracton; Britton; Glanville; Coke's *3rd Institute*; Blackstone's *Commentaries*.

TREASURER.

TREASURER, *Thesaurarius*, an officer to whom the treasure of another is committed to be kept, and truly disposed of. The chief of these was the lord high treasurer of England, who was a lord by his office, and one of the greatest men in the kingdom. He held his place *durante bene placito*, and was instituted by the delivery of a white staff to him by the king; and in former times he received his office by delivery of the golden keys of the treasury: he was also treasurer of the exchequer by letters patent. All the king's wealth in the exchequer was under the charge and government of the lord treasurer, and he had the check of all officers employed in collecting the customs and royal revenues. He had in his gift all the offices of the customs in all ports of England; he nominated the escheators in every county, and made leases of all the crown lands. Of such importance was his dignified post, that by statute 25 Edw. III., stat. 5, c. 2, it is made high treason to kill the treasurer "being in his place, and doing his office."

In modern times the duties of this, like other great offices of state, have been considered too great a task to be imposed, or too important a dignity to be conferred on one person. It has therefore been performed by commissioners. By the statute 56 Geo. III., c. 98, passed for consolidating the public revenues of Great Britain and Ireland, the offices of lord high treasurer of Great Britain and lord high treasurer of Ireland were united into one office, and the holder of such office called lord high treasurer of the United Kingdom of Great Britain and Ireland. And it was enacted that, "whenever there shall not be any such lord high treasurer, his majesty, his heirs and successors, may, by letters patent under the great seal, appoint commissioners of his majesty's treasury, for executing the offices of treasurer of the exchequer of Great Britain, and lord high treasurer of Ireland;" and then it directs that all officers and persons employed in the collection or management of the public revenue shall be, in all respects, subject to the control of such lord high treasurer or commissioners of his majesty's treasury. These commissioners are the officers popularly known by the designation of "lords of the treasury." That part of the power and duties of the lord high treasurer which formerly related to the leasing of the crown lands is now vested in the commissioners of woods, forests, and land revenues of the crown, under the direction of the lords of the treasury.

Besides the lord treasurer, there was a treasurer of the king's household, who was of the privy council; a treasurer of the navy or war, the duties of which are regulated by Act 1 Wm. IV., c. 42; a treasurer of the king's chamber, and a treasurer of the wardrobe.

A treasurer in cathedral churches was an officer whose charge was to take care of the vestments, plate, jewels, relics, and other treasure belonging to such churches. At the Reformation, the office was extinguished as needless, in most cathedral churches.

A treasurer of the county is he that keeps the county stock. There are two of them in each county, whose duties and qualifications are laid down and specified by several statutes, 43 Eliz., c. 2; 7 Jac. I., c. 4; 11 & 12 Wm. III., c. 18; 5 Ann, c. 32; 7 Geo. IV., c. 64; and other Acts relating to the levying of county rates.

I syr John Froissart wyll *treat* and recorde an hystory of great louage and preyse.

Lord Berners. Froissart, vol. i. ch. i. p. 1.

These lordes fonde the kyng of Englande so *treatable*, yt ther was a composcion made betwene y^e kyng of Englande, and the countrey of Bourgoyn.

Id. Ib. ch. 210. p. 252.

But for profe of the firste sayinge, I haue shewyd my conceyte in the draught or *treatyse* in latyn before named, the whiche I remytte to the correccion of suche as haue parfyte vnderstandyng in calculyng of hystories and tymes.

Fabyan. Chronycle, ch. xlix. p. 33.

All erthly kynges may know that theyr powers be vayne, and that none is worthy to haue the name of a kyng but he that hath all thynges subiecte to his hestes, as here is shewed, by worchyng of his *treature* by this water.

Id. Ib. ch. 206. p. 219.

TREAT

Which those his cruell foes, that stand hereby,
Making advantage, to revenge their spight,
Would him disarm and *treaten* shamefully;
Unworthie usage of redoubted knight!
Spenser. Faerie Queene, book ii. can. 8.

Then she began a *treaty* to procure,
And stablish terms betwixt both their requests,
That as a law for ever should endure.
Id. Ib. book ii. can. 2.

For the reformation was not advanced here, as in some forraign free states, suddenly (not to say rapidly) with popular violence, but leisurely and *treatably*, as became a matter of so great importance.

Fuller. The General Worthies of England, vol. i. p. 38.

In the meane while there will be alwayes some skilful persons, which can teach a way how to grind *treatably* the church with iawes that shall scarce mooue, and yet deuour in the end more then they that come rauening with open mouth, as if they would worry the whole in an instant.

Hooker. Ecclesiasticall Politie, book v. sec. 79. fol. 431.

It pleased his majesty the very next morning to call to examination, before the lords of his council, diuers members of the house of commons, for some speeches better becoming a senate of Venice, where the *treaters* are perpetual princes, than where those that speak so irreverently, are so soon to return (which they should remember) to the natural capacity of subjects.

Reliquiæ Wottonianæ, p. 432.

As Jerome speakes of the poysoned workes of Origen, and other dangerous *treatisors*, good things may be received from ill hands.

Hall. Works, vol. i. fol. 581. *An Apologie against Brownists.*

Hail, sweet Saturnian soil! of fruitful grain
Great parent, greater of illustrious men,
For thee my tuneful accents will I raise,
And *treat* of arts disclos'd in ancient days.

Dryden. Virgil. Georgics, book ii.

In the dark recesses of antiquity, a great poet may and ought to feign such things as he finds not there, if they can be brought to embellish that subject which he *treats*.

Id. Dedication to Æneis.

So that to make our society happy, it is necessary, that whether we be superiors or inferiors, we should be of a gentle, yielding and *treatable* temper, that so which rank soever we are placed in, we may be pliable either way to a fair condescension, or a just submission.

Scott. Christian Life, part i. ch. iii. fol. 64.

I will ingeniously confess, [that the helps I have used in this small *treatise*, were many of them taken from the works of our own reverend divines of the church of England.

Dryden. Preface to Religio Laici.

With the same impudence, without a ground,
They say that, look the Reformation round,
No *treatise* of humility is found.

Id. The Hind and the Panther, part iii.

He soon satisfied them, by the humanity of his conduct and by his assurances of their future security and honourable *treatment*, that they had nothing to fear.

Anson. Voyages, book ii. ch. v. p. 243.

At present they have but little idea of *treating* others as themselves would wish to be *treated*, but *treat* them as they expect to be *treated*.

Cook. Voyages, vol. iii. book ii. ch. v. p. 226.

Carriion is a *treat* to dogs, ravens, vultures, fish.

Paley. Natural Theology, ch. xix. p. 298.

Mr. Pengré, in a little *treatise* concerning the Transit of Venus, published in 1768, gives some account of land having been discovered by the Spaniards in 1714, in the latitude of 38°, and 550 leagues from the coast of Chili, which is in the longitude of 110° or 111° west.

Cook. Voyages, vol. iii. book ii. ch. vi. p. 253.

By advantageous *treaties* of commerce, particular privileges were procured in some foreign state for the goods and merchants of the country, beyond what were granted to those of other countries.

Smith. Wealth of Nations, book iv. ch. i. p. 236.

When we write a *treatise*, we consider the subject throughout. We strengthen it with arguments—we clear it of objections—we enter into details—and in short, we leave nothing unsaid that properly appertains to the subject.

Gilpin. Preface to Sermons, vol. i.

TRE'BLE, *adj.* } Is *triple*, *q. v.*
TRE'BLE, *v.* } Three-fold; increased or augmented thrice or three times.
TRE'BLY, }
TRE'BLENESS. } *Treble* in musick, the highest or acutest part of the human voice. Fairefax writes —*Triple*.

And thus they werchen *treble* sinne,
That ben flatours about a kynge.

Gower. Conf. Am. book vii.

I am sure that good wittes, except they be let downe lyke a *treble* stringe, and unbente lyke a good casting bowe, they will never last and be able to continue in studye.

Ascham. Works, book i. fol. 64. *Toxophilus.*

Some of them have iackes, and caparisons for their horses made of leather artificially doubled or *trebled* vpon their bodies.

Hakluyt. Voyages, &c. vol. i. p. 62. *The Tartars.*

With that he markes, and tels her out a score,
And doubles them, and *trebles* all before.
Fond boy! the more thou paist, thy debt still grows the more.
Spenser. Britain's Ida.

Treble augmented was his furious mood
With better sence of his deepe rooted ill,
That flames of fire he threw forth from his large nosethrill.
Id. Faerie Queene, book i. can. 11.

Againe he heard that wondrous harmonie,
Of songs and sweet complaints of louers kinde:
The humane voices sung a *Triple* hie;
To which respond the birds, the streames, the winde,
But yet vnseene those nymphs, those singers, were,
Vnseene the lutes, harpes, viols which they beare.
Fairefax. Godfrey of Boulogne, book xviii. sec. 24.

Come, good wonder,
Let you and I be jogging: your starv'd *trebble*
Will waken the rude watch else.
Beaumont and Fletcher. The Chances, act i. sc. 6.

WOOLF. We will double
What ever Hemskirk then hath promis'd thee.
HUB. And I'll deserve it *treble*.

Id. Beggar's Bush, act iv. sc. 1.

It is evident, that the percussion of the greater quantity of air, causeth the baser sound; and the less quantity the more *trebble* sound.

Bacon. Natural History, Cent. 2. sec. 178.

The just and measured proportion of the air percussed, towards the baseness or *trebleness* of tones, is one of the greatest secrets in the contemplation of sounds: for it discovereth the true coincidence of tones into diapasons: which is the return of the same sound.

Id. Ib. sec. 183.

And thou, *treble*-dated crow,
That thy sable gender mak'st
With the breath thou giv'st and tak'st,
'Mongst our mourners shalt thou go.
Shakspeare. Passionate Pilgrim, stan. 2^c

The pious Trojan then his javelin sent;
The shield gave way: through *treble* plates it went
Of solid brass, of linen *treble* roll'd,
And three bull-hides, which round the buckler roll'd.
Dryden. Virgil. Æneid, book x.

FLOR. Do you gentlemen speak with *treble*-voices? I am resolved to see what company you keep.

Id. Secret Love, act iv.

Augmentations, that may be doubled, or *trebled*, in times to come, upon the same motives, under the same and other pretences; in short, just as speciously as they have been made.

Lord Bolingbroke. Works, vol. iii. p. 291. *A Dissertation upon Parties. Letter 19.*

The rumbling words march fierce along,
Made *treble* dreadful in your song.

Which done, or in doinge, they praised and worshipped their
owne golden, syluery, coper, yerney, *treen* and stoney goddis.

Joye. Expositio of Daniel, ch. i. fol. 63.

For so common were all sorts of *treene* stuffe in old time, that a
man should hardlie find foure peeces of pewter (of which one was
peraduenture a salt) in a good farmer's house.

Holinshed. Chronicles, vol. i. book ii. ch. xii. p. 317. The Description of England.

Till at the last he heard a dreadfull sownd,
Which through the wood loud bellowing did rebownd,
That all the Earth for terror seemd to shake,
And *trees* did tremble.

Spenser. Faerie Queene, book i. can. 7.

And he would serve them also at the table in *treen* and earthen
dishes.

Sir Thomas North. Plutarch, fol. 608. Julius Cæsar.

There were no wars in those days when men did drink in a *treen*
cup.

Taylor. Polemical Discourses, ch. iv. sec. 1. fol. 636. On Repentance.

Like leaves on *trees* the race of man is found,
Now green in youth, now withering on the ground;
Another race the following spring supplies;
They fall successive, and successive rise.

Pope. Homer. Iliad, book vi.

TREILLAGE, } Menage derives Fr. *treille* from
TREILLIS, } the Lat. *trichila*, a walk covered
TREILLISED. } with leaves, (thick as hairs, *τριχες*.)

with vines or other trees, or plants. See Menage and Vossius. A more obvious etymology is—that the verb *treiller* is the same word as *trailer*, to trail; the trees or plants forming the *treille*, and supported by a *treillis*, are *trailing* trees or plants; and the *trellis*, that on which they depend.

Treille, an arbour or walk, set on both sides with vines, &c., twining about a *trellis*, or latticed frame.

Fr. *treillage*, *treillis*, a lattice before a door or window; a grate set thick with crossbars of wood. Cotgrave.

VOL. XXVIII.

Low, without glass, wooden *trellizes*.

Sir Thomas Herbert. Travels, p. 120.

The windows are large, *trellized*, and neatly carved.

Id. Ib. p. 211.

Each correspondent twain alike array'd
With like embellishments of plants and flowers,
Of statues, vases, spouting founts, that play'd
Through shells of Tritons their ascending showers,
And labrynths involv'd, and *trelice-woven* bowers.

West. Education.

There are as many kinds of gardening as of poetry: makers of flower gardens are epigrammatists and sonneteers; contrivers of bowers, grottos, *treillages*, and cascades, are romance writers.

Spectator.

TREMANDRA, in Botany, a genus so called by R. Brown, from the Greek *τρεμω*, to tremble, and *ανηρ ανδρος*, a male, because the anthers are so slightly fixed by their bases to the points of the filaments, as to cause them to shake on the least motion or breath of air. It belongs to the class *Decandria*, order *Monogynia*, and the natural family of *Tremandree*. Generic character: calyx of five sepals; petals five; stamens ten; anthers two-celled.

This genus consists of two known species, both natives of New Holland; they are small shrubs with the habit of *Helianthemum*, covered with starry hairs. The flowers are purple, about the size of those of *Baueria rubioides*.

TREMATODON, in Botany, a genus so called by Michaux, from *τρημα*, a perforation, and *οδους*, a tooth, in allusion to the teeth of the peristome being pierced by a small hole each. It belongs to the class *Cryptogamia*, order *Musci*. Generic character: fruit terminal; sporangia stipitate; peristome simple, of sixteen distinct, subulate, straight teeth, each pierced by a small hole.

Two or three species of this genus are known; they are mosses with the habit of species of *Dicranum*.

TREMBLE, v. } Fr. *trembler*; It. *tremolare*;
TREMBLE, n. } Sp. *tremblar*; Lat. *tremere*; Gr.
TREMBLER, } *τρεμειν*, to shake.
TREMBLING, n. } To shake, to quake, to shiver,
TREMBLINGLY. } to shudder.

Ac trywlicke to telle. hue *trembled* for fere.

Piers Plouhman. Vision, p. 37.

And he seide, I am Ihesu of Nazareth whom thou pursuest, it is hard for thee to kike aghens the pricke. And he *tremblide* and wondride and seide, lord what wolt thou that I do?

Wiclif. The Dedis of Apostlis, ch. ix.

And the Lorde sayde, I am Jesus who thou persecutest, it shal be harde for thee to kycke agaynste the prycke. And he both *trembling* and astonied sayd: Lorde what wylt thou haue me to doe?

Bible, Anno 1551.

Heeres hore aren shad overtime licke vpon my head: and the slacke skinne *tremblith* of mine emptied bodie.

Chaucer. Boecius. De Consolatione, p. 407.

Seruantis obeie ghe to fleeschli lordis with drede and *tremblyng* in symplenesse of ghoure herte as to Crist.

Wiclif. Effesies, ch. vi.

Seruantes be obedyent vnto youre carnall masters, with feare and *tremblyng* in singlenes of your heartes, as vnto Chryst.

Bible, Anno 1551.

He goth vnto the market place
Of Rome: and in a litell space
Through crie the citee was assembled,
And euery mans hert *trembled*,
Whan thei the soth herde of the cas.

Gower. Conf. Am. book vii.

Greatly were they of the countre abasshed, whan they herde that their people were dysconfyted: and ther was none so hardy nor so stronge a castell, but *trymbled* for feare.

Lord Berners. Froissart. Cronycle, vol. i. ch. 215. p. 270.

TREMBLE.
—
TREMEN-
DOUS.

On every side them stood
The trembling ghosts with sad amazed mood,
Chattring their iron teeth, and staring wide
With stonie eies.

Spenser. *Faerie Queene*, book i. can. 5.

Wert thou a stranger to us,
And bred amongst wild rocks, thy nature wild too,
Affection in thee as thy breeding, cold
And unrelenting as the rocks that nourisht thee,
Yet thou must shake to tell me this; they tremble
When the rude sea threatens divorce amongst 'em,
They that are senceless things shake at a tempest.

Beaumont and Fletcher. *A Wife for a Month*, act iii.

It is not therefore for us presumptuously to break in upon God,
and to think by our natural abilities to wrest open the precious
caskets of the Almighty; and to fetch out all his hidden treasure
thence, at pleasure; but we must come tremblingly before him,
and in all humility crave his gracious admission.

Hall. *Works*, vol. iii. fol. 480. *The Devout Soul*, sec. 22.

Say what the use, were finer optics given,
To inspect a mite, not comprehend the Heaven?
Or touch, if tremblingly alive all o'er,
To smart and agonize at every pore?

Pope. *Essay on Man*, v. 195. *Epistle* 1.

Then may my soul, as bright instinctive flame,
Aspiring then, thy kindred radiance claim;
Or to some humbler Heav'n the trembler raise,
Though there the last, the first to sing thy praise.

Brooke. *Constantia*.

His soul, where moral truth spontaneous grew,
No guilty wish, no cruel passion knew;
Though tremblingly alive to Nature's laws,
Yet ever firm to honour's sacred cause.

Falconer. *The Shipwreck*, can. 1.

TREMBLEYA, in *Botany*, a genus dedicated by De Candolle in honour of Abraham Trembley, who, by his observations on fresh water polypes, has contributed to determine the limits of the vegetable kingdom. It belongs to the class *Decandria*, order *Monogynia*, and the natural family of *Melastomaceæ-Rhexiæ*. Generic character: calyx with an ovate tube, which is constricted at the apex, and five lobes, which are rather dilated from the base, and awned or oblong; petals five, oval; stamens ten, five of which bear ovate-oblong anthers, each with a short, blunt beak, and having its connective drawn out into an obcordate or spatulate simple ligula; the five alternate anthers having their ligula scarcely evident; stigma dot-formed; capsule ovate, five-celled, glabrous.

Six species are known of this genus, all natives of Brazil: they are shrubs, with sessile or petiolate, oblong or linear, quite entire, one or three-nerved leaves, and axillary and terminal one to three-flowered peduncles, and yellow or purplish flowers. The genus differs from *Rhexia* in the corollas being of five petals. The species are very different from each other in habit, although not in character.

TREMELLA, in *Botany*, a genus so called by Dil- lenius from *tremo*, to shake, on account of the soft, blub- ber-like appearance of some species. It belongs to the class *Cryptogamia* and order *Fungi*. Generic character: receptacle gelatinous, homogeneous, bearing fruit all round, destitute of papillæ; sporidia submergent.

Of this singular genus there are nine known British species, growing on stumps and trunks of trees, branches, sticks, dead wood, rotten wood, &c.; they are brown, flesh-coloured, dirty white, orange-yellow, generally soft plants. The genus is closely allied to *Exidia* or *Jew's-ears*.

TREME'NDOUS, (Lat. *tremendus*, from *tre-*
TREME'NDOUSLY.) *mere*, that ought to be trembled
at; that ought to be feared or be dreaded; fearful, dread-
ful, terrible, awful.

Tremendously, tremendousness, are regular subderi- vatives; and (the former especially) not uncommon in exaggerating speech.

If any thing could raise his passion, it was the nonsensical dis- courses of deists and Christian infidels, and he thought he might be justly angry with such wretches, that like the giants of old, durst make war with *tremendous* omnipotence.

Glanvil. *Discourses. The Preface*.

Swear then (he said) by those *tremendous* floods
That roar through hell, and bind th' invoking gods;
Let the great parent earth one hand sustain,
And stretch the other o'er the sacred main.

Pope. *Homer. Iliad*, book xiv.

If we are puzzled in accounting for the union of things so familiar to us, and suited to our capacities, what wonder is it, if our thoughts are lost in accounting for the divine union of the *tremendous* Deity?

Waterland. *Works*, vol. iii. p. 303. *A Second Defence of some Queries*.

So God wrought double justice; made the fool
The victim of his own *tremendous* choice,
And taught a brute the way to safe revenge.

Cowper. *The Task*, book vi.

TREMITI, three islands in the Gulf of Venice, sub- ject to Naples, 15 miles from the Northern coast of the Capitanata, called Capraria, Tremiti or St. Nicolo, and St. Domino. Tremiti has a fine Benedictine convent. These islands lie in lat. 42° 10' N., long. 15° 30' E.

TRE'MOR, } Fr. *tremeur*; It. *tremore*; Lat.
TRE'MULOUS, } *tremor*, from *tremere*, to tremble,
TRE'MULOUSLY. } *q. v.*

A shaking, shuddering, shivering; a quivering— (usually from fear, or some ailment.)

As for example, in the ringing of a bell, from every stroke there continues a *tremor* in the bell, which decaying, must (according to his philosophie) be imagination, and referring to the stroke past must be memory.

H. More. *The Immortality of the Soul*, book ii. ch. ii. sec. i.

Mother of all; both gods and men commend
(O muse) whose faire forme did from Joue descend;
That doth with cymball sounds, delight her life;
And *tremulous* diuisions of the fife.

Chapman. *Homer. To the Mother of the Gods*.

When ye are sick or dying, then nothing but prayers and sad complaints, and the groans of a *tremulous* repentance, and the faint labours of an almost impossible mortification.

Taylor. *Sermons*, vol. iii. fol. 30. *Sermon* 2.

Meantime, light-shadowing all, a sober calm
Fleeces unbounded ether; whose least wave
Stands *tremulous*, uncertain where to turn
The gentle current.

Thomson. *Autumn*.

Thus the earthquake mentioned by Josephus shook the whole land of Judea; and the disaster at Nicomedia, as Marcellinus informs us, was occasioned by a *tremor* which went over Macedonia.

Warburton. *Works*, vol. viii. p. 212. *Julian*, book ii. ch. vi.

Through and out of this, passed rays of light of a brighter co- lour, which vanished, and were renewed nearly in the same time as those of the aurora-borealis, but had no degree of the *tremu- lous* or vibratory motion which is observed in that phenomenon.

Cook. *Voyages*, vol. ii. book iii. ch. viii. p. 236.

Then fall their lofty spires, and, sinking low,
O'er the pale ashes *tremulously* glow.

Wilkie. *The Epigoniad*, book v.

Calculating politics consider men commercially and numerically; not as beings *tremulously* sentient, but as living engines capable of productive labour.

Knox. *Works*, vol. iv. p. 351. *Remarks on Grammar Schools*.

Sun of the sleepless! melancholy star!
Whose tearful beam glows *tremulously* far,
That show'st the darkness thou canst not dispel,
How like art thou to joy remember'd well!

Byron. *Hebrew Melodies*.

TREMEN-
DOUS.
—
TREMOR.

TRENCH.

TRENCH, v.

TRENCH, n.

TRENCHANT,

TRE'NCHER,

TRE'NCHING, n.

TRE'NCHMORE.

Fr. *trencher*; It. *trinciare*; Sp. *trinchar*, to cut or carve. Case-neuve—from *trans scindere*, to cut across; Menage—from *trunc-are*, to cut off. See ENTRENCH, RETRENCH.

To trench, to surround, to fortify, with trenches, with ditches, earth, &c., cut or dug out; to cut, to carve, to dig; to cut into, to carve out of; *sc.* the property of another, and thus, to encroach.

A *trencher*, upon which any thing (food, victuals) are cut.

A *trencher-man*, a man who provides for—also who consumes largely the contents of.

A *trencher friend*—a friend while well fed.

Great fur he made ther a nizt of wode & of sprai,

And tresche ladde per aboute, pat me wide sai.

R. Gloucester, p. 552.

And forth she walketh esily a pas,

Arrayed after the lusty seson sote

Lightely for to playe, and walken on fote,

Nought but with five or sixe of hire meinie;

And in a *trenche* forth in the park goth she.

Chaucer. *The Squires Tale*, v. 10702.

And as they rengen the *trenches* by and by,

They heard a noise, and a pitous cry.

Id. *The Story of Thebes*, part i. p. 574.

And by his belt he bare a long pavade,

And of a swerd ful *trenchant* was the blade.

Id. *The Reves Tale*, v. 3927.

Notwithstandinge the trauaile of the almoigner, that hath draw vp in the cloth al the remissailles, as *trenchours*, and the relief to bere to the almesse.

Id. *The Testament of Loue*, book i.

And incōtynent they made an assaut, and aproched the barrers, but ther were suche depe *trenches*, that they coude nat cōe nere.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. lix. p. 80.

The erle of Foiz opyned the purse and toke of the poudre, and layde it on a *trenchour* of bredde.

Id. *Ib.* vol. ii. ch. xxvi. p. 74.

But before our comming he dislodged, notwithstanding it appeared vnto vs that he had in purpose to encampe there; for we found the ground staked out where their *trenches* should haue bene made.

Hakluyt. *Voyages, &c.* vol. ii. part ii. p. 144. *The Portugal Voiage*.

And Fabius dredynge the deceytfull wyt of Annibal, kept the army within the *trēch*, and so Anniball with his host escaped without damage.

Sir Thomas Elyot. *The Governour*, book iii. ch. x. fol. 187.

The passe of Cashill although naturallie of it selfe it were verie strong, yet by means of new *trenching*, plashing of trees, and making of hedges, it was made so strong, that no horsemen could either enter or pass through the same.

Holinshed. *Chronicles*, vol. vi. p. 193. *The Conquest of Ireland*, ch. xiii.

Worc. Yea, but a little charge will *trench* him here,

And on this north side winne this cape of land,

And then he runnes straight and euen.

Shakspeare. *First Part of Henry IV.* act iii. sc. 1. fol. 61.

Mur. I, my good lord; safe in a ditch he bides,

With twenty *trenched* gashes on his head;

The least a death to nature.

Id. *Macbeth*, act iii. sc. 4. fol. 141.

Oh look not black upon me, all my friends,

To whom I will be reconcil'd, or grow unto

This earth, till I have wept a *trench*

That shall be great enough to be my grave,

And I will think them too most manly tears,

If they do move your pities.

Beaumont and Fletcher. *The Honest Man's Fortune*, act iv.

Which when the valiant Elfe perceiv'd, he leapt

As lyon fierce upon the flying pray,

And with his *trenchant* blade her boldly kept

From turning backe, and forced her to stay.

Spenser. *Faerie Queene*, book i. can. 1.

And trulie they beeset a diuine as well, as for an asse to twang quipassa on a harpe or gitterne, or for an ape to friske *trench-moore* in a paire of buskins and a doublet.

Holinshed. *Chronicles*, vol. vi. p. 13. *The Description of Ireland*, ch. ii.

ALPH. Who lyes here?

MAST. Pray ye do not disturb 'em, sir; here lie such youths

Will make you start if they but dance their *trenchmores*.

Beaumont and Fletcher. *The Pilgrim*, act iv. sc. 3.

You fooles of fortune, *trencher-friends*, time-flies,

Cap and knee-slaues, vapours, and minute iackes.

Of man and beast, the infinite maladie

Crust you quite o're.

Shakspeare. *Timon of Athens*, act iii. sc. 6. fol. 89.

They alledge also that foreigners (even the Spaniards themselves) coming over hither, acquit themselves as good *trencher-men* as any; so that it seems want, not temperance, makes them so abstemious at home.

Fuller. *Worthies*, vol. i. p. 83. *Barkshire*.

Advanc'd upon the field there stood a mound

Of earth congested, wall'd, and *trench'd* around.

Pope. *Homer. Iliad*, book xx.

Here open'd Hell, all Hell I here implor'd,

And from the scabbard drew the shining sword;

And, *trenching* the black earth on every side,

A cavern form'd, a cubit long and wide.

Id. *Ib.* *Odyssey*, book xi.

Some help to sink new *trenches*, others aid

To ram the stones, or raise the palisade.

Dryden. *Virgil. Æneid*, book xi.

The *trenchant* blade, Toledo trusty,

For want of fighting was grown rusty.

Butler. *Hudibras*, part i. can. 1.

Montaigne says, in one of his essays, that the learned Castalio was fain to make *trenchers* at Basle to keep himself from starving, when his father would have given any money for such a tutour for his son, and Castalio have willingly embraced such an employment upon very reasonable terms.

Locke. *Works*, vol. iii. fol. 36. *Of Education*, sec. 91.

And as I pass'd

Up yon thick planted ridge, I spy'd their helms

'Mid brakes and boughs *trench'd* in the heath below,

Where like a nest of night-worms did they glitter,

Sprinkling the plain with brightness.

Mason. *Caractacus*.

TREND, v. } Is perhaps formed upon the past par-

TRE'NDING, } ticipie *tyrned*, *tyrn'd*, of the A. S. *tyrnan*, *vertere*, to turn; by the common transposition of the letter r.

The D. and Ger. *trennen*, *disjungere*, *divertere*, seem to be the same word.

The A. S. *trendle* is a spinning wheel, a *rendle*; any thing turned, a bowl, an orb. To *trend* is—

To turn; to make or take a *turn*; to *turn* away, to diverge, to bend, to bend its course.

And this done, there came downe so muche winde, as we were not able to steere before her, with corse and bonnets of each, we hald south with the land, for so the land did *trend*.

Hakluyt. *Voyages, &c.* vol. i. p. 448. *Pet and Jackman*.

Therefore this current (hauing none other passage) must of necessity fall out thorow this our 'fret into Mar del Sur, and so *trending* by the Mollicæ, China, and C. de buona Speranca, maintaineth itselfe by circular motion.

Id. *Ib.* vol. iii. p. 15. *Northwest Passage*.

Not farre beneath i' th' valley as she *trends*

Her silver streame, some wood-nymphes and her friends

That follow'd to her ayde, beholding how

A brooke came gliding where they saw but now

Some heards were feeding, wondred whence it came.

Browne. *Brittania's Pastorals*, book ii. stan. 3.

The riff, or bank of rocks, on which the French fleet was lost, runs along from the east end to the northward about three miles, then *trends* away to the westward, making as it were a half-moon.

Dampier. *Voyages*, vol. i. ch. iii. p. 50. *Anno 1682*.

We steered thus aboute twelve leagues; and then came to a point of land, from whence the land *trends* fast and southerly, for ten or twelve leagues.

Id. *Ib.* ch. xvi. p. 462. *Anno 1688*.

TREND.
—
TREPAN.

When next the rosie morn disclos'd the day
The scouts to sev'ral parts divide their way,
To learn the natives' names, their towns explore,
The coasts and *trendings* of the crooked shore.
Dryden. Virgil. Æneid, book vii. v. 200.

To the southward of the cape, the land *trends* away S.E. by E.
and S.S.E. and seems to be every where a bold shore.
Cook. Voyages, vol. i. book ii. ch. v. p. 353.

This point, which I called Cape Howe, may be known by the
trending of the coast, which is north on the one side, and south-
west on the other. *Id. Ib. vol. ii. book iii. ch. i. p. 67.*

TRENTAL, Fr. *trente*; It. *trenta*; Sp. *trienta*;
Lat. *triginta*. Thirty, *sc.* masses.

And I will that myn executrice, in as covenable wise as they
may after my decesse, cawse three *trentals* to be songen for my
soule, and all cristen soules.

Fabyan. Chronycle. The Will.

If kinges and great men do amisse, they must builde abbeyes
and colledges, meane men builde chauntreis, poore finde *trétals*
and brotherhodes and beggyng friers.
Tyndall. Workes, fol. 141. The Obedience of a Christian Man.

Their diriges, their *trentals*, and their shrifts,
Their memories, their singings, and their gifts
Spenser. Mother Hubberd's Tale.

TRENTEPOHLIA, in *Botany*, a genus dedicated by
Agardh to Trentepohl, a German botanist. It belongs
to the class *Cryptogamia* and order *Algæ-Confervoidæ*.
Generic character: filaments minute, tufted, erect, co-
loured, articulated; dissepiments hyaline; fruit tufted,
terminal.

The species inhabit fresh water and marine rocks and
caverns. Two British species are known. The genus
is separated from *Conferva*.

TREPA'N, v. } It. *trapano*; Fr. *trepane*; "an instru-
TREPA'N, n. } ment having a round and indented
TREPA'NNER, } edge, wherewith chirurgions open a
TRE'PHINE, s. } fractured skull, and by the help of a
levatory (within it) raise up the crushed and depressed
parts thereof, and take out pieces of bone and clotted
blood." Cotgrave. This, Huet (see Menage) de-
rives from the Gr. *τρύπανον*, a word, he adds, of the
same meaning: *τρύπανον* is from *τρύπα-ειν*, to perfo-
rate, to penetrate. And (Cotgrave) the Fr. *trappan* is
"a stone-cutter's drill; the tool wherewith he bores
little holes in marble." But the English verb *trepan*,
or *trapan*, is to *entrap*, and Skinner, by a violent and
rather ludicrous metaphor, deduces this application
from the surgical operation; others, he tells us, derive
from *Trepani*, a town of Sicily, into which some Eng-
lish in a storm were invited and then detained. To
trepan, or (more properly *trapan*, though written with-
out distinction), to *entrap*, is the D. *trappen*. See
TRAP.

To catch or take; to overtake, to overreach, to take
in a snare; to ensnare, to beguile.

The Earl of Westmerland in outward deportment complied
with him, and seemed to approve a writing wherein his main in-
tentions were comprised, so to *trepan* him into his destruction;
telling him on, till it was too late for him either to advance or
retreat, the king with his army being at Pontfract.

Fuller. Worthies, vol. ii. p. 501. Yorkshire.

It is indeed a real *trepan* upon it; feeding it with colours and
appearances instead of arguments.

South. Sermons, vol. ii. p. 381. Sermon 10.

[All other pretences are] nothing but gins, and snares, and
*trepan*s for souls; contrived by the devil, and managed by such as
the devil sets on work. *Id. Ib. vol. iii. p. 169. Sermon 4.*

He [Satan] can *trapan* a Jephtha into a vow and solemn oath
and then bind him, under fear of perjury, to perform it by an
horrid and inhuman murder.

South. Sermons, vol. v. p. 151. Sermon 3.

Yet generally not long after, by the insinuations of that old
pander and *trapanner* of souls, it is odds but you shall hear, that
some of them either fall into villanous and lewd company, or light
into loose and debauched families, or take to some ensnaring
employment.

Id. Ib. vol. vi. p. 339. Sermon 10.

In th' interim spare for no *trepan*s
To draw her neck into the bannus.

Butler. Hudibras, part iii. can. 3.

With whiskers curl'd, and round black eyes,
He meditates the luscious prize,
Till caught, *trepann'd*, laments too late
The rigorous decrees of fate.

Somerville. The Fortune Hunter, can. iii.

Lest I might be *trapann'd* and sold as a servant after my arri-
val in Jamaica, I agreed with Capt. Kent to work as seaman for
my passage, and had it under his hand to be cleared at our first
arrival.

Dampier. Voyages, vol. ii. ch. i. p. 4. Anno 1674.

His principal misfortune being the losing company of a small
bark which attended him, and having some of his people *trapann'd*
at Baldivia.

Anson. Voyages, book i. ch. ix. p. 129.

But I show'd him a screw, which I told my brisk gull
A *trepan* was for bottles had broken their skull.

Cotton. A Voyage to Ireland.

The dura mater under the *trepanned* bone incarn'd so well, that
from that time we only applied a little round tossil to keep the
flesh from thrusting out of it.

Wiseman. Chirurgical Treatises, book v. ch. ix. p. 142.

I began to work with the *trepan*, which I much prefer before a
trephine, it being an instrument which doth its work lightly, and
cutteth the bone equally, or how you please, without pressing so
heavily upon the head, and is approv'd by all the surgeons
abroad, being much to be commended before the *trephine*.

Id. Ib. p. 132.

TREPIDATION, Fr. *trepidation*; It. *trepidazione*;
Sp. *trepidacion*; Lat. *trepidatio*. Festus derives the
Lat. *trepido* from the Gr. *τρεπειν*, *vertere, quia turba-
tione mens vertitur*. See Vossius, who refers to the
Gr. *ταρβ-ειν*, *pavere, terrere*.

The trembling, quaking, shaking; (frequently of
fear, implied.)

Moving of th' earth brings harms and fears,
Men reckon what it did, and meant;
But *trepidation* of the spheres,
Though greater far, is innocent.

Donne. A Valediction.

They can no firme basis have
Vpon the *trepidation* of a wave.

Habington. Castara, p. 2.

Thebit first found the motion of *trepidation*.

Glanvil. Essay 3, sec. 4.

The irresolute repugnance of some, the hypocritical submissions
of others, the ferocious insolence of Cromwell, the rugged bru-
tality of Harrison, and the general *trepidation* of fear and wicked-
ness, would, if some proper disposition could be contrived, make
a picture of unexampled variety and irresistible instruction.

The Idler, No. 46.

What secret hand the *trepidation* weighs,
Or through the zodiac guides the spiral pace?

Brooke. Universal Beauty, book i. v. 291.

TREPOCARPUS, in *Botany*, a genus so called by
Nuttall from the Greek *τρεπω*, to turn, and *καρπος*, a
fruit. It belongs to the class *Pentandria*, order *Digynia*,
and the natural family of *Umbelliferae-Cumineæ*. Ge-
neric character: calyx five-toothed, teeth caducous;
petals obcordate, inflexedly emarginate; fruit pyramidal,
angular, or nearly terete, contracted at the sides; meri-
carps convex on the backs, with five primary, filiform,

TREPAN.
—
TREPO-
CARPUS.

TREPO-CARPUS. hardly prominent ribs, each margined by a brown line on both sides, and four secondary elevated ribs, each bearing a single vitta at its base; commissure thick, furrowed in the middle, and furnished with vittæ inside; seed straight, rather compressed on the back.

This genus, which is nearly allied to *Cuminum*, consists of two known species, both natives of North America; they are annual, glabrous, branched herbs, with the habit of *Æthusa*. The leaves are multifid with linear segments; the umbels are opposite the leaves, of five rays; the involucra are composed of from one to three linear leaves; the umbellules contain each from five to eight flowers, and the involucels are composed of four or five unequal linear dimidiate leaves; the flowers are white.

TRE'SPASS, v. } Fr. *trespasser*, to pass from; *sc.*
TRE'SPASS, n. } this life, to de cease; also to over-
TRE'SPASSER, } pass, to pass beyond, or exceed.
TRE'SPASSING, n. } To pass over or beyond, to exceed, *sc.* our right; our duty; beyond due bounds or limits; to transgress; to go over, or into that which is the property or right of another, to enter wrongfully; generally, to act wrongfully.

To Rome gode messagers to the Pope he sende,
 Vort azen holi church is *trespas* amende.

R. Gloucester, p. 505.

Thei did a foule *trespas*, it was unseemly thing.

R. Brunne, p. 171.

Edrik was hanged on the toure for his *trispas*.

Id. p. 50.

And to take *trespassours*. and tyen hem faste.

Piers Plouhman, p. 17.

Of my *trespas* with tunge.

Id. p. 109.

Thou lord that knowist the hertis of alle men, schewe whom thou hast chosen of this seruyce and apostilheed of which Iudas *trespasside* that he schulde go into his place.

Wiclif. The Dedis of Apostlis, ch. i.

For where is no lawe there is no *trespas* neither is *trespassyng*.

Id. Romayns, ch. iv.

For circumcisioun profitith if thou kepe the lawe, but if thou be a *trespassour* aghen the lawe, thi circumcisioun is maad prepuce.

Id. Ib. ch. ii.

But deeth regnyde fro Adam tilto Moises also into hem that synnyden not in liknesse of the *trespassyng* of Adam the which is liknesse of Crist to comynge.

Id. Ib. ch. v.

For it is reson, that he that *trespasseth* by his free will, that by his free will he confesse his *trespas*; and that non other man telle his sinne but himself.

Chaucer. The Persones Tale, p. 168.

It is wel wist, which they ben that han don to you this *trespas* and vilanie, and how many *trespassours*, and in what manere they han don to you all this wrong, and all this vilanie.

Id. The Tale of Melibeus, p. 113.

But he, whiche all sleighes can,
 The diuell that lieth in hell fast,
 Hym that it cast hathe ouercast,
 That for a *trespas*, whiche he dede,
 He was put in the same stede.

Gower. Conf. Am. book vii.

Whereunto the sayde xxxvi cytezyens answeryd, that it was cotrary theyr lybertyes to be sworne so many for any mater of *trespas* atwene the kyng and any of hys cytezyens.

Fabyan. Chronycle, p. 340. Anno 1257.

And thus soone after thys, noble Robert de Bruse, kyng of Scotland, *trespassed* out of this vncertayne worlde.

Lord Berners. Froissart. Cronycle, vol. i. ch. xx. p. 29.

I would wish the parties *trespassant*, to be made bond or slaues vnto those that receiued the iniurie, to sell and giue where they listed, or to be condemned to the gallies.

Holinshed. Chronicles, vol. i. book ii. ch. xi. p. 312. The Description of England.

A iudge, that after death doth punish sore
 The faults, which life hath *trespassed* before.

Spenser. Virgil's Gnat.

Go, lord it in your watery realms, the main!

There rage and bluster as you please,

Licentious in your native seas,

But not an inch as *trespassers* yo'll gain.

Yalden. Fable 9.

This action of *trespass* or transgression, on the case, is an universal remedy, given for all personal wrongs and injuries without force.

Blackstone. Commentaries, book iii. ch. viii. p. 122.

TRESPASS, in Law, *transgressio*, is, according to Bracton, any transgression of the law less than treason, felony, or misprision of either; but it is most constantly used for that wrong or damage which is done by one private man to another, or to the king in his forest, &c.; in which signification it is of two sorts, *trespass general*, otherwise called *trespass vi et armis*, and *trespass special*, or upon the case. "Trespass," says Blackstone, "in its largest and most extensive sense, signifies any transgression or offence against the law of nature, of society, or of the country in which we live, whether it relates to a man's person or his property. Therefore beating another is a trespass, for which an action of *trespass vi et armis* in assault and battery will lie. Taking or detaining a man's goods are respectively trespasses, for which an action of *trespass vi et armis*, or on the case in trover and conversion (see TROVER), is given by the law; so also non-performance of promises or undertakings is a trespass, upon which an action of *trespass* on the case in *assumpsit* is grounded: and in general any misfeasance, or act of one man, whereby another is injuriously treated or damnified, is a transgression, or trespass in its largest sense, for which an action will lie."

Trespass supposes a wrong to be done with force; and trespasses against the person of a man are of several kinds, as by threatening to hurt him; assaulting him, or setting upon a man to beat him; maiming a person so that he loses the use of limbs; imprisoning or restraining a man of his lawful liberty and the like. An action of trespass is the remedy for a menace attended with consequent damages, and for an illegal assault, battery, wounding or imprisonment, when not under colour of process; and even for an unnecessary degree of violence in cases where the assault, &c., were originally lawful, and in other similar instances. The same action lies also for menacing tenants, servants and others having relative rights to him who complains, and for beating, wounding, or imprisoning a wife or servant, whereby the landlord, master, or servant has sustained a loss, although the injury, the loss of service, of tenancy, company and comfort, are consequential and not immediate; or for seducing away a wife or servant, or for debauching the latter, force being implied in law, and the wife and servant being considered as having no power to consent; trespass will also lie for debauching a daughter.

Of trespass for injuries to a man's personal property, the party bringing the action must have an interest in the same at the time the injury was committed, to such an extent as to have had the actual or constructive possession, and also a general or qualified property therein, which may be either in the case of the absolute or general owner entitled to immediate possession, who may maintain his action although he has never had the actual possession, or although he has parted with his possession to a carrier or a servant, giving him only a bare

TRES-PASS.

TRES-
PASS.

authority to carry or keep the same, not coupled with an interest in the thing. This is grounded on the rule of law that the general property of personal chattels *prima facie*, as to all civil purposes, draws to it the possession. So it may be in the case of a qualified owner coupled with an interest, and also entitled to immediate possession, as a factor or consignee of goods, in which he has an interest in respect of his commission. But the quantity or certainty of the interest is not material, for a shopkeeper may maintain trespass for taking goods sent to him on sale or return. So it may also be in the case of a bailee (or one to whom goods are delivered in trust, upon a contract expressed or implied that the trust shall be faithfully executed on his part) with a mere naked authority, unaccompanied with any interest, except as to remuneration for trouble, but who is in actual possession, for he may support this form of action for any injury done while he was in the actual possession of the thing, as, for instance, a carrier, a factor, or a pawnee. It is, however, otherwise of a mere servant. And lastly, in the case of actual possession, though without the consent of the real owner; as the finder of any article who may maintain trespass against any person but the real owner, and as in the case of a party having an illegal possession, he may support this action against any person but the legal owner.

The nature of the injury for which this action affords redress may be either the unlawful taking of the personal chattel, or by the injuring it whilst in the possession of the general owner, or of a person having a special property in it, as a bailee.

With regard to the cases of trespass relating to land, called in law real property, they are extremely numerous, but may be generally referred to by the following observations. Blackstone says that trespass in a limited and confined sense, as relates to land, signifies no more than an entry on another man's ground, without a lawful authority, and doing some damage, however inconsiderable, to his real property. For the right of *meum* and *tuum*, or property in lands, being once established, it follows, as a necessary consequence, that this right must be exclusive; that is, that the owner may retain to himself the sole use and occupation of his soil; every entry therefore thereon, without the owner's leave, and especially if contrary to his express order, is a trespass or transgression, for satisfaction of which an action of trespass will lie; but the *quantum* of that satisfaction is to be determined by considering how far the offence was wilful or inadvertent, and by estimating the value of the actual damage sustained. Fitzherbert observes that "every unwarrantable entry on another's soil the law entitles a trespass, by breaking his close; the words of the writ of trespass commanding the defendant to show cause *quare clausum quærentis fregit*. For every man's land is, in the eye of the law, inclosed and set apart from his neighbour's; and that either by a visible and material fence, as one field is divided from another by a hedge, or by an ideal invisible boundary, existing only in contemplation of law, as when one man's land adjoins to another's in the same field; for if no other special loss can be assigned, yet still the words of the writ itself specify one general damage, viz. the treading down and bruising his herbage."

A man is answerable for not only his own trespass but for that of his cattle also; for if by his negligent keeping they stray upon the land of another, and much more if he permits them to go, or drives them on, and

they tread down his neighbour's herbage, and spoil his corn or his trees, this is a trespass for which the owner must answer in damages. In this case the law gives the injured party a remedy either by permitting him to distrain the cattle thus "*damage feasant*," or doing damage, till the owner shall make him satisfaction; or else by bringing an action at common law of trespass *vi et armis*, which lies for a trespass committed upon another's land, either by a man himself or his cattle. But the amount of the damage must be such as the jury may see fit to assess.

With respect to the nature of the injury to real property, trespass can only be supported when the injury is committed with force, actual or implied and immediate. As to the person by and against whom it may be brought, it seems that actual possession is necessary to support it. The party who brings it must have a property, either absolute or temporary, in the soil, and actual possession by entry, for there is this material distinction between personal and real property as to the right of the owner—in the former we have seen that the general property draws to it the possession sufficient to enable the owner to support trespass, though he has never been in possession. But in the case of land and other real property, there is no such constructive possession, and unless, therefore, the party bringing the action had the actual possession by himself or his servant at the time when the injury was committed, he cannot maintain it.

Actions of trespass for injuries committed under colour of a legal proceeding cannot in general be brought for any act, however erroneous, if expressly sanctioned by the judgment or direction of one of the superior courts at Westminster. But it may for the malicious and undue issue of a *fieri facias*, or for maliciously procuring a magistrate to grant an illegal warrant. So it may in cases where the proceedings of a court of competent jurisdiction are defective as being irregular or void, and the same may be brought against the attorney and the plaintiff. It also lies where the process of such a court has been misapplied, or has been abused. Also when a ministerial officer proceeds without warrant on the information of another, the action lies against the informer, if the information turns out unfounded; but no person who acts upon a regular writ or warrant can be liable to this action, however malicious his conduct, the remedy against him for the malicious motive and proceeding being in another form of action. Such are a few instances out of a vast variety of cases to be found in the books relating to actions of trespass for injuries under colour of legal proceedings.

The foregoing is a general outline of the nature and effect of this action; of the pleadings and other technical matters relating to the same, it is unnecessary here to speak. They will be found amply laid down in Mr. Chitty's book on pleading, and other works of a similar nature. It will be sufficient, therefore, in conclusion, to observe that as the law always couples the idea of force with that of intrusion on the property of another, it is needful that the declaration should contain an allegation that the injury was committed *vi et armis* and *contra pacem*.

TRESS, *n.* } Fr. *tresse de cheveux*, a lock of
TRESSED, *adj.* } hair. Tresser, to plait, weave, or
TRE'SSURE, } make into tresses. It. *treccia*; Sp.
TRE'SSURED. } *trenza, trenzar*. Skinner thinks

TRES-
PASS.

TRESS.

TRESS. it may be from *tricare, intricare*.^{*} See **INTRICATE**. Case-
neuve, from the Gr. *τρισσοος*, three, because a *tress* is
TRESSEL formed by interlacing *three* pieces. Menage, that the
Italian is from the Gr. *Σπιξ, τριχος*, hair. In the A. S.
thras, or *thres*, is a fringe, and *thraest-an* is to wreath,
to *twist*. (See Lye and Somner.) A *twist* is any thing
twiced; a thread or thrid is, perhaps, anything *thre-ed*,
thred, or thrid; and a *tress* may be anything *triced* or
thriced, thus bringing home the etymology of Case-
neuve. A *tress* then will be—

A three-fold, or tripled portion or quantity; a lock
or curl (of hair); anything hanging like the hair.

Tressure, a lace, or laced border. Fr. *trescheur*.

Hire yelwe here was broided in a *tresse*,
Behind hire back, a yerde long I gesse.

Chaucer. *The Knightes Tale*, v. 1051.

In habit made with chastitee and shame
In women shuld appareile you, (quod he)
And nat in *trassed* here, and gay perrie,
As perles, ne with gold, ne clothes riche.

Id. *The Wif of Bathes Prologue*, v. 5925.

Fyrst the fetures of hir face,
In whiche nature had all grace
Of womanlie beutee besette,
So that it might not be bette.
And howe hir yelowhe heare was *tressed*,
And hir atyre so well adressed.

Gower. *Conf. Am.* book vii.

Her yellow golden heare
Was trimly woven and in *tresses* wrought,
Ne other tire she on her head did weare,
But crowned with a garland of sweete rosiere.

Spenser. *Faerie Queene*, book ii. can. 9.

Now hath this yonker torn his *tressed* locks,
And broke his pipe which was of sound so sweet.

Drayton. *Pastorals. Eglogue 2.*

Thou most vertuous and most blessed,
Eyes of stars, and golden *tressed*
Like Apollo, tell me, sweetest,
What new service now is meetest
For the satyr?

Beaumont and Fletcher. *The Faithful Shepherdess*, act v. *The Song.*

No more my locks in ringlets curl'd diffus'd
The costly sweetness of Arabian dewes,
Nor braids of gold the varied *tresses* bind,
That fly disorder'd with the wanton wind.

Pope. *Sappho to Phaon.*

The mother first beheld with sad survey;
She rent her *tresses*, venerably gray,
And cast, far off, the regal veils away.

Id. *Homer. Iliad*, book xxii.

When the impediments of prejudice, pride, malice, and ambi-
tion shall be removed, which now retard their operation, they
will beat down the ill-founded citadel, but *tressed* as it is by all
the arts and arms of human power, endeavouring to build a fan-
cied fabric of selfish or private felicity on the wreck and ruins of
human nature.

Knox. *Works*, vol. v. p. 410. *Preface to Antipolemus.*

What virgins these, in speechless woe,
That bend to earth their solemn brow,
That their flaxen *tresses* tear,
And snowy veils that float in air.

Gray. *The Descent of Odin.*

The Scottish arms are a lion with a border or *tressure*, adorned
with flower de luces.

Warton. *English Poetry*, vol. ii. p. 269.

The *tressed* fleur-de-luce he claims
To wreath his shield.

Scott. *Lay of the Last Minstrel*, can. 4.

TRE'SSEL, or } It is sometimes also written and
TRE'STLE, or } spoken *trussel*; Bar. Lat. *trestel-*
TRE'TTLE, } *lum*; Fr. *tresteau*, or *tretteau*, a
TRE'STLER. } tripod, three-footed or three-legged,
frame, to support a table. Mr. Moore says in Suffolk
they have sometimes four. Perhaps—

A frame having *three stalls* or standings, or legs. **TRESSEL**
See **TREVET**.

Of gold per is a berde, & *tretels* per bi,
Of silver oþer vesselle gilte fulle richeli.

R. Brunne, p. 152.

[Pyers of Gauaston] yode vpon a day vnto Westmynster, and
there out of y^e kynges iuell house toke a table and a payre of
trestyllys of golde, and conueyed theym, with other iuellys, out of
the lade.

Fabyan. *Chronycle*, p. 418.

These burgesses sette downe the lytter on two *trestels* in the
myddes of the chambre; than they kneled downe before the
kyng and said, &c.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. 157. p. 434.

Citron tables stand

On iuory *tressells*, such as Cæsar's eyes

Saw not when hee king Juba did surprise.

May. *Lucan. Pharsalia*, book x.

They that followed them, had brought from home great leavers
and clubs, and as they went they took up feet of *trestlers* and
chairs which the people had overthrown and broken, running away,
and hied them apace to meet with Tiberius, striking at them that
stood in their way.

Sir Thomas North. *Plutarch*, fol. 689. *Tiberius and Caius.*

The Gloucester made a signal of distress to inform us that she
had a spring in her main-mast, twelve feet below the *trussel-trees*,
which appeared so dangerous that she could not carry any sail
upon it.

Anson. *Voyages*, book iii. ch. i. p. 394.

I ordered the top-masts to be struck and unrigged, in order to
fix to them moveable chocks or knees, for want of which the *trestle-*
trees were continually breaking.

Cook. *Voyages*, vol. iv. book iii. ch. xi. p. 138.

TREVERANIA, in *Botany*, a genus dedicated by
Willdenow, in honour of Lud. Christ. Treveranus, M.D.,
Professor of Botany in the University of Bonn on the
Rhine. It belongs to the class *Didynamia*, order *An-*
giospermia, and the natural family of *Gesneriaceæ-Ges-*
neriæ. Generic character: calyx adnate to the ova-
rium, with a five-parted, nearly equal limb; corolla
funnel-shaped, with a rather oblique tube, which is gib-
bous behind at the base, and a nearly equal, spreading,
five-lobed limb; stamens four, didynamous, with the
rudiment of a fifth; anthers connected; ovarium girded
by a ring; capsule dry, one-celled, or half-two-celled;
placentas parietal; seeds numerous, dust-formed.

This genus consists of three known species, *T. pul-*
chella, a native of Jamaica, and *T. grandiflora*, and *T.*
heterophylla, both natives of Mexico: the first is the only
one as yet introduced into our gardens; they are all
pubescent, perennial plants, furnished with scaly ament-
formed, underground stolons, by which the plants are
propagated; the leaves are opposite, or three in a whorl;
the flowers are axillary, solitary or few, and aggregate;
the corollas are showy and scarlet.

TRE'VET, } Fr. *trepied*, a tripod.

TRI'VET. } A threefoot; a stool with three feet.

Bicause they wanted *trevets* or stones whereon to set their
kettles on, ran by chance into the ship, and brought great peeces
of Nitrum with him, which served their turne for that present.

Holnshed. *Chronicles*, vol. i. book ii. ch. xii. p. 316. *The Descrip-*
tion of England.

And withall, a *trivet*, that enclos'd

Twentie two measures roome, with eares.

Chapman. *Homer. Iliad*, book xxiii.

The *trivet-table* of a foot was lame,

A blot which prudent Baucis overcame,

Who thrust, beneath the limping leg, a sherd,

So was the mended board exactly rear'd,

Dryden. *Ovid. Metamorphoses*, book viii.

Dispos'd apart, Ulysses shares the treat!

A *trivet-table*, an ignobler seat,

The prince appoints.

Pope. *Homer. Odyssey*, book xx.

TREVISO. **TREVISO**, or **TREVIGLIO**, a city of Italy, formerly capital of Trevisiano, now no longer a province. It is a bishop's see and had once a university, which is now transferred to Padua, but it is still the residence of many noble families. It is distant from Venice 18 miles, North-North-West.

TRI-
ACHNE.

TREVOA, in *Botany*, a genus so called by Miers, probably from the vernacular name of the shrub. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Rhamnaceæ*. Generic character: calyx turbinate, five-cleft, persistent, with reflexed segments; petals cucullate, erect, inclosing the stamens; anthers one-celled, bursting each by a kidney-shaped chink; disk almost wanting; ovary superior, large, hairy, three-celled, the cells one-seeded; style much exerted, hairy, persistent; stigma acute, simple; capsule membranous, two-valved, one-seeded, on account of two of the cells becoming abortive; seed erect, elliptical, compressed, marked by a longitudinal furrow; albumen sparing, fleshy; radicle inferior.

Two species of this genus are known, *T. quinque-nervis*, and *T. trinervis*, both natives of Chili; they are shrubs furnished with short, awl-shaped spines or thorns, disposed crosswise; the leaves are by fours and marked by longitudinal nerves; the flowers rise in fascicles from tubercles which are placed at the bases of the spines and axils of the leaves.

TREVOUX, a town of the department of the Ain in France, and once the capital of the principality of Dombes. The old parliament house, the ancient mint, and the residence of the governor, are the principal buildings. The printing-office here was celebrated for issuing the literary journals of the Jesuits from the college of Louis le Grand. Trevoux stands on the Saone, 12 miles North of Lyons; the population is 2556.

TREWIA, in *Botany*, a genus dedicated by Linnæus to C. J. Trew, a German botanical author. It belongs to the class *Polygamia*, order *Polyandria*, and the natural family of *Euphorbiaceæ*. Generic character: perianth superior, with a three-parted persistent limb; stamens numerous; style and stigma one; capsule triquetrous, turbinate, crowned by the perianth, three-celled, three-valved, three-seeded; seeds fixed to a thin dissepiment.

Only one species is known, *T. nudiflora*, a tree indigenous to the East Indies; the leaves are large and alternate; the flowers are disposed in racemose, axillary spikes, and are of a greenish-yellow colour.

TREY, Fr. *trois*—three.

Seven is my chance, and thin is cink and treye.
Chaucer. *The Pardoner's Tale*, v. 12517.

TRIACHNE, in *Botany*, a genus so named by Cassini, from the Greek *τρεις*, three, and *ἀχνη*, a point, on account of the pappus being generally composed of three paleæ. It belongs to the class *Syngenesia*, order *Æqualis*, and the natural family of *Compositæ-Nassauviaceæ*. Generic character: heads composed of five equal flowers; involucre in two series, the outer series of five-oval mucronate scales, the inner series a little shorter, and of five membranous scales; receptacle small, naked; flowers hermaphrodite; outer lip of corolla tridentate, and the inner one is undivided; stamens having the joints of the anthers long; anthers with long appendages at the base and apex; achenia obovate, rather costate; pappus composed of three or five paleæ, which are narrow at the bases, obtuse at the apices, and scarcely denticulated on the margins.

Only one species of this genus, which is nearly allied to *Nassauvia* and *Triptilion*, is yet known, *T. pygmæa*, a native of the straits of Magellan. It is a small sub-ligneous, glabrous, tufted plant. The leaves are sessile, imbricated, oval, acute, coriaceous, dentately ciliated at the base, recurved at apex. The heads of flowers are crowded on the tops of the branches, intermixed with floral leaves. The corollas are probably yellow.

TRIAD, } Fr. *triade*; It. *triade*; Lat. *trias*;
TRIA'LITY, } Gr. *τριας*; three. *Triad*—
TRIA'RIAN, } A co-union of three. *Triarian*.
TRI'ARCHY. } Lat. *triarii*—
Soldiers of the third line. *Triarchy*—
A government of three.

So plentifully gat he by his perquisites, as elecons, procurations, appeales, preuentions, pluralities, tot quots, *trialities*, &c.
Holinshead. *Chronicles*, vol. i. book ii. ch. ii. p. 245. *The Description of England*.

Let the brave second and *Triarian* band
Firm against all impression stand:
The first we may defeated see;
The virtue of the force of these are sure of victory.
Cowley. *On the Restoration of King Charles II.*

It may be rendered more briefly thus: the undivided monad we extend to a *triad*; and again, the undiminished *triad* we collect into a monad.

Waterland. Works, vol. ii. p. 189. *Sermon 8.*

It is very plain that those primitive fathers did not answer the question, how God is one, as some moderns do, by leaving out the Son and the Holy Ghost, and placing the unity in the Father only: but their way was to take in all the three persons, and so to make up the monad of the undivided *triad*. *Id. Ib.*

It seems, however, as if he himself recognized the fault of perpetual *triads* in his style, since they are by no means frequent in his last productions.

Knox. *Works*, vol. i. p. 156. *On the Periodical Essayists*.

There lye betweene and about these citties, certaine *triarchies*, containing every one of them as much as an whole country.

Holland. *Plinie. Natural History*, book v. ch. xviii.

TRIADENIA, in *Botany*, a genus so called by Spach, from the Greek *τρια*, three, and *ἀδην*, a gland, on account of the three hypogynous glands. It belongs to the class *Polyadelphia*, order *Trigynia*, and the natural family of *Hypericinæ*. Generic character: petals persistent, each furnished with a cucullate appendage; hypogynous glands thick, ovoid; androphore linear, tongue-shaped; ovary three-celled; stigma minute, capitate; capsule chartaceous, three-celled, trilocular; placentas three, central connate, but at length free; seeds large, scrobiculate.

Triadenia is a genus separated from *Hypericum*, and consists of four known species, of which *T. microphylla*, the *Hypericum Ægyptiacum*, is the type of the genus; they are small branched shrubs, with small opposite, decussate, quite entire, dotted leaves, and axillary and terminal yellow flowers.

TRIADICA, in *Botany*, a genus so called by Loureiro, from the Greek *τριάδικος*, by threes, on account of the stigmas being three, the capsule three-celled, and the seeds three. It belongs to the class *Dioecia*, order *Diandria*, and the natural family of *Euphorbiaceæ*. Generic character: flowers dioecious; calyx small, campanulate, three-four cleft; male flower, stamens two; filaments flat, very short; anthers two-lobed; female flower with a short thick style, crowned by three oblong erect stigmas; berry dry, three-celled, cells one-seeded.

There are two known species of this genus, one a

TRI-
ACHNE.
—
TRIA-
DICA.

TRIA-DICA. native of *Cochin China*, and the other of China; both trees with alternate, quite entire glabrous leaves; aments almost terminal, filiform, naked, distinct, with many flowered tubercles.

TRIAENA, in *Botany*, a genus so called by Kunth, from *τρίαῖνα*, a trident, on account of the tricuspidate, neuter flower. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: spikelets two-flowered, the one hermaphrodite, and the other neuter and triaristate; glumes two, lower one awned at the base, the awn adhering even to the middle of the glume; paleæ two, acuminate, mutic; stamens three; styles two; stigmas subplumose; caryopsis inclosed in the upper palea, free.

Only one species is known, *T. racemosa*.

TRIAL, in *Law*, (*triatio*), is defined to be the examination of a cause civil or criminal, before a judge who has a jurisdiction over it, according to the laws of the land. The trial or examination of the matter of fact in issue is of various sorts, as, for example, trial by record, by inspection or examination, by certificate, by witnesses, and by jury.

Trial by record is used where a matter of record is pleaded in any action, and the opposite party pleads *nul tiel record*, that there is no such matter of record existing. Upon this the parties pray that the matter may be inquired of by the record, and on a certain day appointed the same is inquired into. Records being the rolls or memorials of the judges, import of themselves such incontrollable verity, that they admit of no proof or averment to the contrary, insomuch that they are to be tried only by themselves, for otherwise there would be no end of controversies.

Trial by inspection, or examination, is, when for the greater expedition of a cause, in some point or issue, being either the principal question, or arising collaterally out of it, but being evidently the object of sense, the judges of the court, upon the testimony of their own senses, decide the point in dispute.

Trial by certificate is allowed in such cases where the evidence of the party certifying is the only proper criterion of the point in dispute; as, for instance, the admission or the deprivation of a clerk or spiritual person is to be tried by the certificate of the bishop.

Trial by witnesses, *per testes*, without the intervention of a jury, the only method of trial known to the civil law, is adopted by depositions in Chancery; the judge is thus left to form, in his own breast, his sentence, upon the credit of the witnesses examined.

Trials by jury, by the country, *per pais*, *per patriam*, or by jury, in civil cases, are either at bar, *nisi prius*, or before the sheriff. Trials at bar are those which take place before all the judges at the bar of the court in which the action is brought. Trials at *nisi prius* are those which are commanded to be tried by a jury at Westminster on a certain day specified in the writ, *Nisi prius*, &c., or "unless the justices of assize come before that day to such a place," and the trial is, with certain special exceptions, had in the county where the fact was or is supposed to have been committed. Trials before the sheriff are held in certain cases for debt under 20*l.*, by virtue of the statute 3 & 4 Wm. IV., c. 42, s. 17.

Trials in criminal cases are by jury. In those of peers, in cases of treason and felony, or misprision of either, are by the peers of Great Britain in the Court of Parliament, or the Court of the Lord High Steward. The trial by jury, in respect to all commoners or

persons not having the privilege of the peerage, is that trial by the peers, *pares* or equals of any Englishman, which, as the great bulwark of his liberties, is secured to him by the Great Charter.

There were formerly two other kinds of trial, by wager of battle, and by wager of law; but the former was abolished by the statute 57 Geo. III., c. 46, and the latter by that of 3 & 4 Wm. IV., c. 42. See WAGER of BATTLE and WAGER of LAW.

For further information on the subject of trials, see ACTION, ASSIZE, INDICTMENT, INFORMATION, ISSUE, JUDGE, PLEAS and PLEADING. See also VENUE.

TRIANGLE, } Fr. *triangle*, *triangulaire*; It. *triangolo*; Sp. *triangulo*; Lat. *triangulus*.
TRIANGLED, }
TRIANGULAR, }
TRIANGULARLY, } A figure containing three
TRIANGULARITY. } angles.

Their sayle is made of mattes of sedges, square or *triangle* wise: and they saile as well right against the winde, as before the winde.

Hakluyt. Voyages, &c. vol. iii. p. 818. Thomas Candish.

The city it selfe in forme representeth a *triangular* figure, the sea washing the walles vpon two sides thereof, the other side faceth the continent of Thracia.

Id. Ib. vol. ii. p. 308. M. Richard Wrag.

Thus as these legions coast
On Danemore they are met, indifferent for this war;
Whereas three easy hills that stand *triangular*,
Small Edgcoat overlook.

Drayton. Poly-olbion, song 22.

The geometrician never consulteth as touching a *triangle* to wit, whether it hath three angles equall to twaine that be right, or no? because he knoweth assuredly that it hath, for all consultations are concerning things that alter and vary sometime after one sort, and otherwhiles after another.

Holland. Plutarch, fol. 56. *Of Morall Vertue*.

And after another manner likewise of composition, it [the number of nine] standeth of two *triangled* numbers, to wit, a senary, and a ternary, whereof both the one and the other is a perfect number.

Id. Ib. fol. 652. *Of Symposiaques*.

That the three angles of a *triangle* are equal to two right ones, is a truth as certain as any thing can be, and I think more evident than many of those propositions that go for principles.

Locke. Works, vol. i. fol. 30. *Of Human Understanding*, book i. ch. iv. sec. 22.

These bars stood all parallel to the ground, and their further ends, which stood *triangularly* and opening from each other at equal distances, like the fliers of our kitchen-jacks, were made exactly in the shape of the paw of some monstrous beast.

Dampier. Voyages, vol. i. ch. xv. p. 411.

We say, for instance, not only that certain figures are *triangular*, but we discourse of *triangularity*.

Bolingbroke. Works, vol. v. p. 226. *Of Human Knowledge*.

TRIANOPILES, in *Botany*, a genus so called by Fenzl, from *τρίαῖνα*, a trident, *πτελος*, a feather, in reference to the three plumose bristles of the perianth. It belongs to the class *Triandria*, order *Monogynia*, and the natural family of *Cyperaceæ*. Generic character: spikelets two-flowered; paleæ subdistich; bristles of perianth three, linear, plumosely ciliated, trifid at apex, the segments awn-formed and naked, the middle one the longest; stamens three; disk small, callous; ovarium terminated by a bifid style; caryopsis girded by the disk, dilated at the base of the style, mucronate.

Only a solitary species of this genus is known; it is an herb with the habit of *Carex pulicaris*. The culms are simple and leafy. The spikelets are crowded, terminal, and lateral, and spathaceously involucreted.

TRIAN-
THEMA.

TRIAS-
PIS.

TRIANTHEMA, in *Botany*, a genus so called by Sauvages, from the Greek *τρεις*, *three*, and *ἄνθος*, *a flower*, on account of the flowers being generally disposed by threes. It belongs to the class *Pent-Decandria*, order *Monogynia*, and the natural family of *Portulacæ*. Generic character: calyx of five-persistent sepals, which are connected at their bases; they are coloured inside, and mucronate below their apices; petals none; stamens five or ten, rarely more, distinct, and inserted in the bottom of the calyx; anthers reniform; styles or stigmas one or two, filiform, rarely three; capsule dehiscing transversely below the middle, the upper part, which separates like a lid, is hollow, and contains a seminiferous cell; therefore both cells are simple or of two divisions, containing each one or few seeds.

A genus nearly allied to *Portulaca*, consisting of nine known species, natives of Arabia, East Indies, Mexico, and the Cape of Good Hope; they are more or less fleshy herbs or under shrubs, bearing opposite, quite entire petiolate leaves; the petioles dilated into stipula-formed membranes on both sides. The flowers are axillary and sessile, and usually three together.

TRIAS, in *Botany*, a genus so called by Lindley, from the Greek *τριας*, *a triad*. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ-Malaxideæ*. Generic character: sepals equal, ovate, spreading, connate at the base, almost free from the foot of the column; petals small, erect; labelum small, undivided, articulated into the bent column, and having its base drawn out, and somewhat toothed on the sides; column short, semiterete, marginate, free; anthers two-celled, drawn out into a petaloid, cuneated, emarginate membrane at the top; pollen masses four, the two inner ones smaller.

This genus consists of two known species, natives of the East Indies: they are small, pseudo-bulbous herbs; the bulbs are roundish, glabrous, and one-leaved, and form a dense tuft. The leaves are small and coriaceous, and veinless. The peduncles are erect, radical, one-flowered, and shorter than the leaves. The flowers are rather large, of a greenish-brown colour, open, and in the form of a triangle.

TRIASPIS, in *Botany*, a genus so called by Burckell, from *τρεις*, *three*, and *ἀσπίς*, *a buckler*, on account of the wings of the samara being three, and saucer-shaped. It belongs to the class *Decandria*, order *Trigynia*, and the natural family of *Malpighiaceæ*. Generic character: calyx short, five-parted, glandless; petals longer than the calyx, unequal, unguiculate, fringed; stamens ten, unequal, joined together, and with the style of the ovary at the base; anthers glabrous; ovaria three, each expanded into a wing on both sides, hence forming a six-winged fruit, which is pilose, and seated on a short stipe; cells containing one pendulous ovulum each; styles three, glabrous, long, slender, acute at apex, and somewhat dilated into a ligula, which is stigmatose beneath; samaræ three, or fewer by abortion, adhering to the axis, winged on the margin; indehiscent, one-seeded, and the wings saucer-shaped, sometimes interrupted at top, usually crested along the middle on the back; seed inverted.

This genus consists of several species; they are shrubs indigenous to the tropical parts of Asia, and the south of Africa. The leaves are opposite, rarely somewhat alternate, petiolate, quite entire, glabrous, or pilose, exstipulate. The racemes or corymbs are axillary, and

few-flowered or terminal, and form many-flowered panicles, in consequence of the abortion of the upper leaves. The flowers are rose-coloured.

TRIATHERA, in *Botany*, a genus so named by Desveaux, from *τρεις*, *three*, and *ἀθήρ*, *an awn*, on account of the trifid lower palea. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: spike solitary, simple, the rachis hardly articulated; spikelets sessile, alternate, distich, distant, two-flowered, and articulated with the rachis, lower flower sessile, hermaphrodite, upper one on a short pedicel, tabescent, reduced to three long scabrous, straight awns; glumes two, one-nerved, keeled, ovate-lanceolate, acuminate, upper one the longest, and contiguous to the rachis; paleæ two, lower one herbaceous, oblong-lanceolate, trifid at apex, concave, three-nerved, the segments subulate; upper palea lanceolate, bicarinate, bifid at apex; stamens three; ovary elongated, glabrous; styles two, terminal; stigmas plumose, from simple hairs; scales two, fleshy, subdolabriform, glabrous; caryopsis unknown.

One species is known, *T. Americana*, a native of Hispaniola; it is much branched grass, with involute, setaceous, stiff leaves, the sheaths of which are pilose at top. This genus hardly differs from *Eutriana*, unless in the inflorescence.

TRIBE, } Fr. *tribu*, *tribu*; It. *tribo*, *tribu*; Sp. *tribu*; Lat. *tribus*, so called (Varro) because the Roman land was at first divided into *three* parts; applied generally to—

A portion, a division; of people into districts; in races or families; of animals or vegetables, into classes or orders.

To *tribe*, to class, or arrange in classes.

Of whom as afterwarde befel
The *tribus* twelfe of Israel
Engendred were, and ben the same,
That of hebrewes tho hadden name.

Gower. *Conf. Am.*, book viii. p. 250.

When now the spials for the promis'd soil,
For the twelve *tribes* that twelve in number went,
Having discover'd forty days with toil,
Safely return'd as happily they went.

Drayton. *Moses his Birth and Miracles*, book iii.

Our fowl, fish, and quadrupeds, are well *tribed* by Mr. Wilughby and Mr. Ray.

Nicolson. *English History. Lib.* (edition 1696,) p. 19.

By thee the various vegetative *tribes*,
Wrapt in a filmy net, and clad with leaves,
Draw the live ether, and imbibe the dew.

Thomson. *Spring*.

Among those councils, let not mine be vain,
In *tribes* and nations to divide thy train;
His separate troops let every leader call,
Each strengthen each, and all encourage all.

Pope. *Homer. Iliad*, book ii.

The subject is a sceptre, which could in no sense, not even in the sense of a *tribal* sceptre, be in possession of Judah before he became a *tribe*.

Warburton. *Works*, vol. v. p. 103. *The Divine Legation*, book v. sec. 3.

The book of Numbers informs us (we see) that even the *tribal* sceptre was established long after the death of Jacob.

Id. *Ib.* p. 105.

TRIBONANTHES, in *Botany*, a genus so called by Endlicher, from *τριβων*, *a worn gown*, and *ανθος*, *a flower*. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Irideæ*. Generic character: perianth clothed with cobwebbed wool, having the tube connate to the base of the ovary, but

TRIAS-
PIS.

TRIBON-
ANTHES.

TRIBON- produced above the ovarium; limb six-parted, with ANTHES. spreading segments; corona in the throat petaloid, of six segments, which are opposite the segments of the perianth; they are exserted, cuneated, and trifid, and the middle lobe of each bears an anther; anthers linear-sagittate; ovarium three-celled, ovate numerous, attached to the placentas, which rise from the central column; style cylindrical, dilated at the base; stigma fusiform, shortly three-lobed; fruit unknown.

This genus consists only of a single known species; it is an herb, a native of the South-West coast of New Holland. The root consists of fascicles of ovate tubers. The stems are simple, woolly, and few-leaved at top. The leaves are flat at their bases and cylindrical at their tops, and sheathed at the base. The flowers are terminal, and are disposed in terminal bracteate heads.

TRIBULATION, Fr. *tribulation*; Lat. of the lower ages, *tribulatio* from *tribul-are*, to trouble. See TROUBLE.

Vexation, affliction, distress.

Ion did ay trespass, men fond in him enchesoun,
He lyued in wo & strife, and in *tribulacioun*.

R. Brunne, p. 206.

Preye ye that youre fleynge be not maad in wynter, or in the sabotis, for thanne schal be greet *tribulacioun* what manere hath not be fro the bigynnyng of the world til now, neither schal be maad.

Wiclif. Matthew, ch. xxiv.

But praye that youre flyght be not in the wynter, nether on the Saboth daye. For then shal be great *tribulacion*, suche as was not from the begynnyng of the world to this time, nor shal be.

Bible, Anno 1551.

And whan that I have told thee forth my tale
Of *tribulation* in mariage,
Of which I am expert in all min age,
(This is to sayn, myself hath ben the whippe)
Than maiest thou chesen wheder thou wolt sippe
Of thilke tonne that I shal abroche.

Chaucer. The Wif of Bathes Prologue, ver. 5753.

Edwyn, whan this tokyn is brought to the, than haue thou mynde of this tyme of *trybulacion*, and of this promesse y^t thou hast made.

Fabyan. Chronicle, ch. 128. p. 110.

And Christ foretold to us *tribulation*, and promised only that he would be with us in *tribulation*, that he would give us his spirit to assist us at tribunals, and his grace to despise the world, and to contemn riches, and boldness to confess every article of the Christian faith in the face of armies and armed tyrants.

Taylor. vol. ii. Sermon 9, fol. 87.

TRIBULUS, in Botany, a genus so called by Tournefort, from the Greek *τριεις*, *three*, and *βολος*, *a point*, on account of each carpel being armed with three and even with four prickly points. The English appellation of the genus *Caltrops* is from the form of the fruit, which resembles the machines which are cast in the way to obstruct the enemy's cavalry. It belongs to the class *Decandria*, order *Monogynia*, and the natural family of *Zygophylleæ*. Generic character: calyx five-parted, generally persistent; petals five, spreading; stamens ten; style short; stigma broad; carpels four or five, adhering to the central axis, triangular, indehiscent, hard, covered with tubercles or spines outside, transversely many-celled inside, rarely one-celled, with a solitary, horizontal, exalbuminous seed in each cell; cotyledons thickish.

A genus consisting of about ten species, all diffuse, trailing, annual, or perennial herbs, natives of sandy, hot places of Africa, Asia, and America. The leaves are abruptly pinnate, with membranous stipulas. The pedicels are axillary, solitary, and one-flowered. The flowers generally yellow, rarely whitish. *T. cistoides*, a

native of the West Indies, is one of the prettiest of the species, and where it is called *Turkey blossom*, because it is thought to heighten the flavour of fowls, which are observed to feed much upon the flowers. *T. terrestris* is a troublesome weed in arable land in the south of Europe, where it is called by the French *La Croix de chevalier*.

TRI'BUNE, } Fr. *tribun*; It. *tribuno*; Sp. }
TRIBU'NAL, } *tribuno*; Lat. *tribunus*; one who }
TRI'BUNATE, } (originally) was placed over a }
TRIBUNI'TIAL, } tribe (*tribus*). Tribunal, locus, }
TRIBUNI'TIOUS, } *sedes*, the place, the seat of the }
TRI'BUNESHIP. } *tribune*. And then generally,— }
The seat of justice or judgment; a court of justice.

And whanne a covenable day was fallen Erroude in his birthe day made a soper to the princis and *tribunes* and to the grettist of Galilee.

Wiclif. Mark, ch. vi.

The king sitteth vp aloft in a great hall, on a *tribunall* seat, and lower vnder him sit all his barons round about.

Hakluyt. Voyages, &c., vol. ii. p. 236. M. Cæsar Frederick.

And the vsurping of a few, as of the senators after the death of Tarquinius, and before the succession of the *tribunate*, and manifestly in the decemvirate, but more perniciously in the triumvirate of Cæsar, Crassus, and Pompeius.

Sir Thomas Smith. Common-wealth, book i. ch. iv. p. 4.

Curio that yeere, wherein he did defile
Diuine, and human lawes, striu'd to exile
By *tribunitiall* law from Libyas throne
This king, and barre him his forefathers crowne.

May. Lucan. Pharsalia, book iv.

The scarlet judge might now set up his mule,
With neighing steeds the streets so pester'd are;
For where he wont in Westminster to rule,
On his *tribunal* sate the man of war.

Drayton. The Battle of Agincourt.

And let them not come in multitudes, or in a *tribunitious* manner; for that is, to clamour counsels, not to enforme them.

Bacon. Essays. Essay 20. Of Counsel.

They thinke also, that the *tribunate* was an impeachment, inhibition, and restraint of a magistracy, rather than a magistracy it selfe: for all the authority and power of the *tribune* lay in opposing himselfe, and crossing the jurisdiction of other magistrates, and in diminishing or repressing their excessive and licentious power.

Holland. Plutarch, fol. 718. Roman Questions.

But to say a truth, this *tribuneship* having taken originally the first beginning from the common people is great and mighty in regard that it is popular.

Id. Ib.

He plainly touches at the office of the high priesthood, with which Augustus was invested; and which made his person more sacred and inviolable, than even the *tribunitial* power.

Dryden. Dedication to Æneis.

This, goddess, this to his remembrance call,
Embrace his knees, at his *tribunal* fall.

Pope. Homer. Iliad, book i.

Such was the erection of that sacred, *tribunitial* power, whose prerogatives served to check the usurpations of the magistrates, and who could arrest with one word even the proceedings of the senate.

Lord Bolingbroke. Works, vol. ii. p. 130. Remarks on the History of England.

The *tribunes*, when they had a mind to animate the people against the rich and the great, put them in mind of the ancient divisions of lands, and represented that law which restricted this sort of private property as the fundamental law of the republic.

Smith. Wealth of Nations, book iv. ch. vii. p. 388.

TRIBUNE, properly the officer or chief of a tribe, was a title given to a variety of functionaries in the Roman republic. The most important of them were the *Tribuni Plebis*, or tribunes of the people, whose office, as is remarked by Cicero, bore a considerable analogy

TRI-
BUNE.

to that of the Ephori of Lacedæmon. They were first appointed about A. U. C. 262, on occasion of the secession of the plebeians to the Mons Sacer, as guardians of the rights of the people against the oppression and encroachments of the patrician order. Their number, originally two, was gradually increased to ten: they were first chosen in the *comitia centuriata*, and afterwards in the *comitia tributa*. The tribunes had originally no active functions, either legislative or executive; but they had the important privilege of putting a *velo* upon the proceedings of the senate; so that no law could pass without their concurrence. In process of time they extended this power so far as to prevent the raising of revenue, the levying of troops, and the holding of judicial assemblies; so that it is difficult to conceive how the machinery of the state could be carried on, while subject to such an obstruction. They had, however, no authority, except in the city of Rome, and for a short distance around it, unless specially deputed by the senate or the people. They could only be chosen from the plebeian order, or from patricians formally adopted by a plebeian family. Their persons were inviolable, and it was forbidden to interrupt them while speaking in public. They had the power of arresting judgments about to be pronounced upon prisoners, and of setting them at liberty; and in order to denote this office of being protectors of the people, their houses were directed to be constantly kept open to suppliants, and they were forbidden to absent themselves from the city more than a day and a night consecutively. It is easy to conceive that they often made their authority a cloak for their own ambition, or an engine of the ambition of others, and that great troubles and disorders were caused by the abuses committed in the exercise of their irresponsible power. They were greatly depressed by Sylla, who reduced their privileges to the simple right of protesting against legislative measures. Their authority was, in a great measure, restored by Cotta and Pompey; and Julius Cæsar skilfully made it subservient to his own designs during the civil war. Under Augustus and his successors the power of the tribunes became virtually extinct; but the form of electing them was kept up for a time, in order to amuse the people with a show of liberty. No mention appears to be made of them by Roman historians subsequent to Constantine the Great.

Besides the tribunes of the people, there were the *tribuni ærarii*, or paymasters-general of the forces; the *tribunus celerum*, or commander of the body-guards under the kings, an office afterwards superseded by that of the Master of the Horse; the *tribuni militum*, who commanded a portion of a legion, and united, in some degree, the functions of a colonel with those of a commissary; the *tribunus voluptatum*, or master of the revels, under some of the emperors, and various others, whose offices are described by the writers on Roman antiquities. The *tribuni militares consulari potestate* were, in fact, chief commanders of armies, and must be carefully distinguished from the mere *tribuni militum*. Their office originated partly in the struggles of the plebeian order for a participation of power, and partly in the extended conquests of the Romans, which created a necessity for an increase of generals. Their number varied according to circumstances, and they were chosen both from the patrician and plebeian orders. During a number of years, the tribunes exercised the authority of chief magistrates, and were in reality consuls under

another name. An account of the circumstances of their first appointment, and of the vicissitudes they underwent, will be found in the fourth and fifth books of Livy's *History*.

TRI'BUTE, } Fr. *tribut*; It. *tributo*; Sp. *tri-*
TRI'BUTARY, *adj.* } *buto*; Lat. *tributum*, so called a
TRI'BUTARY, *n.* } *tribubus*, because this money, re-
quired from the people, was exacted through the *tribes* (*tributim*), in proportion to the estimated value of the estate or property of each. See ATTRIBUTE, CONTRIBUTE, &c.

Tribute, sum paid, portion paid; tax, assessment, impost, subsidy; a token or acknowledgment of subordination. *Tributary*,—

Subject to *tribute*; subject, subordinate.

As wide as þe worlde is. wonyþ þer none
Bote under *tribitt* and taillage. as tikes and cheorles.
Piers Plouhman. Vision, p. 368.

And thei begunnen to accuse him: and seiden, we han founden this turnynge upsodoun oure folk; and forbedynge *tributis* to be goun to the Emperour and saynge that himsilf is Crist a kyng. .
Wiclif. Luke, ch. xxiii.

And they began to accuse hym sayinge: we haue founde this felow peruertynge the people, and forbyddyng to paye *tribute* to Cesar: saying, that he is Christ a king. *Bible, Anno 1551.*

Than is there nought, but yeeld thee,
Or yeue hem *tribute* douteles,
And hold it of hem to have pees.
Chaucer. The Romant of the Rose, p. 217.

Up rose he Julius the conquerour,
That wan all the occident, by lond and see,
By strengthe of hond, or elles by tretee,
And unto Rome made hem *tributarie*.
Id. The Monkes Tale, ver. 14590.

To his empire, and to his lawes,
As who saith, all in thilke dawes
Were obeisant, and *tribute* bere,
As though he god of erthe were.
Gower. Conf. Am., book i. p. 39.

Thenceforth this land was *tributarie* made
T' ambitious Rome, and did their rule obay,
Till Arthur all that reckoning defrayd.
Spenser. Faerie Queene, book ii. can. 10.

For having divided the citie into foure wards, according to the quarters and hils; those parts which were inhabited, he called tribes, of the word *tribute* (as I suppose), for he it was that devised and brought up the manner of equall contribution and payment, proportionably to the assesment and rate of mens goods.
Holland. Livy, p. 31.

As such we lov'd, admir'd, almost ador'd,
Gave all the *tribute* mortals could afford,
Perhaps we gave so much, the powers above
Grew angry at our superstitious love.
Dryden. On the Death of a Young Gentleman.

The two great empires of the world I know,
That of Peru, and this of Mexico;
And since the earth none larger does afford,
This Charles is some poor *tributary* lord.
Id. The Indian Emperour, act i. sc. 2.

But let not all the gold which Tagus hides,
And pays the seas in *tributary* tides,
Be bribe sufficient to corrupt the breast;
Or violate with dreams thy peaceful rest.
Id. Juvenal. Satire 3.

But whether 'or no they are *tributaries* to the Russians, we could never find out. There was some reason to think that they are.
Cook. Voyages, &c., vol. vi. book vi. ch. xi. p. 469.

TRIBUTION, Lat. *tributio* from *tribuere*, to pay.

I shall tell thee (quod she) *tribucion* of thy good willes, to haue of thy Margarite perle, it beareth not the name of mede, but onely of good grace, and that cometh not of thy desert, but of thy Margarites goodnesse, and vertue alone.

Chaucer. The Testament of Love, book iii. p. 503.

TRI-
BUNE.
—
TRIBU-
TION.

TRICALYSIA, in *Botany*, a genus so named by A. Richard, from *τρεις*, *three*, and *καλυσ*, *a calyx*. It belongs to the class *Penta-Hexandria*, order *Monogynia*, and the natural family of *Rubiaceæ*. Generic character: limb of calyx five-six toothed; corolla with a shortish tube, a naked throat, and a five-six parted limb; segments narrow, spreading; stamens five or six, inserted in the throat of the corolla, exserted, with short filaments and linear anthers; stigmas two, linear, shorter, somewhat recurved, exserted; ovary two-celled; cells containing two collateral ovula each.

A single species is only known of this genus, *T. Angolensis*, a native of Angola; it is a shrub, with opposite, linear, lanceolate leaves, joined by the broad, entire, acuminate stipulas. The flowers are downy, almost sessile, and crowded in the axils of the leaves.

TRICE, Fr. *trois*, *three*; in a *trice* or *thrice*, (*three-es.*)

In *three*—moments, minutes; or before you can say or tell *three*.

And when that he him moste auanteth,
That lorde, whiche vainglorie daunteth,
All sodenly, as who saith *treis*,
Where that he stode in his paleis.

Gower. *Conf. Am.* book i. p. 40.

What makes the waxen forme
To be of slender price?
But cause with force of fire it melts
And wasteth with a *trice*.

Turbervile. *To his Friend*, &c.

But faster than his horse the ladies flew,
And in a *trice* were vanish'd out of view.

Dryden. *The Wife of Bath's Tale*.

TRICENTRUM, in *Botany*, a genus so named by De Candolle, from the Greek *τρεις*, *three*, and *κεντρον*, *a spur*, on account of the connective of each anther being furnished with three spurs at the base. It belongs to the class *Octandria*, order *Monogynia*, and the natural family of *Melastomaceæ-Rhexiæ*. Generic character: calyx with an ovate tube and four narrow acute lobes, which usually end each in three bristles; petals four, oblong, or oval; stamens eight, glabrous; anthers linear, beaked, each opening by a single pore, having the connective furnished with three spurs each, two of which are above, and one behind; ovary free, not bristly at the apex; style filiform; capsule ovate, four-celled; seeds cochleate.

This genus, which is separated from *Rhexia*, consists of two known species; they are small South American shrubs, bearing solitary, rose-coloured flowers.

TRICERA, in *Botany*, a genus so named by Schreber, from the Greek *τρεις*, *three*, and *κερας*, *a horn*, on account of the three-horned capsule. It belongs to the class *Monoecia*, order *Tetrandria*, and the natural family of *Euphorbiaceæ*. Generic character: flowers monoecious; calyx four or five-parted; stamens inserted under the rudiment of a pistil; filaments broad, exserted; anthers bursting inwards, arched; styles three, thick, persistent, bipartite; capsule dehiscing at the three sides, tricocous; cocci two-seeded; seeds smooth, shining, black.

There are three species known of this genus. They are shrubs or trees, natives of tropical America. The flowers are racemose, the female ones single, terminal, sessile, encompassed by numerous male flowers, which stand on longish peduncles. The racemes and peduncles are bracteate. The genus differs principally from

Burus, in the structure of the leaves and disposition of the flowers.

TRICERASTES, in *Botany*, a genus so called by Presl from *τρεις*, *three*, and *κερας*, *a horn*, on account of the capsule being furnished with the three permanent styles. It belongs to the class *Triandria*, order *Trigynia*, and the natural family of *Datisceæ*. Generic character: calyx with an oblong, turbinate, trigonal tube, which is adnate to the ovary, and a small tridentate limb; corolla none; stamens three, inserted in the limb of the calyx, and alternating with its segments, with very short filaments, and extrorse, bilocular, narrow anthers; ovary one-celled, closed at the apex, with three parietal placentas; ovula numerous, horizontal; styles three, opposite the teeth of the calyx, bipartite, the lobes setaceous and stigmatose; capsule one-celled, three-valved at apex; seeds numerous, horizontal, with a membranous testa, which is striated longitudinally and dotted; cotyledons short, radicle elongated, centrifugal near the umbilicus.

Of this most singular genus only a single species is known; it is an erect, branched herb, a native of California. The leaves are alternate and ternate, and sharply serrated, the middle leaflet is the largest and is deeply pinnatifid. The flowers are axillary, sessile, glomerate, bractless, and green.

TRICEROS, in *Botany*, a genus so called by Loureiro, from *τρεις*, *three*, and *κερας*, *a horn*, on account of the berry being furnished with three horns at apex. It belongs to the class *Pentandria*, order *Trigynia*, and the natural family of *Burseriaceæ*. Generic character: calyx of five sepals persistent; sepals acute, spreading; corolla of five oblong spreading petals, which are longer than the calyx; stamens five, about equal in length to the calyx, capillary; anthers ovate; styles three, short, distant; stigmas simple; berry coriaceous, roundish at bottom, and three-horned at apex, three-celled; cells one-seeded; seeds roundish, acuminate.

A solitary species of this genus is known; it is a tree with spreading branches; a native of Cochin China. The leaves are impari-bipinnate, of two pairs; the leaflets are ovate, acuminate, serrated, hard. The racemes are nearly terminal, loose. The flowers are white and the berries small.

TRICHANTHERA, in *Botany*, a genus so called by Ehrenberg, from *τριχ*, *a hair*, and *ανθηρα*, *an anther*, on account of the bristly anthers. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Zygophylleæ-Spuria*. Generic character: calyx five-cleft; petals five, linear, hypogynous; stamens five, free; filaments flat; anthers setaceous; disk glandless; styles numerous, crowned by simple capitate stigmas; capsule ovate, stipitate, bluntly pentagonal, five-celled, five-valved, many-seeded; seeds naked, albuminous.

This singular genus consists of a single known species, *T. modesta*, a native of Arabia towards Mecca; it is a small slender annual herb, with alternate, stipulate, linear leaves, which are toothed at their apices. Flowers drooping on long jointed peduncles, having the petals twisted in aestivation.

TRICHASMA, in *Botany*, a genus so called by Walpers, probably from *τρεις*, *three*, and *χασμα*, *an opening*. It belongs to the class *Monadelphia*, order *Decandria*, and the natural family of *Leguminosæ-Papilionaceæ*. Generic character: calyx bilabiate bipartite, superior lip bipartite, lower one tridentate; corolla papilion-

TRICERA.
TRI-
CHASMA.

TRI-
CHASMA.TRI-
CHE-
CHUS.

ceous, having the petals equal in length; vexillum broadly ovate, rather orbicular; wings oval-elliptic, obtuse; keel of two petals arched, obtuse; stamens ten, monadelphous, with usually an entire sheath, but sometimes the vexillar filament is almost distinct; ovarium linear, six or ten-ovulate; style filiform; stigma capitate; legume compressed, linear, chartaceous, many-seeded.

A genus separated from *Cytisus*, and consists of two known species, *T. tomentosa*, the *Cytisus tomentosus* of Andrews, and *T. Calycina*, the *Cytisus Calycinus* of Bieberstein. They are small shrubs, the first a native of the Cape of Good Hope, and the second of Caucasus. The leaves are trifoliate and bistipulate. The flowers are yellow and disposed in axillary umbellate racemes.

TRICHAURUS, in *Botany*, a genus so named by Arnott, from the Greek *τριχ*, a hair, and *ουρα*, a tail, on account of the hairy beaks of the stigmas. It belongs to the class *Decandria*, order *Trigynia*, and the natural family of *Tamariscineæ*. Generic character: sepals five; petals five, rather unequal; stamens ten, alternate ones shorter, inserted between and alternating with the teeth of the torus; filaments distinct, not connected by a membrane; torus fleshy, cup-shaped, surrounding the base of the ovarium with as many teeth on its margin as there are stamens; styles three, rostrate; beaks straight, flattened, beset with long spreading hairs.

This remarkable genus consists of a single known species, *T. ericoides*, the *Myricaria vaginata* of Desvieux, a native of the Indian Peninsula. The young leaves are sheathing. The corollas and capsules are larger in this than in any other genus of the same natural order.

TRICHECHUS, from the Greek *τριχ*, hair, and *εχω*, I have, Lin.; *Walrus*, Pen. In *Zoology*, a genus of animals belonging to the tribe *Amphibia*, family *Carnivora*, order *Sarcophaga*, class *Mammalia*.

Generic character. Muzzle obtuse, and upper lip cleft; in the upper jaw four incisive teeth, the middle two very small and deciduous, the outer larger, cylindrical and obliquely truncated inwards; cuspid teeth large, projecting downwards, cylindrical, pointed, slightly curved, and their inner edge grooved longitudinally; in the lower jaw, neither incisive nor cuspid teeth; molar, ten in the upper and eight in the lower jaw, short, cylindrical, truncated; no auricles; body lengthy, fat, and tapering towards the tail, which is little more than a fold of skin; feet five-toed, the toes connected with membrane, and forming paddles or fins; on the fore feet the inner toe or thumb is the longest, on the hind, the inner and outer are much longer than the intermediate ones, and both hind paddles are directed backwards, and approximated; claws short; four ventral teats.

The general form of the Walrus, of which but a single species is known, corresponds to that of the seals, excepting as to the head and teeth. The alveolar cavities of the upper jaw are large to receive the large tusks, and thus render the muzzle large and full, whilst the nostrils, instead of being placed at its tip, are directed upwards, and the lower jaw is compressed and narrow, so as to be received between the tusks, projecting about two inches beyond the upper. There are but two upper incisive teeth, which greatly resemble molar teeth in shape, and in young animals there is also a still smaller tooth on each side, between these

and the cuspid teeth; the tusks are large, and project about two feet from the jaw; they are of the finest ivory; the lower jaw has neither incisive nor cuspid teeth; the molar teeth are four on a side in either jaw, cylindrical, short, and truncated obliquely; in young animals there is sometimes a fifth.

T. Rosmarus, Lin.; *la Vache Marine*, *le Cheval Marin*, Buff.; *Arctic Walrus*, Pen. Usually from ten to twelve feet, but occasionally as much as eighteen to twenty feet in length, and from ten to twelve in girth; the head roundish and obtuse, the muzzle rounded and cleft, forming as it were two globular lobes; nostrils semilunar; eyes small, fiery, and sunken; ears only minute apertures far back on the head; mouth very small and the lips thick, the latter beset with transverse rows of transparent bristles, as thick as straws, and curving downwards; the neck is very short; the body full in the middle and tapering towards the tail; the legs very short, the hind ones directed backwards and approximated; all are five-toed, and connected together with skin so as to form fins; the inner front toe is the longest, but posteriorly the inner and outer are longest, and the intermediate very short; the hind feet or fins are the largest. The whole animal is enveloped in a thick wrinkled hide, thickest about the neck, and is covered with short hair, mouse-coloured, reddish or grey. The Walrus, or Morse, as it is sometimes called, is gregarious, living occasionally in flocks of thousands. They are very timid, and avoid the haunts of man, living almost entirely upon ice islands, where they sleep, as also indeed even in the water. One great use of their tusks is to enable them to hook on to the edge of the ice, and with the aid of their fore-fins to scramble on to its surface. They are monogamous, couple in June, and early in the following spring bring forth one, and rarely two, young ones. They feed on molluscs and also on sea-weed. They are harmless, except provoked, but then, especially if wounded, are very fierce, and will even attack boats, endeavouring to get over the gunwale by means of their tusks. They are spread generally throughout the Arctic seas, and Pennant says, in his time were found about the Magdalene Islands in the Gulf of St. Lawrence, between 47° and 48° North lat., but not farther south. Martens says they live principally about Spitzbergen, and that he never saw them on floating ice; they herd together like swine, but have always a sentinel on watch, who, if disturbed, rouses its neighbours by striking with its teeth. Zörgdrager states that they visit Greenland in hot weather, in company with the seals, and in flocks of a hundred or more, and that they remain here some days, till hunger compels them to return to the ice. Steller observed them between Asia and America, North of Kamtschatka; and Parry, in his second voyage to the North Pole, met with them in Hudson's Bay, in 64° North lat. and 75° West long. It is a curious circumstance that Captain Ross did not see a single Walrus during the whole of his expedition. They are hunted for the sake of their oil, skin, and ivory. Of the fisheries carried on at the Magdalene Islands, an interesting account may be found in the *Philosophical Transactions*, vol. lxx., from the pen of Lord Shuldharn.

See Cuvier, *Règne Animal*; Pennant's *Arctic Zoology*; Oken's *Allgemeine Naturgeschichte*; Parry's *Second Voyage to the North Pole*.

TRICHIA, in *Botany*, a genus so called by Haller, from the Greek *τριχ*, a hair; on account of the

TRI-
CHE-
CHUS.TRI-
CHIA.

TRICHIA. densely interwoven elastic hairs. It belongs to the class *Cryptogamia*, and order *Fungi*. Generic character: peridium simple, persistent, bursting irregularly; capillitium densely interwoven, elastic.

TRICHIURUS.

Eight British species of this genus are known to botanists; they are pear-shaped, turbinate, or roundish plants, of a blackish, red, bay, vermilion, clay-coloured, yellow, or tan colour, growing on rotten wood; and one species on the scales of old cones.

TRICHILIA, in *Botany*, a genus so named by Linnaeus, from the Greek *τριχα*, by *threes*, on account of the stigma being three-lobed, and the capsule generally three-valved and three-celled. It belongs to the class *Octo-Decandria*, order *Monogynia*, or the class *Monadelphia*, order *Octo-Decandria*, and the natural family of *Meliaceae-Trichilieae*. Generic character: calyx four or five-toothed or lobed: petals four or five, connected at the base: stamens eight or ten, flat, sometimes distinct, and sometimes closely joined into a tube, bearing the anthers at the throat, or between the teeth of the tube; style terminated by a capitate, three-lobed stigma; capsule three-valved, three-celled, rarely two-valved and two-celled; each valve bearing a dissepiment in the middle, and each cell containing one or two seeds; seeds arillate; cotyledons thick.

Composed principally of trees, seldom shrubs, with alternate, usually impari-pinnate or trifoliate, seldom simple, leaves, and axillary racemes or panicles of white flowers, which are sometimes disposed into crowded sessile heads. The species are principally natives of tropical America, but a few are found in the East Indies, one in New Zealand, and one in New Caledonia.

TRICHINIUM, in *Botany*, a genus so called by R. Brown, from the Greek *τριχινος*, made of *hair*, in reference to the hairy or villous perianth. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Amarantaceae*. Generic character: perianth five-parted, the segments linear; stamens five, connate at the base, toothless; anthers two-celled; style undivided; stigma capitate; utricle valveless, one-seeded, inclosed in the connivent base of the perianth, whose segments are spreading and plumose.

A genus nearly allied to *Amaranthus* and *Gomphrena*, and consists of six known species, natives of New Holland and Van Diemen's Land; they are herbs, with generally perennial roots, and alternate leaves. The flowers are disposed in terminal heads or spikes, each flower furnished with three scarious, shining bracteas. The hairs of the perianth are at first adpressed, but are afterwards spreading.

TRICHIURUS, from the Greek *τριχ*, a *hair*, and *ουρα*, a *tail*, Lin.; *Hair-tail*, Mitchell. In *Zoology*, a genus of animals belonging to the family *Tenioides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Head pointed, and lower jaw projecting beyond the upper; teeth strong, pointed, and cutting; body scaleless, lengthy, compressed, riband-shaped, and the tail prolonged into a slender compressed thread; dorsal fin extending along the greater part of the ridge of the back; instead of the anal fin a series of minute spines are placed on the under part of the tail; ventral and caudal fins deficient; branchial rays seven.

This genus has great resemblance to the *Lepidopi*, from which, however, they are distinguished by the absence of the scales representing the ventral fins, by the spines in place of anal fins, and by the entire want

of a caudal fin, the tail itself tapering off to form a very delicate hair-like filament, whence its generic title.

T. Lepturus, Lin.; *le Trichiure d'Atlantique*, Cuv.; *Silvery Hair-tail*, Yarr. From two to three feet in length, and about one-sixteenth of this in depth, which it retains to the middle of the body, whence it begins to diminish, and the last fifth of the entire length resembles a narrow and compressed lash; the forehead and upper part of the muzzle are flat, and the sides of the head vertical; the eyes are placed rather behind the middle of the head, and the gape reaches back opposite their anterior margin; compressed, cutting, and pointed teeth on the intermaxillary bones, and on the lower jaw; the edge of each palatine bone is armed with numerous very delicate teeth, but the vomer has none; the jaws are not protractile, but the tongue is oblong, pointed, smooth, and free; the pre-opercule is nearly semicircular; the opercule and subopercule separated by a horizontal line, and the latter posteriorly forming a point, consisting of fibres which overspread the base of the pectoral fin; when at rest, the branches of the lower jaw are apposed, and conceal the branchiostegous membrane, which, when they are separated, is seen to be narrow; the pectoral fins are small and slightly falcular; the dorsal fin passes from the edge of the pre-opercule along six-sevenths of the whole length, and is supported by between a hundred and thirty and forty spines, of which the hindmost are very minute; behind the vent a series of one hundred and eighteen little spines occupy the place of the anal fin. The general colour is very brilliant silvery; the fins yellowish-grey, and the edge of the dorsal dotted with blackish. This species is described by Cuvier as generally distributed throughout the Atlantic, being found along the western coast of America, as well upon the warm coast of the West Indies and Brazil, as on the more temperate climate of New York; and it has also been taken on the Senegal coast. Two specimens of this genus have been found dead upon the shores of the Moray Firth, and been described in the *Linnaean Transactions*, vol. xi., by Mr. Hoy. One of them Dr. Flemming thinks belongs to this species, but Yarrell doubts it, as the barring on the sides does not occur in *T. Lepturus*, and the latter does not attain the gigantic length of fourteen and a half feet, which Hoy's specimen must at least have been. He therefore thinks it probably a new species; and that the other specimen described, if not the Deal-fish of the Orcades, *Gymnetrus Arcticus*, is a new genus.

T. Haumela, Cuv.; *Clupea Haum.*, Forsk. Is very similar to the last species, but shorter. It is found in the Indian seas, and called *Sawala* at Vizagapatam.

T. Savala, Cuv., is still shorter, and has the eyes extremely small; the number of dorsal rays does not exceed a hundred and fifteen, and those beneath the tail eighty-two. It is found at Pondicherry, and called *Na-Savallé*. Dussumier says that both this and the last species are rare in February, but become abundant in April and May, when they are caught, and preserved by salting.

See Cuvier and Valenciennes, *Histoire Naturelle des Poissons*; Yarrell's *History of British Fishes*.

TRICHIUS, in *Zoology*, a genus of *Lamellicorn Pentamerous Coleopterous Insects*.

Generic character. Antennae short, terminating in a trilamellated club; upper lip hidden beneath the clypeus; mandibles submembranous; maxillae lengthy, mem-

TRICHIURUS.

TRICHIUS.

TRI-
CHIUS. branous, and having their tip fimbriated with hairs; body oval, depressed; thorax roundish; elytra simple at their base.

TRICHO-
CEPHA-
LUS. This genus, founded by Fabricius, has great resemblance to the *Cetonia*, but is distinguished from it principally by the absence of the triangular pieces on each side between the elytra and thorax. They are found on flowers according to Lamarck, but upon the ground according to Latreille. The former enumerates three species, all European, of which *T. Eremita*, Fabr., may be taken as the type; and the latter mentions four, dividing them into two sections, the first of which, containing Lamarck's, have two or three teeth on the outer side of the anterior legs, and the anus, in the female, without any point; and the second, in which the front legs have five teeth, and the anus of the female has a projecting horny point, hollowed above, with dentated edges, and serving as an ovipositor, as in *T. Hemipterus*, Fabric., and others which are North American.

TRICHOA, in *Botany*, a genus so called by Persoon, from the Greek *τριχος*, a hair, on account of the hair-like barren filaments both in the male and female flowers. It belongs to the class *Dioecia*, order *Hexandria*, and the natural family of *Menispermaceæ-Menispermæ*. Generic character: flowers dioecious; calyx of three sepals; petals three, coriaceous, villous, approximating to the middle, but reflexed at tops; male flower with six stamens, which are inserted into the disk, the three outer ones sterile, and alternating with the petals, the three central ones monadelphous and fertile; female flower with six sterile stamens, having the filaments bimaculate at their apices; carpels three, drupaceous, coriaceous, oblong, villous; seed biplicate.

This genus, which is nearly allied to *Cissampelos*, consists of two known species, both natives of South America; they are climbing shrubs, with alternate simple leaves, and axillary racemes or spikes of flowers.

TRICHOCENTRUM, in *Botany*, a genus so called by Poeppig, from the Greek *τριχος*, a hair, and *κεντρον*, a spur, on account of the hairy spur. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ-Vandææ*. Generic character: perianth spreading, free, equal; labellum sessile, connate with the base of the column, spurred, flat, two-lobed, lamellose at the base; column short, semiterete, thick, winged on both sides; anther two-celled, mutic; pollen masses two, complicate, with a cuneated caudicula, and a minute gland.

A genus nearly allied to *Æceolladum*, and consists of American stemless epiphytes; leaves flat or wanting. Flowers rising from the root. Perianth brownish-green; labellum white, yellow at the base, and red at the sides.

TRICHOCEPHALUS, in *Botany*, a genus so called by Brogniart, from the Greek *τριχος*, a hair, and *κεφαλη*, a head, on account of the hairy heads of flowers. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Rhamneæ*. Generic character: calyx having a short urceolate tube, which is adnate to the ovary at the base, but free from it at the apex, the limb composed of five long bristle-like segments; petals wanting, or bristle-like; stamens five; anthers kidney-shaped, one-celled; disk hardly distinct, lining the tube and segments of the calyx; ovary inferior, three-celled;

style short, crowned by a three-lobed stigma; fruit half inferior, trilocular; seeds propped each by a short fleshy funicle.

Composed of small heath-like shrubs, natives of the Cape of Good Hope, with fastigate downy branches. The lower surfaces of the leaves are villous, and the upper surfaces glabrous, with short petioles and convolute edges, and are either furnished with stipulas or destitute of them. The flowers are disposed in elongated or spherical, very downy, heads. The genus has been separated from *Phylla*, and consists of four known species.

TRICHOCEPHALUS, in *Zoology*, a genus of *Nematoid Entozoa*.

Generic character. Mouth terminal, rounded, so small as to be scarcely visible; body lengthy, cylindrical, tapering in front, almost to a hair, and sometimes furnished with spines, and very thick, and club-like posteriorly.

This genus, founded by Rudolphi, are met with in the intestines of man, of the sheep, hare, mouse, and also in one species of lizard. Eight or nine species are known, of which *T. Hominis* represents those with the anterior extremity unarmed, and *T. Echinatus*, such as have it spined.

TRICHOCERA, in *Zoology*, a genus of *Tipular Dipterous Insects*.

Generic character. Antennæ thread-like, somewhat bead-shaped, villous, or feathery; proboscis short; wings incumbent and horizontal; legs nearly equidistant; the anterior pair not attached near the neck.

This genus is formed by Lamarck, by uniting those of *Ceratopogon* and *Cecidomia*, of Latreille; they are distinguished from *Ctenophorus* by their horizontal wings, from *Tanytus* by the equal placing of their legs, and from *Psychodes* by their wings being incumbent. Lamarck enumerates four species, all European, of which *Ceratopogon Femoratus*, of Meigen, is the type.

TRICHOCERCA, in *Zoology*, a genus of *Vibratile Ciliated Polyps*.

Generic character. Body very small, oval, or oblong, truncated anteriorly, with a retractile, subciliated mouth, and a forked, sometimes also jointed, tail.

This genus, founded by Lamarck, resembles his *Furcocerca*, in the forking of the tail, but are distinguished by having a mouth and alimentary canal. They live in ditches or marshes. *Cercaria Vermicularis*, Mull., is the type of those with a simple tail, and *Trichoda Longicauda*, Mull., of those in which it is jointed.

TRICHOCEROS, in *Botany*, a genus so called by Bonpland and Kunth, from the Greek *τριχος*, a hair, and *κερας*, a horn, on account of the hairy processes on the sides of the column. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ-Vandææ*. Generic character: perianth spread out, regular; petals, sepals, and labellum almost similar; column short, villous, furnished with a petaloid, pilose process on each side; rostellum acuminate; anther one-celled on the back of the rostellum; pollen masses two, solid, obovate, with one elongated caudicula.

There are three species of the present genus known; they are pseudo-bulbous, caulescent epiphytes, natives of Quito, New Granada, and Peru. The scapes are sheathed and many-flowered, and the flowers are middle-sized.

TRICHO-
CEPHA-
LUS.

TRICHO-
CEROS.

TRICHOCLADUS, in *Botany*, a genus so named by Persoon, from the Greek *τριχ*, a hair, and *κλαδος*, a branch, on account of the branches being covered with stellate hairs. It belongs to the class *Dioecia*, order *Monandria*, and the natural family of *Hamamelideæ-Hamameleæ*. Generic character: flowers dioecious, scales paleaceous: male flower, calyx unknown; petal one, convolute; stamen one, near the scale and the petal; anther ovate, double-celled, from the connate filament: female flower, calyx unknown; petals wanting; ovarium villous; style one; capsule ovate, four-celled, four-valved; arillus ovate, villous from stellate dots.

This genus is nearly allied to *Hamamelis*, and consists of a single known species, *T. crinitus*, a native of the Cape of Good Hope; it is a shrub having the habit of a species of *Croton*, bearing opposite, petiolate, entire, acuminate leaves, and terminal heads of flowers. The flowers crowded on common receptacles.

TRICHOCLINE, in *Botany*, a genus so named by Cassini from the Greek *τριχ*, a hair, and *κλινη*, a bed, on account of the fringed receptacle. It belongs to the class *Syngenesia*, order *Superflua*, and the natural family of *Compositæ-Mutisiaceæ*. Generic character: head many-flowered, heterogamous, equal flowered, ray-formed; involucre campanulate, composed of flat, entire, subfoliaceous scales; receptacle fringed with hairs; corollas five-nerved, bilabiate, those of the disk with nearly equal lips, the outer lip tridentate, and the inner one bidentate; those of the ray with very unequal lips, the outer one tongue-shaped, largest and tridentate, the inner lip of two distinct or coadunate lobes; filaments of the disk flowers papillose, and the anthers with jagged tails, but those of the ray are abortive; branches of the styles equal at the base, short, obtuse, puberulous on the outside above in the flowers of the disk; achenia beakless, turbinate, papulose; pappus composed of many series of long, equal, serrated, paleaceous setæ.

A genus composed of perennial unarmed herbs, natives of South America, with thick rhizomatose roots, simple scape-formed stems, having the leaves crowded at the necks of the stems. Heads of flowers solitary on the stems; corollas copper-coloured.

TRICHOOLEA, in *Botany*, a genus so called by Nees ab Esenbeck, from the Greek *τριχ*, a hair, and *κολεος*, a sheath. It belongs to the class *Cryptogamia*, and order *Hepaticæ*. Generic character: fructification involucre rising from the forks of the stem, terete, coriaceous, with an irregular setaceous jagged border; ovaria numerous; calyptra none; sporangia stiff, four-valved even to the base; elaters deciduous, spores spherical, smooth: male flowers, antheridia globose, axillary in the upper side of the stems; filament short; involucral leaves similar to the cauline ones.

This genus, which is separated from *Jungermannia*, consists of small bog-creeping plants, with compound fronds.

TRICHODA, in *Zoology*, a genus of *Appendiculate Infusories*.

Generic character. Body very small, transparent, diversely-shaped, and tailless, covered entirely or partially with soft hairs or ciliæ.

This genus Lamarck has formed, by including all Muller's *Leucophiæ*, and the greater number of his *Trichodæ*: the former make up his first section with hairy bodies, of which *T. Confictor*, Lam. is the type, and the second include those in which it is only partially

covered, as *T. Grandinella*, Lam. He enumerates forty-seven species, some of which are found in fresh water, both running and stagnant, and others in sea-water.

TRICHODERMA, in *Botany*, a genus so named by Persoon, from the Greek *τριχ*, a hair, and *δερμα*, a skin, on account of the peridium being closely interwoven by branched flocci. It belongs to the class *Cryptogamia*, and order *Fungi*. Generic character: peridium more or less rounded, formed of loosely interwoven branched flocci, soon obliterated in the centre; sporidia dry, collected together in the centre, and forming a sort of disk.

Only a single British species of this genus is known, the *T. viride*, a plant very common on fallen trees, the peridium of which is villous and white, and the sporidia globose, of a dusky-green colour. It is the *Mucor lanifragus* of Bulliard.

TRICHODESMA, in *Botany*, a genus so called by R. Brown, from the Greek *τριχ*, a hair, and *δεσμος*, a bond, on account of the anthers being bound by hairs to each other. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Boraginæ-Rindereæ*. Generic character: corolla subrotate, with a naked throat, and a five-parted limb, the segments subulate at their apices; anthers exerted, each furnished with two rows of hairs on the back, and by which they are made to adhere to each other; awns subulate, twisted; nuts four, one-seeded, half immersed in the pits of a four-winged central column, closed at their bases.

Trichodesma is separated from *Borago*, and consists of four known species, three are natives of the East Indies, and one of the Cape of Good Hope; they are all erect, hispid, annual plants. The flowers are either blue or white, and are either solitary and axillary, or disposed in terminal racemes, always pedicellate.

TRICHODON, from the Greek *τριχ*, a hair, and *οδους*, a tooth, Steller. In *Zoology*, a genus of animals belonging to the family *Percoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Head flat above; mouth facing upwards; teeth very fine, and some horn-like; eyes lateral; preopercle armed with four or five large spines; opercle terminating in a flattened point; skin not scaly; ventral fins thoracic.

This genus is founded on a species discovered by Steller on the coast of Kamtschatka, and placed by Pallas among the *Trachini*, from which it is distinguished by the nearly equal length of its two dorsal fins, by its unarmed opercle, and by its spiny preopercle. The flattened head and vertical direction of the mouth assimilate it to the *Uranoscopi*, but its eyes are placed laterally instead of upwards. In its smooth skin and the thoracic position of its ventral fins it resembles the *Cotti*, but its cheeks are not plaited.

T. Stelleri, Cuv.; *Trachinus Tricodon*, Pall. From seven to ten inches in length: the general form of the body is compressed and flattened like a knife-blade, and the abdomen sharp; both jaws are furnished with cards of slender teeth pointed, curved backwards, and some rather long; the outer row, partially enveloped in skin, resemble horny substance, whence Steller's name; similar teeth beset the front of the vomer, but there are not any on the palatines or tongue; the pectoral fins are large, wing-shaped, as long as the head, and supported by twenty-three rays; the first dorsal commences some distance behind the head, and supported by four-

TRICHO-
DA.

TRICHO-
DON.

TRICHO-teen slender, pointed, and slightly flexible rays; it is
DON. separated by a space from the second, which is of about
equal length, but less deep, and furnished with seven-
teen rays; caudal fin crescentic, with thirteen perfect
and numerous decomposed rays; the whole skin is
smooth, having neither scales nor asperities, and the
lateral line is scarcely visible. Its colour above the
lateral line is leaden, and below it white, inclining to
golden behind; the first dorsal fin has one brown line
towards its edge, and another toward the base, but the
second has only a single line. It is well known to the
Kamtschatkans by the name *Uaschaktamysch*; its habits
resemble the Weevers, in hiding itself in the mud,
among the hollows of which the female spawns.

See Cuvier and Valenciennes, *Histoire Naturelle des Poissons*.

TRICHOGLOTTIS, in *Botany*, a genus so named
by Blume, from the Greek *τριχ*, a hair, and *γλωσσα*, a tongue. It belongs to the class *Gynandria*,
order *Monandria*, and the natural family of *Orchideæ-
Vandææ*. Generic character: perianth spreading, flat-
tened; lateral sepals under the labellum; labellum
connate with the edges of the column, saccate, horned
on both sides at the margin, with a fleshy undivided
limb; column erect, one-horned at the base; anther
two-celled; pollen masses two, globose, two-lobed, with
one linear caudicula, and a small hooked or peltate
gland.

Composed of branched rooting epiphytes, natives of
Java, with coriaceous or fleshy leaves. The peduncles
are lateral or opposite the leaves, very short, bearing one
or few flowers. Three species known.

TRICHOGYNE, in *Botany*, a genus named by Les-
sing, from *τριχ*, a hair, and *γυνή*, a female, on account
of the hairy styles. It belongs to the class *Syngenesia*,
order *Necessaria*, and the natural family of *Compositæ-
Senecionideæ*. Generic character: heads many-flowered,
heterogamous; corollas of all tubular; female, one or
two, filiform, in the ray situated between the bracteoles
or the inner scales of the involucre; margin of the
receptacle bracteolate, the rest naked; involucre dis-
posed in many series, loosely imbricated; style of the
female flower simple, somewhat dilated at apex, puber-
ulous; pappus of female flower wanting, that of the male
in one series with capillary bristles, which are plumose
at apex.

Eight species of this genus are known to botanists;
they are all under shrubs, natives of the Cape of Good
Hope. The leaves are sessile, scattered, membranous,
mutic, usually inflexed or involute, densely tomentose
above, but more glabrous beneath.

TRICHOLEPIS, in *Botany*, a genus so called by
De Candolle, from *τριχ*, a hair, and *λεπίς*, a scale, in
allusion to the hair-like points of the scales of the in-
volucre. It belongs to the class *Syngenesia*, order
Æqualis, and the natural family of *Compositæ-Cynarææ*.
Generic character: heads many-flowered, homogamous;
involucre hemispherical, composed of numerous im-
bricate, linear-setaceous scales, which are hair-formed
at their apices, subrecurved, unarmed, hooked a little;
receptacle having the fimbriæ cleft into slender bristles;
corollas five-cleft, almost regular; stamens with papil-
lously pilose filaments; anthers acutely appendiculate
at apex, with small sublacerated tails; stigmas two,
more or less diverging; achenia oblong, crowned each
by a lateral areola, which has a circular margin at its
apex; bristles of pappus sometimes densely scabrous in

many series, combined into a deciduous ring at the base,
sometimes paleaceous, and not joined into a ring, and at
other times wanting altogether.

Composed of smooth unarmed herbs, natives of India,
with sessile, undivided, lanceolate, or oblong, serrated
leaves. The heads are bractless, each with a conspicu-
ous hair-like involucre. The corollas are cream-
coloured or pale red. Five species are known to
botanists.

TRICHOMANES, in *Botany*, a genus so called by
Linnæus, from the Greek *τριχ*, a hair, and *μανος*,
soft, on account of the elongated hair-like receptacles of
the capsules. It belongs to the class *Cryptogamia*,
order *Filices*, and the natural family of *Filices-Polypo-
diaceæ*. Generic character: sori marginal; capsules
sessile, inserted in a common cylindrical receptacle within
a one-leaved suburceolate involucre; mouth gaping.

This genus consists of numerous species, natives of
most parts of the world. The surculi are creeping and
tomentose. The fronds are pellucid, areolate, rarely
undivided, usually pinnatifid, bipinnatifid, and tripin-
natifid; the segments one-nerved; involucre terminal;
receptacle of capsules for the most part exerted and
elongated. The *T. brevisetum* is a native of Britain, on
moist rocks, and is the *Hymenophyllum alatum* of
English botany, No. 1417.

TRICHONEMA, in *Botany*, a genus named by Ker,
from *τριχ*, a hair, and *νημα*, a filament, in allusion to
the hairy filaments. It belongs to the class *Triandria*,
order *Monogynia*, and the natural family of *Irideæ*.
Generic character: spathe more than half the length of
the corolla, of two lanceolate, entire, persistent valves;
perianth with a very short, funnel-shaped tube, and a
regular somewhat spreading limb; stamens three, rising
from the mouth of the tube, much shorter than the
limb, hairy, with large, oblong, converging anthers;
style longer than the stamens; stigmas three, equal,
spreading, slender, rather abrupt, divided to the base;
capsule roundish; seeds globose.

There are several species known; they are either
natives of Europe or the North of Africa. The *T.*
Bulbocodium is a native of Guernsey, the root of which
is edible. The genus has been separated from *Ixia*,
and consists of bulbous-rooted plants. The bulbs
are solid, covered with membranous coats. The stems
are simple or divided, naked or bearing a single leaf.
The flowers are solitary, variable, and changeable in
colour and size, always showy.

TRICHONOTUS, from the Greek *τριχ*, a hair, and
νωτος, a back, Schneid. In *Zoology*, a genus of animals
belonging to the family *Pharyngi-Labyrinthiformes*,
order *Acanthopterygii*, class *Pisces*.

Generic character. Head slightly depressed, and the
lower projecting beyond the upper jaw; villous teeth in
both jaws, on the front of the vomer, and on the pala-
tines; preopercule rounded, and its edge entire; the
opercule with the subopercule extends to the base of the
pectoral fin; gill aperture wide; body lengthy; bran-
chial rays seven; first two rays of the dorsal fin very
long, slender, and thread-like.

But a single species of this genus is known; in its
very lengthy body, and the proportional length of the
single dorsal and anal fins, it resembles the *Callionymi*.

T. Setiger, Schneid. Seven inches in length; muzzle
sharp: body slender and roundish; pectoral and ven-
tral fins pointed; the dorsal fin commences opposite
the former by two slender inarticulate filaments two-

TRICHO-
LEPIS

TRICHO-
NOTUS.

TRICHO- thirds the length of the body, the following five rays also
NOTUS. simple, but much shorter, and followed by forty-two
TRICHO- simple rays; anal fin has thirty-eight rays, of which the
PODIUM. first three are simple and inarticulate, but the others
 divided, branching and articulated; caudal fin large and
 pointed. General colour yellowish. Is a native of the
 Indian seas.

See Bloch's *Ichthyologia* à Schneider.

TRICHOON, in *Botany*, a genus so called by Roth, from the vernacular name of the plant. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: calyx two-valved, one-flowered; corolla two-valved, twice the size of the calyx, both naked; ovary girded by wool.

One species of this genus is alone known, *T. Karka*; it is a common grass in the East Indies, where it is used for thatch. The genus is very nearly allied to *Saccharum*.

TRICHOPETALUM, in *Botany*, a genus so called by Lindley, from the Greek *τριχ*, a hair, and *πεταλον*, a petal, on account of the fringed margins of the petals. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Asphodeleæ*. Generic character: calyx green, recurved; petals three, green outside, but coloured inside, bearded on the margins, almost in the same series or verticil as the sepals, also recurved; stamens six, equal; filaments glabrous; anthers linear, innate; ovary trigonal, three-celled, many-seeded; style simple; stigma a triangular dot; capsule oblong, naked, three-celled, many-seeded, loculicidally, three-valved at apex; pericarp chartaceous; seeds reniform, compressed, with a black testa embryo surrounding a horny albumen.

Two species of the present genus are known; they are herbs with fascicled roots, annual, terete stems, racemose, or spicately paniced, or subsolitary white flowers. Both species, *T. gracile* and *T. stellatum*, are natives of Chili, and one of which is the same as *Anthericum plumosum* of Ruiz and Pavon.

TRICHOPHORUM, in *Botany*, a genus so called by Persoon, from the Greek *τριχ*, a hair, and *φορεω*, to bear, in reference to the hair-like or wool-like heads. It belongs to the class *Triandria*, order *Monogynia*, and the natural family of *Cyperaceæ*. Generic character: spikelets subovate; scales imbricated; bristles of seeds hair-formed, long, and six in number.

The American species of *Eriophorum* all belong to this genus.

TRICHOPILIA, in *Botany*, a genus so called from the Greek *τριχ*, a hair, and *πιλος*, a cap, in reference to the fringed clinandrium. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ-Vandææ*. Generic character: sepals and petals equal, spreading, narrow; labellum large, petaloid, convolute, parallel with the column, three-lobed, naked inside; middle lobe somewhat two-lobed, flattish; column terete, clavate; clinandrium cucullate, three-lobed, villously fringed; anther one-celled, compressed, convex in front; pollen masses two, sulcate behind, adhering to slender, cuneated caudicula; gland small.

A genus nearly allied to *Maxillaria*, consisting of a solitary known species, *T. tortilis*, a native of Mexico; it is a pseudo-bulbous, fleshy plant, covered with spotted sheaths. Leaves solitary, coriaceous. Flowers solitary, axillary; sepals yellowish; petals white spotted with purple.

TRICHOPODIUM, in *Botany*, a genus so named by Lindley, from *τριχ*, a hair, and *πους*, a foot. It

belongs to the class *Gynandria*, order *Hexandria*, and the natural family of *Aristolochiææ*. Generic character: male flower unknown; female flower, perianth six-cleft, with a tubular base; sterile stamens six, inserted into as many pits; style one; stigmas three, bipartite; capsule triquetrous, three-celled, three-winged, indehiscent; cells one two-seeded.

Three species of this genus are known, all natives of Ceylon. The leaves are lanceolate or cordate-triangular.

TRICHOPTERIS, in *Botany*, a genus so called by Presl, from the Greek *τριχ*, a hair, and *πτερις*, a fern. It belongs to the class *Cryptogamia*, order *Filices*. Generic character: sori roundish, confluent, in a line parallel to the midrib; receptacle from the radiate hairs involving the sori.

Of this genus a single species is only known, *T. excelsa*, the *Polypodium Tanitis* of Roth, the *Polypodium Corcovadense* of Raddi. It is an arborescent fern, a native of Brazil. The rachis are prickly. The fronds are bipinnate and glabrous; the pinnæ lanceolate, acuminate, serrated, with parallel forked veins.

TRICHOPTERYA, in *Botany*, a genus so called by Nees ab Esenbeck, from the Greek *τριχ*, a hair, and *πτερυξ*, a wing. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: spikelets three-flowered, lower flower male, the second hermaphrodite, and the third rudimentary; glumes two, mutic; male flower, paleæ two, mutic; stamens three; hermaphrodite flower, paleæ two, bifid at apex, the segments setigerous, with an awn between them, flattened and twisted at the base; scales two, obconical, emarginate; stamens three; ovary sessile, glabrous; styles two.

This genus consists of a solitary species; it is a grass, a native of the Cape of Good Hope. The leaves and panicles are both narrow or contracted. The pedicels are bearded under the spikelets.

TRICHOPUS, from the Greek *τριχ*, a hair, and *πους*, a foot, Lacep. In *Zoology*, a genus of animals belonging to the family *Pharyngi-Labyrinthiformes*, order *Acanthopterygii*, class *Pisces*.

Generic character. Forehead straight, and the scales extending to the muzzle; jaws furnished with very fine teeth; first soft ray of the ventral fin extremely long and thread-like.

This genus was first described by Schneider under the name *Trichogaster*, on account of the two long filaments corresponding, as he supposed, to the ventral fins, which, however, are now ascertained to exist, although the other four rays are so minute as to have eluded the observation of many ichthyologists.

T. Tricopterus, Lacep.; *Labrus Trich.* Pallas. About four inches in length; body elliptical and slightly compressed; forehead nearly straight, and curved transversely; scales reaching to the muzzle; mouth small, transverse, and protractile, the lower jaw extending beyond the upper; the jaws armed with very minute teeth; lower edge of the preopercule finely toothed; opercule rounded; branchial rays not exceeding four; lateral line curved like a Roman S laid on its side; scales very small, especially on the sides of the belly and towards the anal fin, a large portion of which is covered by them, but the dorsal only at its base, the rays of which are five spiny and eight soft; anal fin commencing at the base of the pectoral and reaching to the caudal; its spiny rays are eleven, and the soft ones thirty-four; pectoral fins slightly pointed; the long articulated

TRICHOPUS. thread forming the first soft ray of the ventrals reaching to the very tip of the caudal fin, its other rays very short; general colour pale golden-brown with a round black spot beneath each pectoral fin, and another on either side of the base of the caudal; between the rays of the latter, and of part of the dorsal fin, are some brown points. It is brought from Java and from the Moluccas, but Cuvier is doubtful whether it be a marine fish.

See Lape  de, *Histoire des Poissons*; Cuvier and Valenciennes, *Histoire Naturelle des Poissons*.

TRICHOSANTHES, in *Botany*, a genus so named by Linn  us, from the Greek *τριξ* *τριχος*, a hair, and *ανθος*, a flower, on account of the fringed corollas. It belongs to the class *Monoecia*, order *Monadelphia*, and the natural family of *Cucurbitace  *. Generic character: flowers monoecious, white; male flower with a rather club-shaped, five-parted calyx, appendiculated lobes, which alternate with five outside teeth; a five-parted ciliated corolla, three filaments, and joined anthers, whose cells are very flexuous; female flower with a five-toothed calyx, a five-parted, ciliate jagged corolla, a trifid style, and oblong-subulate stigmas; the fruit is one or three to nine-celled, and the seeds are compressed, truncated, and blunt.

This genus, which is nearly allied to *Melothria*, consists of above thirty species, principally natives of the tropical parts of Asia, very few of America. They are all trailing, annual plants, with cordate, entire, or three, five, or seven-lobed leaves, branched tendrils, having the male flowers generally disposed in racemes, and the female ones solitary. The English name of Snake-Gourd is derived from the long, narrow, crooked fruit of some species.

TRICHOSIPHUM, in *Botany*, a genus so called by Endlicher and Schott, from the Greek *τριξ* *τριχος*, a hair, and *σιφων*, a tube, on account of the tube of the corolla being bearded. It belongs to the class *Monoecia*, order *Monadelphia*, and the natural family of *Sterculiace  *. Generic character: flowers monoecious; male flower, calyx funnel-shaped, five-cleft; segments spreading; stameneous tube inclosed in the tube of the calyx, thickened, and villously bearded in the middle; filaments free at the tops; anthers two-celled, in a head; female flower unknown; fruit follicular, sessile, few-seeded; seeds naked.

Only a single species of this genus is known, *T. Australe*, a tree, native of Australia, in the island of Northumberland. The flowers are about the size of those of the orange, and are disposed in short, terminal, and axillary racemes, which rise after the leaves have fallen.

TRICHOSOMA, in *Zoology*, a genus of *Nematoid Entozoa*.

Generic character. Body elastic, extremely slender, round, and gradually thickening towards the hinder extremity; mouth punctiform; male organ a simple sheathed thread.

This genus of Rudolphi's is the same as *Capillaria* of Zeder. They are the most minute of all the Intestinal Worms, appearing at first sight merely as white hairs or the ends of hairs. Their gradually increasing size posteriorly distinguishes them from the *Tricocephali*, in which the enlargement is sudden. They are specially found in the large intestines of birds, and occasionally also in those of beasts and reptiles. The type of the genus is *T. Brevicollis*, Rudolphi.

TRICHOSPERMUM, in *Botany*, a genus so called by Blume, from the Greek *τριξ* *τριχος*, a hair, and *σπερμα*, a seed, on account of the seeds being ciliated.

It belongs to the class *Polyandria*, order *Monogynia*, and the natural family of *Bixine  *. Generic character: calyx of five deciduous sepals, which are imbricate in   stivation; petals five, smaller than the calyx; stamens indefinite, free, hypogynous; anthers twin; stigmas two, emarginate; capsule kidney-shaped, two-valved, hairy on the outside, bearing the seeds on linear, intervalvular placentas; seeds numerous, lenticular, arillate, ciliated; albumen fleshy.

A genus consisting of a single known species, a native of Java; it is a tree with alternate, serrulated, oblong-cordate leaves, which are furnished with two glands beneath at the base. The stipulas are ovate. The flowers are disposed in axillary, solitary cymes.

TRICHOSPIRA, in *Botany*, a genus so called by Kunth, from the Greek *τριξ* *τριχος*, a hair, and *σπειρα*, a spire, on account of the twisted hairs. It belongs to the class *Syngenesia*, order *  qualis*, and the natural family of *Composit  -Vernoniace  *. Generic character: heads many-flowered, or the flowers are in many-headed heaps; bracteas rising from the rachis, with scarious margins, fringed at the apex, one-nerved at the base, and three-nerved at the apex, each girding in its axil a single flower, the true involucre being almost wanting; corolla regular, glabrous, with a terete tube, a campanulate throat, and four obtuse lobes; anthers semi-exserted; achenia compressed, oblong-obovate, acuminate at the base, puberulous, three-ribbed on both sides in the middle; pappus in one series; awns sometimes two, divaricated, and sometimes four or five much smaller ones in addition to the two first.

This genus, which is nearly allied to *Rolandra* and *Spiracantha*, consists of four known species; they are small, humble, American herbs, with the habit of *Filago*. Leaves alternate or opposite, covered with white wool, sessile, entire, feather-nerved, upper ones opposite. Heads axillary, and opposite the leaves sessile.

TRICHOSTEMA, in *Botany*, a genus so called by Linn  us, from the Greek *τριξ* *τριχος*, a hair, and *στημων*, a stamen, on account of the capillary filaments. It belongs to the class *Didynamia*, order *Gymnospermia*, and the natural family of *Labiata  *. Generic character: calyx sometimes campanulate, nearly equal, deeply five-cleft, sometimes depressedly campanulate, very oblique, with the three upper teeth elongated and connate, and the two lower ones at first, superior ones short; corolla with a slender tube, which is exannulate inside, and an almost equally five-cleft limb; stamens four, didynamous, the lower two the longest, and much exserted; filaments sometimes monadelphous; anthers two-celled; cells divaricate or diverging; style bifid at apex, the lobes subulate; stigmas minute.

This genus consists of five known species, all annual herbs, natives of North America and California. The leaves are quite entire, and the inflorescence are axillary or racemose. The corollas are small, purple or blue. The character of the genus brings it close to *Teucrium*, but the habit is very distinct.

TRICHOSTOMUM, in *Botany*, a genus so called by Hedwig, from *τριξ*, a hair, and *στομα*, a mouth, on account of the slender capillary teeth at the mouth of the capsule, hence the English name Fringe Moss. It belongs to the class *Cryptogamia*, and order *Musci*. Generic character: seta terminal; peristome single, of sixteen equal teeth, divided to the base, or thirty-two placed together by pairs; calyptra mitre-formed.

A genus of mosses, consisting of ten known British

TRICHOSPERMUM.
—
TRICHOSTOMUM.

TRICHO. species; they are principally found on rocks and STOMUM. stones.

TRICK. **TRICHOSTROMA**, in *Botany*, a genus so called by Corda, from the Greek *τριχ* *τριχος*, a hair, and *στρομα*, a covering. It belongs to the class *Cryptogamia*, and order *Fungi*. Generic character: flocci erect, rigid, opaque, septate, rising from a horny, wart-formed covering; sporidia rough, globose, pellucid.

This genus, which is nearly allied to *Stachylidium*, consists of a single species, a native of Germany.

TRICHOSTYLIUM, in *Botany*, a genus so called by Corda, from *τριχ*, a hair, and *στυλος*, a column. It belongs to the class *Cryptogamia*, and order *Hepaticæ*. Generic character: fructification seated near the margin on the under side of the female frond; involucre and involucre wanting; calyptra subclavate, green; sporangia oval, opening by a chink on one side; elaters inserted on the central column, pendulous; antheridia scattered over the surfaces of the fronds, naked, oval. Small plants; the fronds are nerveless and fleshy, and throw out roots from their centres; the segments are oblong or cuneiform, obtuse, lobed, and undulated.

TRICHOTHECIUM, in *Botany*, a genus so named by Link, from the Greek *τριχ* *τριχος*, a hair, and *θηκη*, a vessel, on account of the sporidia being scattered on the hair-like flocci. It belongs to the class *Cryptogamia*, and order *Fungi*. Generic character: sporidia unisepate, oval, scattered on the flocci.

This singular genus consists of two known British species, *T. fuscum*, a plant growing on the dead capsules of *Gentiana Campestris*; it is composed of branched, interwoven flocci, and oblong, brown, subdidymous sporidia; and *T. roseum* of Link, growing not uncommon on sticks, herbaceous plants, &c., and is composed of branched, tufted, intricate flocci, covering the rose-coloured, oblong sporidia.

TRICHOTOSIA, in *Botany*, a genus so called by Blume, from the Greek *τριχ* *τριχος*, a hair. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ-Epidendreæ*. Generic character: sepals pubescent; lateral ones adnate to the claw of the column, and counterfeiting a spur; petals conform, glabrous; labellum unguiculate, adnate at the base of the claw of the column, with a rather lobed or entire limb; column much drawn out at the base; anther two-celled; cells four-parted; pollen masses eight, cohering by a kind of elastic, powdery, waxy matter.

This genus consists of four known species, all natives of Java; they are caulescent, rather hairy epiphytes, with simple stems, and sessile coriaceous, or rather fleshy leaves. The peduncles are opposite the leaves, solitary, and few-flowered; and the flowers are bracteate.

TRICK, v. See INTRICATE, EXTRICATE.
TRICK, n. Fr. *tricher*, from *tricare*; Gr. *τριχες*, hairs; generally, any entanglement;—
TRI'CKING, n. To intangle, to ensnare, to delude, to deceive, to practise ensnaring or deceptive arts; to set off,

with delusive appearances, with imposing ornaments; to adorn, to deck, to embellish; to dress with finery ostentatiously.

A *trick*; a snare, a deception, an artifice; an artful, an artificial habit or practice; an habitual manner, way or practice.

To *trick* in heraldry, see the Quotation from B. Jonson—to draw with a pen (in profile).

Trick, n. in B. Jonson, is perhaps *tress*. Old French **TRICK**. *trece*; It. *treccia*; or Low Lat. *trica*, *crines intexti*. See Du Cange.

Tricksy, i. e. trickish; artful, dexterous, adroit, active, smart.

pei red him alle a mysse, pat conseil gaf perto.
Wenes he our men Inglisse for to *trecher* so?

R. Brunne, p. 164.

A neighbour mine not long ago there was,
But nameless he, for blameless he shall be,
That married had a *trick* and bonny lass,
As in a summer day a man might see.

Sidney. *Arcadia*, book iii. p. 705.

The next day in the morning I was saluted at my gate with men in complet harness, what time my souldiers were about to play mee a shrewde *tricke*.

Hakluyt. *Voyages, &c.* vol. iii. p. 334. M. Rene Laudonniere.

For he [Cato] found not his countrey (as Phocion did) utterly destroyed, but tossed in a dangerous tempest; and being not of authority like the pilot to take the stern in hand, and govern the ship, he took himself to *tricking* the sails, and preparing the tackle, so to assist men of greater power.

Sir Thomas North. *Plutarch*, fol. 624. Phocion.

They forget they are in the statute, the rascals; they are blazoned there; there they are *trick'd*, they and their pedigrees; they need no other heralds, I wiss.

Ben Jonson. *The Poetaster*, act i. sc. 1.

Know, thou *tricht* up toy,
My love's a violent flood, where art thou faln,
Playing with which tide thou'dst been greatly toss'd,
By crossing it, thou art o'rwhelm'd, and lost.

Beaumont and Fletcher. *The Knight of Malta*, act i. sc. 1.

So maist thou chauce mock out a benefice,
Unlesse thou canst one coniure by device,
Or cast a figure for a bishoprick;
And if one could, it were but a schoole *trick*.

Spenser. *Mother Hubbard's Tale*.

But it stirs me more than all your court-curles, or your spangles, or your *tricks*.

Ben Jonson. *The Poetaster*, act iii. sc. 1.

No tomb shall hold thee
But these two arms, no *trickments* but my tears
Over thy hearse, my sorrows like sad arms
Shall hang for ever.

Beaumont and Fletcher. *The Mad Lover*, act i.

Here's a new tomb, new *trickments* too.

Id. *The Knight of Malta*, act iv. sc. 2.

There was a *tricksie* girle, I wot,
Albeit clad in gray,
As peart as bird, as strait as bould,
As fresh as flower in May.

Warner. *Albion's England*, book vi. ch. xxxi.

The foole hath planted in his memory
An armie of good words, and I doe know
A many fooles that stand in better place,
Garnisht like him, that for a *tricksie* word
Defie the matter.

Shakspeare. *The Merchant of Venice*, act iii. sc. 5.

At Southwark, therefore, as his *tricks* he show'd,
To please our masters, and his friends the crowd.

Prior. *Merry Andrew*.

By thus perplexing and diluting it, they really weakened it: for it is much easier to oppose it as it stands *tricked* up in that scholastic form, than as it stands in Scripture and in the antient fathers.

Waterland. *Works*, vol. v. p. 53. *Doctrine of the Holy Trinity*.

This is like Merry-Andrew on the low rope, copying lubberly the same *tricks* which his master is so dexterously performing on the high.

Dryden. *Dedication to Æneid*.

The chief reasoner of that philosophic farce is a Gallo Ligur, as he is call'd—what that means in English or French, I can't say—but all he says, is in so loose and slippery and *trickish* a way of reasoning.

Pope. *Atterbury to —*, March 26, 1720.

Vice,
Though well perfum'd and elegantly dress'd,
Like an unburied carcase *trick'd* with flow'rs,
Is but a garnish'd nuisance, fitter far
For cleanly riddance, than for fair attire.

Cowper. *The Task*, book vi

TRICK.

We presently discovered that they were as expert thieves and as *tricking* in their exchanges, as any people we had yet met with.
Cook. Voyages, vol. iii. book ii. ch. vii. p. 257.

TRICOMARIA.

As his pre-eminence depends not upon a *trick*, he is free from the painful suspicions of a juggler, who lives in perpetual fear lest his *trick* should be discovered.

Reynolds. Works, vol. i. p. 48. *Discourse* 2.

It [the world] will shew you, that *tricking*, and deceit of various kinds, are very consistent with Christianity.

Gilpin. Sermon 9. vol. i. p. 111.

I am unwilling to inflame that odium, which confounding the innocent with the guilty, has branded the whole tribe with charges of duplicity, management, artifice, and *trickishness*, approaching to the imputation of arrant knavery.

Knox. Works, vol. ii. p. 456. *Winter Evening* 24.

TRICKER. See TRIGGER.

TRICKLE, *v.* Skinner supposes *treckelen*, a diminutive of *D. trecken*, to trace; to flow (he adds) as drops in a long continuous *track* or course: it may be merely the diminutive of *track*, *q. d. trackle*, by the change of the vowel. Serenius and Dr. Jamieson resort to the Icelandic. See *Trigle*, in Jamieson.

To run in a thin or slender course or stream; in drips or drippings; to distil.

The feete of Jesus being wel washed with *teres triechlyng* down from her eyes lyke the droppes of rayne in a shower, she wiped drye agayne, not with any towell of linnen, but with the heares of her owne head.

Udall. Erasmus. St. Luke, ch. vii. fol. 284.

But whan he behelde the teares *trychelynge* downe by the face of Gysippus, he than recomforted hym.

Sir Thomas Elyot. The Governour, book ii. ch. xii. p. 143.

Not every *trickling* teare doth argue inwarde paine.

Vncertaine Auctors. Answer to the Lower dreading, &c.

But the small birds, in their wide boughs embouring,
Chaunted their sundrie tunes with sweete consent;
And under them a silver spring, forth pouring
His *trickling* streames, a gentle murmur sent.

Spenser. Virgil's Gnat.

Unhappy son! fair Thetis thus replies,
While tears celestial *trickle* from her eyes.

Pope. Homer. Iliad, book i.

How fluent nonsense *trickles* from his tongue!
How sweet the periods neither said nor sung.

Id. Dunciad, book iii.

Here, however, we found fresh water, which *trickled* down from the top of the rocks, and stood in pools among the hollows at the bottom.

Cook. Voyages, vol. ii. book iii. ch. i. p. 77.

TRICOMARIA, in *Botany*, a genus so called by Hooker and Gillies, from the Greek *τρεῖς*, *three*, and *κομή*, *the hair of the head*, on account of the lobes of the fruit being each furnished with a tuft of dark purple hairs. It belongs to the class *Monadelphica*, order *Decandria*, and the natural family of *Malpighiaceæ*. Generic character: calyx five-parted, persistent; sepals ovate, four of which are biglandular at the base outside, and the fifth is glandless; petals five, inserted in the hypogynous disk, unguiculate, the claws slender, and the limbs orbicular, crenated, and silky on the back, all imbricate in æstivation; stamens ten, monadelphous at the base; anthers roundish, two-celled, fleshy outside, but white and membranous inside; ovarium solitary, clothed with silky hairs, three-lobed, three-celled; ovula solitary in the cells, pendulous; styles three, distinct, clavate, truncate at apex, tubular; fruit clothed with silky hairs, dry, indehiscent, three-lobed, three-celled; lobes furnished each with a tuft of long, horizontal, dark, purple hairs on the back; seeds solitary, pendulous; embryo curved.

A single species is only known of this genus, *T.*

Usillo, a native of the province of Mendoza, in Chili, where it is called by the natives *Usillo*; it is a shrub clothed with adpressed silky hairs, having the branches opposite and spinescent, the ultimate ones bearing each two or three leaves, and a few flowers. The leaves are opposite, seldom alternate, narrow-lanceolate, stiff, obscurely one-nerved, on very short petioles, which are coadunate at the base, scarcely an inch long and a line broad deciduous. The flowers are terminal, orange-coloured, and pedunculate.

TRICOPHORUS, from the Greek *τριξ*, *a hair*, and *φέρω*, *I bear*, Tem.; *Bristle-neck*, Swains. In *Zoology*, a genus of animals belonging to the family *Dentirostres*, order *Passeres*, class *Aves*.

Generic character. Beak short, rather conical, compressed at the tip and wide at the base; upper mandible slightly curved at the point, and armed with a small tooth; base of the beak beset with very long and strong bristly hairs concealing the patulous ovoid nostrils; from the forehead pass back long bristles, which project beyond the feathers of the nape; wings of moderate size, the first three quills graduated, and the fourth longest; tarsi shorter than the middle toe; lateral toes of unequal length, the inner connected only at its base, but the outer as far as the second joint.

This genus very nearly approaches the *Ocypteri*. Temminck says, he distinguishes five species, though he describes only one, all natives of Africa, but that their habits and manners are unknown. Swainson however observes, he has reason to think that Temminck's five species were what he took to be the five species in Swainson's possession, as Temminck has only published the one he received from Swainson; the other two, besides those here mentioned, are Swainson's *Dasycephala Syndactala* and his *Hæmatornis Flavicollis*. He supposes that they capture insects on the wing, as, though their tail is not forked, yet the bristles around their beak are larger and more rigid than in the generality of Flycatchers.

T. Barbatulus, Tem.; *T. Strigilatus*, Swains.; *Stripe-breasted Bristle-neck*. Size of a small Thrush, about eight inches in length; general colour olive-green, with a slight tinge of ferruginous on the tail; head and neck dark brown, each feather having around it a light grey shade; chin and throat a little way down canary-yellow, the feathers loose, and each becoming almost white in the centre; auriculars grey-brown, and each feather striped with dusky yellow; lower part of the neck, chest, and under parts olive, but each feather grey in the middle, and the shafts lighter; under tail-coverts and quills paler and more fulvous than the back. According to Temminck, coarse long hairs spring from among the feathers of the forehead and form a scanty tuft which falls on the nape of the neck: this is denied by Swainson, who says, they spring from the nape in two fascicles, one on each side, consisting of three or four of unequal length, the longest measuring about an inch and a quarter. Is found in the neighbourhood of Sierra Leone.

T. Olivaceus, Swains.; *Olive Bristle-neck*. Seven inches in length; is distinguished from the preceding in having the crown of the head and the auriculars of the same olive-green as the back; chin and greater part of the neck straw-coloured, without any white; sides of the neck, breast, and under parts olive with a yellowish tinge; tail slightly stained with rufous; nuchal bristles much developed.

TRICOMARIA.

TRICOPHORUS.

TRICOPHORUS. *T. Gularis*, Swains.; *White-throated Bristle-neck*. Nearly eight inches long; upper part of the head dark sepia-brown, assuming a greyish tinge on the auriculars, of which the shafts are pale; streak between the beak and eye light grey; chin, and half down the throat, pure white; breast and middle of the body pale yellow; inner wing-coverts yellow; back, sides, and flanks olive-green, as are also the wings and tail, but darker; tips and inner margins of the lateral tail feathers pale yellowish, as in the other species.

See Temminck, *Planches Coloriées*; Swainson's *Birds of Western Africa*.

TRICORYNE, in *Botany*, a genus so called by R. Brown, from the Greek *τρεις*, three, and *κορυνη*, a club, on account of the three club-shaped pericarps. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Asphodeleæ*. Generic character: perianth six-parted, spreading, equal, deciduous; stamens six; filaments penicillately bearded; anthers emarginate at the base; ovary triparted, the lobes biovulate, connected by the filiform base of the style; stigma simple; pericarps three, clavate, valveless, one-seeded.

A genus nearly allied to *Stypandra* and *Anthericum*, consisting of five known species, all natives of New Holland; they are herbs with generally perennial roots, and narrow grassy leaves. The branches, when present, are furnished with an inner stipula at the base. The flowers are umbellate, erect, and yellow, and the pedicels are articulated with the perianth. The old perianth becomes spiral before falling.

TRICUSPIDARIA, in *Botany*, a genus so named by Ruiz and Pavon, from the Latin *tres*, three, and *cuspidis*, a point, on account of the petals being divided into three points at tops. It belongs to the class *Polyandria*, order *Monogynia*, and the natural family of *Elæocarpeæ*. Generic character: calyx five-toothed; petals five, tricuspidate at the tops; glands of receptacle annular, ten-sided; anthers fifteen, mutic, bursting at the tops; capsule three-celled, three-valved, few-seeded, the valves septiferous.

Only one known species, *T. dependens*, a native of Chili; it is a shrub with opposite, serrated leaves, axillary, solitary, one-flowered pedicels, and whitish flowers.

TRICUSPIDARIA, in *Zoology*, a genus of *Nematoid Entozoa*.

Generic character. Body soft, lengthy, flattened, subarticulate posteriorly; mouth nearly at the extremity, having two lips armed on either side with two three-pointed hooks.

This genus of Rudolphi's is distinguished from the *Tenia*, by the simple mouth near its anterior extremity, furnished with two lips and four tricuspid hooks; their body is not jointed, but at the hind part thrown into wrinkles, giving it somewhat the appearance of joints. But a single species, *T. Nodulosa*, is known, which is found in fishes.

TRICYCLA, in *Botany*, a genus so named by Cavanilles, from the Greek *τρεις*, three, and *κυκλος*, a circle, on account of the calyx being composed of three circular sepals. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Nyctagineæ*. Generic character: calyx of three circular, veiny, diaphanous, persistent sepals, which are larger than the corolla; corolla monopetalous, funnel-shaped, persistent; with a five-parted limb, and tricrenate segments; stamens five; filaments capillary, longer than the tube of the corolla, inserted in the receptacle beneath the ovary; anthers

ovate, didymous; ovary ovate; style lateral, subulate; stigma simple; fruit girded by the wide tube of the corolla; samara ovate, one-seeded; seed ovate, solitary, covered by a valveless, papery sac; albumen farinaceously fleshy, excavated lengthwise.

Of this genus only a single species is known, *T. spinosa*, a native of Buenos Ayres; it is a tree, with alternate spiny branches, fascicled, nearly linear leaves, which taper at the base.

TRICYRTUS, in *Botany*, a genus so called by Wallich, from the Greek *τρεις*, three, and *κυρτος*, convex, in reference to the three outer segments of the perianth being saccate at the base. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Melanthaceæ*. Generic character: perianth of six segments; segments subunguiculate, conniving into the form of a bell, the three outer ones saccate at the base; stamens six, inserted into the bases of the segments of the perianth; anthers versatile; ovary oblong, three-celled; ovula numerous, in one series, in each cell; style divaricately three-lobed; stigmas six, uncinately; capsule prismatic, three-celled, with three loculicidal valves; seeds densely imbricate to the central angle in the cells, ovate, with a loose, dark, wrinkled testa; embryo minute.

Of this genus only one species is known; it is an erect, villous herb, a native of Nepal. The leaves are alternate, ovate-cordate, stem-clasping. The flowers are disposed in terminal, loose, few-flowered, leafy, pilose panicles.

TRIDACNA, in *Zoology*, a genus of *Monomyary Conchiferous Molluscs*.

Generic character. Shell regular, equivalve, transverse, with a gaping aperture; hinge consisting of two teeth, compressed, unequal, and received into each other; marginal ligament external.

This genus was first separated by Bruguiere from the Linnæan genus *Chama*, or Clam, with which it had been previously confounded, but is distinguished by having only a single muscular impression on each valve, which corresponds to the middle of their edge. Its permanently gaping aperture, through which it protrudes a bundle of tendinous threads to attach and suspend itself to the rocks, distinguishes it from the genus *Hippopus*, and in the greater number of species the edges of this aperture are crenulated. Six species are described as found in the Indian seas, one of which, *T. Gigas*, attains enormous size, and weighs five hundred pounds. Lamarck says that there are some still larger. In Papal churches they are used as receptacles for holy water. Forest relates that in the Moluccas they are caught by introducing a stick when the valves are open; and that the small ones, about as big as a man's head, are considered good eating. One fossil species is found.

TRIDACTYLUS, in *Zoology*, a genus of *Grilloid Orthopterous Insects*.

Generic character. Antennæ short, submoniliform, ten-jointed; eyes very distinct; thorax wider than its length; anus furnished with four styliform appendages; anterior two pairs of legs broad, the first pair spiny at the top and grooved to receive the tarsus when folded; posterior legs having large lengthy thighs, and slender, long shanks, covered externally with little scales, and having, instead of tarsi, little movable, narrow, hooked plates, resembling fingers, varying from three to five in number, when the latter, the middle three are the longest.

**TRI-
CYCLA.**
**TRIDAC-
TYLUS.**

TRIDAC- TYLUS. This genus, formed by Olivier, was subsequently called *Xoya* by Illiger; it very nearly resembles the Mole-crickets, *Gryllotalpæ*, but are distinguished by the form of the antennæ and of the legs. They are incapable of burrowing except with their first pair of legs, but are well able to leap. They live in the mud on the banks of rivers. Two species are described, both European, of which *T. paradoxus*, Latr., is the type.

TRI- DENTEA.

TRIDAX, in *Botany*, a genus so named by Linnæus, from *τρίδακτος*, cut in three, on account of the ray flowers being cut into three parts. It belongs to the class *Syn-genesia*, order *Necessaria*, and the natural family of *Compositæ*. Generic character: heads many-flowered, radiate; flowers of the ray female, ligulate, ovate, three-lobed; those of the disk tubular, five-toothed, hermaphrodite; involucre ovate, with loosely imbricate scales; outer scales six or eight foliaceous, villous on the back; inner ones membranous, quite glabrous, similar to paleæ, but broader; receptacle paleaceous, the paleæ lanceolate-linear; branches of the styles in the hermaphrodite flowers furnished with a filiform appendage each; achenia villous, those of the disk obpyramidal, and those of the ray obovate, obcompressed; pappus in one series of fifteen or sixteen paleæ, those of the ray smaller.

Only a single species is known, *T. procumbens*, an American, procumbent, hairy, branched herb; the leaves are opposite, petiolate, ovate, and deeply toothed; the branches are naked at the apex, elongated, and bearing each one head; the head is yellow in the disk and pale yellow on the ray.

TRIDENT, { Fr. *trident*; It. *tridente*; Sp. *tri-*
TRIDENTED. { *dente*; Lat. *tridens*; three-toothed, having three teeth or tines, (*tres dentes*.)

For he that doth of sea the powerful *trident* wield,
His Tritons made proclaim a nymphal to be held
In honour of himself.

Drayton. *Poly-olbion*, song 20.

Great Neptune went before,
Wrought with his *trident*, and the stones, trunks, roots of trees
he tore

Out of the rampire: tost them all into the Hellespont;
Even all the proud toils of the Greeks, with which they durst
confront

The to be shunned deities.

Chapman. *Homer. Iliad*, book xii.

Neptune
Held his *trident*ed mace upon the south:
The winds were whist, the billows danc'd no more.

Quarles. *History of Jonah*, sec. 6. Anno 1620.

Hence; fly with speed; from me, your tyrant tell,
That to my lot this wat'ry empire fell.
Bid him his rocks, your darksome dungeons keep,
Nor dare usurp the *trident* of the deep.

Pitt. *Virgil. Æneid*, book i.

TRIDENTEA, in *Botany*, a genus so called by Haworth, from *Tridens*, a trident, on account of the segments of the outer corolla being tridentate. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Asclepiadæ-Stapelieæ*. Generic character: corolla rotate, five-cleft, fleshy; column exserted; stameneous corona double, outer one of five tridentate segments and the inner one of five unequally bipartite segments; anthers simple at their apices; pollen masses fixed by their bases, having one of their margins cartilaginous and pellucid; stigma mutic; follicles rather cylindrical, smooth; seeds comose.

Tridentea is a genus separated from *Stapelia*, and consists of eight known species, all natives of South Africa, in the desert plains called the Karro: they are, like *Stapelia*, grotesque, angular, usually tubercular

plants; the branches are naked, with teeth which are each terminated by a small green leaf; the flowers are generally showy, but have a very fetid odour, hence the species are called *Carrion plants*, like *Stapelia* and other similar genera.

TRIDESMIS, in *Botany*, a genus so called by Spach, from the Greek *τρεῖς*, three, and *δεσμη*, a bundle, on account of the stamens being joined into three bundles. It belongs to the class *Polyadelphia*, order *Polygynia*, and the natural family of *Hypericinæ*. Generic character: sepals erect, persistent; petals deciduous, each furnished with a three-lobed appendage; hypogynous scales small, subulate; androphori tongue-shaped, bearing filaments from the middle; anthers glandless; cells of ovary containing many ovula; styles filiform; stigmas two-lobed, rather fringed; capsule woody, many-seeded; valves flattish, bifid at top; dissepiments thick, placentiferous.

Of this genus there are three species known, *T. Och-noides*, *T. Billardieri*, the *Hypericum biflorum* of Choisy, a native of the Moluccas, and *T. Jackii*, the *Elodea formosa* of Jack, a native of Sumatra; the peduncles are axillary and lateral, always one-flowered, very often in fascicles.

TRIDIA, in *Botany*, a genus so called by Korthals, from *τρεῖς*, three, on account of the fruit having three sutural placentas. It belongs to the class *Decandria*, order *Trigynia*, and the natural family of *Guttiferae*. Generic character: calyx of five sepals, sepals imbricated, outer ones rather the largest; petals five, somewhat twisted at top in æstivation; stamens ten, hypogynous; ovary sessile, subtrigonal; ovula numerous, attached to three sutural placentas, disposed in two rows on each; styles three; stigmas subcapitate; capsule girded by the calyx, ovate, trigonal, membranous, one-celled, three-valved, seminiferous along the margin; seeds numerous, oblong, nearly terete, transversely ribbed; embryo in the axis of the albumen, with ovate-oblong cotyledons, which are somewhat truncate at the base, and a small terete radicle.

Only a single species of this genus is known; it is an herb, a native of Sumatra. The stems are erect and tetragonal, and usually divided; the leaves are opposite, rather connate, and membranous at the base, sessile, cordate, ovate, acutish, five nerved, with reflexed edges; the flowers are axillary, alar, and solitary, and the bractæ oblong.

TRIDONTIUM, in *Botany*, a genus so called by Hooker, from the Greek *τρεῖς*, three, and *ὄδους*, a tooth, on account of each tooth of the peristome being composed of three articulated ciliæ. It belongs to the class *Cryptogamia*, and order *Musci*. Generic character: seta terminal, exserted; capsule turbinate; peristome simple: teeth sixteen, elongated, reflexed when dry, each formed of three articulated ciliæ, which are more or less connected; calyptra mitre-formed, cleft on one side.

A genus consisting of two or three known species, all natives of Australia; they are aquatic mosses, with elongated, sparingly branched, flexuous, loose, tufted stems; the leaves are loosely disposed on all sides of the stems, spreading, of a linear-lanceolate form, opaque, obtuse, having a strong brownish nerve which reaches almost to the apex of each leaf, which is channelled above, entire along the margins; the bristles and capsules brown and stiff; the operculum is conical and beaked; the calyptra is brown, stiff, of an oblong conical form.

TRI- DENTEA.

TRIDON- TIUM.

TRIENNIAL, Fr. *triennal*; It. *triennio*; Sp. *triennio*; Lat. *triennium* (*tres anni*); three years.

TRIFLE. Continuing for, returning, recurring at the end of, three years.

Ac to trysten upon *triennels*, triweliche me thynkeþ
ys nat so syker for þe saule. certys as ys Dowel.

Piers Plouhman. Vision, p. 164.

There are that hold the elders should be perpetuall: there are others for a *trienniall*, others for a bienniall eldership.
Hall. Works, vol. iii. fol. 185. *Episcopacy by Divine Right*, part iii. sec. 5.

Together with the bill for subsidies, another was sent up to the lords for a *triennial* parliament: both which quickly passed that house, and were transmitted to the king.
Clarendon. History of the Rebellion, part i. *Civil War*, vol. i. p. 209.

It is remarkable that the Temple was the place of his very first public appearance: and in his coming upon that occasion there was an extraordinary suddenness. It was indeed before the commencement of his *triennial* ministry.

Horsley. Sermons, vol. iii. p. 36.

TRIENTALIS, in *Botany*, a genus so named by Linnæus from *triens*, one-third, the plant generally growing to the height of one-third of a foot, or four inches. It belongs to the class *Heptandria*, order *Monogynia*, and the natural family of *Primulaceæ*. Generic character: calyx of seven awl-shaped, persistent sepals; corolla rotate, seven-cleft; stamens seven, with capillary filaments, and oblong, recurved anthers; style cylindrical; stigma obtuse; capsule globose, one-celled, seven-valved; seeds few, roundish, attached to the central placenta, with loose tunics.

Composed of smooth, perennial herbs, with simple stems, which are leafy at top; the flowers are white, on axillary pedicels; there are two known species, *T. Europæa* and *T. Americana*; the last is a native of woods and heaths in the north of England and in Scotland. The genus is very nearly allied to *Lysimachia*.

TRIER. See **TRY**.

TRIE'TERICKS, } Lat. *trieteris*; Gr. *τρι-ετια*,
TRIE'TERICAL. } three years.

— To whome in mixed sacrifice
The Theban wiues at Delphos solemnize
Their *trietericks*.

May. Lucan. Pharsalia, book v.

VOL. XXVIII.

Any thing small or minute, of little weight or value; **TRIFLE**. inconsiderable, unimportant; unworthy. To *trifle*—

To be, or cause to be, of little worth; to diminish the weight or value; to employ in, to be busy in, *trifles*; in light, frivolous, foolish things; to treat or behave towards, as to a thing of no value; to play with, to make sport of, to act idly, frivolously. See **TRIVIAL** and **TRAVAIL**.

— Hold þy tonge Mercy,
Hit is *trusle* þat þou tellest.

Piers Plouhman. Vision, p. 347.

Than the comons of the cite beganne to saye, howe dothe owre bysshop *tryfle* and mocke vs, sythe he kepeth aboute hym the greatest brybour and robbor in all Fraunce, and wolde that we shulde gyue hym oure money.

Lord Berners. Froissart. Cronycle, vol. i. ch. 200. p. 237.

Sirs, methynke the frenchmen do but *tryfell* with me, and with the countre of Flaunders.

Id. Ib. ch. 409. p. 712.

Therefore whereas the Phariseis teache and obserue supersticiously these folyshe *trifles*: yet they dooe not abhorre those thinges, whereby the mynde is defiled in dede.

Udall. Erasmus. St. Mathew, ch. xv. fol. 65.

It is a great matter that ye whiche are my disciples dooe enterpryse. Ye must therefore apply all your whole study to these thynges, and lytle regarde suche *tryfling* thynges, whiche other men doe bestowe and spende theyr whole lyfe to get or to encrease, or els to auoide.

Id. Ib. ch. v. fol. 25.

I am ashamed to call them madde men, *triflers* and wranglers they bee, such as know not what they say, nor of what thyng they speake.

Barnes. Workes, fol. 360. *A Collection of Doctours Testimonies.*

Which when he had ouer read and considered, he returned his answer by a letter dated at Croph the thirtieth of October, 1579, vsing therein nothing but *triflings* and delaies.

Holinshed. Chronicles, vol. vi. p. 423. *The Chronicles of Ireland, Anno 1579.*

But all as a poore pedlar he did wend,
Bearing a trusse of *trifles* at his backe,
As bells, and babes, and glasses, in his packe.

Spenser. The Shepheard's Calendar. May.

SAY. Pray wear these *trifles*.

CLAY. Neither you, nor *trifles*:

You are a *trifle*. wear your self, sir, out,
And here no more *trifle* the time away.

Beaumont and Fletcher. Love's Cure, act iii. sc. 4.

OLD MAN. Threescore and ten I can remember well;
Within the volume of which time, I haue seene
Houres dreadfull, and things strange, but this sore night
Hath *trifled* former knowings.

Shakspeare. Macbeth, act ii. sc. iv. fol. 138.

The *triflingness* and petulancy of this scruple I have represented upon its own proper principles.

Parker. Rehears. Transpr. p. 39.

There could be no room for those indiffernt and visibly *trifling* actions, to which our wills are so often determin'd, and wherein we voluntarily waste so much of our lives.

Locke. Works, vol. i. book ii. ch. xxi. sec. 44. *Of Human Understanding*, fol. 109.

'Tis not, indeed, my talent to engage
In lofty *trifles*, or to swell my page
With wind and noise.

Dryden. Persius. Satire 5.

What has this *trifler* to produce, that can bear so much as the face of an argument?

Waterland. Works, vol. vi. p. 40. *Scripture Vindicat*, part i.

All our semblances of repentance, all our corporal abstinences, if a kind and merciful disposition are wanting, what are they truly but presumptuous dallyings, or impertinent *triflings* with God?

Barrow. Sermons, vol. i. p. 548. *Sermon 31.*

Those who are carried away with the spontaneous current of their own thoughts must never humour their minds in being thus *triflingly* busy.

Locke.

TRIFLE.
—
TRIFO-
LIUM.

Such men lose their intellectual powers for want of exerting them; and having trifled away youth, are reduced to the necessity of trifling away age.

Bolingbroke. *Of the true Use of Retirement and Study.*

If trifles engage, and if trifles make us happy, the true reflection suggested by the experiment is upon the tendency of nature to gratification and enjoyment; which is, in other words, the goodness of its Author towards his sensitive creation.

Paley. *Natural Theology*, ch. xxvi. p. 421.

I hate the dust that fierce disputers raise,
And lose the mind in a wild maze of thought;
What empty triflings, and what empty ways,
To fence and guard by rule and rote.

Watts. *True Learning.*

TRI-FLUCTUATION, a concurrence of three waves, (*tres fluctus*.)

The Greeks, to expresse the greatest wave, do use the number of three, that is, the word *τριφυμια*, which is a concurrence of three waves in one, whence arose the proverb *τριφυμια κακων*, or a tri-fluctuation of evils, which Erasmus doth render *Malorum fluctus decumanus*.

Sir Thomas Brown. *Vulgar Errours*, book vii. ch. xvii. p. 459.

TRI-FOLIATE, having three leaves, (*tria folia*.)

Trifoliate cytissus restrain'd its boughs
For humble sheep to crop, and goats to browse.

Harte. *Eulogius*.

TRIFOLIUM, in *Botany*, a genus so called by Tournefort, from *tres*, three, and *folium*, a leaf, on account of the leaves of all the species being composed of three leaflets; the Greeks call it *τριφυλλον*, the French *trèfle*, and the English *trefoil*, or clover. It belongs to the class *Diadelphia*, order *Decandria*, and the natural family of *Leguminosæ-Papilionaceæ-Loteæ*. Generic character: calyx tubular, persistent, glandless, five-cleft, the segments subulate; corolla papilionaceous, having the keel shorter than the wings and vexillum; stamens diadelphous, that is, nine joined together and one free; legume small, hardly dehiscent, usually ovate, one or two-seeded, shorter than the calyx, and hidden by it, rarely oblong, and containing three or four seeds, in which case it exceeds the calyx a little.

Of this genus there are above one hundred and fifty species known, all herbs, natives of all the temperate and colder parts of the globe; the roots are either annual or perennial: each leaf is usually composed of three leaflets, very seldom of five leaflets; the stipulas are adnate to the petioles; the flowers are disposed in dense heads or spikes, they are bracteate, and their colour is either purple, white, or cream-coloured; the petals are joined at their bases in the greater number of the species. *Trifolium* includes the most valuable of herbage or fodder plants adopted in European agriculture. The white or Dutch clover, *T. repens*; the purple or red clover, *T. pratense*; the yellow clover, or hop-trefoil, *T. procumbens*, and the Italian clover, *T. incarnatum*. Notwithstanding all that has been said in favour of Lucern, Saintfoin, and other leguminous plants, yet the red clover for mowing, and the white species for pasturage, are, and ever will be found to excel all plants in these respects. The yellow clover, and the cow or meadow clover, *T. medium*, are also in cultivation, but are inferior to the white and red clovers. The Italian clover is now cultivated to some extent in the chalky counties of England, but being an annual plant will not suit with the common practice of farmers; it is a very elegant plant, the flowers varying from crimson to white. The Alexandrian trefoil, or clover, *T. Alexandrinum*, is universally cultivated in Egypt, being the best, indeed the principal fodder for cattle in that coun-

try, and is an upright, annual plant, with yellow flowers: it is sown only in the recesses of the Nile; and where the fields are too high to be inundated by that river, they are watered by means of hydraulic engines: the produce is three different crops, the plants growing each time about half an ell in height. The white clover is generally called Shamrock, but *Oxalis acetocella* is conjectured to be the true Irish Shamrock. There are several species, natives of Britain, but none of any value, except those mentioned.

TRI-FORM, Lat. *triformis*; three-formed, or having three forms; *boviform*, formed like an ox; *hominiform*, formed like a man.

There the neighbouring moon
(So call that opposite fair starr) her aide
Timely interposes, and her monthly round
Still ending, still renewing, through mid Heav'n,
With borrow'd light her countenance *triform*
Hence fills and empties to enlighten th' earth;
And in her pale dominion checks the night.

Milton. *Paradise Lost*, book iii. l. 726.

And the old philosophick atheists were so frank and lavish herein, that they stuck not to affirm, amongst those monstrous shapes of animals that were once produced, Centaurs, and Scyllas, and chimeras; mixtly *boviform* and *hominiform*, *biform* and *triform* animals.

Cudworth. *Intellectual System*, book i. ch. v. fol. 673.

TRI-GAMY, a third marriage. See BIGAMY.

They marry oft-times at nine or twelve years of age; the laity twice, ecclesiasticks but once; *trigamy* to all is hateful.

Sir T. Herbert. *Travels*, p. 158.

TRI'GGER, or } Skinner suggests the D. *dregghe*,
TRI'CKER. } *harpago*, *uncus*, as he explains it.
But the D. is a *dragge*, and *trecken* is to *drag*; and a *trigger*, whether to hold a wheel, or loose the cock of the gun, is a *drag*.

That which drags, or that which we drag or pull.

And as a goose
In death contracts his talons close,
So did the knight, and with one claw
The *tricker* of his pistol draw.

Butler. *Hudibras*, book i. can. 3.

The pulling the *trigger* of the gun, with which the murder is committed, and is all the action that perhaps is visible, has no natural connection with those other ideas that make up the complex one, nam'd murder.

Locke. *Works*, vol. i. book iii. ch. ix. sec. 7. fol. 220. *Of Human Understanding*.

Pulling a *trigger*, or drawing characters upon paper, are neither good nor bad, right nor wrong, considered in themselves: but as the *trigger* so pulled shall occasion the slaughter of a man, or of some vermin, or only a bounce in the air; as the characters so drawn shall tend to the necessary security of our property, or to bring a hardship upon our neighbour, or shall carry no meaning at all, we pronounce the action prudent or idle, moral or wicked.

Search. *Light of Nature*, vol. i. part i. ch. ii. p. 46.

TRIGLA, from the Greek *τρεις*, three (on account of its three loose pectoral rays), Lin.; Gurnard, Penn. In *Zoology* a genus of animals belonging to the family *Triglides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Head nearly square, covered with bony plates, the muzzle cleft, and forming two more or less projecting and denticulated lobes; teeth in both jaws and in front of the vomer very numerous, small and pointed; the suborbitar and opercular bones spiny, and a spine upon the shoulder; dorsal fins two, the rays of the first spiny and of the second flexible; pectoral fins large and long, their lower three rays detached and distinct; gill aperture large; branchial rays seven; body lengthy and roundish; caudal end of the lateral line forked.

TRIFO-
LIUM.
—
TRIGLA.

TRIGLA. This genus has the bony arming of its cheeks the most largely developed of all the family to which it belongs; the first suborbital bone is of great size, covering the whole cheek, attached in front to the muzzle and behind to the preopercle and the two small suborbital bones; the preopercle itself is large, but the opercle of moderate size, and the interopercular and subopercular bones small, and hidden within the gill-membrane; the muzzle in front is more or less deeply cleft or emarginate, with toothings on its edges, and projects more or less so as to have the appearance of a sort of spud; the whole head is armed with spines and crests, as is also the shoulder, forming a very strong protection; the mouth is not large, and when closed the jaws are received within the bony cheeks. From the base of the large pectoral fins three of their rays are detached [and free, covered with soft skin and largely supplied with nerves, which assist, as fingers, in enabling the animal to feel its food upon the ground over which it swims. Of the dorsal fins, the first is tall and spiny, the second short, but much longer, and both are implanted in a long groove formed on either side of a ridge of scales or bony plates, of which the hinder edges are pointed, so that the ridges are sawlike. When these fish are taken from the water they utter a sort of grunt, whence perhaps their French name, *Grondins*; this probably arises from the escape of the air from the swim-bladder by the pressure of the hand.

a. Body nearly surrounded with transverse thread-like lines or ridges.

T. Pini, Bl.; *le Grondin rouge, ou Rouget commun*, Cuv.; *Red Gurnard*, Yarr. From twelve to sixteen inches long; head large and nearly square, and the muzzle furnished with four short tooth-like processes on each side; mouth small, each jaw, and a narrow band in front of the vomer, furnished with short villous teeth; sides of the head flat and nearly vertical; cheeks and upper part of the head rough with lines radiating from various centres; eyes large, and the edges of the orbits furnished with two or three small, erect spines; opercle armed with one short spine, and a larger one on the scapular region above the pectoral fin; body covered with ovate ciliated scales, tapering from the nape to the root of the caudal fin; the lateral line passes unarmed parallel to the ridge of the back, bifurcates at its caudal extremity, and is crossed throughout its whole length by small, short, straight, elevated lines, having the appearance of a series of pins, or, as Bloch thought, to the acicular leaves of the pine, whence its specific name: dorsal fins placed in a groove between two rows of short, triangular spines, the first fin triangular, with its front ray serrated, and the second longer and stouter than the others, the second fin shallower, but twice as long; anal fin corresponding to the second dorsal, but set farther back; pectoral about one-fourth so long as the body, their first seven rays branched and decreasing, the others simple; ventral fins rather shorter than the pectoral, their spinous ray half so long as the soft rays, which are all branched; caudal fin slightly forked. General colour bright red, with the sides and belly silvery; fins reddish-white. It is a native of the Mediterranean and Atlantic, being found on the shores of America as well as Europe, and is very common on our own southern and western coasts. It feeds on crustaceans principally, and spawns in May or June. Yarrell thinks this species, and *T. cuculus*, Lin., identical, but

Jenyns says, "since the characters in the *Systema Naturæ* apply equally well to two species, this must remain doubtful."

T. Lineata, Bl.; *T. Adriatica*, Gmel.; *le Rouget Camard*, Cuv.; *Streaked Gurnard*, Penn. Twelve inches in length; head shorter, profile more vertical, body thicker in front and tapering more suddenly behind than the last species; the muzzle less emarginate, and its denticulations less distinct, the cheeks higher, opercle broader, and its spine blunter and shorter; the first dorsal ray more strongly serrated and the second shorter; the spiny rays weaker; the whole body rough, marked with elevated transverse lines, which upon the belly ramify, and thus nearly encircle the whole body; they correspond in number to the sixty-eight scales on the lateral line. General colour rich red, belly white; the fins spotted and edged with a darker colour; pectorals tipped with blue, and having four rows of darkish blue spots. Is a native of the Atlantic and also of the Mediterranean; it is occasionally, though rarely, found on our southern coast, and there known as the *French Gurnard*, and has been taken even so far north as the coast of Scotland.

b. Body without transverse lines.

T. Hirundo, Lin.; *T. Lævis*, Mant.; *le Perlon, ou Rouget Grondin*, Cuv.; *Sapphirine Gurnard*, Penn. From eighteen to twenty-four inches in length; has a general resemblance to the Red Gurnard, but its head is larger and flatter and the body thicker; the muzzle more emarginate, the gape wider, the cheeks smoother, and the eyes much smaller; pectoral fins rather shorter; lateral line straight, and so smooth that fishermen call the fish *Smoothside*; the first dorsal spine has its denticulations very slight, the second is scarcely longer than the others; the entire body covered with small, smooth, oval scales. General colour brownish-red; fin-rays white; pectorals bluish-green on their inner surface, edged and spotted with light blue; irides yellow; pupils dark greenish-blue. This species is found in the Mediterranean, and also in the Atlantic; it is one of the most common upon our western shores, and known as the *Tubfish*, or *Red Tub*. Risso says it spawns in spring, but Couch says in winter.

T. Paciloptera, Cuv. and Valenc.; *Dieppe Gurnard*. About four inches in length; has the edge of the suborbital bones finely toothed but less projecting, whilst its lower crest and that of the preopercle is more prominent than in the last species; it has also two spines behind the orbit, and behind these, on the edge of the skull, two others, strong and pointed, which rise and form a keel; the hind ridge of the skull has also two spines; first dorsal fin triangular and very low behind; caudal slightly forked. The back is of a reddish-brown colour and the belly silvery; the sides tinged with iridescent gold; the first dorsal fin has a black point, and the second spotted in the middle with violet; the pectorals violet or bluish, irregularly streaked with reddish-brown externally, and blackish or dark purplish-brown, with a large, oval, deep black spot, varied with drops of milk-white on its inner surface. It is found on the French coast near Dieppe, in three or four feet of water. Cuvier thinks it may perhaps be *T. Cuculus* of Risso.

T. Papilionacea, Parkins; *le Perlon de la Nouvelle Zélande*, Cuv.; *Papilionaceous Gurnard*. Fifteen inches in length; very similar to the Sapphirine Gurnard, but distinguished by the more delicate, numerous, and well-

TRIGLA. defined granulations on the head; the lower part of the suborbital bone has no ridge, and that on the preopercule is very indistinct, and the granules on the edge of the latter are disposed in patches. All the upper parts are yellowish-red, with darker reddish spottings; under parts silvery; inside of the pectorals blackish-green, their upper edge pale blue, the lower reddish, and upon the seventh and eighth ray a large black spot marked with little, round, white specks; outside of this fin blackish with white rays; dorsal and caudal fins reddish; anal and ventral whitish. It is found off New Zealand, and called by the natives *Koumou*.

T. Peronii, Cuv.; *Peron's Gurnard*. Seven or eight inches long; has not the preopercular granules separate, nor those of the cheek in rays; it has a little spine behind the orbit, and slight traces of spines on the skull. Upper part of the body brownish; lower silvery, and the two divided by a golden line; tip of the first dorsal blackish; the pectoral fins have the same black spot with white points as the last species, but less numerous. Is found in the Indian seas.

T. Capensis, Cuv.; *Cape Gurnard*. Twenty inches in length; very similar to the last species, but all the rays of its suborbital bone diverge slightly from before backwards, and it has not any black spot on the pectorals. Is found off the Cape of Good Hope.

T. Lyra, Lin.; *la Lyre, ou la Perlon à grandes Epines*, Cuv. and Valenc.; *Piper*, Penn. From twenty to twenty-eight inches in length, and readily distinguished from all the other British species by the length of its opercular and humeral spines, by the large size of its head, and by the greater length of the projections or lobes on the muzzle; the depth of the head at the nape is nearly a fourth of the total length of the animal; the nasal lobes are divided into twelve or fifteen teeth, of which the middle ones are long and pointed; whole head finely granulated; gill apertures large; upon the anterior edge of the orbit one strong spine, and a smaller one behind; humeral spine sometimes two inches long; pectoral fins very large, reaching to the vent; rays of the first dorsal fin very sharp, the edge of the first two rays slightly dentated; the arming of the dorsal grooves very distinct; scales small, oval and ciliated. General colour above bright red, with a white belly and red fins. This fish is taken in the Mediterranean, and also in the Atlantic, but it is rare on our own coast, being caught only occasionally off the western shores of Devonshire and Cornwall, now and then off Anglesea, and, it is said, in Belfast Bay. It is presumed to have acquired the name of *Piper* from the noise it makes, in common with others of the same genus, when taken by the hand from the sea.

T. Gurnardus, Lin.; *le Grondin Gris, ou Gornaud*, Cuv.; *Grey Gurnard*, Penn. From fifteen to twenty inches long; is distinguished by its shallower head, by its shorter pectoral fins, and by its lengthy, slender body. The profile is hollowed; muzzle moderately emarginate; the nasal lobes armed with two or three denticulations; whole head and shoulders granular; anterior edge of the orbit having two spines; opercular and humeral spines slender, and the former projecting beyond the membrane; scales on the dorsal ridges having little crests, crenated and rough, with minute granulations, but not spiny; spines of the first dorsal fin strong, the first three rough with granules, the second the longest; pectoral and ventral fins of equal length, and not reaching to the vent; body overspread

with small, oval, smooth scales. General colour above grey tinged with green or brown, with a few irregular white spots; belly silvery white; lateral line strongly marked with a sharp crest of white scales; first dorsal fin brown spotted with black, the second and the caudal fin light brown; pectorals dusky grey; anal and ventral fins nearly white. It is a native of the Mediterranean and also of the Atlantic, along the coast of Europe. It is one of our most common species, and spawns in May or June.

T. Cuculus, Bl.; *le Grondin Rouge*, Cuv. and Valenc.; *Bloch's Gurnard*, Yar. From nine to ten inches in length; is very similar to the last species, but distinguished from it by the first three dorsal spines not being granulated, and the first two only having their anterior edges sparingly dentated, and by the scales on the dorsal edges not being crenated, but entire, each terminating in a little point. It is also distinguished from *T. Pini* by its smaller and more strongly armed head, by its longer and narrower body, not furnished with transverse striæ, and by the shortness of its pectoral fins: the whole body is rough. It is of a red colour, with a distinct black spot on the upper part of the first dorsal fin, from its second to its fifth spine, according to Jenyns; but Yarrell says this spot is also occasionally found on the Grey Gurnard. Is found both in the Atlantic and Mediterranean, and not unfrequently caught during summer on the Devonshire coast.

T. Lucerna, Brunn; *le Trigle Milan*, Lacep.; *Luminous Gurnard*. About eight inches in length; the shape of its head is very similar to that of the Red Gurnard, but its nasal lobes have only one single, distinct, little point, and another within concealed by the skin; the anterior orbital angle has three little denticulations; the spines on the lower part of the preopercule, the opercule and shoulder, are less sharp and prominent; the spines of the first dorsal fin are very slender and long, and the second especially, which forms a filament, which is as long as one-third of the entire length of the animal; the lateral line consists of seventy scales, twice as deep as their length, with an angular hollow within their centre, and deeply striated on their edges, and between each two are some of the common scales which cover the body generally, and are small and smooth; the scales on the dorsal ridges have only a simple crest. The upper parts are red crossed with brown, and separated from the dirty-white belly by a silvery band; the pectoral fins are deep red speckled with yellow and blue; the ventrals yellowish; caudal red towards the edge and brown at its tip. This species is a native of the Mediterranean, and, according to Rondelet, utters the cry *cou* when taken from the water, and has therefore been supposed to be the *Cuculus* of the ancients. Risso says that at night it shines with a phosphorescent light, and that, like shooting stars, it produces long streaks of light, either when playing on the surface or deep in the water.

T. Aspera, Viviani; *Rough Gurnard*. Four inches in length; its muzzle is short, and the profile as vertical as in the Streaked Gurnard; the third denticulation on each nasal lobe is projecting and pointed, but those farther out are more like hairs; the granules on the head are fine, close, slender, and pointed like villous teeth; behind the posterior orbital spine is a deep transverse notch, which is the principal distinguishing character of this species; the shoulder has the same villous granules as the head, and has also a very sharp and longish spine; the scales generally are larger than in any other species; the first two dorsal spines only

TRIGLA.

TRIGLA. have their anterior edge serrated, the second and third are tallest, and nearly equal to the whole length of the body. The colour is bright red. It is a native of the Mediterranean.

TRI-GLYPH.

T. Papilio, Cuv. and Valenc.; *Butterfly Gurnard*. Five inches in length; is very similar in form to the preceding, but has the humeral spines shorter; the scales small and of a peculiar form, terminating externally in two little points, notched in the middle of each edge, broad behind and crenellated; the spines which edge the dorsal groove straight and strong; the scales on the lateral line much broader than their length and carinated; first dorsal fin rounded. General colour pale greyish-brown above, and yellowish-white beneath; the first dorsal fin has between its fourth and seventh ray a broad, kidney-shaped, black spot, encircled with white; the outer surface of the pectoral fins is bluish-white, and the inner black, and on the anterior third of the tail a whitish band. It was found in the Indian seas by Peron, as also the two following species.

T. Phalena, Cuv. and Valenc.; *Moth Gurnard*. Very similar to the last species, but the spot on the dorsal fin is round; the spines of the dorsal ridges much lower, and scarcely projecting, the rays of the first dorsal fin slender, simple, and nearly straight. General colour blackish-brown above and whitish beneath.

T. Sphinx, Cuv. and Valenc.; *Sphinx Gurnard*. This seems intermediate to the last two species; the arming of the back is as in the former, but the scales smaller and of similar form to those of the latter, which it also resembles in the slenderness and compressed form of the dorsal rays, which, however, are rather larger, longer, and more arched. The greyish-brown back has a few straggling, irregular, deep brown spots; the dorsal fin has a circular blackish spot, with a white edging, and slightly clouded behind with black; pectoral fins brown.

See Linnæi *Systema Naturæ*, à Gmelin; Cuvier and Valenciennes, *Histoire des Poissons*; Pennant, *British Zoology*; Yarrell,

TRIGLOCHIN, in *Botany*, a genus so named by Linnæus, from *τρεις*, three, and *γωνία*, a point, on account of the three angles of the capsule. It belongs to the class *Hexandria*, order *Trigynia*, and the natural family of *Juncagineæ*. Generic character: perianth six-leaved, deciduous; sepals concave, three inner ones inserted higher up; stamens six, very short; anthers behind, nearly sessile; ovaria three to six, one-seeded; styles three to six, short; stigmas adnate; capsules three to six, valveless; seeds erect.

There are several species of this genus, two of which are natives of marshes in Britain, *T. maritima*, and *T. palustre*, and are commonly called Arrow-grass; they are all grass-looking plants, with naked scapes, bearing spikes of insignificant greenish flowers at the top. Cattle are said to be extremely fond of the leaves, which afford an early bite on the sides of the highland mountains, and in salt marshes near the sea.

TRI-GLYPH, Fr. *triglyphe*; It. *triglifo*; Sp. *triglifo*. Having *tres glyphas*; Gr. *γλυφή*, a grave or groove, *γλυφ-ειν*, to grave. See the Quotation from Evelyn.

The Dorique order is the gravest that hath been received into civil use, preserving, in comparison of those that follow, a more masculine aspect, and little trimmer than the Tuscan that went before, save a sober garnishment now and then of lions' heads in the cornice, and of *tryglyphs* and metopes always in the frieze.

Reliquiæ Wottonianæ, p. 24.

The *tryglyps*, which I affirm'd to be charged on the Doric freeze, is a most inseparable ornament of it. The word *τριγλυφος*, in Greek, imports a three sculptur'd piece; *quasi tres habens glyphas*. By their triangular furrows, or gutters rather, they seem to me as if they were meant to convey the guttæ or drops which hang a little under them.

Evelyn. Miscellaneous Writings, p. 395. *On Architecture*.

TRI'-GON,

TRI'GONAL,

TRIGONO'METRY,

TRIGONOME'TRICAL.

Fr. *trigonométrie*; It. *trigonometria*; Gr. *τριγωνος*, a triangle. (*τρεις*, γωνία) and *με-τρειν*, to measure.

Trigon, a figure having three angles. *Trigonometry*, the measurement of triangles;—of their sides and angles.

As when the cranes direct their flight on high,
To cut their way, they in a *trigon* flie,
Which pointed figure may with ease divide
Opposing blasts, through which they swiftly glide.

Beaumont. Bosworth Field.

A spar of a yellow hue shot into numerous *trigonal* pointed shoots of various sizes, found growing to one side of a perpendicular fissure of a stratum of free-stone.

Woodward.

Such a comparison of the sides and angles of a triangle, by which, from certain sides and angles known in the said triangle, the reason of the other angles may be found to a right one, or the proportion of the other sides to the one assigned and known, this is called *trigonometry*.

Barrow. Mathematical Lectures. Lect. 15.

Trigonometrical surveys for the purpose of measuring a degree of a meridian in different latitudes, and thence inferring the figure of the earth, have been undertaken by different philosophers, under the patronage of different governments.

Hutton. Course of Mathematicks, vol. iii. ch. v.

The *trigonometrical* survey in England was first commenced, in conjunction with similar operations in France, in order to determine the difference of longitude between the meridians of the Greenwich and Paris observatories.

Id. Ib.

TRIGONELLA, in *Botany*, a genus so called by Linnæus from the Greek *τρεις*, three, and *γωνία*, an angle, on account of the vexillum being flat, and the keel small and narrow, giving a triangular appearance to the flower. It belongs to the class *Diadelphia*, order *Decandria*, and the natural family of *Leguminosæ-Papilionaceæ-Loteæ*. Generic character: calyx campanulate, five-cleft; corolla papilionaceous, with a small keel and rather spreading wings and vexillum, forming to all appearance a three-petalled corolla; legume oblong-compressed or cylindrical, acuminate, erectish, many-seeded.

Above forty species are known to botanists of this genus; they are mostly annual herbs, natives of Europe, north of Africa, and north of Asia; the leaves are trifoliate, having the middle leaflet stalked. The flowers are capitate, umbellate, racemose, or solitary, sessile or pedicellate, generally yellow, but often white or blue. The *T. fœnum-græcum*, or Fenugreek, is a medicine used by farriers for horses; the seeds are also used in cataplasms and fomentations, for softening, maturating, and dispersing humours, as well as in emollient glysters. The plant was formerly cultivated by the Romans for fodder, and is still occasionally employed in the agriculture of the south of Europe.

TRIGONIA, in *Botany*, a genus so called by Aublet, from the Greek, *τρεις*, three, and *γωνία*, an angle, on account of the triangular fruit. It belongs to the class *Monadelphia*, order *Decandria*, and the natural family of *Hippocrateaceæ*. Generic character: calyx five-parted, unequal, persistent; petals five, unequal, upper one arched, gibbous and concave, the two lateral ones small and wing-shaped, and the two lower ones connected into the form of a keel; stamens ten or twelve,

TRI-GLYPH.

TRI-GONIA.

TRI-GONIA. some of them sterile, and irregularly connected into a tube at the base, which is cleft in front; anthers fixed by their backs, two-celled; glands two or four, opposite the upper petal, and situated at the base of the ovarium; **TRIGONOCEPHALUS.** ovarium trigonal, three-celled, each cell containing many ovula; style terminated by a three-lobed stigma; capsule trigonal, three-valved, three-celled, the valves woolly inside, constituting dissepiments; seeds numerous, woolly, fixed to the axis; albumen fleshy.

This genus consists of eight known species, all natives of tropical America, principally of Brazil; they are climbing or straggling shrubs, with opposite, entire, bistipulate leaves, and axillary or terminal, racemously panicked inflorescence, and insignificant flowers.

TRIGONIA, in *Zoology*, a genus of *Dimyary Conchiferous Molluscs*.

Generic character. Shell equivalve, inæquilateral, trigonal, and sometimes roundish; hinge teeth oblong, flattened on the sides, diverging, and grooved transversely, two on the right valve grooved on each side, and four on the left upon one side only; ligament external, marginal.

The greater number of this genus are fossil, and it was upon one such that Bruguiere founded his genus; a living species, however, was found on the coast of New Holland during Peron's Voyage round the World. Their name implies their triangular form; they are more or less flattened, the greater number granular, but some striated, and all appear to be *pelagic*, or living only in the most profound depths of the ocean. The fossil specimens are found only in the secondary formations, below plastic clay and lime. Lamarck enumerates sixteen species.

TRIGONIDIUM, in *Botany*, a genus so called by Lindley, from the Greek *τριγωνος*, *triangular*, on account of the trigonal perianth. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ-Vandææ*. *Generic character*: sepals equal, semiherbaceous, cohering into a trigonal cup, which spreads at the top; petals coloured not half so long as the sepals; labellum short, three-lobed, articulated with the column, fleshy in the middle; column short, free, semiterete; anther one-celled; pollen masses four, cohering, smaller ones dorsal, seated on a small triangular gland, which covers the small triangular stigma.

This genus consists of two known species; they are American epiphytes, with creeping floriferous, pseudobulbiferous rhizoma, coriaceous leaves, and erect, one-flowered, sheathed peduncles, and yellowish flowers.

TRIGONOCARPUS, in *Botany*, a genus so named by Wallich, from the Greek *τριγωνος*, *trigonal*, and *καρπος*, *a fruit*, on account of the shape of its fruit. It belongs to the class *Didynamia*, order *Angiospermia*, and the natural family of *Bignoniaceæ*. *Generic character*: flowers unknown; capsule trigonal, with a furrow on one side; seeds winged at both ends.

Only one species of this genus is known; it is a tree, found at Moalmeyne in Ava; the leaves are opposite, simple, cordate, and glaucous beneath; the flowers are disposed in terminal, bracteate panicles.

TRIGONOCEPHALUS, from the Greek *τριγωνον*, *a triangle*, and *κεφαλη*, *a head*, Oppel. In *Zoology*, a genus of animals belonging to the family *Serpentes*, order *Ophidia*, class *Reptilia*.

Generic character. Head trigonal, depressed, very large and distinct, narrow in front and obtuse, marginal scales of the muzzle and jaws polygonal, nostrils ob-

long; apertures between the nostrils and eyes very distinct; eyes little prominent; upper jaws armed with poison fangs; body not very long, thickest in the middle, somewhat rounded and trigonal, and tapering towards the extremities, ridge of the spine very distinct, lower parts of the sides and abdomen rounded; scales on the upper part of the body oblongly rhomboidal, abdominal plates single, girding the whole belly; vent transverse; tail short, gently tapering, not unfrequently spiny; the inferior plates beneath it in pairs.

This genus was included by Linnæus and others among his *Colubri*, but by Daudin, Latreille and Dumeril among the *Viperæ*, but it has been formed into a distinct genus by Oppel. In most characters it agrees with the rattlesnakes (*Crotali*), except in not having the tail furnished with a rattle; in its general habits and its poisonous properties it closely resembles them. Merrem prefers the generic title *Cophias* to this genus, and is followed by Pr. Maximilian, who observes that the head is not triangular in all the species.

T. Lanceolatus, Opp.; *la Vipère fer de lance*, Lacep.; *Megæra*, Shaw. From five to six feet in length, of which the tail is one-seventh. Although this species is commonly known to the French colonists of Martinique as the *Yellow Viper*, yet, as remarked by Lacepede and Daudin, this designation is incorrect, the same brood producing some ash-coloured and others yellow; some are marbled on their upper surface with transverse brownish streaks, which others have not, and some are rich deep brown, according to Shaw, varied with bars of yellow; but all have a lengthy brown streak edged with whitish behind each eye, and the under surface of the head, body and tail yellowish-white, without any spot. It is very common in Martinique, and prefers the sugar-cane fields on account of the great number of rats, upon which it feeds, hiding itself under heaps of leaves, or in holes in the ground, and but rarely enters houses. Its presence is easily known by its very offensive odour, and by the cries of little birds which move briskly around it. Its food consists of rats, lizards, birds and game. It is generally considered very poisonous, but Daudin mentions, on the authority of a Martinique planter, that many of his negroes had been bitten, but without further inconvenience than a great disposition to sleep, and that the effect of the mischief was prevented by keeping the person awake for twenty-four hours. It is also a native of the South American continent, and Cuvier considers it the same species as Spix's *Souroucou*.

T. Tigrina, Opp.; *la Vipère Tigrée*, Lacep.; *Panther Snake*, Shaw. About fourteen inches in length, the tail one-seventh; it has much resemblance to our common vipers; its upper surface is reddish-white, with some deep spots edged with black.

T. Ammodytes, Opp.; *la Scytale Ammodyte*, Lacep.; *Ammodytes*, Shaw. Muzzle tipped with a little elevated wart covered with small scales; upper part of the body deep grey or pale rufous, sprinkled with little black points; along the back is extended a longitudinal blackish, zigzag band, and in its angles on either side are black spots; the lips, throat, and all the scales of the belly and tail are white and black, sometimes tinged with reddish. This species is not uncommon in many parts of the continent of Europe, especially in Germany, also in Illyria, and in France, in Dauphiny, and in the neighbourhood of Lyons. It feeds on birds, which, according to Jacquin and De Sturm, it attracts by the

TRIGONOCEPHALUS.

TRIGO-
NOCE-
PHALUS.

rapid movement of its tongue, which they mistake for a worm or insect. Itself becomes a prey to vultures and owls, which destroy it with a blow of the beak. Its bite produces dizziness and a sort of insensibility, accompanied with severe pain; the wound inflames, swells, and becomes gangrenous; feebleness, shuddering and vomiting ensue, with severe constitutional excitement, and are rarely followed by death. For the relief of this injury cupping-glasses are sometimes applied, after having tied a ligature tightly above the wound; and afterwards the parts washed with fomentations of wine, rue, and rosemary, or rubbed with garlic.

T. Viridis, Opp.; *la Vipère verte du Bengale*, Daud. Thirty inches in length, of which the tail is one-fifth; head, body, and tail water-green, with a row of beautiful yellow scales on each side of the latter; the abdominal and caudal scales pale straw-coloured and some having a little green spot at the tip. It is found on the Coromandel coast, where it is called by the natives *Bodrou-ham*, and is very active. Daudin doubts its being venomous.

T. Atrox, Cuv.; *Coluber Atrox*, Lin.; *Cophias Atr.* Mer. Four feet six inches in length, of which the tail is one-ninth; head broad, ovate, and somewhat heart-shaped; scales on the upper surface of the head ovate and of irregular size, upon the back of the head more equal and slightly pointed, and thence becoming carinated and disposed in twenty-four rows along the whole length of the body; abdominal scuta from 193 to 201, caudal from 59 to 68 pairs; the ground-colour of this species is brownish-grey, often inclining to bluish, but still more to brownish, with dusky greyish-brown or blackish-brown large triangular spots on either side, which increase in breadth towards the belly; on the fore part of the body the marking is paler, and in old animals scarcely visible; along the margin of the belly on each side is a row of round, greyish-brown spots; belly yellow-white, and each scutum marked at its edge with two marble-grey spots. This species is the most common poisonous snake of the Brazils, and is probably widely spread over South America. It is powerful but sluggish, and usually lies coiled up in dry, hot bushes, or in high, damp woods, and only prepares for attack when approached too nearly. By the Brazilians the young animal is called *Jararaca*, and the older one, which they consider a distinct species, *Jararacussú*, or *Large Jararaca*. Prince Maximilian observes that the *Cophias Atrox* from Surinam has great general resemblance to this species, but is distinguished by the belly being more dusky, and by a double row of little white spots along each margin; all the colours are more sharply defined, and from the eye above the corner of the mouth passes a broad dusky brown stripe. This Surinam species he considers has great resemblance with Spix's *Bothrops Leucostigma*, and also that *Bothrops Megæra* of the same zoologist is very like the Brazilian serpent just described.

T. Bilineatus, Cuv.; *Cophias Bilineatus*, Pr. Max. About twenty-two inches in length, of which the tail is one-seventh; head wide and heart-shaped; scales carinated; abdominal scuta from 206 to 210, caudal from 66 to 71; body sea-green, spotted and streaked with blackish; on either side, close to the belly, a pale yellowish line, and upon the back a longitudinal row of little, distinct, rufous spots, encircled with blackish; under part of the head and throat bright yellow, and of the neck pale yellowish-green; belly and tail yellowish

white. Is a native of Brazil, and considered very poisonous.

T. Mutus, Cuv.; *Crotalus Mutus*, Lin.; *Lachesis Rhombeata*, Pr. Max. This species is included by Cuvier among the *Trigonocephali*, which, with small scales upon the head, have a double row of scuta beneath the tail, except at its tip, which is covered with little imbricated scales, and terminates in a small spine. Prince Maximilian prefers, with Daudin, forming it into the distinct genus *Lachesis*; Merrem, however, includes it in his genus *Cophias*. From six to nearly seven feet in length; the tail very short; upper surface covered with carinated, swelling, or nodulous, rhomboidal scales; abdominal scuta from 224 to 226, caudal from 28 to 33 pairs, and one to three entire ones; upper surface rufous yellow, a longitudinal stripe of large, dark brown, diamond-shaped spots upon the back, each of which contains two little, pale spots; belly and under parts pale yellowish-white, with a porcelainous brilliancy. It is a native of the Brazils and of Guiana; is very sluggish and acquires great size, it is said, attaining to the thickness of a man's thigh. It is usually found quietly rolled up on the ground in the woods, but never ascends trees. Its habits closely resemble those of the rattlesnakes, and its bite is not less poisonous, destroying life in from six to twelve hours. It is known to the Brazilians by the name *Surukuku*, and is probably the *Boschmeester*, or *Coenicoussi*, of the inhabitants of Surinam.

See Oepel, *Die Ordnungen, Familien, und Gattungen der Reptilien, &c.*; Daudin, *Histoire des Reptiles*; Patr. Russell, *An Account of the Indian Serpents, &c.*; Cuvier, *Règne Animal*; Pr. Max. zu Wied, *Beiträge zur Naturgeschichte von Brasilien*.

TRIGONOSPERMUM, in Botany, a genus so named by Lessing from *τριγωνος*, triangular, and *σπέρμα*, a seed, on account of the triangular achenia. It belongs to the class *Syngenesia*, order *Necessaria*, and the natural family of *Compositæ-Senecionideæ*. Generic character: heads monoecious, minute, many-flowered; flowers of the ray three; female, ligulate, deeply three-four toothed, small, those of the disk more numerous, male, and tubular; involucre six or eight-leaved, with linear, acute, one-nerved scales, the alternate ones larger and roundish; paleæ of the receptacle scarious, of two forms, outer ones larger, erose, inner ones linear; style of the male flower quite entire, abortive, those of the female bifid; achenia of the disk wanting, of the ray triangular, girded by an exterior scale, and an interior palea, lucid and naked.

Annual, erect, dichotomous herbs, natives of Mexico; the leaves are opposite, triple-nerved, rhomb-ovate, shortly acuminate, cuneately decurrent, even to the base of the petioles, rather hairy on both surfaces; the panicles are cymose, with glandularly hairy branches, and the heads are yellow. Two species are known, *T. melampodioides*, and *T. adenostemoides*.

TRIGOSTEMON, in Botany, a genus so called by Blume, from the Greek *τρεῖς*, three, and *στέμον*, a stamen, in reference to the number of stamens. It belongs to the class *Monoecia*, order *Monadelphia*, and the natural family of *Euphorbiaceæ*. Generic character: flowers monoecious; calyx five-parted; petals five, campanulately conniving, interjected by five glands. Male flower; stamens three, having the filaments combined at the base, but free and bifid at the tops; cells of anthers diverging at top and adnate outwardly beneath

TRIGO-
NOCE-
PHALUS.TRIGO-
STEMON

TRIGON-STEMON. the apex; female flower, ovary three-celled; cells containing each one ovulum; styles three, trifid; fruit capsular, tricoccus.

TRILEPIS.

This genus consists of a single known species, *T. serratum*, a shrub, native of Java; the lower leaves are scattered, but the upper ones are ternately verticillate, all oblong, acuminate, obtuse at the base, serrulate, puberulous beneath; the racemes are simple and axillary; the flowers are two or three together and bracteate.

TRIGUERA, in *Botany*, a genus dedicated by Cavanilles to D. Trigueros, a Spanish botanist, and first discoverer of the present genus. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Solanaceæ-Nolaniæ*. Generic character: calyx five-cleft, with unequal, acute, persistent segments; corolla campanulate, irregular, dilated into a short, ventricose, subbilabiate, plicate limb, which is longer than the calyx; the segments unequal, and the two upper ones reflexed; stamens five, very short, joined at the base by a five-toothed, epipetalous membrane, which surrounds the ovary; anthers sagittate, conniving into a cone, each dehiscing by two pores at the apex; stigma capitate; drupe small, globose, half covered by the calyx, furrowed, four-celled, cells two-seeded; seeds ovate, compressed, usually only one in each cell coming to maturity.

This genus, which is nearly allied to *Nolana*, consists of two known species, *T. ambrosiaca*, and *T. inodora*, both natives of Spain; they are annual herbs, with entire or toothed leaves, and extra-axillary, two-flowered peduncles; the flowers are like those of Henbane, purplish-violet at the base, and cream-coloured at top; the first species exhales a strong scent of musk.

TRIGYNÆA, in *Botany*, a genus so called by Schlechtendahl, from the Greek *τρεις*, three, and *γυνή*, a female, on account of the three styles. It belongs to the class *Polyandria*, order *Trigynia*, and the natural family of *Anonaceæ*. Generic character: calyx of three sepals, much smaller than the corolla; petals five, hypogynous, inner ones the largest, thicker, and convex on the back; stamens numerous, with short filaments and linear anthers, the cells of the anthers dehiscing by lateral chinks; ovaria three, sessile on the top of a conical torus, one celled; ovula six, inserted in the ventral suture in one series; styles three, short, distinct; stigmas broad, cup-shaped.

Of this singular genus only one species is known, it is a shrub, a native of Brazil, with flexuous, pubescent branches; the leaves are alternate, on short petioles, and quite entire; the peduncles are extra-axillary, solitary, one-flowered, and the flowers are about the size of those of the pea.

TRILEPIS, in *Botany*, a genus so called by Nees ab Esenbeck, from the Greek *τρεις*, three, and *λεπιδ*, a scale. It belongs to the class *Triandria*, order *Dyginia*, and the natural family of *Gramineæ*. Generic character: spikelets one-flowered, unisexual; male, glume one, in front; paleæ two, parallel with the rachis, lower one behind clasping the superior one, which is smaller and sometimes wanting; stamens two or three; perigone wanting; female, glume and paleæ as in the male; perigone of many bristles; bristles shorter than the paleæ, smooth and of unequal length; disk none; ovary crowned by a bifid or trifid stigma; caryopsis rostrate.

Composed of small herbs, with the habit of species of *Carex*, natives of Himalaya and Brazil; the spikes are declinate or androgynous, simple or compound, or loosely panicle.

TRILEPISIUM, in *Botany*, a genus so called by Du Petit Thouars from the Greek *τρεις*, three, and *λεπιδ*, a scale, on account of three scales being present in the tube of the calyx, between the pistil and the stamens. It belongs to the class *Icosandria*, order *Monogynia*, and the natural family of *Chrysobalanæ*. Generic character: calyx thick, five-parted, free; petals none; stamens numerous, filiform, inserted in the calyx; tube of calyx terminating in three scales between the stamens and pistil; ovary in the bottom of the calyx, one-seeded; style longer than the tube, bifid at apex; stigmas tomentose; fruit unknown.

A single species is only known, *T. Madagascariensis*; it is a small tree with alternate, lanceolate leaves, and when young they are inclosed by the stipulas, which are caducous.

TRILITERAL. See the Quotation.

This name is *trilateral*: it consists of three letters [*tres literæ*], thau, beth, and he; all which are here symbolical.

Biblioth. Bible, vol. i. p. 237.

TRILIX, in *Botany*, a genus named by Linnæus from *trilix*, triple, on account of the calyx being three-parted, and the petals three. It belongs to the class *Polyandria*, order *Monogynia*, and the natural family of *Hippocrateæ*. Generic character: calyx three-parted, persistent; petals three, smaller than the calyx; stamens numerous, hypogynous; anthers roundish; style one; stigma one; berry somewhat pentagonal, five-celled, many-seeded, covered by the calyx.

Only one known species, a much branched shrub, with alternate subpeltate leaves and terminal flowers.

TRILL, *v.* } *D. trillen*; *Ger. trillen*; *A. S. thirl-*
TRILL, *n.* } *ian*. See **THRILL** and **DRILL**.

segments alternate, sessile; stamens six; ovarium roundish, styles three; stigmas three; berry roundish, with many-seeded cells.

The species are pretty plants, but of difficult culture; the roots are rhizomatose; the stems are furnished in the middle with three leaves in a whorl, and terminated by a single flower.

TRIM, v.

TRIM, adj.

TRIM, n.

TRI'MLY,

TRI'MMER,

TRI'MMING, n.

A. S. *tryman*, *trimman*, *parare*, *ordinare*, *disponere*; and, hence, *firmare*, *stabilire*; to set in order, to dress.

To set or put in order; to fit, to adapt, to bring or reduce, to diminish, to cut—into fit form or shape; to dress, to array, to rig, to set out, in order, neatness, or niceness; to decorate. To *trim*, met. is—

To suit or adapt, or accommodate; *sc.* to circumstances, to expedients; to prepare for the safest side.

[Sir Andrewe Dudley] being but single maned, had a greate conflict with three Scottishe shippes, beeyng double manned and *trimmed* with ordinaunce, in the narrowe seas, and obtained the victorie. *Fabyan. Chronycle*, p. 709. Anno 1546.

He rayased an engyn in y^e castell, the which was nat very great, but he *trymmed* it to a poynt.

Lord Berners. Froissart. Cronycle, vol. i. ch. lix. p. 80.

It taketh no rote in a briery place, ne in marice, nether in the sande that fleeteth awaye, but it requireth a pure, a *trymme*, and a substaunciall grounde.

Udall. Erasmus. St. James, ch. i. fol. 28.

As though a manne woulde caste myre in another mannes face, that he hym selfe myght seme the fayrer; and arraye an other mannes garment with fylthynes, that he him selfe myght seme the more *trym*.

Id. Ib. fol. 38.

There hang downe certaine square flappes compacted of a kinde of strawe which is made rough and rugged with extreme heat, and is so *trimmed*, that it glittereth in the sunne beames, like vnto a glasse, or an helmet well burnished.

Hakluyt. Voyages, &c. vol. i. p. 116. *The Tartars*.

Some man, either by lustines of nature, or brought by ill teaching to a wrong judgement, is over full of wordes, sentences, and matter; and yet all his wordes be proper, apt, and well chosen; all his sentences be round, and *trimlie* framed.

Ascham. Works, fol. 290. *The Schole Master*, b. ii.

Therefore then lette passe al that *trimming* and araying of her body, which whē her husband liued, might seeme to be done for pleasure.

Vives. The Instr. of a Christian Woman, book iii. ch. iv.

Ar. Get a banquet ready,

And *trim* yourselves up handsomly.

Beaumont and Fletcher. The Loyal Subject, act ii. sc. 3.

Who had vnder their gouvernement fortie great carrauels, and thirteene *trim* barkes throughlie furnished and appointed with good mariners and men of warre.

Holinshed. Chronicles, vol. ii. p. 697. *Edward III.* Anno 1372.

And when they ceast, it gan againe to play,

The whiles the maskers marched forth in *trim* array.

Spenser. Faerie Queene, book iii. can. 12.

And there's

Another of 'em, a *trim*, cheating souldier,

I'll maul that rascal, h'as out-brav'd me twice.

Beaumont and Fletcher. The Maid's Tragedy, act ii.

Wayting to passe, he saw whereas did swim

Along the shore, as swift as glaunce of eye,

A little gondelay, bedecked *trim*

With boughes and aibours woven cunningly,

That like a little forrest seemed outwardly.

Spenser. Faerie Queene, book ii. can. 6.

PEN. My honour, got thorow fire, thorow stubborn breach es,
Thorow battels that have been as hard to win as heaven,
Thorow death himself, in all his horrid *trims*,
Is gone for ever.

Beaumont and Fletcher. Bonduca, act iv. sc. 3.

VOL. XXVIII.

But Calidore of courteous inclination,
Tooke Coridon and set him in his place,
That he should lead the daunce, as was his fashion;
For Coridon could daunce, and *trimly* trace.

Spenser. Faerie Queene, book vi. can. 9.

Now the English-men's powder failed them, their pikes were broken, all their stoutest men either slain or hurt, their masts and *trimmers* overthrown, their cables cut, &c.

Camden. History of Queen Elizabeth, fol. 456. Anno 1591.

Religion is like the fashion: one man wears his doublet slashed, another laced, another plain; but every man has a doublet; so every man has his religion: we differ about the *trimming*.

Selden. Table Talk, p. 110.

The seat the soft wool of the bee,

The cover (gallantly to see)

The wing of a py'd butterflye,

I trow, 'twas simple *trimming*.

Drayton. Nymphidia. The Court of Fairy.

And set forth hyacinths with iron-blue,

To shade marsh marigolds of shining hue.

Some bound in order, others loosely strow'd,

To dress thy bower, and *trim* thy new abode.

Dryden. Virgil. Pastoral 2.

That done, bears up to th' prize, and views each limb;

To know her by her rigging and her *trimm*.

Id. Prologue to the Second Part of the Conquest of Granada.

So when some beauteous dame, a reigning toast,

The flower of Forth, and proud Edina's boast,

Stands at her toilet in her tartan plaid,

In all her richest head-geer *trimly* clad.

Somerville. To Allan Ramsay.

A *trimmer* cry'd, (that heard me tell this story)

Fie, Mistress Cooke! faith you're too rank a Tory!

Wish not Whiggs hang'd, but pity their hard cases.

Dryden. Epilogue to the Duke of Guise.

His double *trimming* character prevailed on him to talk with the Duke of Ormond: but it carried him no farther.

Bolingbroke. Works, vol. i. p. 79. *Letter to Sir W. Wyndham*.

He, who went about to allay this extravagant ferment, was called a *trimmer*; and he who was in truth a common friend, was sure of being treated as a common enemy.

Id. Ib. vol. iii. p. 100. *Upon Parties. Letter 6*.

The academician would pass, if he could, for a neuter, who is for no side, nor against any; or else for a *trimmer*, who changes sides often, and finds the probable sometimes on one, sometimes on the other.

Id. Ib. vol. viii. p. 74. *Fragments of Essays*, sec. 31.

Those, says Quintilian, who are taken with the outward show of things, think that there is more beauty in persons who are *trimmed*, curled and painted, than uncorrupt nature can give; as if beauty were merely the effect of the corruption of manners.

Reynolds. Works, vol. i. p. 66. *Discourse 3. Note*.

To this out-rigger the shrouds are fastened, and it is essentially necessary in *trimming* the boat when it blows fresh.

Cook. Voyages, vol. i. book i. ch. xviii. p. 207.

TRIMERESURUS, from the Greek *τριμερης*, *divided into three parts*, and *ουρα*, a tail, Lacep. In Zoology, a genus of animals belonging to the family *Serpentes*, order *Ophidia*, class *Reptilia*.

Generic character. Upper jaw furnished with poison fangs; abdominal scuta entire; caudal scuta near the vent in pairs, towards the middle the same but larger, and near the tip smaller pairs.

The formation of this genus depends upon the three different sized series of scuta existing on the under surface of the tail. They are near approached to the *Vipers*.

T. Microcephalus; *le Trimérésure petite tête*. From five to eight inches in length, of which the tail is one-eighth; has the scales smooth, excepting four or five longitudinal rows on the back, which have crests; tail very slender; its colour is uniform and dusky; the large

plates are deeper coloured on their edges. Is a native of New Holland.

The other species, *Trimérésure Vert*, is included by Cuvier among the *Trigonocephali*.

See Lapepède in *Annales du Muséum*, vol. iv.

TRIMERIA, in *Botany*, a genus so called by Harvey, from *τρεις*, *three*, and *μερίς*, *a part*, on account of the parts of fructification being ternary. It belongs to the class *Enneandria*, order *Trigynia*, and the natural family of *Homalineæ*. Generic character: perianth with a very short or hardly evident tube, and a six-parted limb; the segments in two verticils of threes, they are concave and obtuse, the inner ones the largest; stamens nine, approximating by threes opposite the three interior segments of the perianth, each fascicle alternating with large subciliated glands; ovary free, one-celled, with three parietal, uniovulate placentas; styles three, very short; capsule one-celled, three-valved; valves placentiferous in the middle; seeds three, or only one by abortion, arillate.

A single species of this genus is alone known, a tree, a native of South Africa; the leaves are alternate, crenated, petiolate, three-nerved, glabrous, variable in form; the spikes of flowers are axillary, and shorter than the petioles.

TRIMERIS, in *Botany*, a genus named by Presl, from *τρεις*, *three*, and *μερίς*, *a part*. It belongs to the class *Monadelphia*, order *Pentandria*, and the natural family of *Lobeliaceæ*. Generic character: calyx with a narrow, turbinate tube, which is connate with the ovary, and a five-cleft limb, the segments furnished each with a thick middle nerve; corolla inserted in the upper part of the tube of the corolla, the two upper petals linear and free, the three lower ones joined into a three-lobed, erect lip; stamens five, inserted along with the corolla; filaments and anthers joined into a tube, the two lower ones bearded; ovary two-celled; style inclosed; stigma two-lobed, lobes at length, exserted, divaricate, orbicular; fruit indehiscent.

A single species is known, *T. scævolæfolia*, the *Lobelia scævolæfolia* of Roxburgh; it is a shrub, native of St. Helena, with alternate, oblong leaves, and axillary racemes of flowers.

TRIMERIZA, in *Botany*, a genus so named by Lindley, from *τριμερίζω*, *to divide into three parts*. It belongs to the class *Gynandria*, order *Enneandria*, and the natural family of *Aristolochiæ*. Generic character: male flower, perianth three-parted; corona none; stamens nine, disposed in three bundles; rudiment of stigma urceolate, six-toothed; female flower, capsule silique-formed, four-valved, many-seeded.

A single species is alone known of this genus, and is a native of Ceylon; the stems are flexuous, glabrous, rather tumid at the nodi; the leaves are ovate-lanceolate, triple-ribbed, reticulated beneath, and pubescent on both surfaces; the racemes are few-flowered, short and axillary.

TRIMETER, Gr. *τριμετρος*, *versus tria metra seu tres mensuras habens*; a verse having three measures, or six (Iambic) feet.

This foot yet, in the famous *trimeters*
Of Decius and Ennius, rare appears.

Jonson. Horace. *Of the Art of Poetrie*.

TRIMETRA, in *Botany*, a genus so called by Moench, from *τρια*, *three*, and *μητρα*, *the womb*. It belongs to the class *Syngenesia*, order *Frustranea*, and the natural family of *Compositæ-Helianthææ*. Generic cha-

racter: heads many-flowered, radiate; ray-flowers ligulate, in one series, female; those of the disk tubular, hermaphrodite, and five-toothed; involucre campanulate, in two series; outer scales five or six, foliaceous, mucronate, loose; inner ones five or six, membranous; receptacle paleaceous, the paleæ obovate, oblong; style bifid in the rays and trifid in the disks; the branches are exserted, slender, revolute and hispid; achenia cylindrical, glabrous; pappus membranous, crown-formed, four or five-toothed.

T. ficoidea is the only known species, and is a small, branched, glabrous, fleshy, under-shrub, a native of Mexico; the leaves are opposite and subtriquetrous, quite entire, thick; bulbels fleshy, ovate in the axils of the leaves and branches. The genus is probably nearly allied to *Heliopsis*.

TRINCHINETTIA, in *Botany*, a genus dedicated to some botanist of the name of Trinchinett. It belongs to the class *Syngenesia*, order *Superflua*, and the natural family of *Compositæ*. Generic character: heads many-flowered, heterogamous; flowers of the ray five or seven in number, ligulate, tridentate, female, but those of the disk are tubular, five-toothed, and hermaphrodite; involucre ovate, imbricated, the scales in three series, the inner ones the longest, obtuse and striated; receptacle convex, chaffless, dotted; achenia prismatic, pubescent, paleæ of the pappus ten, oval-oblong, a little toothed at the apex, obtuse, in one series, incumbent.

A single species of this genus is known: it is a dichotomously branched, erect, pubescent herb, with round branches. The leaves are opposite on short petioles, ovate-lanceolate, acuminate, coarsely toothed, triple-nerved, glabrous, but having the petioles and nerves on the under sides pubescent; the heads of flowers are solitary and from the forks of the branches, and about the size of peas; the flowers are yellow.

TRINE, *adj.* } Fr. *trine*; It. *trino*; Sp. *trino*;
TRINE, *n.* } Lat. *trinus*, (from *tres*) three.
TRINE, *v.* } Threefold, tripled, compounded
TRI'NAL, } or composed of three. In astro-
TRI'NITY, } logy, a third portion of the zodiac.
TRINITA'RIAN. } To *trine*, to be or place in one of
the *trine* angles.

I have a sone, and by the *trinitee*
It were me lever than twenty pound worth lond,
Though it right now were fallen in my hond,
He were a man of swiche discretion
As that ye ben.

Chaucer. *The Frankeleines Prologue*, v. 10994.

Theologie is that science,
Whiche vnto man yeueth euidence
Of thynges, whiche is not bodily,
Wherof men knowe redily
The high almighty *trinitee*,
Whiche is a god in vnitee,
Withouten ende and begynnynge,
And creature of all thynges.

Gower. *Conf. Am.* book vii.

During the which there was an heavenly noise
Heard sounnd through all the pallace pleasantly,
Like as it had bene many an angels voice
Singing before th' Eternall Maiesty,
In their *trinal* triplicities on hye.

Spenser. *Faerie Queene*, book i. can. 12.

This therefore is the very last ground his argument is to be resolved into. But how weak it is I have already intimated, it being not *trinal* dimension, but impenetrability, that constitutes a body.

More. *The Immortality of the Soul*, book i. ch. x. sec. 7.

TRI-
METRA.

TRINE,

TRINE.
—
TRINGA.

To the blanc moone
Her office they prescrib'd, to th' other five
Their planetarie motions and aspects
In sextile, square, and *trine*, and opposite,
Of noxious efficacie, and when to joyne
In synod unbenigne,

Milton. *Paradise Lost*, book x. l. 659.

That glorious form, that light unsufferable,
And that far-beaming blaze of majesty,
Wherewith he wont at heav'n's high council-table
To sit the midst of *Trinal* Unity,
He laid aside.

Id. *Ode on the Morning of Christ's Nativity*.

St. Denis says, that the *trine* immersion signifies the divine essence and beatitude of God in a trinity of persons. St. Athanasius says, it signifies the death, burial, and resurrection of our blessed Saviour, together with his being three days in the grave.

Taylor. *Rule of Conscience*, book iii. ch. iv. fol. 645.

As to those who take *trinity* and tritheism for synonymous terms, they may go on to value themselves upon it.

Waterland. *Works*, vol. i. p. 238. *A Defence of some Queries*.

Excuse the *trinitarians* for being reserved, after your example

in so tender a point; and for endeavouring to speak properly, as well as to think justly, in things pertaining unto God.

Waterland. *Works*, vol. i. p. 232. *A Defence of some Queries*. TRINGA.

If the *trinitarian* be still farther urged to show in what way this divine equality exists—how far it is an equality—or, if not, what degrees exist of superiority or inferiority, he answers with St. Paul, that God was manifest in the flesh; but that without controversy, great is the mystery of godliness.

Gilpin. *Sermons*, vol. ii. Hint 90.

Now frequent *trines* the happier lights among,
And high rais'd Jove from his dark prison freed,
Those weights took off that on his planet hung,
Will gloriously the new-laid work succeed.

Dryden. *Annus Mirabilis*.

For this advantage age from youth has won,
As not to be outridden, though outrun.
By Fortune he was now to Venus *trin'd*,
And with stern Mars in Capricorn was join'd.

Id. *Palamon and Arcite*, book iii.

These Cherubim were figures emblematical of the *trine* persons in the Godhead—of the mystery of redemption by the Son's atonement—and of the subjection of all the powers of nature, and of all created things, animate and inanimate, to the incarnate God.

Horsley. *Sermons*, vol. iii. p. 15.

TRINGA.

TRINGA, Lin. Tem.; *Sandpiper*. In Zoology, a genus of animals belonging to the family *Longirostres*, order *Grallæ*, class *Aves*.

Generic character. Beak of moderate size, as long or longer than the head, very slightly arched, and either straight or bent at the tip, soft and flexible throughout its entire length, compressed at the base, and depressed, dilated, and blunt at the tip; both mandibles grooved nearly to the point; nostrils lateral, conical, and piercing the membrane which covers the nasal groove; wings of moderate size, the first quill longest; legs slender, and naked above the knee; front toes completely divided and edged with a narrow membrane; hind toe articulated on the tarsus.

Much difficulty has arisen in assigning a specific character to the individuals belonging to this genus, on account of the great variety of plumage arising out of its change of colours in their annual double moult, the plumage of summer differing materially from that with which each bird is clothed in winter. Hence have been described many species which more close observation has shown to be merely the same bird differently feathered at different times of year; so that not unfrequently one bird has been described under two or three specific names, as will presently appear. The principal variations of colour, Selby observes, are from white to reddish-brown, and from grey to black; and in this respect they are similarly circumstanced to the *Numenii*, *Scolopaces* and *Totani*. The colours of the sexes are nearly alike, but the female is largest. They live in small flocks in marshy districts, either near the sea, or along the banks of rivers and lakes where they principally seek their food, consisting of insects and their larvæ, of worms, molluscs, and small bivalves, upon the surface among the weeds when left by the recession of the tide; but they do not much employ their beak for boring, as it is less sensible than in those birds which have this habit. They almost invariably resort to high northern latitudes in the spring, for the purpose of incubation, and return southward in autumn; but some remain stationary throughout the year. As in many other instances, so also in this, systematic writers

have, without any very satisfactory reason, subdivided the genus into many groups, assigning to them generic characters scarcely distinguishable, and which in reality are merely the gradations by which one genus is connected with another. Thus Cuvier has assigned to many of Temminck's *Tringæ* the generic name *Calidris*, whilst to those smaller species which have the beak rather longer than the head, as the Purre, the Little Sandpiper, and perhaps the Large Winged Sandpiper of Spix, he assigns the title *Pelidna*, excluding the Pigmy Curlew and the Knots. Temminck, however, retains them as *Tringæ*, and Jardine observes, "I can fix upon no character which is not equally applicable; and the habits, the changes of the plumage, and the form are so similar that, with the exception of modification essential to every group, they compose one whole." Selby also makes a similar remark of both *Pelidna* and *Calidris*, another genus formed by Cuvier from the *Tringæ*: "not being satisfied that the characters upon which the Baron Cuvier has established these new genera are so distinct and well marked as to warrant a generic division, being in fact only such by the modifications of form as might naturally be expected in birds standing at the extremes of the group to which they belong, and whose intimate connection is shown by the intervention of species intermediate in form, and leading gradually and almost imperceptibly from one to the other. Temminck, on the other hand, has been perhaps too much disposed to include in one genus as many species as he could by any possibility manage to include under the same head; hence he formerly arranged Cuvier's genera *Machetes* and *Falcinellus* merely as sections of his own *Tringæ*, but has since admitted them as distinct, though not with a very good grace, in compliance with the present opinion of ornithologists in general. The *Tringæ* are connected to the genus *Machetes* by means of *T. Cinerea*, in which the bill is nearly straight; and the same species by the bordering of its toes, which in *T. Semipalmata* and *T. Himantopus* becomes a broad membrane connecting the toes; it is allied to *Phalaropus*.

T. Subarquata, Tem.; *Scolopax Africana*, Gmel.; *l'Alou-*

TRINGA. *ette de Mer*, Buff.; *Red Sandpiper*, Tem.; *Red Dunlin*, Steph. Eight inches in length; beak arched and much longer than the head; the middle two caudal quills longer than the rest; a large part of the tibiae bare; tarsi above an inch and a quarter long. In their *winter* plumage both sexes have the beak black and irides brown, the head, back, scapulars, and wing-coverts ashy-brown, with darker stems; feathers of the nape longitudinally streaked with brown and whitish on their edges; face, superciliary streak, throat and under parts pure white, excepting the front of the neck and the chest, which are streaked with hair-brown, a brown streak between the beak and eye; caudal quills ashy edged with white, the outer quills white within, under tail-coverts white. In *summer* the top of the head is black with rufous edgings; the rufous nape is streaked with black; back, scapulars and greater wing-coverts deep black, the edges of these feathers angularly marked with bright rufous, and most of them tipped with pale ashy; the other wing-coverts ashy with reddish-yellow during incubation, but at other times deep brown, edged with whitish; face, superciliary streak, and throat white with brown dottings; throat and under parts chestnut-red, marked, according to the time of year, with little brown spots, or varied with white feathers; tail blackish edged with white, its upper and under coverts white transversely waved with black and rufous. It lives on the borders of the sea and lakes, but rarely far in-shore; passes regularly northward in spring and southward in autumn; is rarely found in Holland or Great Britain; it constantly resides throughout the year in Sardinia, and is found at the Cape of Good Hope, in Senegal, also in the Sonda Isles, and in New Guinea, and in North America. It makes its nest on the shore, and lays four or five eggs, yellowish with brown spots.

T. Variabilis, Meyer; *T. Cinclus*, Lin.; *le Bécasseau Brunette ou Variable*, Tem.; *Purre* or *Stint*, Will.; *Purre Dunlin*, Steph. About seven and three quarter inches in length; beak nearly straight, rather longer than the head, and slightly inclined at the tip, black; irides blackish-brown. In *winter* the streak between the beak and eye and all the upper parts ashy-brown with darker stems; rump, middle, upper tail-coverts and the middle two quills, which are pointed, blackish-brown, the others ashy with white edges; superciliary streak, throat and all the under parts, and the outer three upper tail-coverts, white, the chest tinged with ashy; a small part of the tibiae bare; legs blackish-brown; the tarsi about an inch in length. In *summer* the top of the head has black feathers, edged with bright rufous; back, scapulars, and great wing-coverts deep black, broadly edged with bright rufous and tipped with whitish-ash, the middle three upper caudal coverts white on their outer webs; caudal quills ashy-black, tipped with white; the sides of the head and face, front and sides of the throat and chest white tinged with rufous, and all the feathers streaked with black; belly deep black, and according to the time of year varied with white. In this plumage it is the *T. Alpina* of Gmelin. A variety in which the neck and chest are rufous-yellow with brown streaks is the *T. Ruficollis* of Gmelin, the *Purre* of Pennant. It lives along the edges of streams or ponds, and in marshes, making its nest among the grass or in a slight hollow in the earth, and in May or June lays four eggs, whitish-green marked with large and small brown spots. The male generally remains in the immediate neighbourhood, perched on

some elevation, and on the approach of danger runs round uttering at quick intervals his shrill monotonous whistle. The female, when raised from the nest, flutters a few yards off and imitates the male, whilst the young ones squat among the grass or reeds, at which time the parent will approach within a couple of yards of the persons seeking for them. It spends the summer in the arctic regions, from whence it descends southward both in Europe and America, and returns northward in April and May. Is common in Holland and along the French coast, but more rare in the centre of Europe, and only during its autumnal migration. According to Selby it remains constantly in Scotland and in parts of Northumberland, retiring to the nearer salt marshes, and a few to the shores of inland lakes, and still fewer to the higher inland moors; but in the southern parts of England is only a winter visitant. Their great number on our coast depends principally on these visitors from higher latitudes. Like many other of their congeners, they are remarkable for the glancing and simultaneous exposure of the upper or under surface of the body by every individual of a flock, however numerous, as it sweeps along the surface of the ocean or across the shining sands (Selby). They run with great speed, and when in action flit the tail up and down: when flying, utter only a weak scream, but whilst on the ground or feeding, a softer note is used. They feed on worms, insects, and crustacea, which they grope for with their beak among the sands at ebb tide.

T. Schinzii, Bonap.; *Pelinda Cinclus*, var., Say; *Schinz's Sandpiper*. Nearly seven inches in length; beak black; top of the head, nape, wings, and tail, deep brown, and each feather edged with light brown; dorsal and scapular feathers blackish-brown, tipped with pale brown, and bordered on both sides with rufous; rump white; throat and under parts whitish; the front of the neck, chest, and flanks marked with numerous longitudinal brown streaks; belly and vent pure white; primaries blackish with white stems; secondaries tipped with white; legs black. The winter plumage is ashy above and white beneath. It is easily distinguished from the other species by the shortness of its beak and the large white patch upon the rump. Is a native of North America, but occasionally seen in Europe, and has been shot in England. It lives in small flocks, and its cry is not so loud as that of the last species. It lays four eggs, yellowish grey, spotted with olive or nut-colour.

T. Pectoralis, Bonap.; *Pelidna Pect.*, Say; *Pectoral Sandpiper*. Nearly nine inches in length; bill black, its base reddish-yellow; upper part of the head black, its plumage edged with ferruginous; line over the eye and orbits white; back of the neck dusky with cinereous, shoulders and wing-coverts black with ferruginous edges, and near their outer tips whitish; back, rump, and tail-coverts black; from the beak to the eye a brown line; chin white; cheeks and front of neck ashy tinged with rufous, and lined with blackish; under parts and inferior tail-coverts white, the base of each feather blackish; alar quills dusky, slightly edged with whitish, the outer quill-shaft white; caudal quills dusky with white tips, the intermediate two longest, acute, reaching the tips of the wings, black edged with ferruginous; legs greenish-yellow. Native of North America.

T. Platyrhyncha, Tem.; *Numenius Pygmæus*, Lath.; *Broadbilled Sandpiper*. Nearly six and a half inches

TRINGA.

TRINGA. in length; has the beak longer than the head, slightly curved at its tip and much depressed at the base, which is reddish-ash, and the rest black; head blackish-brown, marked with two narrow longitudinal rufous bands; nape ashy, with longitudinal brown streaks; streak above the eye white pointed with brown, and that between the eye and beak blackish-brown; back and scapulars deep black, and each feather delicately edged with rufous, the outer webs of the latter marked longitudinally with white; wing-coverts blackish towards their tips and terminating with rufous-white; throat, belly, and vent pure white; front and sides of the neck rufous-white varied with a few brown streaks, and all the feathers tipped with white: upon the flanks some large brown patches, and upon the white lateral tail-coverts some lance-shaped spots; middle two caudal quills longer than the others, black and edged with rufous, the lateral ones and the alar quills edged with light ash. Is found in the marshes in the north of Europe and America, also in the archipelago of Sonda and the Moluccas.

T. Maritima, Brunn.; *T. Nigricans*, Mont.; *le Bécasseau Violet*, Tem.; *Purple Sandpiper*, Walc. More than seven and a half inches in length; beak longer than the head, slightly inclined at the tip, blackish with reddish base; top of the head, cheeks, sides and front of the neck blackish-ash; back and scapulars violet-black with purple reflexions, and all the feathers tipped with deep ash; wing-coverts blackish, edged with pale ashy; spot between the beak and eye, ocular circlet, and throat whitish-grey; chest grey, and all its feathers tipped with white crescents; under parts white, purest on the belly, but on the sides marked with large deep ashy spots; under tail-coverts marked with blackish lancet-shaped spots; rump and middle two caudal quills deep black, the others ashy edged with white; there is scarcely any nakedness above the knee; legs ochrish-yellow. In its *summer* plumage the head, back, shoulders and scapulars are violet-black, each feather also edged and tipped broadly with white; all the under parts marked with lancet-shaped black spots, those on the sides of the neck and flanks being more oval, and upon the tail-coverts forming longitudinal bands. The first year's bird is *Pennant's Knot*. Is found on the rocky shores of the sea; not uncommon in England, very common in Holland; found also on the shores of the Baltic, also in Norway, Iceland, and Hudson's Bay; also along the Mediterranean coast. It is only a winter visitor in this country. At breeding-time it leaves the coast and resorts to rocky places in the interior. It lays three or four pear-shaped eggs, olive-grey, pointed and spotted with brown, thickest at their larger end, and few at the other. Their cry is feeble, and not unlike the syllables *weet, weet*, frequently repeated.

T. Temminckii, Leisl.; *T. Pusilla*, Lath.; *Little Sandpiper*, Mont.; *Temminck's Sandpiper*. Five and a half inches long; beak much shorter than the head, brown, and very slightly inclined at the tip; all the upper parts deep brown, with brownish-black stems; front of the neck and chest ashy-rufous; throat and other under parts and lateral tail-coverts pure white; the intermediate coverts blackish; middle four caudal quills ashy-brown, the lateral graduated whitish, and the one or two outermost pure white; legs brown. In the *summer* plumage the feathers of all the upper parts are deep black in their middle, surrounded with a wide deep rufous band; the forehead, front of the neck and chest

rufous-ash, with very small longitudinal black streaks; throat and all the other under parts and lateral tail-quills pure white, the middle two blackish-brown, edged with deep rufous. It is an occasional migratory visitor in England; is a native of the arctic circle, both in Europe and America; passes twice a year through Holland and Germany, following the course of the rivers; is very rarely met with on the Lake of Geneva; and is found in the isles of Sonda and Timor. It comes into Iceland in May, but soon leaves the shores and resorts to rocky ravines, but neither its eggs nor its nest is known.

T. Albescens, Tem.; *Whitish Sandpiper*. Five and a half inches in length, and is distinguished from *T. Temminckii* by the beak being much shorter and thicker, and the tail-feathers so arranged as to give the appearance of double-forking. In its summer plumage, the large black spots on the upper parts are edged with rufous; all the under parts, and the streak over the eyebrows, pale rufous; the two lateral caudal quills are white. Is a native of the South Sea Islands.

T. Minuta, Leisl.; *le Bécasseau Echasses*, Tem.; *Little and Brown Sandpiper*, Pen.; *Little Stint*, Bew. Five and a half inches in length; beak black, straight, and shorter than the head; all the upper parts ashy, with blackish-brown stems; between the beak and eye, a brown stripe; streak over the eye, throat, front of the neck, middle of the chest, all the under parts, and the lateral upper tail-coverts, pure white; lateral caudal quills ashy brown, edged with white; the middle two brown; legs black. In the *summer* plumage, the top of the head is black, with bright rufous spots; the back, scapulars, wing-coverts, rump, and middle two caudal quills, deep black; the other quills ashy-brown, edged with white; the upper lateral tail-coverts white, with a few spots; cheeks, sides of the neck and chest, pale rufous, sprinkled with little angular brown spots; streak over the eyes, throat, middle of the chest, and under parts pure white. Occasionally visits England; migrates along the rivers in Germany and France; frequent during autumn on the large marshes of Holland, and very common on the Lake of Geneva and shores of Dalmatia, but very rare upon the sea-coast. It is found also in India. Its eggs are whitish-red, pointed and spotted with reddish-brown.

T. Rufescens, Vieill.; *Buff-breasted Tringa*, Selby. Nearly seven and a half inches long; beak black, extremely short and slender; upper part of the head, neck, back, wings, rump, and tail brownish-rufous, with black spots on the middle of each feather of a longitudinal shape, on the head, nape, and neck; alar coverts and quills, excepting the secondaries next the back, and also the tail, black near their tips, which are white; under middle wing-coverts white, tipped with black, and the under surface of the quills white, with black marblings; sides of the head, throat, and front of the neck, pale rufous, becoming less bright on the flanks, and marked with black; belly tinged with rufous; vent white; tail conical; legs reddish-yellow. In the female the upper plumage is browner, and tawny beneath; the sides of the neck and flanks have more black spots. Is a native of North America, and ascends high in the arctic circle, where it is supposed to breed. It probably in winter descends to the Brazils. Is occasionally seen both in France and England, and in company with the common dottrel. Selby says it approaches near to *T. Australis* of Jardine.

TRINGA. *T. Cinerea*, Lin.; *la Maubêche Grise*, Buff.; *le Bécasseau Maubêche*, Tem.; *Knot*, Pen. Nine inches and a half in length; beak greenish-black, rather longer than the head, very full and dilated towards the tip; head, neck, back, and scapulars pale ash, with brown stems; rump and upper tail-coverts white, with black crescents and zigzags; wing-coverts ashy, edged with white, and their stems brown; caudal quills of equal length, ashy, edged with white; forehead, streak over the eyes, sides and front of the neck, chest and flanks, white, varied with longitudinal brown streaks, and transverse zigzag ashy-brown bands; throat, middle of the belly, and vent pure white; legs greenish-black. At this time it is the *T. Canutus*, Lin., and is called by Latham the *Gristled Sandpiper*. In the summer plumage, the broad streak over the eye, the throat, sides and front of the neck, chest, belly and flanks, are rusty or copper-coloured; the top of the head, back, and scapulars deep black; all these feathers edged with bright rufous, and the scapulars marked with large oval rufous spots; nape rufous, with little longitudinal streaks; vent white, spotted with rufous and black; upper tail-coverts white, with black crescents and rufous spots; tail-quills blackish-ash, edged with whitish. It is now the *T. Islandica*, Lin.; *Aberdeen Sandpiper*, Pen.; *Red Sandpiper*, Lath. In its transition from winter to summer plumage, it is the *T. Calidris*, Lin.; *Freckled Sandpiper*, Pen. It is the largest species of the genus, and a native of the arctic circle. It spreads equally over Europe and America. They come to us early in autumn, in great numbers, spreading along the shores, and locating themselves in bogs, at the mouths of rivers, and other flat parts of the coast, covered with soft sand, where minute bivalves are found, upon which they principally feed. In the latter end of April, or the beginning of May, they return to the northern regions, and not unfrequently some have changed their winter for their summer plumage before their departure. But a single nest of this species has been met with, and it was found in a tuft of grass. The eggs are pale yellowish-brown, marked at their larger end with grey and reddish spots, more or less disposed in a zone.

The three following species, on account of the half-webbing of their toes, form the Prince of Musignano's genus *Hemipalama*.

T. Semipalmata, Wils.; *Semipalmated Sandpiper*. From five and a half to seven inches in length, and the beak from three-quarters to an inch in length; is one of the smallest species, and often confounded with *T. Temminckii*; beak very slightly bent, black; has the crown and upper parts dusky brown, and each feather edged with ferruginous, and tipped with white; over the eye a white streak; under parts white; sides of the rump white; rump and tail-coverts black; alar quills dusky black, banded with white, and their shafts white; lesser wing-coverts tipped with white; legs and feet blackish-ash. This species arrives in the arctic regions about the middle of May in large flocks, builds a nest of withered grass early in the following month, and lays four or five black and white spotted eggs. Towards autumn it has a chirruping note, and in September descends southward, and is found on the sea-coast and on the shores of the freshwater lakes of North America.

T. Himantopus, Bonap.; *Slender Shanks Sandpiper*, Swains. Nine inches and a half in length; the beak one inch and nearly three quarters long, blackish, and much compressed at the base; crown, upper parts, and

lesser wing-coverts black, edged with reddish-brown and brownish-white; neck grey; breast brownish-grey; belly brownish-white; quills and central tail-feathers clove-brown, the lateral tail-feathers light hair-brown; shafts of the primaries, edges of the secondaries, and of the lateral tail-feathers, and stripes on the shafts of the latter, whitish; inner wing-coverts smoky grey and white; tail-coverts greyish-white, with a few brown spots. Is a native of the arctic regions.

T. Douglasii, Sw.; *Douglas's Sandpiper*. Ten inches and a quarter in length; beak an inch and nearly two-thirds long, black, slender, and slightly arched towards its depressed point, which is conspicuously dilated. Is very similar to the last species, but distinguished from it by its greater size, by its legs being shorter, by the slight double-forking of its tail, the two central quills of which are banded, and striped with ferruginous, and by its under parts and tail-coverts being barred with liver-brown. It has also the bands about the cere, above the eyes, and on the ears, chestnut. It frequents the interior of the arctic regions during the breeding season, thence in autumn passes to the shores of Hudson's Bay, and afterwards migrates southward.

Cuvier's genus *MACHETES* is characterized by him as having the outer two toes connected together by membranes as far as the first joint, nearly as wide as that in the *Totani* and *Limosæ*, whilst the inner is unconnected with the outer one. In the shape of their beak and their carriage, he says they are true *Tringæ*. Why they should form a distinct genus, having only two toes connected, whilst in the last-described three species all the front toes are connected, as are those of the *Totani* and *Limosæ*, does not appear very satisfactorily accounted for.

T. Pugnax, Lin.; *Machetes Pugnax*, Cuv.; *le Bécasseau Combattant*, Tem.; *Ruff and Reeve*, Pen. About eleven and a half inches long; beak very slightly bent, and swelling at the tip, brownish; irides brown. The plumage of this bird is so variable, that scarcely two individuals are alike. In the winter plumage, the face is feathered; hind head and neck covered with short feathers; upper parts most commonly brown, spotted with black, and edged with rufous; all the under parts pure white, except the chest, which is reddish, with brown spots; the longest wing-coverts and the middle caudal quills striped with brown, black, and rufous; legs yellowish, tinged with greenish-brown or rufous. The female is a third smaller, and has the beak black; its plumage more ashy, and the front of the neck seldom pure white; legs darker coloured. In summer, the beak is orange-yellow; the face is naked, and covered with yellow or reddish warts; the hind head has long feathers, and the throat has a broad ruff of beautiful feathers, which, with the former, contrast strongly with the body plumage, which is varied with rufous, ashy, black, brown, yellowish, and white, whilst the ruff varies in colour almost endlessly. The female has no ruff; her beak is black; the upper parts are ashy-brown, mingled with some bright steel-black feathers; the neck and chest are the same, but lighter; belly white; legs yellowish or greenish. The first year's birds are known as the *Greenwich Sandpiper*, Lath.; *T. Littorea*, Gmel.; and the adult female and the young, after the autumnal moult, as the *Yellow-legged Sandpiper*, Mont.; *T. Equestris*, Lath. This species inhabits marshes and watery meadows, and rarely in spring time is found on the sea-coast; probably only at their

TRINGA.

TRINGA. first arrival, in April and the beginning of May, when they spread over the fenny parts of Lincolnshire and the Isle of Ely more especially. Temminck says they are nowhere so abundant as in Holland; but they spread also over Flanders, Germany, and are very numerous in Sweden, Russia, Siberia, and Iceland. Towards the latter end of September they migrate southward. They are remarkably distinguished from all their congeners in being polygamous, which leads to some remarkable habits. So soon as their ruffs and ear-tufts have grown, they begin to *hill*; that is, assemble in companies on some hillock or other dry spot in the marshes, each individual selecting a particular stand or *walk* at a little distance from his neighbour, any attempt to encroach on which is instantly resented and fiercely contested. Here they remain till the approach of a female, when a general contest ensues, and she becomes the prize of the victor. During night the birds disperse in search of food, but return to their stands on the following morning, when battle is again waged, till, by its frequent repetition, the grass is quite worn away, and the earth bared. The whole of May and part of June is thus spent, when the contests terminate, and moulting ensues; the ruff and ear-tufts, as also the warts on the face, disappear, so that the male bird has an entirely different aspect. In fighting, their actions are very similar to those of the common fowl, lowering their head, and keeping it and the neck in a horizontal position, with the ruff feathers outspread, so as to form a sort of shield for the protection of the body; the ear-feathers are erected, and the tail partially expanded. Thus opposed, they attempt to lay hold on each other with their beaks, and this effected, by a leap they are enabled to strike with the wings. The results of these contests are not usually dangerous, but instances have occurred in which birds in confinement have been destroyed. The nest is made upon a stump in the most swampy places, surrounded by coarse grass, of which it is formed; and the females, which have no ruff, and are called *Reeves*, begin to lay

about the first or second week in May, and deposit four eggs, very similar in colour and markings to those of the common snipe. When the Reeves begin to lay, both they and the males are least shy, and the boldness of the former increases as they become broody. But Montagu says that the males, on the contrary, could not be approached within musket-shot. The hatch takes place sometimes so early as the first week in June, but more commonly in July; and in August or the beginning of September the young are fully feathered, but have no ruffs, and are then commonly known as *Stags*. Soon after, they collect together, and migrate southwardly. Ruffs are considered great delicacies, and fetch high prices in the market. They are caught both at hilling time and in September, usually by means of a single clap-net, seventeen feet in length, and six in width, with a pole at each end. When the hill has been discovered, as before-mentioned, by the bareness of the ground, the fowler visits it before daybreak, spreads his net, places his decoy-birds, (usually stuffed skins, made moveable by a long string, so as to produce a kind of jump—a motion very common to Ruffs, which, at the sight of a wanderer flying by, will leap or flirt a yard off the ground—or live birds, pegged to the ground with a string about two feet long, tied above the knee,) and then stations himself about one hundred and forty yards or more distant. Here he rests till, with morning light, the birds return to their walks, when a pull brings the net over them, and captures the whole party. They are then taken home and put into a room, where they fatten soon on bread and milk, boiled wheat, and other farinaceous food.

See Linnæi *Systema Naturæ* à Gmelin; Temminck, *Manuel d'Ornithologie et Planches Coloriées*; Wilson's *American Ornithology*; Richardson, *Fauna Boreali-Americana*; Pennant, *British Zoology*; Selby, *Illustrations of British Ornithology*; Montagu, *Ornithological Dictionary*.

TRINIA, in *Botany*, a genus dedicated by Hoffmann in honour of Dr. Trinius, a celebrated Russian botanist, who has written much on grasses. It belongs to the class *Pentandria*, order *Digynia*, and the natural family of *Umbelliferae-Ammineæ*. Generic character: flowers usually dioecious, rarely monoecious; margin of calyx obsolete; petals of the male flowers lanceolate, each terminating in one involute segment; of the female or hermaphrodite ones ovate, and ending each in an inflexed point; fruit ovate, compressed at the sides; mericarps with five filiform, equal, rather prominent ribs, the two lateral ones marginal: furrows either without or with a single vitta in each; carpophore flat, bipartite from the base; seed convex on the back and flat in front.

Trinia is separated from *Pimpinella*, and contains four known species, natives of Europe and Asiatic Russia, as in Caucasus and Tauria; they are much branched, biennial plants, with angular stems, bipinnate leaves, triternate leaflets, and linear, pale, or glaucous lobes; the umbels are numerous, of many rays, without involucre, and are either disposed in a thyrsus or panicle; the umbellules are generally naked,

seldom furnished with involucels, and are sometimes proliferous or racemose; the flowers are white or cream-coloured.

TRINIDAD, a city of Mexico, in Guatemala, near the head of a bay of the Pacific Ocean, having a considerable trade, lying at the head of the port called Acajutla, where the merchandize of Peru and Mexico is received; it is 110 miles from Guatemala, in lat. 13° 46' N., lon. 90° 20' W.; also a town of the same country in the province of Veragua, near the mouth of a river entering the Caribbean Sea, 20 miles from Conception, in lat. 8° 40' N., long. 81° 23' W.; also a town of Bogota in Columbia, on the river Magdalena, 58 miles North-West of Bogota.

TRINIDAD, Island of. See **WEST INDIES**.

TRINIDAD, three islands situate in the Atlantic Ocean, in lat. 20° 30' S., long. 29° 35' W., about 200 leagues from the coast of Brazil.

TRINKET, *n.* The Fr. *triquet*; It. *trinchetto*, **TRINKETTING**. } from which Skinner derives our word, is properly, Cotgrave says, "the top or top-gallant, on any mast; the highest sail of the ship." This nautical usage was familiar to our old writers. See the Quota-

TRINKET. tion from Hakluyt. The Low Lat. has *trinquetum*, or *triquetum*; Fr. *trictac*. In Eng. *tick-tack*—the Italian *trinci* (Florio), are cuts, jags, or snips in garments; various ornaments in garments; and in modern Italian *trincio* is a piece of stuff—*cut* (*trinciato*)—for ornament. *Trinket* may have originally been applied to these small *cuttings* for ornaments—of any material, linen or metallick; and thence to—

Any small pieces of ornament or decoration; of more ornament than use; toys, trifles, small playthings; a strip of ornamented stuff—for a sail.

Beside this the same teachers with Christes doctrine mingled Jewishnes and superstitious philosophie, observing and keeping certain poyntes of the lawe, superstitiously also honouring the sunne, the moone, and starres, with such other small *trinkettes* of this world, bearing the Colossians in hand that thei were also bound to do the same.

Udall. Erasmus. Colossians. The Argument.

But when the poorer sort of common souldiers haue euery man his leather bag or sackell well sown together, wherein he packs up all his *trinkets*, and strongly trussing it vp hangs it at his hoises tayle, and so passeth ouer.

Hakluyt. Voyages, &c. vol. i. p. 62. The Tartars.

And the farther we went, the more the winds increased, so that they put vs to great distresse, sayling alwayes with the sheates of our maine saile and *trinket* warily in our hands, and with great diligence we loosed the ties of all the sailes, to saue them the better, that the wind might not charge them too vehemently.

Id. Ib. vol. iii. p. 422. Francisco de Ulloa.

And suddenly with a great gust the *trinket* and the mizen were rent asunder.

Id. Ib. vol. iii. p. 411. Francisco de Ulloa, ch. ix.

But I wold wit of the youth of the one, and beautie of the other in vsyng all your lyues in vanitie, what goodly *trinkets* ye hope to weare in the straitnes of the sepulchre.

The Golden Boke. Letter 5.

He's an old man,
A good old man, they say too: I dare swear
Full many a year ago he left these gambols:
Here, take your *trinkets*.

Beaumont and Fletcher. The Humorous Lieutenant, act iv. sc. 1.

LUR. Here are my *trinkets*, and this lusty marriage
I mean to visit, I have shifts of all sorts.

Id. The Night-Walker, act i.

In the court of Herod, by their tricks and *trinketting* between party and party, and their intriguing it with courtiers and court ladies, they had upon the matter set the whole court together by the ears.

South. Sermon 3. vol. vi.

They robbed him, taking from him his sword, the hilt of which was silver, his money, his watch, gold-headed cane, snuff-box, sleeve-buttons and hat, with several other *trinkets*.

Anson. Voyages, book iii. ch. ix. p. 519.

Soon you will hear the saucy steward say,
Pack up with all your *trinkets*, and away.

Dryden. Juvenal, Satire 6.

TRIOBOLARY, homo *trioboli*, a man worth three *oboli*; good for nothing.

Any *triobolary* pasquiller, every tressis agaso, any sterquilinous rascal, is licens'd to throw dirt in the faces of sovereign princes in open printed language.

Howell. Letters, book ii. Letter 48.

TRIODIA, in Botany, a genus so called by R. Brown, from the Greek *τρεις*, three, and *οδονς*, a tooth, on account of the outer valve of the perianth being tridentate. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: glume many-flowered, two-valved, nearly equal; outer valve of perianth tridentate, the teeth nearly equal, the middle tooth straight; hypogynous scales two; flowers panicled.

This genus consists of above ten known species; they are perennial rigid grasses, with the habit of *Poa*, or

Festuca. *T. decumbens* is a native of Britain in heaths, and is the *Poa decumbens* of Linnæus.

TRIODON, in Botany, a genus so called by De Candolle from the Greek *τρεις*, three, and *οδονς*, a tooth, on account of the persistent tridentate axis of the fruit. It belongs to the class *Tetrandria*, order *Monogynia*, and the natural family of *Rubiaceæ-Spermacoceæ*. Generic character: calyx with a turbinate tube, a two or four-toothed limb, which is sometimes furnished with accessory teeth; corolla short, funnel-shaped, four-toothed; stigma bifid; capsule papery, two-celled, crowned by the calyx, containing two indehiscent, one-seeded nuts; the axis remains along with the lateral nerves, and gives it the appearance of being tridentate.

Triodon is nearly related to *Diodia*, and consists of three known species, all natives of Brazil; they are much branched, glabrous shrubs, the branches acutely tetragonal; the leaves are opposite or falsely verticillate, the floral ones small; flowers axillary and terminal, disposed in spikes or fascicles.

TRIODON, from the Greek *τρεις*, three, and *οδονς*, a tooth, Reinw. In Zoology, a genus of animals belonging to the family *Gymnodontes*, order *Plectognathi*, class *Pisces*.

Generic character. Upper jaw divided into two portions by a middle suture, and as it were resembling two teeth; the lower undivided, smooth, and without any trace of fissure; eye large, rounded; fins soft, but little developed and obliquely truncated posteriorly; caudal fin forked; skin rough, scabrous, and covered with little prickly lamellæ; pelvic bone very long, with its base thick, and supporting a very large, deep, fan-like disc of skin; branchial aperture single.

This remarkable genus was first described by Reinwardt, and has since been observed by Lesson and Garrot. It holds an intermediate place between *Diodon* and *Tetraodon*, and by the long pelvic bone which sustains the enormous dewlap, or fanlike disc of skin, it is connected with some of the *Balistes*.

T. Busarius, Reinw.; *le Triodon Macropteri*, Less. and Garn. Thirteen inches in length and nine in depth from the eye to the bottom of the dewlap; the head and body are of equal size, but the latter tapers towards the tail; eyes large; the large pelvic bone commences from the point of the chin, and descends, supporting the dewlap, which is capable of being folded under the belly, but when outstretched is covered with oblong lamellæ or crests attached obliquely; the dewlap extends to the vent, and its free edge forms a regularly round fan; the little lamellæ or crests on the body form a sort of curved line on its sides. The general colour is pale tawny, spotted with ferruginous and brownish; the fins yellow and orange; the dewlap, ferruginous at its base, is elsewhere greyish, and has a large deep black spot on its upper hinder part.

See Lesson, Zoologie to Duperrey's Voyage autour le Monde.

TRIONYX, from the Greek, *τρεις*, three, and *ονυξ*, a claw, Geoffr. In Zoology, a genus of animals belonging to the order *Chelonia*, class *Reptilia*.

Generic character. Back and breast-plate not completely sustained by bone, but covered with a soft skin; lips fleshy; muzzle elongated and trumpet-shaped; neck long and completely retractile; tail short, and the vent opening at its extremity; feet not lengthy but webbed, each furnished with three clawed toes.

The genera *Trionyx* and *Chelonia* are those alone of

TRIODIA.

TRI-
ONYX.

TRI-
ONYX.

the Chelonian order which have the ribs, although consolidated in the back plate, distinctly visible by their elevation on the inside of the shell, and by their free projection beyond it; they are distinguished however by the absence in *Trionyx* of the bony belt which forms the disc of *Chelonia*; hence the skin, which extends some distance beyond the points of the ribs, is flexible, and capable of being acted on by muscular radiations which pass into it, for which purpose it is not covered with scales, but the whole surface is enveloped in an epidermal tissue, which does not offer such opposition to motion as scales would. By raising or depressing, either separately or together, these loose folds of extended skin, the animal is enabled to swim with great swiftness, and in a very peculiar manner, rolling itself over and over, so that, when moving upon the surface of the water, its back and belly are alternately seen. Colonel Sykes states, that, in several species of this genus found in the Ganges, he has found large quantities of *Uniones*, their shells broken into small irregular pieces, though still covering the animal, and attached to the mantle. Hence it would appear they live on food either stationary, or nearly so, at the bottoms of rivers, which they inhabit, whilst other groups of fresh water tortoises pursue their prey, consisting of fish, frogs, and even young aquatic birds.

T. Subplanus, Geoffr. Back plate almost completely flat, and without zigzags or dorsal ridge; the entire surface uniformly minutely chagreened. Geoffroy thinks it may be either the species found in the Euphrates or in Georgia, but is not certain, as they are described much more convex.

T. Aegyptiacus, Geoffr.; *Testudo Triunguis*, Forsk. Three feet in length; back plate somewhat convex, and rather prominent along the ridge of the spine; ribs occupying a fourth part of the space beyond the bony support; front of the soft part of the back plate slightly festooned and not tubercular; the other part of the skin leathery, striated, and rough; its colour green and spotted with white; breast plate having its two anterior appendices very widely separated; it has also four callosities; legs short, and webbed. It is found in the Nile, though not very common, where it is called *Tyrse*, and feeds upon the young crocodiles so soon as they have burst their shell.

T. Stellatus, Geoffr.; *Testudo Cartilaginea*, Bodd. Back plate convex, laterally depressed, but slightly elevated along the ridges of the spine, and marked with little zigzagged crests; front of its soft part edged with tubercles, and upon the hinder part five starlike spots, each formed by a central black spot, from which radiate rows of white spots; the anterior appendices of the breast-plate close at their origin, and thence spreading out like the branches of the letter Y. Is a native of Java.

T. Carinatus, Geoffr. Has the back-plate convex, depressed laterally, and forming an elevated ridge along the spine; half the length of the ribs free; front of its soft part tubercular; breast-plate having four callosities; its anterior appendages wide apart at their base and passing forwards in a nearly parallel direction. Its country unknown.

T. Javanicus, Geoffr. Has the back-plate convex, and full laterally; is marked longitudinally with little zigzag crests; front of its soft part tubercular; a sixth of the ribs free; upon the breast-plate a pair of tubercles; its anterior appendages close at their base, and

thence spreading out like a V. Native of Java and the neighbouring isles, where it is called *Boulousse*.

T. Coromandelicus, Geoffr. Has the black-plate swelling and smooth; the anterior and posterior edges of its soft part are ossified; ribs narrow, slender, and free for a third of their length; breast long, and having seven callosities. Is found on the Coromandel coast.

T. Spiniferus, Les.; *T. Ferox*, Gmel.; *Spined Trionyx*. Thirteen inches in length, and ten in width; head lengthy, muzzle long, and terminated with a pair of tubular nostrils, soft, wide at their orifice, their upper part projecting, and their septum furnished on either side with a little appendage; eyes roundish, prominent, and near together; dorsal plate but little vaulted, but the longitudinal ridge of the back distinct, forming a kind of keel along the anterior edge of the soft disc; a row of conical, cartilaginous points, with a few tubercles depressed, or sometimes pointed, on the fore and hind regions of the soft disc; tail thick and short, but projecting beyond the disc; limbs short and thick, each having five toes connected by broad membranes which are prolonged backwards; only three claws to each foot. The general colour of the head, neck, and dorsal plate, umber barred with lighter and darker tints, slightly tinged with yellow, and marbled with irregular spots; black dots are also scattered about; the light yellow margin of the disc separated from the back by a broken black band; upon each side of the head a yellow band between two black ones, and the sides of both head and neck speckled with black; upper part of the limbs and tail sprinkled with black spots and lines; under part of the body pure white, and of the limbs white tinged with blue, the membranes of the latter edged with rose-coloured osseous plates. Lesuer has some doubt whether this be or not the *Testudo Ferox* of Gmelin and Pennant, as, at some distance apart, the same species are not found; but Harlan thinks it is, and considers also *T. Carinatus*, and *T. Georgiana*, of Geoffroy, as the same animal. According to Lesuer, the Spined Trionyx is found only, according to his observation, in the Wabash, Ohio State, and lives among roots or trees which have fallen into the water. But Harlan says it inhabits the Mississippi, the Ohio, the northern lakes and their tributaries, also many of the rivers of the southern states, but not farther south on the sea-board than South Carolina. At the latter end of April or the beginning of May, the female approaches the sandy spots in the vicinity of the rivers, and deposits its eggs, which are spherical, and from fifteen to sixteen in number, where they are exposed to the sun's rays. The young are hatched about July; the edge of their disc is spined as in the adult, but the dorsal keel is more distinct.

T. Muticus, Les.; *Unarmed Trionyx*. About eight and a half inches long, and an inch less in width; the head and neck of this are shorter than in the last species, and when the neck is outstretched, it is confounded with the disc; the jaws are narrower and more pointed and the lips are larger; the front edge of the disc is not spiny, neither has it tubercles nor keel, but a longitudinal depression produces a sensible elevation of the disc on either side; the limbs are short, strong, five-toed, furnished with three claws, and broad expanded membranes; the hind feet have a scale near the little toe, and many are upon the fore limbs. The general colour above is umber, sprinkled with numerous irregular deeper spots; the foot membranes are edged with yellow; under part of the body white, and of the feet

TRI-
ONYX.

TRI-
ONYX.TRIOP-
TO-
LEMEA.

bluish-white. Its eggs are very similar to the last species, and it is found in the same districts.

T. Labiatus, Bell; *Large lipped Trionyx*. Total length with the neck outstretched, seventeen and a half inches; head lengthy, dusky olive-brown, marked with numerous round yellow spots; muzzle lengthy, roundish, and truncated; lips broad and somewhat pendulous; neck very long, dusky-olive with yellow spots above, and paler beneath; nuchal bone distinct, its callus very wide and subreniform; body ovate and depressed; dorsal shield not carinated, but rugous, olive spotted with yellow; pectoral shield white, its hinder edge dusky spotted with white, its callosities four, the anterior two oblong square, the posterior elongate, trigonal, and widely separated, its anterior branches diverging; tail very short, and concealed by the hind edge of the body, pointed, conical, and white; legs strong, olive above, spotted with yellow, white beneath, the palms and soles blackish, slightly marked with yellow; claws curved, rather sharp, and the inner the largest. This species differs from *T. Ægyptiacus*, in having the dorsal shield much depressed and not carinated, and in the distinct separation of the nuchal bone from the former. From *T. Carinatus*, it is distinguished by the callosities on the sternum being of nearly equal breadth throughout, instead of being broadest at their inner part. This species is a native of Sierra Leone; on being put in a tub of water it immediately sought the bottom, burying itself in a shallow layer of mud there placed, and making its way beneath it as quickly as a flounder or a plaice; here it continued, except when rising to the surface occasionally for respiration.

T. Harlani, Bell; *Harlan's Trionyx*. This is described as having the body more ventricose than *T. Muticus*, and the soft portions of the shell less extensive than in the other species. In general appearance, says Harlan, it is more approaching to the genus *Emys*. It is a native of East Florida.

As regards *T. Bartrami*, said by Bartram, in his *Travels*, to have been found in St. John's river, Harlan observes, it "has never been observed by any naturalists, and is most probably founded in error."

See Geoffroy in *Annales du Muséum*, vol. xiv.; Lesuer in *Mémoires du Muséum*, vol. xv.; Bell's *Monograph on the Testudinata*; Harlan in his *Medical and Physical Researches*.

TRIOPTERIS, in *Botany*, a genus so called by Linnæus, from the Greek *τρεῖς*, three, and *πτερον*, a wing, on account of each carpel being furnished with three wings. It belongs to the class *Monadelphia*, order *Decandria*, and the natural family of *Malpighiaceæ-Banisteriæ*. Generic character: calyx five-parted, each segment bearing two glands on the outside at the base; petals five, roundish, unguiculate; stamens ten, subulate and somewhat connected at their bases, alternately larger; styles three; carpels somewhat connected at the bases, one-seeded, each expanded into three wings, two superior and one inferior, and sometimes into a small dorsal crest.

About ten species are known of this genus; they are all twining shrubs with opposite leaves, and compound racemes or panicles of yellow flowers; natives of tropical America.

TRIOPTOLEMEA, in *Botany*, a genus so called by Martius, but without giving the derivation. It belongs to the class *Monadelphia*, order *Decandria*, and the natural family of *Leguminosæ*. Generic character:

flowers dioecious from abortion; male flower, calyx campanulate, five-toothed; upper teeth broader, lateral ones smaller, lower one longer and narrower; vexillum unguiculate, ovate-oblong, erect, a little longer than the wings, biauriculate at the base; wings narrow, oblong, auricled on one side; keel nearly equal in length to the wings, oblong, erectish, obtuse, of two connate petals; stamens nine or ten, monadelphous, the sheath cleft at the top, or somewhat diadelphous; ovarium stipitate, linear, with abortive ovula; style short, erect; stigma obsolete; female flower unknown; legume samaroid, oblong, membranous, reticulated, indehiscent, having the marginal sutures horny, and the centre indurated, containing a solitary, compressed, reniform seed; radical inflexed.

A genus separated from *Dalbergia*, and is composed of trees natives of Brazils; the leaves are impari-pinnate, with ovate or oblong, usually coriaceous leaflets, which shine and are reticulately veined above; stipels wanting; the inflorescence is dichotomously cymose, the cymes are peduncled, axillary, or disposed in terminal panicles; flowers numerous, minute, disposed along the branches of the ultimate branches of the cymes, pedicellate in the axils of persistent bractees; pedicels bibracteate.

TRIOSTEUM, in *Botany*, a genus so named by Linnæus, from the Greek *τρεῖς*, three, and *ὄστέον*, a bone, on account of each berry containing three bony seeds. It belongs to the class *Pentandria*, order *Mono-gynia*, and the natural family of *Caprifoliaceæ-Lonicereæ*. Generic character: calyx with an ovate tube, a five-parted limb, and linear-lanceolate, persistent lobes; corolla tubular, almost equally five-lobed, gibbous at the base; stamens five, included; stigma oblong, thick; berry coriaceous, obovate, triquetrous, crowned by the calyx, three-celled, but sometimes only one-celled at maturity; seeds bony, elliptic, three in each berry, very rarely five.

A genus nearly allied to *Lonicera*, consisting of four known species, two of which are natives of North America, one of Nepal, and one of Chittagong; they are coarse, perennial herbs, having the leaves tapering into the petioles, and somewhat connate at their bases; the flowers are axillary and sessile, or on very short pedicels, purple or yellow; the berries are also purple or yellow. The roots of *T. perfoliatum* and *T. angustifolium* are used in North America as a substitute for Ipecacuanha. They were first brought to this country by Dr. Tinkar, and hence they are called Tinkar's Root.

TRIPE, Fr. *tripe*; It. *trippa*; Sp. *tripas*; D. *tryp*.
Intestinum; from the Greek *τρεπ-ειν*, *volvare*, from the
convolutions of the bowels. See Skinner. It is more
probably the same word as *trape*, a trail, any thing
drawn, or that draws out.

The Turk, when he hath his *tripe* full of pelaw, or of mutton
and rice, will go to nature's cellar; either to the next well or river
to drink water, which is his natural common drink.

Howell. *Letters*, book ii. Letter 54.

To what would he on quail and pheasant swell,

That ev'n on *tripe* and carrion could rebel?

Dryden. *Absalom and Achitophel*.

TRI-PERSONAL, consisting of, constituted by, three
persons, (*tres personæ*.)

One *tripersonal* Godhead! look upon this poor and almost
spent and expiring church.

Milton. *Of Reformation in England*, book ii.

The Arian and Socinian are charg'd to dispute against the tri-
nity: they affirm to believe the Father, Son, and Holy Ghost, ac-
cording to scripture and the apostolic creed; as for terms of trinity,
triniunity, co-essentiality, *tripersonality*, and the like, they reject
them as scholastic notions not to be found in scripture.

Id. *Of True Religion*.

TRIPHACA, in *Botany*, a genus so called by Lou-
reiro, from the Greek, *τρεῖς*, *three*, and *φακή*, *a lentil*,
on account of the three carpels to each fruit. It be-
longs to the class *Monoecia*, order *Monadelphia*, and
the natural family of *Sterculiaceæ*. Generic character:
flowers monoecious; calyx five-cleft; petals wanting;
stamens in the male flower fifteen, monadelphous; fe-
male flower with one style, which is terminated by a
trifid stigma; carpels three, legume-formed, inflated,
acuminated, many-seeded.

Only a single species (*T. africana*) is known of this
genus, which is probably not distinct from *Sterculia*,
and is a native of the Mozambique coast; it is a tree,
with cordate, entire leaves, and lateral and terminal
cymes of yellow flowers.

TRIPHASIA, in *Botany*, a genus so called by Lou-
reiro from the Greek *τρίφασιος*, *triple*, on account of the
three-toothed calyx, and three-petalled corolla. It be-
longs to the class *Hexa-Octandria*, order *Monygynia*,
and the natural family of *Aurantiaceæ*. Generic cha-
racter: calyx three-toothed; petals three; stamens six,
free, rarely five or eight, flat, awl-shaped; anthers ra-
ther sagittate; fruit of one to three cells, the cells one-
seeded and filled with mucilage; embryos several in the
same seed.

This genus, which is nearly allied to *Atalanta* and
Limonia, consists of three known species: one is a
native of Java, another of Timor, and the other of the
East Indies and China; they are all shrubs, furnished
with straight, axillary spines; the leaves are either
simple or trifoliate; and the flowers are white and sweet-
scented; the fruit is very small, shaped like an orange,
but hardly edible.

TRIP
—
TRI-
PHASIA.

TRI-PHELIA. **TRIPHELIA**, in *Botany*, a genus so called by R. Brown, probably from *τρις*, *three*, and *φηλος*, *a cheat*, on account of the pedicels of the imperfect flowers being by threes. It belongs to the class *Octandria*, order *Monogynia*, and the natural family of *Myrtaceæ*. Generic character: flowers capitately aggregate, bracteate, the outer bracteas broadest and girding the heads of flowers; the outer flowers on long pedicels; pedicels terminated by three bracteoles; inner flowers fertile, on short pedicels, between two bracteoles, sessile and subsecund on the top of the pedicels; calyx with an oblong four-winged tube, connate with the ovary at the base, constricted at the apex; the wings narrow, transversely wrinkled and undulated; limb four-parted, with narrow membranaceous segments; corolla of four ovate petals, which are inserted in the throat of the calyx; stamens eight, inserted with the petals and shorter than them, all fertile; filaments subulate; anthers subglobose; ovary one-celled: ovulum one, erect; style filiform, exserted, glabrous; stigma dot-formed; fruit unknown.

Only a single species of this genus is known; it is a small, humble, slender, glabrous shrub, a native of the south-west coast of New Holland. The branchlets are twiggy; the leaves are exstipulate, densely imbricated, lanceolate, and mucronated; the heads of flowers are terminal.

TRIPHYSARIA, in *Botany*, a genus so called by Fischer and Meyer, from the Greek, *τρις*, *three*, and *φύσα*, *a bladder*, on account of the three segments of the lower lip of the corolla being saccate. It belongs to the class *Didynamia*, order *Angiospermia*, and the natural family of *Rhinanthaceæ*. Generic character: calyx tubular, four-cleft: corolla personate, with a filiform tube, and a bilabiate limb, having the upper lip undivided and subulate, and the lower lip tripartite, with saccate segments; stamens four, didynamous, all fertile; anthers linear, mutic, one-celled; stigma oblong, two-lobed; capsule oblong, two-celled, many-seeded; seeds small, blackish, oblong, wingless; testa scrobiculate, adhering closely to the nut.

A singular genus, nearly allied to *Melampyrum* and *Oncorhynchus*, and consists only of a single known species, *T. versicolor*, a native of California; it is an annual herb, with long, half-stem clasping, pinnately lobed leaves, and axillary, solitary, sessile flowers; the corollas are at first white, but at length change to a rose-colour.

TRIPINNARIA, in *Botany*, a genus so named by Sprengel, on account of the leaves of *T. Asiatica* being tripinnate. It belongs to the class *Didynamia*, order *Angiospermia*, and the natural family of *Bignoniaceæ-Crescentiæ*. Generic character: calyx unequally five-cleft or five-notched, campanulate; corolla funnel-shaped, or somewhat campanulate, with a widened throat, and a five-cleft spreading limb; upper segments the largest, all villous; stamens four, didynamous, about equal in length to the corolla, with the rudiment of a fifth; stigma bifid, acute, or bilamellate; berry large, fleshy, filled with pulp; seeds oblong, compressed, nestling in the pulp.

This genus, which is nearly allied to *Tanacetum* and *Crescentia*, consists of two known species, *T. Asiatica*, a native of Cochin China, and *T. Africana*, a native of Mozambique; they are both large trees, with alternate pinnate or tripinnate leaves, and terminal racemes of large purplish or yellowish flowers; the berries are large.

TRIPLARIS, in *Botany*, a genus so called by Linnaeus, from *triplex*, triple, on account of the triple nature of the parts of fructification. It belongs to the class *Dioecia*, order *Enneandria*, and the natural family of *Polygoneæ*. Generic character: perianth large, with a tubular base, and three-parted apex; stamens three, with linear anthers; styles three; stigmas three, villous; fruit a triquetrous, one-seeded nut, covered by the persistent perianth.

Two species are known, the most common is *T. Americana*; they are trees or shrubs, with broad leaves, and axillary and terminal spikes of flowers; the timber is said to be good.

TRIPLASIAN, Gr. *τριπλαξ*, *τριπλασιος*, *triplex*, tree-fold.

Though both these names, *Oromasdes* and *Mithras*, were frequently used by the Magi, for the *το θειον*, or whole Deity in general, yet this being *triplasan* or three-fold, according to their theology, as containing three hypostases in it; the first of those three seems to have been that, which was most properly called *Oromasdes*, and the second *Mithras*.

Cudworth. *Intellectual System*, book i. ch. iv. fol. 289.

TRIPLASIS, in *Botany*, a genus so named by Paliot de Beauvois, from *τριπλασιος*, *triply*. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: spikelets four-flowered; flowers distant, upper one abortive; glumes two, membranous, acute; paleæ two, unequal, lower one bifid, with a long subulate awn between the segments, upper palea entire, pilose outside, reflexed; scales and stamens unknown; style bipartite; stigmas plumose; caryopsis unknown.

A single species, *T. Americana*, is known of this genus; it is a grass, a native of North America. The spikes are compound, with alternate simple branches, which bear ten flowers at top. Nearly allied to *Dinebra* and *Eutriana*.

TRIPLATEIA, in *Botany*, a genus so called by Bartling, from the Greek *τρις*, *three*, and *πλατεια*, *a court*, on account of the capsule being three-valved. It belongs to the class *Tetra-Pentandria*, order *Trigynia*, and the natural family of *Caryophylleæ*. Generic character: calyx four or five-parted; segments spreading, at length reflexed; petals four or five, perigynous, cuneate-oblong, entire, unguiculate; disk subhypogynous; stamens four or five, inserted in the sinuses of the gland of the disk; ovary sessile, one-celled; ovula three, with distinct, erect, basilar funicles; stigmas three, short, capillary; capsule membranous, ovoid, triquetrous, three-valved, even to the base; valves flat, stellately spreading; seeds globular, a little compressed, usually only two by abortion, tubercular.

This genus consists of a single known species, and is nearly allied to *Alsine*; it is a weak, glabrous, loosely branched herb, with the habit of *Möhringia muscosa*. The leaves are opposite, exstipulate, narrow-linear, one-nerved, and very flaccid. The flowers are minute, white, solitary, pedicellate, alar, and axillary.

TRIPLAX, in *Zoology*, a genus of *Tetramerous Coleopterous Insects*.

Generic character. Antennæ moniliform, terminating in a short ovalish club; maxillæ with an internal membranous process, and having a very small tooth at their tip; body rounded or ovaloid; thorax convex; legs with dilated shanks somewhat trigonal.

The genus *Triplax* of Olivier includes *Tritoma* of Fabricius, who so named those species which have the body rounded. Lamarck and Latreille however make

TRI-PLARIS.

TRI-PLAX.

TRI-
PLAX.TRI-
PLEC-
TRUM.

of them but a single genus. They very nearly resemble the *Erotyli*, but are distinguished by their shorter antennæ and their more slender legs. They live in the bark of trees or in the protuberances on their trunks.

TRIPLE, *adj.* } Fr. *triple*; It. *triplo*; Sp. *triple*; Lat. *triplex*, (*tres*, three, and *plicare*, Gr. *πλεκ-ειν*,) to fold.
TRIPLE, *v.* }
TRI'PLET, }
TRI'PLICATE, } Three-fold. See TREBLE.
TRI'PLICATION, } Triplet—three lines terminating
TRI'PLICITY. } in the same sound; sentences consisting of three members.

He drough Cerberus the hound of Hel, by the *triple* chaines.
Chaucer. Boecius. De Consolatione, book iv. p. 445.

Their losse I can assure you did *triple* ours, as well in quality as in quantity.
Hakluyt. Voyages, &c. vol. ii. part ii. p. 140. *The Portugal Voyage.*

At my coming into Scarperii near unto Bonory, I did meet with Thadeus this courier; which brought certain expeditions *triplicat*; the one unto the prothonotary Gambora, the other unto Gregory de Cassalis, and the third unto me.

Burnet. Records, vol. i. book ii. No. 4.

He gave her gold and purple pall to weare,
And *triple* crowne set on her head full hye,
And her endowd with royall maiestye.

Spenser. Faerie Queene, book i. can. 7.

Such monster-tamers who would take in hand,
As have ty'd up the *triple-headed* hound,
Or of those giants which 'gainst heaven durst stand,
Whose strength the gods it troubled to confound.

Drayton. Pastorals. Eglogue 4.

Those hierarchies that Jove's great will supply,
Whose orders formed in *triplicity*,
Holding their places by the treble trine,
Make up that holy theologic nine.

Id. The Man in the Moon.

And how the signs in their *triplicities*
By sympathising in their trine consents,
With whose inferior forming elements,
From which our bodies the complexions take,
Natures and number.

Id. Ib.

Neither can the duplication of corporeal organs be ever able to advance that simple and stupid life of nature into redoubled consciousness or self-perception; nor any *triplication* or indeed multiplication of them, improve the same into real understanding.

Cudworth. Intellectual System, book i. ch. iii. fol. 173.

As what receiveth motion in the seventh, to be perfected in the *triplicities*; that is, the time of conformation unto motion is double, and that from motion unto the birth, treble.

Sir Thomas Brown. Vulgar Errors, book iv. ch. xii. p. 270.

Time, action, place, are so preserv'd by thee,
That even Corneille might with envy see
Th' alliance of his *Tripled* Unity.

Dryden. Epistle to Mr. Motteux.

No sooner landed, in his den they found
The *triple* porter of the Stygian sound,
Grim Cerberus; who soon began to rear
His crested snakes, and arm'd his bristling hair.

Id. Virgil. Æneid, book vi.

I frequently make use of *triplet* rhymes, and for the same reason, because they bound the sense: and therefore I generally join these two licences together, and make the last verse of the *triplet* a Pindaric.

Id. Dedication to Æneid.

They then retreated to the back part of the circle, as the women had done, and again advanced, on each side, in a *triple* row, till they formed a semicircle.

Cook. Voyages, vol. v. book ii. ch. v. p. 290.

Their [Highland cattle] ordinary price, at present, is about three times greater than at the beginning of the century, and the rents of many Highland estates have been *tripled* and quadrupled in the same thing.

Smith. Wealth of Nations, book i. ch. xi. p. 205.

TRIPLECTRUM, in *Botany*, a genus so called by D. Don, from *τρεῖς*, three, and *πληκτρον*, a spur, on

account of the connectives of the anthers being drawn out at the base into three short, blunt spurs. It belongs to the class *Octandria*, order *Monogynia*, and the natural family of *Melastomaceæ*. Generic character: calyx fleshy, somewhat funnel-shaped, truncated on the margin; petals three, two of which are oblong and recurved, the third is formed of two broadly obovate ones, emarginate; stamens eight; anthers oblong-linear, elongated, but not beaked, opening each by a terminal pore; connective produced at the base into three, short, blunt spurs, two in front of the filament, and the other behind it; ovarium free, stalked, oval, glabrous; style slender, subulate, curved.

This genus is composed of shrubby, glabrous plants, natives of the East Indies, throwing out roots from the joints. The leaves are roundish, oval, fleshy, three-nerved, quite entire, on short petioles; frequently there are only one pair on the short lateral branchlets, opposite to which springs the one-flowered peduncle. The genus is closely allied to *Medinilla*, but differs from all the species of that genus by the union of the upper petals.

TRIPLEURA, in *Botany*, a genus so called by Lindley, from *τρεῖς*, three and *πλευρα*, a membrane, on account of the membranous processes. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ*. Generic character: perianth flattened, cruciate, as if it were four-leaved; upper sepal broad, agglutinated to the petals; lateral sepals linear, spreading; labellum behind, free, concave; column terete, very short, with two membranous, horn-formed processes in front.

Only one species of this genus is known.

TRIPLOSPERMA, in *Botany*, a genus so called by G. Don, from the Greek *τριπλοος*, triple, and *σπερμα*, a seed, on account of the seeds being disposed in three rows or ranks in each follicle. It belongs to the class *Pentandria*, order *Digynia*, and the natural family of *Asclepiadeæ-Hoyaceæ*. Generic character: corolla with a long slender tube, and a five-parted limb; the segments acute and connivent, covering the stamens and pistils; stameneous corolla fleshy, flat, stellate, of five large, acute, expanded segments; anthers oblong, between the lobes of the corona; stigmata two, sessile; follicles terete, subulate; seeds long, terete, comose, disposed in three rows in each follicle.

This genus consists of a single known species, *T. Cochinchinensis*, the *Stapelia Cochinchinensis* of Loureiro: it is a creeping, suffruticose plant, with terete, nearly simple stems, opposite, ovate, fleshy leaves, and large, simple umbels of white, funnel-shaped flowers; common peduncles thick.

TRIPLOSTEGIA, in *Botany*, a genus so called by Wallich, from the Greek *τριπλοος*, triple, and *στεγος*, a covering, on account of the flower having three outer coverings, a double involucre, and a calyx. It belongs to the class *Triandria*, order *Monogynia*, and the natural family of *Valerianææ*. Generic character: involucre double, outer one four-parted and four-keeled, inner one tubular, eight-toothed, and eight-ribbed; calyx adnate to the ovarium, having a small four-toothed limb; corolla funnel-shaped, five-cleft; stamens three, from the base of the corolla; anthers protruding a little; stigma capitate; utricle one-seeded, downy, covered by the involucre, and crowned by the calycine teeth.

Of this singular genus only one species is known, *T. glandulifera*, a native of Nepal; it is a perennial herb, with a long fibry root, and obsoletely four-furrowed,

TRI-
PLEC-
TRUM.TRI-
PLO-
STEGIA.

TRI-
PLO-
STEGIA.
—
TRIPO-
LIZZA.

simple or sparingly branched stems, which bear longish articulated hairs towards the tops, and are tipped by a gland each. The leaves are crowded at the bases of the stems; they are ovate-lanceolate-toothed or pinnatifid, petiolate, and downy or villous, the cauline leaves few, small, and pinnatifid. The corymbs or panicles of flowers are thickly beset by glandular down. The flowers are small, downy, and disposed by threes.

TRIPOD, Fr. *trépied*; It. *tripode*; Sp. *triple*; Lat. *tripos*; Gr. *τριπους*, having three feet, (*τρις*, *ποδας*.)
A three-footed stool.

Ile sweeten his affects againe, with presents infinite,
Which (to approve my firme intent) Ile openly recite,
Seven sacred tripods free from fire, ten talents of fine gold,
Twenty bright caldrons, twelve yong horse, well shapt, and well
controld. Chapman. Homer. Iliad, book ix.

This passion past, he gave command to his neare souldiers,
To put a tripod to the fire, to cleanse the festred gore
From off the person. They obeyd, and presently did poure
Fresh water in it; kindl'd wood, and with an instant flame,
The belly of the tripod girt till fires hot qualitie came
Vp to the water. Id. Ib. book xviii.

I will not be affraid to affirm that this reason properly is the
tripode or three-footed table, as one would say, and oracle of truth.
Holland. Plutarch, fol. 1102.

Scarce had I said; he shook the holy ground,
The laurels and the lofty hills around:
And from the tripods rush'd a bellowing sound.
Dryden. Virgil. Æneid, book iii.

And first the gifts in public view they place,
Green laurel wreaths, and palm (the victor's grace)
Within the circle arms and tripods lie.

Id. Ib. book v.

TRIPOGON, in Botany, a genus so named by Roth, from *τρις*, three, and *πωγων*, a beard. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: spikelets about eight-flowered; glumes two, awned; paleæ two, straight under the apex of the awn, furnished with an awn on both sides at the margin near the middle; stamens three; stigmas two, plumose.

This genus is nearly allied to *Festuca* and *Bromus*, but differs from both in the triple awn. Lower glume immersed in the pit of the rachis, according to Roth.

TRIPOLIUM, in Botany, a genus so named by Nees ab Esenbeck, from an ancient name of Sea Starwort, *τριπολος*, ploughed land. It belongs to the class *Syngenesia*, order *Necessaria*, and the natural family of *Compositæ-Asteroidæ*. Generic character: heads radiate, the ligulæ female, usually in one, rarely in two series; flowers of the disk hermaphrodite; scales of involucre bractea-formed, sometimes rising along the peduncle, or gradually imbricated, sometimes biserial; inner ones longer and smooth; receptacle alveolate, the alveolæ toothed; branches of style in the hermaphrodite flower thickened at apex, and subulate; achenia oblong, compressed, glabrous, or sparingly pilose, girded by bristles at the base; pappus simple, disposed in many series, the bristles slender and retrorsely denticulated.

Composed of rather fleshy, perennial, rarely annual herbs, inhabiting salt marshes. The leaves are alternate, narrow, entire, or hardly serrated, glabrous, or scabrous along the margins. The heads are corymbose, with blue or white ligulæ. This genus is distinguished more by habit than character from *Aster*. Six species are known, one of which, *T. vulgare*, is a native of Britain in salt marshes; it is commonly known by the names of *Sea Starwort* and *Tripoly*.

TRIPOLIZZA, a city of Greece, in the Morea, and department of Arcadia, surrounded by walls, and having

a strong fort, five mosques, and two Greek churches. The houses are mean and irregular. The trade is in corn and wool, and the population about 15,000.

TRIPTERELLA, in Botany, a genus so called by Michaux, from the Greek *τρις*, three, and *πτερον*, a wing, in reference to the three-winged capsule. It belongs to the class *Triandria*, order *Monogynia*, and the natural family of *Liliaceæ*. Generic character: perianth six-cleft, alately angular, tubular above the base; stamens six, inclosed; style one; stigmas three; capsule triquetrous, three-celled, many-seeded.

Only a solitary species is known of this genus, *T. capitata*; it is an herb, a native of Carolina, in bogs. The leaves are subulate, and the flowers are in heads on the tops of the scapes.

TRIPTERIS, in Botany, a genus named by Lessing, from *τρις*, three, and *πτερον*, a wing. It belongs to the class *Syngenesia*, order *Frustraria*, and the natural family of *Compositæ-Cynareæ*. Generic character: heads many-flowered, flowers of the ray ligulate, female, those of the disk tubular, bisexual, or sterile from the abortion of the pistillum; involucre in one or two series; the scales free, and usually scarious along the margins; receptacle naked, flat, at length rather convex; anthers shortly setose; style of ray flower bifid, those of the disk undivided; achenia of the ray trigonal, the angles usually drawn out into wings, the sides smooth or echinated, straight, substipitate, beaked, the beak hollow, closed by a window-formed, transparent membrane on one side, sometimes terete, elongated, and wingless, with a solid beak; achenia of the disk abortive.

Composed of herbs or under shrubs, all natives of the Cape of Good Hope, except one, which is a native of Arabia. The surfaces are usually scabrous from glands. The leaves are cut, toothed, or entire, alternate, or opposite. The heads are terminal. The ligulæ are yellow, white, or dirty purple. This genus is separated from *Calendula*, and consists of seventeen known species. The plants exhale an odour resembling that of the Marigold.

TRIPTEROCOCCUS, in Botany, a genus so called by Endlicher, from *τρις*, three, *πτερον*, a wing, and *κοκκος*, a berry, on account of the fruit being composed of three three-winged cocci. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Stackhouseæ*. Generic character: calyx with a ventricose tube and five-parted limb; petals five, inserted in the throat of the calyx, with linear claws, which cohere in the form of a tube, and stellately spreading limbs; stamens five, inserted with the petals; filaments filiform, unequal; ovarium three-lobed; ovula erect, one in each lobe; style undivided; stigma shortly three-lobed; fruit tricocous; cocca three-winged, separating from the central persistent column, indehiscent, one-seeded: wings membranous, veined, lateral ones longer than the dorsal ones; seeds erect, with a membranous testa.

This genus, which is nearly allied to *Stackhousia*, consists of herbs, or suffruticose, tufted plants, natives of the south-west coast of New Holland and Van Diemen's Land. The branches are tetragonal, sparingly branched at the base, and leafless at top. The leaves are alternate, very narrow, and bistipulate. The spikes are terminal and simple, rather loose; the pedicels are short, and furnished each with three bractæas at the base. The flowers are sweet-scented.

TRIPTILION, in Botany, a genus named by Ruiz

TRIPO-
LIZZA.

TRI-
PTILION.

TRIPTILION. and Pavon, from *τρεις*, *three*, and *πτειλον*, *a feather*, in allusion to the pappus being composed of three ciliated bristles. It belongs to the class *Syngenesia*, order *TRIS-AGION*. *Æqualis*, and the natural family of *Compositæ-Nassau-viaceæ*. Generic character: heads equal-flowered; involucre of many leaves, imbricate; scales spinescent at apex; receptacle small, villous, from very slender fibrillæ; flowers five, hermaphrodite; corollas bilabiate, outer lip tridentate, emulating a ray; inner lip shorter, narrower, constantly composed of two separable lobes; anthers terminated by an acute membranous appendage, bisetose at the base; branches of style semicylindrical, recurved, truncate at apex, rather hairy; achenia obovate, subtriquetrous, obtuse, attenuated at the base, glabrous; pappus paleaceous, caducous, of three or five bristles, the bristles thickish, conduplicate, ciliated.

Composed of annual herbs or under shrubs, all natives of Chili. The leaves are generally spinously-toothed at their apices, or ending in a spine-like mucrone. The corollas are either blue or white. There are six species known, two of which, *T. cordifolium* and *T. spinosum*, have been introduced to the British gardens.

TRIPU'DIARY, } It. *tripudiare*; Lat. *tripudiare*,
TRIPU'DIATION. } to strike on the ground. See to TRIP.

On this foundation (*non causa pro causa*) were built the conclusions of southsayers in their auguriall and *tripudiary* divinations; collecting presages from voice or food of birds, and conjoining events into causes of no connexion.

Sir Thomas Brown. *Vulgar Errors*, book i. ch. iv.

When Graccus was slain, the same day the chickens refused to come out of the coop: and Claudius Pulcher underwent the like successes, when he contemned the *tripudiary* augurations.

Id. *Ib.* book i. ch. xi.

The soule of man, whether admonisht by sense, or left to her own liberty; whether in functions of the intellect, or of the affections and of the will, dances to the musicall aires of the cogitations; which is that *tripudiation* of the nymphs.

Bacon. *Learning by G. Wats*, book ii. ch. xiii. fol. 117.

TRIRAPHIS, in *Botany*, a genus so called by R. Brown, from the Greek *τρεις*, *three*, and *ραφίς*, *a point*, on account of the outer valve of the perianth being three-awned. It belongs to the class *Triandria*, order *Tri-gynia*, and the natural family of *Gramineæ*. Generic character: glumes many-flowered, two-valved, equal, mutic; spikelet distich, of two or more flowers, the lower flowers hermaphrodite, the rest male and neuter; outer valve of perianth triaristate, the awns erect; inner valve mutic; hypogynous scales two; stamens three; styles two; stigmas villous; flowers paniced.

This genus is allied, on the one hand, to *Triodia* and *Pappophorum*, and on the other to *Ectrosia* and *Chloris*; and consists of two species, natives of the tropical parts of New Holland.

TRIEME, Lat. *triremis*, *tres remorum ordines*. See the Quotations.

Thucydides writeth, that Aminocles the Corinthian built the first *Trieme* with three rowes of oars to a side.

Holland. *Plinie*, book vii. ch. lvi.

Some indeed fancy a different original of these names, as that in the *Triemis*, for example, either that there were three banks one after the other on a level, or three rowers sat upon one bank; or else three men tugged all together at one oar: but this is contrary, not only to the authority of the classicks, but to the figures of the *Triemes* still appearing in ancient monuments.

Kennet. *Antiquities of Rome*, part ii. book iv. p. 242.

TRIS-AGION, Gr. *τρεις*, *three*, *αγιος*, *holy*. See the Quotation.

Hereto agrees the seraphical hymn, called the *trisagion*, Holy, holy, holy, &c. that used to be sung in all churches throughout the Christian world.

Bull. *Works*, vol. iii. fol. 968.

TRISECUS, in *Botany*, a genus so called by Willdenow, from *τρεις*, *three*, and *σηκος*, *a stall*, on account of the three-celled capsule. It belongs to the class *Pen-tandria*, order *Monogynia*, but the natural family to which it belongs is unknown. Generic character: calyx five-toothed; corolla of five petals; stamens five; capsule three-celled; cells one-seeded. Nothing more is known of this genus, which is therefore extremely doubtful.

TRISETARIA, in *Botany*, a genus so named by Forskael, from *tres*, *three*, and *seta*, *a bristle*. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: spikelets two-flowered, lower flower hermaphrodite, on a short pedicel, bearded at the base; glumes two, lanceolate, subulate at apex, keeled, unequal-sided, membranous, exceeding the flowers; paleæ two, lower one lanceolate, bisetose at apex, five-nerved, involute, awned beneath the apex, membranous, the awn subgeniculated; upper palea bicarinate; stamens three; ovarium glabrous; stigmas two, terminal, sessile, plumose; scales two, emarginate at apex, glabrous; caryopsis unknown.

Only one species of this genus is known, *T. linearis*, a native of Egypt and Syria. It is an annual grass, with linear, subvillous leaves, and contracted panicles of inflorescence.

TRISETUM, in *Botany*, a genus so named by Persoon, from *tres*, *three*, and *seta*, *a bristle*. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: spikelets two four-flowered; glumes two, membranous, keeled, mutic; paleæ two, green, lower one bicuspidate at apex, awned on the back, upper one bicarinate, with a twisted awn; stamens three; ovarium glabrous; stigmas two, sessile, plumose, the pili or hairs sharply denticulated, simple, or bifid; scales two, glabrous, entire, or lobed; caryopsis glabrous, free, without furrows.

According to Kunth there are twenty-two species of this genus; they are all Alpine grasses, with simple or branched culms, flat leaves, and spicately crowded, rarely diffuse, paniced inflorescence. It seems only to differ from *Aira* in the number of flowers in the spikelet.

TRIST, } Fr. *triste*; It. *tristo*; Sp. *triste*;
TRISTFUL, } Lat. *tristis*. See CONTRISTATE.
TRISTI'ATE. } Sad, pensive, grieved, doleful.

A bitter sorrow by the heart him bit,
Amaz'd, asham'd, disgrac'd, sad, silent, *trist*,
Alone he would all day in darknesse sit.

Fiurefux. *Godfrey of Boulogne*, book xiii. sec. 29.

Heaven's face doth giow,
Yea this solidity and compound masse,
With *tristfull* visage as against the doome,
Is thought-sicke at the act.

Shakspeare. *Hamlet*, act iii. sc. 4. fol. 271.

Nor is there any, whom calamity doth so much *tristitiate* as that he never sees the flashes of some warming joy.

Feltham. *Resolve* 41, part i.

TRISTACHYA, in *Botany*, a genus so called by Nees ab Esenbeck, from *τρεις*, *three*, and *σταχυς*, *a spike*. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: spikelets two-flowered, crowded by threes at the tops of the branches, middle flower usually abortive, lower one sessile, male or neuter, upper one pedicellate, hermaphrodite, bearded at the base; glumes two, lanceolate, three-nerved, canaliculate, upper one a little longer,

TRIS-
AGION

STEMMA.

exceeding the flowers; lower flower with two mutic paleæ; scales two, fleshy, entire, glabrous; stamens two, or wanting; rudiment of pistil linear, or wanting; hermaphrodite flower with two nearly equal paleæ, lower palea bifid, involving the upper one; awn between the lobes spirally twisted at bottom; scales two, fleshy, collateral, nearly entire, glabrous; stamens two or three; anthers long, linear, bifid at both ends; ovary glabrous; styles two, terminal, elongated; stigmas plumose; caryopsis oblong, covered by the paleæ.

Two species are known of this genus; they are grasses, natives of Brazil, Mexico, and Cape of Good Hope. The stems are erect, simple, and terete. The leaves are linear, flat, or convolute, stiff. The panicles are simple, with elongated branches.

TRISTAGMA, in *Botany*, a genus so named by Poeppig from *τρεις*, *three*, and *σταγών*, *a drop*, in reference to the three melliferous pores of the ovary. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Liliaceæ*. Generic character: perianth coloured, tubular, with a six-cleft limb; stamens six; filaments very short, inserted in the middle of the tube of the perianth in two series; hypogynous disk nearly obsolete; ovary nearly sessile, three-celled, crowned by three lateral, melliferous pores; ovula numerous; style continuous with the ovary; stigma undivided; capsule three-celled, many-seeded.

Of this genus only one species is known; it is a scapigerous herb, first discovered by Poeppig on the higher mountains in the south of Chili. The leaves are linear. The flowers are few, and disposed in terminal umbels. The involucre is two-leaved and spathaceous. The perianth is continuous with the pedicel.

TRISTANIA, in *Botany*, a genus so named by R. Brown, from *τρεις*, *three*, and *ισταναί*, *to stand*, on account of the flowers and leaves being disposed by threes. It belongs to the class *Polyadelphia*, order *Monogynia*, and the natural family of *Myrtaceæ*. Generic character: calyx five-cleft, persistent; tube turbinate; petals five; bundles of stamens five, opposite the petals, and hardly longer than them; anthers incumbent; capsule three-celled, many-seeded, half exserted or inclosed; seeds wingless.

Australian shrubs or trees, with lanceolate leaves and pedunculate corymbs of yellowish flowers. About ten species are known to botanists.

TRISTELLATEIA, in *Botany, a genus so called by Du Petit-Thouars, from the Latin *tres*, *three*, and *stella*, *a star*, on account of the disposition of the appendages of the capsule. It belongs to the class *Decandria*, order *Monogynia*, and the natural family of *Malpighiaceæ-Hiptageæ*. Generic character: calyx five-parted; petals five, unguiculate; stamens ten, alternately smaller; ovary impressed by three glandular pores; carpels three, terminated by six appendages, which are tridentate at their apices; embryo convolute.*

This genus, which is nearly allied to *Hiptage* and *Thryallis*, consists of a single known species, *T. Madagascariensis*; it is a twining shrub, having the lower leaves disposed four in a whorl, and the upper ones opposite, all entire, and bearing glands at their bases. The flowers are yellow, and disposed in racemes.

TRISTEMMA, in *Botany*, a genus so called by Jusieu, from the Greek *τρεις*, *three*, and *στεμμα*, *a garland*, on account of the calyx being surrounded by three circles of bristles. It belongs to the class *Octo-Decandria*, order *Monogynia*, and the natural family of *Melastoma-*

ceæ-Osbeckiæ. Generic character: calyx tubular, four or five-cleft, furnished with margins or bearded appendages near the limb, and surrounded by numerous bractes at the base; petals four or five, unguiculate; stamens eight or ten; anthers a little arched, somewhat auricled at their bases; ovary scarcely adnate to the calyx at the base, and crowned by stiff hairs at the apex; berry variously depressed, four or five-celled, covered by the calyx.

This genus consists of two known species, *T. virus-anum*, a native of the Mauritius, and *T. hirtum*, a native of Guinea; the first is a shrub and the second an herb. The stems are tetragonal. The leaves are three or five-nerved. The flowers are disposed in terminal heads, and are either purple or red. The genus appears to be intermediate between *Osbeckia* and *Melastoma*.

TRISTERIX, in *Botany*, a genus so named by Martius, from the Greek *τρεις*, *three*, and *στηρίζω*, *I support*, in allusion to each flower being furnished with three bractes. It belongs to the class *Tetra-Hexandria*, order *Monogynia*, and the natural family of *Loranthaceæ*. Generic character: flowers hermaphrodite, each propped by three bractes; calyx cup-shaped, or cylindrical, with an entire limb; petals linear-spatulate, or linear, each bearing the stamen in the middle; anthers fixed by their backs, oblong, or ovate; style filiform; stigma capitate; berry ovate or elliptic.

A genus separated from *Loranthus*, consisting of four species, natives of tropical America and Asia. The flowers are green, purple, yellow, or scarlet, and disposed in branched, lateral, and terminal panicles. The habit is that of *Loranthus*.

TRISTICHA, in *Botany*, a genus so called by Du Petit-Thouars, from the Greek *τρεις*, *three*, and *στίχος*, *a rank*, on account of the disposition of the leaves in three rows or ranks. It belongs to the class *Monandria*, order *Trigynia*, and the natural family of *Naiadeæ*. Generic character: perianth inferior, of three sepals; stamen one; anther adnate to the inner side of the filament; styles three, reflexed; capsule one-celled, three-valved, many-seeded; seeds very minute, fixed to the valves.

This genus consists of much branched, aquatic, floating herbs, with small, imbricated, distich leaves, similar to some species of *Lycopodium* or *Jungermannia*. *S. bifaria*, of Presl, is a native of the Philippines, and is an annual plant.

TRISTOMA, in *Zoology*, a genus of *Parenchymatous Entozoa*.

Generic character. Body convex and crustaceous above, flat and membranous beneath; upon the under surface are three discs, two small ones in front, behind which is the trumpet-shaped mouth, and a large one behind attached by a short pedicle; a remarkable circular vessel ramifying through the body.

The genus to which Cuvier has applied this title is the *Capsula* of Bosc, which is a preferable name, as it has but a single mouth, and its three sucking discs, which are merely for fixing the animal, may be understood as being considered mouths by Cuvier's designation. It is also the *Phyllina* of Oken. Cuvier thinks the genus *Axine* may be included in this group. Three species are included in the genus, of which *Capsula Martinieri* of Bosc is the type.

TRISULC, } Fr. *trisolque*; habens vel faciens
TRISULCATE. } *tres sulcos*, having or making three furrows.

TRI-
STEMMA
—
TRISULC.

TRISULC. A three-forked, three-pronged, tool, or weapon.
 Consider the threefold effect of Jupiter's *trisulc*, to burn, discuss, and terebrate.
TRI-THEISM. Sir Thomas Brown. *Vulgar Errours*, book ii. ch. vi. p. 113.

And scarcely hatch'd, these sons of him,
 That hurls the bolt *trisulcate*,
 With helmet-shell on tender head,
 Did tustle with red-eyed pole-cat.
 Percy. *Reliques*. St. George for England.

TRITE, It, *trito*; Lat. *tritius*, (past participle of *terere*, to bruise, to rub;)
TRI'TICAL, Rubbed, worn with rubbing;
TRI'TICALNESS, thread-bare; common.
TRI'TENESS.

Swift has A *Tritical Essay on the Faculties of the Human Mind*.

For the great men among the Greeks are taken much notice of, but for very ordinary and *trite* things in this science [astronomy.]
 Glanvil. *Essay* 3. sec. 4.

The goodness of God is a frequented theme; to many perhaps it may seem vulgar and *trite*; so that discourse thereon, like a story often told, may be nauseous to their ears.

Barrow. *Sermon* 36. vol. iii. p. 1.

The deist indeed pretends that, in the things borrowed from Egypt, the first principles of law and morality, and the very *tritest* customs of civil life, are to be included.

Warburton. *Works*, vol. iv. book iv. sec. 6. p. 363. *The Divine Legation*.

Thus 'tis my fault perhaps if I complain
 Of *trite* invention and a flimsy vein,
 Tame characters, uninteresting, jejune,
 And passions drily copied from Le Brun.

Armstrong. *Taste*.

Certain it is (though some lukewarm heads imagine they may be safe in temporizing between the extremes) that where there is not a *triticalness* or mediocrity in the thought, it can never be sunk into the genuine and perfect bathos, by the most elaborate low expression.

Pope. *Works*, vol. iv. p. 153. *Martinus Scribblerus*.

The scarcity of sermons, which, while they preach the Gospel to the poor, disgust not the fastidious ear of modern elegance by *triteness* or vulgarity, has long been a subject of regret and of complaint.

Wrangham. *Sermons*. Preface, p. 7.

TRITELIA, in *Botany*, a genus so called by Hooker, from *τρεῖς*, *three*, and *τέλειος*, *perfect*, in reference to the three perfect stigmas. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Liliaceæ*. Generic character: perianth coloured, salver-shaped, with a six-parted limb; stamens six; filaments very short, three of which are inserted in the middle of the tube, and three in the throat of the perianth, the latter are opposite the inner segments of the perianth; hypogynous disk opposite; ovary on a long pedicel, three-celled; ovula numerous; style continuous with the ovary; stigma trifid; capsule many-seeded.

This genus consists of several species; they are scapigerous herbs, natives of North America. The leaves are linear. The flowers are pedicellate, and disposed in umbels. The involucre is of two or three foliaceous or membranous leaves. The perianth is continuous with the pedicel. The species have much the habit of some kinds of *Allium*.

TRI'THEISM,
TRI'THEIST,
TRITHEI'STIC,
TRITHEI'STICAL.

Gr. *τριθεία, τριων, θεων*, the doctrine, opinion, belief of three gods.

There is nothing more in it than this, that Father and Son are not two Gods, because they are not both unoriginated: which is the common answer made by the Catholics to the charge of *Tritheism*; not only before, but after the Nicene Council; as might be made appear by a cloud of witnesses, were it needful.

Waterland. *Works*, vol. i. p. 11. *A Defence of some Queries*.

I do not pretend that you are *tritheists*, in every sense; but in the same sense that the Pagans are called Polytheists, and in the Scripture-sense of the word *God*, as explained and contended for by yourselves.

Waterland. *Works*, vol. i. p. 238. *A Defence of some Queries*.

The main strength of the Doctor's cause lies, first, in his giving either a Sabellian or *Tritheistic* turn (admitting no medium) to the Catholic doctrine; and then charging it with confusion of persons, polytheism, nonsense, or contradiction.

Id. *Ib.* p. 215.

The *tritheistical* doctrine appears then to be as ancient as the ditheistical, that is, more ancient than our most ancient traditions.

Lord Bolingbroke. *Essay* 4. *Authority in Matters of Religion*.

TRITHING. *Tertia pars provinciae*, says Skinner. See Spelman in *Thingus*, *Thungrevius*, and *Trithinga*.

When a county is divided into *three* of these intermediate jurisdictions, they are called *trithings*, which were anciently governed by a *trithing-reeve*.

Blackstone. *Commentaries*. Introduction, p. 117.

These *trithings* still subsist in the large county of York, where by an easy corruption they are denominated ridings; the north, the east, and the west-riding.

Id. *Ib.*

TRITHRINAX, in *Botany*, a genus so called by Martius, from *τρεῖς*, *three*, and *θρίναξ*, *a fan*, on account of the form of the leaves. It belongs to the class *Hexandria*, order *Trigynia*, and the natural family of *Palmæ*. Generic character: flowers hermaphrodite, or polygamous, from abortion, on a much branched spadix; spaths numerous, incomplete; calyx cupular, trifid; corolla of three petals, which are imbricate on the margins; stamens six, subulate, free or somewhat connate at the base, linear; ovary of three distinct carpella; styles three, subulate; berry solitary by abortion, one-seeded; embryo dorsal near the vertex.

Of this genus only one species is known, it is a middle sized palm, a native of the south of Brazil, bearing palmately fan-shaped fronds. The flowers are small.

TRITICUM, in *Botany*, a genus so named by Linnaeus, from *tritius*, rubbed, in reference to the seeds of wheat being ground to flour. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: spikelets three to many-flowered; flowers distich; glumes two, nearly opposite, nearly equal, mutic, or awned; paleæ two, lower one mutic, mucronate, or awned, upper one bicarinate, the keels ciliated from prickles; scales two, entire, usually ciliated; stamens three; ovary sessile, pilose at apex; stigmas two, terminal, plumose; caryopsis free or adnate to the paleæ.

This genus comprehends all the different kinds of cultivated wheat. The leaves are flat. The spikelets are disposed in spikes or racemes, and parallel with the rachis.

TRITOMA, in *Botany*, a genus so called by Ker, from *τρεῖς*, *three*, and *τεμνω*, *to cut*, in allusion to the three-edged leaves. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Hemerocallideæ*. Generic character: perianth campanulately cylindrical, six-toothed; stamens six, rising from the receptacle, very straight, free, exserted, alternately longer; stigma, an obscure pencilled dot; capsule cartilaginous, ovate, bluntly trigonal; seeds numerous, triquetrous, or angular, disposed in two ranks.

Composed of perennial herbs, natives of the Cape of Good Hope. Root a tufted, thick, soboliferous rhizoma. The leaves are narrow, grassy, radical, erect, keeled on one side, and channelled on the other, attenuated upwards; scapes central, simple; flowers pendulous, crowded, disposed in racemose spikes, red and yellow; seeds black.

TRI-THEISM.
TRI-TOMA.

TRITON.

TRITON, Laur. *Eft*, Ray. In *Zoology*, a genus of animals belonging to the family *Caudata*, order *Batrachia*, class *Reptilia*.

Generic character. Head flat; mouth furnished with small teeth in the jaws and palate; body lengthy, and crested in the male; tail compressed, finned or crested above and below in both sexes; toes of the fore feet always cleft, of the hind feet sometimes distinct, sometimes more or less webbed.

This genus was separated by Laurenti from the Salamanders, on account of their compressed, fin-like, instead of rounded or quadrangular tail, and their aquatic habits. The crest or fin-like membrane along the back existing in the *Efts* is a sexual character of the males, and always more fully developed during breeding time, after which it shrinks comparatively, but is always distinctly separated from the crests, deepening the tail on its upper and lower edge, and common to both sexes.

The Tritons are distinguished also from the Salamanders in being oviparous, instead of oviviparous. They deposit their eggs either single or in patches of two to four, but still distinct, on the corner of some plant standing in or on the water, to which they are fixed by a clammy jelly, which also fastens the leaf together. The larvæ, when first hatched, have no feet; in which respect they resemble the tadpoles of frogs and toads; but they are distinguished from them by the fore legs being first developed, whilst the complete number of toes on the hind feet does not at first appear. At their very first escape from the egg, and previous to the formation of the mouth, they have a filamentous production in front of the gills and on the under surface of the head, by means of which they fix themselves to water-plants. They are carnivorous, feeding upon insects, worms, and small molluscs. As to their tenacity of life, Dufay mentions the remarkable fact, that they may be frozen up in the ice for a long time without being destroyed. Their capability of reproducing parts which have been injured or amputated is very astonishing, and has been largely experimented on by Spallanzani; so that the tail and limbs are found restored after five or six successive amputations in the same summer. Blumenbach also removed the greater part of the globe of the eye, and allowed the escape of the chrystalline lenze and vitreous humours: within ten months the entire eye, with its cornea, iris, lenze and vitreous humour, were reproduced, but remained small.

Many more species of this genus have been enumerated than really exist, in consequence of difference of colour, both as to age and at different periods of the year, having been described as distinct species; but Oken's reduction of twenty to three species can scarcely be considered more correct. Three species are described by Flemming as indigenous to this country: and Jenyns describes as many; but he thinks one of Flemming's to be merely a variety. Harlan has described ten species as natives of North America; but his account extends little beyond colour, and only one species can be considered as made out to agree with any other previously noted. Wagler has arranged them in three divisions, according as the hind toes are distinct, or more or less connected with webs.

a. *With all the Toes unwebbed.*

T. Gesneri, Laur.; *Lacerta Salamandra Palustris*, var. H. Gmel.; *la Salamandre Marbrée*, Latr.; *Marbled*

Eft. From eight to nine inches in length, of which the tail is one-half; upper surface rather pale olive-green, sprinkled with large brownish spots, or irregular marblings, extending on the dorsal crest, which is not deep or dentated; under parts blackish or brownish, and sprinkled with numerous white granular pores upon the sides, neck, and throat; tail compressed, and very deep, equalling nearly half its length; its upper half spotted or marbled with deep brown, and separated by a rather narrow white, sometimes reddish longitudinal band, from the lower brown half. The female is distinguished by an elevated whitish or slightly orange streak, extending from the middle of the back to the nape, instead of the crest. Is a native of the south of France; has a very fetid odour, and lives in pools; but sometimes, in hot and stormy weather, it comes ashore, and trails itself with seeming difficulty to some shady spot more or less distant. In winter it resorts in small parties to the holes in rotten trees, probably for hybernation.

T. Palustris, Flem.; *Lacerta Palust.* Lin.; *Salamandra Aquatica*, Ray; *la Salamandre Crêtée*, Latr.; *Warty Lizard*, Pen.; *Warty Eft*, Jen. About six inches in length, of which the tail has one-third. In spring-time the back of the male is ornamented with a deeply-indented crest of skin, commencing between the eyes, and reaching nearly to the root of the tail, which itself is similarly finned above and below, and is therefore as deep as the body. In the female there is no dorsal crest; her body is longer, but her hind limbs smaller and weaker; her tail is finned; whole surface of the skin warty, with scattered pores, and along each side a regular longitudinal row of pores. They vary much in colour, and hence both male and female have been described, under various names, as distinct species; but generally the upper parts are blackish olive-brown, with some darker round spots; breast and belly bright orange, with rounded black spots, sometimes confluent, and forming interrupted transverse bands; sides dotted with white; often along either side of the tail a white silvery stripe; membranes dusky, and tinged with violet. This species is a native of Europe, and said to be also of Africa and America, which is doubtful. At breeding time, in April and May, they may be seen swimming about very actively in ponds, and displaying their crests. They often spring up perpendicularly or warily to the surface, where they remain for a minute or two, and having emitted a few bubbles of air, descend. They are not vegetable feeders, but live on little water-snails, worms, insects, frog and fish-spawn; and if the larvæ are confined in a glass, they eat off the tails and gills of each other, and are thus destroyed. They have no voice, properly so called; but if compressed, a sort of noise is produced by the escape of the air from their lungs; and if touched, an acrid fluid is discharged from the follicles or pores of the skin, which excites pain if applied to a wounded part, or to the eyes. Hence they are supposed to be venomous, which is not the case. If the pond in which they live dry up, they go in search of another, and are therefore often found in fields and woods during summer. But in October they entirely resort to land, (not hybernating, as frogs, in the mud,) and retire to holes in the ground, hollow trees, or under leaves and moss, where they take their winter's rest. During spring, they shed their coats every eight days, but less frequently after breeding time. The skin first separates about the mouth, and turns off on either side; the animal wriggles about, and raises its head out of

TRITON.

TRITON. water, by which the air gets in between the sloughing and new skin, and assists materially in their separation. After many efforts, the head and fore limbs are disengaged, and soon after the skin is slipped over the tail, when the animal seizes it with its mouth, and draws it off like a sheath. This process is frequently effected in a quarter of an hour, but sometimes occupies from two to twelve hours. The eggs are attached singly upon grass or water-plants, and when hatched, the larvæ have three lancet-shaped gills on each side, and corresponding apertures behind the tongue bone, the former of which shrink away and the latter close as the animal is developed. They have also four very long and slender legs, of which the front ones are first protruded. Larval Efts, with both gills and such long limbs, are often observed swimming about through the whole summer, which probably depends upon their later hatching. In the autumn, after their conversion into perfect animals, the male and female are marked with black and brown streaks, on a yellow ground, from the middle of the head to the tip of the tail, and the sexes are not distinguishable. In the following spring, the streaks upon the back of the male disappear, and the dorsal crest is indented. Towards autumn, yellow spots present themselves on both base of the crests, soon become confluent, and the original yellow marks again appear; but at the end of the autumn the dorsal crest has almost entirely shrunk away. In the second spring, the yellow marks subside, and the dorsal crest, which had re-arisen after breeding-time, shrinks, but never so completely as at first. Towards autumn, the yellow is again visible; but in the third spring disappears for ever. In the adult female, the yellow markings are broader and less brilliant. A curious change of colour has also been occasionally noticed in these animals: thus, one which has its upper surface pale green, and almost spotless, will, in the course of a single hour, become brown, and covered with large bluish spots, which also soon disappear, and the animal assumes a black colour. It is difficult to determine on what this change depends; but perhaps it may arise from the distribution to the skin of more or less blood, in a more or less perfectly aerated condition, the respiratory process being influenced by the nervous energy excited by fear or passion.

T. Alpestris, Laur.; *Salam. Alp.* Schneid.; *la Salamandre à ventre orangé*, Daud.; *Yellow bellied Eft*. From four to five inches in length, of which the tail is about two-fifths; the male an inch less, has great resemblance to the female of the last species, its dorsal crest being scarcely visible; the upper parts are covered with fine warts; the colour is dingy greenish-brown above, with some deeper brown spots principally on the sides of the body; throat and under parts of both body and tail beautiful orange, with some black spots on the tail. This species was discovered by Laurenti on Mount Etscher, particularly after showery weather. When pressed, it produces a sort of noise like grinding of the teeth by drawing its tongue backwards and forwards; and also from the pores on the back it emits a whitish fluid. Oken describes it by the name *T. Igneus*, and gives as its synonyms *T. Salamandroides* to the male, and *T. Alpestris* and *Gyrinoides* to the female.

T. Tæniatus, Wagl.; *T. Punctatus*, Bonap.; *la Salamandre Ponctué*, Latr.; *Common Eft*, Jen. From three and a half to four inches in length; its tail long and pointed; and its skin generally smooth. The dorsal crest continued uninterruptedly with that of the tail, and fes-

tooned or crenated instead of toothed; upper parts brownish-grey inclining to olive, and beneath yellow or orange, marked all over with round black spots of irregular size, and on the head the longitudinal streaks; beneath the eyes a yellowish-white band, which extends slightly beyond them. The female is less spotted and the spots smaller than in the male. Oken and Jenyns both speak of the fringing of the hind toes of the male of this species, the latter stating that it occurs only at breeding time. This statement is, however, doubtful. This species is found in great numbers in standing water, leaving their winter abode under moss and earthholes early in the spring, and speedily pair. After about a fortnight the females come ashore and resort to cool damp places in gardens and woods, where they conceal themselves, and come out only at night to feed on insects and even on dung. They deposit their eggs singly or in twos and fours, on grass or water-plants, and at the end of a fortnight these are hatched and the young larvæ appear. In August they have grown to about an inch and a half in length, and lose their gills, after which they leave the water and are frequently found in gardens. Their residence ashore, Jenyns observes, somewhat alters their appearance, the skin losing its softness and becoming opaque, and the crests of the back and tail shrivelling up and giving to the latter a more bulky but less deep form. In this state he thinks it the *Lacerta Vulgaris* of Sheppard and Turton, perhaps also of Linnæus, the *T. Vulgaris* of Flemming, and the *Common Newt* of Shaw. The male seems to remain constantly in the water. The colours vary considerably. It is an European species, and found in England.

T. Vittatus, Gray; *Striped Eft*, Jen. About four and a half inches long; the skin smooth, with a distinct lateral line of pores, and two lines of pores on the head; in summer the male has a deep notched dorsal crest commencing in front of the eyes, and separated from the tail fin by a deep notch; colour white (perhaps yellow, when alive), unequally spotted with black; belly, under surfaces of the legs and tail, and a broad streak along each side of the body and tail, white; tail itself black. Is found in ponds near London.

b. With the hind Toes half webbed.

T. Rubea, Wagl.; *Salam. Rub.*, Daud.; *la Salamandre Rouge*, Beauv.; *Red Eft*. From five to six inches in length, of which the tail is two-fifths; upper parts bright blood red, paler and slightly orange on the sides; under parts marked with a pretty broad longitudinal blackish band; the whole surface sprinkled with a large number of black points, as large as pins' heads, on the upper parts, but smaller on the flanks and on the sides of the belly and tail. The back has no crest, and the upper edge of the tail is nearly sharp. The hind toes are all half webbed. This species was discovered by Beauvois under the bark of trees, and in shady places, in the United States. Daudin considers that, from the form of its tail, it is aquatic, and Wagler, for the same reason, places it among the Efts.

c. With the hind Toes completely webbed.

T. Palmatus, Wagl.; *Salam., Palm.* Schneid.; *la Salamandre Suisse*, Razoum; *Webfooted Eft*. Four inches in length, of which the tail is one half, including

TRITON.
—
TRI-
TONIA.

the long filament of half an inch by which it is terminated; the upper part of the head and the fore limbs are yellowish pointed with blackish, and behind each eye is a black streak; upper part of the body olive-brown, with a very low black crest; belly pale yellowish tinged with orange in the middle, and having some black spots on the sides; upper part of the tail blackish with an orange streak, and a band of little black spots which separate it from the yellow under part; the hind feet are blackish and completely webbed. Is found in the neighbourhood of Paris, also in the fountains of the Pays de Vaud, and feeds on the small *lymnææ fluviatiles* and *buccina*. This species is described by Oken as the female of *T. Tæniatus*, that author stating that the entire webbing of the hind feet of the female distinguishes it from the male, of which the hind toes have only an expanded skinny edge like the feet of the *Moorhen*. This cannot, however, be considered a sexual distinction, and therefore it is probable that Oken has confounded the two species.

Eight or ten other species are enumerated by Harlan in his *Genera of North American Reptilia and Synopsis of the Species*, among the Water Salamanders, as he calls this genus; but little more is mentioned than their length and colour.

See Laurenti *Specimen Medicum exhibens Synopsis Reptilium emendatam*; Latreille, *Histoire Naturelle des Salamandres*; Wagler, *Natürliches System der Amphibien*; Jenyns, *Manual of British Vertebrate Animals*.

TRITONIA, in *Zoology*, a genus of *Nudibranchiate Gasteropodous Molluscs*.

Generic character. Mouth terminal and encircled with tentacles; body oblong, creeping, pointed behind, convex above, with the gills arranged along the whole length of the back in form of scales, tubercles, or vascular tufts; under surface flat or grooved.

This genus was included in that of *Doris* by Linnæus, until separated by Cuvier. Its form is parallelopiped, with the upper surface slightly bagging throughout its whole length, the anterior extremity rounded and the posterior pointed. The back and sides are separated by two ridges, forming four or five curves or festoons, with their convexity downwards, and those which separate the sides from the foot are folded into much more numerous curves. The mouth is placed anteriorly between the back and the foot, covered by a wide delicate, horizontal, semicircular, denticulated membrane, and consisting of a longitudinal cleft with a pair of lips; within it are a pair of curved horny jaws, compared by Cuvier to the shears used for shearing sheep. The back is completely covered with round, unequal, blunt tubercles, and at its fore part are a pair of apertures, from which the tentacles are projected and in which they can be concealed, but they are not retractile; each forms a sort of crest, consisting of five processes, and at their base the eyes are situated. From the edge of these apertures the gills commence, and are continued along the upper ridges to the very tip of the tail. Both sides are smooth, but on the right are two perforated tubercles, one for the generative and the other for the excrementitial organs. The foot is rugous. Their habits have great resemblance to those of the genus *Doris*; they live in the muddy depths of the sea, attached to marine plants, and rarely come to the surface. Whilst alive, their colours are generally brilliant. Five or six species are known in the European seas, of which *T. Hombergii*, Cuv., is the type.

TRITONIA, in *Botany*, a genus so named by Ker, from *triton*, a weather-cock, in allusion to the stamens. It belongs to the class *Triandria*, order *Monogynia*, and the natural family of *Irideæ*. *Generic character*: spath two-valved, toothed; perianth campanulate, regular, or subbilabiate, usually resupinate; tube usually elongated and slender, and the limb generally rotate; stamens three, ascending; stigmas spreading, sometimes bifid; capsule roundish; seeds globose.

A genus separated from *Ixia*, and includes a great number of species; they are bulbous-rooted plants, natives of the Cape of Good Hope. The leaves are sword-shaped, and the scapes are furnished with gaudy blossoms about their tops.

TRITURATE, *v.* } Fr. *triturer*; It. *tritura*;
TRITURATION, } Lat. *triturare*, from *triturum*, past
TRITURABLE. } participle of *terere*, to bruise.

To pound, to crush, to rub, to grind into powder.

Briefly, it consisteth of parts so far from an Icie dissolution, that powerful menstruums are made for its emollition; whereby it may receive the tincture of minerals, and so resemble gemms, as Boetius hath declared in the distillation of urine, spirits of wine and turpentine, and is not only *triturable*, and reduceable into powder, by contrition, but will subsist in a violent fire, and endure a vitrification.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. i. p. 57.

Where the shore is low, the soil is commonly sandy, or rather composed of *tritured* coral.

Cook. *Voyages*, vol. v. book ii. ch. viii. p. 359.

In poultry, the *trituration* of the gizzard, and the gastric juice, conspire in the work of digestion.

Paley. *Natural Theology*, ch. x. p. 151.

TRI'VANT, } i. e. TRIWANT, TREWANT, TRUANT,
TRI'VANTLY, } *q.v.*

If ought to be omitted or added, which he likes or dislikes, thou art an idiot, an asse, a trifler, a *trivant*, thou art an idle fellow; or else 'tis a thing of mere industrie, a collection without wit or invention, a very toy.

Burton. *Anatomy of Melancholy*, fol. 10. Preface.

Him that by reason of a voluble tongue, a strong voice, a pleasing tone, and some *trivantly* Polyanthean helps, steales and gleanes a few notes from other men's harvests, and so makes a fairer shew, than hee that is truly learned indeed.

Id. *ib.* fol. 138.

TRI'VIAL, *adj.* } Fr. *triviale*; It. *triviale*; Sp.
TRI'VIAL, *n.* } *triviale*; Lat. *trivialis*, from *tri-*
TRI'VIALLY, } *vium*, a place where (*tres viæ*)
TRI'VIALNESS. } three ways meet, a publick place, a place of common meeting. Hence—

Trivial; common, as ought on the publick ways, the high road; common, ordinary, of little price or value, or estimation; worthless; trifling.

Trivial and *trifle*, bear a remarkable similarity in sound, and application.

But Weever now again to warn them doth begin
To leave these *trivial* toys, which inly he did hate,
That neither them beseem'd, nor stood with his estate.

Drayton. *Poly-olbion*, song 1

Themison, a famous physician, set forth a whole booke of the hearbe waibread or plantain, wherein he highly praiseth it: and challengeth to himselfe the honour of first finding it out, notwithstanding it be a *triviall* and common hearbe, trodden under every man's foot.

Holland. *Plinie*, book xxv. ch. viii.

How *trivially* common 'it is, that Luther was the sonne of an Incubus, the disciple of the divell, and that he who had been his master, proved his executioner?

TRIVIAL.

TRIVIAL. As for the pretended *trivialness* of the fifth and sixth day's work; I think it is apparent from what we have noted on the fifth day, **TRIUMPH.** that Moses his ranging of fish and fowl together is a consideration not vulgar and *trivial*, but philosophical.

More. Defence of the Philosophical Cabbala. Appendix, ch. xi. sec. 1.

Profiting in *trivials* to a miracle, especially in poetry (in which he [Heylin] gave several ingenious specimens as occasion offer'd) was in the year 1613 plac'd by his father in Hart Hall under the tuition successively of two tutors.

Wood. Athenæ Oxonienses, vol. ii. fol. 275.

But I have already wearied myself, and doubt not but I have tir'd your lordship's patience, with this long, rambling, and I fear *trivial* discourse.

Dryden. Dedication to Juvenal.

Great ingenuity, though injudiciously and *trivially* employed, will ever excite the curiosity of readers who love to observe the operation of the human faculties under the influence of the various modes of judging and writing, which, at different periods, have prevailed in the world of letters.

Knox. Essay 60, vol. i. p. 302. On Owen, the Letter Epigrammatist.

TRIUMFETTA, in *Botany*, a genus dedicated by Linnæus, in honour of John Baptist Triumfetti, an Italian botanist, who died in 1707, also of Lælius Triumfetti, professor of botany at Rome. It belongs to the class *Deca-Polyandria*, order *Monogynia*, and the natural family of *Tiliaceæ*. Generic character: calyx of five sepals, usually with a point under the apex in each; petals five, with ciliated claws; stamens ten to thirty, free, girded by a narrow urceolus at the base; glands five, on the receptacle and opposite the petals; ovarium roundish; style two or five-toothed at apex; carpels two to five, more or less joined together into a single fruit, which is covered with hooked prickles; seeds hairy, one or two in each cell or carpel.

A well known genus consisting of above fifty badly defined species, which are common within the tropics; they are generally shrubs, seldom herbs, with simple or three-lobed leaves, and axillary, solitary or crowded two or three-flowered peduncles, and small yellow flowers. The hairs are stellate. The fruit being covered by hooked prickles readily stick to clothes in the manner of the heads of the Burdock.

TRIUMPH, n.	} Fr. <i>triomphe</i> ; It. <i>trionfare</i> ; Sp. <i>triumfo</i> ; Lat. <i>triumphus</i> ; Gr. <i>Σπιαμφος</i> . Vossius seems inclined to derive from <i>Spia</i> , the leaves of the fig-tree, and <i>αμφι</i> , around, because the soldiers of Bacchus returned from their Indian victory with their heads encircled by the leaves of the fig-tree. The editor of <i>Lenæp</i> thinks the Gr. <i>Σπιαμφος</i> (a word employed by later Gr. authors to express the Latin <i>triumphus</i>) to be so written for <i>Spiaμφος</i> , that again for <i>Spiaμφος</i> , from <i>Spia</i> , and to have denoted—A multitude of men tumultuously assembled. Tooke, perhaps from A. S. <i>dryman</i> , to make a joyful noise. See to TRUMP . <i>Triumph</i> is applied to—
TRIUMPH, v.	
TRIUMPHAL, adj.	
TRIUMPHAL, n.	
TRIUMPHANT,	
TRIUMPHANTLY,	
TRIUMPHER,	
TRIUMPHINGLY.	

A ceremony, a pomp, a token, in celebration or commemoration of victory or conquest; to—the victory itself; to—the feeling of exultation or gladness; to—a pomp or show in resemblance or imitation of a *triumph*. And see **TRUMP at Cards**.

Beforen his *triumphe* walketh she
With gilte chaines on hire necke honging,
Crowned she was, as after hire degree,
And ful of pierrie charged hire clothing.

Chaucer. The Monkes Tale, v. 14369.

After whiche victory thus hadde, the sayd Constantyne went

vnto Rome, where he was receyued of the Senate with moost **TRIUMPH**. *trumphe.* *Fabyan. Chronycle, ch. lxix. p. 47.*

Wherof kyng Edward beyn enfourmyd, made towarde them, and at a place callyd Halydone Hyll, gaue to the sayde Scottys batayll, and of them had *tryumphaunte* victorye.

Id. Ib. p. 442. Anno 1331.

A cruell and fit man, when fate contriu'de
Romes ruine: hee on Libyan coasts arriu'de
Wandred through empty cottages vpon
Triumphed Jugurth's spoil'd dominion,
And Punicke ashes trod.

May. Lucan. Pharsalia, book ii.

Or did I bragge and boast *triumphauntly*,
As who should saye the field were mine that daye?

Gascoigne. The Lookes of a Louer Forsaken.

And all the way before them, as they went,
Triton his trompet shrill before them blew,
For goodly *triumph* and great iollyment,
That made the rockes to roare as they were rent.

Spenser. Faerie Queene, book iv. can. 11.

But Blandamour whenas he did espie
His chaunge of cheere that anguish did bewray,
He woxe full blithe, as he had gone thereby,
And gan thereat to *triumph* without victorie.

Id. Ib. book iv. can. 1.

Whose glorie did appeare
Like a *triumphall* arch, and thereupon
The spoiles of princes hang'd which were in battel won.

Id. Ib. book vi. can. 8.

Their swords and speres were broke, and hauberques rent,
And their proud girlonds of *triumphant* bayes
Troden in dust with fury insolent,
To show the victor's might and merciless intent.

Id. Ib. book iii. can. 11.

The good soul armed, not with the unmeet and cumbersome harness of flesh and blood, but with the sure (though invisible) armour of God, dares come forth to meet him [Death] and in the name of the Lord of Hosts, both bids him battle, and foils him in the combat; and now having laid him on the ground, can *triumphingly* say, O Death, where is thy sting?

Hall. Of Contentation, sec. 17.

Who scorning worldly loss
Herself in person went to seek that sacred cross,
Whereon our Saviour dy'd; which found, as it was sought,
From Salem unto Rome *triumphantly* she brought.

Drayton. Poly-olbion, song 8.

Prone on the field the bleeding warrior lies,
While thus, *triumphing*, stern Achilles cries.

Pope. Homer. Iliad, book xxii.

I, first of Romans, shall in *triumph* come
From conquer'd Greece, and bring her trophies home:
With foreign spoils adorn my native place;
And with Idume's palms my Mantua grace.

Dryden. Virgil. Georgics, book iii.

Let vulgar souls *triumphal* arches raise,
Or speaking marbles, to record their praise.

Pope. Homer. Odyssey. Conclusion.

Old Rome from such a race deriv'd her birth,
(The seat of empire, and the conquer'd Earth;)
Which now on seven high hills *triumphant* reigns,
And in that compass all the world contains.

Dryden. Virgil. Georgics, book ii.

So fought each host with thirst of glory fir'd,
And crowds on crowds *triumphantly* expir'd.

Pope. Homer. Iliad, book iv.

But it [the splendour of Rubens] resembles eloquence, which bears down every thing before it, and often *triumphs* over superior wisdom and learning.

Reynolds. Works, vol. ii. p. 263. Journey to Flanders and Holland.

When Columbus, upon his return from his first voyage, was introduced with a sort of *triumphal* honours to the sovereigns of

TRIUMPH. Castile and Arragon; the principal productions of the countries which he had discovered were carried in solemn procession before him. *Smith. Wealth of Nations, book iv. ch. vii. p. 394.*

TRIUMPH. Among all the nations of antiquity, successful generals were received on their return home with pompous processions and gorgeous solemnities, but the ancient Latins, and after them the Romans, made such national rejoicings the subject of definite law, and regulated them by a prescribed ritual. We have but few and incidental notices of the triumphs granted to conquerors by the early Asiatics, the Egyptians, and the Greeks; but we have abundant information respecting these honours in Rome, the conditions on which they were granted, and the rites with which they were celebrated. From the history of Jephthah and Saul, it appears that the wives and maidens of Israel hailed the return of a victorious leader with music, dance, and song; but there is no appearance of any religious ceremony being used on such an occasion. Among the Egyptians the triumph was entirely religious; it consisted in the offering of certain sacrifices in a principal temple. The most interesting part of the ceremonial was an allusion to the superior value of the arts of peace; the officiating priest presented a sickle to the victorious prince, with which he cut the heads from a bundle of corn-stalks. The Greeks seem to have had no fixed rules respecting triumphs; indeed the distinguished success of a general too frequently exposed him to the suspicions of those jealous republicans.

The Roman triumphs were of two kinds, the greater, usually called *The Triumph*, and the lesser, which was named an Ovation. Both could only be granted by the senate, and a victorious commander usually waited outside the walls of the city, until that august body had decided in what manner he should be received. The greater triumph could only be obtained by a dictator, consul, or prætor, who had waged a just war against an independent nation, with an army under his own command (*suis auspiciis*), and had slain at least five thousand of the hostile army. Hence Cæsar's triumph at the close of the Pharsalian war was a violation of constitutional law, as well as a needless outrage on the feelings of the principal citizens. The general who was allowed the greater triumph entered the city in a chariot, and proceeded to the Capitol in pompous array, where a white bull was sacrificed to Jupiter. The principal personages taken captive during the war were exhibited bound in the procession, and were generally mocked and insulted by their cruel captors. Such treatment was felt to be worse than death: it is recorded that several went mad while thus led through the streets; other monarchs, aware of the fate that awaited them in Rome, committed suicide when they had no other chance of escaping from captivity.

A triumph was regarded as the greatest honour to which man could attain; indeed it was supposed that its intoxicating influence might lead him to forget his humanity, and a slave was therefore placed in the same chariot with the victor, to remind him that he was still but a man.

Additional importance was given to the triumph when the victor was able to present the *spolia opima*. These could only be obtained by his having slain the commander of the enemy in single combat, and stripped him of his arms. Such spoils were only obtained three times by Roman commanders. The *spolia opima* were dedicated to Jupiter, surnamed Feretrius, from the

feretrum, or bier, on which they were borne in the procession. Some writers have asserted that the Romans derived their custom of triumph from the example of Bacchus after his return from the conquest of India, but there can be no doubt that the custom existed long before the name of Bacchus was known in Latium; it is however probable, that many of the later additions made to the pomp of the spectacle were derived from the fables respecting that deity. Among these may be reckoned the embroidered robes worn by the triumphant general, his crown of laurel, and the acclamations of *Io Triumphe*, with which he was saluted by the soldiers and citizens. The attendance of all the city magistrates and senators in their robes of office seems to have formed a part of the ceremony from the earliest times.

On some occasions monuments were erected to perpetuate the memory of such an event. These were either columns or arches. One of the earliest columns erected in Rome still exists; it commemorates the first great naval victory which the Romans, under the command of Duilius, gained over the Carthaginians, and is singularly decorated with representations of the *rostra* or beaks of the Carthaginian ships.

The earliest triumphal arches were of very simple construction, and frequently served as gates to the town, as well as memorials of victory. Indeed it has been plausibly conjectured, that they were originally designed to be gates, and to intimate that the conqueror had given such additional security to his city as to allow of a new passage being opened through its walls. In later ages the arches and columns were decorated with statues and sculptures in high relief. The pillar of Trajan and the arch of Titus which still remain have thus become important authorities for ascertaining many details respecting the military costume, weapons and standards of the Romans, which have not been communicated by ancient writers.

The lesser triumph, or ovation, differed from the greater, chiefly in the following particulars: the general, instead of riding in a chariot, entered the city on foot; he wore a plain purple robe, and a crown of myrtle; the senators did not meet him in their official capacity, he was only attended by such as happened to be his private friends; the acclamation of the soldiers was O! O! whence some think that the name of Ovation was given to this stunted ceremonial; but according to others, the term was derived from the sheep (*ovis*) which was sacrificed, instead of the white bull used in the greater triumph.

TRIUMVIR, } Lat. *triumvir*. One man of three
TRIUMVIRATE, } (*men*), *sc.* who were appointed to, or who assumed, power in the state.

With these the Piercies them confederate,
And as three heads conjoin in one intent;
And instituting a *triumvirate*,
Do part the land in triple government.

Daniel. History of Civil War, book iv.

The image likewise of Apollo (which after that Antonius the *triumvir* had wrongfully taken from the Ephesians, Augustus Cæsar restored againe unto them, being warned so to doe by a vision appearing unto him in his sleepe) was of Myro his making.

Holland. Plinie. Natural History, book xxxiv. ch. xviii.

To forbid men to complain, when they suffer, would be an instance of tyranny but one degree below that which the *triumvirs* gave, during the slaughter and terrour of the proscriptions, when by edict they commanded all men to be merry upon pain of death. *Bolingbroke. Works, vol. i. p. 112. Remarks on the History of England. Letter 1.*

TRIUMPH.
TRIUMVIR.

TRI-
UMVIR.
—
TRI-
URIS.

TRIUMVIR, } A triumvir is simply one of three
TRIUMVIRATE. } commissioners. It was a maxim of
Roman polity to divide the responsibilities of administra-
tion by entrusting executive offices to a committee instead
of a single functionary, and as three was a convenient
number, we find triumvirs frequently appointed, and for
a great variety of purposes. Thus there were *Triumviri*
Capitales, who presided over prisons, and the punishment
of criminals; *Triumviri Mensarii*, who distributed relief
to the poor; *Triumviri Conquistores*, who took charge
of enlistment; *Triumviri Coloniae deducendis*, who
led out colonies, and many others of minor importance.
But the terms triumvir and triumvirate are most fre-
quently applied to the committees for ordering the re-
public, which, on two occasions, were invested with
supreme authority. The first triumvirate consisted of
Pompey, Cæsar, and Crassus; they shared the supreme
power amongst them, and, though they did not alter the
forms of the constitution, they virtually annihilated the
republic. The death of Crassus put an end to this ar-
rangement; no other person could be found able to
compete with the survivors, and restrain their ambition by
threatening to side against the first who broke the terms
of agreement. Cæsar and Pompey consequently con-
tended for the supreme power, and the former, having
conquered, ruled alone. After the death of Julius Cæsar,
a second triumvirate was formed by Augustus, Antony,
and Lepidus: its career was equally brief and sangui-
nary; the friends of the old republican constitution were
proscribed, and inhumanly butchered; the old forms
of the republic were set aside, consuls, prætors and
ædiles being appointed by the triumvirs, and these
appointments were made to extend over several ensuing
years, in order to avert any pretence for popular assem-
blies or elections. After the supremacy of the trium-
virate had been established at the battle of Philippi,
the mutual jealousies of its members rendered its con-
tinuance impossible. Lepidus was deposed by Augustus,
or, as he was then called, Octavius Cæsar, with very
little ceremony; Antony defended himself by arms, but
was easily overcome, and his death left Augustus sole
master of the Roman empire. It may be observed that
the first triumvirate was simply a private agreement
between the three powerful persons who composed it,
but the second was legally recognized as a form of go-
vernment by the Roman Senate and People.

TRIUNE, } Formed of the Lat. *tres*, three, and
TRINITY. } *unus*, one.

The Arian and Socinian are charg'd to dispute against the tri-
nity: they affirm to believe the Father, Son, and Holy Ghost, ac-
cording to scripture and the apostolic creed; as for terms of
trinity, *trinity*, coessentiality, tripersonality and the like, they
reject them as scholastic notions, not to be found in scripture.

Milton. *Of True Religion*.

Where will they be able to fix their greedy eyes with compa-
rably that pleasure and delight, as upon the mysterious *tri-une*
divinity, which is the eternal Author of all being, the root of all
good, and the rule and source of all perfection?

Scott. *Christian Life*, part i. ch. i. fol. 4.

Can there be harm in adoring power in God the Father, wisdom
in God the Son, goodness in God the Holy Ghost; power,
wisdom, and goodness combined in the *tri-une* Deity, equally the
objects of love and reverence to man, whether acting conjunctly
or separately in his creation, his redemption, or his sanctification?

Knox. *Works*, vol. vii. p. 189. *Christian Philosophy*, Note.

TRIURIS, in *Botany*, a genus so called by Miers,
from *τρεις*, three, and *ὄψα*, a tail, in consequence of
the leaflets of the perianth, which are three in number,

being furnished each with a long horn-like process near
the apex. It belongs to the class *Dioecia*, order *Trian-*
dria, and probably to the natural family of *Burman-*
niaceæ. Generic character: flowers dioecious; perianth
of three-obovate leaflets, each of which is furnished with
a long horn-like process beneath its apex; anthers in
the male flowers three, sessile, with separated cells, in-
serted in the base of a large fleshy central androphore;
pistils in the female flower very numerous, aggregate,
superior; styles simple, subulate; fruit unknown.

Of this genus there is only a single known species, *T.*
hyalina, a small hyaline plant, furnished with a few brac-
tiformed leaves; it is a native of humid places on Serra
dos Orgãos, in the province of Rio Janeiro in Brazil.
Mr. Miers has no positive evidence whether the genus
is *Monocotyledonous* or *Dicotyledonous*; but is induced,
by various considerations, to refer it to the former class.
He also points out its resemblance to different *Mono-*
cotyledonous families, and suggests, as it cannot be dis-
tinctly referred to any of them, it may probably be taken
as the type of a distinct order, holding a place between
Burmanniaceæ and *Fluviales*.

TRIXIS, in *Botany*, a genus so called by P. Browne,
from *τρεις*, three, in allusion to the triangular three-celled
fruit. It belongs to the class *Syngenesia*, order *Æqua-*
lis, and the natural family of *Compositæ-Cichoraceæ*.
Generic character: heads many-flowered, homogamous,
ray-formed; involucre in one or two series; scales of
inner series five or ten, erect, outer ones or bracteas
fewer, and somewhat spreading, sometimes subimbric-
ated or calyculate, all quite entire; receptacle pilose,
fimbriiferous or glabrous; flowers all hermaphrodite;
corollas bilabiate, rather pilose; outer lip tridentate,
ligulate, rather longer in the outer flowers; inner lip
bipartite, with revolute lobes, generally coadunate when
young; anthers with an entire tail each; branches of
style subcylindrical, truncate; achenia subterete, at-
tenuated at apex or shortly beaked, papillosely scabrous,
but smoothish at apex; bristles of pappus capillary in
two series, scabrous.

There are above thirty species known to botanists;
they are either shrubs or herbs, with alternate, undi-
vided, quite entire, or toothed leaves, and usually corym-
bose heads of yellow or white flowers.

TRIZEUXIS, in *Botany*, a genus so called from
the Greek *τρεις*, three, and *ζεύξις*, connection, on account
of the three lateral sepals being joined. It belongs to
the class *Gynandria*, order *Monandria*, and the natural
family of *Orchideæ-Vandææ*. Generic character: pe-
rianth globose; lateral sepals connate, placed under the
labellum; the upper sepals connate at the base, and
conforming to the petals; labellum behind, connate with
the column at the base, entire, concave, acute; column
parallel with the labellum, terete, clavate; stigma lon-
gitudinal; anther one-celled, fleshy; pollen masses two,
discrete at the base, solid, with an oblong, large caudi-
cula, and a small oval gland.

There is only a single species known of the present
genus, *T. falcata*, a native of the West Indies; it is a
small stemless epiphyte, with falcate, distich leaves,
panicked scapes, and aggregated minute flowers.

TROCHEE, } Lat. *trochæus*; Gr. *τροχαιος*, from
TROCHICK, } *τροχ-ειν*, to run, *quia chori, ubi*
TROCHICKS. } *usitatus est, agilius moventur in*
morem currentium.

Also called *choree*.

A foot consisting of a long and short syllable.

TRO-
CHEE.

TRO-
CHEE.
—
TROCHI-
LUS.

Will not experience confute us, if we should say the state of China, which never heard of anapestics, *trochies*, and tribracs, were gross, barbarous, and uncivil?

Daniel. *Defence of Rhyme*.

One poem consisteth only of hexameters; and another was entirely of iambics; a third of *trochaics*; as is visible, by the fragments yet remaining of his works.

Dryden. *Dedication to Juvenal*.

As the *trochaic* measure was still occasionally admitted, even in the improved and serious Greek Tragedy, and, in particular, occurs very frequently in the tragedies of Euripides, it is natural; to suppose, that a still more frequent use of it would be one of the characteristics of the satyric drama, which seems to be only a sort of revival, in an improved and regular form, of the old *trochaic* tragedy with its chorus of dancing satyrs.

Twining. *Aristotle. Art of Poetry*, vol. i. n. 34.

TRO'CHEST, or } It. *trocisco*; Fr. *trochisque*.
TROCHISEE', } A little *rundle* or cake whereinto
TRO'CHISK. } divers medicinale things be reduced, the better to be kept, and the readier to be used. Cotgrave. From the Gr. *τροχισκος*, a wheel; circle; So applied from its round form.

Condemne them (I say) of vanity, curiosity, and absurdity, who confound and mixe together minerals, herbs, theriacall *trochists*, made of the parts of venomous serpents for the composition of their treacles.

Holland. *Plutarch*, fol. 576. *Of Symposiaques*, book iv.

God finds out a way to improve their evils to advantage, and teaches them of these vipers to make sovereign treacles, and safe and powerful *trochisees*.

Hall. *Works*, vol. iii. fol. 584. *The Balm of Gilead*, sec. 4.

There should be *trochisk* likewise made of snakes: whose flesh dried is thought to have a very opening and cordial virtue.

Bacon. *Natural History*, sec. 965.

TROCHETIA, in *Botany*, a genus dedicated by De Candolle, in honour of M. Du Trochet, the celebrated vegetable physiologist. It belongs to the class *Monadelphica*, order *Polyandria*, and the natural family of *Byttneriaceae-Dombeyaceae*. Generic character: calyx five-parted, spreading, naked; petals five; stamens twenty to twenty-five, monadelphous at the base, five to seven of which are sterile; ovarium roundish, scaly;

style filiform; capsule five-celled, five-valved; seeds small, roundish, wingless.

TRO-
CHETIA.

Two species of this genus are known, both natives of the island of Bourbon: they are trees with entire leaves, which are rusty or scaly beneath, and axillary, solitary, one or three-flowered peduncles, and drooping white or red, rather large flowers.

TROCHETIA, in *Zoology*, a genus of *Leech-like Apodous Annelids*.

Generic character. Mouth two-lipped, the upper large and obtuse; neither jaws nor teeth; no eyes; body oblong; cylindrical in front, broad and flattened behind; at the posterior extremity a contractile disc; a broad circular and slightly elevated band surrounds the body at its middle third; vent above and near the disc.

This genus, first described by Dutrochet, very much resembles the Leeches, *Hirudo*, Lin.; but it is distinguished from them by the absence of teeth, and by the circular band around the body, in which it resembles the earthworm. It lives in moist places, hunts after worms, which it swallows whole; is an air-breather, and if put into water, it is destroyed: but a single species is known, *T. Subviridis*, Dutr.; about two and a half inches in length. Blainville has chosen to change its name to *Geobdella*.

TRO'CHILICK, } From the Gr. *τροχος*, *rota*, a
TRO'CHILICKS, n. } wheel; from *τρεχειν*, to run, or turn round.

See the Quotation from Wilkins.

Thus farre had I proceeded in names, when it was hie time to stay, for I am aduertised that there is one, which by arte *trochilick*, will drawe all English surnames of the best families out of the pitte of poetrie, as Bouchier from Busyris the tyrant of Egypt.

Camden. *Remaines*, p. 156.

But for the better conceiving of this invention, it is requisite that we rightly understand some principles in *trochilics*, or the art of wheel-instruments.

Wilkins. *Dædalus*, ch. xiv.

T R O C H I L U S.

TROCHILUS, from the Greek *τρεχω*, *I run*, Lin.; *Humming Bird*, Lath. In *Zoology*, a genus of animals belonging to the family *Tenuirostres*, order *Passeres*, class *Aves*.

Generic character. Beak long, thin, varying in different species from straight to much curved; upper mandible depressed at its base, which is broad as the forehead, its ridge distinct towards the base, and its tip sharp; lower mandible almost completely hidden within the upper; tongue long, extensile, partially tubular and bifid; nostrils basal, marginal very small, covered with a broad vaulted membrane, and open in front; wings long and sharp; the first quill longest, and the others regularly graduated towards the body; tail, composed of twelve quills, (excepting in one species, which has but six,) strong, rounded, graduated, sharply wedge-shaped or forked; legs very short, the tarsus shorter than the middle toe, and often feathered; toes three in front, the inner two slightly connected at their base, and one behind armed with slender curved claws.

This most beautiful and minute section of birds has been generally divided by the French naturalists, from

Brisson to Lesson, into two distinct genera, in consequence of some having the beak straight and others having it curved; the only distinction which, the latter writer admits, can be observed either in their organization or habits. Linnæus has, however, included all under one single kind, and has been, in this respect, followed by Temminck, and also by Prince Maximilian, who, in reference to this presumed distinguishing point, observes: "they have a long, slender, more or less curved beak, the curve of which is presented in every transition, from the most perfectly straight to the most completely arched form;" so that even in merely dividing them into two sections of the same genus, it is almost impossible to fix their precise limits.

The tongue of the Humming Birds has considerable resemblance to that of the Woodpeckers, *Pici*, in its great extensibility, the branches of the bone supporting it winding round, as in the latter genus, upon the sides of the back of the skull, and ascending upon its surface, and which, being acted on by muscles, are depressed, and, straightening, project the tongue itself to a considerable distance from between the mandibles. Hence

TROCHILUS. Prince Maximilian observes, the epithet Flowerpecker would be much more apposite than that of Fly-bird, as it is called by the French. The tongue itself is of a very peculiar form, and has been very variously described. Tiedemann says it is very long and tubular, and fitted for sucking the honey of flowers. Carus says, "the long, tube-shaped tongue of Humming Birds, employed in sucking the juices of flowers, is a perfect repetition of the sucking-tube of bees and butterflies." Lesson describes it as "consisting of two musculo-fibrous cylinders, connected throughout the greater part of their course, and separated towards the tip of the tongue; so that the two tubes, slightly enlarging at this part, separate from each other, and each presents a little blade, concave within and convex without." The description given by Prince Maximilian is, however, most correct. "If the tongue be carefully examined, it will be found to consist of two adjacent muscular cylinders, of which the skin on the anterior half of the muscles projects both on the edges and at the tip, and here turns over like a tube; but nearer the tip is entirely open, and spreads out into a thin, smooth, flexible tip, somewhat fringed at the edges. In consequence of this tubular, rolled together, skinny process of the front of the tongue, many observers have been led to consider the whole tongue as a completely pervious tube; a mistake which has been followed up to the present time by all ornithologists and comparative anatomists;" as, for instance, Tiedemann, Carus, &c. "The two skinny tips of the tongue-processes or cylinders of the Humming Birds are," he adds, "well adapted, when introduced into the tubes of flowers, to feel there the most minute insects, to seize and carry them back to their beak;" and, as Lesson's plate of their tongue indicates, "this part has far greater resemblance to a cleft nipping organ than to a sucking apparatus." Swainson says, that "in all the Humming Birds he has examined, the two filaments of the tongue were perfectly flat."

The honied juices contained in the nectaries of flowers was long supposed to be the sole food of Humming Birds; but the discovery of very minute flies in their alimentary canal has led to a denial of that statement. Wilson says: "For myself, I can speak decisively on this subject. I have seen the Humming Birds for half an hour at a time darting at those little groups of insects that dance in the air on a fine summer evening, retiring to an adjoining twig to rest, and renewing the attack with a dexterity that sets all our other fly-catchers at defiance. I have opened from time to time great numbers of these birds; have examined the contents of the stomach with suitable glasses, and in three cases out of four have found these to consist of fragments of insects; in many subjects entire insects of the coleopterous class, but very small, were found unbroken." Lesson holds that those smaller species, with straight bills (his Fly-birds), feed principally on such honey, and that only occasionally do they eat a few minute insects; whilst the larger species, and some of the curved-beak section, or true Humming Birds, undoubtedly prey on little spiders and gnats. Prince Maximilian says, that in the stomachs of these little birds he has usually found the remains of small beetles, with which he has also found them completely filled. And Bullock, in his *Mexico*, says he has often watched them abstracting flies which had become entangled in the spiders' webs outstretched between the roof of the house he inhabited and the surrounding trees.

The Humming Birds are almost constantly on the

wing. During summer, says Molina, they are seen humming around flowers just like butterflies, and but rarely settle. Fermin remarks of the first of the four species of this genus described by him: "When it flies, it hums like bees, or like the large flies called humble-bees. Its wings are in such active, prompt, and continual motion, that they are scarcely discernible. It never rests in the same spot; is always in motion, and does nothing else than go from flower to flower, usually without resting, and incessantly vaulting around them." Bullock had an opportunity of observing them when confined in cages, and says, "they remain, as it were, suspended in the air, in a space sufficient for the motion of their wings, and the kind of humming they make depends entirely on the surprising velocity with which they execute the imperceptible movements by means of which they are sustained for many consecutive hours." They feed on the wing, plunging their long tongue into the bottom of the flowers, and bringing it back loaded with honey or with insect food. More rarely they settle on the petals of the flowers, and perform the same actions. Prince Maximilian observes that, "coupled with the varying brilliancy of their beautiful plumage, they possess the most elegant form, and the most perfectly developed organs of flight, wherefore, in entire correspondence with their beautiful appearance, they dart like arrows, with the greatest rapidity, so that the eye can scarcely follow them, from flower to flower, humming like bees around the most beautiful and fragrant, and very rarely coming to the ground, except when compelled by the extreme heat of summer. If wearied by a long flight, they rest upon some slender twig in the shade of a dark foliage, and here their nest is usually found." Their great powers of flight, whence they have been included by the French naturalists amongst their *Voiliers*, or Sailing Birds, which scarcely require rest throughout the whole day, and of which the Swallows and Swifts are the most perfect, lead to the presumption that their organs of flight correspond, which is seen to be the case in the powerful breast-muscles acting upon their long and pointed wings which consist of strong, close-set quill-feathers: of these the first is the longest, and the following eight regularly graduated, with flattened, curved, and very solid stems; the five secondaries are short, of equal length, truncated at their tips, and seemingly for the purpose only of filling up the space between the wing and the shoulder. Their resemblance to Swallows and Swifts is further to be traced in the shape of their tails, which is shorter as it is rectilinear, and only in some few is provided with longer quills, giving it a lengthened and forked form. "Upon this arrangement of the rectrices, or tail-feathers, (by means of which the bird is directed in the air,) and upon the form of the wings, result," says Lesson, "that extent of motion, that power and duration which the Fly-birds exhibit to so great a degree in their flight. Thus the quick and uninterrupted strokes with which they smite and cleave the air cannot be better compared than to the humming noise of a spinning-wheel in motion, or of a cat testifying its pleasure under the caresses of a friendly hand. This *frou-frou*, as the Cayenne creoles call it, is well expressed by Marcgrave by the syllables *hour, hour, hour*, quickly articulated."

Humming Birds seem not to have any song; they only utter occasionally a little indistinct cry, which Buffon has rendered by the syllables *screp, screp*; but more faithfully expressed by Vieillot as *tère, tère*, uttered with more or less power, and most commonly in a shrill

TROCHILUS. tone. Lesson says this cry is uttered to give notice of their movements in passing from one spot to another, but that most commonly they are quite silent; and that he has passed hours in the Brazilian forests listening, but without hearing the slightest noise from their throats. Many species fly low, especially where the shrubs of *Justicia* form the greater part of the under-wood of many of the Brazilian forests, or where low flowering bushes are found; while others prefer the lofty flowering crowns of forest trees, in which respect they resemble the large and brilliant butterflies of warm climates. Waterton mentions one species which flies only morning and evening, and feeds on ticks, which it catches upon the water. Azara says that Humming Birds never settle on the ground, which is denied by Prince Maximilian, who has often seen them drinking on the sandy shores of a clear stream or wood brook. According to Lesson, they leave the shady forests, and spread over the neighbouring shrubs, but return in mid-day, to escape the heat of the sun. The conflicting statements of Stedman and Azara, the former of whom says that the Humming Birds collect in such numbers on the tamarind trees that they may be mistaken for swarms of wasps, whilst the latter states that they are solitary, are adjusted by the observation of Prince Maximilian, that he has often destroyed many of the same species in a few minutes on the *Gothea semperflorens*, a tree covered with flowers, although they are usually solitary—that is, that in pairing time the male and female fly apart, though not at any great distance. Lesson also says that he has very frequently seen in the Brazils the Fly-birds grouped in dozens upon the large coral trees when full of flower. And Spix and Von Martius, in their Travels in Brazil, speak of “swarms of Humming Birds;” an expression which, Prince Maximilian says, cannot properly be used.

Buffon has given a beautiful description of the nests of these birds, from the account furnished him by Duterre. It is not larger than half an apricot, and of corresponding form; consists of fine cotton, or silky wool found on flowers, strongly woven together, and resembling a soft thick skin; and the exterior is defended with bits of the bark of the gum tree. It is attached either to a couple of leaves, or to a single sprig of an orange or citron tree, or upon the leaves of ananas, aloes, &c., or to a straw which hangs to the roof of a cottage. Lesson confirms this statement of the perfect hemispherical form of the nest, the interior of which is lined with a dense thick layer of the *ouate d'Asclepias*, or soft cotton, and the exterior neatly covered with lichens. Prince Maximilian says that the nest is beautifully formed of whitish or reddish vegetable wool, but not from the *Verbascum thapsus*, as often stated; for, so far as he is aware, that plant is not found in Brazil. Each nest contains two very minute, lengthy eggs, Buffon says, not larger than peas, and that the parent birds sit in turn for twelve days, and on the thirteenth day the young are hatched. They are then entirely naked and helpless, and, Buffon says, not bigger than flies. At the end of eighteen or twenty days they are able to leave the nest.

It has been said that Humming Birds are reared with difficulty in confinement, which reason is assigned by Prince Maximilian for their not being captured in Brazil. The statements of Wilson, however, would infer the contrary; he mentions two which were reared by a gentleman, and kept for some months in a cage,

being fed on honey dissolved in water, which attracting gnats and flies, they also became their food, the birds snapping at them whilst on the wing, and swallowing them with eagerness. Another pair was so familiar as to fly about the room, perch on a lady's shoulder to be fed, and when the sun shone strongly into the chamber, dashed after the motes as Flycatchers do after flies. Wilson himself kept one upwards of three months, feeding it on loaf sugar and water, which the bird preferred to honey, and giving it daily fresh flowers over which this fluid had been thrown. During this time it was active and full of spirits, hovering from flower to flower, and expressing its delight on seeing fresh flowers by its motions and chirping. At last, however, it escaped from the gauze enclosure in which it had been placed, and injured itself so much that it soon died. Molina mentions that, as winter approaches, this little bird suspends itself by its beak to a branch, and in this position falls into a sort of lethargy, which continues during the whole winter. This statement appears to be doubted by Lesson. But the following notice by the observant Wilson renders it very likely to be true: he says, “A very beautiful male was brought to me this season (1809), which I put into a wire cage and placed in a retired shaded part of the room. After fluttering about for some time, the weather being uncommonly cool, it clung by the wires and hung in a seemingly torpid state for a whole forenoon. No motion whatever of the lungs could be perceived on the closest inspection, though at other times this is remarkably observable. The eyes were shut, and when touched by the finger it gave no signs of life or motion. I carried it out to the open air, and placed it directly in the rays of the sun, in a sheltered situation. In a few seconds respiration became very apparent; the bird breathed faster and faster, opened its eyes and began to look about with as much seeming vivacity as ever. After it had completely recovered I restored it to liberty, and it flew off to the withered top of a pear tree, where it sat for some time dressing its disordered plumage, and then shot off like a meteor.” The pretty story of the Humming Bird in a pet tearing a flower to pieces, the honied sweets of which he finds have been previously rifled, is unhappily a mere fable, for Prince Maximilian states that he has seen a thousand times these birds darting their beak into the tubes of flowers to no purpose, yet without exhibiting any anger or vexation; whilst if they find insects they can be seen very distinctly swallowing them. Neither is the assertion made by Lesson more correct, viz., that the Bird Spider is a dangerous enemy to the Humming Birds, spreading its web in the neighbourhood of their nests, and craftily watching the hatching of the young, when it drives away the parent birds and destroys their young; for Prince Maximilian says that this spider chooses for its lurking-place holes in the ground, in rocks or trees, to which the Humming Birds rarely stray. On the contrary, he has seen instances of these birds flying into the open window of a house, and in summer building their nests, to which they fly in and out, if undisturbed.

With two exceptions, and those of the straight-billed section, the Humming Birds are found only within the tropics. Brazil, Guiana, the northern part of Paraguay, and the Antilles, possess them in great numbers. They have been also found on the orange-flowers of Castillas, at a height of 10,000 feet above the level of the sea, by Scheide and Deppe. And Berters observed

TROCHILUS.

TROCHI- three species in the Island of Juan Fernandez: but
LUS. with the exception already mentioned, they have never
been observed without the tropics; and even these two
during winter are compelled by the temperature to re-
turn within these limits. In India and the Asiatic con-
tinent they are represented by the *Cæreba*; in Africa
by *Cinnyris* and *Nectarinia*; in Australia and the
Southern Pacific by *Meliphaga*, *Myzomela*, &c.

The term *Trochilus* (by which the Greeks were sup-
posed to have known the Willow Wren, *Sylvia Trochi-*
lus, but which, as Geoffroy seems satisfactorily to have
proved, designated the *Sag-Sag* of the Arabs, *Chara-*
drius Aegyptius of Hasselquist) was applied by Lin-
næus to this genus, of which those species having
straight beaks Brisson had previously named *Mellisuga*
or Honeysuckers, by which term some of the Sunbirds
(now called *Cinnyres*) of the East Indies, and some
of the Philetons of New Holland, were formerly known;
whilst those in which the beak is curved he formed into
a distinct genus, *Polytmus*. Both sections are known
to the English as *Humming Birds*, from the humming
noise they produce whilst hovering over flowers. The
French call those with straight beaks, *Oiseaux-Mouches*,
“the extremely minute size of some of them,” says
Lesson, “deserving the name they have received; for
they are compared to large flies with still greater rea-
son, as they fly about incessantly buzzing, or at least
agitating their wings with such extreme rapidity that a
pretty loud noise is produced, which to careless ob-
servers recalls the habits of the Sphinges.” To the
curved-beaked species they give the name *Colibris*, de-
rived, according to Buffon, from the Caribbee language,
but Lesson thinks more probably a Creole corruption
of the old French *Col brillant*, in reference to the
sparkling brilliancy of the neck-feathers. The Spanish
and Portuguese Creoles call both sections indiscrimi-
nately *Picaflors*, or Flower-beaks. The Spaniards also
name the straight-beaked species *Tominos*, in reference
to their small size and weight; a *tomina* being only
twelve grains. And to the same section the French
colonists of Cayenne and the Antilles give the appella-
tions *Murmures*, *Bourdons*, *Frou-frous*, in reference to
their habits, and corresponding to the English expres-
sion *Humming Birds*. Lesson disapproves of the com-
mon French name *Oiseaux-Mouches*, and prefers coining
the new term *Ornismya*, which is merely the same in
Greek, but continues the name *Colibris* to those with
curved bills. But far more beautiful and poetic are the
aboriginal Indian terms applied to these beautiful and
pigmy creatures, and which may be translated as *Rays*
of the Sun, *Hair of the Morning Star*, and *Humming*
Birds.

The first notice of Humming Birds is found in the
Singularités de la France Antarctique (Brazil), by
Thevet and De Léry, the companions of Villegaignon,
who, in 1555, endeavoured to establish a French colony
in that country. But little was known of them till the
beginning of the XVIIth Century, when more satisfac-
tory accounts were given by Nieremberg, Hernandez,
Piso, Marcgrave, and others, which were subsequently
enlarged by Sloane Catesby, Father Labat, &c., who
gave figures and tolerably perfect descriptions of some
species.

The most striking characters of the Humming Birds
have been described in glowing, but not exaggerated
language, by Buffon—“Of all living beings,” says
he, “they have the greatest elegance of form and

brilliancy of colours. Precious stones and metals po-
lished by art are not comparable to this bijou of na-
ture, who has placed them among birds at the lowest
degree in the scale of size, *maximè miranda in mi-*
nimis; her chef-d'œuvre is the little Fly-bird, upon
which she has heaped all those gifts which, amongst
other birds, she has only distributed. Swiftmess, ra-
pidity, agility, elegance and brilliancy of clothing all
belong to this little favourite. The emerald, the ruby,
the topaz, blaze on its plumage, which it soils not with
the dust of the earth, and throughout its ærial life it
scarcely for a moment touches the sward. It is always
in the air flying from flower to flower: it has their fresh-
ness as well as brilliancy, lives on their nectar and
dwells only in those climes where they are constantly
renewed.” Lesson also observes, “the splendour and
rich elegance of their plumage is unequalled in magni-
ficence. Many other birds are indeed remarkable for
the colours with which they are embellished, and for the
happy mixture of their tints; but most commonly these
colours, whatever their liveliness, are dull, whilst the
plumage of the Fly-birds enjoys the extraordinary bril-
liancy of metals and of the most precious stones.” But
the brief and pithy observation, *In summa, splendet ut sol*,
applied by Marcgrave to one species, is more compre-
hensive than the longest eulogium which could be passed
upon them.

But whence arises this brilliancy of colour? It might
be supposed that it originated from the elaboration of
the blood; but it is now more commonly held to depend
on the polarization of light, a notion first advanced by
Audebert. “All the scaly feathers, indeed,” says Les-
son, “which simulate velvet, emeralds, or rubies, and
noticed on the head and throat of the *Epimachi*, the
Birds of Paradise and the Fly-birds, correspond in the
uniformity which pervades their formation, all are com-
posed of cylindrical rough barbules edged with other
regular analogous barbules, which again support others
still more minute, and all these barbules hollowed cen-
trally with a deep groove, so that when the light, as
Audebert first noticed, falls vertically on these feathers,
the luminous rays in traversing them are absorbed and
produce a black. But it is no longer so when the light
is thrown back by these same feathers, each of which is
a reflector, for then is produced, by the molecular ar-
rangement of the barbules, the appearance of emeralds,
rubies, &c., sparkling very variously under the incidence
of the rays by which they are struck.”

The genus *Trochilus* of Linnæus and Temminck has
been formed into the family *Trochilidæ* by Swainson,
who divides it into five genera, *Lampornis*, *Trochilus*,
Cynanthus, *Phæthornis*, and *Campylopterus*. Prince
Maximilian retains the Linnæan genus, but divides it
into eight sections. 1. Those with the head and neck
plumage simple and smooth and the tail equal, as *T.*
Mango, Lin. 2. Those with a neck-ruff and the tail
equal, as *T. Petasophorus*, Tem. 3. Those in which
the tail is more or less deeply forked, as *T. Glaucopsis*,
Gmel. 4. Those in which the tail is forked and its ex-
ternal quill on each side barless, except at their tips,
which have a little fanlike vane, as *T. Platurus*, Vieill.
5. Those in which the feathers of the head and neck are
somewhat elongated, and with a sharp, wedge-shaped
tail, as *T. Bilophus*, Tem. 6. Those with smooth
plumage and a graduated tail, as *T. Auritus*, Lin. 7.
Those with the beak slightly curved, the plumage
smooth, and the tail wedge-shaped and pointed, as *T.*

TROCHI-
LUS.

Superciliosus, Lin. 8. Those in which the beak is strongly curved, the plumage smooth, and the tail equal, as *T. Ferrugineus*, Pr. Max. Lesson, who in his *Histoire Naturelle des Oiseaux-Mouches*, set out with dividing the Linnæan genus into his *Ornismya* and *Trochilus*, although he says that the difference consists almost entirely in the straightness and curvature of the beak, subsequently observes, in his *Histoire Naturelle des Colibris*, that in the genus *Trochilus* we can reasonably recognize but three races, the *Fly-birds*, the *Ramphodons*, and the true *Humming Birds*; which division will be amply sufficient for the purpose of collecting into as many sections the several individual species, in which exist some nearer resemblances to each other than to the whole number forming the genus, but through which the transition is so gradual that it is scarcely possible to offer any decided character which should warrant the formation of distinct genera.

Straight-beaked Humming Birds—Ornismya, Less.

Beak longer than the head, nearly straight or slightly curved.

The first thirteen species of this section form Swainson's genus *Cynanthus*, distinguished by the cylindrical form of their bill, which is more or less curved, and by their forked tail; of which the following are examples:—

T. Gigas, Vieill.; *Oiseau-Mouche Patagon*, Less.; *Giant Humming Bird*. Nearly eight inches in length, and the largest known species; beak an inch and a quarter long, of an uniform black-brown colour; top of the head, beak, and middle wing-coverts brownish, with green glossings; the small frontal feathers slightly edged with rufous; under parts light rufous mingled with brown, and even with greenish-brown on the flanks; rump and under tail-coverts rufous-brown and whitish; wings rather longer than the tail, their quills curved, broad, brown, and slightly iridescent with violet on their inner edge; tail much forked, brown slightly tinged with green, and golden above, and pale brownish beneath, the outer two have only their tips glossed with greenish-brown; legs brownish-black and clothed with little feathers [nearly to the roots of the toes. The female greyish mingled with rufous above and rufous-white beneath; alar quills terminating in a white triangular spot. This species, in the form of its wings and tail, has great resemblance to the Swallow, but is distinguished readily by the length of its beak. Of the slightly metallic colour of the plumage of this bird Lesson observes, "the Fly-birds destined to live between the tropic and in the zones where the sun incessantly pours forth torrents of light, have received splendid clothing to correspond with the gorgeousness of other animal and vegetable productions; whilst of others living in more-tempestuous climes, and more subject to the sudden changes of an uncertain atmosphere, some have no need of such rich plumage as is the case with this bird." The Giant Humming Bird inhabits the forests of the interior of Chili, advances into the Araucana country and the wild pampas of Puelches, to the south of Old Chili, and to the foot of the Andes.

T. Colubris, Lin.; *le Rubis*, Buff.; *Humming Bird*, Catesb.; *Ruby-throated Humming Bird*, Audub. Three and a half inches in length; beak black; upper part of the head, neck, back, sides beneath the wings, and middle two tail-quills, rich golden green; throat and front of the neck covered with scaly feathers, glowing

like a ruby, and, when moved, varying from a deep black to a fiery crimson and burning orange; belly and flanks dusky white, mingled with green; wings and tail deep brownish-purple; legs and feet deep black. The female has not the ruby badge, and her whole under-parts are white, as well as the tip of the tail. The first year's birds of both sexes have the tail tipped with white, and nearly the whole lower parts white; but in September, the ruby feathers on the throat of the male begin to appear, and it does not attain its proper plumage till after the third year. This species is a native of South Carolina. It makes its appearance in Pennsylvania about the 25th of April, and about a fortnight after begins to build its nest, usually on the upper side of a horizontal branch, and occasionally fixes it on the side of an old moss-grown trunk. The nest is about one inch in diameter, and another in depth. Wilson describes it as having an "outward coat, formed of small pieces of a species of bluish-grey lichen, that vegetates on old trees and fences, thickly glued on with the saliva of the bird, giving firmness and consistency to the whole, as well as keeping out moisture. Within this are thick matted layers of the fine wings of certain flying seeds, closely laid together; and lastly, the downy substance from the great mullern, and from the stalks of the common fern, lines the whole. The base of the nest is continued round the stem of the branch, to which it closely adheres; and when viewed from below, appears a mere mossy knot or accidental protuberance." The female lays two eggs, pure white, and of equal thickness at both ends. The time occupied by incubation Wilson is unable to state; but he does not doubt that frequently, and perhaps usually, two broods are raised in the same season. It is on this species that the remarks already quoted by Wilson were made.

To this sub-section belong also the following species:—

T. Macrourus et Forficatus, Gmel.; *Oiseau-Mouche Hirondelle*, Less.; *Fork-tailed Humming Bird*, Lath.

T. Radosus, Tem.; *Oiseau-Mouche Sappho*, Less.; *Bar-tailed Humming Bird*, Shaw.

T. Furcatus, Gmel.; *Oiseau-Mouche à queue fourchue*, Buff. and Less.; *Lesser Fork-tailed Humming Bird*, Lath.

T. Maugæus, Vieill.; *Oiseau-Mouche Maugé*, Less.

T. Glaucopis, Gmel.; *Oiseau-Mouche Glaucopis*, Less.; *Blue-fronted Humming Bird*, Lath.

T. Vesper; *Oiseau-Mouche Vesper*, Less.

T. Cyanopogon; *Oiseau-Mouche barbe bleue*, Less.

T. Amethystinus, Lin.; *Oiseau-Mouche Amethystine*, Buff.; *Amethystine Humming Bird*, Lath.

T. Sapphirinus, Vieill.; *Oiseau-Mouche Wagler*, Less.; *Sapphire Humming Bird*, Lath.

T. Swainsonii; *Oiseau-Mouche Swainson*, Less.

T. Fuscus, Vieill.; *Oiseau-Mouche demi-deuil*, Less.; *Black Humming Bird*, Swains.

Of the following six species is formed Swainson's *Phaethornis*, in which the bill is considerably compressed, and generally curved at the base; the tail graduated or wedge-shaped; and the colours of the plumage less brilliant: sometimes the head is tufted. The following are examples.

T. Polytmus, Lin.; *Oiseau-Mouche à longue queue noire*, Buff.; *Black-capped Humming Bird*, Lath. Total length about ten inches, of which the tail is seven; beak yellow; head covered with loose feathers, forming

TROCHI-
LUS.

TROCHI-
LUS.

a kind of bright black tuft, which falls upon the nape; upper parts, sides of the neck, throat, belly and wing-coverts, golden emerald green, more pure on the throat and belly; wings purplish-brown; caudal quills brown, with green glossings above, and deep brown beneath; the outer quill on each side is of great length, very narrow, slightly curved and rounded at its tip; under tail-coverts brown, mingled with greyish. It is native of Jamaica.

T. Cornutus, Pr. Max.; *l'Oiseau-Mouche aux huppées d'or*, Less.; *Horned Humming Bird*. Four inches and a half in length; beak and eyes black; top of the head beautifully iridescent, with blue, green, and violet; upon each side above the eye stretches backward a flattened tuft, consisting of six little feathers, varying with copper red and golden green; upper parts golden green; alar quills and greater coverts dusky greyish-brown, with a violet gloss; chin and throat black, but in some lights dusky blue; sides of the neck and all the under parts milk-white, except the sides of the chest and beneath the wings, which are somewhat golden green; middle two tail-quills dusky copper-green, the rest white, except the outermost three, on either side of which the outer vanes are pale ashy-grey; legs dusky brown. The female has no tufts; her head is golden green, like the back; sides of the head, chin, and throat pale rufous greyish-brown; chest greyish-brown, spotted with copper-green; middle two tail-quills bluish copper-green, tipped with black, and sometimes having white shafts, the others having their half nearest the root black, and the other half white; the shortest merely tipped with white. This very beautiful species is found on the borders of the province of Bahia and Minas Geraës, in the extensive Campo Geral of Valo, where it flits about the flowers in the hollows and warm valleys overspread with wood and bushes.

To these may be added,—

T. Auritus, Vieill.; *l'Oiseau-Mouche à oreilles*, Buff.; *Violet-eared Humming Bird*, Lath.

T. Langsdorffii, Tem.

T. Cora; *Orthorhynchus Cora*, Less.

T. Enicurus, Vieill.; *l'Oiseau-Mouche à queue singulière*, Less. It is remarkable as being the only bird which has the tail consisting only of six quills; two of these are very short, and scarcely visible, whilst the other four are narrow, slender, slightly turned outwards, and rounded at their extremities; graduated and far apart at their tips, so as to give a forked form. They are also of a black-brown colour, whilst the two short ones are golden green, like the upper part of the body. By some ornithologists it is said to be a native of Trinity Island, and by others of Brazil. Prince Maximilian, however, does not mention it among the species which he found.

The following species forms one of Lesson's sections of his Fly-birds, and is very well marked by the racquet-bat-like shape of the outer caudal quills, which are deficient in vanes sooner than those adjacent, and the webless stump having projected beyond the other pointed quills, is again furnished with a disc-like terminal vane, producing a resemblance similar to that of some Birds of Paradise. The designation *Platurus* employed by Lesson is not, however, very appropriate, although used as specific by Latham and Vieillot.

T. Platurus, Vieill.; *l'Oiseau-Mouche à raquettes*, Buff.; *Racquet-tailed Humming Bird*, Lath. The length about three inches and two-thirds, of which the tail is an inch and three-quarters; beak black; upper

parts golden green; auriculars, cheeks, throat, and lower part of the neck, covered with brilliant emerald-green scaly feathers; chest with green and white scaly feathers; front of the belly black, with golden points; hinder part of the latter white; vent tawny reddish-yellow; wings blackish-brown, with violet glossings; caudal quills blackish-brown, with a reddish-white streak along the middle of their white shafts; the rounded extremities of the outer quills are glossed with violet; legs pale fleshy brown. It is a native of Brazil, but not common. Lesson says it is found in Guiana, which is contradicted by Prince Maximilian.

Swainson's genus *Lampornis* is distinguished by the straight or very slightly bent beak, generally pale, considerably depressed for its whole length, and more especially at the base; neither the head nor neck have any lengthy feathers; wings reaching to the end of the tail, which is short and even. It includes a great number of species.

T. Mango, Lin.; *le Plastron Noir*, Buff.; *Mango Humming Bird*, Lath. About four inches and three-quarters in length, of which the tail is an inch and a quarter; beak blackish; all the upper parts golden and copper green, tinged with brownish upon the forehead; throat, under part of the neck, middle of the breast and belly, of a black satiny colour, gradually fading on the sides into glossy blue, and thence into the green of the upper parts; rump dusky grey; wings, excepting the lesser green coverts, blackish-brown, glossed with violet; middle two caudal quills copper green, with a brownish gloss; the other quills beautiful violet-red, with blue tips and edges; legs blackish. This is one of the most common of the Brazilian species, and also one of the most beautiful. It is also found in Jamaica, and was described by Sloane as the *Largest or Blackest Humming Bird*. This species affords one of the examples of the difficulty of forming new genera, where the transition from one species to another is so gradual; for whilst Swainson considers it a *Lampornis*, Lesson places it among the proper *Trochili*. And so again the latter writer places *T. Recurvirostris* among the *Lampornes*, whilst Swainson makes it the type of his genus *Campylopterus*. The other species of this sub-section of Lesson's are,—

T. Mellivorus, Lin.; *l'Oiseau-Mouche à Collier ou la Jacobine*, Buff.; *White-bellied Humming Bird*, Lath.

T. Mesoleucus, Valent.; *l'Oiseau-Mouche Médiastin*, Less.

T. Rubineus, Lin.; *l'Oiseau-Mouche à gorge rouge du Brésil*, Buff.; *Ruby-throated Humming Bird*, Lath.

T. Sephaniodes; *l'Oiseau-Mouche à couronne violette*, Less.

T. Longirostris, Vieill.; *l'Oiseau-Mouche Corinne*, Less.; *Stripe-cheeked Humming Bird*, Shaw.

T. Rivoli, Swains.; *l'Oiseau-Mouche Rivoli*, Less.

T. Clemenciæ; *l'Oiseau-Mouche de Clémence*, Less.

T. Squamosus, Tem.; *l'Oiseau-Mouche*, Less.

T. Leucotis, Vieill.; *l'Oiseau-Mouche Arsenne*, Less.

T. Amazili; *Orthorhynchus Amazili*, Less.

T. Moschetus, Lin.; *l'Oiseau-Mouche rubis-topaze*, Less.; *Ruby-crested Humming Bird*, Edw.

T. Bicolor, Gmel.; *le Saphir-Emeraude*, Buff.; *Sapphire and Emerald Humming Bird*, Lath.

T. Sapphirinus, Gmel.; *le Saphir*, Buff.; *Sapphire Humming Bird*, Lath.

TROCHI-
LUS.

TROCHI-
LUS.*T. Cæruleus*, Vieill.; *l'Oiseau-Mouche Audebert*, Less.*T. Rufus*, Gmel.; *l'Oiseau-Mouche Sasin*, Less.; *Ruff-necked Humming Bird*, Lath.*T. Anna*, Less.*T. Cyanus*, Vieill.; *l'Oiseau-Mouche Verazur*, Less.*T. Erythronotus*, Less.*T. Niger*, Gmel.; *l'Oiseau-Mouche à ventre-gris*, Vieill.; *Black Humming Bird*, Lath.*T. Tephrocephalus*, Vieill.; *l'Oiseau-Mouche à tête grise*, Less.*T. Viridis*, Vieill.; *l'Oiseau-Mouche à queue verte ou blanc*, Less.*T. Albicollis*, Vieill.; *l'Oiseau-Mouche à gorge blanche*, Less.*T. Viridissimus*, Vieill.; *l'Oiseau-Mouche tout vert*, Less.*T. Albiventris*, Less.*T. Leucogaster*, Gmel.; *l'Oiseau-Mouche à cou et ventre blanc*, Less.*T. Brevirostris*, Less.*T. Prasinus*, Less.; *T. Viridissimus*, Lin.; *Greenest Humming Bird*, Lath.*T. Multicolor*, Lath.; *l'Oiseau-Mouche Arlequin*, Less.; *Harlequin Humming Bird*, Lath.

T. Recurvirostris, Swains.; *l'Oiseau Mouche à bec recourbé*, Less.; *Recurved-billed Humming Bird*, Swains. This species has the beak black, flattened throughout its whole length, especially at the tip, which is rounded and obtuse, and curved upwards. Swainson observes, "the remarkable form of this beautiful species has no analogue amongst terrestrial birds, and recalls in miniature, by its very remarkable imitation, the beak of the Avoset." (See Swains., p. 105.) Lesson has great doubt of the authenticity of this form of the beak, and rather supposes it may have been accidentally so twisted whilst recent. The upper parts are golden green; the throat and neck, to the chest, covered with emerald-green scaly feathers; chest and belly marked with a longitudinal black stripe; thighs white; alar quills purple-brown; tail shorter than the wings, the middle two quills greenish-blue, the others coppery-brown, subsiding beneath into topaz. Is a native of Peru.

Lesson's subsection *Lophornis* is distinguished by the head being crested, or the neck feathers disposed in bunches, so as to form on each side of the neck additional ornaments; and by the tail being short, rectilinear, rounded, or a little forked. Such are the following:

T. Cristatus, Gmel.; *l'Oiseau-Mouche Huppé*, Less.; *Crested Green Humming Bird*, Lath. About three inches in length; beak black; the male has the top of the head covered with a triangular crest of close imbricated scaly feathers, which in front cover the greater part of the upper mandible, and lengthen as they arise nearer the nape; its colour is pure, very bright emerald green, with steel glossings; the upper parts are deep golden green; the throat and front of the neck smoky grey, becoming very much deeper on the chest, belly, flanks, and under tail-coverts, and sometimes the chest is surrounded with a golden green band; the junction of the body with the thighs has a white tuft; the wings are delicate, narrow, but reaching some lines beyond the tail, and of a deep purple-brown; the caudal quills broad, rounded at their tips, and of a deep bronzed blue-black above and beneath, running into golden

green on the middle two quills; legs black. The female has not any crest; all her upper parts are deep golden green, and the under of a silky, smoky grey, less deep on the throat and chest, but more intense on the flanks; the middle two caudal quills are golden green above, but the others dingy brown, and the outer three on either side tipped with white. This species is principally found in the Antilles; it frequents gardens, and is fond of being near houses, the windows of which it often approaches, and fixes its nest to a projecting part of the roof, or to the branch of an orange tree, jessamine, or honeysuckle. It becomes very bold after its young are hatched, and will not hesitate entering a room in search of food for them; and if fresh flowers be then provided, it will by degrees become so familiar as to introduce its young, and pass the night there.

T. Serrirostris, Vieill.; *T. Petasophorus*, Pr. Max.; *l'Oiseau-Mouche Petasophore*, Tem.; *Sawbeaked Humming Bird*. Nearly five inches in length, of which the tail is rather more than one and a half, and the beak above three quarters of an inch; the latter is black, gently arched throughout its whole length, and the upper mandible has its edges armed with small sharp indentations; all the upper parts are golden green, and in certain lights the top of the head brownish; neck and chest bright green, more dusky on the middle than at the edges of the feathers; belly more like the upper parts; rump and under tail-coverts pure white; alar quills dusky-greyish brown; tail golden green, the middle two tipped with dark blue, and those next to them barred with blue near the tip; under surface of the tail bluish-green. This bird is remarkable for a tuft of broad, rounded, rigid feathers of a very bright violet colour, which in certain lights is fiery, blue, and golden, and which, attached beneath the ear, spreads out upon the cheeks and backwards towards the hind neck so completely that the two tufts often touch; legs black. This species is a native of the interior of Brazil, and is continually hovering around the acacias and mimosas.

The other species mentioned by Lesson are—

T. Lalandii, Tem.; *l'Oiseau-Mouche de Lalande, ou le Plumet Bleu*, Less.

T. Ornatus, Gmel.; *le Huppe Col*, Vieill.; *Tufted Necked Humming Bird*, Lath.

T. Magnificus, Vieill.; *l'Oiseau-Mouche hausse-col blanc*, Less.

T. Chalybeus, Vieill.; *l'Oiseau-Mouche Vieillot*, Less.

The genus *Campylopterus* of Swainson has the bill curved; the shafts of the alar quills flattened, dilated, and curved, so as to have a sabre-like form; the tail is short and equal.

T. Ensipennis: *Campylopterus Ensipennis*, Swains.; *Blue Sickle-winged Humming Bird*. About five inches in length, and stoutly formed; beak strong and black; upper and under parts deep golden-green, except a bright violet-blue patch upon the throat and front of the neck; wings violet-brown, extending rather beyond the tail, of which the feathers are wide, the middle two golden-green, the next two bluish-black, and the outermost three black at their base and the remainder white. Is a native of South America.

With this group, among which Swainson includes *T. Recurvirostra*, as already mentioned, are included—

T. Latipennis, Vieill.; *l'Oiseau-Mouche à larges tuyaux*, Buff.; *Broad-shafted Humming Bird*, Lath.

T. Cirrhochloris, Vieill.; *l'Oiseau-Mouche Modeste*, Less.

TROCHI-
LUS.

TROCHI-
LUS.*Tooth-beaked Humming Birds—Ramphodon, Less.*

Beak straight and lengthy; upper mandible terminating in a curved, pointed, hook-like tip; point of the lower mandible sharp and straight; the lower received within the upper mandible, and the edges of both armed with strong well-defined teeth near their tip.

T. Nævius, St. Croix; *le Ramphodon Tacheté*, Less.; *Tooth-beaked Humming Bird*. Five inches and a half in length, of which the tail is more than one inch and a half, and the beak half an inch long; upper mandible black, lower white with a blackish tip; top of the head brownish-green; back the same, tinged with reddish-copper, and the edges of all the feathers encircled with brown, producing a scaly appearance; above each eye a pale rufous streak; cheeks and front of the neck covered with long feathers of a bright golden maroon, divided by a longitudinal band of small scaly black feathers, extending from beneath the lower mandible upon the front of the neck; chest, fore part of the belly, and flanks, varied with broad longitudinal white and blackish streaks, which become reddish upon the hinder part of the belly; under tail-coverts broad, rufous, with a central black streak; the primary alar quills are wide, nearly as long as the tail, and purplish-brown, the secondaries are tipped with white; the tail is broad and full, its quills have rounded tips, and the middle ones are longer than the others; the middle four are on their upper surface bright deep bronze copper-green, subsiding into golden purple on the base of the outermost quills, of which the tops are bright shining brownish-rufous; the under surface of the tail has the same colours but is less golden; legs slender, whitish, the toes very delicate, and the claws longish and curved. Is found in the neighbourhood of Rio Janeiro.

True Humming Birds—Trochilus, Less.; Swains.

Beak long, very straight or but slightly curved, cylindrical or rather broader than its depth; point of the upper mandible curved, and that of the lower very sharp; the upper wider than the lower mandible, which it receives within it, and its edges turned inward; the small feathers covering the nasal pits seemingly continued on the sides of the beak in a scarcely discernible chink; head large; neck short; body stout; wings falcular, but much broader and straighter than in the Fly-birds and reaching the end of the tail or beyond it, except when the middle two quills of the latter stretch out into long thread-like extremities; tarsi very short and weak; the front three toes of nearly equal length, their claws very sharp and much curved; tarsi feathered to the heel, and sometimes even to the toes.

T. Pella, Lin.; *le Colibri Topaze*, Buff.; *Topaz Humming Bird*, Lath. Five inches and a half in length, exclusive of the elongations of the two middle quills, which are three inches longer; beak an inch in length, black; the male has the plumage of the head silky, of a velvety black, with dingy and violet glossings, which descends on the neck and encircles a scaly patch of emerald green in the shade, and of golden yellow when the light falls on it; wing-coverts and under parts metallic fiery red, gradually dissolving into the golden copper and emerald colouring of the rump and upper tail-coverts; vent brownish; leg feathers pure white; alar quills purplish-brown, but the shoulders greenish-copper colour, and the secondaries bright chestnut; the tai

has the middle two quills elongated into two delicate violet-black narrow threads, a little expanded at their tips, drooping and crossing each other, their remaining parts being golden green; the adjoining two chestnut at their base, and brown on their terminal half, and the outer two on each side flax coloured. The female is distinguished by the absence of the caudal threads, and by the tail being pointed and conical, its middle two quills being still longest; all the upper parts are pure emerald green, sometimes tinged with reddish and coppery upon the occiput and neck; the throat-patch is ill defined, and consists of four or five longitudinal rows of scaly feathers, copper-red when glanced on by the light, but otherwise reddish-brown; under parts bright golden green dulled with greyish; vent greyish; under coverts golden greenish-blue; wings within and at their edges chestnut-red, and the quill-feathers purple-brown, middle two caudal quills golden green, the adjacent two on either side bright violet-blue, and the outer two bright cinnamon, sometimes spotted with brown on the base and edges. Is one of the most common species, and found throughout the whole of Guiana, in the neighbourhood of rivers and streams, perched upon the lower branches of trees and skimming upon the surface of the water like Swallows.

T. Rufigaster, Vieill.; *le Colibri à ventre roux*, Less.; *Red-bellied Humming Bird*. Total length scarcely three inches, of which the tail is more, and the beak rather less than an inch long; the upper mandible slender, the lower at its basal half yellow, and thence to its tip black; upper parts greenish-copper-red, passing into bright cinnamon red on the rump; throat whitish; neck, chest, belly and flanks, golden-red; upon each ear a rufous spot edged with black, and sometimes a dingy black spot on the throat; wings narrow and purplish-brown; tail consisting of slender graduated quills, the middle two longer than the others, but not forming threads; colour of the caudal quills brown, edged with rufous; upper tail-coverts rufous, under brown; toes not feathered. Is a native of Brazil, and flies quickly in a straight direction, with its tail outstretched, and uttering a slight hissing noise. It is not shy, and often approaches mankind when pursuing insects. It fixes its nest upon the leaf of a tree, building it of the reddish vegetable wool found on ferns and other plants; it has but little depth, and is surrounded externally with little threads and straws. To these may be added—

T. Superciliosus, Lin.; *le Colibri à brins blancs*, Buff.; *Supercilious Humming Bird*, Lath.

T. Squalidus, Natter.; *Polytmus Brasiliensis*, Briss.; *le Colibri à Vestiture terne*, Less.

T. Auratus, Lin.; *le Colibri Grenat*, Less.; *Garnet-throated Humming Bird*, Lath.

T. Viridis, Vieill.; *le Colibri Cyanure*, Less.

T. Graminius, Gmel.; *le Colibri de Mexique*, Buff.; *Blackbreasted Humming Bird*, Lath.

T. Aurulentus, Vieill.; *le Colibri Hausse-col doré*, Less.

T. Holosericeus, Lin.; *le Colibri vert et noir*, Buff.; *Blackbellied Humming Bird*, Lath.

T. Hirsutus, Lin.; *Polytmus Brasiliensis*, Briss.; *le Colibri Hirsute*, Less.; *Rufousbellied Humming Bird*, Lath.

T. Leucurus, Lin.; *le Collier rouge*, Buff.; *White-tailed Humming Bird*, Lath.

TROD.

TROCHISCANTHES, in *Botany*, a genus so called by Koch, from the Greek τροχισκος, a small wheel, and ανθος, a flower, in allusion to the shape of the flower. It belongs to the class *Pentandria*, order *Digynia*, and the natural family of *Umbelliferae-Seselineæ*. Generic character: calyx five-toothed; petals unguiculate, spatulate, each furnished with a triangular inflexed point; fruit compressed a little at the sides; mericarps with five sharp rather winged equal ribs, the two lateral ones marginal; vittæ three or four in each furrow, and eight in the commissure; carpophore bipartite; seed rather semiterete.

This genus is separated from *Ligusticum*, and is nearly allied to *Athamanta*; it consists of a single known species, *T. nodiflorus*, which is a glabrous, perennial herb, having one radical biternate leaf, with large unequally serrated leaflets; the stem is much branched, and naked at top; the involucre wanting, or of one leaf, and the involucels of from two to five leaves. The flowers are white, and those on the disk of the umbel are sterile.

TROCHISCIA, in *Botany*, a genus so called by Kutzing, from the Greek τροχια, a circle, and σκια, a shade. It belongs to the class *Cryptogamia*, order *Algæ*, and the natural family of *Algæ-Desmidiaceæ-Liberæ*. Generic character: corpuscles not inclosed, vesiculate, usually globose, solitary, or joined by two threes or fours. There are several species of this genus known.

TROCHOCARPA, in *Botany*, a genus so called by R. Brown, from the Greek τροχος, a wheel, and καρπος, a fruit, on account of the putamen of the fruit being wheel-shaped and ten-lobed. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Ipacrideæ-Staphylliæ*. Generic character: calyx bibracteate; corolla funnel-shaped, with a spreading bearded limb; ovarium ten-celled; drupe baccate, containing a wheel-shaped ten-lobed putamen, which is at length divisible into many parts.

This genus, which is closely allied to *Acrotriche*, contains only one known species, *T. Laurina*, a native of New South Wales; it is a glabrous tree, with hard wood, and scattered, petiolate nerved, broad, laurel-like leaves; the flowers are small and white, and are disposed in axillary and terminal, solitary, or aggregate slender spikes; hypogynous disk cup-shaped, and five-lobed; drupe size of a pea. The genus approaches *Decaspora* both in character and habit.

TROCHODENDRON, in *Botany*, a genus so called by Siebold and Zuccarini, from the Greek τροχος, a wheel, and δένδρον, a tree. It belongs to the class *Polyandria*, order *Pentagynia*, and the natural family of *Magnoliaceæ*. Generic character: calyx and corolla none; stamens indefinite in many series, deciduous; anthers dehiscing at the sides longitudinally; ovarium five to eight-celled, containing numerous ovula; ovula in two series, pendulous; styles five or six, continuous with the back of the cells, persistent, recurved at their apices; stigmas running down the inner sides of the cells; capsule globose, corticate, five to eight-celled,

five to eight-valved from the apex downwards; seeds numerous, pendulous, linear, attenuated at both ends, angular; embryo with rather fleshy cotyledons, and a thick, conical, superior radicle.

Only a single species of this genus is known; it is an aromatic tree or shrub, a native of the south of Japan. The leaves are approximate, and remain three years; they are ovate-rhomboid, serrated, coriaceous, and glabrous on long petioles. The flowers are disposed in simple, terminal racemes, and each pedicel is propped by a linear bract at the base.

TROCHOSERIS, in *Botany*, a genus so called by Poeppig and Endlicher from τροχος, a wheel, and σερίς, succory. It belongs to the class *Syngenesia*, order *Æqualis*, and the natural family of *Compositæ-Cichoraceæ*. Generic character: heads many-flowered, homocarpous; involucre campanulate, with imbricate scales, the outer scales squarrose; receptacle flat, epaleate, alveolate; corollas ligulate; achenia uniform, rostrate, glabrous, elliptic, plano-obcompressed, multicostate, the ribs suberously costate, with a long slender beak, and a lateral areola inside; pappus uniform, pilose in many series.

A small, many-stemmed, villously canescent herb, a native of Chili. The leaves are radical, oblong, pinnatifid, hairy; the stems are quite simple and one-headed, the heads are large and yellow. The genus is identical with *Macrorhynchus* of Lessing.

TROCHUS, in *Zoology*, a genus of *Turbinaceous Trachelipodous Phytophagous Molluscs*.

Generic character. Shell conical, with an elevated spire, sometimes shortened; its periphery more or less angular, often delicate and sharp; aperture transversely depressed; its edges disconnected above; columella arched, more or less projecting at the base; an opercule. Animal gasteropodous; spiral; head furnished with two tentacles, having subpeduncular eyes at their base; tongue armed with hooklets; respiratory cavity not furnished with a syphon.

The animal of this genus is very similar to the *Murices*, but distinguished by the absence of a syphon at the front of its respiratory cavity for the introduction of water, and by the edges of its cloak being furnished with lobes. Although the aperture is more or less square, the opercule is always completely circular, slightly convex where attached, and concave in the opposite direction. They are marine animals, living at a short distance from the coast, in clefts of rocks, or wherever marine plants, corallines, &c. are found. They are distributed throughout all seas. Gmelin enumerated eighty species, and though abstracting some for the formation of his genera *Solarium* and *Rotella*, Lamarck still describes seventy-eight. *Trochus Imperialis*, Gmel., may be taken as the type.

TROD
—
TROGON.

One day as he did raunge the fields abroad,
Whilst his faire Pastorella was elsewhere,
He chaunst to come, far from all peoples troad,
Unto a place, whose plesaunce did appere
To passe all others on the earth which were.
Spenser. Faerie Queene, book vi. can. 10.

In humble dales is footing fast,
The trode is not so tickle,
And though one fall through heedless hast,
Yet is his misse not mickle.

Id. The Shepheard's Calendar. July.

Their empty channels may be troad on dry,
(Though pay'd with pearles) then pretious in no eye.
Stirling. Doomes-Day. The Third Howre.

TROGON, Lin.; *Couroucou*, Lath. In *Zoology*, a genus of animals belonging to the family *Zygodactylæ*, order *Scansores*, class *Aves*.

Generic character. Beak much shorter than the head, large, vaulted, convex, much wider than its depth, curved at the tip, and toothed on the edges; its base furnished with long bristles, which hide the open nostrils there situated; wings of moderate size, the first three quills graduated, the fourth and fifth longest; legs short and weak; tarsus much shorter than the outer toe, and partially feathered.

"Splendour and brilliancy of plumage," says Temminck, "are indeed the only gifts in which the *Couroucous* participate; elegance of form, nobleness of gait, quickness of flight, docility and sweetness of manner, they have not." "Their very short neck, together with the vast mass of feathers, hiding their very short feet, and a very broad pendant tail, deprive them of every kind of grace, and give the parts covered with rufous plumage the appearance of a mass of dead leaves." Their abundant plumage is very slightly connected by its delicate quills to an exceeding thin skin, so that the slightest touch detaches considerable portions of it. Their irides are dusky and scarcely visible, and the edges of the eyelids always coloured. The greater number of the genus have a large space on the occipital region entirely bare. The mass of the feathers appears much greater than they really are, being covered with thick down, and their tips only richly coloured. Their tail is narrow, long, and graduated. They are found in both the old and new world; all those of the latter being distinguished by many delicate denticulations along the margins of both mandibles, whilst the former have but one. The sexes are distinguished by difference of colour; but together they make their nest in a hole of an antiquated tree, the decayed fragments of which, without any other addition, serve for the purpose; and here the female deposits three or four large obtuse eggs. When first hatched, the young are entirely naked, and only after some days become covered sparingly with down, but during the first year they acquire their brilliant plumage, which slightly resembles that of the female. During the day-time they sit perched on a branch of thick underwood, and are scarcely visible, and even when observed do not take to flight, but allow of being approached without fear and are easily taken. D'Azzara says they usually perch on branches of moderate height, and do not descend, but quietly sit and snap up such insects as come within their reach. They feed also on some soft succulent fruits, and only leave their cool and shady retreat at early morn and evening. Their breeding time occurs frequently during the year, and at these periods the male leaves his solitude and

VOL. XXVIII.

utters a doleful cry, somewhat resembling its name *couroucou*. The Brazilian name of this genus is, according to Prince Maximilian, *Çurukua* or *Çurukui*, spelt with a Ç, and not with a C, as written by Marcgrave: hence the former writer calls them *Surukudá*, by which name they are commonly known in Paraguay; but in some districts they are called *Pompéo* and in others *Pavao*.

a. *Edges of the Beak not denticulated.*

T. Gigas, Tem.; *le Grand Couracou à ventre blanc de Java, ou le Couroucou Géant*, Levaill.; *Gigantic Couroucou*. This is the largest of the genus, measuring eighteen inches in length, and twice the size of the largest American species; beak yellow; head, back of the neck, upper part of the back, scapulars, rump, and upper tail-coverts, very bright yellowish-green, with golden glossings; throat, and front of the neck to the chest, of the same colour all the under parts and the under tail-coverts white; upper great wing-coverts, and the feathers nearest the back delicately traversed with black, green, and white; alar quills black-brown, with white edges above and greyish beneath; middle six caudal quills of equal length, the others graduated, bright yellowish-green above, and greyish, frosted with white beneath; tarsi not feathered; toes and claws brown. Is a native of Java.

T. Fasciatus, Lath.; *le Couroucou Kondea*, Tem.; *Banded Couroucou*. About eleven and a half inches in length; beak and ocular circle blue; top and back of the head, front of the neck and chest deep black, inclosed in a little white band, forming a collar; the nape and all the under parts very bright vermilion; the back of the neck and all the upper parts, also the middle two caudal quills, bright tobacco-brown; the wings black, but all the secondaries and coverts have far distant, delicate white bands; the middle two caudal quills tipped with black, the two following on either side are entirely black, and the three outer black and white; legs black, and covered with delicate, spreading feathers, having decomposed webs. It is a native of Sumatra, where it is known as the *Burongkasumba*; and is very rarely found in Ceylon, where it is called by the natives *Rantwan Kondea*; but its habits are unknown.

T. Diardii, Tem.; *Diard's Couroucou*. Twelve inches in length; beak very bright blue. Temminck observes that this species so nearly resembles the last, that he for a long time hesitated to admit it as distinct. It is, however, distinguished from the *Banded Couroucou*, in being always of larger size, and having a stronger beak; it never has the white band or collar below the black chest; its back is browner, the white zigzags on the wings are more closely arranged, the occipital band is rosy instead of bright red, and the terminal half of the lateral caudal quills is marbled with black on a white ground, the belly is more red, and from the absence of the band on the chest, the red and black are more sharply defined. It is a native of Sumatra and also of Borneo.

T. Ardens, Tem.; *le Couroucou Rousseau*, ib.; *Brilliant Couroucou*. From eleven to twelve inches in length; beak tipped with orange, its base blue; head very deep brown, slightly tinged with olive; nape, back, and scapulars dead leaf coloured; upper tail-coverts and rump brown, tinged with orange; chin and throat

TROGON. black, chest and belly pale brown; other under parts dead leaf coloured; wing-coverts regularly marked with very delicate reddish and black bands; the outer webs of the secondaries similarly marked, but their inner webs and the primary quills black, the latter having their outer edges white; middle two caudal quills reddish-rusty, and tipped with black, the next two black, and the outer three blackish at their base and white at their terminal half; legs ashy. Is a native of Mindanao.

T. Narina, Vieill.; *le Couroucou à ventre rouge d'Afrique ou le Couroucou Narina*, Levaill.; *Narina Couroucou*. Nine inches in length; beak yellow, its tip black; upper parts, throat, and front of the neck golden green; under parts deep rose-red; great wing-coverts grey, zigzagged with blackish; lateral caudal quills white without and black within; legs brown. In the female the forehead, throat, and front of the neck are brownish-rufous, and the upper part of the chest ashy-brown; the alar quills are blackish with white stems. The young birds have the throat, neck, and chest ashy-rufous, and the under parts greyish rose-coloured. Is a native of Africa.

T. Reinwardtii, Tem.; *Reinwardt's Couroucou*. From eleven to twelve inches in length; beak coral red, and its base rather narrower than in *T. Ardens*; top of the head, cheeks, and sides of the neck green, with an olive tinge, as is also a broad band on the chest; back and rump bright glossy green; wing-coverts rayed with green and yellow; throat, belly, and under tail-coverts bright yellow, and upon each flank a large orange spot; all the caudal quills bright glossy bluish-green, the three lateral tipped with white, and their outer webs also white; legs orange; tarsi feathered. Is a native of Java and of the Moluccas.

T. Rutilus, Vieill.; *T. Cinnamonicus*, Tem.; *le Couroucou roux à ventre jaune de Ceylan, ou le Couroucou Cannelle*, Levaill.; *Cinnamon Couroucou*. Beak black; head and neck deep green; upper parts brownish-rufous; under parts deep rose-coloured; alar quills marked with blackish-green and white; quills black with white stems; middle caudal quills tipped with black, the lateral quills black, spotted on their outside with white; legs blackish. The young birds have the upper parts pale rufous and the under white. Is a native of Ceylon.

T. Rufus, Gmel.; *le Couroucou roux à ventre jaune des Molucques ou le Couroucou Aurore*, Levaill.; *Aurora Couroucou*. Eight inches in length; beak brown; face, head, back, and front of the neck to the chest, shoulders, rump, and upper tail-coverts rust red; under parts and under tail-coverts jonquil yellow; alar coverts regularly zigzagged transversely with black and white; middle six caudal quills of equal length, and bright rust coloured, the following three on each side much graduated, zigzagged with black and white transversely; legs brown. Is a native of the Moluccas, and distinct from *T. Violaceus*, of which Buffon considered it only a variety.

T. Duvaucelii, Tem.; *Duvaucel's Couroucou*. Rather more than eight and a half inches in length; beak pale blue, as also the bare space at the commissure of the beak, which extends towards the eyes; head, and upper part of the neck velvet-black; lower part of the neck, all the under parts, the rump, and tail-coverts, very brilliant red; upper part of the back and scapulars rust

red; wings black, zigzagged with white; middle two caudal quills brown, tipped with black, the next two completely black, and the outer three black and white; the leg bracelets of feathers very wide, rose-coloured, and edged with brown. Is a native of Sumatra.

T. Dreskios, Tem.; *le Couroucou Montagnard*, ib.; *Mountain Couroucou*. Beak black, its tip blue; top of the head, nape, and cheeks olive green; shoulders, back, and middle two caudal quills bright chestnut, tinged with orange on the rump; front of the neck, hind part of the belly, and under wing-coverts yellow; chest, belly, and flanks bright orange; thighs black; wings black, and their coverts marked transversely with white; middle two caudal quills broadly tipped with black, the next two completely black, as are also the outer three, except at their tips, which are white; legs blackish. In the female the colours are less brilliant. Is a native of Java, and perhaps also of Sumatra.

b. *With the edges of the beak more or less numerous and deeply denticulated.*

T. Pavoninus, Spix; *le Couroucou Pavonin*, Tem.; *Peacock Couroucou*. Sixteen inches in length; beak reddish; the head and throat golden bronze; neck, chest, shoulders, back, wing and tail-coverts, and the middle two tail-quills (rather longer than the rest) very brilliant golden green; and rendered still more bright by the velvety character of the plumage, and the decomposed edges of its webs; the great wing-coverts spread in bright plates, and those of the tail, in which the middle two are lengthened into filaments with fringed edges, add much to the richness of the plumage, which is relieved by the carmine belly and under wing-coverts; caudal quills black, the outer two tipped with white; tarsal feathers black; legs brown. Is a native of the interior of the Brazils, and the two long tail feathers used by the Peruvians as head ornaments.

T. Curucui, Lin.; *le Couroucou à ventre rouge, Buff.*; *Red-bellied Couroucou*. Ten and a quarter inches in length; beak yellowish-green; ocular circlelets orange; irides dusky; face black; head, throat, neck, upper part of the breast, back and middle caudal quills golden green, the latter tipped with black, lateral tail-quills transversely banded with black and white; lower part of the breast, belly, and rump bright shining red; thighs blackish-grey; legs grey. Is a native of Brazil.

T. Violaceus, Gmel.; *le Couroucou à ventre jaune, Buff.*; *Yellow-bellied Couroucou*. Nearly thirteen inches in length; beak greenish-white; eyelids naked, bluish-white; irides greyish-brown; face blackish; head, neck, and breast beautiful steel blue, varying with green; back, scapulars, shoulders, and lesser wing-coverts copper-green; belly, vent, and rump, orange-yellow; anterior edge of the wing, greater wing-coverts and quills black, the anterior of the latter white at their root, and at their anterior edge; legs greyish-black. Is a native of Brazil and Cayenne, living in the woods even to the sea-coast; its note is a monotonous, short, often repeated whistle, which sinks from above downwards, and has some resemblance to the voice of the Hen Turkey. If its cry be imitated, it will approach and sit in the neighbourhood of the caller. Its flight is soft like that of the Owl, but not rapid like the Cuckoo. The *T. Leverianus*, *Viridis* and *Strigilatus* are the same species.

TROGON.

TROGON. *T. Aurantiacus*, Spix; *le Couroucou Souci*, Tem.;

Orange Couroucou. But little smaller than *T. Pavoninus*; beak cinereous; top of the head, ocular circlets, and thighs black; back of the head, nape, and band on the neck greenish-blue; shoulders and back golden green, with a copper tinge; upper tail-coverts emerald; under parts deep orange; wing-coverts ashy, dotted with white, quills black, edged with white anteriorly, the secondaries white at their base, caudal quills steel green above at their tip, and beneath black, the middle ones entirely green with black tips, the outer three graduated, spotted in the middle with white, and at their base black; the next two black on their inner vane; legs black, frosted with white. Native of Brazil.

T. Roseigaster, Vieill.; *le Couroucou à Caleçon rouge*, Buff.; *le Couroucou Damoiseau*, Levaill.; *Rose-bellied Couroucou*. Thirteen inches in length; beak yellow; upper parts bright sea-green, but in certain lights seemingly powdered with pearl; throat, front of the neck and chest beautiful pearly green; vent and under tail-coverts pale rose-colour, fading into white; wing-coverts delicately traversed with greenish-black and white; quills black, spotted with white; middle caudal quills greenish blue, the lateral ones graduated white externally, and at their tips the outermost has a spot of greenish-black; legs yellow. Native of St. Domingo.

T. Variegatus, Spix; *Variegated Couroucou*. Nearly nine inches in length; beak whitish; head and neck steel violet begirt with green; forehead, ocular circlets and throat blackish; back copper green tinged with golden; chest and under parts purple vermilion; alar coverts greyish, as it were spotted with black and white and dusty; caudal quills bluish-green, the outer ones banded with black and white; thighs and legs black. Native of Brazil.

T. Temnurus, Tem.; *Docked Tail Couroucou*. Ten inches in length; is remarkable for the docked proportions of its caudal quills, which assume a crescentic form, the barbs becoming shorter towards the sides; base of the upper and all the lower mandible vermilion; the other part black; top of the head and cheeks deep steel blue; nape, back, scapulars, lesser wing-coverts, and bases of the secondary quills very bright deep metallic green; secondaries, towards their tips, spotted with white, and tipped with a black band, having a greenish tinge; the primaries are also similarly glossed, and have their outer webs marked with square white and black spots; front of the neck, chest, part of the belly, and flanks greyish, the other under parts and under tail-coverts beautifully tinged with red; middle six caudal quills very deep blue, with metallic green glossings, the outer three on each side of the same colour for three-fourths of their length, then marked with two or three white spots and tipped with white. Is a native of Cuba and Havannah.

T. Collaris, Viell.; *le Couroucou Rosalba*, Levaill.; *Collared Couroucou*. Beak brown; upper parts emerald green; throat green; upon the neck a white collar; under parts red; outer three caudal quills barred with black and white; legs brown. The young have the upper parts inclining to rufous, and the under ashy-red. Temminck says that *T. Castaneus*, Spix, is the female of this species. It is very rare in Cayenne, and only found in the interior; it is also a native of Brazil.

T. Atricollis, Vieill.; *le Couroucou Oranga*, Levaill.; *Black-necked Couroucou*. Ten inches in length; beak

whitish; face, chin, and throat black; head and all the upper parts golden green; breast, lower part of the neck, and lower part of the back varying dusky blue; breast, belly, vent, and rump pale yellow; wing-coverts blackish, marbled with white; lateral tail feathers beautifully marked transversely with black and white; legs brownish-grey. Is a native of Bahia.

T. Sulphureus, Spix; *Sulphur-bellied Couroucou*. Thirteen inches in length; beak whitish; head, neck, back, and rump glossy green; forehead, throat, and thighs black; chest and belly sulphureous; wing-coverts black, zigzagged with white; middle caudal quills steel-green tipped with black, the lateral ones having their outer web copper yellow with black tips, and the outermost black, banded with black and white at the edge and towards the tip, which is white; legs black. Native of Brazil.

See Buffon, *Histoire Naturelle des Oiseaux*; Temminck, *Planches Coloriées*; Vieillot, *Galerie des Oiseaux*; Le Vaillant, *Sur les Couroucous*; Pr. Max. zu Wied, *Beiträge zur Naturgeschichte von Brasilien*; Spix, *Novæ Species Avium Brasiliensium*.

TROGOSSITA, in Zoology, a genus of Corticolous Tetramerous Coleopterous Insects.

Generic character. Antennæ short, bead-form, and swelling towards their tip, the last three joints being larger; mandibles strong, projecting, and dentated; body lengthy and depressed; thorax truncated anteriorly and narrowed behind, so as to be distinct from the wing-cases.

Although the contraction of the hind part of the thorax approximates this genus to *Passalus*, yet is it distinguished by the number of its tarsal joints, and by the form of its antennæ; the latter also separates it from *Lucanus* in which the antennæ are bent and flattened at the extremity. The *Lucani* have also the jaws long, almost membranous, clothed, and with a single tooth in the centre, whilst the *Trogossitæ* have their jaws short, almost coriaceous, ciliated, and toothed at the base; and have also an upper lip, which the *Lucani* have not. The larva of the *T. Mauritanica*, the type of the genus, is whitish, its body consisting of twelve pretty distinct rings, and covered with short stiff hairs, the latter ring armed with a pair of very hard corneous hooks; the head black, hard, and scaly, and furnished with a pair of curved, very sharp, hard mandibles; it has six short scaly feet attached to the first three rings of the body, upon which are some dusky spots. It is about two-thirds of an inch in length, and scarcely a line in width. It is very abundant in the South of France, where it does great damage to the corn, whence Latreille has derived its generic name; and is most destructive towards the end of winter, when it has attained its full growth. At the beginning of spring it leaves the heaps of corn, and hides itself in holes and clefts of the granary walls, and even buries itself in the earth to pass through its metamorphosis; whence it comes out perfect in the course of the spring or summer. Whether it pierces the grain to deposit its eggs is not known. Two species are described.

TROGULUS, in Zoology, a genus of Exantennated Tracheal Arachnidans.

Generic character. Head concealed by a projecting hood, and confounded with the thorax; mandibles two, short, geniculate, and double-jointed, their extremities pincer-shaped; palpi filiform; eyes two, nearly sessile,

TROGON
—
TROGULUS.

TROGULUS. dorsal, and slightly separated; body ovate; legs four pairs, the second and fourth largest; the others nearly equal; tarsi two-jointed.

TROLLIUS. The animal to which this name was assigned by Latreille is the *Acarus Nepæformis*, first described by Scopoli, and to which the generic title *Phalangium* was given by Linnæus. It belongs to the family *Phalangides*, of Lamarck, and is remarkable for a peculiar kind of hood formed by the front of the body, into which the different parts of the mouth are received; its surface is finely granular; each side of its thorax forms a projecting edge, and a ridge runs along the middle of the abdomen. But one species is known, the *Phalangium Tricarinatum*, Lin., which is found in the South of France and in Spain.

TROLL, or } Ger. *trollen* or *trillen*; D. *drollen*
TROUL, } or *drillen*, *vertere*, *volvere*; A. S.
TROLL, n. } *thirl-ian*, to trill, thrill, or drill.

To turn or move round; like a wheel or a ball; to run quickly round; to move, to drive, to utter or speak volubly;

A *troll*, used in fishing for pike, over which a line of great length rolls.

To *troll*, met.; to allure, (as with a baited *trolling* line.)

I'll have you chronicled, and chronicled, and cut and chronicled and all to be prais'd, and sung in sonnets, and bath'd in new brave ballads, that all tongues shall *troule* you in *Sæcula Sæculorum*, my kind can-carriers.

Beaumont and Fletcher. *Philaster*, act v.

To what end should any man be sad in this world? give a man that when he goes to hanging cries *troul* the black boul to me; and a woman that will sing a catch in her travail.

Id. *The Knight of the Burning Pestle*, act ii.

He knows well the Pharisee's constitution's too austere to be caught with an ordinary bait, and therefore puts off his title of Beelzebub, prince of lies, as seeing that they are not now for his game; but *trowls* and baits him with a nobler prey, and comes in the person of a Cato or Aristarchus, a severe disciplinarian, a grave censor, or as his most Satanical name imports, *διαβολος*, an accuser, and then the Pharisee bites presently.

Hammond. *Works*, vol. iv. fol. 614. *Sermon* 8.

Fill him but a boule, it will make his tongue *traule*.

F. Beaumont. *The Ex-ale-tation of Ale*.

Ah! how unlike to Gerard-street,
 Where beaux and belles in parties meet;
 Where gilded chairs and coaches throng,
 And jostle as they *trowl* along.

Swift. *Dan Smedley's Petition*.

Cheerful at morn, he wakes from short repose,
 Breathes the keen air, and carols as he goes;
 With patient angle *trol's* the finny deep,
 Or drives his vent'rous ploughshare to the steep.

Goldsmith. *The Traveller*.

TROLLIUS, in *Botany*, a genus so called by Conrad Gesner, from an old German word *trol* or *trolen*, signifying something round, in allusion to the form of the flowers, whence also the English name *Globe Flower*. It belongs to the class *Polyandria*, order *Polygynia*, and the natural family of *Ranunculaceæ-Helleboreæ*. Generic character: calyx of five, ten, or fifteen deciduous, petaloid, coloured sepals; petals five to twenty, small, linear, flattened, unilabiate; stamens and ovaria numerous; carpels numerous, sessile, columnar, many-seeded.

A well-known genus, consisting of nine known species, natives of Europe, Asiatic Russia, Nepal, and North America. They are smooth, perennial, slightly acrid herbs, with deeply divided or cut leaves; the

flowers are large and elegant, yellow or orange-coloured, referable to *Ranunculus* in shape. The *T. Europæus* is considered a festival flower in many countries of the north; the species are all highly ornamental, and are therefore well fitted for decorating flower-borders.

TRO'LLOP, } Fr. *troller*, "to *trowle*, to range;"
TROLLOPEE. } *trollerie*, a trowling, a disordered ranging. Cotgrave. And hence *trollop*.

One who goes, strolls about, from place to place, carelessly, loosely dressed. *Trollopee*, a loose dress.

For does it not argue rather the lascivious promptness of his own fancy, who from the harmless mention of a sleek stone could neigh out the remembrance of his old conversation among the Viraginian *trollops*?

Milton. *Works*, vol. i. fol. 120. *An Apology for Smeectymnuus*.

AUT. A fellow (sir) that I have knowne to goe about with *troll-my-dames*.

Shakspeare. *Winter's Tale*, act iv. sc. 2, fol. 290.

Let him, in part, be made your pattern,
 Whose muse, now queen, and now a slattern,
 Trick'd out in Rosciad rules the roast,
 Turns *trapes* and *trollop* in the ghost.

Lloyd. *The Cocker of Cripplegate's Letter*.

At once in bright procession spied,
 The female world was at my side,
 Mingled, like many-colour'd patterns,
 Nymphs, mesdames, *trollops*, belles, and slatterns.

Brooke. *Temple of Hymen*.

There goes Mrs. Roundabout. I mean the fat lady in the lute-string *trollopee*. Between you and I, she is but a cutler's wife.

Goldsmith. *Essay* 15.

TROMBIDIUM, in *Zoology*, a genus of *Exantennated Tracheal Arachnidans*.

Generic character. Mouth furnished with a pair of short, flat mandibles, terminating in a hooked nail; two palpi projecting, pointed, curved inwards, and furnished with a movable appendage beneath their tip; four pediculated eyes, two on each pedicle; body oval, nearly square, slightly depressed, and as it were divided by a contraction into two parts; legs eight.

This genus was first separated from the *Acari* by Fabricius, and placed by Lamarck in his family *Acarides*. They are distinguished from *Erythræus* by having the body transversely contracted, as it were, into two parts, of which the anterior is more solid and elevated, and the posterior softer and narrower, whilst in *Erythræus* there is no division of the body, and the single pair of eyes are sessile, instead of which there are two pairs, one of which is placed on each pedicle. They are the smallest of the family, of a brilliant red colour, very active, and constantly wandering about. The type of the genus is *Acarus Tinctorius*, Lin.; *Tromb. Tinct.*, Fabr., which is from Guinea. A second species, *T. Holosericeum*, is common in gardens and meadows in spring time in Europe.

TROMMSDORFFIA, in *Botany*, a genus dedicated by Martius to J. B. Trommsdorff, who has written on the uses of many plants, as well as analysing their chemical parts. It belongs to the class *Monadelphia*, order *Pentandria*, and the natural family of *Amaranthaceæ*. Generic character: calyx coloured, of two concave leaves; corolla of five petals, girded by wool; stameneous cup composed of five filaments, bearing so many one-celled, elliptic anthers, intersected by as many very short lobules; scale scarcely any; stigma sessile, capitate, or somewhat two-lobed; utricle or fruit valveless, one-seeded.

This genus has been separated from *Alternanthera*

TROL
LIUS.

TROMMS-
DORFFIA

TROMMS-DORFFIA and *Achyranthes*, and is composed of herbs or under shrubs, clothed with spreading, simple, or stellate villi, silky down, or tomentum; the leaves are opposite; the flowers are minute, terminal, or lateral, crowded into heads. Four species are known.

TROOP.

TROMOTRICHE, in *Botany*, a genus so called by Haworth, from the Greek *τρεμος*, *tremor*, and *τριξ*, *τριχος*, a hair, on account of the cilia of the corolla shaking, or in motion from the least breath of air. It belongs to the class *Pentandria*, order *Digynia*, and the natural family of *Asclepiadaceæ-Stapelieæ*. Generic character: corolla smooth, five-cleft, ciliated with tremulous, spatulate hairs; stameneous corolla double, outer one of five horizontal, cuneate-rhomboid, serrated segments or ligulæ, which are joined at their bases, the inner one composed of five unequally bifid segments, the inner branch recurved, and longer and slenderer than the other, and gradually thickened at the apex, where it resembles a stigma.

A genus separated from *Stapelia*, consisting of five known species, all natives of the Cape of Good Hope, in the sandy deserts.

The species have the habit of *Stapelia*, but the branches are naked and very glaucous, and erectly decumbent; the teeth distant, thick, horizontal, or a little recurved; the corollas are very showy, of many hues, but the scent is disagreeable.

TROOP, *n.* } Fr. *troupe*; It. *truppa*; Sp. *tro-*
TROOP, *v.* } *pa*; which Vossius, Menage, and
TROO'PER, } Skinner transpose from the Lat.
TROO'PING, *n.* } *turba*. In low Lat. *troppus* is
grex. See Du Cange and Voss. *de Vit.* l. ii. c. xviii.
But the words exist in the Northern languages; A. S. *trep-as*; D. *troppe*; Ger. *tropp*, *trup*; which Wachter derives from the Ger. *trieb-en*, *agere*, *agitare*, ut *agmen* ab *agendo*, quia a duce suo *agitur*. R. of Brunne writes it *trip*. A *trip* of goats, sheep, &c. will be a *drove*, a number *driven* together (see Jamieson), brought together. And a *troop*,—

A number led or brought together, led or conducted in a collected number; in a company. To *troop*—

To move, to march in company; in a body; to move, to march.

Mepouht kyng Philip inough was discomfite
When he & alle his *trip* for nouht fled so tite.

R. Brunne, p. 203.

The said king by his writs, caused proclamation to be made throughout the whole kingdom, that he had caused his uncle the duke of Gloucester, and the earls of Arundel and Warwick, to be taken and arrested, not for any assemblings or *troopings* by them formerly made within the kingdom of England, but for very many extortions, oppressions, and other things by them afterwards done, and perpetrated, against his royalty, and kingly majesty.

State Trials. 1 Henry IV., Anno 1399. Richard II.

Moreouer, when he will make his progresse from one countrey to another, hee hath foure *troupes* of horsemen, one being appointed to goe a dayes iourney before, and another to come a dayes iourney after him; the third to march on his right hand, and the fourth on his left, in the maner of a crosse, he himselfe being in the midst, and so euery particular *troupe* haue their daily iourneys limited vnto them, to the ende they may provide sufficient victuals without defect.

Hakluyt. Voyages, &c., vol. ii. p. 62. Odoricus.

They being *trooped* together in their order, and a general salutation being made, there was presently a generall silence.

Id. *Ib.*, vol. iii. p. 441. Noua Albion.

The whych thyng when Cesar hard of, deuiding hys horsemen

likewyse into thre *troupes*, he comaunded the to procede agaynst theyr enemies.

Goldinge. Cæsar. Commentaries, book vii. fol. 221.

O, gently come into my feeble brest,
Come gently; but not with that mightie rage,
Wherewith the martiall *troupes* thou doest inuest,
And hartes of great heroes doest enrage,
That nought their kindled corage may aswage.

Spenser. Faerie Queene, book i. can. 11.

Then back she stands; and then desires, as fain
Again to look, to see if he were near.
At length a glitt'ring *troop* far off she spies;
Perceives the throng, and hears the shouts and cries.

Daniel. History of Civil War, book ii.

But for that damn'd magician, let him be girt
With all the grissly legions that *troop*
Under the sooty flag of Acheron.

Milton. Comus, v. 602.

So, when the sun in bed,
Curtain'd with cloudy red,
Pillows his chin upon an orient wave,
The flocking shadows pale
Troop to the infernal jail,
Each fetter'd ghost slips to his several grave.

Id. On the Morning of Christ's Nativity.

So have I known a bold *trooper* fight in the confusion of a battle, and being warm with heat and rage, received, from the swords of his enemy, wounds open like a grave; but he felt them not.

Taylor, vol. i. Sermon 19.

Nor, while they pick them up with busy bill,
The little *trooping* birds unwisely scares.

Thomson. Spring.

Before the merry *troop* the minstrels play'd;
All in their master's liveries were array'd,
And clad in green, and on their temples wore
The chaplets white and red their ladies bore.

Dryden. The Flower and the Leaf.

Two of these [seals' skins] being fastened together, a man sits a-stride them, having one before and the other behind him; and so sits firmer than in a *trooper's* saddle.

Dampier. Voyages, vol. ii. part iii. ch. iv. p. 38.

Now from the roost, or from the neighb'ring pale,
Where, diligent to catch the first faint gleam
Of smiling day, they gossip'd side by side,
Come *trooping*, at the house-wife's well-known call,
The feather'd tribes domestic.

Cowper. The Task, book v.

TROPÆOLUM, in *Botany*, a genus so named by Linnæus, from the Greek *τροπαιον*, a trophy, on account of the leaves having the form of a buckler, and the flower of an empty helmet. It belongs to the class *Octandria*, order *Monogynia*, and the natural family of *Tropæoleæ*. Generic character: calyx five-parted, the upper lobe drawn out into a spur; petals five, unequal, the three lower ones smaller or wanting; stamens eight, free; carpels three, somewhat erose, kidney-shaped, indehiscent, furrowed, roundish, fixed to the central column; seed large, filling the cell.

A well-known genus, consisting of about twenty distinct species, all very elegant plants, bearing showy flowers, and peltate, entire, or lobed leaves. *T. majus* is the Common *Nasturtium* or Indian Cress, the flowers of which are frequently eaten in salads, as well as the leaves, on account of their having a flavour like that of the Garden Cress. The green seeds pickled are used for sauce under the false name of Capers. One of the daughters of Linnæus observed the flowers to emit spontaneously, at certain intervals, sparks like electric ones, visible only in the evening. The roots of *T. tuberosum* are edible when boiled. *T. tricolorum*, *T. brachyceras*, and *T. aduncum*, are cultivated with care by gardeners for their beauty and elegance, and the latter is cultivated at Gibraltar in the open air, under the name of Canary-bird-flower

TROOP.

TROPÆ-
OLUM.

TROPE.

TROPE,

TRO'PICK,

TRO'PICAL,

TRO'PICALLY,

TROPO'LOGY,

TROPOLO'GICAL,

TROPOLO'GICALLY,

TROPOLOGI'ZE.

Fr. *trope*, *tropique*, *tropolo-*
gique; It. *tropo*, *tropico*, *tropo-*
logico; Sp. *tropico*, *tropologia*;
 Lat. *tropus*; Gr. *τροπος*, *τρο-*
πιος, *τροπολογία*, from *τρεπ-*
ειν, to turn.

A *trope*, a turn, a change, a
 metaphor.

Tropology; speech or writing in tropes, changes, (e. g.
 of literal meaning) in metaphor.

A *tropick*; whence the sun appears to turn or return.

This signe of Cancer is cleped the *tropike* of sommer, of *tropos*,
 that is to saine, ayenward.

Chaucer. *The Conclucions of the Astrolabie*, p. 456.

To that we say y^t if it wer but a bare woord spoken, it might be
 taken for an allegory or s^oe other *trope* or common figure of comon
 speaking.

Sir Thomas More. *Workes*, fol. 1340. *A Treatise vpon the Pas-*
sion of Chryste.

To answer this doubt, reason perswadeth, the hottest place in
 the world to bee vnder and about the two *tropickes*; for there more
 then in any other place doe both the causes of heate concur,
 that is, the perpendicular falling of the sunne beames, at right
 angles, and a greater continuance of the sunne aboue the horizon,
 the pole there being eleuated three or foure and twentie degrees.

Hakluyt. *Voyages, &c.*, vol. iii. p. 53. *The Temperature of*
Regions.

They deuide the Scripture in to foure senses, the literal, *tropo-*
logical, allegoricall, and anagogical.

Tyndall. *Works*, fol. 166. *The Obedience of a Christian Man*.

Tropological and anagogical are termes of their own fayning
 and altogether unnecessary.

Id. *Ib.*

If this sence of those words does avoid a *trope*, it brings in a
 distinct proposition; if it be spoken properly, it is more distant
 from giving authority to their new doctrine.

Taylor. *Polemical Discourses*, fol. 217. *Of the Real Presence*,
 sec. 7.

But we by the real spiritual presence of Christ do understand
 Christ to be present, as the Spirit of God is present in the hearts
 of the faithful, by blessing and grace, and this is all which
 we mean besides the *tropical* and figurative presence.

Id. *Ib.* sec. 1.

Liberty from sin, or Christian liberty, in this sence is nothing
 but a *tropical* expression, a metaphor and similitude, and there-
 fore is not that real priuiledge by which we were materially ad-
 vantag'd upon the publication of the gospel of Christ.

Id. *Rule of Conscience*, book iii. ch. i. fol. 428.

But Bellarmine adds, that if you will not allow him to say so,
 then he grants it in plain terms, that Christ's body is chewed, is
 attrite or broken with the teeth, and that not *tropically* but pro-
 perly, which is the crass doctrine which Christ reprov'd in the
 men of Capernaum.

Id. *Polemical Discourse*, fol. 191. *Of the Real Presence*, sec. 3.

But if by a transition from rhetorick to logick, he shall contend,
 it hath no such part or humour; he committeth an open fallacy,
 and such as was probably committed concerning Spanish mares;
 whose swiftness *tropically* expressed from their generation by the
 wind, might after be grasly taken, and a real truth conceived in
 that cōception.

Sir Thomas Brown. *Vulgar Errours*, book iii. c. iii. p. 243.

If Athena or Minerva be *tropologized* into prudence, then let
 the pagans shew what substantial essence it hath, or that it really
 subsists according to this *tropology*.

Cudworth. *Intellectual System*, book i. ch. iv. fol. 520.

In many cases the first literal sence is the hardest, and some-
 times impossible, and sometimes inconvenient; and when it is
 any of these, although we are not to recede from the literal sence;
 yet we are to take the second signification, the *tropological* or
 figurative.

Taylor, vol. iii. *Sermon xi.* fol. 229.

This was the general opinion concerning the Greekish fables,
 that some of them were physically, and some *tropologically* alle-
 gorical.

Cudworth. *Intellectual System*, book i. ch. iv. fol. 512.

If it be granted that by Athena or Minerva, be *tropologically*
 meant prudence, &c.

Cudworth. *Intellectual System*, book i. ch. iv. fol. 519.

For since on every sea, on every coast,
 Your men have been distress'd, your navy toss'd,
 Seven times the sun has either *tropic* view'd,
 The winter banish'd, and the spring renew'd.

Dryden. *Virgil. Aeneid*, book i.

Many reasons may be assign'd for this, beside the accidental
 ones from the make of the particular countries, *tropical* winds or
 the like.

Dampier. *Voyages*, vol. ii. ch. ii. p. 33. Anno 1688.

Such a kind of exercise I take many of those allegorical com-
 ments (those especially of the *tropological* kind) to have been.

Waterland. *Works*, vol. v. p. 312. *Doctrine of the Holy Trinity*.

The law about the Sabbath, for instance, may be supposed
 (over and above the literal meaning) prophetically to signify
 Christ's rest in the grave; *tropologically* to denote the rest of the
 soul, and its cessation from sin; and anagogically to prefigure
 the eternal rest of the saints.

Id. *Ib.* vol. vi. p. 15. *Preface to Scripture Vindicated*.

But divines, by their arbitrary power over their Scriptures,
 make it to signify the Messiah allegorically, and *tropologically* or
 anagogically the inward light of grace, or the outward splendour
 of celestial glory.

Lord Bolingbroke. *Works*, vol. vi. p. 443. *Essay 4. On Autho-*
rity in Matters of Religion.

Figures of words, are commonly called *tropes*, and consist in a
 word's being employed to signify something that is different from
 its original and primitive; so that if you alter the word, you de-
 stroy the figure.

Blair. *Lecture 44*, p. 347.

His appearance was more formidable than that of the other, for
 he wore a large cap made of the tail-feathers of the *tropic* bird,
 and his body was covered with stripes of different coloured cloth,
 yellow, red, and brown.

Cook. *Voyages*, vol. i. book i. ch. xx. p. 253.

For not attaining the deuterocopy, and second intention of the
 words, they are fain to omit their superconsequencies, coherencies,
 figures, or *tropologies*.

Brown. *Vulgar Errours*, book i. ch. iii.

TROPHIS, in *Botany*, a genus so called by P.
 Browne, in his history of Jamaica, from *τρεφω*, to
nourish, on account of its being used in the feed-
 ing of cattle. It belongs to the class *Dioecia*, order
Tetrandria, and the natural family of *Thymeleæ*. Ge-
 neric character: male flower, with a four parted peri-
 anth, and four stamens: female flower, having the
 ovarium closely combined with the calyx; style bipar-
 tite; stigmas two; berry striated, one-celled, one-
 seeded.

Several species of this genus are known; all tropical
 shrubs, with alternate branches and leaves, and solitary,
 axillary, rarely terminal spikes of flowers; the male
 spikes longer and more dense than the female ones.
 The berries of *T. Americana* are pleasant and acid.

TRO'PHY, } Fr. *trophée*; It. *trofeo*; Sp. *trofeo*;
 TROPHIED. } Lat. *tropæum*; Gr. *τροπαιον*, from
τροπη, a turning, (sc. in flight) from *τρεπ-ειν*, to turn.

A sign or signal (sc.) that the enemy has turned
 the back, has fled; a monument of victory. See the
 Quotation from Potter.

And every reame went he for to see,
 He was so strong that no man might him let;
 At bothe the worldes endes, saith *trophee*,
 In stede of boundes he a piller set.

Chaucer. *The Monkes Tale*, v. 14121.

Then since within this wide great universe
 Nothing doth firme and permanent appeare,
 But all things tost and turned by transverse;
 What then should let, but I aloft should reare
 My *trophee*, and from all the triumph beare?

Spenser. *Faerie Queene*, can. 7.

TROPE.

TROPHY

TROPHY.

From whose stone *trophied* head, it on to Wendross went,
Which tow'rd the sea again, resounded it to Dent.

Drayton. *Poly-obion*, song 30.

TROPI-
DURUS.

The manner of adorning *trophies* was hanging up all sorts of
arms taken from the enemy, according to Euripides:

All sorts of arms, that from the foe he took,
He hung about the *trophy* which he rais'd.

Potter. *Antiquities*, book iii. ch. xii.

Seek the known name our Fasti us'd to wear,
The noble mark of many a glorious year;
The name that wont the *trophy'd* arch to grace,
And e'en the temples of the gods found place.

Rowe. *Lucan. Pharsalia*, book viii.

He who bears up with an undaunted spirit against them, while
so many are dejected by them, erects on his very many misfor-
tunes a *trophy* to his honour.

Lord Bolingbroke. *Reflections. Upon Exile*.

For know, I trod the *trophy'd* paths of power;

Felt every joy that fair ambition brings;

And left the lonely roof of yonder bower,

To stand beneath the canopies of kings.

Shenstone. *Elegy 7*.

TROPIDIA, in *Botany*, a genus so named by Lin-
ley, from *τροπις*, a keel. It belongs to the class *Gy-
nandria*, order *Monandria*, and the natural family of
Orchideæ. Generic character: perianth connivent; la-
teral sepals the largest, produced obliquely at the base,
and forming a spur; labellum free, sessile, ventricose,
compressed, constricted at the apex, cucullate, with
reflexed lateral sides; column terete; anther dorsal,
mutic; pollen masses four, cohering into two two-lobed
masses, with a short caudicula.

Only one species is known of this genus; it is a tro-
pical epiphyte.

TROPIDOCARPUM, in *Botany*, a genus so called
by Hooker, from the Greek *τροπις*, a keel, and *καρπος*,
a fruit, on account of the valves of the silique being
keeled. It belongs to the class *Tetradynamia*, order
Siliquosa, and the natural family of *Cruciferae*.
Generic character: calyx of four sepals, sepals equal at
the base; petals four, unguiculate, undivided; stamens
toothless; stigma two-lobed; silique two-valved, nar-
row, compressed from the sides, with keeled valves, and
a very narrow, usually incomplete dissepiment; seeds
numerous, pendulous in one series, oblong compressed,
immarginate, smooth, with free, filiform funicles; coty-
ledons short, narrow, contrary to the dissepiment, radicle
ascendent and accumbent.

This genus is nearly allied to *Erysimum* and *Sisym-
brium*, and consists of annual herbs, natives of the
North-West coast of America; the leaves are pinna-
tifid; the racemes are leafy, and the flowers are small
and yellow.

TROPIDURUS, from the Greek, *τροπις*, a keel, and
ουρα, a tail, Pr. Max. In *Zoology*, a genus of animals
belonging to the family *Iguanida*, order *Sauria*, class
Reptilia.

Generic character. Head protected with large scuta;
front edge of the ear beset with spiny scales; throat
scaly, but without any pendent sac; back and belly
scaly; tail surrounded with spiny, keel-shaped scales;
no femoral pores.

Cuvier's division of the Linnæan genus *Stellio* into
three, *Cordylus*, *Stellio*, and *Uromastix*, is considered
by Pr. Maximilian to be fully justified, but in neither of
the three can the animal now to be described, be placed,
for although confused as it has been with the Levant

Stellion, it is distinguished from it by the absence of the
throat sac, and by the scuta which cover the top of the
head. He has therefore preferred placing it in a dis-
tinct genus.

T. *Torquatus*, Pr. Max.; *Agama Operculata*, Licht.;
Taraguira, Marcgr. About eight and a half inches
long, of which the tail is nearly two-thirds; head rather
broad, ovate above, and somewhat flattened and covered
with irregular large scales; lower jaw a little narrower
than the upper, their edges and the muzzle covered
with large scales; gape extending back to the eyes,
which are rather small and lively, with large lids; in
each jaw a row of numerous small conical teeth, rather
broadest in the upper, and having before and behind a
little spurious tooth; nostrils round, with elevated
edges, and high up on the muzzle, into these run the
continuation of the sharp, keel-shaped, superciliary
ridges, above which are slight depressions; tympanal
membrane deep, but distinct on the middle of the side
of the occiput, the aperture leading to which is bounded
in front with five or six lengthy, pointed scales, forming
a sort of auricle; general form of the body compressed
with strong limbs, and the tail thick at its base, but
tapering towards the tip; upper part of the body,
legs, and tail covered with scales, lozenge-shaped, cari-
nated and pointed, those of the under parts not cari-
nated, but pointed, and their edge elevated, larger than
on the back and sides, and largest on the chest and
limbs, but these are smaller than on the tail, where they
are greatest, and surround it like rings, except at the
under side of its base, where the scales are smooth:
numerous longitudinal ridges are formed on the body
by the keels of the scales: feet five-toed, in front the
second and third from the outside are longest, and the
innermost shortest, behind the second outer toe is
longest of all, next to it the first, and the others to the
inside shorter; all the toes armed with rather short,
sharp, curved, and somewhat compressed claws. After
a certain age the colour of the animal is brownish-grey,
in which sometimes grey, sometimes brown predomi-
nates, but the top of the head is always brownish; the
back sometimes marked with more or less pale roundish
spots, between which are some more dusky; upon the
sides are some yellowish pearly spots; under parts
yellowish or rufous-white, with a coppery tinge; above
each eyelid three dusky perpendicular streaks, and be-
hind the ear some whitish spots; a black stripe passes
on each side of the neck, vertically to the chest, in front
of the shoulder; the limbs have their greyish-brown,
copper ground colour, transversely marked with yellow-
ish or pale rufous, and often with rows of spots; on the
inside of the thighs sometimes there are two longitudi-
nal stripes, and in front of the vent a yellowish or black-
brown spot, another of which is occasionally found on
the middle of the belly, and the middle of the throat.
The older animals vary much, but the young have more
regular colourings, and their back is striped as well as
spotted. This Lizard is one of the most common in
the eastern part of Brazil, and lives in dry, sandy, or
stony districts, where it is called by the general name
Lagarta, or Lizard. It is, according to Prince Maxi-
milian, the *Quetz-Paleo* of Seba, a barbarism, however,
which he says he never heard used in Brazil.

See Pr. Max. zu Wied, *Beiträge zur Naturgeschichte
von Brasilien*.

TROT, v. } Fr. *trotter*, *trot*; It. *trotolare*, *trotto*;
TROT, n. } Sp. *trotar*, *trote*; Ger. *trotten*; the D.
TRO'TTER. } *trotten*; also written *torden*, (Kilian)
and *torden*, is *terden*, *tred-en*; to tread.

So that the *trot* of a horse (technically described by Berenger) is the *tread*; A. S. *tred-an*. See Somner. Skinner resorts to the Latin *torquere*. See also Wachter, in *vv. Trotten*, and *Trot*, and Menage, who wander afar for that which Somner could see at hand.

To tread, to trample; to tread about, move about, run with a quick, short, or high motion of the foot.

An old *trot* (*sc. trate*); one who moves about, backwards and forwards; busily, officiously; one who has moved or trodden about much. *Illa gradum studio celerabat anili*. She hyit furth with slaw pase lik ane *trat*. G. Douglas, and see the Quotation from Surrey.

Al be it so, that no man finden shal
Non in this world, that *trotteth* hol in al,
Ne man, ne beste, swiche as men can devise.
Chaucer. *The Marchantes Tale*, v. 9411.

Neither yet durst I complaine, although he *trotted* full sore.
Hakluyt. *Voyages*, &c., vol. i. p. 112. *The Tartars*.

When she had said, redouble gan her nurse
Her steppes, forth on an aged woman's *trot*.
Surrey. *Æneis*, book iv.

Put case an aged *trot* be somewhat tough?
If coyne shee bring the care will be the lesse.
If shee have store of much and goodes ynough
Thou needste not force so much of handsomnesse.
Turberville. *The Answer for taking a Wyfe*.

And he also [was] verie wearie of his *trotting* and wandering on
foot amongst bogs, woods, and desert places.
Holinshed. *Chronicles*, vol. vi. p. 455. *The Chronicles of Ireland*.
Anno 1583.

————— There's no living thus,
Nor am I able to endure it longer,
With all the helps and heats that can be given me,
I am at my *trot* already.
Beaumont and Fletcher. *The Custom of the Country*, act iv.

Eurimidon then rein'd his horse, that *trotted* neighing by.
Chapman. *Homer. Iliads*, book iv.

One hires a Friezeland *trotter*, halfe yard deepe,
To drag his tumbrell through the staring Cheape.
Hall. *Satire* 4, book iv.

Sne now the *trotting* calf address'd,
To save from death a child distress'd.
Gay. *Fable* 1, part i.

It is good, on some occasions, to think beforehand as little as we can; to enjoy as much of the present as will not endanger our futurity, and to provide ourselves with the virtuoso's saddle, which will be sure to amble, when the world is upon the hardest *trot*.

Dryden. *Virgil. Pastorals. Epistle to Lord Clifford*.

When a horse *trots*, his legs are in this position, two in the air, and two upon the ground, at the same time crosswise; that is to say, the near-foot before, and the off-foot behind, are off the ground, and the other two upon it, and so alternately of the other two.

Berenger. *The History and Art of Horsemanship*, vol. ii. ch. iv. p. 33.

All writers, both ancient and modern, have constantly asserted the *trot* to be the foundation of every lesson you can teach a horse.
Id. Ib.

TROTH, } Otherwise written *truth*; the third
TRO'THLESS. } person singular of the verb to *trow*,
T. v.

That which any one *troweth*; plighteth to be *true*; or *trusty*, or faithful; *truth*; veracity; faith, fidelity, fealty.

Togeder han thise three hir *trouthes* plight
To live and dien eche of hem for other,
As though he were his owen boren brother.

Chaucer. *The Pardoner's Tale*, v. 12637.

AMINT. I hate mine as much,
This 'tis to break a *troth*; I should be glad
If all this tide of grief would make me mad.
Beaumont and Fletcher. *The Maid's Tragedy*, act iii.

As when a troupe of iolly saylers row
Some new found land and countrie to descrie,
Through dang'rous seas and vnderstars vnknow,
Thrall to the faithlesse waues, and *trothlesse* skie,
If once the wished shore begin to show,
They all salute it with a joyfull crie.

Fairefax. *Godfrey of Bulloigne*, book iii. stanza 4.

Sir Knights (quoth he), if you intend to ride,
And follow each report fond people say,
You follow but a rash and *trothlesse* guide,
That leades vaine men amisse, and makes them stray.
Id. Ib. book xiv. stanza 30.

————— [My wife] deserves a name
As ranke as any flax-wench, that puts to
Before her *troth-plight*.
Shakspeare. *The Winter's Tale*, act i. sc. 2. fol. 280.

————— This your son-in-law,
And sonne vnto the king, who heavens directing
Is *troth-plight* to your daughter.
Id. Ib., act i. sc. 3. fol. 303.

BAR. It is certaine, Corporall, that he is marryed to Nell
Quickly, and certainly she did you wrong, for you were *troth-plight*
to her.
Id. Henry V. act ii. sc. 1. fol. 73.

But first I swore him on his knightly *troth*,
(And here demand performance of his oath,)
To grant the boon that next I should desire;
He gave his faith, and I expect my hire.
Dryden. *The Wife of Bath's Tale*.

DOUR.

TROUBADOUR.

TROUBADOUR. The Troubadours were a race of poets belonging to a race, language, and literature, which at one time seemed on the point of obtaining intellectual supremacy in Christendom; the race has been absorbed by less worthy conquerors, the language has sunk into oblivion, and nothing remains of the literature but a few fragments disinterred from those

cemeteries of learning, the old monastic libraries. When the successive tides of barbaric invasion swept over Gaul and Italy, the fertile delta inclosed between the Maritime Alps and the mouth of the Rhone frequently escaped from devastation: in its sunny climate and genial soil, some germs of civilization which had survived the general ruin began early to show signs of life and

TROUBA-
DOUR.

vigour; at the beginning of the VIth Century the inhabitants of *The Province*, as this favourite district was called by the Romans, retained the language, customs, and ideas of the ancient empire, which had become too firmly rooted to be extirpated by the Franks, when they had acquired the mastery of Gaul. The allodial system of property was not introduced into Provence, the lower classes continued free, and the towns retained their municipal rights, of which Toulouse, according to its historian La Roque, was never deprived. Commercial and manufacturing industry rendered the Provençals wealthy; their nobles engaged in trade, and the counting-house formed a part of the palace. Such pursuits, so dissimilar from the warlike and plundering propensities of the Franks, widened the distance between the two races, and they regarded each other with mutual contempt.

This schism extended beyond Provence; the vast tract of country lying south of the Loire was never firmly occupied by the Franks; its chiefs indeed were nominally subject to the successors of Charlemagne, but its inhabitants piqued themselves on the purity of their Roman blood, which they had kept free from all intermixture with that of barbarians, and were called appropriately *Romani*. Hence many of the French kings, on assuming the crown, took the oath of inauguration as *Imperatores Franciæ et Romanæ terræ*.

There was a diversity of language as well as a distinction of race; the Franks spoke the *Lingua Romana Rustica*, which derived its latter epithet from the introduction of barbarous phrases and harsh sounds, belonging to their native Teutonic; the *Romani* used the purer *Theodostica*, which was an offset from Latin, and differed from the classic language chiefly in rejecting grammatical inflections and in allowing changes of letters to produce harmony of sound. The *lingua Theodostica* was also called the *Romanz*.

Soon after the Normans had settled permanently in the northern districts of France, the rude *Lingua Rustica* began to be converted into the Franco-Norman "*langue d'oui*," a tongue so flexible, lively, and artificial, that several German and Italian writers adopted it in preference to their own. At the same time a new race of poets, called the *trouveurs* or "finders," introduced the chivalrous romance, which spread itself with inconceivable rapidity, and speedily became the common property of Europe. The earliest specimen of this new composition with which we are acquainted is the *Floral Romance*, from which we shall extract the opening passage, being probably one of the oldest examples of the *langue d'oui*, and well calculated to give some idea of its pleasing vivacity.

Quand floriste la violette
La Rose et la flor de glai
Que chante li popegai,
Lors mi poignent amoretes
Qui me tiennont gay,
Mas pieca ne chantai,
Or chanterai
Et serai
Chanson joliette
Pour l'amour de ma miette
On grand pieca me donnai.

A less striking, but scarcely a less important revolution took place in southern France. Berengar, count of Barcelona, married the heiress of Provence, and in the course of his reign annexed to his territories the

principalities of Cerdagne and Roussillon, together with the whole western extremity of France, included under the comprehensive appellation of Aquitaine. One of his descendants, Raymond Berengar, increased his dominions by the acquisition of Valencia, Arragon, and the Balearic Islands, embracing under his sovereignty the whole country from the Loire to the frontiers of Castille, with the single exception of Brittany. The Berengars assumed the title of kings of Arles, made Provence their residence, and even regarded it as the centre of their realm. From this time forth the name *Romani* was superseded by that of Provençals, and the *lingua Theodostica* was moulded into the *langue d'oc*, no feeble competitor of the *langue d'oui*. The *langue d'oc* was divided into five principal dialects, the Provençal, properly so called, which is now extinct, but is rescued from oblivion by the beautiful relics of its literature; the Gascon, which still exists as a patois in Gascony; the French, similarly preserved in Poitou and Guienne; the Italian, long prevalent in Genoa, but which has been insensibly absorbed in the *lingua Toscana*; and the *Limousin*, which has had a very considerable share in the formation of modern Spanish.

The warlike Franks had as little respect for the peaceful pursuits of literature as for commerce; their *trouveurs* were itinerant minstrels, who subsisted on the alms which they obtained for telling stories, or from the moderate remuneration they received as dancing-masters. A few of them rose to the more respectable rank of *romanciers*, who, like the sennachies of an earlier age, sung in rambling verse the exploits of the nobles in whose service they were retained. The Troubadours of the south, on the other hand, were for the most part men of rank, residing on their own domains. Whenever they appeared at a tournament they were received as the equals of all in the courtly circle, and the guerdons of their songs were rich carpets, noble steeds, or the favours of the noble dames whose beauty they celebrated. Such was the enthusiasm created in favour of their poetry that, from their rise in 1070, to their downfall in 1382, no less than one hundred and forty are recorded as worthy competitors for fame, besides a countless multitude whose weaker pretensions have been lost in oblivion. It was probably this very copiousness of production which prevented any single Troubadour from exerting himself to produce some great and commanding work of genius, for it cannot be denied that there is a sickly uniformity in their productions which soon wearies out the most enthusiastic student.

William, count of Toulouse, and William, lord of Bauxare, are usually named as the earliest Troubadours, but it was not until the accession of the Berengars that Provençal poetry began to acquire celebrity, and the period of the XIIIth Century may be named as the age of its highest glory, when some of the most eminent monarchs of Europe were ranked amongst its votaries. Richard Cœur de Lion, who during his father's life-time had resided at Poitiers, as count of Poitou, early became acquainted with the beautiful dialect of the *langue d'oc*, and collected several of the most eminent Troubadours at his court. He was himself a professor of the *Gay Saber*, as their art was called, and is said to have composed some pieces of Provençal poetry to solace his captivity in an Austrian dungeon. His favourite minstrel was Blondel de Nesle, who, though born in northern France, composed his songs

TROUBA- in the soft dialect of the south. Indeed it was by re-
DOUR. citing part of a sonnet in this idiom, to which the cap-
tive king responded, that Blondel discovered the castle

BLONDEL.

Domna vestras beutas,
Elas bellas faisas,
Els beis eils amaras,
Els gens corsben taillatas,
Dom lieu impressivas,
De vestra amor que me lia.

Your beauty, lady fair,
None view without delight,
But yet, so cold an air
No passion can excite.
But this I patient see
While all are shunned like me.

Among the most eminent Troubadours were reckoned Frederic Emperor of Germany; Daniel, Borneil and Fayditt, whom Petrarch recognized as his masters; Vidal, whose didactic pieces are equally remarkable for moral and poetic excellence, and Bertrand de Born, whose bitter satires were among the chief causes of the wars between Henry II. and his children, and afterwards of the strife between Richard Cœur de Lion and Philip Augustus. To these we must reluctantly add Folquet, archbishop of Toulouse, who took a leading share in the crusade against the Albigenses, and the consequent ruin of his country and destruction of his brethren.

The invention of rhyme has been erroneously ascribed to the Troubadours, but there is no doubt that the Provençal poets have a just claim to the introduction of the elegant devices and ingenious variations by which its structure was diversified and ornamented. Daniel led the way by the invention of the sonnet, which, however graceful in the hands of a true poet, too often conceals poverty of meaning under a profusion of artifice and illusive jingle of sound. Borneil introduced the chanzo or canzone, which is fairly described as "a poem of several stanzas, preserving throughout the same order of rhyme, refrain, and punctuation." It was from the Provençal chanzo that the Italians derived their *Sestina* and *Distichi*, which, in the hands of Petrarch, attained such excellence as to throw the parent stock into the shade. Amand Daniel invented the Hendecasyllabic metre, which was chosen by Dante for his earlier compositions, and the octosyllabic measure was devised by Piers de Cabesting. Of minor importance were various kinds of ode, such as the Gobbolo, the Mottetto, the Motto, the Sue, the Frottolo, and the Madrigal, the two last of which were a mixture of moral axioms and pithy reflections. In addition to these we find a very large class of compositions, subject to no fixed rules either of versification or execution, in which the authors gave free course to all the excesses of hyperbole.

Provençal poetry is usually divided into the *Soulaz* or love-song, a corruption of the Latin *solatium*; and the *Lais*, or didactic composition, probably derived from *ludus*. Under the latter division are included the *Servientes*, bitter satires which the Troubadours hurled against the objects of their resentment, sparing neither kings, emperors, nor popes. Pierre d'Auvergne and Bertrand de Born were the most formidable of these satirists, and monarchs stood in awe of their sarcastic powers. A more melancholy interest belongs to Guillaume Reinhold. He directed his attack against the Albigensic crusaders who were marching to desolate

in which Richard was detained. We shall quote this TROUBA-
interesting relic of antiquity as a specimen of Trouba- DOUR.
dour poetry, and subjoin an anonymous translation.

RICHARD.

Li bel trop affansia,
Ja de vos non portray,
Que major honoray,
Lel en vestre deman,
Que sautra desbeisan,
Tot jan de vos valzia.

No nymph my heart can wound,
If favour she divide
And smile on all around,
Unwilling to decide;
I'd rather hatred bear,
Than love with others share.

Provence, and his was almost the last voice raised in defence of the expiring liberties of his country. A portion of his *serviente* will show to what an extent the Troubadours carried their powers of sarcastic bitterness. "A weak contemptible mob, arrayed in the ill-beseeming robes of priesthood, dares to rob nobility of its towers and donjons. I see malice raise its numberless heads; merit and honour trodden in the dust. I see a court of justice erected where one side alone is heard. I see the whole world convulsed by impious delinquency. The goat ventures against the wolf, the héron pursues the falcon, and the lamb guards the shepherd. I see the weak stand upright, the strong slip and fall. The plough precedes the ox, and Christmas the new year. Accursed be ye, holy fabricators of mischief."

When the ferment which had been awakened by the enthusiasm and adventure of the third crusade began to subside, the taste for poetry also abated, and the Troubadours languished for want of the exalted patronage which they had hitherto enjoyed. Raymond Berengar, the fifth count of Provence, himself a poet of no mean merit, while he lived, encouraged by munificent benefactions the fraternity to which he belonged; and Alphonso, the wise King of Castile, opened to the Troubadours that part of Southern Spain from which they had been previously excluded. But this generous policy did not survive these sovereigns. Deprived of the patronage and protection which were no longer granted by their native courts, and alarmed by the civil broils and religious dissensions which began to distract the South of France, the Troubadours gradually dispersed themselves over the whole face of Europe. Great numbers went into Italy, where they were gladly received by the princes of the House of Este. But the most efficient protection was afforded them by the imperial cities and republics, which, having extorted from their rulers grants of municipal rights, were eager to purchase by splendid largesses the services of the minstrels in the pompous festivals with which they regularly celebrated the anniversaries of their liberties. Genoa, in particular, the neighbour of their fatherland, was a favourite resort of the professors of the *Gay Saber*. For some years the Provençal became the literary language of Italy, and we find a long range of Troubadours of Venetian and Genoese extraction, who, in obedience to the prevailing fashion, furnished a considerable part of the pseudo-Provençal chanzos.

Several Troubadours came to England in the train of Eleanor of Provence, upon her nuptials with Henry III., others to Northern France, invited by Louis VIII., and a yet greater number accompanied the Provençal Princess, Beatrice, wife of Charles of Anjou, in the

TROUBA-
DOUR.

expedition against Naples. The school of poetry which they founded survived the fearful tragedy of the Sicilian Vespers, and, under the protection of Peter of Arragon, extended itself to Sicily, where it soon acquired considerable strength and eminence. It was probably this colony which gave rise to the much disputed assertion of Petrarch, that the Sicilians first of all Italy cultivated eloquence and the belles lettres. Sicily was the last home of the Troubadours; their songs continued to be heard in the island after bigotry had changed their lovely Provence into a desert, but the influence of the Sicilian minstrels was confined to the Neapolitan kingdom, and produced very little effect in the northern states. From the influx of the Troubadours and their intellectual influence, both the language and literature of Italy were in a great degree derived from Provençal sources, and Petrarch was proud to recognize the poets of Arles as his models. This infusion from beyond the Alps produced such deep effects that many Italian critics describe the *Lingua Toscana* as the daughter of the Provençal.

The *Tenzone* or love-question, originally borrowed from the Spanish Arabs, was so eagerly taken up by the Troubadours, that it may be said to have been naturalized in Provence. This singular diversion was an extension of the subtle casuistry and dialectic trifling which pervaded theology, philosophy, and every branch of learning during the Middle Ages, to the tender details of the heart. Love was brought into close contact with logic, and all possible manifestations of the affections were classed under their proper categories. Some point of amorous jurisprudence was started by a Troubadour, who, taking one side of the question, defended it in quaint verses, and with a truly laudable display of legal proficiency; he was answered by another in the same elaborate style, and the poetic pleadings were continued so long as the respective advocates could find arguments and rhymes. The matter was then referred to a tribunal called the Court of Love, consisting for the most part of ladies eminent for high rank and character, whose decisions were of course absolute and final. Some of the questions thus deliberated were the merest trifles, others were of very dubious propriety, and the manner in which they were discussed rendered them not less offensive to morality than to good taste. The first Court of Love was established at Romany in 1160, under the presidency of Ilfonselle, lady of Baux, and it continued, through a long period of anarchy, to be the only court whose decisions were at all respected.

The Floral Games were connected with the Courts of Love: they derived their name from a flower being bestowed as a prize on the advocate who displayed most ingenuity in defence of his thesis. Both institutions soon degenerated into mere forms, or something worse, and were therefore abandoned. Some attempts were made to revive them in later times; a Court of Love was opened at Romany under the patronage of the Popes, who then resided in Avignon, but Nostradamus, the historian of the Troubadours, declares that it was a gross perversion of the original institution, and very unceremoniously calls its lady judges "*les ducts des Cardinaux*." Richelieu was the last who attempted to revive these institutions in the *Assemblée Galante*, which he convoked at Ruel. It was there that he pro-

duced his famous thesis on Love, the latest specimen of the *tenzone*, and certainly one of the most extraordinary dissertations that ever originated from the institution. The cardinal's experiment was so signal a failure that it is not likely to be repeated.

The intellectual advancement of the Provençals led them to discover the absurdities with which the simple purity of the Christian religion had been sullied and defaced. They regarded the Eastern churches as their true parents, and perhaps while they rejected the errors of the Latins, they adopted some of the dangerous speculations of the Greeks. It is not indeed easy to discover what was actually the creed of the Albigenses, as the schismatics of Provence were called, but there is no doubt that they rejected the Pope's claim to despotic rule over their churches, and that they treated the monkish legends and the pretensions of the priesthood to miraculous power, with contempt and ridicule. The Troubadours directed several of their most bitter satires against the abuses of the church, and it must be confessed that they sometimes went farther, and directed the shafts of ridicule against religion itself. Still the Albigensian schism is itself a mark of the higher degree of civilization to which its professors had attained; they had discovered the value of free opinion, then and for many subsequent centuries utterly unknown to the rest of Europe, and they vindicated their sentiments with an ability which left their adversaries no other reply than the brute force of barbarous fanaticism. The very verses in which the renegade Troubadour, Archbishop Folquet, invokes papal vengeance on the head of his heretical brethren, contain abundant proof that he envied their talents and dreaded their abilities.

It was resolved at Rome to silence the troublesome poets and the perilous preachers, by establishing the Inquisition in their land. Naturally reluctant to subject their beloved country to such a scourge, the counts of Toulouse remonstrated and resisted; they were included in the barbarous doom pronounced against Provence, and the noble house of the Berengars came to an untimely and calamitous end. The cities, proud in the full enjoyment of opulence and municipal privileges, were still more averse to the reception of the papal inquisitors, and lent willing ears to the odes by which the latest Troubadours encouraged them to resistance; but the best songs are but a poor defence against sharp swords; the cities were stormed by the ruthless crusaders, plunder and murder devastated their streets, until nothing remained but the memory of former wealth and greatness. The kings of France seized upon the desolated land and perpetuated its misery by the severest feudal exactions; the church and the state acted in concert to destroy every remnant of political and religious independence, and the voice of the Troubadours was hushed in a land where any display of intellectual energy was sure to be punished as an overt act, either of treason or heresy. From that hour Provence, in its most general acceptation, became a melancholy and poverty-stricken land; and it is remarkable that few, if any, of the eminent men in modern French literature have been born south of the Loire. The close of the XIVth Century witnessed the extinction of a literature which, under more favourable auspices, might have competed with the proudest in modern Europe.

TROUBLING, *n.*

the Latin.

To vex, to afflict, to distress, to harass, to perplex, to molest; to be or cause to be anxious; to disquiet, to disorder, to agitate.

Now my soule is *troubled*, and what schal I seye? fadir, saue me fro this our.

Wiclif. *Ion*, ch. xii.

Nowe is my soule *troubled*, and what shall I saye? father delyuer me from this houre.

Bible, Anno 1551.

Than is accidie (or slouth) the anguish of a *trouble* herte.

Chaucer. *The Persones Tale*, p. 160.

The second spice of glotonie is, that the spirit of a man wexeth all *trouble* for dronkenesse, and bereveth a man the discretion of his wit.

Id. *Ib.* p. 164.

He is like to an hors that seketh rather to drink drovy or *troubled* water, than for to drinke water of the clere well.

Id. *Ib.* p. 163.

Alas, that evir our hertis should depart atoo!

For in your graciose dayis of hertis *troubles*

I had nevir knowlech, but of all gladness.

Id. *The Merchants Second Tale*, p. 646.

As much as through his greate might,

Be it of heate or of light,

The Sunne surmounteth the Moone,

That *troubler* is, and chaungeth soone.

Id. *The Romant of the Rose*, p. 223.

And *troubleable* ire, that araiseth in hem the flode of *troublings*, tourmenteth on that other side.

Id. *Boecius De Consol.* book iv. p. 437.

Suster, I have right great pitie

Of your annoy, and of the *troublous* tene,

Wherein ye and your company have bene

So long alas.

Id. *The Flower and the Leaf*, p. 398.

And if myne hap were so well went,

That for the hole I might haue halfe,

Me thinketh I were a goddesse halfe.

From where Vsure wolde haue double,

My conscience is not so *trouble*.

Gower. *Conf. Am.* book v. p. 156.

I am but a poore man, of a lowe degree, *troubled* and beaten vnder fote, not eloquent.

Udall. *Erasmus. Corinthians*, ch. xii. fol. 62.

Our people greatly reioyced of their great good happe to haue escaped so many hard euentis, *troubles* and miseries, as they did in that voyage, and had great cause therefore to praise the Almighty, who had so mercifully preserved and deliuered them.

Hakluyt. *Voyages*, &c. vol. i. p. 430. Christopher Burrough.

This night, after supper, by reasone of a certaine Hollander that was drunke, there arose in the ship such a *troublesome* disturbance, that all the ship was in an uproar with weapons.

Id. vol. ii. p. 111. John Locke.

But Jesus [was] offended with this importunitie and *troublesomes*.

Udall. *Erasmus. Matthew*, ch. xii. fol. 56.

The *troublouse* cares in marriage, as are the necessarye provisyons for howse keepynge, the vertuous bryngynge vp of children, and the daylye helpynge of pouertie, shulde rather seme a christen crosse to godly wyse men, than easye idelnesse in monckerye.

Bale. *The Actes of English Notaries*, part i. fol. 69.

In stede of circumcision, cutte out of thy mynde superfluous and vnsemynge desyres. In stede of keepynge the sabbath, kepe thy minde quiet from *troublous* desyres.

Udall. *Erasmus. Romaines*, ch. xii. fol. 33.

Fr. *troubler*, from *turbulare*, which Menage forms from the Lat. *turbula*, a little crowd (*turba*). Wachter derives the Ger. *truben*, *tribulieren*; and the A. S. *trifel-an* (See TRAVAIL), from the Lat. *tribulare*. Tooke considers the A. S. *tribul-an* (otherwise written *trifel-an*), to be the root of

And what, that to be *troublously* vexed with the care of suche thinges is a poinct not only of mistrustfulness towards god, but also a poinct of folie?

Udall. *Erasmus. Luke*, ch. xii. fol. 313.

My woman's strength

Is so orecharg'd with danger like to grow

About my marriage, that these under-things

Dare not abide in such a *troubled* sea.

Beaumont and Fletcher. *Philaster*, act i.

How have ye *troubld* all mankind

With shews instead, meer shews of seeming pure,

And banisht from man's life his happiest life,

Simplicite and spotless innocence.

Milton. *Paradise Lost*, book iv. l. 315.

The lord treasurer complained of the *troublesomeness* of the place, for that the exchequer was so empty: the chancellor answered, be of good cheer, for now you shall see the bottom of your business at the first.

Bacon. *Apophthegm* 102.

But were it not that Time their *troubler* is,

All that in this delightful garden grows

Should happy bee, and have immortal blis.

Spenser. *Faerie Queene*, book iii. can. 6.

Whom broad awake she findes, in *troublous* fitt,

Fore-casting, how his foe he might annoy.

Id. *Ib.* book i. can. 4.

It fortun'd, forth faring on his way,

He saw from far, or seemed for to see,

Some *troublous* uprore or contentious fray,

Whereto he drew in hast it to agree.

Id. *Ib.* book ii. can. 4.

And thus prepar'd

Secure to die, the fatal message heard:

Then smil'd serene; nor with a *troubled* look,

Or trembling hand, the funeral present took;

Ev'n kept her countenance, when the lid remov'd

Disclos'd the heart, unfortunately lov'd.

Dryden. *Sigismund and Guiscardo*.

Two *troublesome* mischiefs therefore wisdom frees us from, the company of anxious doubt in our actions, and the consequence of bitter repentance; for no man can doubt of what he is sure, nor repent of what he knows good.

Barrow. *Sermon*, vol. i. p. 175.

Men will not be so importunately dull, as not to understand what others say, without demanding an explication of their terms; nor so *troublesomely* critical, as to correct others in the use of the words they receive from them.

Locke. *Of Human Understanding*, book iii. ch. x. sec. 22, fol. 248.

The scene then chang'd, from this romantic land,

To a bleak waste by bound'ry unconfin'd,

Where three swart sisters of the weird band

Were mutt'ring curses to the *troublous* wind.

Cooper. *The Tomb of Shakspeare*.

We found walking here exceedingly *troublesome*, for the ground was covered with a kind of grass, the seeds of which were very sharp and bearded backwards.

Cook. *Voyages*, vol. ii. ch. ii. p. 108.

TROVER, Fr. *trouver*; It. *trovare*; Ger. *treffen*; D. *treffen, tangere, attingere*; and consequently, *invenire*, to touch, to touch upon, to find.

Now, whether I should beforehand

Swear he robb'd me?—I understand.

Or bring my action of conversion

And *trover* for my goods?

Butler. *Hudibras*, part iii. can. 3.

This action of *trover* and conversion was in it's original an action of trespass upon the case, for recovery of damages against such person as had found another's goods, and refused to deliver them on demand, but converted them to his own use; from which finding and converting it is called an action of *trover* and conversion.

Blackstone. *Commentaries*, book iii. ch. ix. p. 153.

TROVER, in law, a word derived from the French *trouver*, to find, is an action which lies, *i. e.* may be brought, in cases where one man gets possession of the goods

TROU-
BLE.

TROVER

TROVER. of another, by delivery, finding, or otherwise, and refuses to deliver them to the owner, or sells them or converts them to his own use, without the consent of the owner. For this wrong the owner recovers in trover the value of the goods. This action was originally an action of trespass on the case for recovery of damages against such person as had actually found another's goods, and refused to deliver them on demand, but converted them to his own use; from which finding and converting it is called an action of trover and conversion. In consequence of the greater facility afforded by this form of proceeding over the action of detinue, it is permitted to be brought against any man who has in his possession, by any means whatever, the personal goods of another, and sells them or uses them without the consent of the owner, or refuses to deliver them when demanded.

The injury lies in the conversion; for any man may take the goods of another into possession, if he finds them; but no finder is allowed to acquire a property therein, unless the owner be for ever unknown. For this reason he must not convert them to his own use, which the law presumes him to do if he refuses to restore them to the owner: wherefore such refusal alone is, *primâ facie*, sufficient evidence of a conversion. The fact of the finding, or trover, is therefore now totally immaterial, for the plaintiff needs only to suggest, as words of form, that he lost such goods, and that the defendant found them, and if he proves that the goods are his property, and that the defendant had them in his possession, it is sufficient. But a conversion must be fully proved: and then in this action the plaintiff recovers damages equal to the value of the thing converted, but not the thing itself; the thing itself being alone recoverable in an action of detinue or replevin. (See DETINUE, REPLEVIN.)

As conversion is the most important feature in this form of action, it may be well to afford a few instances of what are held in law to amount to conversions. The conversion may be by a wrongful taking of a personal chattel, as if goods be wrongfully seized as a distress, though they be not removed from the place in which they were, for the possession in point of law is changed by their being seized as a distress. In the cases of a conversion by wrongful taking, it is not necessary to prove a demand and refusal. The wrongful taking of the goods of another who has the right of possession is of itself a conversion, and so is the compelling of a party to deliver up goods. Conversion, too, may be by some other illegal assumption of ownership in the personal chattel, or by illegally using or misusing it, as where a person entrusted with the goods of another puts them into the hands of another, contrary to orders, or where a carrier draws out part of the contents of a vessel and fills it with water, or if a carrier or wharfinger breaks open a box containing goods and sells them, and a vast variety of other instances. Conversion may also be by a wrongful detention of the personal chattel, as where a bailee or one to whom goods are delivered upon trust, upon a contract expressed or implied, that the trust shall be faithfully executed on his part, refuses to deliver goods to the real owner without the authority of the bailor or the party by whom the goods were delivered to him, and who has in fact no lien or claim on them. Of the evidence of conversion it will be sufficient in this place to observe, that the denial of goods to him who has a right to demand them, is of itself a conver-

sion, and that if an actual conversion cannot be proved, then proof is to be given of a demand made before the action brought, of the thing for which the action is commenced, and that the thing demanded was not delivered. In this case, though an actual conversion may not be proved, a demand, and refusing to deliver the things demanded, is a sufficient evidence to satisfy a jury. Where a defendant really comes to the possession by finding, denial alone is a conversion; but if the goods were in his hands by delivery, there denial is not a conversion, but only evidence of such conversion, and in both cases the defendant has a lawful possession, either by finding or delivery; and where the possession is lawful, the plaintiff must show a demand and a refusal.

A few instances of the things for which the action of trover will lie will suffice, as it is confined to the conversion of some personal chattel, and does not lie for injuries to land or other real property. It may be maintained for money given to a person to keep, though it be not in bags, because the action is not to recover the money, but damages. It lies also for deeds.

The action may be maintained by any party who at the time of the conversion had a property in the chattel either general or special. He must, however, have had the actual possession, or the right to immediate possession, at the time of such conversion. The person who has the absolute or general, and not the mere special property in the personal chattel, may support the action, although he has never had the actual possession; for it is a rule of law, as stated in the article TRESPASS, that the general property of personal chattels *primâ facie*, as to all civil purposes, draws to it the possession, or, in other words, that such property creates a constructive possession. Thus where a person has delivered goods to a carrier or other bailee, who has not the right to withhold the possession from the general owner, and so parted with the actual possession, yet he may maintain trover for a conversion by a stranger, for the owner has still the possession in law against a wrong-doer, and the carrier or other bailee is considered merely as his servant.

In conclusion, it may be observed, that in every case in which trespass will lie for taking goods of the plaintiff wrongfully, trover will also lie.

TROUGH. See TRAY. A. S. *trog*, *troge*, alveus; D. *trock*; Ger. *trog*; Sw. *trog*; Is. *trewge*. All perhaps from A. S. *drag-an*; Ger. *tragen*; D. *trecken*, *trahere*, *vehere*, to draw or drag; D. *troch*, *tractus*; as well as *alveus*.

He goth and geteth him a kneding trough.

Chaucer. *The Miller's Tale*, v. 3620.

Alein answered; John, and wolt thou swa?

Than wol I be benethe by my croun,

And see how that the mele falles adoun

In til the trogh, that shal be my disport.

Id. *The Reves Tale*, v. 4039.

The vnthrifty sone taketh his fathers substance and spendeth it viciously, and at last was compelled to come to the hoggis troffe for hunger.

Joye. *Exposicion of Daniel*, ch. iv. fol. 56.

Here come every morning at the break of day twentie or thirtie canoas or troughes of the Indians.

Hakluyt. *Voyages*, vol. iii. p. 454.

He had also ropes, bridgets, chestes, and troughs of gold and silver.

Id. *Ib.* p. 634.

And in their precinct

(Proper and placefull) stood the troughs and pailles

In which he milkt.

Chapman. *Homer. Odyssey*, book ix.

TROVER.

TROUGH.

TROUGH. Danaus was the first that sailed with a ship, and so hee passed the seas from Ægypt to Greece: for before that time they used but *troughs* or flat planks, devised by king Erythra to crosse from one iland to another in the red sea.

Holland. *Plinie. Natural History*, book vii. ch. 56.

Some log perhaps upon the waters swam,
An useless drift, which, rudely cut within,
And hollow'd first, a floating *trough* became,
And cross some rivulet passage did begin.

Dryden. Annus Mirabilis.

It now imports beneath what sign thy hoes
The deep *trough* sink and ridge alternate raise.

Grainger. The Sugar-Cane, book i. v. 258.

TROUNCE, *v.* Skinner derives from the Fr. *tronçon*, a truncheon; *q. d.* to beat with a truncheon, or club. It may be from the Fr. *troncer*, to cut; to cut with a lash; to lash; generally, to beat; to punish.

But the Lorde *trounsed* Sisara and all his charettes, and all hys hoste with the edge of ye swerde, before Barak.

Bible, Anno 1551. Judges, ch. iv.

No court allows those partial interlopers
Of Law and Equity, two single paupers,
T' encounter hand to hand at bars, and *trounce*
Each other gratis in a suit at once.

Butler. Miscellaneous Thoughts.

I would it were my case, I'd give
More than I'll say, or you'll believe:
I would so *trounce* her, and her purse,
I'd make her kneel for better or worse.

Id. Hudibras, part iii. can. 3.

Dom. Nay, if you talk of peaching, I'll peach first, and see whose oath will be believ'd; I'll *trounce* you for offering to corrupt my honesty, and bribe my conscience.

Dryden. The Spanish Fryer, act iv.

TROUT, Fr. *truite*; It. *trota*; Sp. *trucha*; Lat. *tructa*, *trocta*; Gr. *τροκτης*, from *τρογ-ειν*, *vorare*, *comedere*, to devour, to eat.

With botelles of wyne trussed at their sadelles and pastyes of samonde, *troutes* and elys, wraped in towels.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 113, p. 325.

He is mine own, I have him,
I told thee what would tickle him like a *trout*,
And as I cast it so I caught him daintily,
And all he has I have 'stow'd at my devotion.

Beaumont and Fletcher. Rule a Wife and have a Wife, act ii.

TROW, *v.* } *Trow*; A. S. *treow-ian*; Goth. *traw-an*. Lye. *True*, verus, fidus.
TRUE, }
TRU'AGE, and } *Truth*, veritas, fides. Junius; who
TRU'AGER, } merely tells us that Mer. Casaubon
TRUE'FAST, } derives from Gr. *αρεκης*, *verus*, *αρε-*
TRUE'LY, } *κεια*, *veritas*. Lye adds; from A. S.
TRUE'NESS, } *treowa*, *truwa*, *trywe*, fidus, verus;
TRU'ISM, } *treowtha*, *trywth*, veritas; all from
TROTH, or } the Goth. *trawwan*, confidere. Skinner
TRUTH, } also traces *true* and *truth*, to the
TRU'THFUL, } A. S. verb *truw-ian*, and pronounces
TRU'THLESS. } Casaubon, *impavidus*. Wachter

affirms the A. S. and Goth. with the D. *trow*, *trowen*; Ger. *trew*, fidus; *trewe*, fidelitas, fiducia; Sw. *tro*, from the verb *traw-en*, credere, confidere, to believe, to confide—to be all from the Gr. *σapp-ειν*, *confidere*. Ihre agrees with neither Casaubon nor Wachter; but proposes nothing himself. See Tooke, vol. ii. p. 401.

To *trow*; to think, to have thoughts, ideas; to believe—firmly; to be thoroughly persuaded, to be convinced of.

True, anciently written *trew*, (the regular past participle of *trow*, as *grew* of *grow*, *knew* of *know*,) means—

Trowed, thought, believed firmly; agreeable to, conformable to or consistent with *truth*, with our thoughts or belief; faithful; veracious; real.

Truth, formerly written *troweth*, *trowth*, *trouth*, and *TROW*. *troth*, is the third person singular of the verb to *trow*, and means—

Any thing which any one *troweth*; thinketh, firmly believeth, is thoroughly persuaded or convinced of; belief, faith, fidelity, verity, veracity; reality; and further, with more latitude, it is applied to—fidelity to laws, rules, promises, engagements; to—honour, honesty, integrity, virtue, loyalty, chastity, &c. &c. See to **TRUST**; and **TREE**. See **VERY**; and the Quotations from Locke.

Troth, to plight, also the Quotation from Hobbs in *v. BELIME*. See **BETROTH**.

P. Plouhman uses (to us) the extraordinary expression, "Many a false *truth*"—Arrews feathered with fair byheste, (that is, promise,) and many a *false truth* (*i. e.* deceitful thought, or meaning.) Ford uses *truth* as a verb: to vouch the *truth*: or as *true*.

And naþeles men yt *trowede*, and leuede not ys glose.
R. Gloucester, p. 110.

By þis tale me may iyse, þat men *trewest* we seþ,
And best me may to hem truste, þat of lest wordes' beþ.
Id. p. 37.

To breke ys *trewe* couenant, þe kȳng was loþ þerto,
And naþeles ys conseyl hym gef, þat he moste yt nede do.
Id. p. 250.

— We bere þe and þyne euermore *treuage*.
Id. p. 47.

Conan bowede a doun to hym, and þonkede hym faste,
And bi het to serue hym *trewlicke*, þe while ys lyf laste.

Ac God þougte on hire for hire *trewnesse*.
Id. p. 31.

And bed hym, vor hȳs *treunesse*, þe vorewarde abbe in þogt,
þat bytuene hem was ymade þat he ne breke yt nogt.
Id. p. 391.

I *trowe* it was for vengeance, he died so sodenly.
R. Brunne, p. 57.

Henry of Aniowe takes conseile at frendes,
With Malde, þat is so *trowe*.
Id. p. 109.

Grete *treuage* þei toke of þis lond here.
Id. p. 7.

þe folk wild not suffre to be *treuwageres*,
Bot sent after Eilred bi certeyn messengeres.
Id. p. 45.

þouht he not of þe *trouth*, þat he to William plight,
For to make him his heȳre, if he þe lond haf myȳht.
Id. p. 61.

Esteward ich behulde. after þe sonne
And sawe a tour as ich *trowede*. *truthe* was þer ynne.
Piers Plouhman. Vision, p. 2.

Thees lecherie leyden on. with lauhȳnge chire
And with prȳvey speche. and peyntede wordes
And armede hym with ydelnesse. and in hȳ berȳng
He bar a bowe in hus honde. and many brode arwes
Where fetherede with faire bȳ heste. and many a *fals treuthe*.
Id. Ib. p. 398.

But Jhesus *trowide* not himsilf to hem, for he knew alle men.
Wiclif. Jon, ch. ii.

But oon of the knyghtis openyde his side with a spere, and anon blood and watir wente out. and he that sigh baar witnessyng, and his witnessyng is *trewe*, and he woot that he seith *trewe* thingis that ghe bileue.
Id. Ib. ch. xix.

But one of the soudiers with a speare, thruste him into the syde, and forthe with came there oute bloude and water. And he that sawe it, bare recorde, and his record is *true*. And he knoweth that he sayth *true*, that ye might beleue also.

Bible, Anno 1551.

He that is *trewe* in the leeste thing: is also *trewe* in the more, and he that is wickid in a litil thing: is wickid also in the more.
Wiclif. Luke, ch. xvi.

TROW. *Treuli treuli*, I seye to thee for we speken that we witen, and we witnessen that that we han seyn; and ye taken not oure witnessing.
Wiclif. Jon, ch. iii.

To this thing I am born, and to this I am comun into the world to bere witnessyng to *treuthe*. ech that is of *treuthe* heerith my vois. pilat seith to him, what is *treuthe*? and whanne he hadde seide this thing efte he wente out to the iewis and seide to hem I fynde no cause in hym.
Id. Ib. ch. xviii.

For thys cause was I borne, and for thys cause came I into the worlde, that I shoulde beare wytnesse vnto the *truthe*. And al that are of y^e *treuth* heare my voyce. Pylate sayd vnto hym: what thyng is *truth*?
Bible, Anno 1551.

She *trowed* he was in som maladie,
For no crie hire maiden coud him calle
He n'olde answer, for nothing that might falle.
Chaucer. The Milleres Tale, v. 3418.

Who is so *trewe* and eke so ententif
To kepe him, sike and hole, as is his make?
Id. The Marchantes Tale, v. 9164.

And than dame Prudence, withouten delay or taryng, sent anon hire messageres for hir kin and for hir olde frendes, which that were *trewe* and wise.
Id. The Tale of Melibeus, p. 119.

For the *trouthe* of thinges, and the profit, ben rather founden in fewe folk that ben wise and ful of reson, than by gret multitude of folk, ther every man cryeth and clattereth what him liketh.
Id. Ib. p. 108.

And I so loved him for his obeisance,
And for the *trouthe* I demed in his herte,
That if so were that any thing him smerte,
Al were it ever so lite, and I it wist,
Me thought I felt deth at myn herte twist.
Id. The Squieres Tale, v. 10876.

O trustie turtle *truefastest* of all true. A. S. *treowe-fast*.
Imputed to Chaucer. A Ballade in Commendation of our Lady.

So that I maie the chamber knowe,
In which my ladie, as I *trowe*,
Lieth in hir bed, and slepeth softe:
Then in myn herte a thefe fall ofte.
Gower. Conf. Am. book v.

And thervpon a lawe he sette,
That euery man of pure dette,
With sacrifice and with *truage*,
Honour shuld thilke image.
Id. Ib. book v. p. 135.

That kynge Minos fro yere to yere
Receyue shal as thou shalt here
Out of Athenis for *truage*
Of men, that were of mighty age
Parsons nyne.
Id. Ib. p. 163.

The vertue, whiche is in the stones,
A very signe is for the nones
Of that a kynge shall be honest,
And holde *trewely* his behest
Of thyng, whiche longeth to kinghed.
Id. Ib. book vii. p. 217.

But for finall concludion,
What strengest is of erthly thynges,
The wine, the women, or the kynges,
He saith, that *trouthe* aboue hem all
Is mightiest, howe euer it fall.
Id. Ib. p. 219.
For how so that the cause wende,
The *trouthe* is shameles at ende,
But what thyng that is *trouthles*,
It maie not well be shameles.
And shame hyndereth euery wight.
Id. Ib.

So that euery man turned the poynte of his spere agaynste the *trewe* and innocent man, and the Comons gaue theym all to drunkennesse and ydlenes.

Fabyan. Chronycle, ch. lxxxii. p. 59.

Sir, I haue gyuen you my fayth and allegiance; I vnderstande ye purpose to go to Hanybout: sir, knowe for *trouthe*, the towne and the castell ar of suche strength, that they be nat easy to wyne.

Lord Berners. Froissart. Cronycle, vol. i. ch. lxxv. p. 88.

Cato (as his tyme required) had more *troth* for the matter, than eloquence for the style.

Ascham. The Scholemaster, book ii.

Renounce the place where shee
doth make sojourn and stay:
Force not hir trayning *truthlesse* eies,
but turne thy face away.

Turbervile. The Louer to Cupid for Mercie, &c

Was this a sentence (*trow* you) of so great force to prove that scripture is the only rule of all the actions of men?

— In that fayre face
The false resemblance of Deceit, I wist,
Did closely lurke; yet so *true-seeming* grace
It carried, that I scarce in darksome place
Could it discern.

Spenser. Faerie Queene, book i. can. 5.

As Charles his daughter, you the lilly wear;
As Henry's queen, the blushing rose you bear;
By France's conquest, and by England's oath,
You are the *true-made* dowager of both.

Drayton. Owen Tudor to Queen Catharine.

CEL. Now what's the meaning of this *trow*?

Dryden. Secret Love, act iv.

Those propositions are *true*, which express things as they are: or, *truth* is the conformity of those words or signs, by which things are exprest, to the things themselves.

Wollaston. Religion of Nature, sec. 1. p. 8.

All *Truth*, of what kind soever it be, is real.

Clarke. Sermon 41.

The title of this chapter is a *truism*.

Swift. Remarks upon a Book, ch. vii.

Though *truth* and falsehood belong, in propriety of speech, only to propositions; yet ideas are oftentimes termed *true* or false (as what words are there, that are not used with great latitude, and with some deviation from their strict and proper significations?)

Locke. Of Human Understanding, book ii. ch. xxxi. sec. 1.

Our ideas, being nothing but bare appearances or perceptions in our minds, cannot properly and simply in themselves be said to be *true* or false, no more than a single name of any thing can be said to be *true* or false.

Id. Ib.

Truth or falshood lying always in some affirmation, or negation, mental or verbal, our ideas are not capable any of them of being false, till the mind passes some judgment on them; that is, affirms or denies something of them.

Id. Ib. sec. 3.

Truth, whether in or out of fashion, is the measure of knowledge, and the business of the understanding; whatsoever is besides that, however authorised by consent, or recommended by rarity, is nothing but ignorance, or something worse.

Id. Conduct of the Understanding, sec. 24.

TROW.

TROW. I might have said more explicitly : That I account that to be *truth*, which the constitution of human nature determines man to believe, and that to be falsehood which the constitution of human nature determines man to disbelieve.

Beattie. On Truth, part i. ch. i. Note.

Truth supposes mankind : for whom and by whom alone the word is formed, and to whom only it is applicable. If no man, no *truth*. *Tooke. Diversions of Purley, part ii. ch. v.*

TROWEL, Fr. *truelle*; D. *trouweel, truweel*, from the Lat. *trulla*, a diminutive of *trud*, a laddle. Menage, Skinner, and Lye. Against these authorities the D. *troll-en*, to turn or move around or about, may still be suggested.

But, alas, most mean are their monuments, made of plaister, wrought with a *trowell*.

Fuller. The Worthies of England, vol. i. p. 327. Durham.

No, they could not have the honour of a generall dismission, but each man leaves his *trowel* and station, more like a foole then hee undertooke it : so commonly actions begun in glory, shut up in shame.

Hall. Works, vol. i. p. 26. Cent. Of Babel.

Decker and others, who were, at the very moment, pledging their future labours for the magnificent loan of "five shillings," or writing "penny books" in spunging houses, are high in mirth, at the expense of the "bricklayer," and ring the changes on the "hod and *trowel*," the "lime and mortar poet," very successfully, and, apparently, very much to their own satisfaction.

Gifford. Memoirs of Ben Jonson.

TROWSE, } Fr. *troussis*, a tuck or tucking up
TRO'WZERS, } in a garment. *Trousser*; to *truss*,
TRO'WZED. } tuck, pack, gird or girt in, pluck or
twitch up. Cotgrave. See **TRUSS**.

A dress or clothing for the lower limbs; perhaps so called from their being tied, girt or laced tight, buttoned fast; to distinguish them from a former or other dress. See the Commentators on Shakspeare.

— The poor *trowz'd* Irish there
Whose mantles stood for mail, whose skins for corslets were,
And for their weapons had but Irish skains and darts.

Drayton. Poly-olbion, song 22.

DOLPH. O then belike she was old and gentle, and you rode like a herne of Ireland, your French hose off, and in your strait *strossers*. *Shakspeare. Henry V. act iii. sc. 7. fol. 82.*

By laced stockings and *trouzers* the swellings in his legs and thighs went off.

Wiseman. Chirurgical Treatises, book i. ch. xviii. p. 142.

I directed his servants to make a *trouze* of a fine dimity lined with soft flannel, with Eyelet holes, to lace on the outside, with a Waistband fitted to the upper part of it. *Id. Ib.*

Orellana and his companions, under cover of the night, having prepared their weapons, and thrown off their *trouzers* and the more cumbrous part of their dress, came all together on the quarter-deck, and drew towards the door of the great cabin.

Anson. Voyages, book i. ch. iii. p. 40.

Judging that we should soon come into cold weather, I ordered slops to be served to such as were in want; and gave to each man the fearnought jacket and *trowzers* allowed them by the Admiralty.

Cook. Voyages, vol. iii. book iii. ch. ii. p. 18.

Gold was his sword, and warlike *trousers*, laced
With thongs of gold, his manly legs embraced.

Mickle. Lusiad, book ii. v. 741.

TROX, in Zoology, a genus of *Pentamerous Lamellicorn Coleopterous Insects*.

Generic characiter. Antennæ short, ten jointed, of which the first is well clothed, and the last three form a lamellated club; labrum short and projecting; mandibles horn-shaped, and simple; jaws bifid, the outer lobe pointed; palpi terminating each in a very large and nearly oval joint; head retracted within the thorax, of

which the lateral edges are extended and depressed; wing-cases convex, and entirely covering the abdomen; legs inserted at equal distances, the anterior thighs broad and covering the head when contracted. **TROX.**
TRUAND.

This genus was included among the *Scarabæi* till removed by Fabricius, and is distinguished from them by their distinct upper lip, by their large well clothed first antennal joint, and by their bifid jaws, with an external lobe pointed and horn-shaped. They live on the ground, in muddy or partially dry places, and feed on the tendinous parts of dead animals, the muscles of which have long since decayed. If touched, they fold the antennæ and legs against the body, become motionless and simulate death. Sometimes they make a shrill noise by rubbing the base of the abdomen against the inner walls of the thorax. They are found both in Europe and Africa. The type of the genus is *Scarabæus Sabulosus*, Lin.; *T. Sab.*, Fabr.

TROYES, France, in the department of the Aube, a large manufacturing city, a bishopric, and chief place of a prefecture, containing 25,690 inhabitants. It is a city of great antiquity, lying in the centre of the department, and in a rich and fertile plain on the left bank of the Seine. The streets are narrow and old fashioned in the more ancient part of the town, and many of the houses are of wood blackened by time, giving it a sombre character. It has a few public buildings worthy of remark. The public library contains 60,000 volumes, and more than 4000 MSS., some of which are very curious. The Gothic cathedral, dedicated to St. Peter, is a lofty edifice; the boldness of the arches in the roof of the nave is much admired, and the painted windows are fine and well preserved. The churches of St. Nicholas and the Magdalen exhibit nothing striking, but that of St. Urbain is one of the noblest specimens of the Gothic style of the XIIIth Century which is in existence. Troyes has a large hôtel-de-ville, and a handsome theatre; it boasts also some fine specimens of French sculpture and painting, with the noble nursery and botanic gardens of Vouldy, rich in exotics and fruit trees. The principal manufactures consist of cotton goods, cloths, cards, woollen stuffs, leather, wax candles, and paper. Troyes is 98 miles from Paris East-South-East.

TRU'AND, or } Fr. *truand, truand*, a beggar; a
TRU'ANT, } knave; *truandise, truander*. In
TRUANDI'SE, } Spanish, *truahan*, a buffoon, jester,
TRU'ANTLY. } a flattering fool; D. *trouwant*, a
vagabond, a deceiver. Skinner suggests the A. S. *thurh*, thorough, and *wendan*, to wend or go; to wend or wander through. May it not be from Fr. *trouvant, trouver*, to find, to invent, to contrive, to devise; and hence, invent tricks, excuses, pretences. A *truant*—

One who invents excuses, (for industry;) who neglects or omits under false pretences; and generally, an idler, a loiterer, a lazy loitering fellow.

In Fr. and in Old English—One who begs (under false pretences, pretences of his own finding or invention.)

Saint Poule that loved all holy church,
He bade the apostles for to wurch,
And winnen hir livelode in that wise,
And hem defended *truandise*,
And said, werketh with your honden.

Chaucer. The Romant of the Rose, p. 220

Than may he go a begging yerne,
Til he some other craft can lerne,
Through which without *truanding*,
He may in trouth have his living.

Id. Ib.

TRUAND.
—
TRUCE.

There ben *truantes* in suche a wise,
That lacken hert.

Gower. *Conf. Am.* book iv. p. 97

But thei me shopen that I sholde
Eschewe of slepe the *truandise*,
So that I hope in suche a wise
To loue for to ben excused,
That I no sompnolence haue vsed. *Id. Ib.* p. 116.

All thynges at this day faileth at Rome, except all ouely these
ydell *trewandes*, iestours, tumblers, plaiers, or dröslates, iuglers,
and suche other, of whom there is inow and to many.

Goldene Boke. Letter 12.

There boyes the *truant* play and leave their booke:
Here stands an angler with a bayted hooke.

Browne. *Britannia's Pastorals*, book i. son. 2.

We should not dare to throw away our prayers so like fools, or
come to God and say a prayer with our mind standing at dis-
tance, trifling like untaught boys at their books, with a *truantly*
spirit.

Taylor. *Sermon* 5. vol. ii.

But when the swarms are eager of their play,
And loath their empty hives, and idly stray,
Restrain the wanton fugitives, and take
A timely care to bring the *truants* back.

Dryden. *Virgil. Georgics*, book iv.

But, when thou seest a single sheep remain
In shades aloof, or crouch'd upon the plain;
Or listlessly to crop the tender grass;
Or late to lag behind, with *truant* pace;
Revenge the crime, and take the traitor's head,
Ere in the faultless flock the dire contagion spread.

Id. Ib. book iii.

TRUCE, } Fr. *treves*; Sp. *treg-ua*, from the
TRU'CELESS. } Ger. *trew*, faith; because it is a *faith*
given for a time to the enemy. Skinner. See *treuga*
in Wachter. *Truce* or *trewes* is the regular past tense
of the A. S. verb *trywsian*, to pledge one's faith, to
plight one's troth (Tooke); *sc.* to forbear from acts of
hostility.

A plight or pledge—to cease or forbear, or suspend
hostility; and hence applied to—A suspension, cessa-
tion, interruption, intermission, forbearance.

He suor he wolde awreke be of this vil trespas.
He beleuede is noble dede of the holi lond, alas!
And *trewis* nom of Saladin, vor this luther cas.

R. Gloucester, p. 488.

He therefore sent hym in ambassade to the sayde Rollo, to
requyre a *trew* or *trewse* for .iii. monethes.

Fabyan. *Chronycle*, p. 179.

The prince sawe that he shuld haue batell, and that the cardy-
nall was gone, without any peace or *trewse* *makyng*.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. 162. p. 197.

By this example appereth, in what estimatiō and reuerence
leages and *truces*, made by princis, ought to be hadde, to the
breache wherof none excuse is sufficyente.

Sir Thomas Elyot. *The Governour*, book iii. ch. vi. fol. 173.

And therfore is this tranquillite of the sea for that litle tyme, as
a *truce* taking in the winter, called the halcions dayes.

Joye. *Exposicion of Daniel*, fol. 3. *The Pistle Dedicatorye*.

In all his intervals of happy *truce*,
Knowledge and arts, which his high mind endow'd,
Were still his objects, and what they produce
Was the brave issue of his solitude.

Cotton. *Philoxipes and Policrite*, can. 1.

Rutulians, hold, and Latin troops, retire;
The fight is mine, and me the gods require.
'Tis just that I should vindicate alone
The broken *truce*, or for the breach atone.

Dryden. *Virgil. Æneid*, book xii.

What, what are all the wars of seas and wind,
Or wreck of matter, to this war of mind?
Two minds in one, and each a *truceless* guest,
Rending the sphere of our distracted breast!

Brooke. *Redemption*.

VOL. XXVIII.

TRUCHMAN, } Fr. *trucheman*, *drogueman*; It.
TRUCHMENT. } *torcimanno*, *dragomanno*; Sp. *tru-*
chaman, *dragoman*, from the Arab. *turjīmān*, an in-
terpreter. See Menage. Junius seems inclined to call
him, a *truce-man*, *induciarum vir*. *Truchman*, *trudge-*
man, or *druggerman* is, in fact, a corruption of the
Arabic word *terjūmān*, "interpreter," used in the East,
and particularly at Constantinople, as the title of the
official interpreters employed by the court and the mi-
nisters of foreign powers sent to carry on negotiations
with the Porte. This word has been converted into
dragomano and *dragoman* or *drogueman* by the Italians
and French.

They toke aduysse amonge them howe to knowe the trouth
therof, and determyned to sende to the crysten men to knowe their
myndes, and so toke a *truchman* that coulde speke Italyan, and
commaunded hym to go to the crysten host, and to demaūde of
them in what tyle and instance they are come to make vs warre.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. 171. p. 503.

The next mornynge they rode forth to skrymysshe with their
enemies, and Agadingor formest, mounted on his good horse, and
his *trucheman* with him.

Id. Ib. p. 507.

Brother, these noblemen to you nowe haue me sent,
As for their *Trounchman* to expound the effect of their intent;
They bid me tell you then, they like your worthy choyce,
And that they cannot choose therin but triumph and reioyce.

Gascoigne. *A Deuise of Maske for Viscount Mountacute*.

Mithridates the king reigned over two and twentie nations of
diverse languages, and in so many tongues gave lawes and minis-
tered justice unto them, without *truchman*.

Holland. *Plinie*, book vii. ch. xxiv.

He requested therefore the team of a certain time, in which
space he might learn the Persian language, to the end that from
thenceforward he might be able to declare and deliver his own
mind unto the king by himselfe, and not by a *truch-man* or inter-
preter.

Holland. *Plutarch*, fol. 345.

Anaxagoras holdeth, that all animals are endued with active
reason, but want the passive understanding, which is called the
interpreter or *truchment* of the mind.

Id. Ib. fol. 692.

TRUCK, } Fr. *troquer*, *troq*; It. *truccare*;
TRUCK, } Sp. *troc*, to barter or exchange,
TRU'CCAGE, } from *trug*, fraud, *trieg-en*, to deceive.
TRU'CKER, } See Menage. It may be from *trieg-*
TRU'CKLE, v. } *en*, in its literal meaning—to drag or
TRU'CKLE. } draw. D. *trecken*. A *truck*, is a *dray*,
i. e. a carriage dragged; and to *truck* may be, to drag
or carry goods or wares in barter or exchange, to a mart
or market, and hence—

To chop or change, to exchange, to barter.

To *truckle*; to yield to terms in exchanging or barter-
ing; to yield, to concede.

A *truckle-bed*—a bed with wheels that may be drawn
from place to place. See Skinner.

And no commutation or *truche* to be made by any of the petie
marchants, without the assent aboue said.

Hakluyt. *Voyages, &c.* vol. i. p. 228. *Instructions of Cabota*.

The souldier came in with fiue or sixe pounds weight of siluer
which he had *trucked* and traffiqued with Indians.

Id. Ib. vol. iii. p. 326. M. Rene Laudonniere.

Where it shall chance the same to rise, or to be found, bought,
trucked, permuted, or given.

Id. Ib. vol. i. p. 228. *Instructions of Cabota*.

A knight lately made of the governing trade,
Whose name he'll not have to be known;
Has been *trucking* with fame, to purchase a name,
For 'tis said he had none of his own.

Brome. *The New Knight Errant*.

If such divine ministeries as these, wherein the angel of the
church represents the person of Christ Jesus, must lie prostitute
to sordid fees, and not pass to and fro between our Saviour that of
free grace redeem'd us, and the submissive penitent without the

TRUCK. *truccage* of perishing coin, and the butcherly execution of tormentors, rooks and rakeshames sold to lucre, then have the Babylonish **TRUDGE** merchants or souls just excuse.
Milton. Works, vol. i. book ii. fol. 21. Of Reformation in England.

First that he lie upon the *truckle-bed*,
 Whiles his yong maister lieth ore his hed.

Hall. Satire 6. book ii.

They rowed up about 100 leagues before they came to any settlement, and then found some Spaniards, who lived there to *truck* with the Indians for gold.

Dampier. Voyages, vol. ii. ch. iii. p. 41. Anno 1681.

Now tell me, Stoick,
 If all these with a wish might be made thine,
 Would'st thou not *truck* thy ragged virtue for 'em?

Dryden. Secret Love, act v.

So that of all the courses which man in such a case can take, this of capitulating, and (as it were) making terms with the devil, is the most senseless and dangerous: no man having yet driven a saving bargain with this great *trucker* for souls, by exchanging guilts, or bartering one sin for another.

South. Sermons, vol. vi. p. 310.

But the greatest point of all wherein the bishop of Winton shewed his zeal to the pope and popery, appeared in his furious prosecution to blood, of all such as would not, or could not, *truckle* to it.

Strype. Ecclesiastical Memoirs, ch. xxxv. p. 483. Mary, 1555.

He that is beaten may be said
 To lie in Honour's *truckle-bed*.

Butler. Hudibras, part i. can. 3.

But first with knocking loud, and bawling,
 He rous'd the squire, in *truckle* lolling.

Id. Ib. part ii. can. 2.

Liv'd with men infamous and vile,
Truck'd his salvation for a smile,
 To catch their humour caught their plan,
 And laugh'd at God to laugh with man.

Churchill. The Duellist, book iii.

It is the necessary, though very slow and gradual, consequence of a certain propensity in human nature, which has in view no such extensive utility; the propensity to *truck*, barter, and exchange one thing for another.

Smith. Wealth of Nations, book i. ch. ii. p. 17.

I cannot *truckle* to a fool of state,
 Nor take a favour from the man I hate.

Churchill. Epistle to Will. Hogarth.

I venture to say, it did so happen, that persons had a single office divided between them, who had never spoke to each other in their lives; until they found themselves, they knew not how, pigging together, heads and points, in the same *truckle-bed*.

Burke. Works, vol. ii. p. 20. Speech on American Taxation.

TRUCULENT, } Fr. *truculent*; truculent, cruel,
TRUCULENCY. } threatful of countenance, terribly looking; Lat. *truculentus*, from *trux*; Gr. *τροχ-ειν*, Cotgrave, *atterere, affligere*, to bruise to pieces, and hence—Savage, barbarous, terrific.

The trembling boy his brethren's hands,
 Their *truculent* aspects, and servile bands,
 Beheld.

Sandys. Christ's Passion, (1640,) p. 14.

Pestilential seminaries, according to their grossness or subtility, cause more or less *truculent* plagues, some of such malignity, that they enecate in two hours.

Harvey. On the Plague.

For their Head and Leader they had Claudius Sanctus, one bereft of an eye, in his countenance hideous and *truculent*, in his faculties still more defective and impotent.

Gordon. Tacitus. History, book iv. p. 333.

He loves not tyranny:—the *truculency* of the subject, who transacts this, he approves not.

Waterhouse. On Fortescu, (1663,) p. 184.

TRUDGE, It. *truccare*, to *trudge*, to skud, to pack away. Florio. And Skinner derives from this Ital. or from to *trot*; perhaps more immediately from *tread*, in Goth. *trud-an*, to move or keep upon the *tread* or *trot*; to keep on, get on, keep (the feet) in motion.

And let them *trudge* hence apace, tyll they come to theyr maister of myschief.

Bale. Apology, fol. 6.

Thus tale once tolde none other speech preuaylde,
 But packe and *trudge*, al leysure was to long.
Gascoigne. The Fruites of Warre.

And now, my Lord, declare your noble mynde,
 Was this a Pylot, or a Pilate iudge?
 Or rather was he not of Judas kynde;
 Which left vs thus and close away could *trudge*?

Id. Voyage into Hollande, p. 538. Anno 1572.

They enquire how many beeves or oxen of his died? of what quantity of wine sowred under his hand? and no sooner are they full of these news, but into the city they *trudge* and make haste again.

Holland. Plutarch, fol. 114. Of Curiosity.

He that will know the truth of things, must leave the common and beaten track, which none but weak and servile minds are satisfied to *trudge* along continually in.

Locke. Conduct of the Understanding, sec. 24.

Not one of them was observed to stop and look towards us, but they *trudged* along, to all appearance without the least emotion, either of curiosity or surprize.

Cook. Voyages, vol. ii. book iii. ch. ii. p. 92.

TRUE. See **TROW.**

TRUFFLE, Fr. *truffe, truffe*; It. *tartufo*; Sp. *turma di tierra*; Lat. *terræ tubera*.

Happy the grotto'd hermit with his pulse,
 Who wants no *truffles*, rich ragouts—nor Hulse.

Dr. Warton. Fashion.

TRUJANO, in *Botany*, a genus dedicated by La Llave and Lexarza to Trujano, a Mexican botanist. It belongs to the class *Pentandria*, order *Monogynia*, but to what natural family is unknown. Generic character: perianth double; anthers sessile, alternating with as many glands; fruit lenticular.

Only a single species of Trujano is known, *T. pinnata*; it is a middle-sized branched tree, a native of Mexico; the leaves are alternate, and impari-pinnate; leaflets opposite, entire, petiolulate, pubescent beneath; the spikes of flowers are subpinnate; the spikelets are alternate on the common axillary and terminal rachis; calyx double, inner five-cleft, outer three-cleft; corolla of five white petals; style trifid; ovary depressed; seeds clammy, covered with a red pellicle at maturity.

TRULL, from the It. *trulla*, a dirty woman. Skinner. A. S. *thyrel, thyrl, foramen*, a hole bored or pierced. Somner. The past participle of the A. S. *thyrl-ian, perforare*, means *aliquid perforatum*; by the common transposition of *r* is the English *throll, thrul*, or *trull*. See Tooke. G. Douglas renders *spiracula*—ane *throll* or aynding stede, *i. e.* a hole or breathing place.

The Quotations sufficiently explain the usage.

The Gouverneur was all bedewed with drinke,
 His *truls* and he were all layde downe to sleepe,
 And we must shift, and of our selues must thinke
 What meane was best.

Gascoigne. Voyage into Hollande. Anno 1572.

I haue met with some of these *trulles* in London so disguised, that it hath passed my skill to discern whether they were men or women.

Holinshed. Chronicles, vol. i. book ii. ch. vii. p. 290. The Description of England.

And all this pother for a common *trull*.

Beaumont and Fletcher. The Fair Maid of the Inn, act i.

The kings of Persia at their ordinary meals have their queens or espoused wives to sit by them at the board, but when they list to be merrie indeed, and carrouse lustily untill they be drunk, they send them away to their chambers, and call for their concubines, singing wenches, and musicall *truls* in their place.

Holland. Plutarch, fol. 261.

Though yet you no illustrious act have done,
 To make the world distinguish Julia's son
 From the vile offspring of a *trull*, who sits
 By the town wall, and for a living knits.

Stepney. Juvenal, sat. 8.

TRUDGE.
TRULL.

TRULL.

TRUMP

Of this great town, this wicked end
Is ripe for judgment; Satan's seat,
The sink of Sin, and Hell compleat.
In every street of *trulls* a troop.

Somerville. *The Fortune Hunter*, can. 2.

TRUMP, *n.* } Fr. *trompe*, *trompette*; It. *tromba*,
TRUMP, *v.* } *trombetta*, *trompetta*; Sp. *trompa*,
TRU'MPET, *n.* } *trompette*. All from the Lat. *tuba*.
TRU'MPET, *v.* } See Skinner, Junius, and Menage.
TRU'MPETER, } D. *tromp*, *trompet*; Ger. *tromp*,
TRU'MPER. } *trompette*, *trommette*; Ger. *dromme-*
ten or *trompeten*, to *trumpet*; Sw. *trumpet*. All (as
well as the Fr., It., and Sp.) from A. S. *drem-an*, *drym-*
an, (to *drum*), to make a joyful noise, *jubilare* (by the
mere change of *d* into *t*.) Applied first to the sound,
noise, clamour of joy or rejoicing, of *triumphing*; (See
TRIUMPH.)

And then to the instrument:—

The *drum*-beaten; the *trump* or *trumpet*-blown; to
trump—

To sound, to make a noise, a clangor, or clamour of
rejoicing, or triumph, of congratulation; of glory, vain
glory; to sound or make a noise.

To *trump* is also at cards—Fr. *trionpher*—to throw
down, to play, a conquering, victorious, *triumphant*
card; Fr. *trionphe*; (It. *trionfo*; Sp. *triumfo*.) See
the Quotations from Fox. And hence—

To get the victory, to get the better, the advantage;
to over-reach, to circumvent; and further, to *contrive*,
to devise. (Fr. *tromper*.)

To be put to his *trumps*, *i. e.* to the necessity of using
the *trump*-card; met. all exertions to conquer difficulties

Jan blew the *trumpes* fulle loud & fulle schille.

R. Brunne, p. 30.

He smote his hors with spors, & fleih fro þat rascaile,
& comandid his *trompors*, to blow vnto bataile.

Id. p. 117.

Ich can nat tabre ne *trompe*. at festes ne harpen.

Piers Plouhman. *Vision*, p. 253.

Treuthe *trompede* þo. and song Te Deum laudamus
And þen lutede love. in a lowd note.

Id. Ib. p. 364.

Therefore whanne thou doist almes, nyle thou *trumpe* (*tuba*
clanxeris) before thee as ypocrites don in synagogis and stretis,
that thei be worschippyd of men. Wickl. *Matthew*, ch. vi.

When soeuer therfore thou geuest thyne almes, thou shalte not
make a *trompet* to be blown before the, as the ypocrites do in y^e
Synagoges and in y^e streates, for to be praysed of mē.

Bible, Anno 1551.

And seide to the sixte aungel that hadde a *trumpe*, [*tuba*],
unbynde thou foure aungelis that ben boundun in the greet flood
eufrates.

Wickl. *Apocalips*, ch. ix.

[And] saying to the syxte angell, whiche had the *trompe*: Loose
the .iiii. angelles whyche are bounde in the greete ryuer Euphrates.

Bible, Anno 1551.

And the firste aungell *trumpide*, (*clanxit*), and hail was maad
and fier meynd togidre in blood and it was sent into erthe.

Wickl. *Apocalips*, ch. viii.

The heraudes left hir pricking up and down,
Now ringen *trompes* loud and clarioun.

Chaucer. *The Knightes Tale*, v. 2602.

At every cours in came loude minstralcie,
That never Joab *tromped* for to here,
Ne he Theodomas yet half so clere
At Thebes, whan the citee was in doute.

Id. *The Marchantes Tale*, v. 9592.

They had not daunced but a little throw,
Whan that I heard not ferre off sodainly,
So great a noise of thundring *trumps* blow,
As though it should haue departed the skie.

Id. *The Flower and the Leaf*, p. 396.

The *trompoures* with the loude minstralcie,
The heraudes, that so loude yell and crie,
Ben in hir ioye for wele of Dan Arcite.

Chaucer. *The Knightes Tale*, v. 2673.

I sie come first all in their clokes white,
A company that ware for their delite,
Chapelets fresh of okes seriall,
Newly sprong, and *trumpets* they were all.

Id. *The Flower and the Leaf*, p. 396.

He shall this dreadfull *trumpe* blowe
Tofore his gate, and make it knowe,
How that the iudgement is yeue
Of deathe, whiche shall not be foryeue.

Gower. *Conf. Am.* book i. p. 33.

His brother saide, A lorde mercy,
I wote none other cause why,
But onely that this night full late
The *trompe* of deathe was at my gate,
In token that I shulde die.

Id. Ib. p. 34.

The kyng whan it was night anone
This man assent, and bad him gone
To *trumpen* at his brother's gate.

Id. Ib. p. 33.

And eche of hem eke a *trompet*
Bare in his other honde beside.

Id. Ib. p. 235.

And the *trumpetter* came to Boleine gate, and blewe his *trumpet*
to come to my lorde deputie, and tarried at the gate from .ix. of
the clock before noone till two of the clock at afternoone.

Fabyan. *Chronycle*, p. 707. Anno 1545.

Fyrst to be drawn on an hyrdell with *trumpes* and *trumpettes*
through all the cite of Herford, and after, to be brought into the
market place, where as all the people were assembled, and there-
fore to be tyed on hygh vpon a ladder that euery mā myght se
hym.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. xiii. p. 12.

The game that wee will play at, shall be called the *Triumph*,
which if it be well played at, he that dealeth shall winne: the
plaiers shall likewise winne, and the standers and lookers vpon,
shall doe the same: insomuche that there is no man, that is will-
ing to plaie at this *Triumphe* with these cardes, but they shall bee
all winners, and no losers.

Foxe. *Actes and Mon. Queen Mary*, 1555. fol. 1572.

Let therefore euerie christian man and woman plaie at these
cardes, that they may haue and obtaine the *triumph*; you must
marke also that the *triumph* must applie to fetch home vnto him
all the other cardes, whatsoever sute they be of.

Id. Ib.

It is a great ignominie and shame for a christian man to be
bond and subiect vnto a Turke: nay it shall not be so, wee will
first cast a *trumpe* in their waie, and plaie with them at cardes
who shall haue the better, let vs plaie therfore on this fashion with
this carde.

Id. Id. fol. 1573.

Now turne vp your *trumpe*, your hart, (*hartes* is *trump* as I saide
before) and cast your *trumpe* your hart on this carde, and vpon
this carde you shall learne what Christ requireth of a Christian
man, not to be angrie, ne mooued to ire against his neighbour.

Id. Ib.

But sith she will the conquest challeng needs,
Let her accept me as her faithfull thral;
That her great triumph, which my skill exceeds,
I may in *trump* of fame blaze over all.

Spenser. *Sonnet* 29.

PHI. I know not how they have shuffled, but my head on't,
A false card is turn'd up *trump*, but fates look to't.

Beaumont and Fletcher. *The Coronation*, act v.

Some of the nobility have deliver'd a petition to him: what's
in't I know not, but it has put him to his *trumps*: he has taken a
month's time to answer it, and chafes like himself.

Id. *Cupid's Revenge*, act iv.

Then gan triumphant *trompets* sownd on hye,
That sent to Heven the ecchoed report
Of their new ioy, and happie victory.

Spenser. *Faerie Queene*, book i. can. 12.

A breast of brasse, a voyce
Infraet and *trumplike*.

Chapman.

But since they're at renouncing, 'tis our parts,
To *trump* their diamonds, as they *trump* our hearts.

Dryden. *Prologue to the Princess of Cleves*.

TRUMP.
—
TRUNCARIA.

Know what a leading voice is worth,
A seconding, a third, or fourth,
How much a casting voice comes to,
That turns up *trump* of Aye or No.

Butler. *Hudibras*, part iii. can. 2.

This often happened when we drew near the cape, and as oft put us to our *trumps* to manage the ship.

Dampier. *Voyages*, vol. i. ch. ix. p. 526.

Captain Swan was served a little better, and his two *trumpeters* sounded all the time that he was at dinner.

Dampier. *Voyages*, vol. i. ch. xiii. p. 359. Anno 1686.

NAK. But their men lie securely intrench'd in a cloud;
And a *trumpeter*-hornet to battel sounds loud.

Dryden. *Tyrannick Love*, act iv. sc. 1.

These very *trumpeters* are now the men that represent the whole as a mere trifle.

Burke. *Works*, vol. ii. p. 412. *Speech on American Taxation*.

TRUMPERY, Fr. *tromperie*, *impostura*, *tromper*; D. *trompen*, *circumvenire*, to impose upon, to circumvent; but this is clearly a consequential usage. See to TRUMP. G. Douglas, in his *Prologue of the Eyght Booke*, uses *trumpes*; a thing of little value; *tenuis res*, *Æn.* v. 690, the sobir *trumpis*, i. e. mean, inconsiderable goods, says the glossarist. *Trompery*—

Any vain-glorious display; or any display of mere vanity; any worthless finery.

Have always with you the testimony of a good conscience, believing that Jesus of Nazareth was crucified for your sins, letting all other trash and *trumpery* go.

Strype. *Ecclesiasticall Memoirs*, ch. xxiii. p. 303. *Queen Mary*, 1554.

And this man, say they, is a prophet of Mahomet, his armes and legges naked, on his feet he did weare wooden pattens of two sorts, in his hand, a flagge, or streamer set on a short speare painted, he carried a mat and bottels, and other *trumpery* at his backe.

Hakluyt. *Voyages*, &c. vol. ii. p. 169. *The First Voyage to Constantinople*.

I knowe well there by ynow in the court of princes, that know nothyng what is to make theim selfe of worthinesse, and to main- teine them self among so many *trumperies* as ar treated in the houses of princes.

Goldene Boke, ch. xlv.

What a world of fopperies there are, of crosses, of candles, of holy water, and salt, and censings? away with these *trumperies*.

Hall. *A Sermon at Exeter*, Aug. 1637.

This idle *trumpery* (only fit for schools and schoolboys) unto that ancient Doric shepherd Theocritus, or his mates, was never known.

Gay. *The Shepherd's Week*. *The Proem*.

But the learned artist himself seems conscious that the ware he would put into my hands is indeed no better than a counterfeit piece of *trumpery*.

Warburton. *Works*, vol. v. book v. sec. iv. p. 156. *The Divine Legation*.

TRUNCARIA, in *Botany*, a genus so called by De Candolle, from *trunco*, to lop off, on account of the truncate limb of the calyx. It belongs to the class *Decandria*, order *Monogynia*, and the natural family of *Melastomaceæ-Lavoisiereæ*. Generic character: calyx with a cylindrical hardly turbinate tube, and a truncate nearly entire limb; petals five, ovate; stamens ten; anthers elongated, beaked, opening each by a single pore, without auricles; ovarium free, ten-sided, and rather cup-shaped at the apex; style filiform; stigma hemispherical; fruit unknown.

A genus consisting of a single known species, *T. caryophyllæa*, a native of Brazil, in the province of Para; it is a climbing shrub with tetragonal branches, five-nerved leaves, and having the flowers disposed in terminal thyrsi.

TRUNCATE, v.

TRUNCA'TION,

TRUNK, n.

TRUNK, v.

TRU'NCHEON,

TRU'NCHEONER.

Fr. *trunc*, *truncation*, *tronçonner*; It. *tronco*, *troncare*, *troncone*.
Sp. *tronco*, *troncon*, *troncar*; D. *tronck*, *troncken*; Lat. *truncus*.
(See DETRUNK.)

TRUNCATE.

Trunk, that from which, the stem, stock, body, or bulk, from which boughs or limbs are cut or lopped off—generally the stem, the main body. Also (says Cotgrave) the poor man's box in churches, i. e. a bulk or block, hollowed out, (to receive alms; to serve as a box,) and then applied to a chest: and further, to the proboscis of the elephant or other animal; to any thing formed like a stem, whether solid or hollow.

Truncheon: a staff (with the branches cut off); a log, a club; a large thick piece.

To *truncheon*, to use a truncheon, beat or strike with one.

To *trunk*, or *truncate*, used as equivalent to—to *de-truncate*.

He foineth on his foo with a *tronchoun*,
And he him hurtleth with his hors adoun.

Chaucer. *The Knightes Tale*, v. 2618.

By the foresayde place or shryne, where the holy martyrs bodyes lay, he ordeyned a cheste, or *trunke* of clene syluer, to thentent y^t all suche iueellys and ryche gyftes as were offryd to the holy seyntis, shuld therein be kepte to the vse of the mynstres of the same place.

Fabyan. *Chronicle*, ch. 131, p. 113.

And lastly his hed stryken of, and the *trunke* of his body haged by chaines vpon y^e comon gybet of Parys.

Id. *Ib*.

And the speare heed dyd entre into his throte, and dyd cutte asonder the orgonall vayne, and the spere brake, and the *tronchion* stacke styll in the squiers necke, who was with that stroke wouëd to death.

Berners. *Fröissart*. *Cronycle*, vol. i. ch. 374, p. 621.

And the bowis grewen out of stockis or *tronchons*, and the *tronchons* or schafis grewen out of the roote, and the roote out of the next erthe thereto, upon whiche and in whiche the roote is buried. (From Pecoek.)

Waterland. *Works*, vol. x. p. 246. *Letter to the Rev. Mr. Lewis*.

Thy brawn-fall'n arms and thy declining back
To the sad burthen of thy years shall yield,
And that thy legs their wonted force shall lack,
Able no more thy wretched *trunk* to wield.

Drayton. *Pastoral*. *Eglogue* 2.

By reason they had beene so long couered, and as it were buried vnder the sands, they stood as *trunked* and poled trees, and were as blacke as is the ebenie.

Holinshed. *Chronicle*, vol. vi. p. 164. *The Conquest of Ireland*, ch. 36.

So him dismounted low he did compell
On foot with him to matchen equall fight;
The *trunked* beast fast bleeding did him fowly dight.

Spenser. *Faerie Queene*, book ii. can. 5.

Did not I beat thee there i' th' head o' th' troops with a *trunchion*, because thou wouldst needs run away with thy company, when we should charge the enemy?

Beaumont and Fletcher. *A King and no King*, act i.

If captaines were of my minde, they would *trunchion* you out, for taking their names vpon you, before you haue earn'd them. You a captaine?

Shakspeare. *Hen. IV*. *The Second Part*, fol. 83.

I mist the meteor once, and hit that woman, who cryed out clubbes, when I might see from farre, some forty *truncheoners* draw to her succour.

Id. *Hen. VIII*. act v. sc. 3, fol. 231.

These feathers are neither gradually lessened towards their extremities, nor rounded, which are the usual terminations of the feathers in most birds; but they appear as if cut off transversely towards their ends with scissars. This is a mode of termination, which, in the language of Natural History, is called *truncated*.

Dr. Shaw. *Museum Leverianum*.

TRUNCATE.

Decreeing judgment of death or *truncation* of members.*Prynne. Huntley's Breviate* (1637,) p. 48.

TRUNGIBIN.

Tho in that chamber he could dance exceedingly well, yet it was only whilst that *trunk* was there; nor could he perform well in any other place, unless that or some such other *trunk* had its due position in the room.

Locke. Works, vol. i. fol. 179. *Of Human Understanding*, book ii. ch. xxxiii. sec. 16.

Nor bees are lodg'd in hives alone, but found
In chambers of their own, beneath the ground:
Their vaulted roofs are hung in pumices,
And in the rotten *trunks* of hollow trees.

Dryden. Virgil. Georgics, book iv.

There on the walls, by Polygnotus' hand,
The conquer'd Medians in *trunk*-breeches stand.

Id. Persius. Satire 3.

I'm not myself, since from her sight I went;
I lean my *trunk* that way, and there stand bent.

Id. The Conquest of Granada, act iii.

With *truncheon* tipp'd with iron head,
The warrior to the lists he led.

Butler. Hudibras, part i. can. 2.

Those who wear any thing on their heads, resembled, in this respect, our friends at Nootka; having high *truncated* conic caps, made of straw, and sometimes of wood, resembling a seal's head well painted. *Cook. Voyages*, vol. vi. book iv. ch. v. p. 339.

The examples are too often injudiciously *truncated*.

S. Johnson. Preface to his Dictionary.

Then strut a captain, if his wish be war,
And grasp, in hope, a *truncheon* and a star.

Smollet. Advice.

TRUNDLE, *n.* } Fr. *trondel*; A. S. *trendel*; a
TRUNDLE, *v.* } turning wheel; any thing turned
TRUNNEL. } or turning, a *rundle*, globe, orb.

To *trundle*, (a dim. of turn, *q.d.* torn-dœl,)

To turn, *sc.* a ball, a hoop, to bowl.

Vayne is the rest, and that most vayne of all
A smouldring smoke which flieth with euey winde,
A tickell treasure, like a *trendlynge* ball.

Gascoigne. The Fruites of Warre, p. 516.

Whether they have not removed—all images, candlesticks, *trindels*, or rolls of wax. *Cranmer. Articles of Visitation*.

ALG. Faith, sir, he went away with a flea in's ear,
Like a poor cur, clapping his *trundle* tail
Betwixt his legs.

Beaumont and Fletcher. Love's Cure, act iii. sc. 3.

— The king tooke rest
In a retir'd part of the house; where drest
The queene her selfe, a bed, and *trundlebed*;
And by her lord, repose her reuerend head.

Chapman. Homer. Odyssey, book vii.

He, that not knowes the games, nor how to use
His arms in Mars his field, he doth refuse;
Or, who's unskilful at the coit, or ball,
Or *trundling* wheele, he can sit still from all.

Jonson. Horace. Of the Art of Poetrie.

For as touching the cube, he subtracteth and removeth it quite away, as they do who play at nine holes, and who *trundle* little round stones. *Holland. Plutarch*, p. 1089.

In the four first it is heaved up by several spondees intermixed with proper breathing places, and at last *trundles* down in a continued line of Dactyls. *Spectator*.

The carpenters who were employed in stopping the leak were obliged to take off a great part of the sheathing from the bows, and found many of the *trunnels* so very loose and rotten, as to be easily drawn out with the fingers.

Cook. Voyages, vol. vii. ch. iii. p. 205.

TRUNGIBIN is the Arabic word *Turunjibin* ill spelt: it is the Asiatic name of the manna gathered from the Alhagi Maurorum, (Alhagi of the Moors,) the Hedysarum Alhagi of Linnæus, a handsome plant, which is common in the Archipelago and throughout South-

Western Asia and Northern Africa, and known wherever the Arabic language prevails, by the name of 'Akûl, vulgarly pronounced 'Agûl, whence perhaps Rauwolf, who first made it known in Europe, formed the word Alhagi, unless he meant to express the word Alhâjî, "the Pilgrim," which does not appear to be one of its Eastern names. "It is on this shrub," says Russel, in his *Natural History of Aleppo*, "that manna (Trungebeen) is found in Mesopotamia and other Eastern countries." It is gathered chiefly about Tabriz, in Persia, but is probably not produced so far to the North as the Greek islands. Wheeler found the plant in Tenos, and it was seen, a few years ago, in great abundance in Paros and Naxos.—Martyn's *Edition of Miller's Gardener's Dictionary*.

TRURO, a town of Cornwall, situated at the head of a creek which communicates with Carrick Roads, which are a part of Falmouth harbour. Truro is built between the small rivers of the Kenwyn and St. Allen, and is 10 miles North of Falmouth, and 260 from London. The town stands in the parishes of St. Mary, Kenwyn, and St. Clement's, and contains a population of 9250, St. Mary's, wholly within the borough, having 3043. It is the largest and handsomest town in the county, and was one of the stannary places of coinage. It has a market on Wednesday and Saturday, and returns two members to Parliament. The principal trade is in shipping copper ore from the neighbouring mines. It was here that the wreck of the forces of Charles I. surrendered to General Fairfax, soon after the battle of Naseby. Truro has a public library, and an infirmary supported by voluntary subscriptions.

TRUSION, Lat. *trus-um*, past participle of *trudere*, to thrust. See DE- EX- IN- OB-TRUDE.

A thrusting or pushing.

The operation of nature is different from mechanism, it doing not its work by *trusion* or pulsion; by knockings or thrustings, as if it were without that which it wrought upon.

Cudworth. Intellectual System, book i. ch. iii. fol. 156.

TRUSS, *v.* } Fr. *trousser*; D. *tross*, *trossen*; Ger.

TRUSS, *n.* } *tross*; Sw. *tross*; Low Lat. *trossa*, *trossare*, to pack up (the baggage, utensils, tools,) perhaps, says Skinner, a *trudendo*, from thrusting or pushing. See TROWSE.

To pack up; to bind or bundle up; to close up, (to pluck up, to twitch up. Cotgrave.) Junius says a *truss* man is a well knit man, of small but compact frame.

Wherof Osmunde beynge ware, and also beynge sure of the kynge, made a great *trusse* of herbys or grasse, wherin he wrapped the childe, and so *coveyed* hym out of the cytie of Laonne.

Fabyan. Chronicle, ch. 186. p. 188.

Ful thinne it lay, by culpons on and on,
But hode, for jolite, ne wered he non,
For it was *trussed* up in his wallet.

Chaucer. Prologue to the Canterbury Tales.

This counsell was taken, and all the lordes ordayned to dyslodge, and *trussed* tentes, and paulyons, and all maner of harnes, and so departed.

Lord Berners. Froissart. Cronycle, vol. i. ch. xxviii. p. 52.

But all as a poore pedler he did wend,
Bearing a *trusse* of trifles at his backe,
As bells, and babes, and glasses, in his packe.

Spenser. The Shepheard's Calendar. May.

Tho up they gan their mery pypes to *trusse*,
And all their goodly heardes did gather round.

Id. Faerie Queene, book iii. can. 10.

And for the love of God, sens all my *trist*
Is on you two, and ye bethe bothe wise,
So werketh now, in so discrete a wise,
That I honour may have.

Chaucer. Troilus and Creseide, book iii. p. 259.

For whan men *trusten* hire [fortune] than wol she faille,
And cover hire bright face with a cloude.

Chaucer. The Monkes Tale, v. 14619.

God wote I wend, O lady bright Creseide,
That every word was gospell that ye seide,
But who may bet beguile, if him list,
Than he on whom men wenen best to *trist*?

Id. Troilus and Creseide, book v. p. 289.

~~~~~ He hath founden one

That *trustie* is and true as stone.*Id. The Romant of the Rose, p. 209.*

He slept, and ros whan it was tyme,  
And whan it fel towards prime,  
He toke to hym suche as he *triste*  
In secret. *Gower. Conf. Am. book v. p. 152.*

The yomen of his chambre there  
All only for to serue hym were,  
The whiche he *trusteth* wonder wele.

*Id. Ib. book vi. p. 198.*

Certainly I saye vnto you, that the maister hauing a triall of his *trustinesse*, will be bolde to *truste* him with greater thinges, and wyll make hym reweler ouer all his goodes.

*Udall. Erasmus. Matthew, ch. xxiv. fol. 94.*

That which in latine is called Fides, is a parte of iustice, and may diuersely be interpreted: and yet finally tendeth to one purpose in effect. Some tyme it may be called fayth, some time credence, other wyles *trust*.

*Sir Thomas Elyot. The Governour, book iii. ch. vi. fol. 174.*

A very few, of whose *trustynes* towards hym, he had had prooffe before, he determined to leaue in Gallia.

*Goldinge. Cæsar. Commentaries, book v. fol. 111.*

The mouse which once hath broken out of trappe,  
Is sildome tised with the *trustlesse* bayte,  
But lyes aloofe for feare of more mishappe,  
And feedeth styll in doubte of deepe decepte.

*Gascoigne. To the same Gentlewoman, &c.*

Therefore whylome to knights of great emprise  
The charge of Justice given was in *trust*,  
That they might execute her iudgements wise.

*Spenser. Faerie Queene, book v. can. 4.*

And such persons who are under discipline, or under notorious sins, must make their exomologesis, that is, do ecclesiastical repentance before them who are the *trustees* and stewards of the mysteries of God.

*Taylor. Polemical Discourses. Of Repentance, ch. x. sec. 4 fol. 834.*

He started up; and snatching neare his syde  
His *trustie* sword, the servant of his might,  
Like a fell lyon leaped to him light,  
And his left hand upon his collar layd.

*Spenser. Faerie Queene, book vi. can. 7.*

One whyle she blam'd herselfe; another whyle  
She him condemn'd as *trustlesse* and untrew:  
And then, her grieve with errour to beguyle,  
She fayn'd to count the time againe anew,  
As if before she had not counted trew.

*Id. Ib. book v. can. 6.*

Thus having her restored *trustily*,  
As he had vow'd, some small continuance  
He there did make.

*Id. Ib. book vi. can. 3.*

~~~~~ Bankrupts, hold fast  
Rather then render backe; out with your kuines,
And cut your *trusters* throates.

Shakspeare. Timon of Athens, act iv. sc. 1. fol. 90.

~~~~~ The shepherd last appears,  
And with him all his patrimony bears;  
His house and household gods! his trade of war,  
His bow and quiver; and his *trusty* cur.

*Dryden. Virgil. Georgics, book iii.*

In a word every man implicitly *trusts* his bodily senses concerning external objects placed at a convenient distance; and every man may with as good a reason put even a greater *trust* in the perceptions of which he is conscious in his own mind.

*Horsley. Sermons, vol. iii. p. 262.*

TRUXALIS, in Zoology, a genus of Locustarian Orthopterous Insects.

Generic character. Antennæ short, compressed,

TRUST.

—  
TRUXA-  
LIS.

~~~~~

TRUXALIS. sword-shaped, their joints indistinct, attached above the line separating the eyes; head pyramidal with two lengthened eyes, and three small smooth ones; mouth at the bottom of the head, lower lip bifid; body lengthy; abdomen simple, covered by the wing-cases as with a roof; hind legs much longer than the body, and fit for leaping.

Like the crickets, *Acrydia*, this genus has the hind legs very long but more slender, and the abdomen of the female has no boring apparatus; but they are further distinguished by the sabre-shaped antennæ, which in the crickets are filiform. From all the other genera of the same family they are distinguished by their pyramidal head. They are natives of warm climates, but their habits unknown. The type of the genus is *T. Nasutus*, Fabr.

TRY, v. } *Probare, tentare*, Junius thinks may
TRI'ABLE, } mean to prove, *sc.* to be true; to be

TRI'EDLY. } *triatio; exactissima litis contestatæ*
exagitatio, a most careful sifting or examination of any contested dispute. Spelman. And hence—

To prove or put to the proof; to the test; to search into, investigate, examine, *sc.* the proofs, the evidence; to put or place under examination, to make experiment or essay; to essay, to attempt, to endeavour.

Was neuer prince, I wene, þat I writen of fond,
More had *treie* & tene, þan he had for his lond.

R. Brunne, p. 235.

Wenne all tresours ben *tried*. quap hue, treupe is þe beste.
Piers Plouhman. *Vision*, p. 16.

They fet him first the swete win,
And made eke in a maselin,
And real spicerie,
Of ginger-bred that was ful fin,
And licoris and eke comin,
With suger that is *trie*.

Chaucer. *The Rime of Sire Thopaz*, v. 13780.

There maie no golde the iudge plie,
That he ne shall the sooth *trie*,
And setten euery man vpright,
As well the plowe man as the knight.

Gower. *Conf. Am.* book ii. p. 71.

Than the thre knyghtes answered hotely, and sayde, howe they set but lytell by the manassynge of a sonne of a *tryer* of hony, nor that y^e herytage of therll their lorde shulde be so sone gyuē to him, nor to none suche.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. 402. p. 699.

That thing ought to seme no newe matter vnto you, whyche wente long a go before in the *triedly* proued prophetes, and lately in Christe.

Udall. *Erasmus. St. Peter*, ch. iv. fol. 13.

The wylde corne, beinge in shape and greatnesse lyke to the good, if they be mengled, with great difficultie wyll be *tryed* out, but either in a narowe holed seeue they wyl stil abide with the good corne, or elles, where the holes be large, they wyll issue out with the other.

Sir Thomas Elyot. *The Governour*, book ii. ch. xiv. fol. 155.

For whose sake I let all go to losse, and count thē as chaffe or refuse (that is to say, as thinges which are purged out, and refused when a thyng is *tryed* and made perfect) that I might wyne Christ.

Tyndal. *Workes*, ch. vi. fol. 219. *Matthew*.

For except a man be proued and *tryed*, it cannot be knownen, neither to hym selfe or other men, that he is righteous and in the true faith.

Id. *Ib.* fol. 224.

What can be more *triall* of a faythfull hart, then to aduenture not onely to ayde and succour by the meanes of other (whiche without daunger may not be admitted vnto vs) but also personally to visite the poore oppressed, and see that nothyng be lackyng vnto thē.

Frith. *Works*, fol. 81. *Letters of John Frith*.

But when it pleaseth the higher powers to call any man's life

and sayings in question, then there be constructions, interpretations, and extensions reserved to the justices and judges equity, that the party *tryable*, as I am now, shall find himself in much worse case, than before when those cruel laws stood in force.

State Trials. 1 Mary, 1554. Sir Nicholas Throckmorton.

How often do we reade, that the causes of heresye haue bene debated before emperours and princes, and discussed by their *triall*?

Wynchester. *Of True Obedience*, fol. 33.

Now maketh he a *triall* how muche his disciples haue profyted ghostly, prouing whether suche thinges be done in them spirituallie, as in other haue bene wrought corporally, and by darke figures.

Udall. *Marke*, ch. viii. fol. 163.

Content who lives with *tryed* state,
Neede feare no chaunge of frowning Fate.

Spenser. *The Shepheard's Calendar. September*.

Then forth came Artegall out of his tent,
All arm'd to point, and first the lists did enter:
Soone after eke came she with full intent
And countenance fierce, as having fully bent her
That battels utmost *triall* to aduenter.

Id. *Faerie Queene*, book v. can. 5.

So curious are men to make experiments and *trie* conclusions in every thing.

Holland. *Plinie*, book xvi. ch. xii.

What dressing will best take your knight, what wastecote, what cordial will do well i' th' morning for him, what *triers* have you?

Beaumont and Fletcher. *The Scornful Lady*, act iv.

There was lately a company of men called *Tryers*, commissioned by Cromwell, to judge of the abilities of such as were to be admitted by them into the ministry.

South. *Sermon* I. vol. iv.

When wert thou known in ambush'd fights to dare,
Or nobly face the horrid front of war?
'Tis ours, the chance of fighting fields to *try*,
Thine to look on, and bid the valiant die.

Pope. *Homer. Iliad*, book i.

League all your forces then, ye powers above,
Join all, and *try* th' omnipotence of Jove.

Id. *Ib.* book viii.

Afterwards he [Rainbow] enjoyed two livings successively without examination by the *tryers*.

Wood. *Fasti Oxonienses*, vol. i. fol. 243.

Heavens! can you then thus waste, in shameful wise,
Your few important days of *tryal* here!
Heirs of eternity! yborn to rise
Through endless states of being.

Thomson. *Castle of Indolence*, c. 2.

A Christian always is indulged with an opportunity of escaping before he is brought to a *trial*, whatever may have been his offence; and if he is brought to a *trial* and convicted, he is seldom punished with death: while the poor Indians, on the contrary, are hanged, and broken upon the wheel, and even impaled alive without mercy.

Cook. *Voyages*, vol. ii. book iii. ch. xii. p. 324.

Sir Edward Coke in this same chapter bringeth two precedents to prove, that though the Spiritual courts in England be now the King's courts, yet whosoever sueth in them for any thing *triable* by the common law, shall fall into a premunire.

Hobbs. *On the Common Laws of England*.

When we speak of a state of *trial*, it must be remembered, that characters are not only *tried*, or proved or detected, but that they are generated also, and formed, by circumstances.

Paley. *Natural Theology*, ch. xxvi. p. 451.

Jesus, indeed, orders his followers to shake off the dust of their feet, where the inhabitants would not receive their doctrine, that they might not throw away their time in vain: but he never directed it as a *trial-ordeal* of innocence when they were accused of immoralities, and the honour of the mission concerned.

Warburton. *Works*, vol. viii. book ii. ch. xii. p. 398. *The Doctrine of Grace*.

TRYGON, from the Greek *τριγων*, *I creak*, Adans.; *Sting-Ray*, Penn. In *Zoology*, a genus of animals belonging to the tribe *Rauidi*, family *Plagiostomi*, order *Branchopterygii branchiis fixis*, class *Pisces*.

Generic character. Head enveloped in the pectoral

TRY.

TRYGON.

TRYGON. fins, which form an obtuse disc; teeth fine, and arranged in quincunces; tail slender, and armed with a strong, flattened, bony spine, of which the edges are serrated; tail tapering and pointed; caudal fin sometimes a mere fold of the skin; in some the back is smooth, but in others spiny.

This genus is remarkably distinguished from the other Rays by the peculiarly offensive organ with which the tail is armed, consisting of a long, flat, bony, sword-like process or spine with jagged edges, and a very sharp point. According to Couch's account, quoted by Yarrell, when the animal is "seized or terrified, its habit is to twist its long, slender, and flexible tail round the object of attack, and with the serrated spine tear the surface, lacerating it in a manner calculated to produce violent inflammation." Others, however, state that it strikes the spine into its prey or enemy; and in confirmation it may be mentioned, that the writer of this article was informed by a fisherman who brought him one for sale, that it had struck him through the thick leather of his fishing boot. The vulgar notion of the spine being poisonous is incorrect; the laceration produced by its saw-like edge, either if drawn violently over the skin, or plunged into it, being quite sufficient to produce an ugly wound of that kind, which heals with the greatest difficulty, even if produced by the teeth of a clean saw. Whatever its use to the fish may be, either as a defensive organ or as a mean for securing its prey, it is doubtless of importance to its economy; for Montagu observed, on one taken at Hastings, that "at the base of the bony process in the tail of this fish was a smaller one ready to replace the original if by accident it should be lost; or possibly this weapon may be deciduous and occasionally discharged."

Risso states that the Sting-Rays, although so powerfully armed, appear to have very peaceable habits, remaining quietly in the sand during day-time, and only moving about at night, when they frequently become entangled in the fishing nets.

Of those which have scarcely any caudal fin, some have the back free of spines, but in others it is more or less spiny or tubercular. Of the former kind are—

T. Pastinacus, Flem.; *Raja Past.* Lin.; *le Pasténague Commune*, Cuv.; *Sting-Ray*, Penn. From two to three feet in length, of which the tail is one-half, is almost round, and very thick and convex in the middle, but thinning towards the edges; muzzle sharp but short, and scarcely projecting beyond the pectoral fins, the anterior edges of which meet at an obtuse angle; mouth small; skin smooth above and below; tail very slender, and tapering to a point; irides golden; upper surface dingy yellow, and its central part dusky blue; under surface white; tail and spine dusky. It keeps on the sands, at no great distance from shore, where it is often entangled in the fishermen's nets. It is most commonly met with on the southern coast of England, where, from the redness of its flesh exposed by skinning, it has been called the *Fireflaire*. But it is found in the Mediterranean, and extends as high northward as Norway. It was well known to the ancients by the names *Trygon* and *Pastinaca*, and marvellous accounts are recorded of its dangerous properties; Pliny says, that whatever animal is wounded by it dies without remedy; and Ælian states, that the largest tree wounded with its spine will wither. Oppian mentions it as furnished by Circe to her son Telegonus, who unwittingly destroys with it his father Ulysses.

Nascitur extrema cauda penetrabile telum
Trygoni, sunt telo vires, tetrumque venenum.
In jaculo mater donavit Dædala Circe
Telegono nato telum, ut prosterneret hostes:
Hinc Ithacæ appulsus, magni genitoris abegit
Armenta, et clarum belli virtute parentem
Letifero incautus misit mucrone sub Orcum.—
Et multa expertum *Trygon* mactavit Ulyssem
Atque ducem solo prostravit vulnere tantum.

Halieut.

TRYGON.

T. Shindraki, Cuv. Four inches and a half in length, and the tail four inches long; behind the oval apertures are five transverse lines studded with minute tubercles, and corresponding with the branchial spiracles on the under side; its spine not serrated; its colour whitish on both sides. Is found on the Coromandel coast, and there called *Tenkee Shindraki*.

Some have the back more or less spiny, as—

T. Say, Cuv.; *Raja Say*, Lesuer. About thirty-six or seven inches in length, of which the tail is rather more than one-half; body roundish, convex, and olivaceous red above, flat and white beneath; tail thick and somewhat compressed at its base, nearer to which than its attenuated pointed tip is placed the spine, and behind this two elongated vertical fins, which are thick, smooth, without distinct rays, black, elevated in the middle, and gradually disappearing towards the extremities, the upper shorter than the lower fin. Is caught on the shores of New Jersey.

T. Tuberculata, Lacep. About sixteen inches in length, with a long slender tail; its form nearly rhomboidal; and both body and tail studded with pointed tubercles or very strong prickles, very hard, white, and enamel-like; five of them are close set longitudinally upon the back, and the other five at irregular distances on the tail nearer the trunk than the spine, which is serrated. Is found off Cayenne.

In some the back is tuberculated, as—

T. Isakurrah, Cuv. Thirteen inches in length, of which the tail is rather less than one-half; the body is somewhat oval; between the eyes a cluster of tubercles in shape of a bell; and others on the middle of the back forming a pyramid, from the base of which a long tapering train runs down to the spine; ventral fins small and round; tail not finned; the colour in the specimen, which was young, was whitish on both sides. Is taken off the Coromandel coast, and called by the natives *Isakurrah Tenkee*.

In some species the under part of the tail is furnished with a broad membrane; such are—

T. Sephen, Cuv.; *R. Sephen*, Gmel.; *le Raie Sif.* Bontal; *Shagreen Sting-Ray*. This fish becomes very large, Lacepede mentioning that specimens had been seen, which, from the edge of one to the other pectoral fin, measured eleven feet in breadth; the hinder part of these fins is rounded, and in many positions conceal the very small ventral fins; the form of the body is somewhat rounded, and the tail double its length, armed with one or two spines above, and from it to the very tip with a row of very sharp and small spines, and furnished beneath with a narrow black membrane or fin, which runs along its whole length to the very tip. It is also remarkable for having the whole upper surface of the body and of the tail to the base of the caudal spines covered with flat tubercles, in the middle of which are three larger than the rest, of an hemispherical form, whitish colour, and disposed longitudinally on the back; its upper surface is greyish-brown, and the under pale-

TRYGON. red. This species was discovered by Forskael in the Red Sea; and Lacepède considers it furnishes the article of commerce called *Shagreen*, which consists of the skin of the head, body, and root of the tail dyed green. This substance is distinguished from Shark's skin, with which it is often confused, by its larger and more rounded tubercles. Pennant, however, says that this article is made of the skin which grows about the rump of the Wild Ass, and also from that of the Horse. He calls it *Chagrin*, and derives the term from the Tartar word *Soghré*.

T. Wolga, Cuv. The length of the body nine and a half inches, and of the tail two feet and four inches; has a slightly pointed muzzle; body rhomboidal; the back covered with minute whitish tubercles, and in the middle two whiter than the rest, exactly round, of unequal size, and remarkable for their resemblance to pearls; upper surface dull leaden, under dusky-white, and the tail dark blue. Is found on the Coromandel coast, and called by the natives *Wolga Tenkee*.

Cuvier just notices by the name—

T. Gesneri. A species which has its rounded body completely rough with little points, and its tail beset with little studs.

In many the back is entirely smooth, thus—

R. Lymna, Forsk. About a foot in length, with an oval body, having oval bluish spots on the back. Is found in the Red Sea. Cuvier thinks this is probably the *Raja Grabatus* of Geoffroy.

Some have the tail but little tapering, rather thickish, and terminating at its tip in a fin, as—

T. Cruciatu, Cuv.; *le Raie Croisé*, Lacep. Body smooth; the denticulated spines near to the oval vertical fin, which edges and terminates the thick and conical tail; general colour greyish with a broadish black band passing from between the eyes along the back to the spine, and crossed by some black spots and little transverse bands; other spots also accompany the longitudinal band, and some are spread upon the sides, near the eyes, and upon the muzzle. Found on the coast of New Holland.

Perhaps here belongs—

T. Torpedinus seu *Trygonobatus Torped.*, Desm., in which the tail is not so slender and whip-like, but furnished with a spoon-shaped caudal fin, bilobed posteriorly, and opposite it above is placed the spine; the body nearly round, is chocolate-brown above, with deep brown points, and beneath of a dingy white; the edges of the pectoral and ventral fins are also marked with little white points. It is found in the sea about the Havannas.

In the following species the body is very wide, from the great extent of the pectoral fins, and the tail very short.

T. Kunsul, Cuv. About ten and a half inches in length, of which the tail is less than half; the head scarcely distinguishable from the body, which is oval in a transverse direction; the lateral fins extend to a blunt fringed point; tail small, tapering to a hair-point, and marked with cross-bands, alternately black and white, resembling a porcupine's quill; head and back dark grey; belly white. Is found on the Coromandel coast, and there called *Tenkee Kunsul*.

T. Maclura, Cuv.; *Raja Micrura*, Schn.; *Raie Macl.*, Lesuer. About six feet and a half in width, and three feet and a half from the muzzle to the tip of the ventral fins; the tail about one-third the length of the body, of a triangular shape, and finless; the upper sur-

face is shagreened, of a bluish-green with small, black, vermicular, interrupted lines, and larger, more distant, pale spots; under surface pale-red. This fish is taken off the coasts of the United States generally, and is said by the fishermen sometimes to attain fifteen or eighteen feet in width.

See Cuvier, *Règne Animal*; Lacepède, *Histoire des Poissons*; Lesuer in *Journal of Acad. of Nat. Sciences of Philadelphia*; Yarrell's *British Fishes*.

TRYMALIUM, in Botany, a genus so called by Fenzl, from *τρυμαλια*, a hole made with a gimlet, on account of the divisions of the fruit being pierced by a small hole each at the base. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Rhamneæ*. Generic character: calyx with a hemispherical or turbinate tube, which is connate with the ovary at the base; limb quinquefid, with ovate, acute, spreading segments, which are coloured inside; petals five, inserted in the exterior sinuses of an annular, fleshy, lobed, or pentagonal disk, alternating with and shorter than the segments of the limb of the calyx, unguiculate at the base, and convolute or cucullate at apex; stamens five, inserted with the petals, and opposite to and longer than them; filaments filiform, inflexed; anthers bursting, roundish; ovary semi-inferior, free, and villous at top, two to four-celled; ovula solitary in the cells, erect, subglobose, propped by a cup-shaped funicle; style two to four or more parted; stigmas obtuse; capsule covered by the persistent base of the calyx, two to four-celled, each cell containing one cocca; coccae separate from the base to the apex, indehiscent, perforated at the base by a small hole, one-seeded; seed erect, obovate, compressed, with a smooth, coriaceous testa.

A genus separated from *Pomaderris*, consisting of several species; they are all shrubs, natives of the south-west coast of New Holland. The leaves are alternate, quite entire, or obsoletely toothed, tomentose from stellate tomentum beneath, usually glabrous above. The flowers are villous, and disposed in racemose panicles or cymose heaps.

TRYMATOCOCCUS, in Botany, a genus so called by Pöppig, from *τρυμα*, a hole made with an auger, and *κοκκος*, a berry, on account of the ovary being pervious at the apex. It belongs to the class *Monoecia*, order *Triandria*, and the natural family of *Artocarpeæ*. Generic character: flowers androgynous; involucre none; receptacle globose, bearing numerous male flowers, which surround a solitary female flower; male flowers with a trifid perianth, three stamens, having the filaments dilated upwards, and adnate two-celled anthers; ovary one-celled, nestling within the receptacle, pervious at its apex; ovulum one; styles exserted, bifid, spiral; stigmas warted; drupe one-seeded, inclosed in a fleshy receptacle, and crowned by persistent male flowers; seeds pendulous, globose, with a coriaceous testa, and a large orbicular umbilicus, exalbuminous; cotyledons fleshy.

Only a solitary species of this genus is known; it is a middle-sized tree, a native of Tropical America. The leaves are alternate, petiolate, oblong, acuminate, and quite entire. The flowers are axillary, solitary, and drooping.

TRYPETHELIUM, in Botany, a genus so called by Sprengel, from the Greek *τρυπα*, a hole, and *θηλη*, a nipple, on account of the apothecia being furnished with holes. It belongs to the class *Cryptogamia*, and order

TRY-
PETHE-
LIUM.

TRY-PETHELIUM. *Lichenes.* Generic character: verruca hard, many in a crustaceous uniform thallus; apothecia globose, dark, furnished with holes; spora in gelatinous nuclei.

TSCHUDYA. A genus nearly allied to *Verrucaria*. **TRYPHERA**, in *Botany*, a genus so called by Blume, from *τρυφερος*, *soft*, on account of the plant being soft from wool. It belongs to the class *Octandria*, order *Pentagynia*, and the natural family of *Amaranthaceæ*. Generic character; perianth coloured, of five divisions, the two inner divisions the smallest; stamens usually eight, rarely nine or ten; anthers two-celled, bursting outwardly; styles five, subulate; capsule membranous, inclosed in the calyx, pentagonal, five-celled; cells many-seeded; funicle of seed dilated and sac-formed, with an appendage; albumen mealy, embryo peripheric.

Only a single species of this genus is known, a native of Java. The plant is clothed with white tomentum. The stems are woody and nodose. The leaves are obovate, and disposed three in a whorl. The heads of flowers are intrafoliaceous or terminal.

TRYPHIA, in *Botany*, a genus so called by Lindley, probably from *τρυφος*, *a fragment*. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ*. Generic character: sepals connivent, equal, herbaceous; petals linear, membranous, longer than the sepals, adnate to the face of the labellum, which is similar; labellum membranous, deeply partite, connate with the column; anther erect, short, with diverging lobes; and a flat ovate rostellum; glands of pollen naked.

Only one species of this genus is known, it is a terrestrial orchideous plant, with a testiculated root, membranous radical leaves, and secund flowers, a native of South Africa.

TSAPHARI is the Arabic word *Dhafári*, pronounced by Turks, Persians and Indians *Zafári*, and signifying "produced or born at Dhafár or Dhofár," a town on the South-Eastern coast of Arabia, in the land of myrrh and frankincense. It is used by the Arabian writers of *Materia Medica*, and from them by old pharmaceutical compilers in Europe, for that species of *Cadmia* which is called by Dioscorides, *Placitis*, but by other Greek writers, *Zonitis* and *Onychitis*, which last accounts for its Arabic name, as the onyx is called *Zafári* by the Arabs, because it is found in the neighbourhood of Zafár.

TSCHERNEMT, a town in the kingdom of Illyria, subject to Austria, situated in Carniola, about 33 miles from Laybach.

TSCHUDYA, in *Botany*, a genus dedicated by De Candolle to M. le Baron de Tschudy, author of *Traité des Arbres Conifères et Résineux*. It belongs to the class *Decandria*, order *Monogynia*, and the natural family of *Melastomaceæ-Miconiææ*. Generic character: calyx with a globose tube, and five bristle-formed, small, persistent lobes; petals five; stamens ten, flattish; anthers oblong, without auricles, each opening by a single pore at the apex; ovary free, bristly at the apex; style filiform, generally hairy at the base; capsule globose, membranous, four or five-celled, and probably indehiscent; seeds numerous, small, lunately incurved, each crowned by a cellular, acute, curved appendage.

Four species are known of this genus, natives of Guiana, Cayenne, and Brazil; they are shrubs with the habit of *Clidemia*, and are clothed with rufous hairs all over. The branches are terete. The leaves stand on short petioles, and are five-nerved and toothed. The

thyrses are panicled and terminal. The flowers are small, white, or whitish, seldom four-cleft, and octandrous.

TUAM, a city of Ireland, in the county of Galway, an archbishop's see. It is 20 miles from Galway, and possesses a small cathedral, used as a parish church, with a spacious and magnificent ecclesiastical palace attached, and has four principal streets; the linen manufacture is carried on there. It stands in lat. 53° 26' N., long. 9° 16' W.

TUB, *D. tobbe*; *Ger. zuber, tuppe*. Perhaps originally—

A log, hollowed out; an open vessel, without top.

But when thou hast for hire, and thee, and me,
Ygeten us these kneding *tubbes* thre,
Than shalt thou heng hem in the rooffe ful hie,
That no man of our purveyance espie.

Chaucer. *The Miller's Tale*, v. 3560.

Pray for us; for, God willing, we will not leave you. We will go before you. You shall see in us that we preached no lyes, nor tales of *tubs*, but even the true word of God.

Coverdale. *Exhortation to the Cross*, (1554.)

Here do I see a Cynick housed in his *tub*, scorning all wealth and state; and making still even with his victuals, and the day; who, when he was invited to supper to one of Alexander's great lords, could say; I had rather lick salt at Athens, then feast with Craterus.

Hall. *Works*, vol. iii. sec. 16. fol. 509. *Contentation*.

And few years hence, if anarchy goes on,
Jack Presbyter shall here erect his throne,
Knock out a *tub* with preaching once a day
And every prayer be longer than a play.

Dryden. *Prologue* 10.

A Philosopher who, in the austerity of his virtue, should condemn the art of pleasing as unworthy cultivation, would deserve little attention from mankind, and might be dismissed to his solitary *tub*, like his brother Diogenes.

Knox. *Works*, vol. i. p. 471. *Essay*, No. 96.

TUBE, } Fr. *tube, tubule*; It. *tubo*; Sp. **TUBULAR**, } *tubo*; Lat. *tubus*, generally derived
TUBULATED, } from *tumere*, to swell; or from *τυπος*,
TUBULOUS. } q.d. hollowed out by beating; *τυπτειν*, to beat or strike.

Any thing hollow or concave (with some degree of length;) a cane, a pipe.

Others with optick *tubes* the Moon's scant face
(Vaste *tubes*, which like long cedars mounted lie)
Attract through glasses to so near a space,
As if they came not to survey, but prie.

Davenant. *Gondibert*, book ii. ch. v.

There lands the fiend, a spot like which perhaps
Astronomer in the sun's lucent orbe
Through his glaz'd optic *tube* yet never saw.

Milton. *Paradise Lost*, book iii. l. 588.

When the sucker in a pump is drawn, the space it fill'd in the *tube* is certainly the same, whether any other body follows the motion of the sucker or no: nor does it imply a contradiction, that upon the motion of one body, another, that is only contiguous to it, should not follow it.

Locke. *Of Human Understanding*, vol. i. book ii. ch. iv. sec. 3.

This [juice] is conveyed by the stalk up into the branches and leaves, through little, and in some plants, imperceptible *tubes*, and from thence, by the bark, returns again to the root.

Id. *Elements of Natural Philosophy*, ch. ix.

The teeth are *tubulated*, for the conveyance or emission of the poyson into the wound the teeth make: but their hollowness doth not reach to the apex, or top of the tooth (that being solid and sharp, the better to pierce) but it ends in a long slit below the point; out of which the poyson is emitted.

Derham. *Physico-Theology*, book ix. ch. i. p. 408. No. 8.

The sturdy churl
Moves right towards the mark; nor stops for aught,
But now and then with pressure of his thumb
T' adjust the fragrant charge of a short *tube*,
That fumes beneath his nose.

Cowper. *The Task*, book v.

TSCHUDYA.

TUBE.

TUBE. Let us see, therefore, how a danger so serious, and yet so natural to the length, narrowness, and *tubular* form of the part, is provided against. *Paley. Natural Theology*, ch. xi. p. 171.

TUBICINELLA. Besides [there are] a considerable variety of corals; amongst which are two red sorts; the one most elegantly branched, the other *tubulous*. *Cook. Voyages*, vol. v. book ii. ch. viii. p. 362

TUBER, in *Botany*, a genus so called by Micheli, from the Latin name for some Fungi. It belongs to the class *Cryptogamia*, order *Fungi*. Generic character: uterus closed, marbled with veins internally; sporangia pedicellate, confined to the veins.

This genus, which is nearly allied to *Phallus*, *Tremella*, *Thelephora*, &c. consists of two known British species, *T. moschatus*, the musk-scented Truffle, a roundish, even, blackish plant, growing beneath the soil, very rare, as in North Park, near Epsom; and *T. cibarium*, the Common Truffle, a warted black plant, growing buried in the soil of woods, especially those of Beech. It is very plentiful in some parts of England, but very rare in Scotland. The plant is composed of rough, irregular, rounded nodules, one or two inches or more in diameter, cracked into small subpyramidal warts, smooth, but here and there furnished with a little brown down, white within and marbled with darker grains. The white portions are of a distinctly filamentous structure. The affinities of this genus are strong with *Rhizopogon* or White Truffle. Truffles are much sought after as a luxury, and are hunted by dogs trained for the purpose. Nees von Esenbeck relates that a poor crippled boy could detect Truffles with a certainty superior even to that of the best dogs, and so earned a livelihood. Truffles have been successfully cultivated by Bornholt. Truffles are often preyed upon by a species of *Leiodes*.

TUBERCULARIA, in *Botany*, a genus so named by Tode, from *tuberculum*, a little swelling, on account of the tuberculate form of the species. Generic character: sporidia simple, subglobose, closely packed upon an erumpent, distinct, more or less stem-like disk.

There are four known British species of this genus; they are small plants, growing on decayed sticks and branches, and trunks of trees of reddish or dirty-white colour.

TUBEROUS, } Fr. *tubereux*, *tubercle*; It. *tuber*;
TUBERCLE. } *roso*, *tubercolo*; Lat. *tuberculum*, a diminutive of *tuber*, from *tum-ere*, to swell.

Swollen; risen or rising in pimples, knobs, wens.

The Thalami Optici, Nates, Testiculi, and the other *tuberos* parts, are so many distinct harbours of the said spirits, ministering to the several species of sense and phancy.

Grew. Cosmologia Sacra, book i. ch. v. fol. 21.

The management also of these grooves, or rather of the *tubercles* and grooves, is very observable.

Paley. Natural Theology, ch. viii. p. 86.

TUBICINELLA, in *Zoology*, a genus of *Sessile Cirrhipeds*.

Generic character. Shell univalve, operculated, tubular, straight, slightly attenuated towards the base; banded circularly with transverse ribs, truncated at both ends, open at the top and closed by a membrane at the base; opercule consisting of four unequal valves; the inclosed animal projects from the upper aperture small, unequal, setaceous cirrhi.

The shell of this genus differs from that of all the other *Cirrhipeds*; it appears open at both extremities, but during the life of the animal its lower extremity is closed by membrane. The valves of its opercule are

trapezoid, obtuse, and movable, inserted in the upper part of the inner wall of the shell. The animal attaches itself to the bodies of whales, and as it grows penetrates through the skin to the subjacent fat. The type of the genus is *T. Lamarckii* of Leach.

TUBICOLARIA, in *Zoology*, a genus of *Rotiferous Ciliated Polyps*.

Generic character. Mouth terminal, funnel-shaped, and furnished with a retractile, ciliated, rotatory organ; body contractile, oblong, and contained in a tube attached to foreign bodies lying in water.

These Polyps are distinguished from the *Vaginicolæ* by being fixed instead of carrying their habitations about with them. In some respects they resemble the *Plumatellæ*, but are rotiferous instead of radiated. They live in stagnant waters, and the sheath by which they are covered seems to result from a transudation from the surface of their bodies, which entangles and agglutinates into a mass grains of sand or bits of water-plants. Lamarck considers that they form the transition from Rotiferous Polyps to those furnished with a true polypary; but instead of being adherent to the bottom of their tube, they are attached only by means of a pair of little points on their hind extremity. The type of the genus is *T. Quadriloba*, Dutrochet, the *Polype à fleur* of Schoeffer.

TUBIFEX, in *Zoology*, a genus of *Rough Worms*.

Generic character. Body thread-like, transparent, ringed, or subarticulate, and armed with lateral spines; mouth and vent terminal; inclosed in a tube.

This genus most nearly resembles the *Naidæ*; some inhabit tubes buried in mud at the bottom of ponds or brooks; and others are buried in the sand at the bottom of the sea. The type is *Lumbricus Tubifex* of Müller.

TUBIPORA, in *Zoology*, a genus of *Polyps with Foraminated Polyparies*.

Generic character. Polypary of rocky hardness, composed of cylindrical tubes, straight, parallel, separate, but connected by external transverse collars; tubes jointed, and communicating by radiating and porous collars.

The mass of connected polyparies of these animals assumes somewhat of a rounded shape, and is about a foot wide; it consists of an immense assemblage of delicate tubes placed side by side vertically, distinct from each other, but connected by horizontal collars, which appear as so many perforated stages filled up by the tubes, which, as they continue elongating, form new horizontal stages, their vertical growth being for a time stayed and collars developed till they meet and coalesce, when the tubes are again produced in a vertical direction. The polypary thus appears like a mass of minute organ-pipes banded together, and hence its common name *Organ Coral*. Peron states, that the inhabiting polyp has fringed tentacles of a bright green colour, so that at the bottom of the sea they appear as velvet verdure overspreading the rocks of coral. The type of the genus is *T. Musica* of Linnæus.

TUBULARIA, in *Zoology*, a genus of *Polyps with Vaginiform Polyparies*.

Generic character. Polypary slender, tubular, horny, simple or branching, and attached by its base; the extremities of its stem and branches each lodging a polyp, of which the mouth is furnished with two rows of naked, non-retractile tentacles, pouched at the root.

This genus of Polyps is marine, and very nearly allied

TUBU-
LARIA.
—
TUCK.

to the *Plumatellæ*, whence it leads to the *Sertulariæ*, from which it is distinguished by having the polyp cells only at the tips of its stem and branches instead of on their sides. Their tentacles are numerous, the outer or lower rank open and radiating, whilst the upper are erect, somewhat like the pistil of a flower. The reproductive oviform buds are each contained in a little vesicle produced internally, and subsequently projecting between the tube and the lower tentacles. The type of the genus is *T. Indivisa* of Linnæus.

TUBULIPORA, in *Zoology*, a genus of *Polyps* with *Reticulated Polyparies*.

Generic character. Polypary parasitic or encrusting with semimembranous cells close set, fasciculated, and mostly distinct, slender, tubular, with regular roundish apertures, rarely dentated.

This genus has very small polyparies, which seem to approximate to the *Celleporæ*, but are more frail and are more lengthy and tubular; although mostly distinct yet are they massed together or fasciculated or verticillate, and sometimes ranged in scattered rows. They are attached to fuci and corallines, &c., by very delicate and rather narrow bases; their apertures are rarely closed. The type of the genus is *T. Transversa*, Lam.; *Millepora Tubulosa* of Solander and Ellis.

TUBURCINIA, in *Botany*, a genus so called by Fries, but the derivation is not given by him. It belongs to the class *Cryptogamia*, and order *Fungi*. *Generic character*: sporidia nearly globose, unequal, filled with sporidiola; flocci interwoven, scarcely evanescent, at first adherent. The species grow on plants in a state of putrefaction.

TUCK, Fr. *estoc*; It. *stocco*. See **STICK**.

A rapier; a sword adapted for thrusting, pushing, sticking.

Dismount thy *tucke*, be yare in thy preparation, for thy assaillant is quick, skilfull, and deadly

Shakspeare. Twelfth Night, act iii. sc. 2. fol. 269.

The Batavians, as they were commanded, running in upon them, now with their long *tucks* thrusting at the face, now with their piked targets bearing them down, had made good riddance of them that stood below; and for haste omitting further execution, began apace to advance up hill, seconded now by all the other cohorts.

Milton. Works, vol. ii. book ii. fol. 29. *The History of England*.

These [pistols] being prim'd, with force he labour'd
To free's sword from retentive scabbard:
And after many a painful pluck,
From rusty durance he bail'd *tuck*.

Grey. Hudibras, part i. can. ii. v. 89.

TUCK, v. } Skinner thinks either from the Ger.
TUCK, n. } *trucken*, to press, or from *tucken*, to sink
TUCKER. } down. Junius thinks it may be to take
up, or to tug or draw up.

To take up; to fasten that which is taken, to tack up; to take or draw up the edges; to draw in, to confine.

Tucker, employed in *fulling*. Skinner derives from the same Ger. *trucken*. *Tucker* is also a border, to confine the edges.

For what time Vlisses and Nestor came to him, for agreement betweene him and Agamemnon, he laid the tables himself, and tucked vp his clothes, and went into the kitchen, and prepared their meat, to make the noble Princes sober and temperate cheare.

Vives. The Instruction of a Christian Woman, book i. ch. iii.

And vpon his head a goodly white *tucke*, containing in length by estimation fiftene yards, which was of silke and linnen wouen together, resembling something Callicut cloth.

Hakluyt. Voyages, &c., vol. ii. p. 113. *Anth. Jenkinson*.

Strange were the ladies weeds, yet more unfit than strange,
The first with cloths *tuckt* up, as nymphs in woods do range,
Tuckt up even with the knees, with bow and arrows prest.
Sidney. Arcadia, book iii. p. 450.

Shee also dofte her heavy haberieon,
Which the faire feature of her limbs did hyde;
And her well-plighted frock, which she did won
To *tucke* about her short when she did ryde,
Shee low let fall.

Spenser. Faerie Queene, book iii. can. 9.

Her clothes *tuckt* to the knee, and dainty braided hair,
With bow and quiver arm'd, she wander'd here and there
Among the forest wild; Diana never knew
Such pleasure, nor such harts as Mariana slew.

Drayton. Poly-olbion, song 26.

After that he came to the crown, he caught one of the nobles, a great friend and companion of his brother Pantaleon, who had beforetime been his adversary, and within a fuller's mill so beclawed and mangled him with *tuckers* cards and burling combs, so as he died therewith.

Holland. Plutarch, fol. 1003.

DIAN. With horns and with hounds, I waken the day;
And hie to the woodland-walks away;
I *tuck* up my robe, and am buskin'd soon,
And tie to my forehead a waxing Moon.

Dryden. The Secular Masque.

Propp'd on his lance the pensive hero stood,
And heard, and saw unmov'd, the mourning crowd.
The fam'd physician *tucks* his robes around
With ready hands, and hastens to the wounds.

Id. Virgil. Æneid, book xii.

They gather it in their hands, and twist it till it sits close to their wastes, *tucking* in the twisted part between their waste and the edge of the petticoat, which keeps it close.

Dampier. Voyages, vol. i. ch. xii. p. 327. Anno 1686.

'Twas a sad sight, before they march'd from home,
To see our warriors in red wastecoats, come,
With hair *tuck'd* up, into our tiring room.

Dryden. Marriage-a-la-Mode. Prologue.

There is a certain female ornament by some called a *tucker*, and by others the neck-piece, being a slip of fine linen or muslin, that used to run in a small kind of ruffle round the uppermost verge of women's stays, and by that means covered a great part of the shoulders and bosom.

The Guardian, No. 100.

The shiv'ring urchin, bending as he goes,
With slipshod heels, and dewdrop at his nose;
His predecessor's coat advanc'd to wear,
Which future pages yet are doom'd to share,
Carries her bible *tuck'd* beneath his arm,
And hides his hands to keep his fingers warm.

Cowper. Truth.

Good heaven! cries Kitty, what language I hear!
Have I trespass'd on chastity's laws?
Is my *tucker's* clean muslin indecently clear?
Is it no sattin apron, but gauze?

Lovibond. To Miss K. P.

TUCKET, It. *toccata*, a flourish on a trumpet.

A *tucket sonance*, the name of an introductory flourish on the trumpet. Steevens.

Then let the trumpets sound
The *Tucket-sonuance*, and the note to mount.

Shakspeare. Henry V. act iv. sc. 2. fol. 86.

TUCUMAN, in South America, a province bounded from North-West to North-East by that of Salta; by Santiago del Estero from North-East to South-West, and thence North-West by Catamarca. A branch of the Andes is its western limit, rising, in one named the Nevado, to 14,488 feet above the sea. The immeasurable plains at the foot of the Sierra stretch southward to Buenos Ayres and to Paraguay on the North. The portion of the plains within the limits of the province of Tucuman, indeed the entire province, approaches the form of a trapezium, of about 40 leagues on the sides, lying between the 25th and 28th parallels of South latitude, and 63 and 66 West longitude. The soil of the

TUCK.
—
TUCU-
MAN.

TUCU-
MAN.

TUDELA.

plains or pampas is much varied; the level very little above that of Buenos Ayres. There are districts of clay, loam, sand, gravel, and a fine rich black mould, six feet thick, upon a sandy substratum, uncommonly productive. There are six or seven kinds of grain cultivated; among them, barley, oats, and rye, with peas, beans, potatoes of several varieties, and all the European garden products. Oranges, lemons, citrons, pomegranates, peaches, grapes wild and cultivated, apples, pears, quinces, plums, melons, strawberries, gooseberries, and many fruits unknown in Europe, are cultivated at different elevations. Some parts of the province are found to be warm enough for the sugar-cane. The cattle are remarkably fine, and before the revolution the price of a cow was not more than six shillings, though afterwards it rose to ten or twelve dollars, and good working bullocks to twenty, or four pounds ten shillings sterling. The horses are small and hardy. Wild boars, deer, guanacoës, viscunnas, llamas, and alpuchas, the three last in the mountains, are numerous. The principal wild animal is the jaguar. Partridges, pheasants, and wild turkeys, wild fowl, and many varieties of fowl unknown in Europe, are plentiful, as well as small birds, both of song and plumage, of great beauty. There are upwards of twenty rivers or streams in this province, most of which unite and form the Santiago del Estero.

The inhabitants of this province, though idle, are a generous, hospitable race, and much attached to their country, which in fertility and beauty is not surpassed in any other part of the globe. The Sierra of the Andes extends 35 leagues through Tucuman, and continues its course through Salta to Potosi in a double range called the Anconiqua, abounding in minerals, and its sides affording every kind of temperature and cultivation. Gold, silver, copper, iron, lead, zinc, cobalt, alum, lime, gypsum, slate, and stone of various kinds, exist in the mountains, but none are worked, from the poverty of the people, and even the ranchos or farms are many of them very ill attended: for though the country is well peopled for South America, the numbers are by no means in proportion to the extent of surface, and yet Tucuman is the smallest of the united provinces of the Rio de la Plata. The population is most numerous in the plains, where fertility and plenty render labour very light. The wages of labourers are from three to five dollars a month. A capitaz or head-man asks eight or ten, superior labourers, as woodmen, demand six or eight, but handicraft workmen are scarce. The labouring part of the population is quick to comprehend, and very docile. The price of the best land near the city of Tucuman is about ten dollars the acre. The population of the province does not exceed 45,000 souls.

Tucuman, the city or capital of this magnificent province, is built of a rectangular form, but the public edifices are in a very neglected state. It lies in a fruitful valley on a river of the same name near where it joins the Dolce, and is distant from Buenos Ayres about 700 miles, North-West. It is the see of a bishop, who resides at Cordova. Tucuman has a cathedral, two convents, and a college. It stands in latitude $26^{\circ} 59' S.$, and contains a population of about 10,000. There are no other towns or cities of note in the province, the inhabitants residing principally in estancias or farms; the town of Trancas and similar places being no more than miserable villages.

TUDELA, a city of Spanish Navarre, situated on the

banks of the Ebro, upon rising ground, having a strong castle, and containing 3000 houses. It is at the head of a liberty, consisting of 22 towns and 2 cities. It stands in a fertile district, producing much wine, 40 miles from Pamplona.

TVER, a city and government of Russia, on the Volga, which flowing through divides it into two parts. Close to the walls the Tvertza and Timaka form a junction with that river. This city is 109 miles North-West from Moscow, in lat. $56^{\circ} 47' N.$, long. $36^{\circ} 5' E.$ It possesses a considerable trade by the Volga, and has communications with Siberia and the provinces towards Petersburg, and is divided into the old and new town. The streets are broad and run in straight lines from a central octagon. Tver has a cathedral, 27 churches, an ecclesiastical seminary, and a school for burghers' children founded by the Empress Catherine; there is also an academy for the young nobility. The number of inhabitants is 10,000.

TUFA, in *Mineralogy*, a kind of stone formed by aqueous deposition, commonly composed of carbonate of lime or silex. The appellation is also given to a concretion of volcanic dust or ashes, cemented by the agency of water; or to one formed by the disintegration and subsequent consolidation of trap or basalt.

Calcareous tufa is of most frequent occurrence; and in many localities the process of its formation may be distinctly traced. Springs of water originating from beds of limestone, commonly hold a large proportion of carbonate or bi-carbonate of lime in solution or mechanical suspension, much of which is deposited on becoming exposed to the atmosphere. The process is accelerated by contact with extraneous substances, such as a pebble, a rush, or a small twig, around which the calcareous deposit gathers in concentric layers. The so called *petrifications* of the Dropping-well, at Knaresborough, are familiar instances of this; and springs of similar properties occur in several parts of Derbyshire and Gloucestershire. At Crathorne, near Yarm, in the clay district of Cleveland, there is a remarkable spring of this description, the deposit from which speedily chokes up the trough used to convey the water to a neighbouring bleach-ground. No limestone appears at the surface within a considerable distance; but the calcareous matter contained in the water is an undoubted indication of the proximity of the great belt of magnesian limestone which traverses the island from north to south, and is well known to our geologists. The most remarkable deposit of calcareous tufa in Europe occurs in the valley of the Anio or Teverone, in Italy, where it has long been extensively quarried as a building-stone, under the appellation of travertine. It appears most conspicuously at the Cascades of Tivoli, where the formation of it is visibly and rapidly proceeding; and in the basin of Solfatara, where large beds have been produced by the overflowing of the lake. It hardens by exposure to the atmosphere, so as to become an excellent material for building; indeed, the ancient architecture of Rome owes much of its beauty to travertine, and of its solidity to the employment of puzzolana as a cement.

Tufa, being altogether a recent formation, contains no marine remains or primeval organic fossils. Recent objects, such as aqueous plants, belonging to existing species, fresh-water shells, and similar matters are of frequent occurrence. In the quarries in Italy, it is not uncommon to find workmen's tools imbedded in the travertine, occasionally at a tolerable depth. This alone

TUDELA.

TUFA.

TUFA. is a sufficient proof of the modern origin of the rock. The well-known Guadalupe human skeleton, now in the British Museum, supposed for a time to be an antediluvian fossil, was found upon examination to have been imbedded in a deposit of calcareous tufa, and consequently to be of no such antiquity as was imagined.

Siliceous tufa is most commonly formed by the agency of hot springs, which deposit the particles held in suspension by them on coming in contact with the atmosphere. It is found in a pure state near the boiling springs in Iceland and the Azores; but does not occur in such large masses as the calcareous tufa.

Volcanic tufa occurs more or less abundantly in the vicinity of volcanoes, either extinct, or in actual operation. Sometimes, especially in South America, it is produced by torrents of mud, which issue during eruptions, and leave a deposit, which subsequently hardens by the evaporation of the water. In Iceland volcanic tufa is found to alternate with lava and basalt; it sometimes occurs in very large masses, and at a considerable elevation. Many of the rock formations near Rome, and in other parts of southern Italy, are supposed to consist of volcanic tufa. Mineralogists specify many varieties of it, one of which is the well known puzzolana. The German *trass* or *tarras* is a production of similar origin, and employed for the same purposes.

Proper volcanic tufa is not of common occurrence in the British Islands. Basaltic tufa, composed of fragments of trap-rocks, cemented together by particles of decomposed basalt, is found at Arthur's Seat, near Edinburgh, and in various other basaltic districts.

TUFT, n. Fr. *touffe*; Ger. *zopf*; perhaps merely
TUFT, v. the A. S. *top*; Ger. *zopf*; the top or
TUFTED, summit: a *top-knot*. Applied to—
TUFTY. A number of small substances knitted or collected together to form one *top* or head; a knot or collection of such things; generally a knot, collection, cluster, clump. To *tuft*—

To form into, to dress or adorn with *tufts*; to pass over, in, or among the *tufts* or *tufted* grass.

Upon the cop right of his nose he hade
 A wert, and theron stode a *tufte* of heres,
 Rede as the bristles of a sowes eres.

Chaucer. *Prologue to the Canterbury Tales*, v. 560.

Also the westernmost point of Trepoyntes is a low lande, lying halfe a mile out in the sea: and vpon the innermost necke, to the landward, is a *tuft* of trees.

Hakluyt. *Voyages, &c.*, vol. ii. part ii. p. 16. M. John Lok.

They have great *tuffes* of haire hanging downe their foreheads.
 Id., vol. iii. p. 382. *Vasques de Coronado*.

These *tufts* or buttons, do never fade nor wither.

Holland. *Plinie*, book xxi. ch. xxv.

With his hounds
 The labouring hunter *tufts* the thick unbarbed grounds
 Where harbour'd is the hart.

Drayton. *Poly-olbion*, song 13.

Light and useless as the *tufted* feathers upon the cane, every wind can play with it and abuse it, but no man can make it useful.

Bishop Taylor. *Sermon* 14, part ii. fol. 136.

Bring the rathe primrose that forsaken dies,
 The *tufted* crow-toe, and the pale jessamine.

Milton. *Lycidas*, v. 142.

Towers and battlements it sees
 Bosom'd high in *tufted* trees,
 Where perhaps some beauty lies,
 The cynosure of neigh'ring eyes.

Id. *L'Allegro*, v. 77.

The sylvans that about the neighbouring woods
 Both in the *tufty* frith and in the mossy fell,
 Forsook their gloomy bow'rs, and wand'ring far abroad,
 Expell'd their quiet seats, and place of their abode.

Drayton. *Poly-olbion*, song 17

Sleeveless his jerkin was, and it had been
 Velvet, but 't was now (so much ground was seen)
 Become *tuffaffaty*; and our children shall
 See it plain rash awhile, then nought at all.

Donne. *Satire* 4.

The west part is dry and sandy, bearing a sort of long grass, growing in *tufts* very thin.

Dampier. *Voyages*, vol. ii. part ii. ch. ii. p. 49. Anno 1676.

So joys Ulysses at th' appearing shore,
 And sees (and labours onward as he sees)
 The rising forests and the *tufted* trees.

Pope. *Homer. Odyssey*, book v.

Thou best Anana, thou the pride
 Of vegetable life, beyond whate'er
 The poets imag'd in the golden age:
 Quick let me strip thee of thy *tufty* coat,
 Spread thy ambrosial stores, and feast with Jove!

Thomson. *Summer*.

The maggot of the eruca labra has a long tail, one part sheathed within another (but which it can draw out at pleasure), with a starry *tuft* at the end, by which *tuft*, when expanded upon the surface, the insect both supports itself in the water, and draws in the air which is necessary.

Paley. *Natural Theology*, ch. xix. p. 297.

The wild celery is very like the celery in our gardens, the flowers are white, and stand in the same manner, in small *tufts* at the tops of the branches, but the leaves are of a deeper green.

Cook. *Voyages*, vol. i. ch. v. p. 61.

TUG, v. } A. S. *teog-an*, to tow, q. v.

TUG, n. } To pull, to drag or draw, to haul; to wrestle, to struggle or strive.

Heerevpon insued cruell warre, in so much that in the end Venutius became enimie also to the Romans. But first they *tugged* together betwixt themselves.

Holinshed. *Chronicle*, vol. i. p. 492. *History of England*, book iv. ch. viii.

All on confused heapes themselves assay,
 And snatch, and byte, and rend, and *tug*, and teare,
 That who them sees would wonder at their fray,
 And who sees not would be affrayd to heare.

Spenser. *Faerie Queene*, book vi. can. 11.

[He] must either pay his fine for his presumption,
 (Which is six hundred duckets) or for six years
Tug at an oar i' th' gallies.

Beaumont and Fletcher. *The Custom of the Country*, act ii. sc. 3.

NIG. And to encourage thy laborious powers
 To *tug* for empire, dares thee to the field.

Id. *The Prophetess*, act iv. sc. 4.

These fellows then, according to the saying of Hierom, in this doing are much alike to cowardly and bastardly cur-dogs, which, when they be at home within house, will bite the hides and skins of wild beasts, and lie *tugging* at their shagged haire: but they dare not enter into the field.

Holland. *Plutarch*, fol. 52.

All softening simples, known of sovereign use,
 He presses out, and pours their noble juice;
 These first infus'd, to lenify the pain,
 He *tugs* with pincers, but he *tugs* in vain.

Dryden. *Virgil. Aeneid*, book xii.

By heav'n I'll *tug* with Harry for a crown,
 Rather than have it on tame terms of yielding,
 I scorn to poach for power.

Id. *The Duke of Guise*, act iv.

He [Turnus] said: and downward by the feet he drew
 The trembling dastard: at the *tug* he falls,
 Vast ruins come along rent from the smoking walls.

Dryden. *Virgil*, book ix.

With hearts of proof,
 Full against wind and tide, some win their way;
 And when strong effort has deserv'd the port,
 And *tugg'd* it into view, 'tis won! 'tis lost!

Young. *The Complaint*, No. 8.

What now avail
 The strong built sinewy limbs, and well spread shoulders!
 See how he *tugs* for life, and lays about him,
 Mad with his pains!

Blair. *The Grave*.

A man that knows the world.

JAM. I needs must learn

That have so good a *tutress*.

Beaumont and Fletcher. The Spanish Curate, act v. sc. 1.

False Fame, thy mistris, *tutour'd* thee amiss;

Who teaches school in streets, where crowds resort.

Davenant. Gondibert, book iii. ch. iii.

As for the deliuering vp of the women, either by her Father or
 by some other, wee must note, that in ancient times, all women
 which had not husbands nor fathers to gouerne them, had their
tutors, without whose authority there was no act which they did,
 warrantable; and for this cause they were in marriage deliuered
 vnto their husbands by others.

Hooker. Ecclesiastical Politie, book v. sec. 73, fol. 398.

He that should grant a *tutorship*, restraining his grant to some
 one certaine thing or cause, should doe but idely, because *tutors* are
 giuen for personall defence generally, and not for menaging a few
 particular things or causes.

Id. Ib. sec. 80, fol. 434.

He carried his son Lucius, then a wild youth, with him into
 that country, where he caused him to be educated in academical
 learning in Trinity College, near to Dublin, and afterwards sent
 him to travel under the *tutelage* and protection of a discreet
 person.

Wood. Athenæ Oxon., vol. i. fol. 586.

These *tutelar* genii, who presided over the several people and
 regions committed to their charge, were watchful over them for
 good, as far as their commissions could possibly extend.

Dryden. Dedication to Juvenal.

Whom shall we fear, while he, Heaven's awful Lord,
 Unsheaths for Israel his avenging sword?
 His outstretch'd arm, and *tutelary* care,
 Guarded and sav'd us in the last despair.

Pitt. The Song of Moses.

In happy hour, (pleas'd Euryclea cries)

Tutor'd by early woes, grow early wise!

Inspect with sharpen'd sight, and frugal care,

Your patrimonial wealth, a prudent heir.

Pope. Homer. Odyssey, book xix.

A prattling nurse is a better *tutrix* to her foster-child.

Dalgarno. Deaf and Dumb Man's Tutor, p. 48.

Mr. Samuel Reynolds was master of the Grammar School at
 Plympton; and whatever classical instruction Sir Joshua received
 was under the *tuition* of his father.

Malone. Memoirs of Sir Joshua Reynolds.

Pleasure, which during the period of *tutelage*, engaged only a
 part of her votary's attention, now usurps the whole of it.

Knox. Works, vol. vi. p. 204. Sermon 14.

Some of those prodigies of ignorance and folly, the Rabbin of
 the Jews who lived since the dispersion of the nation, thought all
 would be well if for *tutelar* deities they substituted *tutelar* angels.

Horsley. Works. Sermon 29, vol. ii. p. 380.

Before almost every house there is a little cupboard, furnished
 with a glass window, in which one of these *tutelary* powers is
 waiting to be gracious.

Cook. Voyages, vol. i. ch. ii. p. 32.

Aristotle, after having been *tutor* to Alexander, and most mu-
 nificently rewarded, as it is universally agreed, both by him and
 his father Philip, thought it worth while, notwithstanding, to
 return to Athens, in order to resume the teaching of his school.

Smith. Wealth of Nations, book i. ch. x. p. 184.

TUITION

TUITION.

TULIP.

I'll bring you to the pearly cars,
By dragons drawn, above the stars;
The colours of Arabian glow;
And to the heart-dilating show
Of paintings, which surmount the life:
At once your *tut'ress*, and your wife.

Smart. Reason and Imagination.

Conceited pertness teaches the new loosened school-boy and
novel-studied girl thy scorn of *tutorage* and controul.

Search. Light of Nature, vol. ii. part iii. ch. xxvii. p. 301.

Yet this obtains in all,
That all discern a beauty in his works,
And all can taste them: minds, that have been form'd
And *tutor'd*, with a relish more exact,
But none without some relish, none unmov'd.

Cowper. The Task, book iv.

TULA, in *Botany*, a genus so called by Adanson,
and, like the rest of his names, is probably without any
meaning. It belongs to the class *Pentandria*, order
Monogynia, and the natural family of *Rubiaceæ-
Hedyotideæ*. Generic character: calyx five-toothed;
corolla with an oblong tube, a five-cleft limb and blunt
toothed curled lobes; stamens five inclosed; capsule
two-celled, many seeded.

A genus nearly allied to *Dentella*, and contains only
one known species, *T. Adansonii*, a native of Peru, on
rocks by the sea-side; it is a plant with the habit of
Soldanella. The leaves are reniform and petiolate, the
pedicels are axillary, short, and one-flowered. It is
perhaps only a species of *Nertera* badly defined.

TULBAGHIA, in *Botany*, a genus dedicated by
Linnaeus to Tulbagh, a Dutch governor at the Cape of
Good Hope. It belongs to the class *Hexandria*, order
Monogynia, and the natural family of *Liliaceæ*. Ge-
neric character: perianth coloured, urceolately funnel-
shaped, with a cylindrical tube and a six-cleft equal
spreading limb; corona in the throat of the perianth of
three bifid segments, which are either distinct or com-
bined into a ring; stamens six, three of which are in-
serted in the throat, and the other three in the tube of
the perianth, with very short filaments; ovary three-
celled; style terete, crowned by a depressed turbinate
stigma; capsule covered by the perianth, which is con-
stricted at the throat, membranous, ovate, trigonal,
three-celled, with three loculicidal valves; seeds two in
each cell, one above the other, triquetous, with a crus-
taceous dark testa.

The genus *Tulbaghia* consists of two or three known
species. They are herbs having fasciated tuberous roots,
natives of the Cape of Good Hope. When bruised
they exhale a scent like garlic. The leaves are radical,
linear, or filiform. The flowers are disposed in umbels
at the tops of the scapes. The spathe is of two small
valves.

TU'LIP, } Fr. *tulipan*; the Dalmatian cap cot:
TU'LIPIST. } It. *tulipano*; Sp. *tulipan*; so called
from its resemblance to the *tulipan*, or *turban*, i. e. the
Turkish cap. Skinner.

It follows not the usurping *tulip* is better than the rose, because
preferred by some forraign fancies before it.

Fuller. Worthies, vol. ii. p. 537. *Yorkshire*.

Thou fool, (said Love) know'st thou not this,
In every thing that's good she is?
In yonder *tulip* go and seek,
There thou may'st find her lip, her cheek.

Carew. The Enquiry

Some commendably affected plantations of venomous vege-
tables, some confined their delights unto single plants, and Cato

seemed to dote upon cabbage, while the ingenuous delight of
tulipists stands saluted with hard language, even by their own
professors.

Brown. Urne Buriall.

TULIP.

Ladies, like variegated *tulips*, show,
'Tis to their changes half their charms we owe;
Fine by defect, and delicately weak,
Their happy spots the nice admirer take.

Pope. Epistle 2.

TULIPA, in *Botany*, a genus so called by Tour-
nefort, from *Thoulybun*, the Persian name of the
tulip. It belongs to the class *Hexandria*, order *Mono-
gynia*, and the natural family of *Liliaceæ*. Generic
character: perianth coloured, deciduous of six-seg-
ments; segments nearly equal, conniving into the form
of a bell; stamens six, hypogynous; ovary three-
celled; ovula numerous, two rows in each cell; stigma
sessile, three-lobed; lobes spreading complicate; capsule
trigonal, three-celled, with three loculicidal valves;
seeds numerous, horizontal, flat, with a rufescent testa,
having the raphe and chalaza scarcely manifest; em-
bryo straight.

This genus consists of all the different species and
varieties of the tulip; they are well known bulbous-
rooted plants, natives of the South of Europe and
Middle Asia. The leaves are radical, ovate-oblong, or
lanceolate. The flowers are erect, and only one on
each scape.

TULLE, a town of France, in the department of the
Correze, situated at the conflux of the Correze and
Solane, among mountains and rugged rocks. It was
once a bishopric, and has now a cathedral, remarkable
for the beauty of its steeple. The population is nearly
9000; the lat. 45° 16' N.; long. 1° 42' E.

TULOSTOMA, in *Botany*, a genus so called by
Persoon, from the Greek *τυλος*, a wart, and *στομα*, a
mouth, on account of the warted or teated mouth. It
belongs to the class *Cryptogamia*, and order *Fungi*.
Generic character: peridium papyraceous, with a deci-
duous bark, distinct from the stem; capillitium unequal.

This genus, which is nearly allied to *Lycoperdon*,
consists of a single known British species, *T. Mammo-
sum*, a plant growing on old walls and in sandy pas-
tures common about London; it varies with a smooth
and nearly solid stem, or rather scaly with a central
pith; the sporidia of a bright rust colour.

TU'MBLE, v. } Fr. *tomber*; It. *tombolare*; Sp.
TU'MBLE, n. } *tumbar*; D. *tommelen*, *tummelen*,
TU'MBLER. } *tuymelen*; Ger. *tummeln*; Sw.
tumla; A. S. *tumb-an*, to dance, to tumble, to play the
tumbler. Somner. Herod's daughter danced, A. S.
tumbude. The word may have been transferred from
the voluntary turns, rollings, fallings, and similar ges-
tures of dancers.

To turn or roll about, to fall or cause to fall, to
throw down, to throw or toss about.

A tumbler (Sw. *tumlare*), *poculum rotundum*—rolled
round the table to show that it was empty. Ihre.

Right als I rede, þei *tombled* in Tuede, þat woned bi þe se.

R. Brunne, p. 273.

If the forme of this world is so seld stable, and if it turneth by
so many enterchaunges; wylt thou than trusten in the *tomblyng*
fortunes of men?

Chaucer. Boecius De Consolatione, book ii. p. 416.

Trowest thou that ther be any thing in this erthlie mortal *tem-
blyng* thinges, that may bringen this estate?

Id. Ib. book iii. p. 429.

The Flemmyges with theyr arbalasters and theyr longe mareys
pykes set a slope before theym, woudyd so theyr horses, that they
laye *tumbleynge* one in the others necke.

Fabian. Chronycle, p. 410.

TUMBLE. You put her to the kepyng of the sworde plaiers, you suffre her to see the *tumblers*, and yet ye do not remembre, that shee is **TUMEFY.** younge, and you not aged.

The Golden Boke, c. xxxvi.

And, cleaving the hard steele, did deepe invade
Into his head, and cruell passage made
Quite through his brayne: he, *tumbling* downe on ground,
Breath'd out his ghost.

Spenser. Faerie Queene, book ii. can. 8.

Now when he was gone a little past the ambush, they began to assaile him from behind, *tumbling* down and throwing mighty stones upon his head and neck.

Holland. Plutarch, fol. 155. Of Brotherly Love.

But handsomely and well? does your Lordship take us
For the Dukes *tumblers*? we have done bravely, sir,
Ventur'd our lives like men.

Beaumont and Fletcher. The Loyal Subject, act ii. sc. 1.

As I have seene
A nimble *tumbler* on a burrow'd greene,
Bend cleane awry his course, yet give a checke,
And throw himselfe upon a rabbit's necke.

Browne. Britannia's Pastorals, book ii. stan. 4.

Their heads being too weak to look down from such a precipice, they either grow dizzy and stand trembling, or *tumble* down with a much greater ruin.

Sharp. Works, vol. vi. p. 209. Sermon 15.

Thus heav'd, the fix'd foundations of the rock
Gave way: Heav'n echo'd at the rattling shock.
Tumbling it chok'd the flood.

Pope. Virgil. Aeneid, book viii.

What incredible and astonishing actions do we find rope-dancers and *tumblers* bring their bodies to!

Locke. Conduct of the Understanding, sec. 4.

TUMBREL, Fr. *tombereau*; Low Lat. *tumberella*.
A kind of rolling carriage, used as a punishment of disgrace or infamy. Also a cart or waggon.

And myllers for stelyng of corne to be chastysed by y^e *tumbrell*, and this to be put in execucion he gaue auctorytie to all mayres, baylyffes, &c.

Fabyan. Chronycle, Anno 1284.

He was taken thens and sette in a *tumbrell*, and therunto fastenyd with chaynes of iren, and so conueyed, bareheded, with dynne and crye, thorough the hyghe stretes of Parys.

Id. Ib. Anno 17. Philip de Valoys.

Or hires a Friezland trotter, halfe yard deepe,
To drag his *tumbrell* through the staring Cheape.

Hall. Satire 4, book v.

My corpse is in a *tumbril* laid, among
The filth and ordure, and enclos'd with dung.

Dryden. The Cock and the Fox.

The sled, the *tumbril*, hurdles, and the flail,
The fan of Bacchus, with the flying sail.

Id. Virgil. Georgics, book i.

Again impetuous to the field he flies;
Leaps ev'ry fence but one, there falls and dies;
Like a slain deer, the *tumbrel* brings him home,
Unmiss'd but by his dogs and by his groom.

Cowper. Progress of Errour.

TUMEFY, v. Fr. *tuméfier*, *tumeur*; It. *tumore*; Sp. *tumor*; Lat. *tumor*, from *tum-ere*, to swell. For the technical description of *tumour*, see the Quotations from Wiseman.
TUMEFY, v. To cause to swell; to swell; to puff out; *tumid*, met.—

Inflated; large or grand to excess; beyond need, without strength.

The med'cinable mallow here,
Assuaging sudden *tumours*,
The jagged polypodium there,
To purge all rotten humours.

Drayton. The Muses' Elysium. Nym. 5.

VOL. XXVIII.

So high as Heav'n the *tumid* hills, so low
Down sunk a hollow bottom broad and deep,
Capacious bed of waters; thither they
Hasted with glad precipitance.

Milton. Paradise Lost, book vii. l. 289.

He, there the while this shuffling that had seene,
Who to her party Isabel had won,
To pass for Hainault humbly prays the queen,
Prompting her still what good might there be done,
To ease the anguish of her *tumorous* spleen.

Drayton. The Barons' Wars, book iii.

From whence it follows of necessity, that besides the outside bulky extension, and *tumorous* magnitude, there must be another kind of entity, whose essential attribute or character is life, self-activity, or cogitation.

Cudworth. Intellectual System, book i. ch. v. p. 830.

I applied three small causticks triangular about the *tumefied* joint.

Wiseman. Chirurgical Treatises.

The common signs and effects of weak fibres are paleness, a weak pulse, *tumefactions* in the whole body or parts.

Arbuthnot. Nature of Aliments.

[A *tumour* is explained by Galen] a disease in which the parts of the body recede from their natural state by an undue encrease of their bigness.

Wiseman. Chirurgical Treatises, book i. ch. i. p. 1.

He said, and cowering as the dastard bends,
The weighty sceptre on his back descends:
On the round bunch the bloody *tumours* rise;
The tears spring starting from his haggard eyes.

Pope. Homer. Iliad, book ii.

When he [David] looks upon God, he submits and is silent. But when he considers the instrument, his heart begins to rise, and his passions to *tumulate* and ferment into a storm.

Wilkins. Natural Religion, book i. ch. xvii.

The muscles which move the toes, and many of the joints of the foot, how gracefully are they disposed in the calf of the leg, instead of forming an unwieldy *tumefaction* in the foot itself.

Paley. Natural Theology, ch. ix. p. 112.

As from his *tumid* urn when Nilus spreads
His genial tides abroad, the favour'd soil
That joins his fruitful border, first imbibes
The kindly stream.

Glover. London.

TU'MULT, n.

TU'MULT, v.

TUMU'LTR, n.

TUMU'LTUARY,

TUMU'LTUARILY,

TUMU'LTUARINESS,

TUMU'LTUATE, v.

TUMULTUA'TION,

TUMU'LTUOUS,

TUMU'LTUOUSLY,

TUMU'LTUOUSNESS.

all applied to—

A noisy, disorderly assembly, *raising* or rising; a commotion, conducted with violence; a turbulent mob or multitude; generally, noisy confusion.

After that theis thyngs were dyspatched, Cesar thoughte there had ben no cause of *tumult* and rebellion left in Gallia.

Goldynge. Caesar. Commentaries, book iii. fol. 69.

And herein they could not be stayed, eyther by chastisement of their officers, or by anye reuerence of their king; but when he would haue spoken unto them, they would not suffer him to bee hearde, but disturbed his tale with their *tumultuous* cry, and violet thrög.

Brende. Quintus Curtius, book x. fol. 294.

He shall not doe this *tumultuously* or violently. For he shall not chide, nor shal not crie out against them that bee contentious.

Udall. Erasmus. Mathew, ch. xii. fol. 53.

Tho', as they rode together on their way,
A rout of people they before them kend,
Flocking together in confusde array;
As if that there were some *tumultuous* affray.

Spenser. Faerie Queene, book v. can. 11.

5 P

TUMEFY.

TUMULT.

TUMULT.

Why do the Gentiles *tumult*, and the nations
Muse a vain thing. *Milton. Psalm 2.*

They who attended them without, *tumulting* at the death of
their masters, were beaten back; and driven into a Church, de-
fending themselves were burnt there in the steeple.

Id. Works, vol. ii. fol. 104. History of England, book ii.

Notwithstanding which compliance, they endeavoured here to
set up another emperor against him; and Helvius Pertinax, who
succeeded Governour, found it a work so difficult to appease them,
that once in a mutiny he was left for dead; and though after-
wards he severely punish'd the *tumulters*, was fain at length to
seek a dismissal from his charge. *Id. Ib. book ii. fol. 32.*

You have had a fair time to prepare yourself, God give you a
boon voyage to the haven you are bound for, (which I doubt not
will be Heaven,) and me the grace to follow, when I have pass'd
the boisterous sea and swelling billows of this *tumultuary* life.

Howell. Letter 73, book ii.

Stephen, son to the earl of Blois and Adela, daughter to Wil-
liam the conqueror, invades the kingdom,—contends with Maud
the empress for the succession, and reigned *tumultuarily* eighteen
years and ten months.

Daniel. History of Civil War, book i.

The *tumultuariness* of the people, or the factiousness of pres-
byters, gave occasion to invent new models.

King Charles.

This is enough I hope to make you keep down this boiling and
tumultuousness of the soul, lest it make you either a prey, or else
companions for devils. *Hammond. Works, vol. iv. p. 614.*

Till four hundred years after Christ no Catholick persons, or
very few, did provoke the secular arm or implore its aid against
hereticks, save only that Arius behaved himself so seditiously and
tumultuarily, that the Nicene fathers procured a temporary decree
for his relegation. *Taylor. Liberty of Prophecy, Ep. Ded.*

If any thing were well proposed, it took no place, it entred not
into the minds of the rest to approve and follow it, but as men
confounded with strange and unusuall amazements of spirit, they
attempted *tumultuously* they saw not what.

Hooker. Ecclesiastical Polity, book v. sec. 76. fol. 408.

Both parties meet: they raise a doleful cry:
The matrons from the walls with shrieks reply:
And their mixt mourning rends the vaulted sky.
The town is fill'd with *tumult* and with tears,
Till the loud clamours reach Evander's ears.

Dryden. Virgil. Æneid, book i.

Innumerable experiments shew, that heat, in the fire especially,
is a positive quality, consisting in a *tumultuary* and vehement
agitation of the minute parts of the body, that is said to be hot,
and producing also in the bodies, that it is communicated to, a
local motion, which is manifestly a positive thing.

Boyle. Works, vol. iii. fol. 148. Nature of Cold.

But the injury being once owned by a retribution, and ad-
vanced by defiance, like an opposing torrent, it *tumultuates*,
grows higher and higher, begins to fix, and so by an improvement
of the humour, that which at first was but a sudden motion, rises
into a violent, and from thence passes into a settled revenge.

South. Sermon 7, vol. viii. p. 198.

At once the cornel rattled in the skies;
At once *tumultuous* shouts and clamours rise.

Dryden. Virgil. Æneid, book xii.

The fierce Curetes too in arms advance,
And tread *tumultuously* their mystic dance:
And, lest the cries should reach old Saturne's ear,
Beat on their brazen shields the din of war.

Pitt. Callimachus to Jupiter.

In the night, however, the *tumult* of their minds having sub-
sided, and given way to reflection, they sighed often and loud.

Cook. Voyages, vol. i. ch. i. p. 268.

'Tis not, however, insolence and noise,
The tempest of *tumultuary* joys,
Nor is it yet despondence and dismay
Will win her visits and engage her stay.

Cowper. Table-Talk.

The workmen, accordingly, very seldom derive any advantage
from the violence of those *tumultuous* combinations, which gene-
rally end in nothing but the punishment or ruin of the ring-
leaders.

Smith. Wealth of Nations, book i. ch. viii. p. 90.

Nor was this their manner of speaking, only when at ease, or *TUMULT.*
when they could hope to obtain favour by it: but, as the case of
St. Stephen shews, their sentiments were the same, under the cer-
tainty, under the actual pains, of death itself, even when suddenly
and *tumultuously* inflicted on them. *TUN.*

Secker. Works, vol. iii. p. 281. Sermon 18.

TUN, or

TON,

TUN, v.

TU'NNAGE,

TU'NNAGING, n.

TU'NNEL, n.

TU'NNEL, v.

To the low Lat. *tonnæ* or *tunnæ*,
vicinum est tina. Voss. Fr. *tonne*,
tonneau; It. *tina*; Sp. *tonel*, *tone-*
lado; D. *tonne*; Ger. *tonne*; Sw.
tunna; A. S. *tunne*. Skinner
(followed by Wachter and others)
derives from the Lat. *tina*, and

that from the Gr. *δελυος*, a kind of vessel for wine, accord-
ing to Hesychius. Tooke thinks *tun*, and its diminu-
tive *tunnel*, (A. S. *tænæl*, *tenæl*,) are the past participle
of the verb *tyn-an*, to inclose, to encompass. And that
the Lat. *tina* is itself from *tyn-an*. See TOWN. *Tun*—

Any inclosure; any package or bundle; a certain
quantity or weight in one package; a certain measure
of liquid inclosed in one vessel; the vessel holding such
measure.

From *Fabian*, (quoted by Tooke,) *tunne* was a place
to inclose, or hold prisoners. In the reprint by Mr.
Ellis the word is *towre*, p. 400. Certain persons of
London brake up the *tunne* in the warde of Cornhill;
and tooke out certayne persons that hither were com-
mitted by Sir Thom. Briton, then Custos or gardeyn of
the citie. *Fabian, Edward I., p. 142.*

Tunnel, to inclose smoke in its passage out; to inclose
liquor, in its passage into a *tun* or other vessel; a net,
said to be shaped like a *tunnel*, for liquids, wide at the
mouth, and diminishing to a point. And to *tunnel*, to
make nests in this form is used by Derham.

And ever sith hath so the tappe yronne,
Til that almost all empty is the *tonne*.

Chaucer. The Reves Prologue, v. 3891.

Every piler the temple to sustene
Was *tonne-gret*, of yren bright and shene.

Id. The Knightes Tale, v. 1995.

But ofte for defaute of bondes
All sodeinly, er it be wist,
A *tunne*, whan his lie arist
Tobreketh, and renneth all aboute,
Whiche els shulde nought gone out.

Gower. Prologue to Conf. Am. p. 11.

Prouysyon came fro al partyes and aryued in flaunders, both
wyne, salte, flesshe, hay in *tonnes*, otes, onyons, bysket, floure,
egges in pypes, and of al maner of thynges y^e coulede be deuysed.

Lord Berners. Froissart. Cronycle, vol. ii. ch. xlix. p. 168.

The caracke being in burden by the estimation of the wise and
experienced no lesse then 1600 *tunnes* had full 900 of those stowed
with the grosse bulke of marchandise, the rest of the *tunnage*
being allowed, partly to the ordinance, &c.

Hakluyt. Voyages, &c. vol. ii. part ii. p. 198. Madre de Dios
taken.

And before we came to his presence we went thorow a great
chamber, where stood many small *tunnes*, pailles, bowles and pots
of siluer.

Id. Ib. vol. i. p. 263. George Killingworth.

Then when they please they make poudre of it [Tobacco] and
then put it in one of the ends of the said cornet or pipe, and lay-
ing a cole of fire vpon it, at the other ende sucke so long, that
they fill their bodies full of smoke, till that it commeth out of
their mouth and nostrils, euen as out of the *tonnell* of a chimney.

Id. Ib. vol. iii. ch. x. p. 224. Jaques Cartier 2.

Whan the new wine is *tunned*: the dry huskes are cast out.

Golden Boke. Letter 5.

It was a vault ybuilt for great dispence,
With many raunges reard along the wall,
And one great chimney, whose long *tonnell* thence
The smoke forth threw.

Spenser. Faerie Queene, book ii. can. 9.

TUN.

TUNE.

These mixtures of divers kinds are never good, but alwaies discordant : naught in old wines that come to our table, much worse then you may bee sure, in those that be new and not yet *tunned* up.
Holland. Plinie, book xvii. ch. xxii.

Let them passe along either through the concavities of an oxe shanke and maribone, or else an earthen pipe or *tunnell* made for the nonce.
Id. Ib. ch. xxi.

Lo ! there th' unthankful swallow takes her rest,
And fills the *tunnell* with her circled nest.

Hall. Satire 2. book v.

DUKE. Why should he die, sir ?

LUC. Why ? for filling a bottle with a *tunne-dish*.

Shakspeare. Measure for Measure, act iii. sc. 2. fol. 74.

They hear that all things shall be order'd, all things regulated and settled ; nothing written but what passes through the custom-house of certain publicans that haue the *tunnaging* and poundage of all free-spoken truth.

Milton. Of Unlicens'd Printing.

The ships employed herein are found by the king of Spain, who pays the officers and crews, and the *tunnage* is divided into a certain number of bales, all of the same size.

Anson. Voyages, book ii. ch. x. p. 327.

The Cyclops here their heavy hammers deal ;
Loud strokes and hissings of tormented steel
Are heard around : the boiling waters roar ;
And smoky flames through fuming *tunnels* soar.

Dryden. Virgil. Aeneid, book viii.

With what prodigious subtilty do some foreign birds not only plat and weave the fibrous parts of vegetables together, and curiously *tunnel* them, and commodiously form them into nests ; but also artificially suspend them on the slender twigs of trees to keep them out of the reach of rapacious animals.

Derham. Physico-Theology, book iv. ch. xiii.

These little houses look coarse, and shew no great artifice outwardly ; but are well *tunnelled* and made within with a hard tough paste.

Id. Ib. book v. ch. xiii. p. 235. N. 20.

And we took on board about fifteen *tons* of water, which we brought off in the country boats, at the rate of about three shillings per *ton*.

Cook. Voyages, vol. iv. book iv. ch. xi. p. 255.

The route which it is made to take, in order that, and until that, it arrive at its destination, is more complex indeed and intricate, but, in the midst of complication and intricacy, as evident and certain, as is the apparatus of cocks, pipes, *tunnels*, for transferring the cider from one vessel to another.

Paley. Natural Theology, ch. xv. p. 230.

TUNE, *n.*

TUNE, *v.*

TU'NEABLE,

TU'NEABLY,

TU'NEFUL,

TU'NEFULLY,

TU'NELESS,

TU'NER,

TU'NING.

See TONE. Fr. *ton* ; It. *tuono* ; Sp. *tono* ; Lat. *tonus* ; Gr. *τονος*, from *τείν-ειν*, *intendere*, (sc. *vocem*, *sonum*.) to stretch the voice.

An extension—of sound, of continuous sounds, of sounds in harmony, or concert, or concert ; an harmonious, a musical continuity or succession of sound ; met., harmony, concert, congruity ; concord ; a concurring or agreeing disposition or arrangement or temperament.

In the whiche swete sounders wee shall here so great plentie and diuersitie of *tunes* as euer was herde before, for sometime he speketh of god sometime of y^e deuil sometyne of holy angels, sometyne of dampened spirites.

Fisher on Prayer. Seuen Psalms. Psalm 38. part ii. ch. iii.

But now a while lett downe that haughtie string,
And to my *tunes* thy second tenor rayse,
That I this man of God his godly armes may blaze.

Spenser. Faerie Queene, book i. can. 11.

But nymphes and Faeries by the bancks did sit
In the wood's shade which did the waters crowne,
Keeping all noysome things away from it,
And to the water's fall *tuning* their accents fit.

Id. Ib. book vi. can. 10.

Let the words be so set and couched ; the affection so appeare, the countenance be so composed and the gesture so ordered, and the voice so *tuned*, that all concurring together may win credit to the speech, and be effectually to move.

Holland. Plutarch, fol. 89.

[England] is commonly called by foreigners, (the ringing Island,) as having greater, more, and more *tuneable* bells than any one country in Christendom.

Fuller. The Worthies of England, vol. i. p. 80. Bark-shire.

Caius Graccus the oratour, a man by nature blunt, rude in behaviour, and withall over-earnest and violent in his manner of pleading, had a little flute or pipe made for the nonce, such as musicians are wont to guide and rule the voice gently by little and little up and down, between base and treble, according to every note as they would themselves, teaching their scholars thereby to have a *tunable* voice.

Holland. Plutarch, fol. 101.

In summer he [merle or blackbird] singeth cleare and *tunably*, in winter he stutteth and stammereth : but about the sun-steed in December, hee is mute and dumbe altogether.

Holland. Plinie, book x. ch. xxix.

The trembling streames which wont in chanel cleare
To romble gently downe with murmur soft,
And were by them right *tunefull* taught to beare
A baser part amongst their consorts oft.

Spenser. The Teares of the Muses.

But when in hand my *tunelesse* harp I take
Then do I more augment my foe's despight ;
And grieve renew, and passions do awake
To battaile, fresh against myself to fight.

Id. Sonnet 44.

Our mournful Philomel,

That rarest *tuner*,

Henceforth in April

Shall wake the sooner.

Drayton. The Shepherd's Sirena.

———— All organs of sweet stop,
All sounds on fret by string or golden wire
Temper'd soft *tings*, intermixt with voice
Choral or unison.

Milton. Paradise Lost, book vii. l. 596.

Thus the blest gods the genial day prolong,
In feasts ambrosial, and celestial song.
Apollo *tun'd* the lyre ; the Muses round
With voice alternate aid the silver sound.

Pope. Homer. Iliad, book i.

———— The king observ'd alone
The silent tear, and heard the secret groan :
Then to the bard aloud : O cease to sing,
Dumb be thy voice, and mute the *tuneful* string ;
To every note his tears responsive flow.
And his great heart heaves with tumultuous woe.

Id. Ib. Odyssey, book viii.

If therefore the praises of God, *tunefully* performed, be naturally attended with an holy pleasure, that pleasure, I say, must needs produce attention ; actuate all the springs, and enliven all the motions of devout and heavenly, nay even of earthly, and sluggish minds.

Atterbury. Sermon 9. vol. iv. p. 237.

If any one, in public speaking, shall have formed to himself a certain melody or *tune*, which require rest and pauses of its own, distinct from those of the sense, he has, undoubtedly, contracted one of the worst habits into which a public speaker can fall.

Blair. Lecture 33. p. 442.

———— Mean-time the shrill *tun'd* bell
Of some lone ewe that wanders from the rest
Tinkles far off, with solitary sound.

Warton. Acis and Alcyon.

The screws revers'd (a task which, if he please,
God in a moment executes with ease),
Ten thousand thousand strings at once go loose,
Lost, till he *tune* them, all their pow'r and use.

Couper. Retirement.

But chief the breeze, that murmurs through yon canes,
Enchants the ear with *tunable* delight.

Grainger. The Sugar-Cane, book iii. v. 575.

Their features were far from disagreeable, their eyes were lively, and their teeth even and white, their voices were soft and *tunable*, and they repeated many words after us with great facility.

Cook. Voyages, vol. ii. book iii. ch. iv. p. 150.

How often have I led thy sportive choir,
With *tuneless* pipe, beside the murmur'ing Loire !
Where shading elms along the margin grew,
And freshen'd from the wave the zephyr flew.

Goldsmith. The Traveller.

TUNICLE. **TU'NICLE,** } Fr. *tunique*; It. *tonica*; Sp.
TUNIS. **TU'NICK,** } *tunica*; Lat. *tunica*, for which Vos-
TUNIS. **TU'NICATED.** } sius finds no etymology that he can
 approve. In the A. S. version of the Scriptures *iunece*
 is of common occurrence (see Lye); but it may have
 been adopted from the Latin; though, as undoubtedly
 some roots of Latin words are to be found in our
 northern language, it admits at least of conjecture that
 the A. S. *tyn-an*, to inclose, to infold, to inwrap, may
 be the origin of the Lat. *tunica*. See TOWN, TUN, TEN.
 That which infolds or inwraps, or invests; a vest, a
 clothing, an integument, a covering.

Tunicle of the eye, a thin coat or covering of the eye. **TUNICLE**
Tunicle, much lyke the vppermoste garment of the deacon.
Tyndal. Workes, fol. 11. *Prologue to Moses.* **TUNIS.**

The said medicine likewise is good for to extend and dilate the
tunicles that make the ball or apple of the eye.

Holland. Plinie, book xxv. ch. xiii.

To him seven talents of pure ore I told,
 Twelve cloaks, twelve vests, twelves *tunics* stiff with gold.
Pope. Homer. Odyssey, book xxiv.

The most common of these, which we observed, were two sorts
 of liliaceous roots, one simply *tunicated*, the other granulated upon
 its surface. *Cook. Voyages*, vol. vi. book iv. ch. iii. p. 296.

T U N I S.

Bound-
aries.

TUNIS, the second and smallest of the Barbaresque States, is bounded by the sea and a part of the Tripolitine territory on the North and East, by Tripoli and the Great Desert (Sahrá) on the East and South, and by the Regency or State of Algiers, lately named by the French Algeria, on the West. Its Southern limits are ill defined, but as it extends Southwards beyond the lake or morass now called Sabkhat Far'aun, nearly in the parallel of the Isle of Jerbah, it may, without the risk of any great error, be said to lie between 33° and 37° 20' N. and 8° 30' and 11° E., so that from North to South it measures about 260 miles, and 150 from East to West. It forms an irregular parallelogram; occupies nearly the site of Africa Proper, Zeugitana, and Byzacium of the ancients, and is still known to the Arabs by the name of Ifríkiyah,* derived from the first.

Soil.

It may be considered as the Eastern extremity of the chain of Atlas, which here, running from South-West to North-East, slopes down to the sea more abruptly to the North, more gradually to the East and South, and almost imperceptibly to the Desert; but of that portion of the Tunisine territory little is known. It is divided into two very unequal portions by the Mejdah, (or Bejdah, anciently no doubt Magradah or Bagradah, the Arabic letter *j* having even now in Egypt and many parts of Africa, the sound of *g* in 'gird,') the Bagrada of the Romans. The Western side of the country is very mountainous; the whole, exclusive of the Southernmost districts, is hilly, and about one-half of it is well watered and very fertile. It is all subject to earthquakes, which are occasionally severe.

Subdivi-
vions.

Since its Begs or Sovereigns have rendered themselves independent of the Porte, they have divided their territory into two circuits, the Northern inspected in summer, the Southern in winter; the former nearly coinciding with the ancient Zeugitana, and the latter with Byzacium and Africa Proper.

Climate.

The summer-heat in the plains and valleys of the Southern provinces is excessive; but the mountains are in many places of a sufficient height to afford a mild and healthy climate in summer, with severe cold in winter. A large valley, or rather plain, lying between

* It is probable that Dr. Shaw knew little of the Arab writings or geography before he returned from his travels, or he would hardly have substituted for Afrikea, the colloquial corruption of that word Frigeah, which was not likely to suggest Afrikiyah to his readers, the word as written in Arabic. He spelt the native words according to the English orthography for the purpose of making the sounds intelligible, but was very unfortunate in the mode he adopted. Who, for example, would suppose that 'Ello-deah' meant 'el-audiyah,' a word beginning with a vowel preceded by el?

the chains of hills which border the level containing the lake or morass el Audiyah, (i. e. the streams, anciently Palus Tritonis,) and the Eastern mountains near Kaïrowán, is the commencement of the Great Desert; it has few streams, and its soil abounds in saline or nitrous particles. The fertile spots, though not far distant from each other, are even here Oases. More than two-thirds of this regency, however, is very productive; the Northern regions yielding largely all the products of the temperate zone, and the Southern those of the tropics; the people are also, though sufficiently turbulent and fanatical, more docile and industrious than in the neighbouring States; so that, under a wise and provident government, Túnis might become powerful and wealthy, as Carthage was in the ancient world. The prevalent winds from the sea are refreshing, though unaccompanied by moisture in summer, but they bring rain in autumn and winter, first in September, and afterwards in November and December. From the South and East, the winds occasion a suffocating heat and a hazy cloudy sky. The harvest begins in May or June, and is entirely finished before August. The French fortress at La Cale, or El Kal'ah, marks the Western boundary of Túnis, and at the mouth of the River Zán (anciently Tusca) is the little Island of Tabarkah or Tabrakah, (Tabraca, Plin. *N. H.* v. iii.) opposite to which, on the shore, the ruins of the ancient town, in 36° 56' N., and 8° 42' E., were visible half a century ago, (Poiret, i. 236.) In the Xth Century it had many fine relics of ancient architecture; was populous, and its harbours were much frequented, (Al Bekrí, *Not. et Extr.* xii. 513.) The river passing near it is called Wád-i-l Berber (Berber's River) by Leo Africanus (738.) The Sorelle (Sisters) are rocks, and Galita* (in 37° 31' N., 8° 53' E.) a small island off Capo Negro, (Black Cape,) a point a few miles North-East of Tabarkah, about half way between it and Capo di Serra or Rás-el Minshár (Cape Saw.) The coast still advances to the North-East, till a few miles beyond the Rás-el kurún, (Cape Horns,) at Rás-el Abyad, (White Head,) or Capo Bianco, it recedes to the South-East and forms the Bay of Benzert. Some islets near the shore, half way between Capes Kurún and Minshár, are called I Frati (the Brethren) by the Italian seamen. Of Benzert or Bizerta, the Hippo Diarrytus of the

* Probably Kumláwiyah (Tick Isle) of the Arabs, noted by them as a resting place for birds of passage, (El Bekrí. The MS. (No. 9577) in the British Museum contains a Description of the Northern Coast of Africa, not found in that from which M. Quatremère published Extracts in the *Notices et Extraits des MSS. de la Bibliothèque du Roi*, tom. xii.)

TUNIS. ancients, and its singularly formed harbours, an account has been already given in this work, (*E. M.* xviii. 605.) The Cani (Dogs) are ($37^{\circ} 22' N.$, $10^{\circ} 9' E.$) small islands to the East of this bay. A lofty peaked rock near the shore, called Piláú, from its fancied resemblance to a dish of stewed rice, the bouilli of the Turks and Persians, lies to the West of Rás-*ez Zebib*, (Cape Raisin,)* the ancient Apollinis Promontorium. A few miles to the South-West of it, is the estuary called Porto di Farina (Port Flour) or Ghár-el-milh,† (Salt Cave,) into which the Mejerdah,‡ (Bagradah,) the largest river in this part of Africa, discharges its waters. This port was anciently called Ruscinona (Liv. xxx. 10.) The Mejerdah is formed by the union of two streams, the Khamís or Sajrás and the Miskiyánah Melák or Sérát, which rise in the mountains South-East of Kostantinah, a part of the Jebel Aurás. Their course is probably East and North-East, as is the general course of the Mejerdah through the Tunisian territory; though its channel is very tortuous, and its waters are nearly stagnant, except in the rainy season, when it overflows its banks and fertilizes the plains through which it passes, just as Silius Italicus (vi. 140.) describes it. Between Rás-*ez Zebib*, on the West, and Rás or Jebel Addár, (Promontorium Mercurii, now Cape Bon,) on the East, is the extensive gulf, near the South-Western extremity of which is the narrow and celebrated passage called Goleta (Gullet) by the Spaniards, and Halku-l wád (river's throat) by the Arabs, which connects the artificial harbour or lagoon, on the shore of which Túnis stands, with the sea. This gulf, the mouth of which is about 40 miles from cape to cape, and nearly 30 from the entrance to its Southernmost extremity, is the finest harbour in the Mediterranean, and such that fleets of any magnitude can find secure anchorage in it at all seasons. It has nearly a semielliptical form, and the circuit of its shores is said to measure 120 miles, (Blaquière, *Letters*, i. 159.) Its best anchorage, which is to the North of El Marsa, (the Port,) between Capes Kamar, (Moon,) in $36^{\circ} 55' N.$ and $10^{\circ} 17' E.$, and Carthage, in $36^{\circ} 52' N.$ and $10^{\circ} 19' E.$, stretches quite across the gulf. Four miles South of the latter is the Goleta, in $36^{\circ} 48' N.$ and $10^{\circ} 16' E.$, protected by a strong fortress on each side, and leading to the harbour and arsenal, where all the Tunisine naval armaments as well as their commercial fleets are stationed. This nearly elliptical lagoon, which has a circumference of 24 miles, and measures about eight miles from North-East to South-West, and five from North to South, has no where a greater depth than nine feet, and in many places only a foot and a half or even less. A small island called Shiklah (Slice or Rag), not far from its centre, on which there is a castle, now used as a lazaretto, was frequented by parties of pleasure in Shaw's time, (p. 84,) to enjoy the sight of the vessels constantly plying, and the flocks of flamingoes which frequent this stinking morass. It is said by Procopius (*Bell. Vand.* i. 15.) to have been called the Stagnant, and to have been a convenient station for a very large fleet; its waters were, therefore, at that time of a greater depth than

now, and the neck of sand by which it is nearly encircled has gradually accumulated. At its South-West extremity, in $36^{\circ} 48' 20'' N.$ and $10^{\circ} 16' 140'' E.$, stands the city of Tunis, consisting of two large forts on its Northern and Southern sides, connected by an intermediate town strongly fortified towards the sea as well as landwards. Being nearly inclosed by hills, and constantly exposed to the exhalations from the lagoon, it can hardly be, as is said, very healthy, (Temple, i. 170.); but in the hilly tract, towards El Mersa and the site of Carthage, to the North and North-East, which is agreeable and healthy, the wealthier inhabitants and foreign merchants have country houses where they reside in the hot season of the year. The city is protected by the kasbah, (citadel,) two castles on its Northern and others on its Southern and Eastern sides. Between the inner and outer walls are the three suburbs called Báb-el-suwíkah, (Porridge* Gate,) Báb-el-khadrah, (Green Gate,) and Sebkhah,† (the Salt Marsh.) The houses are smaller, but the streets wider and straighter than those of Algiers, and the covered bázárs with sufficient causeys, are far superior. The Jámi' ez-zeítún, (Olive Mosque,) those of Hamúdah Páshá, Sídí Ibn-ar-rús, and that of Yúsuf Sahib el-tabá', (Joseph, Lord of the Privy Seal,) in the suburb Báb-es-suwíkah, are among its handsomest public buildings. The Beg's palace, richly adorned with devices formed of the stucco called Naksh hadídah, (iron painting,)‡ and the new barracks, which the reigning Beg kindly allows his wealthy subjects to erect at their own cost, for the accommodation of his troops, are all great ornaments to the city. On its west side is the kasbah or citadel, which can only be seen by a special order, (Amr-el-Beg.) It is of great extent, but completely in ruins, having but one battery in a serviceable condition. Its position is strong; but as the government powder-mills are within its walls, and the negligence of the Moghrebines is proverbial, it is wonderful that it has not long since been blown up. The tombs of the sultáns of the dynasty of Abú Hafs are in the mosque in this fortress, which was built by Abú-Zakaríyá, the fourth of that race, in the middle of the XIIth Century. The greatest inconvenience experienced in Túnis, is the want of good water, almost all the springs in the neighbourhood being more or less brackish. Its population may be estimated at 150,000, though, as in most other Muselmán cities, no accurate account is kept, and in a place of considerable commerce it is difficult to distinguish the permanent from the transient inhabitants. The most remarkable places in its immediate neighbourhood are Al Bardo, Manúbah, and Abdáliyah,§ all country seats belonging to the Beg. The first name, which is doubtless the Spanish El Pardo arabicized, is properly a small fortified town about one mile and a half North-West of Tunis. It is inhabited by at least 4000 persons, all attached to the court. As it stands in a large

* Rás el jebel (Cape Mount) in El Bekrí, (MSS. 9577, Brit. Mus.)

† 'Gar il mailah,' Shaw, p. 77; by 'mailah' he means to express 'melah,' the Moghrebini pronunciation of the Arabic word milh, i. e. salt.

‡ Nejerdah, by an error of the copyist in Idris's *Africa*, (p. 275,) but Bejerdah, also pronounced Bagardah or Bagradah, in the MSS. (Edrisi par Jaubert, i. 276.)

* 'Porridge' or 'Wind' is the meaning of Sewík, if that be the word; but Soweík is more likely to be the diminutive of Sák, 'Market,' than of Sák, 'shin' or 'leg,' the sense adopted by Sir Grenville Temple, (i. 181.)

† Not Sibbah with há, as that traveller supposed, (i. 118.)

‡ Sir G. Temple, who seems to be unaware that these apparent sculptures are casts, contradicts (i. 173.) Leo Africanus, who says they were coloured, because they are not so now; but doubtless they were blue and gold in Leo's time, as is usual throughout the East.

§ This name is spelt 'Abdálíyah by Captain Falbe, as if derived from 'Abdallah, but 'Abdalláwí, not 'Abdallí, is the adjective formed from that word. It is more probable that it means a house of the Abdáls, an order of Fakírs.

- TUNIS. plain without a single tree near it, nothing can have a less engaging aspect; but the interior of the palace, particularly the hall of audience, affords an animated picture of an oriental court, (Temple, i. 185.) About two miles beyond Al Bardo, to the South-West, is the pretty villa of Manúbah, built by Hamúdah Báshá, and adorned with ancient marbles brought from the ruins of Carthage. Its gardens, with straight allées, afford little besides an agreeable shade to please an European eye, except a beautiful kóshk or summer-house in the best Asiatic taste. The Abdálíyah, a spacious palace built by 'Alí Beg, a ferocious tyrant, has agreeable and shady gardens, and has been assigned as the country house of the British consul, General Sir Thomas Reade. It is near the village of El Marsa, (the Port,) about five miles North by West of the Goletta, in the midst of the villas of wealthy Moors and Europeans, (*Id.* i. 117.)
- Manoubah. Carthage. The exact site of Carthage, of which such splendid relics were extant in the Xth and XIIth Centuries, (Al Bekrí,* *Notices et Extraits*, xii. 497; Idrísí by Jaubert, i. 262,) has been traced with great labour and accuracy by Captain Falbe of the Danish navy, Consul-General of that Power at Tunis. He ascertained that the level isthmus between the Lake of Tunis and the Sebkah (salt lake or morass) of El Sukará, North-East of Tunis, now separated from the sea by a bank of sand, and doubtless a shallow bay in the time of the Romans, measures exactly 25 stadia, allowing 1475 metres for the Roman mile. Two hollows, now salt pans, about two miles North-East of the Goletta, are evidently the two artificial harbours of the Punic city; nearly due North of which is a height, on which was the citadel called Byrsa, unless El Mo'allakah, (the suspended,) a little further to the North, the buildings on which are highly extolled by the Arabs, should prove to have been that remarkable fortress; a circus and amphitheatre also can still be traced; nor is a peculiarity observable in the adjoining tract, called by the Arabs El Mersa, (perhaps from the ancient Byrsa,) less deserving of notice, viz. that the whole of this large area is divided by roads nearly straight and intersecting each at right angles, so as to form regular squares, which form a singular contrast to the narrow crooked lanes of the Arabs, and at the same time agree exactly in their dimensions with the areas of 2410 square feet measured out by the Romans in their allotment of conquered countries in obedience to the Agrarian Law. These subdivisions, therefore, carry us back to the colony established near the site of Carthage by Julius Cæsar and Augustus. In a country, the natives of which are so jealous of foreigners, nothing but long and patient perseverance with great caution could enable Captain Falbe to make an actual survey of this remarkable peninsula.† His work, which is extremely well executed,
- * M. Quatremère's conjecture, that Abú 'Oba'id, Al Bekrí of Cordova, is the author of the work which he has so ably illustrated, has received a complete confirmation by a comparison of the text of a similar anonymous extract belonging to the British Museum, (No. 5999,) with a volume of El Bekrí's *Memálik wa-l mesálik*, in the possession of Señor Pascual de Gayangos.
- † Captain W. H. Smyth's chart of the *Harbour of Tunis* (1838) gives the greater part of the site of ancient Carthage, and, in essential points, coincides with Captain Falbe's *Plan des Ruines de Carthage*, (1831,) but the heights appear to be too strongly marked in the former; and those who have compared these maps with the ancient authorities, can hardly doubt that Captain Smyth, notwithstanding his well known accuracy and acuteness, was mistaken as to the place of the ancient harbours, as well as in some other leading points. He had not the leisure and opportunities of carefully examining the spot enjoyed by Captain Falbe.
- throws very great light on the narratives of ancient historians, and reflects the highest honour on the zeal, learning, and ability of its author.
- On a height near the shore, a few miles South-West of the Goletta, is Rádis* (anciently Ades) a little to the West of the River Milyánah, which comes from the South-West. At the foot of the mountain, 1217 feet in height, near the Southern extremity of the gulf, are the celebrated warm baths, called Hammám-el-enf.† A few miles to the South-East is the Jebel-eresás, (Mount Lead,) which has a height of 1713 feet, and extensive mines still productive. About 16 German miles South-West of it is the lofty and picturesque Jebel Zaghwán, (Mons Ziguensis,) 3917 feet in height, at the foot of which, about 36 miles nearly due South of Tunis, is the pretty town bearing the same name, now vulgarly pronounced Sowán, (Falbe, p. 33; Sir G. Temple, i. 286.) About 10 miles East of Hammám-el-Enf, is Sulaímán, a Moorish town, formerly celebrated for the urbanity of its inhabitants, chiefly refugee Moors from Granada, who retained, till the middle of the last century, the language and manners of their Spanish ancestors. A line drawn from this place to Hammámát, (the warm baths,) in 36° 23' N. and 10° 38' E., marks the Southern boundary of the peninsula called El Dákhilah, (the Interior,)‡ which forms the Eastern side of the gulf. Its most prominent points are Rás ez-za'frán, (Cape Saffron,) in 36° 52' N. and 10° 35' E.; Cape Bon or Rás Addár,§ in 37° 6' N. and 11° 2' E.; Rás el Milh (Cape Salt); Rás Mustafá, (Cape Mustafá,) near Iklíbiyah, (Clypea,) in 36° 50' N. and 11° 7' E., and Cape Túsihán, the low point of which is called Rás-el-mahmúr, (Ruddled Head,) in 36° 26' N. and 10° 51' E. From that point to Cape Dímás, on the Eastern side of Al Dákhilah, is a large gulf, called the Gulf of Hammámát, from that town a few miles North-East of the ancient Civitas Singitana, now Kasr-al-zeít, (Oil Castle,) on the Wádí Serwál, (Breeches River.) Travelling along the coast, which is here a flat beach, to which the hills descend gradually, we come to Herkilah, (Ihraklíyah or Heraklíyah,) the ancient Heraclea or Justiniana, in 35° 59' N. and 10° 30' E., a port and fortress of some importance, (Shaw, i. p. 105.) Half way between the two, is Bír Sellum, (Ladder well,) about 30 miles South-West of Hammámát, and nearly equal distant from Capes Túsihán and Monastír or Al Ghadírah. Súsah, (Adrumētum,) in 35° 50' N. and 10° 35' E., is a flourishing town with 3000 inhabitants, carrying on a considerable trade in flax and oil. To the South-East of Súsah is the promontory (Dionysii Promontorium) on which stands Monastír, (commonly shortened into Mestír,) a walled town surrounded by plantations of palms, figs, and olives. Near it are the Jazáyir-al Kúriyateín, (isles of the two Kúriyah,) now called Al Kúriyah or Al Júriyah, two small isles, the Coniglere of the Italian seamen, and

the Tarichiaë of the Greeks and Romans. On the bay between these and the Báltah Isles, off Cape Dimás, in 35° 36' N. and 11° 5' E., is Lamtah, (Leptis Parva,) and on Rás Dimás, the remains of Thapsus. Nearly due South of this is Cape Afrikíyah or Mahdíyah, named from the town so called, founded by 'Obeïdu-llah al Mahdí, one of those cunning and ambitious adventurers, who, like 'Abdu-l Kádír of the present day, availing himself of the credulity, turbulence and fanaticism of his countrymen, (for he was probably a Berber of the tribe of Ketámah,) succeeded in persuading them that he was a descendant of Fátimah, daughter of Mohammed, and wife of 'Alí, and as such had a right to the Khalifate, then held by the Aghlabites, who reigned at Kaïrawán. He then established at that place the Fathemite (Fátimí) dynasty, which subsequently possessed the whole of Northern Africa from Sijilmásah to Egypt, for nearly 270 years, (A.H. 295—569, A.D. 907—1171.) This city, the castle of which, in 35° 30' N. and 11° 6' E., and its town walls are now full of breaches, is built on a point of land surrounded by shoal water, and is a wretched place, having neither bázars nor shops, and at the most, 2000 inhabitants. It was taken and fortified by the Franks under Andrea Doria, in 1550, but was soon afterwards abandoned by Charles V. as untenable. It is supposed to be on the site of Hannibal's Tower, (Turris Hannibalis,) (Temple, i. 137.) A few miles South, of Mahadíyah is Kasr Salektah, (Sullekti,) then El Aliyah, (the Lofty,) anciently Achola, just below which is the Port of Kabúdiyah, (Ruspæ,) near the Rás el jisir, (Cape Bridge,) now called Rás Khadíjah, (anciently Cape Ammon or Caput Vada.) "Here," says Al Bekrí, (Mesálik MSS.) "begin the Shallows," (the Smaller Syrtis,) now called the Gulf of Kábís, (vulgarly pronounced Gabs.) Below Kabúdiyah, along the coast, is Isfákus, (vulgò Sfax,) still a flourishing town, where gems and coins can be advantageously purchased. Opposite to it, about four leagues distant, are the Kerkines, (Circina and Circinitis,) two isles, now called Kerkinah and Gharbí, (Western.) On the same coast, about 20 leagues South-West of Gharbí, the smaller of those islands, is Kábís, (Tacape and Epichus,) on the River Wád er-ríf, (Corn-land River.) It is now nearly a mile from the sea, on the shore of which, it formerly stood. Its neighbourhood is famous for the pretty and fragrant hinná, (cypress of the ancients, and Lawsonia inermis of botanists,) which is cultivated abundantly as a profitable article of commerce. The ladies and petit-mâitres throughout the Muselmán world use a paste made of its dried leaves to stain their nails and hair red, and adorn their white dogs and horses with red spots and devices. From Kábís the coast makes a wide bend by South-East to East by North, towards the point now called Zurshaf, (Zú-resháf?) probably the Kasr el jarf (Tide-washed Castle) of Idrísí, (Jaubert's *Version*, i. 281,) four miles* from the Isle of Jerbah. From this point, the shore recedes and forms a large elliptical bay opposite the Southern end of that island, from the Eastern extremity of which it runs first East by South, and then turns to the South-East at a point near Kasr Jerjis, (Castle George,) now called Rás Jerjis, (Al Zarsis in Captain Smyth's chart,) which forms the Eastern boundary of

the regency of Tunis. "Jerbah," says Idrísí, (*l. c.*) "is 60 miles (54') from East to West, 15 miles (13') (in its narrowest part,) and 20 miles (18') from the continent."* It was in his time entirely peopled by Berbers, who were perfidious and turbulent heretics; and they were reduced to slavery by Roger, King of Sicily, in consequence of their having risen against him a second time, A.D. 1153.

The country near the sea between Heraklíyah and Terfáwi (Taphura, according to Shaw) is called El sáhilí, (*i. e.* the Coast,) and formerly Sáhil-el-Kaï-Sahul. rawan, the Coast of Kaïrawán, from that city, then a powerful metropolis. This Province is the ancient Byzacium, the most fertile part of the Beglik of Tunis, (Shaw, i. 105,) and still contains many fine relics of ancient architecture. At Lejm † (Thysdrus) there are considerable remains of a large amphitheatre, measuring 429 feet by 368 feet, (Temple, i. 151). About 45 miles North-West of Lejm is Kaïrawán, (now pronounced Kairwan. Keerwan.) supposed to be on the site of the Vicus Augusti, and for a long time the favourite seat of Arabian learning and civilization. It is in an extensive plain, running along the foot of the Usalet or Wasalet mountain (Mons Usaletanus) from Shúkár, the source which formerly supplied Tunis with fresh water, to the Bilád-el-jeríd on the skirts of the desert. It has still, at a distance, a striking appearance; and being a place of great sanctity on account of the many saints who died and are buried there, Christians are rarely suffered to set their foot within its walls, (Temple, ii. 92.) It is nearly square, has a doubly embattled wall, a large citadel, (kasbah,) many mosques, covers much ground, is well built and clean, and has four gates. Of the present state of its colleges and students, Sir G. Temple could gain no information. It is considered as the second city in the Regency, and its governor (Káyid) has almost sovereign power. Its manufacture of yellow morocco leather has never been equalled. A few miles North-East of Kaïrawán is Jelúlá, supposed by Shaw to be the Oppidum Usalitanum of the Romans. On the other side of the mountains to the West, is Sebíbeh, Sbeeba. anciently Tucce Terebinthina.

At about 20 miles East of Kábís is El Hammah Elhama. (Aquæ Tacapitanæ), where there are three springs, the heat of which is higher than 115° of Fahrenheit's scale. The river of Kábís, which enters the sea near that place, and rises from the ridge which divides the Sebkhah-el-audíyah or Buheïrah Far'aun from the coast, is probably the Triton of the ancients. Telemín, (Turris Triton. Tamalleni,) on a pretty lake, embosomed by palm groves, is a lovely place now the capital of the district of the Beléd el jeríd, named from its former metropolis Nefzáwah, (Temple, ii. 154.) About 40 miles West of Kábís is a large salt-marsh, covered in winter with water to the depth of two or three feet, but in summer by a hard dry crust of salt of various thickness, and of considerable depth in the centre. (Temple, ii. 163.) Its length from North-East to South-West is about 70 British miles; its width, in the narrowest part, about 25. It has been commonly supposed to be the Lake (Palus) Tritonis, the birth-place of Minerva; but the passages in the ancients respecting this pool (Palus, λίμνη) are obscure, and it has been conjectured that the

* Perhaps from some more distant port in the island, as the nearest distance from point to point is not 2'. (Captain Smyth's *Chart of the Gulf of Kabes*.)

* These measurements are now about 20', 10', and 12'; but it is probable that changes have occurred in the shores both of the island and the continent since the middle of the XIIth Century.

† Not El-Jemm, as Sir G. Temple supposed, (i. 146.)

- TUNIS. little Syrtis was the lake, and Jerbah, the island called Tritonis by the Greeks, (Gail *ad Scylac.* p. 524.) It has at present no single name; its various portions being called Kit' ah Wetyán, Nefzáwah, &c., (the Port near Wetyán, Nifzáwah, &c.) The Eastern end is sometimes called Ghadí Far'aun (Pharaoh's Pool) equivalent to the Buheirah Far'aun (Pharaoh's Lake), mentioned by Shaw: but the name Sebkhat-el-audíyah (Rivers' marsh) seems to be now entirely unknown in its neighbourhood. Neftah,* (Negetah,) properly three villages, on the banks of the Wádí (River of) Neftah, surrounded by palm groves, famous for its dates, oranges, and manufacture of gauze sefsars (sifsírs?), is a handsome town compared with many of its neighbours, and is placed in a very picturesque situation. The nearest part of the Sebkhat is about two miles to the East, and it is there only that Sir Grenville Temple saw any water in that salt morass, (ii. 174). About 12 miles North-East of Neftah, is Tozer (Tauzer or Kastíliyah), Capital of a province of the Bilád-el-jeríd, and the Tisurus of the Romans, said formerly (*Idrisí de Jaubert*, i. 253) to produce the best dates and oranges in all Africa. It is still a considerable town, with clean streets, and good houses, and the place where the best woollen burnuses (body cloths) are made; but its inhabitants are very fanatical and inhospitable, (Temple, ii. 181.) At El Hammah, four miles North of Tózer, there are two springs, one salt and hot, the other fresh and cold. A chain of hills, West-North-West of El Hammah, running North by East, seems to be here the Northern boundary of the Sahrá or Great Desert, of which the Bilád-el-jeríd may be considered as the skirt. About 45 miles N. E. of Tozer, but still in the same plain, is Kafsah (Capsa) surrounded by beautiful groves and gardens watered by copious streams. The kasbah or citadel, principally built from the ruins of the ancient city, is garrisoned by 50 Kúl-óghlús, (Slave-sons,) *i. e.* Turks by descent; their features show their origin, and contrast strongly with those of the surrounding Moors. There are two hot and mineral springs, the hottest within the kasbah, still called El Tarmín.† El Bekrí, (*Not. et Extraits*, xii. p. 503,) who lived in the Xth Century, says, that there were "more than 200 forts in the neighbourhood of Kafsah," called "the Castles of Kafsah:" and that the revenue paid by that place to the government amounted to 50,000 dínárs (about 5000*l.*) It is still famous for its manufacture of barakáns and figured blankets, and its inhabitants are as inhospitable and fanatical as in the time of Leo Africanus, (p. 626.) Kafsah is in a valley formed by the approach of two chains of mountains, the Jebel Yúnus and the Jebel Aktár or 'Arbátah.‡ Near Feriyánah and the North-West there are the remains of a large Roman town, perhaps Thelepte, (Temple, ii. 196.) Kasreín, (*i. e.* the two castles,) on the site of the Colonia Scillitana, 12 or 14 miles North-East of Feriyánah, has some of the finest ruins and most perfect inscriptions still extant in Africa; and on the borders of the plain, 15 or 18 miles distant, are the ruins now called the Bú Daurokhho (?), perhaps those of Meneggere. Twelve miles further to the North-East is Ayedrah,* in a picturesque valley, where there are fine ruins, and many inscriptions. This may possibly be the Ad Medera of the Itinerary. Nearly due East of that place is Thálah, (the ancient Thala?) North-West of Kasreín is Sobeítilah, (Jaubert, i. 259,) the ancient Sufetula, where Dr. Shaw (i. 118,) found the remains of three splendid temples, (Temple, ii. 235.) South-West of it is Kálmah (Gilma), and at Mahdhur Aulád' Ayyár, between Sobeítilah and Káf, are remains which probably belonged to Tucca Terebinthina, and Keff, on the site of Sicca Veneria, is now considered as the second town in this Regency. It is on the bank of a small stream running into the Sirát, stands on the Western flank of a range of rocky hills, and its walls and citadel (kasbah) are kept in good repair. It is garrisoned by 70 Turks, 200 Makháziniyah (artillery men), and 700 militia. The view from the citadel is very fine. Al Urbus, 15 miles South-East of Káf (Kéf), is on the site of the ancient Laribus, and Dukkah, a few miles to the East of it, is the ancient Thugga. The only two remaining places of note anciently in this Regency are Bējah (spelt Bájah) and Bú Shátir. The former (the Baga of Plutarch and Vacca of Sallust) was, in Idrisí's time, (Jaubert, i. 266,) a pretty town in the midst of a very fertile plain, bare of wood, but producing rich harvests of corn; it was rather more than one day's journey on the road from Tabarkah to Túnis. Shaw (i. 93) reports that it still retains its celebrity as an emporium for corn, and gives a copy of an inscription found there, which proves that it is the ancient Vacca.
- Bú Shátir, a wretched village about 20 miles North by West of Tunis, and at a small distance from the Northern bank of the Mejerdah, (Bagradas,) marks the site of Utica—not far from it is Kellah (Kel'ah the Castle?) on the site of the Castra Cornelia. This place, which was well pointed out by Shaw, (i. 78,) has been ably illustrated by Sir Grenville Temple, (i. 256,) to whom, as a military man, it was peculiarly interesting, and a complete plan of it and the environs would have been added as an Appendix to the work of Captain Falbe, had that writer obtained the consent of the Dutch Government, under whose auspices M. Humbert had preceded him in making researches respecting the position of Utica. (*Rech. Avertissement*, p. 1.)
- The military commanders under the Páshás, having usurped the supreme authority, converted the government into a sort of aristocracy till Hasan ibn 'Alí, who died in A. H. 1170, (A. D. 1756,) succeeded in rendering the Beglik hereditary in his family, and his successors have assumed the title of Báshá† Beg. Their power is absolute, as they do not, like the Turkish Páshás, recognize the authority of the Grand Signor. His authority is however nominally

* It seems as if the Arabs had written Neftah for Nektah, (Negta or Negete.) In this name, Azof and a few other Asiatic or African words, the Arabic character has perhaps given rise to an erroneous pronunciation and spelling: F and K being distinguished in writing only by a point, the latter being also substituted for the Latin G. Azák in Turkish, if a point were dropped, would be Azáf, and Neftah, if a point were added, would be Nektah or Negtah.

† In Idrisí, (Jaubert, i. 253,) it is Tarmídh, but the ear could not mistake dh for n; while in the Moghrebin writing, those letters may be very easily taken for each other: M. Jaubert's MSS., moreover, are full of errors.

‡ This name, which rests on the authority of Sir G. Temple's attendants, (ii. 190,) is very doubtful.

* This seems to be the Hydrah (Alkhadrá) of Shaw, supposed to be the ancient Thunudronum, and mentioned by the Arabs as the Western frontier of Tunis, (Al Bekrí, *N. et Extr.* xii. p. 467.) Its proper name is Tanjah el Khadrá, (the Green Tangier).

† Báshá (vulgarly spelt Bashaw) is the Turkish title Páshá, 'Viceroy,' arabicized.

TUNIS. admitted, and the Court has paid him the compliment of adopting the new Turkish costume. Most of the great officers of state have the military titles used in the Turkish army, such as Básh 'Odá, Cháúsh, &c., and the head of the Díván or council is styled the Aghá (Captain) of the Díván; but the Prime Minister is the Sáhib-el-tabá', (Lord of the Privy Seal,) an Arabic title peculiar to the Barbary States.

The population of this state, of the amount of which only a very imperfect conjecture can be made, has been stated to be 2,386,000 Arabs and Berbers, 7000 Turks, 100,000 Jews, 112,000 Renegadoes, and 7000 Christians, altogether 2,612,000; but Sir G. Temple does not think it can exceed 2,000,000, as very large tracts of the interior are completely desert, and vast numbers have been carried off, within the last half century, by plague and famine. The principal sources of revenue are duties on the produce of the land and the customs: the former, collected in the most oppressive and arbitrary manner, are a continual bar to the improvement of agriculture. The *Avanías*, or arbitrary seizures by the servants of the Beg and his family, operate also very powerfully as a check to trade and commerce. The military force is, on the whole, about 50,000 men, the cavalry being styled *sibáhi*, the Persian word for soldier, (*sipáhi*), which we have converted into *Sepoy*. Their pay, when they have served eighteen years, is about 5s. 6d. monthly, but they have a small allowance of provisions, and are suffered to help themselves almost *ad libitum* to other people's property. The part of this force usually embodied does not, however, exceed 6000 men. The naval force of the Beg consisted, in 1833, of only one frigate, and seven smaller vessels of war, the largest of which had only 22 guns.

The weights, measures, and money, now used in this Regency, are—

Holland. *Plinie*, book ix. ch. xv.

The *tunny* was a fish well known to the ancients; it made a considerable branch of commerce; the time of its arrival into the Mediterranean from the ocean was observed, and stations for taking it established in places it most frequented; the eminences

VOL. XXVIII.

Afrikíyah, or Africa Proper, was one of the first Christian kingdoms overrun by the Arabs after the establishment of Mohammedanism, but it was soon withdrawn from the dominion of the Khalifs, Ibráhim ibn 'Aghlab, then Viceroy, having thrown off his allegiance, A. H. 184. (A. D. 800.) His successors reigned at Kaïrowán till A. H. 296, (A. D. 908.) when 'Obeidu-llah Al Mahdí defeated and put to death the usurper, who had driven away the last of the Aghlabites. Al Mahdí's descendants were, as before-mentioned, styled Fatimites, and the third of his successors having added Egypt to his dominions, removed his court to Cairo: but in the course of time, this dynasty experienced the ordinary fate of all Asiatic sovereignties, the Vezírs or Prime Ministers usurped the real power, leaving only a shadow of it to the Sultán. Internal feuds having compelled the minister of the Fatimite prince to call in the aid of the powerful Emírs who governed Syria in the name of the 'Abbási Khalif, at Baghdád, Saláhu-ddín (Saladin) in A. H. 567, (A. D. 1171,) deposed the last of the Fatimite princes, and Africa Proper continued subject to the 'Abbási Khalifs till A. H. 603, (A. D. 1206,) when 'Abdu-l Wáhid ibn Abú l' Hafs of the Berber tribe of Sanhájah, was appointed governor, and subsequently made himself sovereign of Tunis, under the Al Mómade (or Al Mowahhadi) Emperors of Morocco. The descendants of Abú Hafs maintained their authority over this state, till Khaïreddín Páshá took Túnis for the Grand Signor, A. D. 1534, (A. H. 941,) under pretence of placing on the throne a brother of Múlái Hasan, the reigning prince of the house of Abú Hafs. In a few months, however, it was retaken by Charles V., and restored to the latter, the fortress at Goletta remaining in the possession of the Spaniards, till the Grand Vezír, Sinán Páshá, finally expelled them and their worthless tributary Hamíd, the last of the Abú Hafs dynasty, A. D. 1574. (A. H. 982.) The state of Tunis was then, together with Algiers and Tripoli, made a páshalik of the Osmán empire; but the officers of the Turkish garrison, like the Mamlúks in Egypt, soon rendered the Páshá's authority merely nominal, and formed themselves into a sort of military republic,—a constant scene of continual rivalry and bloodshed, till Hasan ibn 'Alí, one of their best rulers, who died in 1753, (A. H. 1168,) succeeded in making the beglik hereditary in his own family, his sixth successor being now the reigning beg of Tunis.

Modern history.

TUPA.
—
TUPI-
NAMBIS.

TUPA, in *Botany*, a genus so called by G. Don, from the name of one of the species in Chili. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Lobeliaceæ*. Generic character: calyx adhering to the spherical ovary, with a five-cleft limb; corolla long, inflated at the base, cleft on the back, its whole length, therefore unilabiate, having the limb divided into five segments, which are all united at their tips; stamens five, united into a tube; anthers cohering, all bearded, or only two of the lower ones; style protruding; stigma orbicular, two-lobed, not bearded; capsule three-celled, three-valved, many-seeded.

This genus, which is separated from *Lobelia*, consists of many known species, all natives of Peru and Chili; they are strong, showy, herbaceous plants, with alternate, ovate-lanceolate, downy leaves, the superior ones sessile. The flowers are generally scarlet, purple, or yellow, pedicellate, disposed in terminal racemes, or solitary from the axils of the superior leaves. *T. Feuillei* is so poisonous a plant, that even the smell of the flowers will cause vomiting, according to Feuillée, and the

milk of it, if by any accident it touches the eyes, occasions blindness.

TUPEIA, in *Botany*, a genus so called by Schlechtendahl, from the Tahiti name of the plant. It belongs to the class *Dioecia*, order *Tetrandria*, and the natural family of *Loranthaceæ*. Generic character: flowers dioecious; male flower, perianth four-parted, valvate in æstivation; segments lanceolate, concave at top, and holding the stamens; stamens four, opposite the segments of the perianth; anthers two-celled, fixed by the base; female flower; ovary clavate, one-seeded, crowned by a narrow, four-toothed margin; style short; stigma thick, subglobose, capitate, somewhat four-lobed.

A genus separated from *Viscum*, consisting of a single known species, *T. antarctica*: it is a parasitical shrub, with nearly opposite leaves, terete branches, and with the branchlets floriferous at their tops; leaves furfuraceous, entire, obtuse, two inches long; racemes shorter than the leaves; flowers minute, male ones, when expanded, about two lines in circumference.

TUPA.
—
TUPI-
NAMBIS.

T U P I N A M B I S.

TUPINAMBIS, Daud. In *Zoology*, a genus of animals belonging to the family *Lacertida*, order *Sauria*, class *Reptilia*.

Generic character. Head of an oblong pyramidal shape, in some covered with very small hexagonal scales, but in others with large angular plates; teeth in both jaws; tongue forked, and very extensible; upper part of the body covered with very minute hexagonal or rounded scales, smooth centrally, and rather rough on their edges, disposed in bands; belly covered with small square scales; tail as long as the body, thick, and cylindrical at its base, and tapering towards its tip, in some species more or less compressed; its scales verticillated, sometimes smooth, sometimes carinated, and in some instances forming a low crest on its upper edge; in some there are, and in others there are not femoral pores; hind legs longest and stoutest; all furnished with five distinct slender toes, having little curved claws.

The specific title applied by Seba to one individual from the name of an aboriginal American tribe, having, although erroneously, been long adopted by naturalists as the designation of the whole genus, it seems scarcely worth while to alter it to that of *Monitor*, as proposed by the French writers, and founded on a very doubtful assertion, viz. that of their giving notice of the neighbourhood of Crocodiles. By modern erpetologists, the genus has been divided into several, Fitzinger making six, and Wagler seven. Merrem, on the other hand, made only two genera of them, and these by Cuvier are taken merely as sections of his genus, and are sufficient for all ordinary purposes. The greater number have the tail compressed, which readily distinguishes them from the Lizards, but those in which it is round can only be known by their larger size, and by the absence of the broad scales which form a transverse band on the under part of the neck of Lizards. They are found in both the Old and New World, mostly living on the banks of rivers, in which they are often found, their greater disposition towards which is indicated by the compression of their tail. They feed on insects, snails,

fish, and small beasts; also upon eggs and poultry. The Egyptian species were supposed to be very destructive to the eggs of Crocodiles, and hence they were venerated by the ancients. The French term *Monitor*, first applied to some species by Mademoiselle Merian, originated in a notion that they gave warning of the neighbourhood of Crocodiles, by uttering a loud hiss; Geoffroy has, however, observed that this is probably the result of fright.

a. *Ouarans*, Forsk.; *Monitors*, Cuv.; *Varani*, Merr.

In this division the head, limbs, belly, and tail are covered with numerous small scales, which, ranged in a double row, form a sort of crest upon the tail, in some species very distinct, but in others scarcely visible; no femoral pores.

T. Niloticus, Geoffr.; *Lacerta Nilotica*, Lin.; *Varanus Dracæna*, Merr.; *le Monitor du Nil*, Cuv.; *Nilotic Ouaran*. From three to three and a half feet in length, of which the tail is one-half, according to Isidore St. Hilaire, but Cuvier states that it sometimes measures five or six feet from the muzzle to the tip of the tail; the front teeth are very small, fine, and sharp, but the hinder large, short, and blunt pointed, and the intermediate conical; the scales generally very small, those on the sides of the head and on the tip of the tail not more than half a line long, whilst those on the under surface of the body, which are the largest, are little more than a line; they are generally oval, but on the limbs are nearly circular; throughout, and specially on the under surface of the body, and on the tail, they are disposed in transverse rows, the little interspaces between which are more distinct than in the longitudinal direction; the toes are perfectly distinct, and of very unequal length, especially on the hind feet, of which the outer toe is more movable than the others, and can be separated to a right angle; the claws are sharp, curved, and compressed. The upper part of the head is dusky, and the back seems marbled only with green and black, but on closer observation, the black is disposed in spots

TUPI-
NAMBIS.

of various form, the greater number of which are merely simple black lines, surrounding a paler space, in the middle of which are found also some black scales; under part of the body greenish; sides of the tail indistinctly banded with black and green. This species lives on the banks of the Nile, and is often seen in the river itself. It is very predacious, attacking all the little animals it can master with great avidity; and if irritated hisses loudly, and endeavours to bite or to strike with its tail. Cuvier considers it to be the same animal as *Lacerta Dracæna*. It was well known to the ancient Egyptians, who engraved it on their monuments. The Arabs call it *Ouaran-el-bahr*, or River Lizard.

T. Ornatus, Daud.; *Beautiful Tupinambis*. Six feet in length, of which the tail is one-half; its head, smaller than the body, is compressed; muzzle blunt; front teeth pointed, hind teeth with rounded crowns; the scales oblong and smooth; its colour is dingy black, speckled with white above, and whitish, inclining to green beneath; from each eye extends a white band, which breaks into a semicircle of rounded spots on the upper part of the neck; this is followed by a second band of five spots, a third passes from shoulder to shoulder, and upon the body are four other transverse bands, consisting of seven or nine spots; the crested tail has twelve broad circles of a similar colour to the belly, which latter sends black bands upon the flanks, dividing into two; the throat is whitish with nine transverse black bands, and upon each leg are six or eight rows of little round spots. This species is a native of Africa, and common in Congo and Mayombe. It feeds specially on *blattæ*, which at night it pursues with great activity, hunting among the palm leaves, with which the huts are covered. Although not venomous its bite is much dreaded by the negroes, as frequently producing sloughy and incurable sores.

T. Stellatus, Daud.; *Lac. Capensis*, Sparrm.; *le Tupinambis*, Lacep.; *Stellated Ouaran*. Total length about five feet, of which the tail is three-fifths; head rather more compressed in front of the eyes than in the other species; twelve short conical teeth on each side of the upper jaw, and only ten in the lower; upper parts deep black, under whitish or ashy; upper part of the head crossed with pale yellowish straight lines, cheeks pale, and marked with little blackish spots; upon the upper part of the neck many yellowish white angular lines directed backwards; upper surface of the body and cylindrical part of the tail crossed with ten deep black bands each, relieved with whitish spots or circles, and between the bands numerous scattered whitish points, extending over nearly the whole tail; under surface marked with eight blackish bands, narrow, transverse, and far apart; the limbs studded with whitish points and little round spots. This species is a native of the Cape of Good Hope, and not of Ceylon, as stated by Seba. It seems to have no special preference for land or water. Sparrman's endeavours to destroy an individual which he procured, show its great tenacity of life; he pierced its brain and heart with a large needle, but the animal immediately endeavoured to escape; he then gave its body many squeezes with great violence, bound its legs together, and then suspended it by the neck in a noose, drawn as tightly as possible; from this it managed to extricate itself, after forty-eight hours, and seemed almost exhausted. He then plunged it into brandy, but after a quarter of an hour it still lived.

T. Albogularis, Daud.; *White Throated Ouaran*. About the same size as the last species; its head is large, rounded, obtuse in front, and the eyes rather prominent; all the upper parts and the limbs are whitish, the under parts dusky brown; the head and neck are pointed with brown, and in front of each fore-leg is a round brown spot; the limbs have also brown points; upon the belly are fourteen irregular transverse brown bands, which, on the flanks, are diminished to seven, and between these the abdominal white rises up, forming four broad transverse marblings on the upper part of the body; upon the tail are seven whitish bands with brown points. Probably a native of India.

To the preceding species Fitzinger restricts his genus *Varanus*, and to the next, in which the caudal crest is not distinguishable, he applies the generic name *Psammosaurus*.

T. Arenarius, Geoffr.; *Scincus Niloticus*, Schneid.; *le Varan d'Egypte*, Daud.; *le Monitor Terrestre d'Egypte*, Cuv.; *Desert Ouaran*. About three feet in length, of which the tail is two-thirds. It is distinguished from *T. Niloticus*, by having all its teeth very small, very fine, and very sharp; the scales are almost entirely circular, except on the throat, middle of the belly, and tail, on which they are oval, and upon the head they are smaller than in the last species; tail rounded, and without any crest, from its anterior third becomes more slender and tapers to the tip. The back of this species is of a pale brown, marked with some pale greenish-yellow square spots, and the tail is banded with the same colour; the caudal crest commences about one-eighth of the entire length of the animal behind the attachment of the hind limbs, and is about a third of an inch in height. This species is an inhabitant of the desert on the Syrian side of Egypt, where it is called by the Arabs *Ouaran el-Nard*. It was known to Herodotus as the *Terrestrial Crocodile*, and is the *Skink* of the ancients.

T. Variegatus, Daud.; *Lacerta Varieg.*, Shaw; *Variegated Lizard*, White; *Variegated Ouaran*. Length of the body about fifteen, and of the tail thirty inches, the latter compressed and keel-shaped; general colour black, varied with yellow spots and streaks of different form across the body; upon the limbs are many transverse rows of similar round spots; tail banded with black and yellow. Is a native of New Holland.

T. Stellatus, Daud.; *Lacerta Monitor*, Shaw; *Stellated Ouaran*. Fourteen inches in length, and the tail twice as long; upper parts deep black; upon the top of the head are some pale yellowish transverse straight lines; cheeks pale, mingled with little black spots; upon the upper part of the neck are many yellowish-white lines; upon the body and the base of the tail are ten deep black bands, consisting of from five to nine whitish circles or spots, with intermediate scattered whitish points; under parts marked with eight narrow transverse black bands; limbs marked with whitish spots and points. Is a native of the Cape of Good Hope, and, according to Sparrman's account, as fond of water as land. Cuvier considers Daudin's *T. Elegans* as the same species.

T. Cepedianus, Daud.; *Lac. Exanthematica*, Bosc.; *Cepedian Ouaran*. Total length six inches, of which the tail is about one-half; head quadrangular, twice as long as its breadth, somewhat obtuse, and its skin covered with granular scales not carinated but of equal size; dorsal scales of unequal size almost carinated;

TUPI-
NAMBIS.

TUPI-
NAMBIS.

ventral scales smooth, and ranged in regular bands; tail slightly compressed, rounded beneath, and having a very small keel formed of two rows of elevated scales upon its upper edge, the other scales tubercular and verticillated; head spotted and lined with dusky, and behind each eye two black streaks; back green, marbled with irregular, round, whitish spots; belly banded with white and dusky; upper part of the tail marked with brown and white bands, its under part pale and spotless; legs brown, with some deeper markings. This species is a native of Senegal, lives in damp places, and often hides at the bottom of fresh streams or pools.

T. Bengalensis, Daud.; *Bengal Ouaran*. Three feet nine inches in length, of which the tail is two feet; head of a truncated, pyramidal form, with smooth, hexagonal scales upon its upper and lateral surfaces; similar scales also cover the chest between the fore legs; upper part and sides of the body overspread with very small, round, slightly tubercular scales, smooth in their centre, and finely granulated at their edge; tail verticillated: the head is ashy, with black spots above and black streaks on the cheeks; upper part of the body ashy, spotted with black and white; under surface white, the throat spotted with black. Is a native of Bengal.

T. Maculatus, Daud.; *le Monitor noir picqueté de Vert*, Cuv.; *Indian Ouaran*. About sixteen inches long, of which the tail is more than one-half; head long and narrow, brown above, the lower jaw pale bluish; upper part and sides of the body brownish-black with irregular transverse bands, and seven longitudinal rows of spots of a pale green colour; tail verticillated, spotted with blackish and greenish, and the posterior half yellowish-white. Is a native of the Moluccas.

T. Bivittatus, Kuhl; *Double-filleted Ouaran*. This species is about three feet long, has a broad brown streak posterior to the eye, and another still broader behind the tympanal membrane; upon the back are six bands of large yellow round spots; the throat and front of the neck have about nine transverse stripes, the first upon the lips; the belly and under part of the tail pure white, and the upper surface of the latter marked with seventeen white bands.

To these also Cuvier adds *T. Marmoratus*, a native of the Manillas, and *T. Nigricans* from Java.

β. *Teyous*, Azar.; *Teii*, Merr.

In these the head is covered with angular scales; the throat skin is disposed in a double fold and overspread with small scales; the belly and the tail furnished with large rectangular scales; and on each thigh is a row of pores.

In some species of this division crested scales, similar to those of the Crocodiles, form crests on the edges of the tail, which is compressed; and such have been formed by Spix into the genus *Crocodylus*.

T. Crocodylinus, Cuv.; *Monitor Crocodil*, Merr.; *la Grande Dragonne*, Lacep. Two feet and a half in length according to Lacepede, but Cuvier says from four to six feet; head flattened above and compressed on the sides; its body covered with large, oval, or roundish scales, longitudinally carinated, separated from each other, on the back and beginning of the tail, by smaller rounded and rough scales, and arranged in transverse bands; on the root of the tail there are four keels but subsequently only two, excepting the hinder

part of the tail, which is flattened and covered with very small rhomboidal, imbricated, and rough scales; under part of the body covered with square scales. The general colour is greyish-brown, more or less tinged with green. It is a native of South America, yet though greatly resembling the Crocodile in form, it has not its habits, for it swims badly, runs with great swiftness, and climbs trees very readily. It frequents marshy districts in search of food, but prefers dry places, and burrows.

T. Bicaratus, Cuv.; *Lacerta Bicar*, Lin.; *Crocodylus Amazonicus*, Spix; *le Lezardet*, Daud. Total length about two feet, of which the tail is one-half; head rather flat and rectangular; tympanal membrane large and round; cervical scales roundish, somewhat tubercular, those of the back lengthened, and of the sides widened and slightly keel-shaped, disposed in rings; scales of the throat squarish; those of the belly scutiform, flat, imbricated, rectangular, and crenular at the tip; tail smooth at the base, but on both sides having four ridges; legs scaly in front and tubercular behind; head dusky-olive; body dusky-brown above with indistinct black eye-spots, sulphurous beneath; tail rufous-brown above, spotted on the sides with black and tawny. Is a native of Brazil.

T. Ocellatus, Cuv.; *Crocodylus Ocellatus*, Spix. Length of the body nearly nine inches, and of the tail six and a half; is of more slender form; body tawny-olive above, with three rows of white eyed spots, inclining to blackish on the sides, ochrish-white pointed with black beneath; tail tawny above and black beneath; legs spotted and banded with black and tawny. Native of the Brazils.

Some of this section have the scales of the back and tail unkeeled, and their teeth notched, but as the animal's age increases, the hind ones are rounded. To such only the generic term *Monitor* is applied by Fitzinger, and Cuvier has again subdivided them, applying to such as have the tail more or less compressed, and the ventral scales longer than their width, the name *Safe-Guards*; whilst those which have the tail round, uncompressed, and furnished like the belly with transverse rows of square scales, he calls *Ameivas*, besides other small groups.

Of the *Safe-Guards* are enumerated—

T. Monitor, Daud.; *Lac. Teguxin*, Lin.; *le Grand Sauvegarde d'Amérique*, Cuv.; *Great American Monitor*. From thirty-three to forty-two inches in length, of which the tail is about one-half according to Prince Maximilian, but Cuvier says, that the animal sometimes attains the length of six feet; head of a somewhat quadrangular, pyramidal form, with the upper rather longer than the lower jaw; the eyes of moderate size, with large lids; the tympanal membrane but little below the surface, and its hinder edge rather concealed by the skin of the neck, which is full and folded; body and limbs thick; of the front toes the inner is the shortest, next the outer, the second and third outer ones longest; on the sides of the belly and of each thigh is a flat fold of skin, and on the latter some pores; tail very stout and long at its root, the upper surface of which has a slight longitudinal depression, scarcely less than the body, and slightly compressed; of the hind toes, the inner one is shortest, and thence increasing outwards to the fourth, which is longest. The front of the head and skull is covered with large scales; that on the muzzle is triangular, above it an hexagonal one covering the whole

TUPI-
NAMBIS.

TUPI-
NAMBIS.

nose, and then a pair of pentagonal ones followed by the large frontal scales: from the back of the head all the upper parts are covered with rows of tetragonal, sometimes hexagonal scales, becoming narrower on the sides of the body; the depending skin of the under part of the neck is also covered with rows of pretty large hexagonal scales, whilst on the sides they are smaller and less regular; the front of the limbs are covered with transverse rows of four, five, or six-angled scales, their sides and hind parts with smaller scales; the tail is encircled with regular rings of oblong scales, and on its under surface is an indistinct keel, which becomes more distinct towards the tip. The general colour is blackish; the nape marked with little rounded whitish-yellow spots, and the sides of the neck with rows of the same coloured spots; the back is marked with nine or ten transverse bands of yellow spots, and in each of these lines is a larger spot; on the sides of the belly the spots become whiter; front legs black with little single yellowish-white spots, whilst those on the hind legs are composed of three or four smaller spots; upper part of the tail black, with rows of little pale yellow spots, under part whitish-yellow with black bands and spots; all the under parts reddish-yellow with continuous, jagged, transverse black bands, often inclosed in pale yellow; claws greyish-brown. Is a native of Guiana, Brazil, and Paraguay; it lives in holes in the earth and trees, having a wide opening, commonly under the roots of their branches, but sometimes on their upper surface. They sit with their head raised, and constantly shoot their forked tongue out of the mouth; they run with a serpentine movement, their belly upon the ground and the tail trailing after, darting with the swiftness of an arrow to their hole. If, however, they cannot escape, they become very fierce, defend themselves bravely, biting severely, and striking dogs violently with their muscular tail. They feed on fruits, on small animals, as mice, frogs, insects, also on eggs, and even poultry. The native Indians say, that during the cold season they hide for three or four months, living on a store of fruit which they have collected, and reappear in August. The Brazilians use their flesh for food, and often keep it dried in their houses. The Indians call this animal *Teiu*.

T. Maculatus, Daud.; *Green Spotted Monitor*. About fifteen inches in length; head lengthy, narrow, and pyramidal; upper part of the body and sides shining brownish-black, with some irregular marblings or transverse bands of pale bluish, and seven longitudinal parallel rows of little, oblong, well defined greenish spots upon the back and sides; belly pale slate colour. Cuvier thinks this probably only a variety of the last species, and that it is the species called by Spix *T. Monitor*. The species to which the name *Ameiva* has been applied are the following:—

T. Ameiva, Cuv.; *Teius Ameiva*, Merr.; *Lac. Ameiva*, Lin.; *l'Ameiva*, Lacep.; *Side-streaked Tupinambis*. Total length nineteen inches, of which the tail is nearly two-thirds; the general form very similar to the last species, but its head is rather larger and the belly narrower; on the ridge of the fore leg is a large scale; the inner and outer toes are shortest, and the other three nearly of equal length, the middle one being rather the longest; the toes are all armed with long, narrow, sharp, slightly curved claws; the head is brownish, its sides paler with fine black spots; the back bright grass-green, and the belly pale yellowish green; from the ear to the tail on each side of the back passes a broad

pale brown longitudinal stripe, beneath which the sides are brownish, but on the edge of the belly become bluish-green; upon the brown ground are perpendicular streaks of bluish-green and yellow spots encircled in black, some round and others oblong; root of the tail green, sometimes pale brown, and on its sides a greenish black streak; the fore legs marked like the head; the hind ones are spotted with bluish-green, and at their upper parts green and brown intermixed. This species is spread over South America, and in its manners has great resemblance to the last species. Prince Maximilian considers Daudin's *Lacerta Ameiva*, *Litterata*, and *Graphica*, as well also as Cuvier's *Ameiva Lateristriga*, merely synonyms of this species.

T. Cyaneus, Cuv.; *Teius Cyan.* Merr.; *Blue Tupinambis*. About the same size as the last species, of a bluish colour, with round white spots scattered on the flanks and sometimes upon the body.

T. Cyanomelas, Cuv.; *Teius Cyan.* Pr. Max.; *Blue Striped Tupinambis*. Body nearly two feet long, and the tail probably much longer than it, but in the specimen described it was broken; the head in this species is smaller and shorter than in the preceding, and its summit slightly vaulted; the lower jaw scarcely shorter than the upper; from the flat space between the eyes a sharp keel extends to the tip of the nose; the skin beneath the neck is folded transversely; the fore feet have five slender toes, of which the inner and outer are shortest; on the hind feet, the outer toe is set far back, the next to it is very long, and thence to the innermost their length decreases; the tail is carinated; upper part of the head and neck and the feet leaden; back and sides blackish, on the middle of the former a broad bluish-grey longitudinal streak, with a slightly indented edging; next follows a black stripe bounded below with a narrow, regular, bluish-white, longitudinal stripe, then another streak of black with a pale blue line beneath, and below this the sides are blackish, bounded with pale sky-blue marbled with a row of black spots, and gradually subsiding into whitish on the belly. It is a native of Brazil, living in dry districts, and not very common.

T. Ocellifer, Cuv.; *Teius Ocell.* Spix. About fourteen inches in length, of which the tail is one-half; upper parts brownish with a bluish-olive tinge, the back dotted with black and the sides marked with a double row of bluish-white spots, and with a whitish streak running to the tail, which is bluish-brown above, marked on the sides with black and white, and tawny beneath. Is a native of Brazil.

T. Tritæniatus, Cuv.; *Teius Tritæn.* Spix. About seventeen inches in length, of a greenish colour above with a broad black band passing from the ear to the thigh, and towards the latter eyed with white, and another above and below it narrower and white; back dotted with black; under parts tawny. Is found in Brazil.

Some species have all the scales of the belly, tail, and legs keeled, of which one has a little oblong spine on each side of the vent, and hence Spix has formed his genus *Centropyx*, whilst in another the dorsal scales also are keeled, so that the flanks only are granular; such is Fitzinger's *Pseudo-Ameiva*. Both are approximated to the True Lizards by the collar of broad scales existing on the neck.

See Daudin, *Histoire Naturelle des Reptiles*; Cuvier, *Règne Animal*; Merrem, *Tentamen Systematis Amphibiorum*; Fitzinger, *Neue Classification der Reptilien*; Spix, *Species Novæ Lacertarum*.

TUPI-
NAMBIS.

TUPISTRA.

TURBAN.

TUPISTRA, in *Botany*, a genus so named by Ker, from a diminutive of *τυπις*, a *mallet*, in reference to the form of the flower. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Smilacæ*. Generic character: flowers in dense spikes; perianth coloured, campanulate, six or eight-cleft, with spreading segments; stamens six or eight, inserted in the tube of the perianth; filaments adnate or distinct; anthers fixed by the back; ovarium subcylindrical, small, three or four-celled; ovula two in each cell collateral; style thick, continuous with the ovarium; stigma radiately three or four-lobed.

Tupistra consists of two or three known species; they are stemless, glabrous herbs, with thick rhizomatose roots, ringed by the falling of the bases of the leaves. The leaves are in two ranks, petiolate, oblong-lanceolate, striately nerved; the scapes are central, and the flowers are of a dirty violaceous colour, and furnished each with a bractea.

TURARIA, in *Botany*, a genus so called by Molino, from the vernacular name of the shrub. It belongs to the class *Decandria*, order *Digynia*, and the natural family of *Ebenacæ*. Generic character: calyx tubular, five-toothed; corolla funnel-shaped, five-cleft; stamens ten, with very short filiform filaments, and didymous anthers; styles two, setaceous; capsule two-celled, two-seeded.

Only a solitary species of *Turaria* is known, *T. Chilensis*; it is a shrub with alternate-linear, callously-toothed leaves, which are silky beneath. The flowers are usually solitary and sessile.

TURBAN, } See Vossius *De Vit.* lib. ii. ch. xviii.;
TURBAN'D, } and Menage.
TURBANT, } Fr. *turban*; It. *turbant*; Sp. *turbante*.
TURBANED. }

A Turkish hat, of white and fine linen, wreathed into a rundle; broad at the bottom to inclose the head, and lessening for ornament towards the top. Cotgrave.

The men of the same countrey use to haue their haire kempt, and trimmed like vnto our women: and they weare golden *turbants* vpon their heades richly set with pearle, and pretious stones.

Hakluyt. Voyages, &c. vol. ii. p. 54. *Odoricus*.

And twin'd of sixty elles of lawne and more,

A *turbant* strange, adorn'd his tresses hore.

Fairefax. Godfrey of Bulloigne, book xvii. st. 10.

Set you downe this:

And say besides, that in Aleppo once,

Where a malignant, and a *turbond-Turke*

Beate a Venetian, and traduc'd the state,

I tooke by th' throat the circumcised dogge,

And smoate him, thus.

Shakspeare. Othello, act v. sc. 2. fol. 338.

But if ye take that course which Erasmus was wont to say Luther took against the pope and monks, if ye denounce war against their miters and their bellies, ye shall soon discern that *turbant* of pride which they wear upon their heads, to be no helmet of salvation, but the meer mettle and horn-work of papal jurisdiction.

Milton. Apology for Smectymnus.

O how the fair queen with the golden maids,

The sun of night, thy happy fortunes aids!

Though *turban'd* princes for a badge her wear,

To them she wains, to thee would full appear.

Drummond. The Speech of the Moon.

He had on a long robe of purple silk, and a kind of *turban* on his head of the same colour, which had a star of gold wrought on it, worn just before.

Glanvill. Essay 7. On Lord Bacon's New Atlantis.

They wear but few cloaths; their heads are circled with a short *turbat*, fringed or laced at both ends; it goes once about the head, and is tied in a knot, the laced ends hanging down.

Dampier. Voyages, vol. i. ch. xii. p. 326. Anno 1686.

They wear no hat, cap, nor *turbat*, nor any thing to keep off the sun. *Dampier. Voyages*, ch. xv. p. 427. Anno 1687.

With front unblest'd, came towering in

Proctor armipotent, in stern deport

Resembling *turban'd* Turk.

J. Philips. Cerealia.

And some had a piece of white or leather coloured cloth wound about the head like a small *turban*, which our people thought more becoming.

Cook. Voyages, vol. i. book i. ch. xx. p. 256.

TURBAN or **TURBANT**, the ordinary covering for the head used by Muselmáns throughout Asia and Africa, is a corruption of the Persian word *Dul-bend*, which signifies a long, narrow, muslin wrapper rolled round the head: but the rage for innovation among the Turks, in which the late Sultán took the lead, has almost put that remarkable and becoming part of their dress out of fashion among his subjects. As every Turk has his head shaved, with the exception of one lock of hair, he requires, as its first covering, a scull cap. This is made of very fine woollen cloth dyed scarlet, and manufactured at Fás, (Fez in Morocco, commonly pronounced Fés,) whence it is called Fási, i. e. Fezian. Over this is placed the *kávuk* or *káúk*, a large, flat-topped, cylindrical cap stuffed with wool and covered with dark coloured cloth or silk, round which the sash (*shásh*) or shawl (*shál*) is twisted. The *káúk* is peculiar to the Turks, a simple cap of various dimensions being substituted for it by Moors, Arabs, Persians and Hindús. Soleimán I. in 1408, and subsequently Murád III. in 1583, distinguished the different ranks and professions of his subjects by the shape and decoration of their turbans. The 'Ulemá or learned, i. e. the doctors of law and divinity, and particularly the chiefs in those professions, still wear the same turbans, particularly remarkable for their vast size: but the civil and military officers of the court, and a great part of the people, have substituted a pendant *kuláh* or red cap for the head-dress of their forefathers. The different kinds of Turban used in Turkey are well represented in Niebuhr's plates. (*Reise*, tom. i. tab. xix.—xxiii.)

Mouradgea D'Ohsson, *Tableau de l'Empire Ottoman*, 8vo. ed. IV. 113; Niebuhr, *Reise*, theil i.

TURBARY, Low Lat. *turbaria*, locus *cespitiibus* fodiendis idoneus, a place for digging *turf* or *turves*. Skinner calls it *turfery*. See **TURF**.

And a *turbarie* thereby compassed about with water and maresse was so dried vp, that neither grasse nor mire remained.

Holinshed. Chronicles of England. Henric III. vol. ii. p. 353.

Anno 1222.

Common of piscary is a liberty of fishing in another man's water, as common of *turbary* is a liberty of digging *turf* upon another's ground.

Blackstone. Commentaries, book ii. ch. iii. p. 34.

TURBID,

TURBIDLY,

TURBULENT,

TURBULENTLY,

TURBULENCE,

TURBULENCY.

Fr. *turbulent*; It. *torbido*, *turbulento*; Sp. *turbado*, *turbulento*;

Lat. *turbidus*, *turbulentus*, from

turba; Gr. *τυρβην*, a mob or mul-

titude. Lennep derives from *συν-*

ειν, *trahere*, and his editor from

συν-ειν, *miscere*;—by mere transposition of the letter it

appears to be the same word as *trib-ul-are*, to trouble.

See **TROUBLE**. R. Brunne uses *turbe*, a troop. *Turbid*

is—

Troubled; disordered, vexed, disquieted, agitated, muddy. *Turbulent*—

Disquieted, agitated, confused; confusedly noisy, or

clamorous; stormy, tempestuous.

In the second *Turbe* was Maister Coradyn.

R. Brunne, p. 188.

TURBID.

TURBID. Since I was hurl'd among these walls, I had divers fits of melancholy, and such *turbid* intervals that use to attend close prisoners, who for the most part have no other companions but confus'd troops of wandering cogitations.

Howell. Letter 30. book ii.

Mast'ring the mighty, humbling the poorer wight,
By all severest means that could be wrought;
And, making the succession doubtful, rent
This new-got state, and left it *turbulent*.

Daniel. History of Civil Wars, book i.

For I have dreamt
Of bloody *turbulence*; and this whole night
Hath nothing beene but shapes, and formes of slaughter.
Shakspeare. Troilus and Cressida, act v. sc. 3. fol. 102.

Since the *turbulency* of these times, the same moderation shines in you, notwithstanding that the mitre is so trampled upon, and that there be such violent factions afoot.

Howell. Letter 54. book i. sec. 6.

Yet as being oft times noxious where they light,
On man, beast, plant, wastfull and *turbulent*,
Like *turbulencies* in the affairs of men,
Over whose heads they rore, and seem to point
They oft fore-signifie and threaten ill.

Milton. Paradise Regained, book iv. l. 457.

With jealous eyes, at distance she had seen,
Whispering with Jove, the silver-footed queen;
Then, impotent of tongue (her silence broke)
Thus *turbulent* in rattling tone she spoke,

Dryden. Homer. Iliad, book i.

But now, of *turbid* elements the sport,
From clear to cloudy tost, from hot to cold,
And dry to moist, with inward-eating change,
Our drooping days are dwindled down to nought,
Their period finish'd ere 'tis well begun.

Thomson. Spring.

As this innocent way of passing a leisure hour is not only consistent with a great character, but very graceful in it; so there are two sorts of people to whom I would most earnestly recommend it. The first are those who are uneasy out of want of thought; the second are those who are so out of a *turbulence* of spirit.

The Tatler, No. 112.

Their religion, like an hec tick body, hath, by degrees, been consumed by its own heats, whilst that zeal and fervour, which should move and animate it, hath been converted into its disease, and wholly evaporated into faction and *turbulency*.

Scott. Christian Life, part i. ch. iv. fol. 137.

It is true, indeed, that benevolence, arising from this source, at first runs thick and *turbid*; but, as it holds its way, it refines; it purifies and expands its current, till it hath lost all memory of its low original.

Warburton. Works, vol. ix. p. 57. Sermon 3.

A person of small merit is anxiously jealous of imputations on his honour, because he knows his title is weak; one of great merit *turbidly* resents them, because he knows his title is strong.

Young. Estimation of Human Life.

To thorny thickets flock'd the feather'd throng,
And pensive plied their melancholy song,
Or to the shelter of the forest driven,
Escap'd the windy *turbulence* of heaven.

Faule. Description of Winter.

Has any nymph her faithful lover lost,
And in the visions of the night,
And all the day-dreams of the light;
In sorrow's tempest *turbulently* tost—
From her cheeks the roses die.

Smart. Ode on St. Cecilia's Day.

TURBINARIA, in Botany, a genus so called by Lamouroux, from *Turbino*, to fashion like a top, on account of the form of the plants. It belongs to the class *Cryptogamia*, and order *Algæ*. Generic character: frond leafy; leaves petiolate, peltate, triangular, inflated into a vesicle; receptacle minute, branched, cylindrical, tuberculate, axillary.

A genus separated from *Sargassum* and *Fucus*, consisting of two known species, the *Fucus turbinatus* of Turner, t. 24, f. a. and b.

TURBINATED, Fr. *turbiné*; Lat. *turbinatus*;

formed like a *top* (*turbo*), like an inverted cone; or a cone,—*spiral*; moving like a top.

Let mechanism here make an experiment of its power, and produce a spiral and *turbinated* motion of the whole moved body without an external director.

Bentley. Sermon 4, p. 143.

An irregular contortion of a *turbinated* shell, which common eyes pass unregarded, will ten times treble its price in the imagination of philosophers.

The Idler, No. 156.

TURBINELLA, in Zoology, a genus of Canaliferous Zoophagous Trachelipodous Molluses.

Generic character. Shell turbinated or somewhat spindle-shaped, canaliculate at its base, with from three to five compressed and transverse folds upon its columella.

The greater number of this genus was included by Linnæus among his *Volutæ*, and some also in the *Murices*, from which they have been removed by Lamarck; they have however close relations with those genera, notwithstanding the remarkable folds on their columella. They are not very easily distinguishable from *Fasciolaria*, except by the direction of these folds, which in that genus are very oblique, instead of transverse, as in this. The animal is provided with a small roundish horny opercule; it has two obtuse club-like tentacles, with prominent eyes, placed at the outside of their base. The mantle or cloak sends a tube-like prolongation through the canal of the shell. They are all inhabitants of the Indian and African Seas and the Southern Pacific Ocean; but Linnæus says, one species, *T. Craticulata*, is found in the Mediterranean. The type of the genus is *T. Scolymus*, Lam.

TURBITH, in Botany, a genus so called by Tausch, from the native name of the plant. It belongs to the class *Pentandria*, order *Digynia*, and the natural family of *Umbelliferae*. Generic character: limb of calyx five-toothed, deciduous; petals obovate, emarginate, each furnished with an inflexed point; fruit attenuated at the neck, contracted from the side; mericarps five-ribbed, the ribs filiform, obtuse and equal; the lateral ones marginating, the furrows between the ribs are furnished with one vitta each, and the commissure with two; carpophore bipartite; seed semiterete.

This genus consists of a single species, a perennial herb, a native of the Alps of Piedmont and Carniola. The leaves are decomposed, with capillary segments. The umbels are terminal. The involucre are deciduous, and the involucels are of many leaves. The plant is the *Athamanta Mathioli* of Jacq, and the *Seseli Turbith* of Linnæus.

TURBINOLIA, in Zoology, a genus of Polyps with Lamelliferous Polyparies.

Generic character. Polypary rocky, unattached, single, turbinated, or cuneiform, pointed at the base, striated longitudinally without, and terminated by a starlike, sometimes oblong, lamellated cell.

This genus is connected on the one hand with *Caryophyllia*, and on the other with *Fongia*, but they are not attached like the former, and their pointed base distinguishes them from the latter. The specimens found of this genus are all fossil. The type is *T. Patellata*, Lam.

TURBO, in Zoology, a genus of Turbinaceous Trachelipodous Molluscs.

Generic character. Shell conical, of a somewhat turricular shape; its periphery never compressed; aperture round, perfect, its edges distinct above; columella

TURBINATED

TURBO.

TURBO. arching, flattened, its base not truncated; furnished with an opercule.

TURDUS. The shell of this genus is solid, often very thick and agreeably diversified with brilliant nacreous colours; its twists are always round, never compressed or sharp. It rests entirely, or almost so, upon its aperture, and its axis is generally much more inclined than in the *Trochi*. It is distinguished from *Monodonta* by the lower end of its columella not being truncated. From the *Phasianella*, it is known by its aperture not being toothed, nor its roundness altered by the projection of penultimate turn. The foot or ventral disc of the animal is shorter than its shell, and is obtuse at both ends: the head is furnished with a pair of pointed tentacles which support the eyes at the outside of their base. Lamarck enumerates thirty-four species, of which seven are European. *T. Littoreus*, Lin., may be taken as the type.

TURBOT, Fr. *turbot*; D. *turbot*, *terbot*. In Latin called the Rhombus, from *ρῶμβος, ρεμβ-ειν*, to turn or roll round; and Scaliger thinks the turbot is so called from *turbo*, a top.

Of sea-fishes some be plaine and flat, as byrtes or *turbots*, solds, plaice, and flounders. And these differ from the *turbots* onlie in the making of their bodie. For in a *turbot* the right side turneth upward, and in a plaice the left.

Holland. Plinie, book ix. ch. xx.

To make thy meal of sauces, and to make the accessory become the principal, and pleasure to rule the table, and all the regions of thy soul, is to make a man less and lower than an oglio, of a cheaper value than a *turbot*. Taylor. Sermon 16.

Not oysters of the Lucrine lake
My sober appetites would wish,
Nor *turbot*, or the foreign fish
That rolling tempests overtake,
And hither waft the costly dish.

Dryden. Horace. Epode 2.

Turbots grow to a very large size; we have seen them of three and twenty pounds weight, but have heard of some that weighed thirty. Pennant. British Zoology. Turbot. Flounder.

TURCISM, } Religion, manners, &c. of the
TURKISHNESS. } *Turks*.

Contemnyng of knowledge and learninge, settinge at nought, and having for a fable, God and his hyghe providence, will bringe us, I say, to a more ungracious *Turkishnes*, if more *Turkishnes* can be than this, than if the *Turkes* had sworne to brynge all *Turkys* against us.

Ascham. Works, fol. 107. Toxophilus, book i.

He grounds his following discourse upon the probability of the fall of *Turcism*, and the hopes of the further propagation of the Christian religion; and the necessity of unity and concord of Christendom.

Strype. Ecclesiastical Memoirs. Hen. VIII. Anno 1536, book i. ch. xxxv. p. 432.

TURCOING or **TOURCOING**, France, in the department of the Nord, a manufacturing town, the chief place of the arrondissement of Lille, containing 14,660 inhabitants. It is well built, and the streets have a lively and industrious aspect. The Hotel de Ville, in the Grand Place, is a fine building, and the church of St. Christopher an ancient edifice of very considerable dimensions. In the church of St. James are several pictures by masters of different schools in the best style of the art. There is a hospital for aged women, upon which an order of nuns attends. Turcoing also possesses a Chamber of Commerce and manufactures. Camlets, satins, table-linen, soap, flax, woollens, and cotton cloths, are the principal manufactures. It is nine miles North-East of Lille.

TURCZANINOVIA, in Botany, a genus dedicated by De Candolle to M. Turczaninow, a Russian botanist. It belongs to the class *Syngenesia*, order *Superflua*, and the natural family of *Compositæ-Senecionidæ*. Generic character: heads many-flowered, radiate; ligulæ seven or eight in one series, female, fertile, entire, oblique at the base; flowers of the disk seven or eight tubular, five-toothed, hermaphrodite, fertile, mixed with a few sterile ones; receptacle alveolate; scales of involucre disposed in two series, linear, bluntish, shorter than the disk; stigmas of the ray-flowers elongated, of the disk ones short and inclosed; achenia compressed, glabrous, coloured; pappus uniseriate, bristly, the bristles silky and somewhat scabrous.

This genus consists of a single known species, *T. fastigiata*; it is an erect, simple, corymbosely fastigate herb, a native of Siberia and Dahuria, and is glabrous at the base, and clothed with scabrous pubescence above. Leaves alternate, linear, lanceolate, quite entire, acute, one-nerved; corymbs compound, fastigate, many-headed. Ray-flowers white, disk ones yellow. Habit of the genus *Galatella*, but differing in the ligula being fertile, and in the achenia being glabrous.

T U R D U S.

TURDUS. Lin.; Thrush, Pen. In Zoology, a genus of animals belonging to the family *Dentirostres*, order *Passeres*, class *Aves*.

Generic character. Beak of moderate size, sharp, its tip pointed and curved, the upper mandible toothed towards its extremity; about the gape a few bristles; nostrils basal, lateral, ovoid, partly closed by a naked membrane; wings of moderate size, the first quill very short, or of moderate length, the third in some, the fourth in others longest; tarsus longer than the middle toe, which is attached at its base to the outer; hind toe large; claws large, but only slightly curved.

This species are all of moderate size, prettily formed, and in the shape of their beak approach the Crows. The inner sharp edges of the eyelids and the corners of the mouth are, in all the species, yellow at pairing time. Buffon has divided them into Thrushes and Blackbirds,

the former having their plumage more or less marked with little deep spots, whilst the latter have their colours in large masses, but their actual characters are the same. In the Blackbirds, however, the males of the first year resemble the female in their plumage. Temminck believes that they moult only once a year, and that the difference in the spotting and barring of their feathering covering is dependent on friction. They mostly live in flocks and have a sameness of voice. But few are stationary in any country, the greater number migrating northwards in summer, and returning to the south in winter. They feed on insects, worms, and berries; the tough wing-cases of the former, and the shells and stones of the latter they reject from their gizzards in the shape of oblong pellets. They all hop, and never walk. Some prefer the woods and others rocky places.

TURCISM.
TURDUS.

TURDUS. Section I.—*Wood Thrushes*; *Merula*, Willugh.

These live in companies, and specially at their migratory seasons. They constantly inhabit woods, bushes, and gardens, are very similar in their habits and in their voice, are very amorous, and one species readily follows the call of another. They feed on worms, grubs, and creeping insects, but do not notice those on the wing; and in winter and spring eat berries, specially those of the *Sorbus Aucuparia*, Lin. They build nicely contrived nests, breed twice a year, and their eggs are mostly pale sea-green.

T. Viscivorus, Lin.; *la Drenne*, Buff.; *Missel Thrush*, Pen. Eleven inches in length; beak pale golden yellow, its ridge and tip blackish-brown; streak between the beak and eye greyish-white; upper parts greyish-brown, under parts white tinged with rufous-yellow, varied on the throat and front of the neck with lance-shaped, and on the other parts with oval brown spots; wing-coverts edged and tipped with white; outer three caudal quills tipped with greyish-white; legs dusky light reddish-yellow; claws black. The female is distinguished from the male by having the beak more brown and rufous, and the under parts more clouded with ferruginous. The young birds are greyish above, much spotted beneath, and have a wide, rusty, yellow edging on the wing-feathers. The Missel Thrush, which is the largest of the genus, is found throughout the greater part of Europe, as high as Sweden and Norway, and as low as the Mediterranean; it is not, however, equally common, for whilst in England, in the south of Sweden and north of Germany, it is frequent, and remains throughout the year, and is also common in Switzerland, yet in Holland, and in the southern part of Europe, it is rare, and in some parts of France is only a periodical visitant. In summer it prefers thick fir forests, in which are little open spaces with a few bushes; but in spring and autumn it resorts to more open places, or to the edges of woods, and sometimes to the open fields, whilst in very cold and snowy weather it seeks shelter among the firs, and specially among juniper trees. They build their nest at various heights in trees, making its bottom of herb stalks and lichens, with a layer of earth, and line the interior with mosses, roots, and hay. The female produces twice a year about four greenish-white eggs, slightly speckled with violet and maroon. They feed on earth-worms and insects, and to these are added, in winter, berries, specially those of the juniper, of which they are very fond. Their song commences in February, consisting of five or six broken strains, and is continued for four or five months. Their call has much resemblance to the word *schnaerrrr*, but when excited by passion or fear of their nest being disturbed, it is increased to *schnaerrrr-ratatataru*. They live together in little and sometimes even in large flocks, but are little united together, as on the slightest alarm they disperse in various directions.

T. Pilaris, Lin.; *la Litorne ou Tourdelle*, Buff.; *Fieldfare*, Pen. Ten inches in length; beak, in spring, orange-yellow with brown spots, but in autumn brown, with the corners of the mouth and the lower mandible, only, yellow; space between the beak and eye black, and a white streak above the latter; head, nape, and lower part of the back ashy; upper part of the back and wing-coverts chesnut, the latter tipped with ashy; throat and chest pale rufous, with brown lancet-shaped streaks,

belly pure white; flank-feathers spotted with black and edged with white; tail black, its outer quills tipped with deep grey; legs deep brown. The female has the head tinged with brown, the throat white, and the legs paler than in the male. The Fieldfares are natives of the northern parts of Europe and Asia, which in winter they leave, passing southward into the northern parts of Germany, Denmark, England, and Holland, where they remain in great numbers, but part proceed to France, Switzerland, Italy, and a few even as low as Sardinia. It arrives in England, in large flocks, about October, and remains till the beginning of April, being the last bird which leaves our shores. On their first appearance their flesh is dark, thin, and scurfy, but after feeding in the hedges for a little time becomes fat, and the flesh bluish, in which state it continues from the latter end of November to that of January, according as the hedge fruit holds out; at this time they are comparatively tame, but subsequently, as their food is less farinaceous, they become more wild and shy, and their flesh again becomes dark. If the weather be very severe, they leave, and proceed southward, but again visit us on their return, and in greater numbers. Their migratory journeys are usually commenced at earliest dawn, and continued till about nine o'clock, when they rest and feed, after which, from noon to even, they proceed on their course, and rest for the night, if the weather be not severe, among the branches of tall trees; but if it be very cold, they prefer the lower branches and thick bushes, but in this country, according to Montagu, roost on the ground. In their migrations they are more commonly accompanied by the Redwing than any other species. They breed in high northern latitudes, and their gregarious habits are so strong that even at this time many nests are made in the same tree. They prefer birch woods, and in the north of Norway every little birch wood teems with them. The nest is made externally of soft brushwood, and dried stalks of plants, and within of straws, both consolidated with earth or clay; and in it are laid four or five, rarely six eggs, of a sea-green colour, with small rufous dottings. Their food is much the same as that of the last species. Their call, which they frequently utter, both sitting and flying, and which is a marked indication of the commencement of their migration, may be expressed as *schaschaschaschach*, uttered suddenly and sharply together with the single syllables *schach*, *schach*; but if they wish to attract one flock to another for the purpose of resting, they call distinctly *qui qui*, or *trivitri*. They are caught in winter in large numbers for the market, and are considered good eating. To this use they were applied by the Romans, who included them with the Redwings, under the common name *Turdi*, and fattened them with crumbs of figs and bread mixed together.

T. Musicus, Lin.; *la Grive*, Buff.; *Mavis*, *Throstle* or *Song Thrush*, Will. Eight inches and a half in length; and resembling the Missel Thrush, in almost every respect except size, so that the name *la Petite Grive*, applied to it by Belon, might be used without impropriety; beak horn-brown, with the under part of its base yellowish; irides nut-brown; space between the eye and beak yellowish; all the upper parts brown tinged with olive; the wing-coverts edged and tipped with rufous-yellow; throat white; sides of the neck and chest rufous-yellow, with triangular brown spots; belly and flanks white with oval brown spots; legs

TURDUS. greyish-brown. The female is smaller; her chest lighter yellow, and the rufous tipping of the wing-coverts less distinct. Thrushes are spread all over Europe, frequenting woods near streams; they are stationary in England, but in France are migratory, and as in Burgundy they appear just before the vintage, are there called *Grives de Vigne*. As the autumnal fogs come on, they collect in large flocks for their departure southward, which takes place between the middle of September and that of October, and they return about the middle of March, each pair to its own particular residence. They build in trees of no great height, often in apple and pear trees. The nest is pretty large, although less apparently so externally than within, its walls being very thin, so that it is both wide and deep, bowl-shaped, with its edges inverted. It is built up of dry twigs and stems of grass closely interwoven, and the whole interior is smooth and solid, being overspread with what is usually considered to be clay and cow-dung, but which Naumann holds to be more probably well masticated rotten wood mixed with some glutinous matter, probably the Thrush's saliva. From four to six eggs of a bright sea-green colour, with many small, and a few large, round, light rufous-brown spots; sometimes there are only a very few and small spots, and sometimes the eggs are spotless. The call of the Thrush is a hissing or hoarsely piped *zipp*, uttered often so low as to lead to the supposition that the bird is far distant, although close at hand. When alarmed or uneasy, their note *dak, dak, dak, dak, dak*, is uttered in a higher tone; and at sunrise, and sunset, and often even later, when they resort to the water to drink and bathe, the first which finds a suitable stream utters joyfully *tic, tic, tic, tic, ticki, dack, dak*, and this being quickly responded to by the party, consisting of ten or twelve, they cautiously begin to enter the water, and so soon as one has ventured in, the rest quickly follow, and begin to quarrel if they are scant of room. If disturbed whilst in a bush it darts out, merely uttering *zipp*, or *dack, dack*, by which it is distinguished from the Blackbird. The male has a very beautiful song, which from March till far into summer is heard in the woods, specially at morning and evening; it sits singing on the very topmost branch of the tree, above its usual favourite perch. Previous to having young ones they sing during the day, but most beautifully towards evening, and continue till twilight has passed, after which they descend, but for a long while their beautiful *tir, tir, tir, tir*, may be heard. Their song has some resemblance to that of the Blackbird, but the tone is higher, the time quicker, the pauses between the strophes shorter, but the entire song longer, more melodious and varying, and has several distinct, very flute-like strophes, of which some resemble the syllables *tratu, trati, migam, migam*, and *kudubh, kudiet*, each twice repeated.

T. Iliacus, Lin.; *le Mauvis*, Buff.; *Redwing*, Willugh. Eight inches in length; beak blackish, and yellow only at the base and angles of the lower mandible; irides nut-brown; space between the beak and eye black and yellowish; above each eye a broad whitish band; upper parts olive-brown; under wing-coverts and flanks bright rufous; sides of the neck, chest, and sides of the belly marked with numerous blackish longitudinal streaks; belly pure white; legs light grey. In the female the plumage is paler, the rufous colouring of the wings and flanks less bright, and the spots on the chest and sides of the belly larger

and of a light brown colour. They are natives of the north of Europe, and visit England in large flocks a few days before the arrival of the Fieldfares. Here they utter only a disagreeable piping note, whence perhaps their provincial names *Swine-pipe* or *Wind Thrush*, but in spring time in Sweden their song is loud and melodious. They build in elder trees, upon the berries of which they feed, also in birch and alder trees, in marshy districts. Their nest is very similar to that of the Song Thrush, but much smaller, less solid and compact; it contains six eggs of a bluish-green colour, spotted with blackish.

T. Torquatus, Lin.; *le Merle à plastron blanc*, Buff.; *Ring Ouzel*, Pen. Ten and a half inches in length; beak horn-black, the corners of the mouth yellow, and in old birds the base of the lower mandible also; irides nut-brown; all the feathers blackish with greyish-white edges; upper part of the chest belted with a broad semilunar, very beautiful white band: legs blackish-brown. In the female the plumage has a greyer tinge, the feathers of the upper parts being edged with ashy-grey, and those beneath with white; the chest band is narrower, less distinct, and tinged with rufous and ashy-grey. It is found generally throughout Europe, as high as Sweden and in the north of Asia; is very rare in Holland, but more common in Switzerland, although no where in great number. It prefers woody and mountainous districts, builds on the ground at the foot of a bush, and lays four or six whitish-green eggs, with little rufous-brown or reddish spots.

T. Merula, Lin.; *le Merle*, Buff.; *Blackbird*, Pen. Nine and a half inches long; beak, inside of mouth and ocular circlet yellow, irides black; whole plumage deep black; legs black. The female is of a blackish-brown or soot colour; the throat irregularly spotted with deep and pale brown; chest reddish-brown, and belly deep ash; beak black; legs brown. The young males resemble the female, but have the beak brown. The Blackbird is found throughout almost the whole of Europe, also in Asia, from the north down so low as Syria. It is sedentary or migratory, according to its locality: thus in Holland it is very common during autumn, but rare in winter. Their call, uttered either whilst sitting or flying, is a tremulous *tsrii, tsritsrii*; but sometimes merely *tak, tak*, or, in a deeper tone, *tuk, tuk*, and if very earnest, *taktaktaktak*, expressive of pleasure, or of the approach of something which they fear to be dangerous, and should this draw nearer, their voice changes to *tir, tir, tir, tir, tir, tir*! very loudly uttered, and, when they take wing, followed by a shrill, quick *gaig iggig giggi, gaigig gaggiggi*. In the evening, when sitting on a low branch, or flying to the water, they utter the syllable *tir*, sustaining it for a minute. If suddenly frightened, they dart off, crying out in a loud tone *tak, tak, gaigig gaggiggi, tak, tak*, the middle syllables expressed very quickly. The male Blackbird is one of our most beautiful songsters; his song consists of many strophes following at short intervals, among which are some more staid chirping and hoarse notes, varied with clear whistles; but it is specially distinguished and heard at a great distance, by a loud flutelike *tratu, tratatoe*, which has also been compared to the sounds *david, hans david*. With this somewhat melancholy song they enliven the quiet evenings of the early spring; they sing also during the day, but specially at morning dawn; for the most part,

TURDUS.

TURDUS. however, their song is first continuous towards evening, in the twilight, till the night is completely set in, when they cease, or are only very rarely heard. From March to July they sing incessantly, but principally on the evenings of hot and sultry days. Blackbirds build in the woods where thickest, and in the neighbourhood of water, making their nest sometimes in a hollow tree, of a tissue of club moss and dry stubble, but if more exposed, upon a small branch or in a thick bush: they weave the outside with fine roots, dried grass, and stalks, with which, not unfrequently, moss is intermingled, and the whole overspread with a layer of moist earth or mud. The female lays four, five, or six eggs, of a greenish-grey colour, marked with pale brown spots.

T. Atrogularis, Tem.; *T. Dubius*, Bechst.; *T. Bechsteinii*, Naum.; *Blackthroated Thrush*. About ten and a half inches long; beak blackish-brown, with the base of the lower mandible yellow; irides brown; face, cheeks, front of the neck, and upper part of the chest deep black, the tips of the chest-feathers tinged with ashy; upper parts pale olive-green, becoming darker on the head, with a paler streak over each eye; belly white, with brown, oblong, and dusky spots. In the female the throat is yellowish-white, spotted on each side with dusky-brown; the upper part of the chest light olive-grey arched with dusky-brown. This bird is a native of the north and north-eastern parts of Asia, from whence it visits Hungary and the neighbouring parts of Austria and Bohemia; it is found also in Silesia, and very rarely in Germany.

T. Naumanni, Tem.; *Nauman's Thrush*. Nine inches in length; beak brown; top of the head and auriculars deep brown; above the eye a broad light yellow stripe, and upon the sides of the neck a pale yellow spot; upper parts olive grey, mingled with ferruginous, the latter becoming more predominant on the sides of the neck, rump, and lateral caudal quills; wings brown above, their feathers all broadly edged with rufous, and the primary quills have at their root a pale rufous yellow spot; under wing-coverts rusty-red; upon the chest, flanks, and belly, the feathers are ferruginous, with broad white edgings; caudal quills deep brown, but their under surface rufous; legs brown. The colours of the female are paler, and the markings less distinct. It is probably a native of Northern Asia, and appears occasionally in Austria and Silesia, but most commonly in Hungary: it is also met with in Dalmatia and Southern Italy. It is fond of associating with the Redwing, and, like it, prefers more open woods than the Song Thrush and Blackbird.

T. Migratorius, Lin.; *T. Canadensis*, Briss.; *la Litorne et la Grive de Canada*, Buff.; *Robin*, Wils.; *Red-breasted Thrush*, Richardson. About eight inches and three quarters in length; beak yellow, with a blackish tip; head slate-grey, with three white spots on the sides, and the ocular circlelets white; upper parts and wings smoky-brown or blackish, throat having oblong black spots on a white ground; front of the neck, chest, and belly, brick-dust red marked more or less distinctly with slight whitish borders near the edges of the feathers; under tail-coverts white; tail blackish-brown edged with grey, the outer quill terminated with a white spot on its inner web. The female has her colouring less bright and distinct. It is a native of North America, and in summer ascends in large flocks as high as Hudson's Bay, but in winter descends as low as Carolina

and New Hampshire. It builds a large nest, often on an apple tree, plasters its interior with mud, and lines it with hay or fine grass. "The male," says Dr. Richardson, "is one of the loudest and most assiduous of the songsters that frequent the fur countries, beginning his chant immediately on his arrival. Within the arctic circle the woods are silent in the bright light of noonday; but towards midnight, when the sun travels near the horizon, and the shades of the forest are lengthened, the concert commences, and continues till six or seven in the morning." At Hudson's Bay they are known as *Redbirds*, from the colouring of their breasts, *Blackbirds* on account of their note, and by some they are called *American Fieldfares*.

T. Varius, Horsf.; *T. Aureus*, Stoll.; *le Merle Varié*, Tem.; *White's Thrush*, Gould. From ten inches and three-quarters to twelve and a half in length; beak brown; lore, ocular circlelets and cheeks whitish, and the feather tips marked with black crescents; all the upper parts and the four middle caudal quills olive-brown tinged with yellowish, and each feather marked near the tip with a broad black crescent; wing-coverts deep brown, spotted and edged with ochrish-yellow; bastard-wing streaked and edged with ochrish-brown; chin, middle of the belly, and under wing-coverts pure white; chest varied with pale-brown and ochre; the other under parts white, and the feathers ending in brown crescents; outer caudal quills black, the outermost two pale-brown towards their tips; legs brown. Temminck considers that the birds of this species, living either in Java, Japan, or Australia, are all identical, for he states that, although the latter have the beak rather longer and a little stronger than those observed in our country or in Japan, it is still a fact, that in the greater number of Indian specimens he has found individuals of which the beak is not stronger nor longer than those from Japan; he has therefore united them into one species in opposition to Gould's opinion, who makes two Indian, and is disposed to consider the Australian as a third species. Two of these birds have been shot in England, and it is remarkable that, as stated by Yarrell, the one shot near Christchurch, in Hampshire, should correspond to that of Japan in the relative size and structure of the wing, the total length of the former being twelve and a half inches, its wing from the carpal joint to the tip of the longest primary six inches and three-eighths; the first primary very short, the second and fourth of equal length, and the third the longest, whilst the latter is twelve inches long, its wing six inches and four-eighths, its first quill being short, the second a little longer than the fifth, and the third and fourth the longest. A specimen precisely similar to the latter has also been shot on the Elbe. The other English specimen, said to have been shot in the New Forest, Hampshire, measured eleven and a half inches; its wing five inches and four-eighths; the first quill short, the second as long as the sixth, the third, fourth, and fifth equal, and longest of all. This corresponds with an Australian specimen in the Zoological Museum of London, except in the second quill feather being shorter than the sixth, and the third, fourth, and fifth, although longest, being not quite equal. Yarrell also observes further, "so much alike in their colour and markings are the six birds just referred to, that one description would apply to all." Besides the instances mentioned as European, one has been shot on the Rhine, another in Germany, and a third close to Mayence. It is a very common species in

TURDUS. Japan, but in Java is only found on mountains of six or seven thousand feet high.

T. Pallidus, Pall.; *le Merle Blafard*, Tem.; *Pale Thrush*, Lath. About eight inches and three-quarters in length; the lore is covered with a black spot; forehead brown; head, sides of the neck and throat blackish-ashy; nape, back, and wing-coverts deep olive-rufous; alar and caudal quills black glossed with ashy, and upon the inner web of the outer three tail quills, a white spot; chin white; flanks cinereous olive, and all the other under parts pure white. It is a native of Siberia, but has been taken in some parts of Europe, in Saxony, and Italy.

T. Sibiricus and *T. Leucocillus*, Pall.; *le Merle à sourcils blancs*, Tem.; *White-browed Thrush*, Lath. Nine inches long; beak black; the whole plumage bluish-black, except the throat and front of the neck, which are perfectly black; a broad white streak over each eye; alar and caudal quills dingy-black, but the former having their inner web white, forming on the wings an oblique band; outer three caudal quills and under coverts having white tips; legs brown. The female has the throat whitish, with little brown points, and its sides bounded by a longitudinal black stripe; the band above the eye tinged with yellowish, and the cheeks marked with whitish-brown. This species inhabits the woody mountains of Siberia, and is also a native of Japan, where it is called *Kurotsigatori*.

T. Aureus, Pall.; *Yellow Thrush*. From eight and a half to nine and a quarter inches in length; upper parts olive or greyish-brown, inclining to brown towards the hinder part; a small white or yellow band above the eye; under parts rufous-yellow, becoming whitish upon the belly; upon the sides of the throat two brown bands, and in the throat itself some brown edgings; the chest is marked with some triangular spots, and the flanks with crescents of the same colour; under parts of the wings brown, and the tips of the feathers yellow and white. The colours of the female are less bright. Is a native of the Isle of Kadiak, on the north-eastern coast of North America.

T. Minor, Gmel.; *T. Iliacus Carolinensis*, Briss.; *Little Thrush*, Edw. Seven and a half inches in length; beak blackish, brown above, pale horn-colour beneath; head, upper sides of the neck, back, wings and tail reddish-brown or clay-colour; inner webs of the alar and caudal quills liver-brown; chin white; throat, lower part of the neck and breast reddish, and numerous marked with ill-defined roundish hair-brown spots, becoming fainter on the lower part of the chest, which is whitish; sides of the breast, flanks, and under surface of the wings smoky-grey; belly and under tail-coverts white; legs very pale brown. Temminck says, he cannot determine whether the species described under this title by Brehm, and shot near the Elbe, is the *T. Solitarius* or *T. Minor* described in Richardson's *Fauna Boreali-Americana*. The difficulty however ceases, if it be borne in mind, that Gmelin's description of the *T. Minor* is derived from that of Edwards, in which all the upper parts are "reddish-brown," and not "olivish or olive-brown," as Brehm's bird, which therefore cannot be Gmelin's species. Neither is it Brisson's *T. Iliacus Carolinensis*, in which the upper parts are described as "rufous-brown," and "the lower part of the neck and chest reddish with rufous-brown spots;" for Brehm's bird has "the chest white, with brownish streaks." The difficulty seems to have arisen from Swainson pre-

ferring to employ a version of his own in the description of the colours of this species to those of Edwards and Brisson, although he says that Edwards's "species is well distinguished by its tawny or reddish-brown plumage," and that "the reddish breast," as described by Brisson, "is a nice but very masterly distinction." Brehm's bird therefore is certainly not Gmelin's *T. Minor*. Is a native of North America, from the Arctic regions down to Georgia.

T. Wilsonii, Bonap.; *T. Mustelinus*, Wils.; *Wilson's Thrush*. From ten to twelve inches in length; beak shorter and less compressed than in the last species, black above and at the point, the base of its lower mandible flesh-coloured, angles of the mouth yellow; cheeks dusky-brown; all the upper parts tawny-brown; chin white; throat and upper parts of the chest cream-coloured, with pointed brown spots; sides of the breast and under surface of the wings tinged with ashy; legs pale brown. It makes its appearance in Pennsylvania from the south regularly in the beginning of May, and after staying a week or two passes northward. Prince Charles Bonaparte says, he has no doubt of its breeding in the northern high districts of the United States, but he has been unable to discover its nest. Richardson says, that it appears on the banks of the Saskatchewan in May, and during summer haunts the alder thickets and dense willow groves skirting the marshes where it doubtless breeds, but neither has he seen its nest. It has no song, and merely utters a sharp *chuck*.

T. Mustelinus, Gmel.; *Wood Thrush*, Wils. Eight inches in length; beak dusky-brown, the lower mandible flesh-coloured towards the base; irides dark-chocolate; ocular circle narrow and white; upper parts brown-fulvous inclining to olive on the rump and tail, and brightening into red upon the head; chin white; throat and breast white tinged with light buff, and marked with black or dusky points running in chains from the sides of the mouth, and crossing over the breast and belly, which with the vent is pure white; legs flesh-coloured. Inhabits the whole of North America from Hudson's Bay to the Peninsula of Florida. It arrives in Pennsylvania from the south towards the latter end of May, and returns in the beginning of October. It is commonly known as the *Wood Thrush* or *Ground Robin*, and arrives singly or in pairs, soon announcing its presence by piping its few but clear and musical notes in a sort of ecstasy, the prelude resembling the double tonguing of a German flute, and sometimes the tinkling of a bell; the whole song consists of five or six parts, the last note of each leaving its conclusion suspended. During the heat of day they are comparatively mute, but in the evening they resume their song, and continue it far into the night.

T. Solitarius, Wils.; *T. Minor*, Bonap.; *Hermit Thrush*. Seven inches in length; beak black above, whitish below; irides black; streak over the eye cream-coloured, as are also the auriculars, but mottled with olive; upper parts plain deep olive-brown, under parts dull-white; throat and upper part of the breast dull-cream-colour, deepest where falling over the shoulders of the wing, and marked with large dark-brown pointed spots; tail quills and coverts foxy red; legs dusky. This species remains in the southern states of the American Union through the whole year. It is rarely seen in Pennsylvania, and only at spring and fall for a few weeks, when it is mute, having in the spring only an occasional squeak like a young stray chicken. Richardson

TURDUS.

TURDUS. mentions one taken on the north side of Lake Huron in the spring. On the Atlantic coast in New Jersey, Wilson says, they remain longer and later, having observed them there in November. It frequents the dark solitary cane and myrtle swamps of the southern states, and the deeper they are the more certainly is this species found flitting about. It has been confounded with the Wood Thrush, but is distinguished by its smaller size, different markings, and the total absence of the clear voice and musical powers of that species. Its nest is made on a horizontal branch, its exterior composed of coarse rooty grass intermingled with horsehair, and lined with dry thread like grass laid circularly. The female deposits four pale greenish-blue eggs, speckled and blotched with olive.

Section II.—*Mocking Birds; Orphei, Swains.*

This section differs from the True Thrushes in its long bending and proportionally more slender beak; in its longer form dependent on the greater length of its tail, and in its rounded and shorter wings. They are all natives of America, and frequent the lower brushwood near the ground, mounting higher only during spring and breeding time, when they sing to their mates. Their note is very loud; some possess great melody, but in others it is very harsh, grating, and kept up incessantly.

T. Navius, Lath.; *Orpheus Meruloides*, Swains.; *Varied Thrush*, Pen. Nine inches and three-quarters in length; beak black, and at the base of the lower mandible pale yellow; head, sides of the neck, and an imperfect band across the breast pitch-black; auriculars encircled with a narrow reddish-orange stripe; upper parts blackish-grey; wings crossed with two reddish-orange bands, and the quill-feathers blotched exteriorly with the same colour, their inner surface leaden-grey with a broad whitish band on their base and on the tips of the greater inner coverts; chin, throat, and belly reddish-orange; flanks and axillary feathers bluish-grey; vent white; caudal quills greyish-black, their inner webs blackish-brown, all, except the outer, spotted with brownish-white on their tips, the spots diminishing towards the middle quills, which have mere brownish specks; on the tip of the inner web of the outer quill a large white spot; under tail-coverts blackish-grey edged with orange and tipped with white; legs flesh coloured. This species Swainson considers intermediate between the Thrushes and the Mocking Birds, agreeing with the former in the comparative straightness of its bill, the length of its wings, and the size, length, and scutellation of the tarsi; and with the latter in having the notch of the upper mandible nearly obsolete, the wings, though long, slightly rounded, and the rounded lengthened tail having its outer quills conspicuously tipped with white. It is a native of Nootka Sound.

T. Polyglottus, Lin.; *le Grand Moqueur*, Briss.; *Singing Bird*, *Mocking Bird*, or *Nightingale*, Ray; *Mocking Bird*, Wils. Nine and a half inches long, sometimes more, sometimes less; bill black, and base of the lower mandible whitish; irides yellowish-cream inclining to golden; upper parts dark brownish-ash, but when fresh moulted of a fine light grey; chin white, sides of the neck, breast, belly, and vent brownish-white; wings and tail nearly black; the first and second rows of coverts tipped with white; sometimes the primary coverts wholly white, and at other times tinged with brown; first three alar quills white from their roots to their coverts, the six following have the white extended

equally on both vanes, an inch to an inch and a half further; tail cuneiform, the outer two quills white, the others only tipped with white. In the female the white on the wings is less pure, spreads over only seven or eight of the primaries, to less extent, and reaches farther on the broad than on the narrow vane; the black is also of a brownish tinge. The Mocking Bird is spread largely over both North and South America, extending from New England to Brazil and among the adjacent islands. They are more numerous south of the River Delaware than north, where they are migratory. They seem to prefer a warm climate and low country, hence are they less numerous on the west than on the eastern side of the Alleghanies. Their time of building depends on the latitude in which they reside, in the lower part of Georgia early in April, in Pennsylvania not before the 10th of May, but in New York and the New England States still later. The nest, consisting of dry twigs and sticks, upon which are laid withered tops of weeds, fine straw, hay, wool and tow, and thickly lined with fine fibrous roots, is placed either in a solitary thorn bush, an almost impenetrable thicket, an orange tree, cedar, or holly bush; but the bird does not fear to place it near a house or farm, nor does it care for much concealment, as being at all times ready to defend it. Often, indeed, he builds near the house, not unfrequently in a pear or apple tree, rarely more than six or seven feet from the ground. The female lays four or five cinereous blue eggs with large brown blotchings. During the period of incubation, which lasts about fourteen days, neither man nor brute is allowed to approach without being fiercely attacked. But its vengeance is specially directed against the black snake, the inveterate spoiler of its eggs and young, and so soon as its stealthy approaches are noticed, the male darts at it like an arrow, striking it violently about the head with its beak, and as the snake's strength fails, the Mocking Bird seizes, and lifting it up a little from the ground, beats it with its wings till it has destroyed it. The motions of this bird are easy, elegant, and rapid; its voice full, strong, and musical, and capable, as Wilson observes, of almost every modulation, from the clear mellow tones of the Wood Thrush to the savage screams of the Bald Eagle. Its own note is bold, full, and varied almost endlessly, consisting of short expressions of two, three, or at most five or six syllables, generally interspersed with imitations, all uttered with great emphasis and rapidity, and continued for half an hour or an hour. As his song swells or dies away he mounts and descends, or, as Bartram expresses it, "he bounds aloft with the celerity of an arrow, as if to recover or recall his very soul, expired in the last elevated strain." His imitations are so perfect, that he not only deceives the sportsman, sending him in search of birds perhaps many miles distant, but even birds themselves are often deceived by his voice, and are either enticed by the fancied calls of their mates, or scared away by the well feigned screams of the Sparrow Hawk. Wilson, in his *American Ornithology*, has given a very interesting description of the imitative powers of this species, too long for insertion here, but well worth perusal. He also mentions, that they are frequently taken in trap cages, and may be rendered sufficiently tame to sing in confinement. Attempts have been made to breed them; and Wilson cites an instance, in which from a pair of birds confined in a room twelve feet square, with a cedar bush planted in its centre, five eggs were produced, the young hatched and brought up till

TURDUS.

TURDUS. they could nearly fly, but were accidentally starved. In the following year three young ones were hatched and doing well at the time of his observation.

T. Rufus, Lin.; *Orph. Ruf.* Swains.; *la Grive de la Caroline*, Briss.; *le Moqueur François*, Buff.; *Ferruginous Thrush*, Wils. About eleven and a half inches in length; beak black above and whitish beneath near the base; irides bright yellow; upper parts bright reddish-brown; wings crossed with two white bars relieved with black, their tips and inner vanes dusky; chin white; under parts yellowish-white; breast and sides beneath the wings marked with chains of long pointed black spots; legs dusky-clay. This species is the *Brown Thrush* or *Thrasher* of the middle and eastern states of the American Union, and the *French Mocking Bird* of Maryland, Virginia, and the Carolinas. It winters in the southern states, appears in Pennsylvania about the 20th of April, and thence ascends up to the Saskatchewan, announcing its arrival by its loud, emphatic, and highly varied song in the opening morning. Its notes, according to Wilson, are not imitative, but solely its own, and have great resemblance to that of the *Mocking Bird*. In May it builds its nest in a thorn bush, low cedar, briar thicket, &c., within a few feet of the ground, constructing it externally of small sticks, lined with dry leaves, and these overlaid with fine fibrous roots. The female lays five eggs of a pale bluish, thickly sprinkled with ferruginous granules, usually twice in the season. It quits the fur countries early in September, about which time also it begins to leave Pennsylvania; is an active vigorous bird, flies generally low, from thicket to thicket, with its tail outspread like a fan, and feeds not only on worms and caterpillars, but also on all the coleopterous insects it can find, as well as upon berries.

T. Felivox, Bonap.; *Muscicapa Carolinensis*, Lin.; *le Moucherolle de Virginie*, Buff.; *Cat Bird*, Cates. Nine inches in length; beak pitch-black; at a little distance this bird appears nearly black, but on closer observation is found to be of a deep slate colour above, lightest on the edges of the primaries, and much lighter beneath, excepting the under tail-coverts; the rounded tail and the upper part of the head, as also the legs, black. The female is very similar, but in the young birds the red on the under tail-coverts is scarcely visible. This species winters on the borders of the Gulf of Mexico, arrives in Georgia about the end of February, in the second week of April appears in Pennsylvania, and in the beginning of May in New England, but it does not reach the Saskatchewan till the end of that month. They build, soon after their arrival, in a thicket, or the fork of a small sapling, a nest consisting of dry leaves and weeds, small twigs, and fine dry grass lined with black fibrous roots; in which are deposited four or five uniformly greenish eggs, usually twice or thrice a year. They are very common and familiar, and on approaching its nest the bird utters its note, which so exactly resembles that of a kitten, that, as Wilson states, "a stranger unacquainted with its note would instantly conclude that some vagrant orphan kitten had got bewildered among the briars and wanted assistance." It is one of the earliest American songsters, beginning generally before break of day. Its notes are rather more singular than melodious, consisting of short imitations of other birds and other sounds, but the pipe being rather deficient in clearness and strength of tone, his imitations fail where these are requisite. In their migrations, Wilson observes, they keep pace with the

progress of agriculture, the settlers in many parts of the Genessee country having noticed that, till several years after their entrance on that district, the *Cat Bird* had not made its appearance. They are very fond of fruit, specially of strawberries, cherries, pears, &c., among which they make much havoc; hence perhaps the great antipathy to them rather than their peculiar cry. If alarmed, they become extremely agitated, hurrying backwards and forwards with open mouth and hanging wings, calling out louder and faster and screaming with distress till seeming to become hoarse by exertion. During breeding time they are extremely courageous, will not readily desert their nest, but fiercely attack their great enemy the black snake, which is very destructive to their eggs and young, snapping and striking it with their bill till the snake retreats.

T. Lividus, Spix; *Mimus Liv.* Pr. Max.; *Livid Mocking Bird*. Nine inches and a half in length; beak black; irides bright reddish-brown; forehead sooty-white; temples greyish with long black streaks; upper parts ashy-grey; under white, the sides of the belly and thighs being marked with delicate longitudinal black streaks; wings and tail blackish-brown; alar quills and coverts edged with whitish, the middle four caudal quills unspotted, the others marked with a large white spot; legs black. Is a native of the Brazilian sea-coast; and has much resemblance to the following species—

T. Gilvus, Vieill.; *Grey Thrush*. The principal differences in which are a white streak over each eye, the greyish tinge of the breast and flanks, which have some narrow dusky streaks, and the middle caudal quills having very narrow white tips. It is a native of Guiana.

T. Saturninus, Licht.; *T. Thenca*, Vieill.; *Mim. Sat.* Pr. Max.; *Saturnine Thrush*. Ten inches in length; upper mandible blackish-brown, lower reddish horn-grey; irides citron-yellow; from the nostril, above each eye, passes a dingy-whitish streak, and a dark band runs through the eye to the ear; upper parts dirty greyish-brown, becoming somewhat paler on the edges of the feathers; alar and caudal quills dusky grey-brown, the former as well as the greater wing-coverts narrowly edged with a pale tint; the caudal quills, excepting the middle two, marked with large white spots; under parts dirty-white inclining to grey on the breast; flanks streaked longitudinally with dark greyish-brown, as is also the rump; legs blackish-brown, with white soles. This species is found in the interior of Brazil; Spix describes it as the male of *T. Orpheus*.

Many other species are also enumerated by Temminck, Vieillot, and Latham.

Section III.—*Rock Thrushes; Petrocinclæ*, Vigors.

The greater number of this section are readily distinguished by the rufous colour of the caudal quills, excepting the middle two, which are black. They live solitarily, and always inhabit steep rocks and the stony parts of the highest mountains, among the clefts of which they build. They feed almost entirely on insects, and but rarely on berries. In these habits they resemble the *Saxicolæ*, but the exact correspondence in the form of their beaks with the *Turdi* shows their true position.

T. Saxatilis, Lath.; *le Merle de Roche*, Buff.; *Rock Crow*, Pen.; *Rock Thrush*, Lath. From seven to eight inches in length; beak black; the angles of the mouth yellow, with some black bristles; irides dusky-brown;

TURDUS. all the head and upper part of the neck ashy or leaden-blue; upper parts blackish-brown, with a broad white space on the middle of the back; alar and middle two caudal quills brown, the other tail-quills and the under parts bright rufous; under tail-coverts tipped with white; legs black. In the *female* the upper parts are dirty brown, with some large whitish spots edged with brown on the back; throat and sides of the neck pure white, and these feathers very frequently edged with ashy-brown; under parts rufous-white, each feather delicately streaked transversely at its tip; caudal quills light rufous, excepting the middle two, which are ashy-brown. The *first year's* bird has all the upper parts pale ashy-brown, each feather terminating in a larger or smaller greyish-white spot; the wing-coverts edged with grey and tipped with white; tail rufous with white tip, and the under parts similar to those of the old female, but much more varied with white marked with brown lines; it is then Pennant's *Rock Crow*. It is found in Switzerland, the Tyrol, Hungary, Turkey, the Archipelago, the Apennines, and Pyrenees; here and there on the Vosges and other high mountains of France, rare in Germany, common in the north of Italy, but very rare on the Mediterranean coast. It is a bird of passage, makes its appearance in those places, where it breeds towards the latter end of April, begins to depart in August, and in September has entirely disappeared. It prefers high mountains, and specially where the steep rugged rocks face the south, or high towers and falling ruins. Whilst migrating, it resorts to the vine clad hills, and bushes or clumps of trees on the hills, but otherwise it avoids woody districts, and is never observed in deep woods. They live in pairs, and make their nest in the clefts of rocks or walls, of a mass of moss, tender stalks, and other parts of plants carelessly interwoven and lined with feathers and hairs. The female deposits from three to five spotless pale green eggs. It is a very active, shy bird, rarely hunting with its fellows, but driving them away from its resorts. It moves upon the ground in large light springs, often assisted with the wings and tail. In its manners it resembles the Starling or the Stone Chat much more than the Thrush. Its note consists of a snapping *tak, tak, tak*, partly resembling that of a Thrush, partly that of a Stone Chat. The male has also a very beautiful and melodious song, consisting of several various flute-like strains, which is heard far into the summer almost incessantly, and often at night.

T. Cyanus, Gmel.; *T. Solitarius* and *Manillensis*, Lath.; *le Merle bleu et le Solitaire de Manille*, Buff.;

Blue Thrush, Lath. About eight and a half inches long; **TURDUS.** beak black; irides dusky-brown; all the upper parts, excepting the wings and tail, deep blue, as are also the under, but of a paler hue; throat and front of the neck unspotted, but all the rest marked with very narrow black crescents at the tips of the feathers, the extremities of which are whitish; wings and tail deep black, the latter and the alar coverts edged with deep blue; legs black. In the *female* the upper parts are intermixed with brown and ash; the wings and tail are blackish-brown, and all the quills edged with bluish-ash; the throat and front of the neck have large reddish spots, and the remaining under parts are rayed and varied with bluish, ash, and brown. This species is a native of the south of France, Spain, Sardinia, Italy, and the Levant; is very common in the high valleys of Piedmont and about the Apennines, but less so in the Tyrol; is rare in Switzerland, and still more so in the Vosges. It is a bird of passage, and appears in the Tyrol, in the north of Italy, and the neighbouring parts of Switzerland in April and leaves in September. It does not resort to the highest but rather to the middle mountainous districts, living in the rugged sides of rocks and naked cliffs, and is specially fond of old ruins, church towers, and castles. In its passage it rests on the edges of woods, but never penetrates their depths. It is a very shy active bird, sits upon the juttings and peaks of rocks, or on the highest parts of ruins, and if it descend nearer the ground the slightest alarm sends it back to its old station. During the time of incubation they live in pairs, but without companions, driving away from their resort any other which may attempt to settle there. They are very fond of each other, are never far apart, and if the female leave her nest, it is only to seek her mate on his more elevated stand. They fly very quickly, move upon the rocks, walls, or roofs, and also sometimes on the green spots of the rocks, gardens, and vineyards with large hops. They make their nest of dried grass and feathers at great heights, in holes in walls, under roofs, or behind rafters, and sometimes in hollow trees. The female lays four or five eggs. Its voice is little like that of other Thrushes, but the song of the male is extremely beautiful, consisting of several varying strains, some very soft and flute-like, others melancholy and melting tones.

They pierce the *turfie* ground, and under it meet with a black and deadish water, and in it small fishes do swim.

Fuller. Worthies, vol. i. p. 538. The Worthies of England. Lancashire.

Then after length of time, the labouring swains,
Who turn the *turfs* of those unhappy plains,
Shall rusty piles from the plough'd furrows take,
And over empty helmets pass the rake.

Dryden. Virgil. Georgics, book i.

When Charion saw me, from his *turfy* bed
With eagerness he rais'd his drooping head:
Oh! fly, my dear, this guilty place, he cry'd,
And in some distant clime thy virtue hide!

Pomfret. Cruelty and Lust.

Thus you call a canal the same notwithstanding a perpetual influx and efflux of the waters, and after you have new *turfed* the banks, but tho' it be the same canal no man will esteem it the same substance, for it seems necessary to substantial identity that the component parts should remain unchanged.

Search. Light of Nature, vol. ii. part i. ch. iv. p. 74.

There is, indeed, an elegance and a classical simplicity in the *turf-clad* heap of mould which covers the poor man's grave, though it has nothing to defend it from the insults of the proud but a bramble.

Knox. Works, vol. i. p. 457. Of Monumental Inscriptions.

TURGENIA, in *Botany*, a genus so called by Hoffman, from *turgeo*, to swell, on account of the swollen fruit. It belongs to the class *Pentandria*, order *Digynia*, and the natural family of *Umbelliferae-Caucalineae*. Generic character: calyx five-toothed, the teeth setaceous; petals obovate, emarginate, each furnished with an inflexed point, the outer ones radiating and bifid; fruit contracted at the sides, rather didymous; mericarps each with five primary ribs, and four secondary ones, the two lateral primary ones placed in the commissure, which is flat, each furnished with a single series of muricæ or prickles, and not, like the rest of the ribs, furnished with two or three rows of equal prickles each; the furrows below the secondary ribs contain a single vitta each; carpophore setaceous; seed involute.

A genus separated from *Caucalis* and *Tordylium*, and consists of three known species, all natives of the South of Europe. They are erect, scabrous herbs, with pinnate leaves, and toothed leaflets. The umbels are of few rays. The involucra, as well as the involucels, are composed of three or five ovate, concave, equal leaves, with membranous edges. The flowers are white or rose-coloured; those in the disks of the umbels are either male or sterile. *T. latifolia*, the *Caucalis latifolia* of Lin., or broad-leaved Bur parsley, is a native of England, in chalky pastures, but rare.

TU'RGENT,
TURGE'SCENCE,
TURGE'SCENCY,
TU'RGID,
TURGI'DITY,
TU'RGIDNESS.

Fr. *turgent*; It. *turgido*; Lat. *turgidus*, *turgens*, present participle of *turgere*, to swell; of unknown origin. Vossius suggests from *urgere*, by prefixing *t*. (Qy. A. S. *tir-ian*, *tir-ig-an*. See to TIRE.) Swelling, dilating, distending; tumid.

In stede of these we haue now base daūces, bargenettes, panyons, *turgions*, and roundes.

But a great man in office may securely rob whole provinces, undo thousands, pill and pole, oppresse, flea, grinde, tyrannize, inrich himself by spoiles of the Commons, be uncontroleable in his actions, and after all, be recompensed with *turgent* titles, honoured for his good service, and no man dare find fault, or mutter at it.

Burton. Anatomy of Melancholy, fol. 34. Preface.

— The clusters clear,
Half through the foliage seen, or ardent flame,
Or shine transparent; while perfection breathes
White o'er the *turgent* film the living dew.

Thomson. Autumn.

The sucker, lying and playing always under water, is kept still *turgid* and plump.

Boyle. Works, vol. iii. fol. 181. Experiments touching the Spring of the Air.

The forerunners of an apoplexy are dulness, slowness of speech, vertigos, weakness, wateriness, and *turgidity* of the eyes.

Arbuthnot on Diet, ch. iii.

A simple, clear, harmonious style; which, taken as a model, may be followed without leading the novice either into *turgidity* or obscurity.

Cumberland. Memoirs, p. 262.

The *turgidness* of a young scribbler might please his magnificent spirit always upon the stilts.

Warburton to Hurd. Letter 96.

TURIA, in *Botany*, a genus so called by Forskael, from the Arabic name of one of the species. It belongs to the class *Monoecia*, order *Pentandria*, and the natural family of *Cucurbitaceae*. Generic character: flowers monoecious, the male ones disposed in umbels; calyx five-parted, the segments lanceolate and spreading; corolla rotate, yellow, of five petals; the rudiment of a half globose germ; stamens five, filiform, in three bundles; bearing irregularly curled anthers; female flower having the calyx and corolla as in the male, but the stamens are sterile; the ovarium is cylindrical and thickened; the stigmas three and two-lobed; fruit cylindrical, thickened, attenuated, villous, warted.

This genus consists of three known species, all natives of Arabia Felix; they are twining, perennial plants, with palmate, three-lobed, or angular cordate leaves, and trifid tendrils.

TURKEY, a fowl, *Gallus Africanus*; avis *Turcica* vel *Afra*. See the Quotation from Pennant.

Like very poore, or counterfeite poore men,
Who, to preserve their *turky* or their hen,
Doe offer up themselves.

Corbet. To Lorde Buckingham.

In fact the *turkey* was unknown to the antient naturalists, and even to the old world before the discovery of America. It was a bird peculiar to the new continent, and is now the commonest wild fowl of the northern parts of that country.

Tobolsk.

TURKISTAN (*i. e.* the dwelling-place of the Turks) is a Persian word, which, in its original acceptation, comprehended the whole of the Northern half of Asia, supposed by the Arabs and Persians to be inhabited by tribes of Turkish origin: it has, by most European geographers, been restricted to a comparatively small part of that vast region, but it is here taken in its widest sense, for the purpose of including an account of the whole of that region and its inhabitants, many, if not most of whom, may be strictly said to be Turks or Tatars, and all are vulgarly known under the latter denomination, just as their country is commonly called Tartary or Siberia. This region, then, may be said to extend from the Caspian Sea and Mount Urál on the West to the Japanese Sea and Behring's Strait on the East; from the Frozen Ocean on the North to the Hindú Kush and Himálaya Mountains on the South. I. The Northern portion between Mount Urál and the Aleutian Sea, bounded on the South by the Kirghiz, Little Altaï, Daurian, Hing-an and Lamutian Mountains, is called Siberia, from Sibir, its ancient metropolis, near the present Tobólsk.* Its subdivisions are West and East Siberia; the former level, the latter mountainous. II. To the South of Siberia lies the remaining part of this vast region, containing, 1. Turkistán Proper. 2. Dzungaria or Jung-har. 3. The Khalkhás. 4. The Solóns, following the course of the mountains East and North-Eastwards. Farther South, in nearly parallel directions, are the 5. Turkománs of Samarkand and Bokhára, Káshghar, Yárkend, Khoten, and Turfán. 6. The Great Desert of Hami. 7. Kachi. 8. Tangút. 9. The Monghóls; and 10. The Manchús. Tibet, which lies to the North of Himálaya, but is separated from the Southernmost of these states by the Narr, Hor, and Weï Mountains, has been already described in this work, as well as Khorásán and Afghánistán, the latter of which is inhabited by a people not of Turkish origin.

I. The two great divisions of Siberia are perfectly natural; to the West of the Yeniséi the whole country is nearly level; to the East of that river it rises, more or less rapidly, (Oldekop, x. 260.) to a great elevation. 1. The former or Western Siberia is watered by the Ob and the Yeniséi, two very large streams, and the Irtýsh, which is a tributary to the first. The Lena, which is a third large river, flowing into the Frozen Ocean, belongs to, 2. Eastern Siberia. From the Kirghiz Mountains, which are the culminating ridge between Siberia and Turkistán, flow the Toból, the Ishím and Irtýsh, tributaries to the Ob, and near its confluence with the last, is the city of Tobólsk, (Tobólia,) capital of this part of Siberia, in $58^{\circ} 12' 39''$ N. and $68^{\circ} 18' 49''$, not far from the ruins of Sibir. It is now the capital of a government or province bearing the same name. It consists of two towns, one on an elevation, in which is the Kreml, or fort, built by Prince Gagarín, in the XVIIth Century; the other at a small distance below, near the river. It is an archiepiscopal city, has two

churches and a few public buildings of stone, the rest being built of wood, is the seat of government, and has 18 churches, some convents, a school, and a theatre. Its population amounts to above 16,000, one-fifth being Tatars. Having been assigned as a place of abode for the Swedish officers taken at the battle of Pultava in 1713, they established schools there which still subsist, and since 1770 it has been the seat of a German Lutheran colony, and is now the great emporium of the trade between Russia and Central Asia. Caravans of Kalmuks and Bukharians pass the winter there, and their goods are conveyed on sledges over the snow into Europe. It has a few manufactures of woollen cloths, ribbons, soap, and candles. (Vsevolojsky, *Dict. Géogr.*)

The Ob issues from the lake called by the Tatars Altín Gúl, (Golden Lake,) and Teletskoï Ozero (Telet-zian Lake) by the Russians, in $51^{\circ} 50'$ N. and $86^{\circ} 30'$ E. This river is formed by the junction of the Bíyah (King's) and Kátúniyah (Queen's) rivers, the first of which issues from the lake; hence their united streams have been called Óbe, *i. e.* both; but by the Kalmuks, Umar; by the Ostiaks, Emé, and by the people of Tobolsk, Ós. It is the largest of all the Russian rivers, and has several falls or rapids in the upper part of its course, which is very serpentine, and has generally a North-Westerly direction till it meets the Irtýsh, near Samárova, in $60^{\circ} 30'$ N. and $69^{\circ} 15'$ E. Before its junction with the Irtýsh, it receives the Tom a little below Tomsk, in $56^{\circ} 20'$ N. and $85^{\circ} 30'$ E., an episcopal see, with 6000 inhabitants. A little below, it divides into two streams, forming large islands, and, keeping a course nearly due North, discharges its waters below Obdórska, a little stoccade at its mouth, into the Óbskaya Gubá, (Gulf of the Ob,) a very large and deep inlet of the Frozen Sea, in $66^{\circ} 30'$ N. and 70° E. This vast river abounds in fish, and is navigable through the greater part of its course, which measures 3000 versts (2000 miles). Berezov, (Birch-town,) on the left or western bank of the Sosvâ, near its confluence with the Ob, founded in 1593, and made the capital of a district in 1772, is in 64° N. and 66° E., 929 versts (620 miles) from Tobólsk. It has three churches, and 200 or 300 houses, chiefly inhabited by Cossacks. (Kazáks.) The Yeniséi, the other great river of Western Siberia, rises in about 51° N. and 98° E., in the Chinese territory, on the North side of the Tang-nu Mountains, where it is called by the Monghols Kem, or Ulú Kem (the Great Kem); and, after a long course, nearly Westwards, turning to the North, and forcing its way through the Sayanian Mountains at Kem-Kenchik, enters the Russian territory, and passing through the districts of Kolyván, Kuznétsk, and Krasnoyársk, before it reaches the government of Tobólsk, falls into a deep gulf of the Frozen Sea, in $69^{\circ} 30'$ N. and 87° E., after a course of about 3500 miles. In the upper part of its course it is extremely rapid, and hardly navigable; in the lower part, its current is scarcely perceptible. Near its banks there are large beds of coal. The Tunguska, or Angara, issuing from the Lake Baikál, is the largest of its tributaries. Krasnoyársk, in $55^{\circ} 50'$ N. and $94^{\circ} 40'$ E., with a population of 3446 souls, is the most considerable place on the Yeniséi. It is a great

* In this and similar Russian names, which are apocated adjectives, their harsh termination might be conveniently changed into the Latin ending *ia*, or *a*. Tobólsk, abridged from Tobólskaya, signifies 'Tobolian,' as it is near the river Toból.

thoroughfare, being on the high road to Kyakhta, on the Chinese frontier, the only place where trade by land, between the Chinese and Russians, is allowed. In 1772, wheat flour was sold there, at $2\frac{1}{2}d.$ per púd, (36lb. avoirdupois,) and the same quantity of barley at $1d.$, while the best meat cost only $\frac{3}{4}d.$ per pound; such is the productiveness of the neighbouring country, and even now a cow sells for only 7s. II. The Léna, the largest river in the upper or Eastern division of Siberia, rises in the North-West declivity of the mountains skirting the Lake Baikal, in $52^{\circ} 10' N.$, and $105^{\circ} 30' E.$, and after a winding course, North, North-East, North, and finally West of North, enters the Frozen Sea by a large delta of estuaries, in about $75^{\circ} N.$, and $127^{\circ} E.$ Its principal tributaries are the Vitim, Aldan, and Viljui. The whole of this portion of Siberia is a continued tissue of mountain-ranges, receiving various names in different tracts, and branching out in various directions, but having all one general bearing from South-West to North-East, towards the shores of the Gulf of Anadýr, and the Peninsula of Kamchatka, which is itself merely an offset from this vast mass of mountains terminating in North-Eastern Asia.

The Siberian mountains contain large stores of mineral wealth, as yet little known or used, though it is more than a century since the Russian government began to derive some revenue from that source. In the southern tracts the valleys are, in summer, warm and productive; but the northern regions, where the mountains for the most part gradually sink into a level towards the Frozen Ocean, are completely bare and insusceptible of cultivation; they appear to have been anciently one vast swamp, and the soil has there been long frozen to a great depth, so that, in the hottest season, it is not thawed for more than two or three feet below the surface. The intermediate region, occupied by the lower hills, more temperate than the lofty ridges, is thickly covered with forests, abounding in game of many different species, and supplying its scanty and migratory population with food and furs for barter; the latter being the staple commodity of the traders in Siberia. The winter in every part of this country is very long and severe, and the trade is more generally carried on at that season by sledges on the ice and snow, than by land in summer.

Siberia and Middle Asia are inhabited principally by four, or perhaps three different races of men: 1. Finns; 2. Samoyéds; 3. Tungúzes; and 4. Turks. There are also four or five races in some parts of Siberia, whose affinity with the rest cannot be satisfactorily traced: one of the latter either emigrated from America, or was the parent of a considerable part of its population. i. "The Finns," says Dr. Ed. Dan. Clarke, (*Trav.* xi. 331, 8vo. ed.) "with their shorn features; long, dark, unbending hair, and sallow countenances; eyes extended lengthways, and half closed; peaked nose, frequently inclining upwards, but always pointed; sharp and square chin; elevated cheek-bones, and pinched mouth; large, high, prominent ears; small beard; thin, scanty eye-brows turned upwards at their extremities, like those of the Chinese; high shoulders; short and small fingers; bent and projecting knees, are evidently allied to the Laplanders." This their language also proves; and they extend in Siberia from Mount Urál, its Western boundary, and their original seat, (Klaproth, *Asia Polygl.* 132.) to the neighbourhood of Yeniseisk, in $58^{\circ} N.$ and $71^{\circ} E.$ Near Perm, in $58^{\circ} 1' N.$

and $56^{\circ} 26' E.$ on the West side of Urál, are the Votyáks, who call themselves 'Uhdmurd, *i. e.*, Hospitable men; the Syrenians and Permians or Komi-murt; and further Eastwards, the Uguri, whence the On-oguri or Hungarians of the middle ages: who are called Ugri by the ancient Russian annalists, and were the Ogres of the early romances. Their land, called Yuguria or Yugoria, extended to the mouths of the Ob, and their descendants in that part of Siberia are still called Vogúls or Vogúlich, and Ostyák, the latter from As-yakh, *i. e.* people of the river As or Ob. Near Narym or the Tórn, they are called Nyorom-yakh (marsh-people.) To the East of the Finnish race is a small tract on the Yenisei, inhabited by tribes, one of which, the Aríns, became extinct early in the last century, whose language was peculiar and origin doubtful. (Klaproth, *ibid.* 167.)

ii. The second distinct race inhabiting Siberia is that of the Samoyéds, who extend from Archangel on the White Sea to the Anabara River, which separates the Yeniseian (Yeniseisk) from the Yakútian Province, (Yakútsk,) and enters the Frozen Ocean in $74^{\circ} 20' N.$ and $112^{\circ} E.$ This race occupies nearly one-half of the shores of the Frozen Ocean. Their face is flat, round and broad; their lips are large and turned up; nose broad, with wide nostrils; hair coarse, stiff and black; and beard scanty. They are generally below the middle size, but are well made, fatter and more thick set than the Finns. They are migratory and unsettled in their habits, and less civilized than their Western neighbours. They appear at Uryang-khai, on the Upper Yenisei, South of the peculiar race just mentioned, and are subdivided into 19 different tribes or families.

iii. A considerable part of the North-East portion of Siberia is inhabited by the third of the widely-extended races established in that part of Asia; the Tung-úz, whose name is probably an opprobrious term (Hog) applied to them contemptuously by their Turkish neighbours, from whom it was borrowed by the Russians.* Their country extends from the Anabara River to the Okhotian Sea, (Okhotsk,) and the Lamúts, or maritime people on its shores, are one of their tribes. Their face closely resembles that of the Monghols and Chinese. They are migratory, and live by hunting and fishing; good humoured, honest and truth-telling, they appear to be the most estimable savages yet known, with the exception perhaps of some American tribes. To the East of the Tungúzes are the Yakúts, a Turkish tribe; and beyond these, the Yukagírs or Yukahírs, probably a mixed race. The Koryáks, another migratory tribe, perhaps of distinct origin, intervene between the Yukagírs, Kamchadáls, and Chukchís, and are generally, but improperly called, the Western Chukchís by the Russians. The Eastern Chukchís, near the Chukótskoï Nós, (Chukchi Nose,) are identical with the Eskimós, as was observed above. The Kamchadáls, inhabiting the Peninsula of Kamchatka, call themselves Itelmén or Itulmen, and have a different language from their neighbours. Bolsherétsk, its capital, and Petro-Pavlovsk, its best harbour, are Russian settlements of some magnitude. A small portion of the continent, East of the Manjús, opposite to the Isle of Sakhalin, (Black,) is occupied by the Aínos or Kuríls, whose Isles extend from Japan to the Southern extremity of Kamchatka. A somewhat remote branch of

the Tung-úzian race is that of the Manchús or Manjús, (in Russian Mandzhury,) who, from being a very inconsiderable tribe on the Sunggari-Ula or Amúr River, scarcely three hundred years ago, have now, for nearly two centuries, been masters of China and all its vast domains.

That the Nyu-ji of the Chinese are identical with the Manchús has been clearly proved by M. Klaproth, (p. 291.) who also shows their derivation from the Tungúz. The Monghols, whom the Chinese call Mo-ho, (Moghól,) and Mung-ku, or Mung-ku-su, (Mungkus,) were also named Tata, (Tátár,) and appear to have been established anciently in the neighbourhood of the Lake Baikál, North-West of the Solóns or Manchús. They were at an early period divided into three great tribes, the Monghols Proper, the Buriéts, and the Eléts or Kalmuks (also called Kilmáks.) Their tribes were brought into one body by Chingíz Khán, and became the principal instruments of his overwhelming invasions. Though now subject to the Manchús, their tribes are still very numerous, and occupy the whole area from the Chinese wall to the Great Altaí Mountains, Lake of Balkhash, and across Tangút, to Ka-chi on the borders of Tibet. Though very remote, in many respects, the structure of the Monghol and Manchú languages, which are almost dialects of the same parent tongue, bears such a resemblance to that of the 4th widely-extended race in Northern Asia, the Turks, that it is not improbable that they had a common origin. It is not, indeed, impossible, that the Chinese may have sprung from the same stock; but the monosyllables of that language have been so pared and melted down for some thousands of years, that it is almost a hopeless undertaking to attempt to trace its affinities even with its monosyllabic, much more with its polysyllabic neighbours. The Manchús and Monghols, who seem, in the earliest periods of their history, to have held that most ancient form of idolatry, the worship of the elements, still prevalent in China, embraced, in the middle ages of our era, with great zeal and rapidity, the doctrines of Budd'ha as then received from Tibet; and it can scarcely be doubted that they borrowed or received from Nestorian converts, many of those peculiar rites which distinguish the ritual of the Tibetan and Siberian Buddhists, and in some respects closely resemble certain rites and doctrines maintained by the Eastern and Western Church.

iv. The other race, which occupies the remainder of Siberia, as well as the greater part of Middle Asia, is that of the Turks, from whom so large a portion of it received the name of Turkistán. If the early history of China can be trusted, the Turks originally inhabited the declivities of the Tang-nu Mountains, and the Greater Altaí, nearly midway between the Frozen and the Indian oceans. They are mentioned by those annalists as early as the middle of the XVIIth Century before Christ, under the name of Hyun-yu; and that name, altered to Hyan-yun, or Hyung-nu, is given to them till the IIIrd Century after Christ. From the end of the IIIrd Century before Christ, to the middle of the Ist Century of our era, these Hyung-nu were masters of a great part of Central Asia. The southern branch of this people, with the aid of the Chinese, drove their Northern brethren Westwards, but were in their turn driven across the Great Desert of Gobi or Hamíl, by the Tungúzes, who had occupied the ground abandoned by their adversaries, soon after the beginning of the IIIrd

Century. One tribe of Hyung-nu settled on the Kin-shan, (Gold Mount,) at the foot of a hill shaped like a helmet, (tekyeh,)* was thence called T'hu-k'hyu, and are doubtless the Turks of Ektágh (Golden Mountain) of the Byzantine Historians, (Klaproth, p. 212.) In A. D. 569, their name and existence thus became first known in the West. The kingdom of the T'hu-k'hyu was ruined in the middle of the VIIIth Century by another tribe of the Hyung-nu, called by the Chinese Hwi-he, Hwi-hu, Kao-chi, or Ku-shi, who, in the beginning of the Xth Century, were driven Westwards by the K'hi-tan, probably a Tunguzian race, and possessed themselves of Tanggút, which comprehended all the tract between the Chinese province of Shen-si and the Snowy Mountains North of K'ho Kho, or Ko-ko Nór, (Blue Lake,) Southwards, and the ranges beyond the Great Desert of Gobi or Hamíl, (Hami,) Northwards. The Hwi-hu were subdued by the Monghóls, in A. D. 1257, and by degrees mixed with the inhabitants of Hamíl, Turfán, Ak-sú, Káshghar, &c., who were, in fact, people of the same or of a cognate race; for it can scarcely be doubted that their names Kao-che, Ku-shi, and Hwi-hu are corruptions of the Turkish Uí ghúr, whose country is often called Tanggút. In the middle of the Vth Century Turkish tribes made themselves masters of all the country between the Volga and the Sea of Azov, and thence, by continual incursions, overran Western Asia and a great part of Eastern Europe. Their original country has long been in possession of the Monghóls or Moghóls, so that the name of their conquerors was transferred to them, for the Moghóls of Hindústán are a Turkish and not a Tátár or Mongholian race, though constantly confounded with the latter by Arab, Turkish, and Persian writers. The most Eastern states of Turkistán are Khoten, Yár-kand, and Káshghar on the West side of the Great Desert, and now governed by Monghol chiefs, subject to the Chinese. Their country, lying between the 30th and 40th parallels of latitude, enjoys a comparatively temperate climate, though, from its great elevation, and the immediate neighbourhood of the Alpine chains, Bolór tágh, (Cloud Mount,) and Múz tágh, (Ice Mount,) the winters are long and extremely severe. To the West of these mountains begins Turkistán Proper with Khókand, in which the Sír or Saíhún (Jaxartes) rises, in about 42° N. and 76° 30' E. from the Western side of the Múz tágh. In its course, which is nearly due West to Khojend, where it turns almost at right angles to the North, it passes Khókand in 41° 30' N. and 70° 30' E. That town, the capital of a khánát or principality, has about 30,000 inhabitants, and is as large as Bokhárá. Its supply of water is by canals from the Sír, about seven miles North of it. It is a great mart for the trade of Táshkend and Káshghar, but its Khán is often at war with his neighbours, (Meyendorff, p. 117.) To the North of this state and Bokhárá are large Steps or plains, inhabited by migratory tribes of the Kirghiz Kazáks, who originally lived between the Upper Ob and Yeniséi, (Klaproth, p. 231.) Tásh-kend and Túnkat are on the banks of the Sír further Northwards, and near the latter, it again takes a Westerly direction, and passing by Otrár enters the Lake Aral, in about 46° N. and 61° 30' E. To the South and West of the Sír is the principality of Bo-

khárá, the capital of which, in 38° 52' N. and 64° 25' E., one of the finest cities in Asia in the Xth Century, is now in a state of complete decay, but, seen at a small distance, has still a striking appearance. Internally it has all the defects of an indifferent Turkish city, narrow, dirty streets, ill-built houses, and few public buildings deserving of notice. The city walls, 24 feet high, and of that thickness at their base, taper off to their summit, so that a vertical section of them forms a truncated equilateral triangle: they are about nine miles in circuit; and the population of the city may be estimated at 70,000, of which the Jews form nearly a tenth part. A very considerable trade is carried on there, as it is a sort of dépôt for the commerce of Central Asia, (Meyendorff, p. 184; and see also Bucharia, *E. M.* xix. 43.) To the South of Bokhárá is the Amú deryá, (Amú River,) or Jaíhún, (Oxus,) the source of which is Sari kól, (Lake-head,) in 37° 27' N. and 73° 40' E., just below the highly elevated and frigid Plain of Pamír, so well described by Marco Polo, and visited in February, 1838, by that enterprising traveller Lieutenant Wood of the Indian navy. On that river, which, passing through Khívah, empties its waters into the Lake Aral, having been apparently intercepted in its way to the Caspian, is Badakhshán, the capital of which, in 36° 23' N. and 72° 36' E., is now called Faíz-ábád, (Abode of Plenty,) and has about 20,000 inhabitants. Its trade is almost exclusively the purchase and sale of slaves, and not only does its Khan sell his subjects without compunction, but they are always themselves on the watch to kidnap each other. (Ritter, *Asien*, v. p. 797.) The governor of Kunduz, formerly its Easternmost province, has lately rendered himself independent; and as the Passes between Afghánistán and Balkh are in his territory, he is, in fact, master of the commercial intercourse between Turkistán and India. A very few years ago the districts of Khulm, Haibak, Ghaúrí, Inderáb, Tálikán, and Hazret

Imám were added by this new and aspiring chief, the Kkán of Kunduz, to his dominions. The little state of Khíva, formerly Khwárizm, on the South side of the Lake Aral, is the only remaining portion of Turkistán not previously noticed in this work. It is so surrounded by deserts that even the colossal power of Russia failed in reaching its boundaries and inflicting a well-merited punishment on its chief for a long series of unprovoked hostilities. The Khán of Khívah belongs to the numerous and formerly powerful tribe called Uz-beks, (Yúz-begs—Centurions?) who long occupied the country South of the Great T'hyen Shán or Gók Tágh (Heaven-Mountains) in the territories of Khoten, Káshghar, Turfán and Hámil, and were descendants of the Uíghúrs, Náimáns and other migratory tribes. They are called Ghuzz by the Arabs, a name strongly resembling the Ku-shi of the Chinese. They crossed the Saíhún (Sir or Jaxartes) in the beginning of the XVIth Century, and soon made themselves masters of Balkh, Bokhárá, and Khwárizm, (the Chorasmia of the Greeks,) now called from its present capital Khívah. The Turkománs who crossed the Jaíhún (Amú or Oxus) in the XIth and XIIth Centuries are still in a great measure migratory in Khorásán and most parts of Persia and Asia Minor. Though now comparatively harmless, they long spread terror and desolation wherever they went, and, as 'Osmánlis, or adherents of 'Osmán, overthrew the Seljúks, a more polished tribe, who had dispossessed the Arabs in the latter country; and the same Turkománs, in the XIIIth Century, gave birth to the Ottoman, or more properly 'Osmán Empire.

TURMERIC is the root of the *Curcuma longa* of Linnæus; it is medicinal, but is generally used by dyers to give a yellow colour. The root is greyish externally, and of a deep yellow saffron colour internally, hard and not unlike ginger in appearance. It is brought from the East Indies, but the plant is also cultivated in the gardens of the Chinese, who use the powdered root as a sternutatory. The plant grows plentifully in Java, Malacca and other neighbouring islands. It was first cultivated in England by Miller, in 1759. It has been imagined by some people that there is a red Turmeric, but

this is owing to the root's turning brown as it grows old; and when pulverised, it is reddish. The Indians use Turmeric to dye their rice and other food of a yellow colour, whence it is called by some, Indian saffron. Our dyers do not find it give so steady a colour as woad, (the *Reseda luteola* of Linnæus.) Common salt, or ammoniacal muriate, fixes its colour, but at the same time renders it deeper. It is admirable to brighten and heighten all red colours dyed with cochineal and vermillion, as scarlets, &c. Turmeric has a slight aromatic and not very agreeable smell, and a bitterish, slightly acrid, and rather warm taste. Distilled with water it yields a small quantity of a gold coloured, essential oil. Turmeric wash is the gum of the root dissolved in water, which is used in water-painting like that of the yellow berry, (*rhamnus infectorius*,) but is brighter, and for this purpose it is dissolved in spirits of wine instead of water, by putting two ounces of proof spirit and one ounce of water in a phial with two drachms of the powdered root, shaking them well together, and letting them stand, with a repetition of the shaking for three or four days.

Turmeric root in eastern countries, besides its use in colouring and seasoning dishes, is much recommended as a medicine, being accounted an effectual remedy in obstructions of the viscera, uterine disorders, affections of the kidneys, &c. In this country it has been em-

TUR-MERIC. ployed in infusion, decoction, and powder, as a deobstruent in hypochondriacal, leucophlegmatic, and cachetrical constitutions, but is now almost neglected as a medicine.

In wretched anguyshe and incessant woe.

Id. Ib. book iv. can. 9.

If therefore we would vindicate our rational freedom, we must resolve to shake off those slavish fetters, our brutish and our devilish appetites, that do so perpetually *turmoil* and incumber us in all virtuous attempts and rational operations.

Scott. Christian Life, part i. ch. iii. fol. 70.

O son! *turmoil'd* in Trojan fate,
Such things as these Cassandra did relate.

Dryden. Virgil. Æneid, book iii.

So loud is the noise of business, as it is called, or the jarring *turmoil* which avarice occasions, that I fear the still small voice of reason will not be heard in the walks of the Exchange, and in the storehouses of the crowded emporium.

Knox. Works, vol. vi. p. 271. Sermon 19.

TURN, v. } (See **TOURN, TOURNAMENT.**) Fr. *tour-*
TURN, n. } *ner*; It. *tornare*; Sp. *tornar*; Lat.
TURNER, } *tornare*; Gr. *τοπος*, a tool or instru-
TURNERY, } ment to form a round or circle;
TURNING, } whether concave or convex; all from
TURNCOAT, } the Gr. *τερειν*, *terebrare*. Skinner.
TURMPIKE. } And see Menage. *Le Origini It.*
in v. *Tornare*. The A. S. *tyrn-an*, *vertere*, *flectere*, *volvere*; is probably the original word.

To move or cause to move out of a straight line, out of a direction or course; to be or cause to be, to take, to put or place in another, an altered, a changed course or direction; an altered or changed posture or position, state or condition, or appearance; to change or alter; to wind, to round.

Turn, with prepositions expressed or understood, is used as equivalent to various compound words derived from the Latin: as—

To avert, to convert, to invert, to pervert, to revert or reverse.

To deflect, to inflect, to reflect.

To revolve, to retort; to transfer, to transpose, to transform.

Turn, the *n.*, besides its usage in common with the verb, is applied to—

A vicissitude, a chance, an occasion, an opportunity, a purpose. **TURN**

Turnery is a common word.

The Englis kynges *turned*, bei mol do no more,
But sojourned þam a while in rest a Bangore.

R. Brunne, p. 3.

& Richard at þat *turne* gof him a faire juelle,
þe gode suerd Caliburne, þat Arthur luffed so welle.

Id. p. 154.

And Jhesus *turnede*, and sigh hem suyng him, and seith to hem, what seken ye?

Wiclif. Jon, ch. i.

And Jesus *tourned* aboute, and sawe them folowe, and sayde vnto them: what seke ye?

Bible, Anno 1551.

And thei han power on watirs to *turne* hem into blood.

Wiclif. Apocalips, ch. xi.

And haue power ouer waters to *turne* them to bloud.

Bible, Anno 1551.

And whanne his kynnes men hadden herd thei wenten out to hold him, for thei seiden that he is *turned* into woodnesse.

Wiclif. Mark, ch. iii.

But nathelesse, it is my will, (quod she)
To forthren you, so that ye shall nat die,
But *turnen* sound home to your Thessalie.

Chaucer. Hipsiphill and Medea, p. 311.

Now let vs stente of Troilus a throw,
That rideth forth, and let vs *tourne* fast
Unto Creseide, that heng her hedde full low.

Id. Troilus and Creseide, book ii. p. 242.

Olde doinges, and by many *turninges* of yeres vsed, and with the peoples maner proued, mowen not so lightly been defased, but new doinges contrariauntes soche old, often causen diseases and broken many purposes.

Id. The Testament of Loue, book i. p. 473.

The goddes, that the mischiefe see,
Her formes chaunged all thre,
Eche of hem in his degree
Was *turned* into a briddes kinde
Diuerselicke as men may finde.

Gower. Comf. Am. book v. p. 168.

We discouered 32 islands lying al neere the land, being small and pleasant to the view, high, and hauing many *turnings* and windings betweene them, making many faire harboroughs and chanelles.

Hakluyt. Voyages, &c. vol. iii. p. 300. John de Verrazzano.

And that vertue, if it be in operation, or (as I mought saye) endeuour, is called than beneficence; and the dede (vulgarly named a good *tourne*) maye be called a benefytte.

Sir Thomas Elyot. The Governour, book ii. ch. viii. fol. 122.

The manifold water, so called, bicause of the sundrie crinckling rills that it receiueth, and *turnagines* that it selfe sheweth before it came at the Dou.

Holinshed. Chronicles, vol. i. p. 164. The Description of Britaine, ch. xv.

The labyrinth in Lemnos was much like to them, onely in this respect more admirable, for that it had a hundred and fortie columns of marble more than the other, all wrought round by *turners* craft, but with such dexteritie, that a verie child was able to weld the wheele that *turned* them, the pins and poles whereby they hung were so artificially poised.

Holland. Plinie. Natural History, book xxxvi. ch. xiii.

But, soone as he appeared to their vew,
They vanisht all away out of his sight,
And cleane were gone, which way he never knew,
All save the shepheard, who, for fell despight
Of that displeasure, broke his bagpipe quight,
And made great mone for that unhappy *turne*.

Spenser. Faerie Queene, book vi. can. 10.

Moreover, translations are but as *turn-coated* things at best, specially among languages that have advantages one of the other, as the Italian hath of the English.

Howell. Letter 21, book iii.

The 29th of June, being St. Peter's day, a small fair was kept in St. Margaret's Church-yard, Westminster; as for wool, *turner's* ware, and such other small things.

Strype. Ecclesiastical Memoirs. Queen Mary, Anno 1557, ch. xlix. p. 141.

TURN.
—
TURN-
PIKE.

Pow'r has no balance, one side still weighs down;
And either hoists the common-wealth or crown.
And those who think to set the scale more right,
By various *turnings* but disturb the weight.
Dryden. The Conquest of Granada, part ii. act i. sc. 2.
But *turn-coat* Time assists the foe in vain,
And brib'd by thee, assists thy short-liv'd reign,
And to thy hungry womb drives back thy slaves again.
Rochester. Upon Nothing.

Found in few minutes, to his cost,
He did but count without his host,
And that a *turnstile* is more certain
Than, in events of war, dame Fortune.

Butler. Hudibras, part i. can. 3.

It is an aptitude which results from the figure of the flower,
and, as we have said, is strictly mechanical, as much so as the
turning of a weather board or tin cap upon the top of a chimney.

Paley. Natural Theology, c. xx. p. 300.

It is not more than fifty years ago, that some of the counties in
the neighbourhood of London petitioned the parliament against
the extension of the *turnpike* roads into the remoter countries.

Smith. Wealth of Nations, book i. ch. xi. p. 203.

Turn-bridge, further up the same river [Medway], which is na-
vigable to it for barges, is famous for its elegant *turnery*-ware.

Aikin. England Delineated.

TU'RNEP, or } Perhaps from its roundness so called
TU'RNIP. } —*Turn*, and A. S. *næpe, napus*.

The skirret (which some say) in sallads stirs the blood;
The *turnip* tasting well to clowns in winter weather:
Thus in our verse we put, roots, herbs, and fruits together.

Drayton. Poly-olbion, song 20.

The best husbandmen, and such as are more exquisite in their
practice of agriculture, give order, that the ground for *turneps*
should have five *tillthes*. *Holland. Plinie, book xviii. ch. xiii.*

TURNERA, in *Botany*, a genus dedicated by Plumier to the memory of William Turner, M.D., Prebendary of York, Canon of Windsor, Dean of Wells, and Student of Pembroke Hall, in Cambridge, in 1538, died in 1568: author of a *New Herbal*, London, fol. 1551. It belongs to the class *Pentandria*, order *Trigynia*, and the natural family of *Turneriaceæ*. Generic character: calyx tubularly funnel-shaped; petals five; styles three, cleft at the apices into multifid stigmas; capsule opening from the apex to the middle.

Composed of above fifty known species, principally natives of tropical America; they are small shrubs or herbs with simple alternate toothed or pinnatifid exstipulate leaves, occasionally furnished with two glands at the apex of the petiole. The flowers are axillary, sessile, or pedunculate, the peduncles either distinct or joined with the petioles, simple and one-flowered, or branched and many-flowered, articulated in the middle, or furnished with two small bracteas. Corollas generally yellow or yellowish, opening in the sun, and sometimes with a dark centre.

TURNPIKE. The roads which are called Turnpike Roads are a class of highway roads made under the authority of Parliament, and for the passage along which of horses, carriages, carts, or other vehicles, a toll is authorized to be taken. Although Turnpike Roads are highways, it does not necessarily follow that every road is a highway where toll is taken, since there may be a toll traverse, as where a man pays certain toll for passing over the soil of another man in a way that is not a highway. The Turnpike Roads of England are under the management and direction of trustees appointed in general by the several Acts of Parliament enacted for making or repairing the particular road which happens to be the subject of such act. These statutes, however, being confined to separate and local objects, are ill calculated to supply the place of a general

code for the regulation of Turnpike Roads. The legislature has therefore thought it expedient to pass a general act for that purpose.

By the common law, and the simple system enforced by it, whenever a highway was out of repair, the general charge of repairing it lay on the occupiers of lands in the parish in which it was, who were compelled to pay such charge, or by actual labour re-instate the highway in good order. But a distinct class of ways have been created under the appellation of Turnpike Roads; and this conversion of highways into Turnpike Roads has taken place by reason of the application of a new principle of repair. This innovation on the old law consists principally of the following points: the suspension of the liability of the parish to the repairs of the road, except by the performance of their statute labour, and the substitution in lieu of the parish of a body of trustees or commissioners with a contracting power, power to levy tolls upon all passengers, and authority to raise money on loan. Under the Acts made for the regulation of highways, a ministerial agent is appointed to superintend the management of highways; actual labour is permitted to be compounded for in money, and a power is given to raise funds by assessment for effecting those repairs or other improvements to which the common law provision may prove inadequate. But by the Turnpike Acts, an additional body are appointed, who are made as it were the proprietors of the road, but nevertheless upon trust for the public. They are empowered to bargain and sell, and to enter into stipulations, to raise money by mortgage, and, what is the most important of their privileges, they are authorized to levy a tax, the receipts of which are to be applied to the repair and improvement of the roads, which are placed under their management and control. Such are the main distinctions between the regulations relating to highway and Turnpike Roads.

Although there is a general Turnpike Act, passed on the 6th of August, 1824, namely, the 3rd Geo. IV., c. 126, the provisions of which might be inserted in this place, it is considered more convenient that they should be stated in a subdivision, under the title *WAYS*, where the subject will be found treated as to the appointment and qualification of trustees and other officers for the management of such roads; their several duties and respective liabilities; the procurement of materials for repairs; regulations as to repairs by statute labour and by prescription; rules as to the exaction of tolls; exemption from toll; power to raise money by mortgage of tolls and other matters relating to the subject. Besides the statute 3 Geo. IV., c. 126, by which all former general statutes relating to Turnpike Roads were repealed, the present Turnpike Acts are—4 Geo. IV., c. 16, 35, 95; 5 Geo. IV., c. 69; 7 & 8 Geo. IV., c. 24; 9 Geo. IV., c. 77; 2 & 3 Vic., c. 40; 3 & 4 Vic., c. 51; 4 & 5 Vic., c. 33; besides several statutes passed in the reigns of Geo. IV., Wm. IV., and her present Majesty, by which the general acts have been continued from year to year, with a view to the enactment of some new general enactment. For information on the subject of Turnpike Roads, see the Treatises of Messrs. Wellbeloved, Bateman, and Egremont, on *Highways*, and Mr. F. Gunning, on *Tolls*.

TURPENTINE, (see *TEREBINTH*.) Fr. *turbentine*; It. *terpentina*, *trementina*; Sp. *termentina*, *trementina*; Lat. *terebinthi lacrymæ*. See the Quotation from Drayton.

TURRÆA

Near which, of stately fir and pine

There grew abundant store,

The tree that weepeth *turpentine*,

And shady sycamore.

*Drayton. The Muses' Elysium. Nym. 6.*The prohibition of exporting from the colonies to any other country but Great Britain, masts, yards, and bowsprits, tar, pitch, and *turpentine*, naturally tended to lower the price of timber in the colonies.*Smith. Wealth of Nations*, book iv. ch. vii. p. 421.

TURPINIA, in *Botany*, a genus dedicated by Ventenat to M. Turpin, a distinguished French botanical artist and naturalist, author of several articles in the *Annales du Musée d'Histoire Naturelle*. It belongs to the class *Polygamia*, order *Dioecia*, or class *Dioecia*, order *Pentandria*, and the natural family of *Celastrineæ-Staphyleaceæ*. Generic character: flowers polygamous or dioecious; calyx five-parted, persistent, the margins coloured; petals five, inserted in the disk; stamens five, inserted into a disk of ten crenatures; ovary trigonal; styles three, combined in one, or distinct; berry trigonal, three-celled, each cell containing two or three seeds.

This genus consists of four species, three of which are natives of tropical America, and one of the North of India; they are all trees having the habit of *Staphylea*, with glabrous, opposite, impari-pinnate leaves, and stalked and serrated leaflets; the inflorescence is panicled, and the flowers white or cream-coloured; *T. pomifera*, the *Dalrymplea pomifera* of Roxburgh, bears yellow fruit as large as a medlar.

TURPITUDE, Fr. *turpitude*; It. *turpitudine*; Lat. *turpitude*, from *turpis*; of unknown origin; perhaps from *turba*. See **TURBID**. Applied to—
Moral foulness or defilement; baseness.

But though no other plague and reuenge should follow sacrilegious violations of holy things, the naturall secret disgrace and ignominy, the very *turpitude* of such actions in the eye of a wise understanding heart, is it selfe a heauy punishment.

Hooker. Ecclesiastical Pol., book v. sec. 79, fol. 431.

The second effect is shame, which conscience never fails to inflict secretly, there being a secret *turpitude* and baseness in sin, which cannot be better express'd than by its opposition and contradiction to conscience.

Taylor. Rule of Conscience, book i. ch. i. fol. 12.

Vice [ought] to be avoided, for that evil of *turpitude* which is in it, and not for any other external evil consequent thereupon.

Cudworth. Intellectual System, book i. ch. iv. fol. 419.

When we have surveyed them round about, and considered them in all their natural *turpitude*, disingenuity, and indecency, and applied them to our selves in all their appendent strings, shameful effects, and dismal circumstances, so that our hearts begin to feel them, and to smart and bleed under the dolorous sense of them; then must we pour them out before God, in sad and mournful confessions.

Scott. Christian Life, part i. ch. iv. fol. 82.

TURRÆA, in *Botany*, a genus dedicated by Linnaeus in honour of George Turra, professor of botany in the university of Padua, and author of several botanical works; he died in 1607. It belongs to the class *Monadelphia*, order *Decandria*, and the natural family of *Meliaceæ-Meliæ*. Generic character: calyx five-cleft; petals five, very long, and ligulate; stamens ten, combined into a very long tube, which is ten-cleft at apex, and bearing the anthers at the bases of the lobes, or between them; style terminated by a thickish

stigma; capsule five-celled; cells two-seeded; the valves each bearing a dissepiment in the middle.

A genus consisting of ten species, principally trees, natives of the East Indies, Guinea, Mauritius, Madagascar. The leaves are alternate, generally simple, or three-lobed, very rarely pinnate; the flowers are usually red, seldom yellow or white.

TURRET, *n.* } Fr. *tourette*; It. *torricella*; Sp. *TURRET*. } *torrecella*. See **TOWER**.

A small tower.

And of a sute were all the *toures*,
Subtly coruen after flowres,
Of vncouth colours during aye,
That neuer been none seene in May,
With many a small *turret* hie,
But man on liue could I non sie.

Chaucer. Chaucer's Dream, p. 379.

When they saw the vines framed, the mount raysed and a *turret* a buylding a farre of, at the first they began to laugh at it and to make a continuall scoffyng at it fro the wall, that so huge an engine should be reared so great a distaunce of.

Goldynge. Cæsar. Commentaries, book ii. fol. 62.

Their temple and citee Jerusalem were buylded pleasantly vpon that holy hyghe mount of Sion wel fortreced and *turretted*.

Joye. Exposition of Daniel, ch. xii. fol. 232.

Thus they awhile with court and goodly game
Themselves did solace each one with his dame,
Till that great lady thence away them sought
To vew her castles other wondrous frame:
Up to a stately *turret* she them brought,
Ascending by ten steps of alablaster wrought.

Spenser. Faerie Queene, book ii. can. 9.

Take a *turreted* lamp of tinne, made in the forme of a square, the height of the *turret* being thrice as much as the length of the lower part, whereupon the lamp standeth, &c., you shall finde, that it will burne slow, and a long time.

Bacon. Natural History, Cent. 4, sec. 373.

Like as the mother of the gods, they say,
In her great iron charet wons to ride,
When to Jove's pallace she doth take ner way,
Old Cybele, arayed with pompous pride,
Wearing a diademe embattild wide
With hundred *turrets*, like a turribant.

Spenser. Faerie Queene, book iv. can. 11.

Now like a maiden queen she will behold,
From her high *turrets*, hourly suitors come;
The east with incense, and the west with gold,
Will stand like suppliants to receive her doom.

Dryden. Annus Mirabilis.

His equals, over whom he attempts to rise, shoot at him from the ground the shafts of envy, and those who have already risen, assail him from the *turret* with the missile weapons of jealousy.

Knox. Works, vol. ii. p. 509. *On the Safety and Happiness of a Life of Obscurity*.

TURRILITES, in *Zoology*, a genus of *Polythalamous Cephalopodous Molluscs*.

Generic character. Shell spiral, turricular, multilobular, its convolutions close and distinct, its walls articulated with wavy sutures; chambers transverse, lobated, notched at their circumference, and pierced by a marginal and dorsal siphon; aperture rounded with a marginal fulness.

This genus is fossil, and was first described by Montfort, under the name *Turbinite*. It has great resemblance, in structure, to the Ammonites, in the same family with which it is placed by Lamarck, but they are distinguished by their vertical spire. Five species are described, two of which are French and three English. The type of the genus is *T. Costulata*, Lam.

TURRITELLA, in *Zoology*, a genus of *Phytophagous Trachelipodous Molluscs*.

TURRÆA

TURRI-
TELLA.

TURRI-TELLA. *Generic character.* Shell long, narrow, pointed, turricular, but not nacreous; the last turn terminating at the base in a perfect aperture, somewhat square or rounded, with a straight, narrow, sinuous edge; opercule horny and spiny.

This formed part of the Linnæan genus *Turbo*, till separated by Lamarck. The greater number have neither vertical ribs, fulnesses, nor spiny tubercles; the edges of the aperture are separate above, and not bent outwards. They have been confounded with the *Cerithia* and the *Terebræ*, but are distinguished from the former, which have the aperture oblong and oblique, and from the latter, in which it is longitudinal. Eighteen species are enumerated, all marine, of which *Turbo Terebra*, Lin., is the type.

TURRITIS, in *Botany*, a genus so named by Dillenius, from the Latin *turris*, a tower, on account of the disposition of the foliage upon the stem, which gives to it a pyramidal figure, and from the same cause springs the English name Tower Mustard. It belongs to the class *Tetradynamia*, order *Siliquosa*, and the natural family of *Cruciferae-Pleurorhizeæ-Arabideæ*. *Generic character*: silique linear, with flat valves; seeds disposed in two rows in each cell.

This genus consists of about ten known species, all natives of Europe and North America; they are erect annual or biennial herbs, which are scabrous in the young state, and usually glabrous in the adult state. The cauline leaves are stem-clasping, and somewhat sagittate, the radical ones are toothed, and drawn out along the petioles; the racemes are elongated, the pedicels are bractless, and the flowers are white and sulphur-coloured. *T. glabra* is a native of Britain, on banks, by road sides, in a gravelly soil.

TURTLE, Fr. *tourterelle*; It. *tortola*; Sp. *tortolilla*; Lat. *turtur*; in A. S. *turtl*, *turtle*, *turtele*.

They schulen geve an offrynge aftir that is seid in the lawe of the Lord; a peyre of *turturis* or tweie culver briddis.

Wiclif. Luk, ch. ii.

And to offer (as it is sayde in the lawe of the Lorde) a payre of *turtle* doues or two yonge pignons.

Bible, Anno 1551.

Rise up, my wif, my love, my lady free;
The *turtles* vois is herd, myn owen swete;
The winter is gon, with all his raines wete.

Chaucer. The Marchantes Tale, v. 10012.

He saw the body of his dearly esteemed prince, and heard Gynecia's lamenting; not such as the *turtle-like* love is wont to make for the over-soon loss of her only loved mate.

Sidney. Arcadia, book iv. p. 745.

And ye, faire ladies, that your kingdomes make
In th' harts of men, them governe wisely well,
And of faire Britomart ensample take,
That was as trew in love as *turtle* to her make.

Spenser. Faerie Queene, book iii. can. 11.

And have a flock of *turtle*-doves,
A guard on us to keep,
As witness of our honest loves,
To watch us till we sleep.

Drayton. The Shepherd's Sirena.

Not half so swift the sailing falcon flies,
That drives a *turtle* through the liquid skies;
As Phœbus, shooting from th' Idæan brow,
Glides down the mountain to the plain below.

Pope. Homer. Iliad, book xv.

ALMAH. So two kind *turtles*, when a storm is nigh,
Look up, and see it gathering in the skie;
Each calls his mate to shelter in the groves,
Leaving in murmur their unfinish'd loves;
Perch'd on some drooping branch they sit alone,
And coo, and hearken to each other's moan.

Dryden. The Conquest of Granada, part ii. act i. sc. 2.

TU'RTLE, } Seamen (says Skinner) call the sea- **TURTLE.**
TU'RTLER. } tortoises, *turtles*, from the It. *tartuga*, **TUS-**
tartaruga. See **TORTOISE.** **CANY.**

These people have great large nets, with wide meshes, to catch the *turtle*. The Jamaica *turtlers* have such; and I did never see the like nets but at Jamaica and here.

Dampier. Voyages, Anno 1687, vol. i. ch. iv. p. 395.

The Jamaica *turtlers* visit these keys with good success for *turtle* all the year long, and from thence bring most of their *turtle*, wherewith the market of Port Royal is served.

Dampier. Voyages, vol. ii. part iii. ch. iv. p. 36. Discourse of Winds.

TUSCANY, a Grand Duchy of Italy, the ancient Etruria; in modern times including the territories of Florence, Pisa, Sienna, and Lucca, formerly the celebrated republics so named. It is one of the most beautiful, fertile, and healthy regions of Italy, bounded on the North by Romagna, Bologna, Modena, and Parma; South by the Mediterranean; East by the Duchy of Urbino, Perugia, the States of the Church, and the Duchy of Castro, and West by the sea and Genoa. It is about 120 miles long by 90 broad, and is densely peopled, containing, upon 7040 square miles of surface, a population of 1,250,000, or 177 to each square mile, exclusive of Lucca.

Tuscany was made a sovereignty by Charles V. in favour of Alexander de Medicis, who was created Duke of Florence by that emperor. Subsequently Pope Pius V. created the son of Alexander, Cosmo de Medicis, Duke of Tuscany, and for two centuries the house of Medicis reigned uninterruptedly, until the death of Gaston in 1737, when by agreement between France, Spain, and the Emperor of Germany, it passed to Francis Duke of Lorraine, the consort of the heiress of the house of Austria, to whom Elizabeth Farnese, Queen of Spain, ceded it, as heiress of the house of Medicis, since which it has remained in the house of Austria.

The Grand Duchy of Tuscany comprises the Florentino, or territory of Florence, containing the towns of Pistoia, Fiesoli, Prato and Borgo San Sepolchro, Monte Pulciano, Cortona, Arezzo, Barberino, Ancisa, Il Miniate, Val Ombrosa, and Camaldoli, with other places of less note beside the capital. The Siennese contains the Maremma, an unhealthy marshy district near the sea, Sienna, Monte Alcino, Pienza, Chiusi, Massa, Grossetto, Suana, Saturnia, Pitigliano, Campagnatico, and Radicofani. The territory of Pisa comprises Pisa, Livorno, Volterra, Orciano, Piccioli, Orcinato, Casali, Campiglia, Lastignano, Paumanza, and Colle. In addition to these three states, Lucca was added to the Duchy by the treaty of 1815, on the death of the ex-queen of Etruria. It contains the port of Via Reggia, and the towns of Castiglione and Coreglia. Two appendages to Tuscany in addition, are the Val di Magia, and Piombino; the first, on the North-West of Tuscany, between Genoa, Parma, and Modena, was a particular fief of the empire. Piombino lies between Orbitello and Livorno.

Tuscany abounds in the finest fruits. The plains are affluent in corn, and every species of production, useful as food, comes to great perfection. The vine is largely cultivated, and the best wines in Italy are made from the vineyards; among them, the famous Monte Pulciano. The olive is grown for its oil, and the white mulberry is planted to a considerable extent for the purpose of breeding silkworms, the silk and oil of Tuscany being its principal articles of exportation.

TUS-
CANY.

The worm is hatched twice a year. Among the fruits, the water-melons of Pistoia are held in great esteem. Almonds are largely exported. All the plain country bordering upon the Arno is particularly rich in agricultural productions; although the mountains, containing better pasturages, are more thickly peopled. Diligence in cultivation is every where remarkable, every foot of land capable of it, is assiduously applied to that end, the population being industrious, and enjoying the mildest government in Italy, under the Archduke Ferdinand. Agriculture too is well understood, dressing is carefully bought up and applied with judgment. Much flax is grown near Florence, and, though the land pays considerably in taxes, the peasantry are cheerful and contented. The revenue is computed at half a million sterling. The troops kept in pay do not exceed 6000 or 7000.

The winter rarely has more than three months of duration, from the first of December to the first of March, and from the mildness of the climate but few houses have the appendage of chimneys beyond those needful for culinary purposes. The inhabitants are well grown, of large proportion, and the women handsomer than in other parts of Italy, being distinguished for what is generally styled the Roman character of beauty. The manners of all ranks are less strict in the observances of the Catholic church than in the other States, the ecclesiastics being held in less respect amid the pleasures of Florence and the exterior assumption of a luxury which is little observable in the private recesses of their mansions. They speak the Italian tongue in great purity, (although with an unpleasant accent,*) a circumstance which is become a proverb, but Sienna, rather than Florence, is given as the locality where this excellence is most discoverable. Every thing Florentine bears more or less of the peculiar genius and character of the people.

The mountainous part of Tuscany lies in the Siennese, and is part of the Apennine, wooded principally with the chestnut, and abounding in every variety of scenery, the beautiful, cultivated, savage, or romantic. Valuable metallic ores are found in the mountains; antimony is plentiful; copper is extracted near Massa, slate and yellow marble abound, and the serpentine of Imprunata, about seven miles from Florence, is noted as one of the most beautiful used in domestic architecture. Borax has been discovered in the lakes between Sienna and Volterra. Iron, alum, and salt mines are worked, though not to the extent which is practicable.

The physical aspect of the country on entering Tuscany from the north is pleasing rather than bold. Near Lojano the eye ranges over a great part of the basins of the Po from Bologna to Milan, and the Alps bound the horizon, while near Pietra Mala there is scenery which may even be called bold. The summits of the Apennine in that direction, though not high, slope down to the Val di Mugello and the Val d' Arno, which show no elevation until the Siennese hills appear. The climate is modified in all seasons, and the summer heats of the plains of Florence are avoided by ascending the Apennines. The heat is sometimes very great, the thermometer being for days at 90°, and in winter ice is often two inches thick.

Pistoia, on the road from Florence to Lucca, is a neat city, with broad streets, and a population of 9000.

* One great peculiarity is the pronunciation of *c* hard, like a strong aspirate, as *hasa* for *casa*.

TUS-
CANY

It has a number of noble buildings which appertain to its past greatness. Its cathedral is noble, having some fine monuments. It was erected in 1337. Pistoia has a museum, two public libraries, a theatre, and a race-ground; there is also a large hospital. There are some iron-works in its vicinity, but the principal manufactures consist of woollen, silk, leather, and hardware.

Fiesoli has but few inhabitants, but is still a bishop's see, and its ruins bespeak its having once been a place of importance.

Volterra in the Pisanese, the ancient *Velathri*, or Volaterra of the Etruscans, is about 15 miles from the sea, and is filled with ruins of all dates, amid which no more than 3000 or 4000 inhabitants wander like spirits of the past. In the XIIth Century it numbered a population of 50,000, now *malaria* and desolation reign over the whole site of the ancient and modern city. It is 12 leagues South-East of Florence.

Sienna, the capital of the Siennese, is 12 leagues from Florence, on the side of a hill. The inhabitants have dwindled from 100,000 to 20,000. It is still a fine city, and has several noble architectural edifices, of which the most worthy of note is the cathedral, built in 1250, of black and white marble polished, and covered with statues, busts, and ornaments. There is a Roman gate much admired, ancient grottoes, and a few antiquities besides. Sienna possesses a university, founded in 1330, and a library of 25,000 volumes. The inhabitants are affable and social, the climate neither subject to the heat nor cold of Florence, and the neighbouring country fertile, healthy, and beautiful, consisting of hill and valley well cultivated. The state of Sienna numbers 182,000 souls.

Grosseto stands on the right bend of the river Ombrone, and contains about 2000 inhabitants. Pliny represents that river, then called the Umbro, as navigable.

Piombino contains about 2000 inhabitants; it was once a little principality, covering 190 square miles, and numbering 18,000 inhabitants. Attached to it are the islands of Elba, Capraia, and Gorgona. Elba lies immediately off the shore of Piombino, and once belonged to the Dukes of Sora. Porto Ferrajo and Longono are the principal towns. Gorgona is celebrated for its anchovy fishery.

Lucca and its duchy comprise about 54 geographical square leagues. The population of the Duchy is about 145,000, and the revenue 82,000 pounds sterling. The capital, Lucca, is a handsome city, with a population of 22,000. It stands in a plain amid a rich country, over which rise in the distance the picturesque Apennines. It is said to have little in its streets which resembles an Italian city. The cathedral was built in 1100, and the portico in 1204. It is rather a singular than a handsome structure. There are several very old churches: the Palazzo Pubblico is an immense edifice, and the palace in the Piazza Reale is superbly furnished and painted by inhabitants of Lucca alone. The Lucchese are an industrious race; both their oil and silk are justly famed in other countries. Lucca has celebrated baths in the mountains, some miles from the capital, beautifully situated in the heart of the Apennines. The temperature is 128° of Fahrenheit.

Via Reggio is the only port of the Lucchese, three leagues from the capital; it lies in a marshy, unhealthy spot, though much ameliorated by drainage and dykes. Hence the merchandise of Lucca is exported.

TUS-
CANY.

TUSSEL.

Castiglione, on the lake of that name, is a small town where there are salt-works; *Coreglia* is also an inconsiderable place.

TUSH, } or, as Holinshed writes it, *twish*. I
TU'SHING, } know not, says Skinner, whether from
the D. *twissen*, *discordare*, *q. d.*—

That is dissonant, or absonant, or absurd. See the Quotation from Udall.

Nowe after a peruerse kynde of iudgement (as it wer, setting the cart beefore the horses) thou flatterest and pleasest thy self in thyn owne good qualitees, as though they were singular, and at an other mannes thou makest much *tushing*, and many exceptions. Udall. *Erasmus*. *Luke*, ch. vi. fol. 276.

There is a cholericke or disdainfull interiection used in the Irish language called Boagh, which is as much in English as *twish*. Holinshed. *Chronicles*, vol. vi. p. 8. *The Description of Ireland*, ch. viii.

Tush, tush, son, said Cecropia, if you say you love, but withal you fear, you fear least you should offend.

Sidney. *Arcadia*, book iii. p. 515.

CLEON. *Tush*, nymph, his swans will prove but geese,
His barge drinks water like a fleece;
A boat is base, I'll thee provide
A chariot, wherein Jove may ride.

Drayton. *The Muses' Elysium*, Nym. 2.

TUSK, *n.* } A. S. *tuxas*, *dentes exerti*. *Tusks* of a
TUSK, *v.* } boar; the projecting teeth of the boar.
TU'SKY, } *Tusked*, having *tusks*; to *tusk*, to
TUSH. } show, or move, to strike with the *tusks*.

And up and doune as he that forrest sought,
He met he saw a bore, with *tushes* great,
That slept ayenst the bright Sunnes heat.

Chaucer. *Troilus and Creseide*, book v. p. 288.

Janus sit by the fire with double berd,
And drinketh of his bugle horn the wine:
Before him stant braune of the *tusked* swine,
And Nowell, crieth every lusty man.

Id. *The Frankeleines Tale*, v. 11564.

Meriones lent Ithacus, his quiver and his bow;
His helmet fashiond of a hide: the workeman did bestow
Much labour in it, quilting it, with bow-strings; and without,
With snowie *tushes* of white-mouth'd bores, 'twas armed round
about

Right cunningly. Chapman. *Homer*. *Iliads*, book x.

Nay, now you puffer, *tusk*, and draw up your chin,
Twirle the poore chain you run a feasting in.

B. Jonson. *Essay* 107.

The chase she lov'd not, nor with hound or spear
Would charge the *tusked* bore, or savage bear.

Sherburne. *Salmacis*.

O be advis'd; thou know'st not what it is
With javelin's point a churlish swine to gore,
Whose *tushes* never sheathed, he whetteth still,
Like to a mortal butcher, bent to kill.

Shakspeare. *Venus and Adonis*.

On Oeneus' field she sent a monstrous boar,
That levell'd harvests, and whole forests tore;
This beast (when many a chief his *tusks* had slain)
Great Meleager stretch'd along the plain.

Pope. *Homer*. *Iliad*, book ix.

COR. These branches of a stag, this *tusky* boar,
(The first essay of arms untry'd before)
Young Mycon offers, Delia, to thy shrine.

Dryden. *Virgil*. *Pastoral* 7.

Rous'd by their smart, the savage lion roars,
And mad to combat rush the *tusky* boars,
Of wounds secure.

Wilkie. *The Epigoniad*, book i.

TU'SSEL, *n.* } *i. e.* a *tousel*, diminutive of *touse*
TU'SSEL, *v.* } or *tease*.

And scarcely hatch'd, these sons of him
That hurls the bolt trisulcate,
With helmet shell on tender head
Did *tustle* with red-ey'd pole-cat.

Saint George for England, part ii. v. 204.

I hate to see two people bear ill-will to one another, after they have had a *tussel*. TUSSEL.

Fielding. *History of a Foundling*, book ix. ch. iv.

TUTTY.

TUSSILAGO, in *Botany*, a genus so called by Tournefort, from *tussis*, a cough, and *ago*, to drive away, in allusion to its virtues. It belongs to the class *Syngenesia*, order *Superflua*, and the natural family of *Compositæ-Eupatoriaceæ*. Generic character: heads many-flowered, heterogamous; flowers of the ray in many series, narrow, ligulate, female, those of the disk few; male, tubular, with a campanulately five-toothed limb; receptacle naked; involucre subuniseriate of oblong obtuse scales; anthers almost tailless; style of the disk flowers inclosed, abortive, those of the ray bifid, with nearly terete branches; achenia of the ray oblong-cylindrical, glabrous, those of the disk abortive; pappus of the ray in many series, those of the disk in one series with very fine bristles.

This genus has been reduced to a solitary species, *T. Farfara*, the common Coltsfoot, a plant indigenous to Britain; it is a perennial with thickish rhizomatose roots. The leaves rise after the flowers, they are petiolate, cordate, and angular. The scapes bear each one head of yellow flowers; they are tomentose and leafless, but furnished with alternate, oblong, adpressed scales, referable to the scales of the involucre. The plant is a certain indication of a clayey soil, and is the first plant that vegetates in marle or limestone rubble. The cotton of the leaves wrapped in a rag, dipped in a solution of saltpetre, and dried in the sun, makes an excellent tinder. The leaves are the basis of British herb tobacco; they have been regarded as expectorant from the earliest ages, having been smoked through a reed in the days of Dioscorides, with a view to relieving the chest from accumulated mucus in catarrh, asthma, and phthisis. At present very little reliance is placed on its power.

TUT, perhaps *Toot, toot*; See, see.

And that he [my lord of Norfolk] said, (to what she had spoken, as it seems, in her own defence,) *Tut, tut, tut*; and shaking his head three or four times.

State Trials. 28 Hen. VIII. Anno 1536. Queen Anna Boleyn.

TUTENAG, or TUTANAG, is the name of a mixed mineral substance brought from China, and sometimes called *White* or *Chinese Copper*: it is a compound of which from 60 to 90 parts in 100 are zinc and the remainder iron, with a very small quantity of clay. It is very white and malleable, takes a fine polish, and is not soon tarnished. Nicholson, *Dictionary of Chemistry*.

TUTSAN, Fr. *tutsan*. Skinner says it is remarkable for its efficacy in healing wounds, and thinks it so called, *q. d. totum sanum* or *sanans*.

The yarrow, wherewithal he stops the wound-made gore;
The healing *tutsan* then, and plantane for a sore.

Drayton. *Poly-olbion*, song 13.

TUTTY, Fr. *tuthie*; Low Lat. *tutia*; from Ger. *tootsen*, *explorare*, to try, to examine, or Fr. *toucher*, to touch; but see TUTTY, *infra*.

The true *tuthie* (says Cotgrave) is bred of the sparkles of brazen furnaces whereinto store of the mineral calamine beaten to dust hath been cast.

Upon the mantle-tree, (for I am a pretty curious observer,) stood a pot of lambitive electuary, with a stick of liquorice, and near it a phial of rose-water, and powder of *tutty*. Tatter. No. 266.

TUTTY, from the Arabic word *Tútiyá* and the Persian *Dúdiyá*, *i. e.* vaporous, is an argillaceous ore of zinc, cast in tubes over cylindrical moulds. The Asiatic

TUTTY. writers on the *Materia Medica* speak of it as both natural and artificial; but the author of the *Karabadin* says that it is always artificial. It is procured principally in Kirmán, the south-easternmost province of Persia, where zinc is found in great quantities: when levigated it is used as an ophthalmic.

TUY, a city of Galicia, in Spain, on the banks of the Miño, near the sea, in the midst of a very fertile but unhealthy district; it is the seat of a rich bishopric, and is distant 17 leagues from Compostella. The walls are the workmanship of the Moors; the streets are narrow and gloomy. The principal building is the cathedral, which contains the body of San Pedro Gonzales Telmo, the patron saint. The population is about 5000.

TUZ, perhaps from the Fr. *tasse*, a *tuff* (or *tuft*) of grass. *Tasse de foin*, a bundle of hay, Cotgrave. Or it may be a corruption of *tush* or *tusks*; tufts of hairs projecting like *tusks*. Donne, in his history of the *Septuagint*, has the expression—*tussies* of all fruits.

A girdle of flowers and *tussies* of all fruits, intertyed and following together. P. 49. Ed. 1633.

With odorous oyl, thy head and hair are sleek:
And then thou kemb'st the *tuzzes* on thy cheek.

Dryden. *Persius*. Satire 4, v. 89, fol. 51.

TWAIN, or } A. S. *tuæg*, *twæg*, *tuæg-en*, *twæg-en*; D.
TWEY, } *twée*; Ger. *zwen*, *zween*. *Tuene* in Piers
TWEYN. } Plouhman, from A. S. *twéon-an*, *du-*
bitare; to doubt, or put in doubt; in hazard: thence, as Dr. Whitaker interprets it, "to ruin."

Twey dayes heo wende in þe se fro þe lond of Grece.

R. Gloucester, p. 14.

Godefrey of Louaïn, þe duke þat was douhty
By messengers *tuayn* sent to kýng Henry.
For his douhter Adelaïn, þat wele was þan of age.

R. Brunne, p. 106.

In trist of hure tresour, hue *tueneþ* ful menýe.

Piers Plouhman. *Vision*, p. 46.

Two wymmen schulen be gryndyng in oo queerne oon schal be taken: *tweyne* in a bed the toon shall be taken and the tother left.

Wiclif. *Matthew*, ch. xxiv.

That other answered, I not how that may be:

He wote well that the gold is with us *tweye*.

What shuln we don? what shuln we to him seye?

Chaucer. *The Pardoner's Tale*, v. 12750.

— With Proserpine

Whan I am dead, I woll won in pine,

And there I woll eternally complain

My wo, and how that *twinned* be we *twain*.

Id. *Troilus and Creside*, book iv. p. 269.

So soon as he [Taurus] is risen from the coast of the East Indian sea, he parteth in *twaine*: and taking the right hand, passeth Northward, and on the left hand Southward, somewhat bending into the West: yea, and dividing Asia through the mids.

Holland. *Plinie*, book v. ch. xxvii.

— I may be bold

To justifie a truth, this very sword

Of mine slew more than any *twain* besides.

Beaumont and Fletcher. *The Laws of Candy*, act i. sc. 2.

And when cold winter split the rocks in *twain*,

And ice the running rivers did restrain,

He stripp'd the bears-foot of its leafy growth,

And, calling western winds, accus'd the spring of sloth.

Dryden. *Virgil*. *Georgics*, book iv.

TWANG, } Either (as Minshew believes) from
TWANG, v. } the Lat. *tang-ere*; or rather a word
TWA'NGLE, v. } formed from the sound. Skinner.
TWANK, v. } The A. S. *twéog-an*, *twéon-an*, is,

hæsitare, *fluctuare*. *Twéon-unge* or *twéoung*, *hæsitatio*, a hesitation, a shaking, *fluctuatio*, a fluctuation, a wavering. And *twang* is—

The sound of metal, the reverberation from the concussion, shaking, quavering of metal; of a bow-string,

in quivering motion; then applied to other ringing sounds. *Twang* of the vessel in Search should be *tang*.

When the harper *twangeth* or singeth a song, all the companie must be whist, or else he chafeth like a cutpurse, by reason his harmonie is not had in better price.

Holinshed. *Chronicles*, vol. vi. p. 67. *The Description of Ireland*, ch. viii.

Twanged the string, out flew the quarell long,
And through the subtil aire did singing passe,
It hit the knight the buckels rich among,
Wherewith his precious girdle fast'ned was.

Fairefax. *Godfrey of Bulloigne*, book vii. stan. 103.

He was an arch-robber, and withall an excellent archer, though surely the poet gives a *twang* to the loose of his arrow, making him shoot once a cloth-yard long, at full forty score mark, for compass never higher than the breast, and within less than a foot of the mark.

Fuller. *Worthies*, vol. ii. p. 205. *Nottinghamshire*.

Their arrows finely pair'd, for timber, and for feather,
With birch and brazil piec'd, to fly in any weather;
And shot they with the round, the square, or forked pile,
The loose gave such a *twang*, as might be heard a mile.

Drayton. *Poly-olbion*, song 26.

For it comes to passe oft, that a terrible oath, with a swaggering accent sharply *twang'd* off, giues manhoode more approbation, then euer prooffe it selfe would haue earn'd him.

Shakspeare. *Twelfth Night*, fol. 268.

— The sinew forged string
Did give a mighty *twang*; and forth the eager shaft did sing,
(Affecting speedinesse of flight) amongst the Achive throng.

Chapman. *Homer*. *Iliads*, book iv

Sometimes a thousand *twangling* instruments

Will hum about mine eares.

Shakspeare. *The Tempest*, act iii. sc. 2, fol. 12.

While she did call me rascall, fidler,
And *twangling* Jacke, with twentie such vile tearmes,
As had she studied to misvse me so.

Id. *The Taming of the Shrew*, act ii. sc. 1, fol. 217.

Yet shooting upward, sends his shaft, to show
An archer's art, and boasts his *twanging* bow.

Dryden. *Virgil*. *Æneid*, book v.

When we in merry plight, airy and gay,
Surpris'd to find the hours so swiftly fly,
With hasty knock, or *twang* of pendant cord,
Alarm the drowsy youth from slumbering nod.

Gay. *Wine*.

A freeman of London has the privilege of disturbing a whole street with *twankling* of a brass kettle.

Addison.

I took notice indeed that his voice was something different from the human, having a little *twang* like that of string music.

Search. *Light of Nature*, vol. ii. part ii. ch. xxiii. p. 129.

He then owned that he had received heavenly gifts in earthen vessels, and though the liquor was not at all impaired thereby in substance or virtue, it might get some *twang* of the vessel.

Id. *Ib.* p. 259.

TWA'TTLE, v. } Perhaps *tattle*, Junius. *Twittle*,
TWIT'TLE, n. } *twattle*; and *tittle-tattle*, differ only

TWEE'DLE, v. } in the w. *Be-twattled* Mr. Brockett

TWA'TTLER. } explains, confounded, stupified,
infatuated. See **TWIDLE**.

To *tweetle* is perhaps to make a small chattering noise; a small unmeaning or insignificant noise or sound; like the tuning of an instrument; the bad play.

Let vs, in God's name, leaue lieng for varlets, berding for ruffians, facing for crakers, chatting for *twatlers*.

Holinshed. *Chronicles*, vol. vi. p. 52. *The Description of Ireland*, ch. vi.

Such fables *twitted*, such vntrue reports *twatted*.

Id. *Ib.* p. 48.

Insomuch that a man that heareth, would say; all that ever he did was not worth so much as the *twittle-twattle* that he maketh.

Holland. *Plutarch*, fol. 85.

When one talks toys or trifles, and speaks shadows or gawds that yield no profit; such *twatling* cuts out the heart of good time.

Whately. *Redemption of Time*, p. 15.

TWAT-
TLE.You keep such a *twatting* with you and your bottling.Swift. *To Dr. Sheridan.*

TWEEZE.

A fidler brought in with him a body of lusty young fellows, whom he had *tweedled* into the service.

Addison.

TWEAGUE. From *tweoge*, indicative of *tweog-an*, *dubitare*, *hesitare*, says Lye, comes the Sw. *tuekan*, and our *tweague*.

Perplexity, anxiety, fluctuation of mind.

Mrs. Bull. I fancy this put the old fellow in a rare *tweague*.Swift. *History of John Bull*, part ii. ch. vi.

TWEAK, v. } A. S. *twiccan*, *twiccian*, to pluck, to
TWEAK, n. } catch, to *twitch*. Somner. See **TWITCH**.
 To pluck or pull.

Am I a coward?

Who calles me villaine? breakes my pate a-crosse?

Pluckes off my beard, and blowes it in my face?

Tweakes me by the nose? giues me the lye i'th' throate?

As deepe as to the lungs?

Shakspeare. *Hamlet*, act ii. sc. 2, fol. 264.

Quoth he,

Tweaking his nose, You are, great sir,

A self denying conqueror.

Butler. *Hudibras*, part i. can. 2.

It wanders about without stirring out;

No passion so weak but gives it a *tweak*.Swift. *Rid.* 25.

TWEEDIA, in *Botany*, a genus dedicated to James Tweedie, an indefatigable collector of plants in South America. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Asclepiadaceæ*. Generic character: calyx five-parted; corolla campanulate, the throat crowned by five fleshy, retuse, or bifid exserted scales, which are opposite the sinuses of the corolla; stameneous corona none; anthers terminated by a membrane each; pollen masses ventricose, fixed by their attenuated apices, pendulous; stigma long-acuminated, bipartite.

Tweedia consists of a single known species, *T. versicolor*, a twining shrub, native of Buenos Ayres, bearing opposite membranous leaves, and axillary umbels of largish flowers. The corollas are pinkish outside and blue inside.

TWEEZE, } It. *astuccio*; Low Lat. *estugicum*;**TWEEZER.** } derived by some from the Lat. *theca*.

See *Menage*. Fr. *estuy*, a sheath, case, or box to put things in, and more particularly, a case of little instruments or sizzars, bodkin, penknife, &c., now commonly called an *ettwee*. (Cotgrave.) *Ettwee* is used by Shenstone. *Economy*, part ii.

Tweezers—is now usually applied to—a small instrument, to pinch and pull out hairs, &c.

I have sent you by Vacandary the post, the French bever and *tweeses* you writ for.

Howell. *Letter* 17. book i. sec. 1.

By drawing a little penknife out of a pair of *tweezers* I then chanced to have about me, and approaching it to the north point of the needle, which, according to the known custom of such needles, readily followed it, or rested over-against it, which way soever I turned the penknife, or whereabouts soever I held it still.

Boyle. *Works*, vol. ii. sec. 4. fol. 419. *Occasional Reflections*.

Then his *tweezer-cases* are incomparable: you shall have one not much bigger than your finger, with seventeen several instruments in it, all necessary every hour of the day, during the whole course of a man's life.

Tatler, No. 142.

There is but one,

By this expedient left alone,

To save that dear head from disgrace;

Here, Jenny, fetch my *tweezer-case*.Somerville. *The Bald Batchelor*.

Open'd his toy-shop in the port,

Trinkets of various size and sort;

Bracelets and combs, bodkins and *tweezers*.Id. *The Fortune-Hunter*, c. 4.**TWELVE,** } See **ELEVEN**. D. *twelf*; Ger. **TWELVE****TWELFTH.** } *zwelf*; Sw. *tolf*; A. S. *twelf*; D. **TWICE.**

twael, *twelf*; Goth. *twa-lib*, *twa-lif*, duo-decim—numerus in quo unitates *duæ* relinquuntur supra denarium, unde tota numerandi ratio de novo subinde resumitur ac veluti redintegratur. Junius. See also Wachter.

Twelfth, that unit which completes the number *twelve*; or the number two beyond ten, for a second decimal numeration.

pis folc hem armede anon, and baneres gonne rere,
 And departede here ost in *twolf* partyes here.

R. Gloucester, p. 18.

Oþer an ague in suche an angre. and som tyme a fevere
 þat takeþ me al a *twelf* month.

Piers Plouhman. *Vision*, p. 91.

And whanne the *twelve* Apostlis weren clepid togidir: Jhesus gaf to them vertu and power on alle Develis, and that thei schulden heel syknessis.

Wiclif. *Luke*, ch. ix.

Then called he the *twelve* together, and gaue them power, and auctorite ouer all deuyls, and that they myght heale diseases.

Bible, Anno 1551.

(Quod Pandarus) All this know I my selue,
 And all thassiege of Thebes, and the care,
 For hereof ben there maked bookes *twelve*.

Chaucer. *Troilus and Creseide*, book ii. p. 237.

And there vpon to make an ende
 The Soudan his hostage sende
 To Rome, of princes' sonnes *twelve*.

ze haf well herd, þe Brus Roberd was Scottis kýng.
 Wele *tuenti* gere in gode powere mayntend þat þing.

R. Brunne, p. 282.

Although the eage of gold be never so gay,
 Yet had this brid, by *twenty* thousand fold,
 Lever in a forest, that is wilde and cold,
 Gon eten wormes, and swiche wretchednesse.

Chaucer. *The Manciples Tale*, v. 17053.

And tho she yafe hym drinke a draught,
 Of whiche his youth agayne he caught,
 His head, his herte, and his visage
 Licke vnto *twenty* wynter age.

Gower. *Conf. Am.* book v. p. 154.

— The seven and *twentieth* day expir'd
 Quite from the Earth the waters were retir'd.

Drayton. *Noah's Flood*.

TWI-BILL, A. S. *twy-bill*; D. *twee-bill*, bipennis, bicuspis, securis.

A two-edged bill, or axe.

She learn'd the churlish ax and *twybill* to prepare,
 To steel the coulter's edge, and sharp the furrowing share.

Drayton. *Poly-olbion*, song 18.

TWICE, D. *twees*, *twy-es*, *twies*, *twise*, *twice*, the gen. of *twy*, *twey*, or *two*.

Lo this thriddle tyme I come to ghou, and in the mouth of *tweyne* or of thre witnessis eueri word schal stonde. I seide bfore and *seie bfore*,—(prædixi et prædico)—as present *twies*—and now absent to hem that bfore han synned and to alle othir.

Wiclif. *2 Corynth.* ch. xiii.

Hast thou not wondred, Adam, at my stay?
 Thee I have misst, and thought it long, depriv'd
 Thy presence, agonie of love till now
 Not felt, nor shall be *twice*.

Milton. *Paradise Lost*, book ix.

By virtue of this property of the mind, the having done any thing *once* becomes a motive to the doing of it again; the having

TWICE. done it *twice* is a double motive; and so many times as the act is repeated, so many times the motive to the doing of it once more is multiplied.
Horsley. Sermon 28. vol. ii. p. 352.

TWI-LIGHT.

TWIDLE, v. See **TWATTLE.** To rub, or pull about lightly.

With my fingers I pressed close upon it and *twidle* it in, first one side, and then the other.
Wiseman. Surgery.

TWI-FALLOW. See **TRIFALLOW.**

TWIG, n. } A. S. *twig, twiga*; D. *twiigh*; Ger.

TWIG, v. } *zweig*, perhaps from A. S. *twicc-an*, to

TWIGGEN, } twitch.

TWIGGY. } Something (branch, slip, of a tree,)

tweaked or *twitched*; a branch *twitched*, snatched, plucked, severed; a small branch.

To *twig*, to *tweak*; to flog with *twigs*, to lash, to flog.

And eche of thise chief sinnes hath his braunches and his *twigges*.
Chaucer. The Persones Tale, p. 153.

Not one kynge hath bene in Englande sens the conquest, but they haue *twygged* hym one way or other, and had theyr false flynges at him.
Bale. Apology, fol. 142.

Others the utmost boughs of trees doe crop,
And brouze the woodbine *twigges* that freshly bud;
This with full bit doth catch the utmost top
Of some soft willow, or new growen stud.

Spenser. Virgil's Gnat.

Traiterous brat,
How dost thou thus confront me? impious *twig*
Of that old stock, dew'd with my kinsman's gore,
Draw.

Beaumont and Fletcher. Love's Cure, act ii. sc. 2.

Wise Solomon, while he cared to seem not too severe an exactor of that which his father had remitted, prudently lays insensible *twigs* for so foul an offender.

Hall. Works, Cent. vol. i. p. 430. The Exec. of Joab and Shimei.

Others take and lay them within a large basket or *twiggen* panier.
Holland. Plinie, book xvii. ch. x.

But I hold it a meere fable and vaine tale, that all of it is fetched as farre as from the islands of the Atlanticke sea, and that the inhabitants of those parts doe convey it in little *twiggen* boats, covered all over with feathers.
Id. Ib. book xxxiv. ch. xvi.

Oziers yield more limber and flexible *twigs* for baskets, flaskets, hampers, chairs, hurdles, stages, bands, &c. likewise for fish wairs and to support the banks of impetuous rivers, in fine for all wicker and *twiggy* works.
Evelyn. Sylva, ch. xix.

Their nests hang down two or three foot from the *twig* to which they are fastened, and look just like cabbage-nets stuff with hay.
Dampier. Voyages, vol. ii. part ii. ch. ii. p. 68. Anno 1676.

Yet ev'n these
Themselves love life, and cling to it, as he
That overhangs a torrent, to a *twig*.

Cowper. The Task, book i.

TWI-LIGHT, D. *twee-licht*; A. S. *tweonlht, dubra lux*; *tweon*, from *tweon-an*, dubitare, to doubt.

The waning light immediately after the setting, or before the rising of the sun.

A dim light; a dim sight.

Whan that the day his light gan withdraw,
And the night approched in the *twilight*,
How a woman came and met him I saw,
Talking with him vnder shade of the night.

Imputed to Chaucer. The Remedy of Love, p. 540.

As the *twilight* beginneth, you shall haue about you two or three hundred foxes, which make a marueilous wawling or howling.

Hakluyt. Voyages, &c. vol. i. p. 400.

This famine must beginne at the heart of the Prophet. He must haue darknesse for a vision, hee must stumble a noone-dayes, as at the *twi-light*, and then truth shall fall in the midst of the streets.

Hooker. Sermon vpon St. Jude, sec. 33. fol. 582.

The sun was sunk, and after him the starr
Of Hesperus, whose office is to bring
Twilight upon the Earth, short arbiter
Twixt day and night.

Milton. Paradise Lost, book ix. l. 50.

And now on earth the Seventh
Ev'ning arose in Eden, for the sun
Was set, and *twilight* from the East came on
Forerunning night.

Milton. Paradise Lost, book vii. l. 583.

Some few sparks or flashes of this divine knowledge may possibly be driven out by rational consideration; philosophy may yield some *twilight* glimmerings thereof.

Barrow. Sermon 45. vol. iii. p. 412.

My evening is now fully come, and the night is fast approaching: yet if we shall have a tolerably lengthened *twilight*, we may still perhaps find time enough for a further conversation on this subject.

Tooke. Div. of Purley, vol. ii. last page.

TWILLED. From the Fr. *tuyau*, we have *tewell*, *tiwill*, or *tuill*, or *twill*, any thing tubular. See ante **TEWELL.**

A cane, a reed; and in this contested passage of Shakspeare, *twilled* may be merely *can-y*, *reed-y*; or abounding with *tuills*, canes, or reeds. A *quill* is very commonly called *twill* in the north. See **RAY.**

In Ovid's *Banquet of Sense*, by Chapman, 1625, Mr. Steevens found *twill*-pants enumerated among flowers.

Thy bankes with pioned, and *twilled* brims,
Which spungie Aprill, at thy hest betrimms;
To make cold nymphes chast crownes.

Shakspeare. The Tempest, act iv. sc. 1. fol. 14.

TWIN, v. } A. S. *tuin, getwin*; Ger. *zwen*,
TWIN, n. } *gemini, gemelli.*

TWIN, adj. } To *twin*, is to *twain*, to disunite in

TWINNING, } *twain*; to separate, to disjoin, to part

TWINNED, } with or from; to sever. See **TWAIN.**

TWINNER. } It is also to unite in *twain*; to conjoin.

Twins, are two or *twain*, at a birth; in astrology, Castor and Pollux, "the Spartan *twins*."

We se alle day in place ping bat a man wynnes,
It is told purchase, whedir he it hold or *twynnes*.

R. Brunne, p. 86.

& he with scrite & oth mad obligacion,
bat for leue no loth, borgh conseile of treson,
Suld werre on him begynne, bi water ne bi lond,
Ne his pes breke no *tuynne*, þe sonne þertille him bond.
Id. p. 134.

But though myself be guilty in that sinne,
Yet can I maken other folk to *twinne*
From avarice, and sore hem to repente.

Chaucer. The Pardoner's Tale, v. 12363.

If love be searched well and sought
It is a sicknesse of the thought
Annexed and knedde betwixt *tweine*,
With male and female with o cheine.

Id. The Romant of the Rose, p. 206.

Many a sodeine blast
He bloweth, wherof been agast
Thei, that desiren pes and reste:
He that is ilke vngoodlyeste,
Whiche many a lustie loue hath *twynned*.

Gower. Conf. Am. book iii. p. 75.

Ewes, yearly by *twinning*, rich masters do make,
The lamb of such *twinnings*, for breeders go take:
For *twinnings* be *twiggers*, increase for to bring,
Though some for their *twigging*, peccavi may sing.

Tusser. January's Husbandry, p. 93.

Friends now fast sworn,
Whose double bosomes seeme to weare one heart,
Whose houres, whose bed, whose meale and exercise
Are still together: who *twin* (as 'twere) in loue,
Vnseparable, shall within this houre,
On a dissention of a doit, breake out
To bitterest enmity.

Shakspeare. Coriolanus, act iv. sc. 4, fol. 21.

HER. Was not my lord
The veryer wag o' th' two?

POL. We were as *twyn'd* lambs, that did frisk i' th' sun,
And bleat the one at th' other.

Id. The Winter's Tale, act i. sc. 2, fol. 278.

TWI-LIGHT.
TWIN.

TWIN.
—
TWINE.

Yet know withall
Since thy original lapse, true libertie
Is lost, which alwayes with right reason dwells
Twinn'd and from her hath no diuidual being.
Milton. Paradise Lost, book xii. l. 82.

And from her [Psyche] fair unspotted side
Two blisful *twins* are to be born,
Youth and Joy: So Jove hath sworn.
Milton. Comus, l. 1010.

As when those hinds that were transform'd to frogs
Rail'd at Latona's *twinn-born* progeny
Which after held the sun and moon in fee.
Id. Sonnet 12. l. 6.

The cave of Mars was dress'd with mossy greens:
There, by the wolf, was laid the martial *twins*:
Intrepid on her swelling dugs they hung;
The foster-dam loll'd out her fawning tongue.
Dryden. Virgil. Æneid, book viii.

The tardy fields
Pay not their promis'd food; and oft the dam
O'er her weak *twins* with empty udder mourns.
Dyer. The Fleece, book i.

TWINDGE, } Ger. *zwing-en*; D. *dwing-en*; Sw.
TWINDGE. } *twing-a*; cogere, coarctare, compri-
mere, to press, to pinch; appears to be the A. S. *twicc-*
ian, to twitch.
To pinch.

I tell thee, I doe use to tear their hair, to kick them, and
twindge their noses if they be not carefull in avoiding me.
Beaumont and Fletcher. The Woman-Hater, act ii.

LAP. For the *twindge* by th' nose,
'Tis certainly unsightly, so my tables say,
But heelps against the head-ach, wond'rous strangely.
Id. The Nice Valour, act iii.

The wickedness of this old villain startles me, and gives me a
twinge for my own sin; though it come far short of his.
Dryden. The Spanish Fryar, act iv.

But when a man is past his sense,
There's no way to reduce him thence,
But *twinging* him by th' ears or nose,
Or laying on of heavy blows.
Butler. Hudibras, part iii. can. 1.

As *twing'd* with pain, he pensive sits,
And raves, and prays, and swears, by fits,
A ghastly Phantom, lean and wan,
Before him rose, and thus began.
Gay. Fable 31.

But struggling to go through the rest,
He felt a pain across his breast
A sort of sudden *twinge*, he said,
That seem'd almost to strike him dead.
E. Moore. The Trial of Sarah, &c.

TWINE, n. } D. *tweyn, twyn*; A. S. *twyn, twyne*,
TWINE, v. } or *twined*, thread, filum duplex, from
the verb *twyn-an, duplicare*, to *twine* (i. e. to *twain*) or
twist (i. e. *twis't*.)

A double thread, one thread strengthened by another
twined around it; a thin string.

To *twine*—

To turn, roll, or wind around; to convolve, to in-
volve; to embrace.

To *twyn* or *twine*, is to unite into two; make two into
one; and also, to disunite into two; to make one into
two; to separate. See to **TWIN**.

They all of them do weare long haire vpon their heads, and,
after the maner of women, do' curiously keame their dainty locks
hanging downe to the ground, and, hauing *twined* and bound them
vp, they couer them with calles, wearing sundry caps thereupon,
according to their age and condition.
*Hakluyt. Voyages, &c. vol. ii. part ii. p. 91. A Description of
China.*

TWINE
—
TWINK.

She then began them humbly to intreate
To draw them longer out, and better *twine*,
That so their lives might be prolonged late.
Spenser. Faerie Queene, book iv. can. 2.

The Naiads and the nymphs extremely overjoy'd,
And on the winding banks all busily employ'd,
Upon this joyful day, some dainty chaplets *twine*.
Drayton. Poly-olbion, song 15.

And because it *twineth* and casteth not, it is passing good for
hinges and hookes, for sawne bords, for ledges in dores and gates.
Holland. Plinie, book xvi. ch. xl.

She shrikes, and *twines* away her sdaignefull eyes
From his sweet face, she fals dead in a swoone,
Fals as a flowre halfe cut, that bending lies.
Fairefax. Godfrey of Boulogne, book xx. sec. 128.

Right on the front he gaue that Ladie kinde
A blow, so huge, so strong, so great, so sore,
That out of sense and feeling, downe she *twinde*.
Id. Ib. book xx. sec. 43.

But heav'n, which moulding beauty takes such care,
Makes gentle fates on purpose for the fair:
And destiny that sees them so divine,
Spins all their fortunes in a silken *twine*.
Dryden. Secret Love, act iii.

My clue of life is *twinn'd* with Ozmy'n's thread.
Id. The Conquest of Granada, act iv.

By thee dispos'd into congenial soils,
Stands each attractive plant, and sucks, and swells
The juicy tide; a *twining* mass of tubes.
Thomson. Spring.

This said, a double wreath Evander *twinn'd*;
And poplars, black and white, his temples bind.
Dryden. Virgil. Æneid, book viii.

TWINK, v. } A. S. *twinc-lian*, rutilare, scin-
TWINKLE, v. } tillare, is probably the diminutive
TWINKLE, n. } of *twyn-an*, to *twine*, or *twin*; to
TWINKLING, n. } separate.

A twinkling (of a star) is caused by the apparent
separation of the continuous surface.

The *twink* or *twinkle* of the eye; the quick separation
of the lids; or the sparkle caused by it;—the space of
time in which it is finished.

To shine with a sparkling, quivering light; to sparkle,
to quiver; to emit or throw forth a small portion of
light.

Whan that I *twinkin* upon the
Loke for to be gon,
And cast away the fetteris,
And come to me anon.
Imputed to Chaucer. The Coker's Tale of Gamelyn, p. 615.

His eyen *twinkled* in his hed aright,
As don the sterres in a frosty night.
Chaucer. Prologue to the Canterbury Tales, v. 250.

It is of Loue, as of Fortune,
That chaungeth oft, and nill contune,
Which whylome woll of folke smile,
And glombe on hem another while,
Now friend, now foe, shalt her feelee,
For a *twinkling* tourneth her wheele.
Id. The Romant of the Rose, p. 203.

And than hir ioy for aught I can espie,
Ne lasteth not the *twinkling* of an eye.
Id. The Comp. of Mars and Venus, p. 363.

And in a *twinkelynge* of a loke
His man's forme ageine he toke
And was reformed to the reigne,
In whiche that he was wont to reigne.
Gower. Conf. Am. book i. p. 41.

And so in the very *twinkling* of an eye, both shippe and men
were all cast away.
*Hakluyt. Voyages, &c. vol. i. p. 612. The honor. Voyage to
Cadiz.*

TWINK.

When suddenly, with *twinkle* of her eye,
The damzell broke his misintended dart.

Spenser. Sonnet 16.

TWIRL.

If women have an ague, and the same accompanied with head-
ach and much *twinkling* or inordinat palpitacion of the eyes, it is
thought they shall find much good by drinking them in some hard
and austere wine.

Holland. Plinie, book xxxii. ch. x.

Hast not slept to night? wou'd not (a naughty man) let it sleep
one *twinkle*!

Dryden. Troilus and Cressida, act iii. sc. 2.

PAND. I go immediately, directly, in a *twinkling*, with a
thought.

Id. Ib. act ii. sc. 2.

He had a roguish *twinkle* in his eye,
And shone all glittering with ungodly dew,
If a tight damsel chaunc'd to trippen by.

Thomson. Castle of Indolence, c. 1.

Well may we be thus ignorant of all the solar systems beyond
our own, the very phænomena of which, except the *twinkling* of
some of their suns and our fixed stars, are imperceptible to human
sight.

Bolingbroke. Essay 1. On Human Knowledge.

Happy who walks with him! whom what he finds
Of flavour or of scent in fruit or flow'r,
Or what he views of beautiful or grand
In nature, from the broad majestic oak
To the green blade, that *twinkles* in the sun,
Prompts with remembrance of a present God.

Cowper. The Task, book vi.

TWIRE. *Twyereth*, says Skinner, is interpreted
singeth, *twyer*, to sing; I know not whether from the
Dutch *wieren*; Fr. *vire*; It. *girare*, circuire; *gyrare*,
(i. e.) vocem reciprocare, vibrissare, et quasi circumro-
tare.

Steevens thinks *twire* may perhaps have the same
signification as *quire*, or that it may be a corruption—of
twink for *twinkling*. Gifford says, to *twire* is to leer
affectedly, to glance at obliquely or surreptitiously, at
intervals, &c.

But whence have we the word? It is perhaps the
A. S. *thwyr-ian*, *thweor-ian*, to wrest, to twist, to turn
or put out of a straight course; to swerve.

To swerve from a straight line, to look or direct the
look askance, askint, obliquely; to leer, to wink, to
twinkle.

In Chaucer *twireth* appears to be applied to the in-
terrupted, intermitted sounds of a bird, its short chirp
or whisper of gladness on escaping from its cage,—as
distinguished from continuous song.

If thilke birde skipping out of her straite cage, seeth the agre-
able shadowes of the wodes, she defouleth with her feete her meate
ishad, and seketh on morning onely the woode, and *twirethe*, (silvas
dulci voce susurrat) desiring the woode with her swete voice.

Chaucer. Boecius. De Consolatione, book iii. p. 424.

Suppose twixt noon and night the Sun his half way wrought
(The shadows to be large, by his descending brought)
Who with a fervent eye looks through the *twyring* glades,
And his dispersed rays commixeth with the shades.

Drayton. Poly-olbion, song 13.

Tho. Ye are an ass, a *twirepipe*,

A Jeffery John bo peepe, thou minister.

Beaumont and Fletcher. Monsieur Thomas, act iii. sc. 1.

I tell the day, to please him, thou art bright,
And dost him grace when clouds do blot the heaven;
So flatter I the swart-complexion'd night;
When sparkling stars *twire* not, thou gild'st the even.

Shakspeare. Sonnet 28.

Which maids will *twire* at 'tween their fingers thus!

Ben Jonson. Sad Shepherd, act ii. sc. 1.

I saw the wench that *twired* and twinkled at thee
The other day, the wench that's new come hither,
The young smug wench.

Beaumont and Fletcher. Women Pleas'd, act iv. sc. 1.

TWIRL, v. } Holland writes *turling*, the same word
TWIRL, n. } probably as *trilling*, from the A. S. verb
thirl-ian, to turn round; to turn about.

To turn, to run or cause to run round; to revolve TWIRL.
fast or speedily; to whirl about.

If a man in private chamber *twirls* his band-strings or plays
with a rush to please himself, 'tis well enough; but if he should
go into Fleet Street, and sit upon a stall, and *twirl* a band-string,
or play with a rush, then all the boys in the Street would laugh
at him.

Selden. Table-Talk. Poetry.

But what a dizzinesse and giddinesse of the brain is this to
say; that he who is indigent of nothing, yet hath need of the
good things which he hath; and that the lewd and vicious per-
son is indigent of many things, and yet needeth nothing: for this
is the very assertion which Chrysippus holdeth: That wicked persons
have no need, and yet are indigent, *turling*, shifting, and trans-
porting the common notions, like unto cockall bones or chasse-
men upon the board.

Holland. Plutarch, fol. 893.

MARG. Can you love a young lady? how he blushes!

ALT. Leave *twirling* of your hat, and hold your head up,
And speak to th' lady.

Beaumont and Fletcher. Rule a Wife and have a Wife, act ii.

Yet when I meet again those sorcerer's eies,
Their beams my hardest resolutions thaw,
As if that cakes of ice and July met,
And her sighs powerful as the violent North,
Like a light feather *twirl* me round about
And leave me in mine own low state again.

Id. Love's Cure, act iii. sc. 3.

So when the wriggling snake is snatch'd on high
In eagle's claws, and hisses in the sky,
Around the foe his *twirling* tail he flings,
And twists her legs, and writhes about her wings.

Addison. Ovid. Metamorphoses, book iv.

Then to my few companions, bold and brave,
Propos'd, who first the venturous deed should try,
In the broad orbit of his monstrous eye
To plunge the brand, and *twirl* the pointed wood,
When slumber next should tame the man of blood.

Pope. Homer. Odyssey, book ix.

TWIST, n. } A. S. *ge-twisan*, to twice. *Twist*, that
TWIST, v. } which is *twiced*, *twist*; and hence the
TWISTING. } verb.

To double, or duplicate; to turn one round another;
generally to turn or wreath around, to infold, to wind,
to implicate.

Ther was no wight, save God and he, that wiste
In many a wise how sore that I him *twiste*.

Chaucer. The Wif of Bathe's Prologue, v. 1065.

But after whan the fury and all the rage
Which that his heart *twist*, and fast threst,
By length of time somewhat gan assuage,
Upon his bed he laid him down to rest.

Id. Troilus and Creseide, book iv. p. 260.

And as about a tree with many a *twist*
Bitrent and writhe the swete wodbinde,
Can eche of hem in armes other winde.

Id. Ib., book iii. p. 260.

The men weare onely a stroope about their wastes, of some
kinde of linnen of their owne weauing, which is made of plantan
leaves, and another stroope comming from their backe vnder their
twistes, which couereth their priue parts, and is made fast to
their girdles at their nauels.

Hakluyt. Voyages, &c., vol. iii. p. 819. M. Thomas Candish.

There were fyue rowes of them ioyned and *twysted* one wythin
another, so that whosoever ventured in, must nedes gore them
selues vpon the sharpe pointes of the stakes.

Goldynge. Cesar. Commentaries, book vii. fol. 225.

There was a man seene in Aquitaine. whome the king being in
those parties made of his gard, whose height was such, that a
man of common height might easilie go vnder his *twist* without
stooping, a stature incredible.

Holinshed. Chronicles, vol. i. p. 18. Description of Britaine,
ch. v.

All in a canvas thin he was bedight,
And girded with a belt of *twisted* brake:
Upon his head he wore an helmet light,
Made of a dead man's skull, that seemd a ghastly sight.

Spenser. Faerie Queene, book ii. can. 11.

TWIST. And these meet one with another in the space betweene, and are interlaced, *twisted*, and tied together.
TWIT. *Holland. Plinie, book xvii.*

Upon my blessing say not it was she.
 The daughter of the only man I hate!
 Two contradictions *twisted* in a fate!
Dryden. The Conquest of Granada, act v.
 Too well he knows the *twisting* strings
 Of ardent hearts combin'd,
 When rent asunder, how they bleed,
 How hard to be resign'd.
Young. Resignation, part i.

Which ligament keeps the two parts of the joint so firmly in their place, that none of the motions which the limb naturally performs, none of the jerks and *twists* to which it is ordinarily liable, nothing less indeed than the utmost and the most unnatural violence can pull them asunder.
Paley. Natural Theology, ch. viii. p. 99.

I have such confidence in the microscope, having already found it serviceable upon many occasions, that I doubt not to follow, without losing or breaking the threads, all the *twistings* and crossings and entanglements in those intricate subjects that have hitherto perplexed the learned world.
Search. Light of Nature, vol. i. part i. ch. vi. p. 190.

TWIT, } A. S. *edwit-an*, to reproach, to re-
TWITTINGLY. } buke, to taunt, to wit, to backbite, to slander, to deprave. Somner. And *edwit-an*, Skinner forms of *ed*, again, and *wit-an*, to give to wit (or cause to wit or know), *i. e.* openly to signify to any one the fault he may have committed.

The A. S. *wit-an* is not only to know, but to censure. Chaucer and G. Douglas use the *n. Wite*, and Spenser the *n.* and *v.* as equivalent to—*twit*. F. Q. b. ii. c. 12. s. 16. B. vi. c. 3. s. 16.

To name, or tell of, a fault, defect, infirmity, any matter of blame, scoff, mockery; to scoff, to reproach. And see **TOOT**.

May it not be from *Twight*, the past participle of twitch? (See the Quotation from Chaucer in *v. twitch*.)

To pull or pluck; to have a twitch or pull at; to carp at; and hence to taunt, scoff, flout.

his word dude much sorwe his seli old kyng,
 pat *atwytede* hym & ys stat, pat he nadde hymself noþing.
R. Gloucester, p. 33.

In womanhede as auctours all write
 Most thing commended is their chaste honesty,
 Thing most slaundersous their nobles to *atwite*.

Chaucer. *A balad declaring the worthines of Women's Chastitie.*

The loured let make a gret fere,
 And let of sende a neyghebour,
 Ich understonde, a god barbour
 And set his wif forth, for-hot,
 And hire misdedes here *atwot*.

The Seugn Sages. Weber, vol. iii. l. 1876.

Oft did she blame herself and often rew
 For yeelding to a straunger's love so light,
 Whose life and manners straunge she never knew,
 And evermore she did him sharply *twight*,
 For breach of faith to her which he had firmly plight.

Spenser. Faerie Queene, book v. can. 6.

But not more pleasing was't to Pompey's spritt
 That all the people raile at heauen, and *twitt*
 The gods with Pompey, then what Cato spoke,
 Few words, but from a truth-fill'd breast they broke.

May. Lucan. Pharsalia, book ix.

By hearing feminine confessions (wherewith Wilton *twitteth* them,) and abusing the key of absolution, they opened the coffers of all the treasure in the land.

Fuller. Worthies, vol. ii. p. 450. Wiltshire.

The physician onely is dispensed with all, if he murder a man; so cleare he goeth away with impunitie, that none so hardie as once to *twit* or challenge him for it.

Holland. Plinie, book xxix. ch. l.

I would some other had been the cause of thy undoing, I shall be *twitted* i' th' teeth with it, I'm sure of that foolish lady.

Beaumont and Fletcher. Wit at several Weapons, act v.

But so far was all this from satisfying that fierce natur'd man, to whom his own mind and will was a law, that in a long letter having reckoned all his civilities to the English nation, he *twittingly* upbraided them therewith.
Camden. History of Queen Elizabeth, Anno 1569, book i. p. 125.

TWITCH, v. } Ger. *zwicken*; A. S. *twicean*, *twic-*
TWITCH, n. } *an*; *vellere*, *carpere*; to pull—
TWITCHING, n. } To pluck, to catch, to snatch.

Somner.

And ever in on alway she cried and shrighit,
 And with hire bek hireselven she so *twight*.
Chaucer. The Squires Tale, v. 10731.

And after this, with sterne and cruel herte,
 His swerde anon out of his sheth he *twight*,
 Him selfe to sleen.

Id. Troilus and Creseide, book iv. p. 275.

Imagine that the time is now presently come, that shal shortly come at hande, whan (those riches wherin now you most folishly put your confidence, being *twitche*d awaye) you shal be wise to late, and acknowlage that those gaye possessions doe not now helpe you.
Udall. Erasmus. St. James, ch. v. fol. 39.

His word (*was slaine*!) straightway did move
 And nature's inward life strings *twitch*;
 The skie immediately above
 Was dimd with hideous clouds of pitch.

Spenser. Elegie upon Sir P. Sidney.

They themselves, measuring worship by wealth, and thinking nothing honourable that is not sumptuous and costly, see not how by this means they give occasion to their heires for to breake open their counters and make spoile of all, or else before that day come, entice a theefe to be hooking or *twitching* them away with gins and snares.
Holland. Plinie, book xxxv. ch. ii.

Any sharp thing to the eyes provoketh tears; and therefore we see that almost all purgers have a kind of *twitching* and vellication, besides the griping which cometh of wind.

Bacon. Nat. Hist. Cent. l. sec. 37.

So crakt their backe bones wrincht
 With horrid *twitehes*. In their sides, armes, shoulders (al be-
 pincht)

Ran thicke the wals, red with the bloud, ready to start out.

Chapman. Homer. Iliad, book xxiii.

Now forc'd to wake, because afraid to sleep,
 Her blood all fever'd, with a furious leap
 She sprang from bed, distracted in her mind,
 And fear'd, at every step, a *twitching* sprite behind.

Dryden. Theodore and Honoria.

He gives the princely bird, with all his wives,
 To his voracious bag, struggling in vain,
 And loudly wond'ring at the sudden change.

Cowper. The Task, book iv.

[Other muscles] placed on the hinder part of the arms, by their contractile *twitch* fetch back the fore-arm into a straight line with the cubit, with no less force than that with which it was bent out of it.

Paley. Natural Theology, ch. ix. p. 111.

A man who should find a troublesome *twitching* in his muscles would do very wrong to destroy the tone of them; he had better bear the present uneasiness than lose the use of his limbs.

Search. Light of Nature, vol. i. part ii. ch. xxxiii. p. 288.

TWITTER, n. } A common word in Lincolnshire,
TWITTER, v. } says Skinner, from the Ger. *zit-*
TWITTERING, n. } *tern*, *tremere*, to tremble;—both
 formed from the sound. Ray says, to *twitter* thread or yarn, is to spin it uneven.

To tremble, to shake, (with any passion, hope, or fear; with laughter;) to utter or emit, a trembling, shaking sound.

I KEEP. How the fool bridles? How she *twitters* at him.

Beaumont and Fletcher. The Pilgrim, act iii. sc. 6.

Thought he, the ancient errant knights
 Won all their ladies' hearts in fights,
 And cut whole giants into fritters,
 To put them into amorous *twitters*.

Butler. Hudibras, part iii. c. i

TWIT.
TWIT-
TER.

TWIT-
TER.

TYGER.

The swallow *twittering* on the straw-built shed.
Gray. Elegy.

Well the sweet warbler of the livelong night,
That fills the list'ning lover with delight,
Forgets his harmony, with rapture heard,
To learn the *twitt'ring* of a meaner bird.

Couper. Conversation.

TWIXT. See BETWIXT, BETWEEN.

Three miles together thrusting through the throng
Of th' enemies horse, (still pouring on their fall
Twixt him and home) and thunder'd through them al;
The gallick Monsiour standing on the wall,
And wondring at his dreadfull discipline.

Chapman. Homer. The Epistle Dedicatorie.

If music and sweet poetry agree,
As they must needs, the sister and the brother,
Then must the love be great 'twixt thee and me,
Because thou lov'st the one, and I the other.

Shakspeare. Passionate Pilgrim, stanza 6.

His strutting ribs on both sides show'd
Like furrows he himself had plough'd;
For underneath the shirt of pannel,
'*Twixt* every two there was a channel.

Butler. Hudibras, part i. can. 1.

TWO, Goth. *twai*, *twos*, *twa*; A. S. *tu*, *tua*, *twa*;
D. *twee*, *twy*; Ger. *zwei*, *zur*. From A. S. *twæman*;
D. *tween*; Ger. *zwein*, *dividere*, *separare*, *dissidere*;
to divide, to separate, to dis-join. See *ante Dis*, in
composition. *Two*, generally, means—

One separate unit, added to one separate unit, or one
and one.

A wondere were, *two* watres þer er togidir gon,
& two kýngdames, with *two* names, now er on.

R. Brunne, p. 282.

For they are but allegories both *two* of thē and this word alle-
gorie comprehendeth them both and is enough.
Tyndal. Workes, fol. 166. The Obedience of a Christian Man.

The prince reed the letter a *two* tymes, the better to understande
it.

Lord Berners. Froissart. Cronycle, vol. i. c. 235, p. 329.

When, all the way; Apollo shew'd them still
Their farr-stretcht valleys, and their *two-topt* hill,
Their famous Phane.

Chapman. Homer. A Hymne to Apollo.

Rest upon that word,
Which doth assure thee, tho' his *two-edg'd* sword
Be drawne in justice 'gainst thy sinfull soule,
To separate the rotten from the whole;
Yet if a sacrifice of prayer be sent him,
He will not strike.

Browne. British Pastorals, book i. stanza 5.

Ah me! but yet thou might'st, my sweet, forbear,
And chide thy beauty and thy straying youth,
Who lead thee in their riot even there
Where thou art fore'd to break a *two-fold* truth.

Shakspeare. Sonnet 41.

TYDY, *n.* D. *tyte*; *avis quælibet* minutior, Kilian.
A bird perhaps so called for its small size, or small
and delicate notes. See the Quotations.

In which were painted all thise false foules,
As ben thise *tidifes*, tercelettes, and owles.

Chaucer. The Squieres Tale, v. 10861.

And yet of these chanting fowls, the goldfinch not behind,
That hath so many sorts descending from her kind,
The *tydy* for her notes as delicate as they,
The laughing hecco, then the counterfeiting jay.

Drayton. Poly-olbion, song 13.

TY'GER,
TY'GRESS,
TY'GRISH.
VOL. XXVIII.

See *ante*, TIGER.

Some part thei shopen in to bestes,
Some part thei shopen in to foules,
To beres, *tygres*, apes, oules.

Gower. Conf. Am., book vi. p. 195.

As when a *tygre* and a lionesse
Are met at spoyling of some hungry pray,
Both challenge it with equall greedinesse.

Spenser. Faerie Queene, book v. can. 7.

And let thine eyes drinke vp my funerall fires,
And with my ashes glut thy *tygrish* heart.

Stirling. Aurora. Son. 91.

The painted panther which not fear'd doth gore,
Like some whose beauteous face foule mindes defame;
The *tyger tygrish*, past expressing more,
Since cruelty is noted by his name.

Id. Doomes-day. The Third Houre.

No *tyger's* like her; she feedes upon man
Worse than a *tygresse* or a leopard can.

Corbet. Upon Mistris Mallet, &c.

TYKE, an animal subject to, or infested with *ticks*,
(*q. v.*); a dog: a lousy, vulgar, dirty fellow. See *TIKE*,
and the Quotation from P. Plouhman.

TYLANTHUS, in *Botany*, a genus so called by
Reissek, from *τυλος*, a *hump*, and *ανθος*, a *flower*, on
account of the petals being concave inside, therefore
convex outside. It belongs to the class *Pentandria*,
order *Monogynia*, and the natural family of *Rhamneæ*.
Generic character: calyx with an obconical tube, which
adheres to the ovarium at its base, but is free at its
apex; limb five-cleft; segments ovate, acute, erect,
crestedly villous outside, and callous at the apex in-
side; petals five, inserted in the edge of a concave
disk, above the middle of the tube, roundish, concave,
fornicately cucullate, narrowed into the claws: stamens
five, inserted with the petals, and inclosed in their
hoods; filaments short, incurved; anthers reniform,
one-celled, from the cells being confluent at apex, de-
hiscing by a horseshoe-shaped two-valved chink; ova-
rium elliptic, three-celled; ovula solitary in the cells,
erect; style short, conical; stigma obsoletely tridentate;
capsule spherical, crowned by the persistent tube of the
calyx, three-celled, containing three crustaceous, one-
seeded *coccae*, which at length open longitudinally from
the base; seed erect, propped by a short cup-shaped
funicle, ovate, convex on the back, and rather angular
in front, with a crustaceous testa.

A genus separated from *Phyllica*, and consists of
several species; they are small heath-like shrubs, indi-
genous to the Cape of Good Hope and Madagascar;
the branches are erect and fastigiate; the leaves are
dense, scattered, and fastigiate, linear, with revolute
edges, glabrous, warted or pubescent above, and villous be-
neath; the flowers are disposed in terminal heads or spikes,
which are girded by short, scarious, villous bracteas.

TYLLOMA, in *Botany*, a genus so called by D. Don,
from the Greek *τυλος*, a *hump*, and *λωμα*, a *margin*, on
account of the callous margins of the leaves. It belongs
to the class *Syngenesia*, order *Superflua*, and the
natural family of *Compositæ-Mutisiaceæ*, heads many-
flowered, heterogamous, ray formed; involucre ovate,
imbricated; scales coriaceous, smooth, adpressed, macro-
nulate; receptacle naked; flowers of the ray eigh-
teen—twenty; female, with sterile stamens; and those
of the disk hermaphrodite; corollas of the ray bila-
bate, having the outer lip silky outside, ligulate,
and obscurely tridentate; the inner lip is very short,
bifid, and erect; corollas of the disk tubularly bilabiate,
clothed with silky villi, having both lips short and
erect, the outer lip tridentate, and the inner one biden-

TYL-
LOMA.
TYMPAN. tate; filaments glabrous; anthers with a lanceolate, acuminate appendicula; tails bristly, long, subplumose; styles glabrous, filiform, with short, connivent, blunt, pruinose branches; achenia trigonal, papilloso-muricated; pappus of many series, deciduous, furnished with capillary bristles at base and apex.

This genus, which is nearly allied to *Chætanthra*, contains three known species, all procumbent, many-stemmed herbs, natives of Chili. The leaves are alternate, rarely opposite, narrowed into the petioles at the base, rather aggregate at the tops of the stems, complicate, quite entire, glaucous, ornamented with glands; heads of flowers sessile, bracteate; corollas yellow.

TYLOPHORA, in *Botany*, a genus so called by R. Brown, from the Greek *τυλος*, a swelling, and *φορεω*, to bear, in allusion to the ventricose pollen masses. It belongs to the class *Pentandria*, order *Dygynia*, and the natural family *Asclepiadeæ-Hoyaceæ*. Generic character: corolla rotate, five-parted; stameneous corona of five simple, fleshy leaves, having their inner angles simple and toothless; anthers terminated by a membrane; pollen masses erect, fixed by their bases, with simple margins; they are minute, ventricose, and are either transverse or ascending; stigma mutic: follicles smooth, attenuated at their apices, compressed, rather angular on one side; seeds comose.

This genus, which is separated from *Hoya*, *Asclepias*, *Gymnema*, and other genera, consists of twenty-four known species, natives of New Holland, Java, Timor, and the Indian Peninsula; they are all twining herbs or sub-shrubs, with opposite, membranous, flat leaves, and usually interpetiolar umbels of small flowers; the extreme minuteness of the pollen masses renders it difficult to determine the situation this genus ought to occupy in the natural family; the form of the gynostegium and the leaves of the corolla readily distinguish it from every other genus, except *Iphisia*, but which differs in the pendulous pollen masses: as now defined the genus is quite distinct from *Hoya*, to which R. Brown considered it so closely allied.

TYLOSTYLIS, in *Botany*, a genus so called by Blume, from the Greek *τυλος*, a swelling, and *στυλος*, a column, in reference to the callous base of the column. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ-Epidendreæ*. Generic character: outer sepals of perianth erectly spreading, lateral ones connate beneath, inner ones rather narrower; labellum small, entire, with a callous disk, elastically articulated with the callous incurved base of the column; column incurved, clavate; anther two-celled, cells divided by four partitions; pollen masses eight, a little compressed, connate, with elastic caudiculæ.

Of this genus only a solitary species is known; it is a pseudobulbous, caulescent epiphyte. The leaves are lanceolate, and obliquely retuse and stiff; the scapes are terminal and the flowers are numerous, and disposed in spikes.

TYMBAL, Fr. *tymbale*; a timbrel; or a little brazen drum to dance to. Cotgrave. See TIMBREL.

Yet, gracious Charity! indulgent guest,
Were not thy power exerted in my breast,
Those speeches would send up unheeded prayer;
That scorn of life would be but wild despair;
A tymbal's sound were better than my voice;
My faith were form, my eloquence were noise.

Prior. *Charity*.

TYMPAN, } Fr. *tympan*; It. *timpano*; Sp. *tím-*
TYMPANY. } *pano*; Lat. *tympanum*.

A drum; any thing stretched, extended, expanded, swollen, like a drum; sounding or echoing like a drum.

Ireland (saith one) uses the harp and pipe, which he calls *tympanum*; Scotland the harp, *tympan*, and chorus; Wales the harp, pipe, and chorus.

Drayton. *Poly-olbion*, song 6.

Some of slight judgment, that were standing by,
Said, it was nothing but a *tympany*.

Id. *The Moon-Calf*.

So that as in a *tympany* their very greatness was their disease.

Fuller. *Worthies*, vol. i. p. 162. *Cambridgeshire*.

In the first leaf of my defence, I fore-told you so much; as finding nothing in that swollen bulk, but a meer unsolid *tympanie*, instead of a truly solid conception.

Hall. *A Short Answer*. *Preface*.

By striving to be short, they grow obscure,
And when they would write smoothly, they want strength,
Their spirits sink; while others, that affect
A lofty style, swell to a *tympany*.

Roscommon. *Horace's Art of Poetry*.

Nor let thy mountain-belly make pretence
Of likeness; thine's a *tympany* of sense.

Dryden. *Mac-Flecknoe*.

TYMPANUS, in *Botany*, a genus so called by Tode, from the Greek *τυμπανον*, a drum. It belongs to the class *Cryptogamia*, and order *Fungi*. Generic character: hymenium not persistent, but at length cracking and breaking up; cup open; veil partial; between horny and coriaceous.

This genus, which has been separated from *Peziza*, consists of three British species: *T. alnea*, a tufted umber-black plant, at first resembling a *Sphaeria*, and grows on the alder. *T. fraxinea*, a shining black plant, growing on dry ash branches, and *T. conspersa*, a black plant, found on the branches of *Rosaceæ*.

TYNDARIDEA, in *Botany*, a genus so called by Bory de St. Vincent, who does not give its derivation. It belongs to the class *Cryptogamia*, order *Algæ*, and the natural family of *Algæ-Confervoideæ*. Generic character: filaments simple, finally inosculating by transverse tubes; endochrome consisting of two-roundish masses, (stellæ,) which after conjugation unite and form a roundish globule (sporidium) lodged either in one of the articulations or in the connecting tube.

This genus is separated from *Conferva*, and consists of four British species, found on stones, in running streams, stagnant water, ditches, and pools: except one of the species, *T. epigæa*, which is found on road sides, they are all yellowish, greenish-yellow, or bright-green plants.

TYNEMOUTH, a town of Northumberland, at the mouth of the Tyne, nine miles from Newcastle. This town has some considerable salt-works, and, equally with Shields, loads great numbers of vessels with coals and goods from Newcastle. The population is 10,000. Tynemouth has a castle, seated on a high rock, the ruins of an abbey, extensive military barracks, and a strong fort commanding the entrance of the river, at the mouth of which are rocks called the Middins, where light-houses have been erected.

TYPE,

TY'PICK,

TY'PICAL,

TY'PICALY,

TY'PIFY, v.

TY'PIFIER,

TYPO'GRAPHY,

TYPOGRA'PHICK,

TYPOGRA'PHICAL,

TYPO'GRAPHER,

TY'POCOSMY.

Fr. *type*, *typographie*; Sp. *typo*, *typografia*; Lat. *typus*; Gr. *τυπος*, *signum a percutiendo factum, simulacrum, forma*, from *τυπτειν*, to strike.

A sign or mark, (made or formed by striking,) a form, an image, a figure, an emblem; a mark, figure, letter.

Typocosmy, a figure, or representation of the world, (*κοσμου*.)

TYPE.

Typography, figurative descriptions; writing in figures or letters; printing.

I must endite
A wofull case, a chippe of sorie chaunce,
A tipe of heauen, a liuely hew of hell.
Gascoigne. Voyage into Hollande, Anno 1572.

So mought thy Redcrosse knight with happy hand
Victorious be in that faire ilands right,
(Which thou dost vayne in *type* of Faery land)
Eliza's blessed field, that Albion hight.
To the Learned Shepheard. Addressed to Spenser.

Great ladie of the greatest isle, whose light
Like Phœbus lampe throughout the world doth shine,
Shed thy faire beames into my feeble eyne,
And raise my thoughts, too humble and too vile,
To thinke of that true glorious *type* of thine,
The argument of mine afflicted stile.

Spenser. Faerie Queene, book i. can. 1.

The truth is, he [Erghom] renewed the custome of expounding scripture in a *typicall* way, which crowded his church with auditors, seeing such soft preaching breaks no bones, much pleased their fancy, and little cross'd or curb'd their corruptions.

Fuller. Worthies, vol. ii. p. 542. York.

S. Gregory clearly enough expresses himself, that in the immolation of the Pascheover Christ was figured; that in the Eucharist he still is figured, there more obscurely, here more clearly, but yet still but *typically*, or in figure.

Taylor. Polemical Discourses, fol. 526.

So St. Hierome he offered wine not water in the *type* (representation of Sacrament) of his blood.

Id. Of the Real Presence, sec. 6.

Alluding herein unto the heart of man and the precious blood of our Saviour; who was *typified* by the goat that was slain, and the scape goat in the wilderness.

Sir Thomas Brown. Vulgar Errours, book ii. ch. v. p. 91.

To reduce surnames to a methode, is matter for a Ramist, who should haply finde it to be a *Typocosmic*.

Camden. Remains, p. 112.

Great father of the gods, when, for our crimes,
Thou send'st some heavy judgment on the times;
Some tyrant-king, the terrour of his age,
The *type* and true vicegerent of thy rage;
Thus punish him.

Dryden. Persius. Satire 3.

How many passages of the prophets by lazy readers are thought to have no use, which, as the star did the wise men, lead the attentive considerers to Christ; and so loudly and harmoniously, together with Moses's *typick* shades, utter those words of the Baptist's, Behold the Lamb of God that taketh away the sins of the world!

Boyle. Works, vol. ii. fol. 278. The Style of the Holy Scriptures.

Indeed the Mosaic law was intended for a single people only, who were to be shut in, as it were, from the rest of the world, by a fence of legal rites, and *typical* ceremonies; and to be kept by that means separate and unmixed, till the great antitype, the Messiah, should appear.

Atterbury. Sermon 4, vol. i. p. 134.

Thus, for example, the words relating to Jonah carry but one meaning, the literal meaning, expressing such a fact; by them that fact expresses, prefigures, or *typifies* another fact of a higher and more important nature.

Waterland. Works, vol. vi. p. 8. Preface to Scripture Vindicated.

He who wishes to trace the art in its gradual progress, from the wooden and immoveable letter to the moveable and metal *type*, and to the completion of the whole contrivance, will receive satisfactory information from the annals of the elaborate *Mattaire*.

Knox. Works, vol. ii. p. 81. Essay 135.

And where the peacock shows
His azure eyes, (Time) is tinctur'd black and red
With spots quadrangular of diamond form,
Ensanguin'd hearts, clubs *typical* of strife,
And spades, the emblem of untimely graves.

Cowper. The Task, book iv.

Give us, say they, a bible-proof that God declared or revealed his intention of prefiguring the death of Jesus; or some better authority at least than a modern *typifier*, who deals only in similitudes and correspondences.

Warburton. Works, vol. ii. p. 103. Occasional Reflections.

It [the history of a mechanical art] often exhibits manual excellence united with such meanness of sentiment and vulgarity of manners, as unavoidably mingle disgust with admiration; but to the truth of this general remark, the annals of *typography* are a singular exception.

Knox. Works, vol. ii. p. 82. Essay 135.

Caxton taught us *typography* about the year 1474. The first book printed in English was a translation.

Idler. No. 69.

In the possession of good men it [eloquence] cannot do so much good as a written discourse, sent into the wide world by the operation of that providential discovery, the *typographical* art, the most important in effect which the world ever received.

Knox. Works, vol. iii. p. 141. Winter Evening, 33.

It was printed, subjoined to Tully's Offices, in the infancy of the *typographic* art.

Warton. History of England. Poetry, vol. ii. p. 218.

There is a very ancient edition of this work (Justinian's Institutes) without date, place, or *typographer*.

Id. History of English Poetry. Additions, p. 189.

TYPHA, in *Botany*, a genus so named by Tournefort from *τυφος*, a marsh, on account of the species growing in water or marshes. It belongs to the class *Monoecia*, order *Triandria*, and the natural family of *Typhaceæ*. Generic character: ament double, both cylindrical, pannose on the top of the culm; upper ament male, having the perianths composed of three bristles, each with three stamens seated on the common stipe; lower ament female, having the perianths pappose, the ovaries stipitate, and the styles capillary; fruit a valveless utriculus, crowned by the style.

The English name of the genus is Cat's-tail. There are four known species—*T. latifolia*, *angustifolia*, *minor*, and *minima*; the three first are natives of Britain, and the latter of the Lake of Geneva; they are all water-plants, with erect culms, grass-like leaves, and brown tail-like aments of flowers. Haller says the roots of *T. latifolia* are eaten in salads, that cattle eat the leaves, and that the downy seeds serve for stuffing pillows. The leaves are sometimes used by coopers to introduce between the staves of their casks; they are frequently used for making mats, baskets, chair-bottoms, and sometimes for thatch. Rubens, and other Italian painters after him, have put it into the hand of Christ as a sceptre, when he was saluted as a king in mockery by Herod's soldiers. *T. angustifolia* is found in every part of the globe, in rivers, brooks, and ditches.

TYPHIS, in *Zoology*, a genus of *Isopod Crustaceans*.

Generic character. Superior antennæ thick, angularly bent, much shorter than the large head, and attached to its fore and under part; inferior antennæ attached on the under surface below the eyes, and on the sides of the mouth, slender, cylindrical, setaceous, consisting of four joints which fold on each other, so as to be entirely concealed beneath the head, although longer than the thorax; the last joint consists of two pieces; eyes large on the fore and lateral parts of the head; body oblong, convex, curved, divided into transverse segments, and on each side two oblong pointed movable plates; on the tip of the tail some little plates; ten pairs of legs, the first four two fingered.

This genus, first described by Risso, is remarkable for

TYPE.

TYPHIS.

TYPHIS. bending its body inwards, and converting itself almost into a ball, lapping over the lateral plates, so as to conceal all its under parts. They live on sandy bottoms, but rise to the surface of the sea occasionally in search of little *Æquoræ*, upon which they prey. Three species are described, of which *T. Ovoides*, Riss., a native of the Mediterranean, is the type.

TY-
PHLOPS.

TYPHLOPS, from the Greek τυφλωψ, *blind*, Schneid. In *Zoology*, a genus of animals belonging to the family *Serpentes*, order *Ophidia*, class *Reptilia*.

Generic character. Head of the same size as the body, which is vermiform, the former covered with plates, the latter with small imbricated scales; eyes scarcely visible, throat not dilatable; mouth very small; tongue long and forked; vent almost at the extremity of the body; one lung four times so large as the other.

This genus has great resemblance in the disposition of its scales to the Blind Worms, *Angues*. Its mouth is extremely small, and hence Spix has altered the generic term to *Stenostoma*, which is probably a better name than that used by Schneider, as they are not blind. Their general form is very similar to Earth Worms; they live in the ground, and feed on ants and termites, which is perhaps the reason of their eyes being protected with so thick skin. In some the head is obtuse, as—

T. Braminus, Cuv.; *Eryx Bram.* Daud. About six inches in length, and as thick as a swan-quill; the eyes are vertical, round, and slightly prominent; the general colour is cream-white, studded with innumerable black spots. It is found occasionally at Vizagapatam, and called by the natives *Rondou-taloulou-pam*.

The greater number have the muzzle depressed, obtuse, and furnished anteriorly with plates, as—

T. Reticulatus, Schn.; *Anguis Ret.*, Lin. From seven to eight inches long; upper parts blackish-ash, with a white spot in the centre of each scale; under parts yellowish-white. Is found at Surinam.

T. Septemstriatus, Schn. Is marked with seven streaks; has the tail larger than the head, and terminating in a kind of appendix or obtuse elongation.

T. Crocatus, Cuv.; *Ang. Croc.*, Gmel. About a foot long; muzzle very long; eyes at the top of the head; lower jaw very short, of a greenish-black colour, with the top of the head, sides, belly, a broad band on the tail, and a point on its tip, yellow. Is a native of Surinam.

To these also may be added, *T. Undecimstriatus*, Cuv.; *T. Cinereus*, Schn.; *T. Leucorhous*, Oppel.

In some the front of the muzzle is covered with a single broad plate, of which the anterior edge is rather cutting.

T. Lumbricalis, Schn.; *Ang. Lumbr.* Lin. About eight inches long, and as thick as a goose-quill; caudal extremity of the body larger than the fore part; lower jaw shorter than the upper; tail very short, and terminating in a hard pointed scale; its colour is livid-white. It is a native of the Greek Archipelago, and specially of Cyprus, and is also found in the East Indies.

T. Leucogaster, Pr. Max. About fifteen inches long; all the upper parts dusky reddish-grey; sides and under parts whitish, the middle of the scales being dusky reddish-grey, and their margins white, so that the sides and belly have the appearance of being overspread with a white network. It is a native of Brazil.

Some have the muzzle terminating in a little conical point, and the tail enveloped in a little oval horny shield, as—

T. Philippinus, Cuv. Eighteen inches long, and completely blackish. Native of the Philippine Islands.

T. Oxyrhynchus, Cuv.; *Ang. Oxyrh.*, Schn. The muzzle is narrow and rufous; dusky brown above, and paler beneath; the horny shield on the tail rufous. Is found in the East Indies.

See Schneider, *Historia Amphibiorum*; Daudin, *Histoire Naturelle des Reptiles*; Cuvier, *Règne Animal*; Prince zu Wied, *Beiträge zur Naturgeschichte von Brasilien*.

TYPHONIUM, in *Botany*, a genus so called by Schotte, from τυφων, in mythology, a giant, the son of Titan and Terra. It belongs to the class *Monoecia*, order *Polyandria*, and the natural family of *Aroideæ*. *Generic character*: spath convolute at the base, self-coloured; spadix a little elongated, with aggregate paranthia which are beneath the stamens; ovarium containing one ovulum each, fixed to its bottom, and therefore erect.

A genus separated from *Arum*, consisting of four known species, all natives of the East Indies, one of which is *T. Orixense*, the *Arum Orixense* of Roxburgh. The leaves rise simultaneous with the flowers and are entire; the peduncles are elongated.

TYPHULA, in *Botany*, a genus so named by Fries, from *typha*, the reed-mace, which it sometimes resembles in miniature. It belongs to the class *Cryptogamia*, and order *Fungi*. *Generic character*: receptacle somewhat cylindrical, distinct from the capillary stem, bearing sporules on every side, as obsolete.

This genus, which has been separated from *Clavaria*, consists of five known British species, small, white, brownish-black or reddish-brown plants growing on dead or fallen leaves, decaying vegetable substances, and rotten wood. The genus is nearly allied to *Clavaria* and *Pistillaria*, which, like the present, is separated from the first.

TYRAN, v.

TYRANNE, or

TYRANT,

TYRANNESS,

TYRANNY,

TYRANNISH,

TYRANNICK,

TYRANNICAL,

TYRANNICALLY,

TYRANNICIDE,

TYRANNIZE, v.

TYRANNOUS,

TYRANNOUSLY.

Fr. *tyran*, tyranniser; It. *tiranno*, *tirannizzare*; Sp. *tyrano*, *tyranizar*; Lat. *tyranus*; Gr. *τυραννος*, the cause of the appellation may be—that they dwell in towers (*turres*) or palaces; the word was used originally for a king or prince or chief. Lye says—A. S. *tir*, was Quivis dux, princeps, dominus, imperator, any leader, prince, master, or commander; and hence perhaps he adds the *τυραννος* of the

Greeks. This brings the word home to the verb *tir-an*, to tear, to prey upon; an origin which will suit very well with the use of the word as explained by Smith; but not to the just and merciful of Potter. See the Quotations from those writers.

This shold a rightwise love have in his thought,
And nat be like *tiraunts* of Lombardie,
That han no reward byt at *tyrannie*,
For he that king or lorde is naturell,
Him ought nat be *tiraunt* ne cruell.

Chaucer. *Prologue to Legende of Good Women*, p. 302.

He had of counsell many one,
Amonge the whiche there was one,
By name whiche Berillus hight,
And he bethought hym, how he might
Unto this *tyranne* do likynge.

Gower. *Conf. Am.* book vii. p. 232.

NUS.

Of *tyrannie* and crueltee
By this ensample a kynge maie see
Hym selfe, and eke his counsell bothe,
Howe they ben to mankynde lothe,
And to the god abhominable.

Gower. *Conf. Am.* book vii. p. 232.

So as these olde gestes seyne
The proude *tyrannisse* Romeyne
Tarquinius, whiche was than kynge,
And wrought many a wrongfull thyng.

Id. *Ib.* p. 242.

And after all the remenant
He shall vpon his couenant
Gouerne, and lede in suche a wise,
So that there be no *tyrannise*,
Wherof that he is people greue.

Id. *Ib.* book viii. p. 274.

A *tyrant* they name him, who by force commeth to the monarchy
against the will of the people, breaketh lawes already made, at
his pleasure, maketh other without the aduise and consent of the
people, and regardeth not the wealth of his commons, but the
aduancement of himselfe, his faction and kindred.

Smith. *Commonwealth*, book i. ch. vii. p. 6.

They blame Lewes the xi. for bringing the administration-
royall of Fraunce, frō the lawfull and regulate raigne, to the abso-
lute and *tyrannical* power and gouernment.

Id. *Ib.* p. 7.

For, what ciuill countrey hath euer suffered themselues to be
conquered by so few men as they were; to be deprived of their
naturall king, and to be *tyrannized* ouer thus long, but they?

Hakluyt. *Voyages*, &c. vol. ii. part ii. *The Portugall Voyage*.

With his false doctryne, capciouse othes, articles, and interroga-
tions he shall fraudelently deceyue and trappe the simple inno-
cents and shed their blode *tyrannously*.

Joye. *Exposicioun of Daniel*, ch. vii. fol. 119.

What glorie or what guerdon hast thou found
In feeble ladies *tyranning* so sore,
And adding anguish to the bitter wound
With which their lives thou launchedst long afore,
By heaping stormes of trouble on them daily more!

Spenser. *Faerie Queene*, book iv. can. 6.

But his familiar friends above all rebuked him, saying he was
to be accounted no better than a beast, if for fear of the name of
Tyrant, he would refuse to take upon him a kingdom: which is
the most just and honourable estate, if one take it upon him that
is an honest man.

Sir Thomas North. *Plutarch*, fol. 72. *Solon*.

This encouraged the Irish Grandees (their O's and Mac's) to
rent and *tyrant* it in their respective seignieuries, whilst such
English who were planted there had nothing native (save their
surnames) left.

Fuller. *Worthies*, vol. i. p. 141. *Buckinghamshire*.

They were by law of that proud *tyrannesse*, [Covetise]
Provokt with Wrath and Envyes false surmise,
Condemned to that dongeon mercilesse,
Where they should live in wo, and dye in wretchednesse

Spenser. *Faerie Queene*, book i. can. 6.

I can forget
The barbarous usage; and though thou to me
(When I was in thy power) didst shew thyself
A most insulting *tyranness*, I to thee
May prove a gentle mistriss.

Beaumont and Fletcher. *The Prophetess*, act iv. sc. 4.

They say that he answered his friends, that principality and
tyranny was indeed a goodly place: howbeit there was no way for
a man to get out, when he was entred into it.

Sir Thomas North. *Plutarch*, fol. 72. *Solon*.

The law which restrains a man from doing mischief to his fel-
low-citizens, though it diminishes the natural, increases the civil
liberty of mankind; but every want and causeless restraint of the
will of the subject, whether practised by a monarch, a nobility, or
a popular assembly, is a degree of *tyranny*.

Blackstone. *Commentaries*, book i. ch. i. p. 126.

T Y R A N N U S.

TYRANNUS, Briss.; *Tyrant*, Lath. In Zoology, a
genus of animals belonging to the family *Dentirostres*,
order *Passeres*, class *Aves*.

Generic character. Beak stout, long, straight, wide,
and depressed, toothed near the tip, which is suddenly

bent down, and bristled at its base; lower mandible
slightly flattened beneath, sharp, and turned up at the
tip; nostrils lateral, basal, round, and patulous; wings
of moderate size; three toes in front, of which the outer
two are connected at their base, and one behind.

TYRAN-
NUS.

This genus, originally instituted by Brisson as a section of *Muscicapa*, has since been adopted by Vieillot, Cuvier, Swainson, and others. Temminck, however, considering that they do not exhibit sufficiently decided generic characters, has left them among the Fly-catchers, *Muscicapæ*, of which they form a considerable number. Swainson, on the other hand, in his *Natural History and Classification of Birds*, has converted Vieillot's genus into the sub-family *Tyranninæ*, and divided it into five genera and two sub-genera, in which he has been followed by Jardine. The species, however, which he has classed in these new genera do not always agree with the characters assigned to them, when compared with the descriptions of those species previously given by him in the *Journal of the Royal Institution*, vol. xx. p. 267, and subsequently in the *Fauna Boreali-Americana*, vol. ii. For all useful purposes, the sections he has pointed out in the *Journal* just mentioned are amply sufficient. They are all natives of America, supplying the place of the *Drongos* in the Old World, and connect the Shrikes, *Lani*, with the Flycatchers, *Muscicapæ*. The Tyrants are fierce, courageous, and active, feed on insects generally, some species also on dead carcases, according to Azara, and some fish like King-fishers, and eat lizards, as noticed by Swainson. Usually they sit perched upon a twig, and dart upon such insects as come within their notice; but some chase their prey upon the ground. Most of the species live either in or upon the borders of woods or thickets, but occasionally some are found on the edges of streams.

Sect. I.—Beak strong and large; wings of moderate size, the inner webs of the primary quills are entire; caudal quills of equal length.

These nearly approach the Blackcaps, *Psaris*; are very carnivorous, but, from the small size of their wings, have no very extended flight.

T. Pitangua, Swains.; *Lanius Pitang.*, Lin.; *Muscicapa Pitang.*, Licht.; *le Tyran du Brésil*, Buff.; *Bienteveo* or *Puitaga*, Azar. About nine inches and a quarter in length, and rather more bulky than our Common Shrike; beak black; gape bright yellow; forehead greyish-white, sometimes intermingled with black; middle of the top of the head bright yellow, sides and back of the head, and a broad patch extending from the angles of the mouth, through the eyes and upon the ears, black; a white streak passes from the forehead, above each eye, and meets on the back of the head, forming a crown; upper parts rufous greyish-brown; chin and throat white; other under parts bright citron-yellow, most brilliant on the belly and vent; alar coverts and quills dark-greyish-brown, their anterior edges bordered with rufous-brown, as is also the tail; legs black. The female nearly resembles the male, but has the beak shorter, the streak over the eye towards the nostrils ash-grey, and the hinder alar quills edged with whitish. The *Bentavi*, as it is called by the Brazilians, is very common in their country and in Paraguay, in the fields which are patched with bushes, in the neighbourhood of dwellings, in plantations, and on the edges of woods or in pastures among the cattle, where it sits commonly upon a stone, a clump of earth, an old tree stump, or in the thickest bushes, and is continually uttering its shrill *tictivi*, *tictivi*, or *bintivi*, as the Brazilians say. It is a restless, active, inquisitive,

and quarrelsome bird, jealously follows its mate with a loud noise, and is often fighting with its fellows. They frequently fly from their perch to the ground, when they notice an insect. They probably feed on beetles and locusts, as the remains of these have been found in their gizzards. At pairing time their cry is very shrill, and they are more than usually active; males and females flying constantly together, and in vying with each other, exhibit the beautiful yellow feathering of the head. Their nests are found in spring, and in the beginning of autumn, in the fork of a thick bush or not very high tree, consisting of a large thick round ball of moss, leaves, stubble, and feathers, with a little round entrance in front, and containing four bluish eggs, spotted with violet and black.

T. Sulphuratus, Vieill.; *Lan. Sulph.*, Lin.; *le Bécarde à ventre jaune*, Buff.; *Nei-nei*, Azar. This species, described both by Vieillot and Swainson, as a *Tyrannus*, is considered by Prince zu Wied as more properly a distinct genus, which he names *Scaphorynchus*, on account of the peculiar form of its beak, which he describes as being "strong, bulky, swelling, broader than its height, its ridge angular, slightly vaulted, hooked at its point and armed with a small tooth, the lateral edges in front of the rather compressed, superior, maxillary bones scalloped, the edge of the lower mandible, in front of the point, notched, the symphysis roundish and sloped." The bird's length is nine inches and three-quarters; beak blackish; irides greyish-brown; upper and lateral parts of the head blackish-brown, the feathers on the vertex being bright yellow at their root, and blackish only at their tip; upon the forehead a little white; from the lore a broad white streak passes over each eye to the back of the head, but are not united as in the last species; upper parts greyish-brown, with a strong tinge of olive-green on the back; large wing-coverts and quills tinged with rufous-brown, and the hinder ones partially edged with white; the hinder edges of the quills tawny-yellow; chin and throat white; all the other under parts brilliant gamboge yellow; inner wing-coverts pale yellow; tail dusky greyish-brown, the outer edges of the quills reddish-brown; legs blackish. The *Nei-nei* is very common throughout the whole of South America, between the tropics, specially in Brazil and Guiana. It has been well named by Azara, from its distinct utterance of the syllables *nei*, *nei*, or *gnei*, *gnei*, in a high but not very loud tone; is less common than the *Bentavi*, and lives singly or in pairs in bushes, woods, and especially on the edges of thickets. It may be noticed flying backwards and forwards from the ground to a branch, upon which, after having devoured an insect, it sharpens its beak. It often keeps upon the thick tops of trees, but constantly in motion, hopping from branch to branch, and uttering its cry. Its habits are very similar to the *Bentavi*, but it prefers the woods, and more rarely approaches human habitations. Azara states that it approaches dead animals to carry away the remnants and little bits of flesh which have been left by the Caracaras. And Swainson mentions that he has taken from its stomach entire lizards, of such size as to render it astonishing how the bird could have swallowed them. Hence the name *Saurophagus*, applied to the genus, of which he makes this species the type.

T. Cinereus, Vieill.; *Cinereous Tyrant*. Nine inches in length; beak black; head streaked on the sides with black and white; throat, belly, and base of the alar

TYRAN-
NUS.

TYRAN-
NUS.

quills white; tail and feet black. Is a native of South America.

T. Calcaratus, Swains.; *Spiny-footed Tyrant*. Is eight inches in length; and very remarkable for a series of seven or eight small, but very acute, spines like the teeth of a saw, placed at the back of the tarsus, adjoining the knee: as they descend, they diminish in size, and unite to a series of small scales extending to the base of the tarsus; general colour dull olive-grey, paler beneath, and tinged with dirty yellow; tarsi short, weak, and blackish. Is found in the province of Bahia, but is rare, and its habits not known.

Of the following species Swainson composes his genus *Tyrannula*, which, however, excepting its general small size, has not any very definite character.

T. Audax, Swains.; *Muscicapa Aud.*, Lath. Eight inches in length; head brown, with a slight golden-yellow crest, one white band passes around the head above the eyes, and another from the corner of the mouth passes on to the ears; upper parts blackish-brown, mingled with white, each feather having its centre brown, and its edges white; under parts white, and the centre of each feather slightly streaked with brownish, which is deepest on the throat and chest; vent pale yellow; alar quills brown, edged with whitish, caudal quills brown with rufous edges; legs black. Not a very common species, and seemingly confined to the northern part of Brazil.

T. Crinitus, Swains.; *Muscicapa Crin.*, Gmel.; *le Moucherolle de Virginie à Huppe verte*, Buff.; *Great Crested Flycatcher*, Wils. Eight and a half inches long; bill blackish; irides hazel; feathers on the top of the head pointed, with dark brown centres and ragged edges, forming a sort of crest; upper parts dull greenish-olive; wing-coverts pale drab, crossed with two dull white bars, primaries bright ferruginous; throat and upper part of the chest delicate ash, other under parts sulphurous yellow; tail slightly forked, its interior vanes bright ferruginous; legs and feet bluish-black. This species appears in Pennsylvania early in May, and builds in a hollow tree, a scanty nest, consisting of loose hay, Guinea fowls' feathers, bristles, dog's hair, and pieces of cast snake's skin; in it are found four dull cream-coloured eggs, thickly marked with purple, as if lined with a pen. It feeds on insects, and is specially fond of bees; towards the latter end of summer it also eats berries, particularly huckle-berries, which are principally the food of the young birds. They more commonly keep to the woods, and have no song, but their loud harsh squeak is easily distinguished. Both Swainson and Vieillot consider the *Louisiana Flycatcher*, described by Latham, as identical with this species.

T. Acadicus, Swains.; *Muscicapa Querula*, Wils.; *Small Green-crested Flycatcher*, Wils. Five and a half inches in length; beak dark brown above and flesh-coloured beneath; irides hazel; ocular circlelets yellowish white; upper parts olive-green, under pale greenish-yellow, darkest on the breast; wings deep brown, with two bars of yellowish-white; legs and feet pale ash. It inhabits deep, lonely woods, sits on the lower branches, uttering continually a sudden sharp squeak, which is heard at a great distance, and as it flies from tree to tree, makes a low querulous note, resembling the twitterings of chickens beneath the wings of the hen. It makes its appearance in Pennsylvania from the South, about the middle of May, but does not pass farther northwards than Newfoundland.

T. Pusillus, Swains. Very nearly resembles the last species, its colours being the same, but is distinguished by its smaller size, being only five inches long, by its bill being broader in the middle, and the upper mandible also pale, by its wings being shorter and rounded, which, in the last species, are longer and rather pointed. It has been shot in the arctic regions, as high as Carlton House, and extends southward to Mexico.

T. Fuscus, Jard.; *Muscicapa Nunciola*, Wils.; *le Gobemouche noirâtre de la Caroline*, Buff.; *Pewit*, Bartr. Six inches in length; beak black; irides hazel; head plumage loose, and of a deep brownish-black, upper parts dusky olive; under parts pale yellow; wings and tail deep dusky, each feather of the former edged with yellowish-white, the latter forked and widening greatly towards the tip; legs black. Is spread over America from Canada to Florida, numbers of them wintering in the Carolinas and Georgia. In New York they are called *Phæby Birds*. They arrive in Pennsylvania about the first week in March, and continue till the latter end of October or beginning of November. Their favourite resort is the sides of streams, under or near bridges, in caves, &c.; here they sit on a twig calling out *pewée*, *pewittilee pe-wée*, occasionally darting after insects, and returning to their perch. Towards the latter end of March they build on some projection beneath a bridge, in a cave, or open well, often under a shed, &c., making their nest large and solid, of mud mixed with moss, and lined with flax and horsehair; in it are deposited five pure white eggs, with two or three red dots at their large end. Towards the middle of June the bird becomes mute.

T. Richardsonii, Swains.; *Short-legged Pewit*. Nearly of the same size as the preceding, to which it has very close resemblance, but is distinguished by the beak being less elevated and compressed, by the ridge of the upper mandible being less distinct and the sides more dilated; and by its feet being much smaller, and the tail more forked; the head crest is thick and lengthy, the upper plumage more olive, and the under more olive-white; the length of the corresponding alar quills also differs. It was found in the neighbourhood of Cumberland House, frequenting moist shady woods, by the banks of the rivers and lakes.

T. Barbirostris, Swains. More nearly approaches the last species in the peculiar tint of its upper plumage, and its thick incumbent crest.

T. Sayi, Swains.; *Muscicapa Sayi*, Bonap.; *Say's Flycatcher*. Seven inches in length; very similar to *T. Fuscus*, but distinguished by having the beak long, straight, and remarkably flattened, the upper mandible very slightly emarginate and blackish, the lower much dilated, and pale horn colour; irides brown; upper parts dull cinnamon-brown, of a deeper shade on the head; throat and breast of same colour, gradually merging into the pale rufous of the belly; primary quills dusky, tinged with cinnamon, and having brown shafts; tail blackish-brown; feet blackish. Is found in Mexico, and extends as high northward as Carlton House. Peale states that the bird he took on the Arkansas river had its nest, in July, built on a tree, of moss and clay, with a few blades of dried grass, and the young were then just ready to fly.

T. Virescens, Jard.; *Muscicapa Rapax*, Wils.; *Wood Pewee*. Six inches in length; lower mandible yellow; head dusky-brown; upper parts dusky-olive, inclining to greenish, under parts pale yellowish-white;

TYRAN-
NUS.

TYRAN-
NUS.

tail forked. It does not appear in Pennsylvania till the middle of May, and retires southwards about the middle of September. It frequents high timbered woods, where there is little underwood, sits on high dead branches, calling out in a feeble tone, *peto wāy, peto way, pee way*, and occasionally darts out upon insects, or, making a circular sweep of thirty or forty yards, snaps up numbers of them with great activity. It builds on the upper side of a limb or branch, forming its nest externally of moss, without mud, and lining it with soft materials; in it five white eggs are deposited.

T. Trailii, Audub. Is stated by Jardine to come nearest this species, but differs in some parts of its plumage, as well as its habits.

Sect. II.—*Beak of moderate size; wings long, their outer quills sinuated; tail of moderate size, and nearly equal; tarsi short.*

T. Crassirostris, Swains., *Thick-beaked Tyrant*. Nine and a quarter inches long; beak stout; head furnished with an indistinct crest; upper parts pale greyish-brown, deepest on the head, primary quills and tail; the upper coverts of the latter tinged with rufous, and the first primary very pointed; chin and throat pure white; under parts pale yellow. Is a native of the hottest parts of Mexico, and lives on large trees, from whence it drives away other birds.

T. Vociferans, Swains.; *Noisy Tyrant*. Eight and a half inches long; beak much smaller, but broader than in the last species; upon the top of the head an indistinct tuft of orange feathers; remainder of the head, neck, and throat, slate colour; upper parts greyish tinged with olive; wings very long; their first primaries pointed; under parts pale yellow; tail and its coverts deep black. Is found in the neighbourhood of Mexico, perched upon the very tops of the trees, and screaming loudly on the approach of any other bird. It is stated to be fearless of attacking falcons.

The following genus is the type of Swainson's *Tyrannus*.

T. Intrepidus, Vieill.; *Muscicapa Tyrannus*, Lin.; *le Tyran de la Caroline*, Buff.; *Field Martin* or *King Bird*, Wils. About eight inches long; bill glossy black; upper parts generally dark slaty-ash; head and tail nearly black, the latter tipped with white, the crown feathers of the former, although not making a crest, are capable of erection, and exhibiting a bed of rich orange or flame colour, which does not appear when they are depressed; wings brownish, the quills and coverts edged with dull white; throat and all the under parts pure white, except the upper part of the chest, which is tinged with ash; legs and feet black, seamed with grey. The female has the plumage above more brown, a smaller streak of paler orange on the crown, and the white edging of the tail broader. The King Bird arrives in Pennsylvania towards the latter end of April, in small parties of five or six; and are silent till they begin to pair and build their nest, (which takes place in the early part of May,) at no great height from the ground, consisting of small twigs, withered flowers of the yarrow and others interwoven with tow and wool, so as to render it very compact; internally it is lined with dry fibrous grass and horsehair, and the female deposits five pale cream-coloured eggs, with a few large deep purple and some small brown ones, mostly towards the large end. At this time the male is extremely fierce in the protection of its mate and of its nest, attacking indiscriminately every

intruder which approaches its habitation, be it hawk, crow, bald eagle, or the great black eagle. So soon as the King Bird perceives one of the latter kind, it rises in the air considerably above it, and darts down upon its back; again and again it remounts to descend with great violence, and at the same time keeping up a shrill and rapid twitter. These attacks are often continued for the distance of a mile, and the Eagle is only relieved from one of these plagues to be tormented by another. The flight of this bird is similar to that of a Hawk, hovering and settling over a field till it perceives an insect suited to its liking, when with a sudden sweep it stoops upon and seizes it, and then rises again to be on the look out for more. It often settles on tops of rank weeds, there waiting the approach of its prey, and is very fond of the large black gad-fly. Bees also are great favourites with it; and as it often allows many to pass before it singles out one for its prey, some of the American farmers imagine that it feeds only on the drones, and not on the working bees. Wilson considers the King Bird as of great use to the agriculturist, not only by the destruction it makes among noxious insects and their larvæ, but also by driving away the Crows, Hawks, and Eagles, which have little relish for its society.

T. Crudelis, Swains.; *Grey-breasted Tyrant*. Eight inches and a half in length; beak black; head and back of the neck light cinereous, as is also the front of the neck, but paler; auriculars deep black, upon the top of the head a bright orange crest; upper parts dingy olive, under bright yellow; alar quills brownish and sharp pointed, their coverts and the middle quills edged with whitish; caudal quills black, as are also the very short tarsi. Is a native of the northern part of Brazil, and Swainson mentions of it, that whilst "sitting in the house, he suddenly heard a splash close to the window, and on looking out, saw one of these birds perched upon a dead branch hanging over the water, plunging and drying itself. Intent upon watching, he saw it, within a quarter of an hour, dive into the lake two successive times, after some small fish or aquatic insects, precisely like a King-fisher; this action was done with amazing celerity, and it then took to its former station to plume and dry its feathers."

T. Dominicensis, Briss.; *St. Domingo Tyrant*, Lath. Nine inches in length; it has been long confounded with *T. Intrepidus*, from which it is distinguished by its beak being stronger and more convex; upper parts light ashy-grey, tinged with rufous on the wing-coverts; chest greyish, belly white; vent yellow; tail black. Is found on the sea-coast of Mexico.

T. Leucotis, Swains.; *le Barbichon de Cayenne*, Buff.; *White-eared Tyrant*. Seven inches in length; crest yellow, cheeks and a streak above the eye white; hind head black; upper parts deep greyish-brown, with deeper spots on the back; throat white, becoming greyish on the chest, and yellow on the belly; wing-coverts and scapulars edged with white; caudal quills and their coverts edged with ferruginous; legs black. Native of Northern Brazil.

T. Ferox, Swains.; *le Petit Tyran de Cayenne*, Buff.; *Brown-crested Tyrant*. Rather more than seven inches long; crest on the top of the head brown; cheeks ashy; upper parts deep greyish-brown tinged with olive; throat white; belly pale yellowish; alar quills brown, secondaries and coverts tinged with rufous and edged with white; tail brown; tarsi black. Native of South America.

TYRAN-
NUS.

TYRAN-
NUS.

Sect. III.—*Wings of moderate length; tail even; tarsi lengthy.*

The length and strength of the tarsi in this section are so strongly contrasted with their shortness and comparative weakness in the other species, that Swainson is led to believe they live upon the ground, and feed principally on apterous insects.

T. Cinereus, Swains.; *Muscic. Cin.*, Gmel.; *le Gobe-Mouche roux de Cayenne*, Briss.; *Rufous-bellied Fly-catcher*, Lath. Eight inches in length; upper mandible brown, lower yellowish; head, neck, and throat cinereous, darkest above, whilst the feathers beneath have their edges nearly white; shafts of the crown-feathers black; wings and middle of the back rufous, merging into bright ferruginous on the rump; under surface and tail rufous; tarsi pale, with a series of small reticulated posterior scales. Is a native of Brazil.

T. Rufescens, Swains. *Yellow-rumped Tyrant*. About six inches and three quarters in length, and though of smaller size, yet nearly allied to the last species; upper parts rufous-brown, changing to buffy-yellow on the rump and upper tail-coverts; wing-coverts dusty black tipped with rufous-brown; three bands of the latter also mark the wing; from the chin to the breast light brown; belly white; vent and under tail-coverts tinged with yellow; tarsi pale, and as in the last species.

T. Ambulans, Swains.; *Walking Tyrant*. Rather more than seven inches in length; beak black, and rather long; front and sides of the head greyish-brown, and the crest orange; upper parts drab coloured brown, under parts yellow, inclining to white on the chin and throat; wings and tail deep brown, the side feathers of the latter tipped with white; legs long and stout. Is found in the neighbourhood of Pernambuco, and according to Swainson, "habitually frequents the ground upon which it walks, and occasionally runs like a lark; it nevertheless is an air-feeding bird, for during these excursions it is perpetually making short and nearly perpendicular flights after such insects as have just taken wing." Notwithstanding every watchfulness on his part, Swainson could never detect this bird using its feet in any other situation than on the ground.

T. Nengeta, Swains.; *Black and White-winged Tyrant*. About the size of a blackbird, nine inches in length; upper parts, breast, and flanks cinereous grey; the throat and belly white; across the front, from eye to eye, a white line; space between the eye and gape black, and below the ears a black streak joins the lower mandible; wings and tail black; the wing-coverts and scapulars edged with grey; primary quills marked with a white band at their base, widening as it approaches the lesser quills, of which two are pure white, tipped only with black; the first two quill-feathers notched, and obsoletely pointed; tail half concealed by its coverts slightly forked, of a deep black colour, broadly tipped with greyish-white; legs black. Is a native of Brazil, has very great resemblance to the American Mocking Bird, but is distinguished by the depression of the base of its bill. According to Latham, the species in Guiana assemble in flocks near watery places and utter loud cries.

Sect. IV.—*Wings long; inner webs of the primary quills sinuated; tail very long and forked.*

The species in this section form the subgenus *Milvulus* of Swainson's last arrangement.

VOL. XXVIII.

TYRAN-
NUS.

T. Savanna, Vieill.; *Musicapa Tyrannus*, Lin.; *le Tyran à queue fourchue de Cayenne*, Buff.; *Fork-tailed Fly-catcher*, Pen. Fourteen inches in length, of which the tail measures ten; bill black; upper part of the head, cheeks, and nape, velvet black; feathers on the crown slender, and orange-yellow at their base, but not visible till erected; upper parts greyish-ash, becoming much darker behind, and changing into black on the tail-coverts; all the under parts of the body, wings, and tail-coverts pure white; wings dusky, the coverts rather lighter at their edges and tips, outer three quills having a remarkably deep notch on their inner webs near the tip; caudal quills black, the outer one white on its narrow outer web, and the shaft beneath for three-fourths of its length; outer two caudal quills ten inches long, and the middle two scarcely two inches. Is a native of Guiana, and regularly visits the southern states of the American Union, but rarely the northern. Is solitary, remains sitting long on the branch of a tree, occasionally darting on insects which fly across it; or it descends to the tufts of herbage in the partially inundated savannahs, where it flirts its tail like the Wagtails. Besides insects, it occasionally feeds on berries. Prince Charles Bonaparte states, that it may be easily confounded with either of the following species:—

T. Bellulus, Vieill., which however is larger, and has a much longer tail, also a black collar, extending from each corner of the eye, and edging the white throat; a white streak passes from behind the eye to the hind head; the head is also of the same bluish-grey as the upper parts, and the under parts are the same, with a narrow brown streak on each feather. It is a native of Brazil.

T. Violentus, Vieill. Ten inches and a half in length, beak black; feathers of the crown very close, yellow with black tips; upper parts bluish-ash, and the wings brown; under parts white; alar and caudal quills black, and the under wing-coverts slightly tinged with yellow. Is a native of Paraguay, and called by the Guaranis *Guira yctapa*, or Scissor bird. It sits on open elevated spots, whence it may dart upon passing insects, pursuing them much as do the Swallows. They make their nest in a dry bush, wide and deep, building it with earth, and lining it with small roots and cotton down.

T. Forficatus, Say; *Muscicapa Forf.* Gmel.; *le Moucherolle à queue fourchue de Mexique*, Buff.; *Swallow-tailed Tyrant*. Eleven inches in length; beak black; irides brown; upper part of the head and neck light grey; back and scapulars darker, and tinged with reddish-brown; rump grey, tinged with black, and upper tail-coverts deep black; under parts milk white, the flanks tinged with red; under tail-coverts pale rose; wings above brownish-black; upper coverts and secondaries margined externally, and tipped with dull white; under wing-coverts white, tinged with rose; axillaries above and beneath bright scarlet; caudal quills deep velvet black tipped with dull white, and having the base of their shafts white, the outer three are of a pale roseaceous colour for some distance from their base; the tail is much forked, the outer quill measuring five and a half inches, but the sixth little more than two. This bird is said to be confined to the Trans-Mississippian regions, lying on the south-western frontier of the United States, especially frequenting the scanty forests, extending here and there along the Arkansaw, Canadian, and Platte rivers. This species is as bold as the King bird; its note consists of a chirping note, *tsch*,

TYRAN-
NUS.
—
TYROL. *tsch*, resembling that of the Prairie Dog, (*Arctomys Ludovicianus*), which "for a moment," says Say, "induced the belief that a village of the Marmot was near, but we were soon undeceived by the appearance of the beautiful *Tyrannus Forficatus* in full pursuit of a crow. Not at first view recognizing the bird, the fine elongated tail-plumes occasionally diverging in a furcate manner, and again closing together, to give direction to the aerial evolutions of the bird, seemed like extraneous processes of dried grass or twigs of a tree adventitiously attached to the tail, and influenced by currents of wind."

T. Longipennis, Swains.; *Grey fork-tailed Tyrant*. This species is about the same size as the *T. Savanna*,

but its beak is smaller and more depressed; the crown feathers are streaked with blackish; entire plumage cinereous or slaty, excepting the throat, which is nearly white; wings smoky; tail deeply forked and sooty, its two long quills edged with white. Is a native of Brazil.

See Linnæi *Systema Naturæ* à Gmelin; Wilson, *American Ornithology*; Prince Maximilian, *Beiträge zur Naturgeschichte von Brasilien*; Buffon, *Histoire des Oiseaux*; Swainson, *On the Tyrant Shrikes of America in Quarterly Journal of Science, Literature and the Arts*; Vieillot, in *Dictionnaire Nouveau d'Histoire Naturelle*.

—
TYROL.

TYRIMNUS, in *Botany*, a genus so called by Cassini, from τυρμια, *curd*, on account of the leaves being blotched with white. It belongs to the class *Syngenesia*, order *Frustraneæ*, and the natural family of *Compositæ-Cynareæ*. Generic character: heads equal-flowered, the flowers of the ray neuter; involucre ovate; scales imbricate, often lanceolate, each furnished with a straight spine; receptacle fringed; corolla with a short tube, a five-cleft oblong limb, the segments subcorneous at top, bluntish, denticulated on the margin; stamens; filaments monadelphous at the apex, quite glabrous, rather pilose at the base; anthers with linear subulate appendages, without tails; style undivided at apex; genitals in the marginal flowers more or less abortive; fruit oblong, compressed, glabrous, shining; areola

terminal, girded by a cartilaginous ring, rather oblique at the base; nectary hardened, persistent; pappus of many series of filiform bristles which are annulate at the base, and rather scabrous at the apex.

This genus is intermediate between *Carduus* and *Galactis*, and consists of a single known species, *T. leucographis*, a native of the south of France; it is an erect, simple, or branched herb; the stem of which is cobwebbed, and the branches are elongated, tomentose, white, wingless, and one-headed; the leaves are oblong-lanceolate, sinuated, or bipinnatifid, decurrent, spotted with white above, more or less tomentose beneath, the margins and wings spiny-toothed; heads erect; corollas purple, in one variety white, and in another white tipped with purple.

T Y R O L.

Divisions. TYROL, The, a province of Austria, bounded on the East by the Duchies of Salzburg and Carinthia, South by Italy, West by Switzerland, and North by Baden and Bavaria. It may be divided into the German and Italian Tyrol, or more accurately into the Tyrol Proper, the Principality of Trent, and that of Brixen. The population has been estimated at 620,000, the larger proportion consisting of a robust and hardy peasantry.

Rivers. The mountain streams in a country where a plain is almost unknown are naturally numerous, but the rivers of the Tyrol of any note are but four, the Inn, Drave, Adige, and Eisach. The Inn, which rises in the Grison country, in Switzerland, flows through the Tyrol in a North-Eastern direction, passing by Inspruck and Kufstein, and there entering Bavaria takes its course to the Danube. The Adige, increased by the junction of the Eisach near Botzen, flows southward from its source, North of Glarus, and passing by Trent and Roveredo, runs parallel for some distance with the Lake of Garda, bends South-Eastward to Verona, and passing Legnago, and, near Rovigo, enters the Gulf of Venice between the mouths of the Bacchiglione and the Po di Levante. The Eisach River rises near the Brenner mountain and falls into the Adige; the Drave rises in the same ridge. There are several lakes, among them the Achen-see four miles long by one broad.

Superficies. The surface of this country is altogether mountainous, the chain of the Rhætian Alps being prolonged through it from Switzerland, taking the denomination of the Brenner. These Alps extend in a vast chain to the source of the Piave, having two other branches, one

stretching North-Eastward towards Bavaria, and another to the Southward of Trent. This central chain crosses the whole of the Tyrol and Duchy of Salzburg, entering Carinthia. The Northern branch passes through that part of the country called the Voralberg. The principal mountains here are the Flaxberg and Hogspix, and to the East of Pludenz the Grinser, the Sporgelberg, and the Haiterwandberg. Near Uaserait these mountains are composed of a schistose hornstone, or of a lamellated calcareous stone rich in veins of silver, lead, copper, and iron. This Northern range is of various height, while that behind it is of granite covered with perpetual snow, and the strata inclining to the East. The valley of Guyel, in this inferior ridge, is 2430 feet above the sea. Limestone forms mountains of considerable elevation between Nayerait and Lermos. Towards Inspruck the mountains become less elevated. Near Halle are mines of sal-gemme 5286 feet above the sea-level. The Southern chain constitutes the Tridentine Alps, and has several branches which extend into the Principality of Trente. The Westernmost ridge runs along the limits of the state, presenting the mountains of Trorno, Gleckberg, Andomello, Vergone, Alpo, and others to the East of the Lake of Garda. Other ridges appear beyond the Eisach; the principal mountain is called Mendola, at the head of the Val di Tassa. The exterior mountains of this chain are composed of a yellow calcareous stone of a coarse grain, containing marine bodies, and there are also beds of marble, porphyry, slate, granite, and, according to some, of lava. Near Brixen there are glaciers of this chain with points above them rising to

TYROL. 9600 feet. At the foot of the glacier of Steuben, a torrent flows from beneath a glacier out of a cavern of ice 19 feet wide and 30 high, the entrance being decorated with icy pyramids 50 feet in altitude, rising amphitheatrically one behind another above the cavern to the top of the glacier, which is 250 feet in height. This glacier is 4692 feet above the sea, and extends from East to West 15 miles. Though 430 feet lower than the glacier of Bois at Chamouni, it is much colder, from the larger quantity of ice in the Rhætian than in the Pennine Alps. The Brenner is extremely difficult of ascent, owing to the rocks on every side. It is 3897 feet above the city of Botzen. The name Brenner was given to this mountain from its attracting the electric fluid in summer, and causing dreadful storms, and the whole chain of the Rhætian Alps in the Tyrol has been named from it. The mountains of this extensive chain are very lofty and numerous. West of the Brenner are the Kaiser, the Arula, the Rhetico, and Gowper, while to the North-West tower the peaks of Lorenzen, Fartschal, and Tschafatfeh. The lofty Gafora of granite and glaciers of Duxer, 10 miles in extent, and to the South-West Mount Tributaun, are of the highest of the Great Brenner range. The most lofty of all is the Ortler Spilze, in the heart of enormous glaciers, in the territory of Sala. This mountain was never ascended until M. Gobbard of Inspruck got a chamois-hunter to make the attempt, and he succeeded. The elevation is 15,430 feet, and next Monts Blanc and Rosa, the highest of the Old World. The Gluckner, another mountain of this range, is 13,841 feet above the sea. Glaciers are found on all the Tyrolese mountains of this range; those of Guckler, Schalzer, Rosner, Stuben, Duxer and Teufferer are the most extensive.

Minerals.

The minerals in such a mountainous country as the Tyrol are various and in considerable number: silver, copper, lead, mercury, iron, alum, sulphur, rock crystals of various colours, and almost every species of stone are found. Lermos is famous for an ancient silver and lead-mine. The Uaserait mines, about 30 miles from Inspruck, produce silver, lead, copper, and iron. South of Trent mines of considerable importance have been worked.

Inhabitants.

The Northern Tyrol produces corn and pasturage in the valleys, but the Southern is the most productive, and in every respect resembles the same parallel in Switzerland, being equally affected by the vicinity of glaciers and the difference of the elevations. The peasantry of the South dress in a singular manner, wearing stockings without feet, hats that resemble cones, with green silk hoods and green tassels dependent from the sides. The women wear large white worsted caps, in the shape of a sugar loaf, of five or six pounds weight, and increase their rotundity of form by putting on nine or ten petticoats. Some of the male peasantry wear blue smock frocks. In the towns the dress is very little different from that adopted in the country. The country people are a brave, hardy race, of simple manners, pure morals, and, as all mountaineers, great lovers of their country, but they are kept by the Austrian government in a prostrate state of dependence.

Agriculture.

In the Upper Tyrol the chief grain cultivated is Indian corn; and the whole valley of the Inn is in the hands of a small proprietary, so that pasture on the mountains must be compounded for, and is not free to all as it is in Switzerland. The rent is generally settled by a proportion of the dairy produce paid to the owner. Few

flocks of cattle are seen there on this account. The peasant is possessed of a cow and a couple of pigs, with ground for his Indian corn and a few vegetables, as well as some flax for working up in the family. He produces little surplus, and lives solely upon Indian corn and milk, fully as hard as a day-labourer in other countries. Indian corn is the support of life in the Tyrol, and is eaten in soup three times a day. If by any chance the peasant has a surplus, it may be sold for horses; the husks stuff his mattresses, and other parts supply fuel. A peasant is considered very opulent when he possesses about £1700 sterling, and one in easy respectable circumstances when he possesses half that sum. A peasant's farm of four acres would have a third in Indian corn, half an acre of wheat, another half acre in barley, an acre in grass and wood, a quarter of an acre in flax, and a quarter in a garden. The wheat and barley are sold and produce money for coffee, sugar, and wine; the flax is spun for clothing by the family. The grass is used as summer pasture for a cow, and the wood for burning; two pigs, and a litter of young ones, with a number of hens, complete the property. All is cultivated with the spade. Such is the account given of the mode of life of the Tyrolese peasantry by an intelligent traveller. The Indian corn is never known to fail in the Tyrol.

This singular country is entered from Munich after Seafeld, leaving Mittewald, in front of lofty snow-crowned mountain peaks. The Iser is crossed, and the country becomes more grand as the road approaches Seafeld, which is a small Alpine village at a considerable elevation, where snows lie not far off, until the first of June. It is inhabited principally by peasantry, and surrounded by firs.

Zirl is a small town on the road from the Bavarian Zirl, frontier to Inspruck, possessing few or no attractions, but finely situated upon an eminence above the level of the surrounding valley, and at a short distance from the river. The valley of the Inn is seen from thence, and the beauty of the spot is very striking on the side towards Inspruck.

Inspruck is the metropolis of the Tyrol, lying 2000 feet above the sea, and is a very beautiful town, distinguished for a number of handsome buildings. The suburbs are alike remarkable for cleanliness and elegance. The population is 13,000. The environs are represented as of enchanting beauty, picturesque scenery being everywhere lavished in its vicinity, while ruined baronial castles cover the surrounding eminences, the Tyrolean Alps towering in snowy grandeur over all. Houses are cheap, and the necessities of life still more so in this little capital of the Tyrol. There is a theatre, in which German pieces are represented; also a casino, and the Rennplatz, a square, surrounded by very handsome edifices, where, and on the bridge, is the favourite walk of the citizens. Here is a convent of Capuchins, in which is shown the hermitage of the Emperor Maximilian. The church of the Holy Cross is the cathedral, and contains numerous works of art, among which is the tomb of Maximilian I. It is constructed of different sorts of marble, measuring above six feet high by thirteen in length and seven in breadth. On the top is a bronze statue of the emperor in a kneeling attitude. The sides consist of bas-reliefs, in number 24, executed in Carrara marble, and divided from each other by black marble pilasters. These bas-reliefs contain the principal passages in the life of the emperor, together with views of cities, the whole executed in a style of extraor-

TYROL. dinary elegance and beauty, by an artist named Colin, in 1565. Around the monument are 28 statues in bronze guarding the tomb, some of which represent kings, others heroes of renown. This church also contains a statue in silver of the Virgin Mary, and numerous other statues of different personages entombed there, such as Honorio Piccolomini, the Archduke Fredinand II., and Philippine, his wife. Here too repose the remains of Andreas Hofer. The church of St. James is a handsome building, and contains some fine pictures; there are also frescoes in this church of considerable merit, executed by a Tyrolean artist named Arnold. The church of the Holy Trinity has considerable merit in an architectural point of view, with a fine cupola, from whence a noble view over the valley is obtained. There are pictures too in this church executed by Rubens and Albert Durer. The church of Maria Hilf is situated in the suburbs, across the River Inn, and that also boasts some good paintings. The public cemetery contains several fine tombs, among them a monument of Colin, who executed the tomb of Maximilian I. The College of the Jesuits has a very fine collection of subjects of natural history; the minerals and metals of the country being very complete. There is also a Flora Tyrolensis, and a number of pictures by Tyrolean artists. For so small and remote a city, the works of art, and the various establishments connected with the sciences permitted by the Austrian government to be studied, no second rate capital in Europe can compete with it.

Hall. *Hall.*—About 20 miles from Inspruck is a dark and gloomy town, with narrow streets, and gates of considerable antiquity. The houses, blackened with smoke, are all ancient, and rendered very disagreeable to the view by the vapours of a great salt manufactory, which has been in work ever since the XIVth Century. The native salt is procured a few leagues off, and the water impregnated with it is conveyed in troughs to the town. The clear revenue accruing to the imperial crown from these works is about £80,000 sterling, the whole being in the hands of the crown. Hall contains a parish church, built in 1271; and has some pictures, among others one by Albert Durer. The salt-mines lie about eight miles from the town, in the heart of the mountains, among pine forests, cliffs, torrents, rocks, and snow-capped summits. No less than 48 immense caverns and a gallery two leagues long have been excavated in the rock salt, during the last five centuries.

Schwatz. *Schwatz* is an old market-town where the southern range of the Tyrolese mountains reaches nearly to the river Inn, and the meadow land of the valley passes to the other side. This town was once noted for its silver-mines, which are now neglected.

Kufstein. *Kufstein* is a small town close to the Inn, built under a lofty rock, castle-crowned and containing some cannon, while on the South side towers a range of mountains. This town is within a league of the frontiers of the Tyrol towards Salzburg. It is about 46 miles from Munich in Bavaria. Kufstein stands at the extremity of the valley called the Innthal, from the commencement of which to Kufstein, at the junction of the Cetz with the Inn, is 120 miles of valley, varying in width from two to six miles, and containing a population of 150,000 in hamlet, town, and village.

Schönberg. *Schönberg* is a small town situated near the Brenner Pass, and village of this name, where the primitive manners of the Tyrolean people are very prominent.

Sterzing. *Sterzing* is a small town in a very romantic position,

built in a valley, and having an old castle upon an elevation close by, completely overlooking it; it stands upon the river Eisach. This town stands in an inclement climate; owing to its great elevation, no grain will ripen near it.

Brixen, situated in a fine vale to the Southward of the Brenner pass, is a small town at the confluence of the Rienz and the Eisach. It has no trade nor manufacture, but the land round is exceedingly fertile, and much wine of a middling quality is made there. This place was once upon a footing with Trent and sent deputies to the Diet of the empire. Brixen lies in the valley called the Pusterthall, which is traversed by the river Rienz; near Brixen lies the small town of Muhl-bach, containing about a hundred houses.

Paunecken is the principal town of the Pusterthall. It is very small, consisting of only one or two streets, a convent, church, and market-place, standing in an amphitheatre of fertile land, near the river Rienz, where several mountain-streams join it.

Lienz, the frontier town of the Tyrol towards Carinthia, stands near the Drave, where it is joined by the Isil, which makes a sweep nearly round the town, and to the South magnificent mountains raise their wooded sides and peaks. *Clausen* is another small town, consisting of only one street. It has an old castle, and is surrounded with noble scenery.

Botzen is the head of a district called Etelsland, and has a fine old castle. It stands on the Eisach, in a vale of great beauty, and may be considered the capital of the Central Tyrol. It is a very clean, neat town, having one long street, with covered arcades on both sides, under which the four annual fairs are held, each lasting a fortnight; no goods but those which are Austrian are allowed to be sold. The other streets of the town are handsome and spacious, and there are two squares, as well as some very noble houses. The principal church is a handsome structure with a fine spire; the altar boasts some pillars of rare beauty, covered with mosaic to represent different coloured marbles. Near this town there is a country place of considerable resort called Ober-Botzen, a very agreeable retreat among the mountains, being a village consisting of pretty detached retreats or rustic pleasure-houses, inhabited during summer by visitants from the nearest towns. A little distance from Botzen is the old ruined castle of Sigmundscron, occupied as a powder-magazine: the view from this castle is exceedingly fine, commanding the whole of the Central Tyrol.

Nieumarket is a small town between Botzen and Trent, in Southern Tyrol, about which the country puts on an appearance of greater populousness than in the upper province; it contains no edifices of note.

Trent is a large antique town, celebrated in history for its Council in the reign of Charles V., about 1545, which lasted during the time that five popes filled the chair of St. Peter. The church of St. Maria Maggiore and the cathedral are the most remarkable edifices in this city. In the former is one of the finest organs in Europe, and a picture representing the sitting of the Council. This picture is rendered very indistinct by time, but the figures of many of the prelates and other individuals are still visible, who took part in the celebrated discussions. The town is a place of great antiquity, and was the Tridentum of the Romans. Subsequently it was annexed to the church of Rome by the Emperor Wincelaud, and the bishops were princes of

TYROL. the empire and members of the Tyrolean Diet. Trent stands in the midst of a country rich in silk and wine. **TYRONE.** The situation is truly noble, and it is watered by the Adige at a spot where the mountains recede and leave a considerable space of rich soil on each side of that fine river.

Roveredo. *Roveredo* is a manufacturing town of the Southern Tyrol, beautifully situated, thirteen miles from Trent, near the Adige, at the foot of a mountain. It has a strong citadel, and carries on a considerable trade in silk, the working of which employs 1700 looms. There are few large buildings in the town, but the private houses are handsome, and in general possess fine gardens with noble terraces commanding scenery almost unrivalled for fertility, grandeur, and picturesque beauty.

Riva. *Riva* is a small town of the Southern Tyrol in the part which embraces the head of the Italian Lago di Garda. It is an unsightly place, situated in a spot of exquisite natural beauty, exceedingly fertile, abounding in the olive and all kinds of fruit trees, in corn, wine, and oil. The pomegranates and figs are particularly fine here, and the growth of Indian corn the most luxuriant in Europe.

Arco. *Arco* is a town 15 miles from Trent, having a castle situated upon a high rock near the river Scarca; it is an old place, about two miles from the Lago di Garda, and one-fourth of that distance from the mountains.

Meran. *Meran* was once the capital of the Tyrol, or "Tyrol Proper," and stands upon the river Passer near its confluence with the Adige, twelve miles from Botzen. It possesses six convents and churches, but is a straggling and unattractive place. Near this town is the celebrated

TYROL. Schloss Tyrol, or castle of the Tyrol, one of the noblest ruins in Europe, standing upon an insulated rock, which rises 700 feet above the plain. **TYRONE.**

Glarus is a very small town, situated in a romantic and mountainous neighbourhood, and having an enormous castle on the right of the road from Meran, and not a great way from the borders of Switzerland, or from the road by the Ortler Spitz, a pass into the Austro-Italian territory, more than 9000 feet above the sea, being the highest in Europe. The Ortler Spitz mountain itself, as before observed, is the third European mountain in height.

Nauders is a small town, or rather village, only remarkable for its fine mountain scenery, and for the pass of Funsterminz, differing from Swiss scenery in the superiority of its rock, wood, and water, in possessing more richness and beauty, but less of savage sublimity.

Lindeck, a mountain town of small size, is chiefly remarkable for a fine old castle and a church of excellent architecture of the middle ages.

The *Voralberg* is a district of the Tyrol, of which *Bregentz* is the capital. *Bregentz* is six miles east of *Lindau*, near the Eastern end of the Lake of Constance. It possesses a fine castle upon an eminence. *Pludenz* is also a town of the *Voralberg*, as well as *Feldkirch*; both are small places, not containing a thousand inhabitants, but they stand in the midst of natural scenery of the most imposing character.

Wilson, European Mountains; *Pinkerton, Tour in the Tyrol*; *Journal de Physique*; *Beaumont, Rhætian Alps*.

Boundaries. **TYRONE**, a county of Ireland, in the province of Ulster, bounded North by Londonderry, East by Armagh and Lough Neagh, South-West by Fermanagh, and West by Donegal. It is 46 miles long, by 37 broad, and contains 1271 square miles of surface, or, mountain and bog included, 387,175. It is divided into 35 parishes, the population of which is 302,943—of which there are supposed to be six and a half Roman Catholics to one Protestant.

Rivers. The chief rivers are the Blackwater, Mourne, and Foyle. Lough Neagh is the only lake in this county, the shores of which are flat and divested of interesting scenery. The surface is in general rough, and some part mountainous.

Agriculture. The agriculture of the county, for it is agricultural almost wholly, differs little from that of those which border upon it. The size of farms throughout the county varies greatly, and those in the mountain districts are of very considerable extent. There are great impediments to the improvement of land in some of the tenures, while much of the large estates passes through the hands of middle men. The landed proprietors hold great estates, many being in value from 5000*l.* to 7000*l.* per annum. The Newton-Stewart estate consists of 24,000 plantation acres. The land is minutely inclosed, but without live fences. The black cattle of the mountainous districts are small, and similar to those in the neighbouring county of Derry, a hardy breed, subsisting on coarse mountain heath and carex grass, which springs up after the heath is burned off in spring, but many are lost, even in summer, from dearth of food.

The milch cows of the farms are considered to yield well. The sheep are the same breed as those which are common in Londonderry. The tillage on the eastern side of the county is performed with the spade, the farms there seldom exceeding 10 acres. Potatoes, flax, and oats, form the crops, only a few farms possess a plough. The con-acre system, or hiring land for a single crop, is also common. The quantity of wheat produced is small, but clover is sown in considerable plots. Beans or peas are rarely grown but in the gardens. In the barony of Clogher the poor live on oat-cake and potatoes, not half a dozen acres of wheat being cultivated in the whole district. Good land is let at above 40*s.* per acre. There were only 11 acres sown in hemp in the whole county a few years ago. Irrigation is partially practised on some lands; and ash wood grows well, but elm will not flourish.

The minerals in Tyrone are confined to a bad bituminous coal raised between Dungannon and Stewartstown. Good potter's clay and excellent millstones are obtained near Drumquin, but no limestone is found in the county.

Tyrone has some considerable linen manufactures, although it is not noted as a manufacturing county.

Omagh is the county town, and is situated on the river Mourne, where it is joined by the Carnown, 24 miles from Dungannon. The population is 2147.

Dungannon is built upon a hill, 14 miles from Dungannon; it is a small place, but in the vicinity there are several coal mines; it has a free-school, founded by Charles I.

TYRONE. *Newtown-Stewart* is a small town on the Mourne, nine miles from Omagh. *Cookstown* is 11 miles North of Dungannon.

UBI-
QUITY.

Clogher, a very small town, on the river Launy, 19 miles from Dungannon, is a bishop's see; the cathedral, a modern building, serves for the parish church.

Strabane lies on the Mourne, two miles above Lifford, just where that river joins the Friern, and forms the Foyle; it is 16 miles from Omagh. The other places in this county can only come under the denomination of insignificant villages.

TYRONE.
UDORA.

U.

U. As a vowel (U) (says B. Jonson), it soundeth thin and sharp, as in *use*; thick and flat as in *us*. It never endeth any word for the nakedness, but yieldeth to the termination of the diphthong *ew*, as in *new*, *knew*, &c., or the qualifying *e*, as in *sue*, *due*, *true*, and the like.

UBEDA, the ancient Idubeda, a city of the province of Andalusia in Spain, situated in a fruitful district, on a plain, where much salt is made; it contains about 1500 houses, and is 22 miles from Jaen.

U'BEROUS, } It. *ubero*, *ubertà*; Fr. *ubir*, *uberté*.

U'BERTY. } Cotgrave and Roquefort. Lat. *uber*.
Abundant, copious, plentiful, fruitful.

Here the women give suck, the *uberous* dug being stretched over their naked shoulder. Sir T. Herbert. *Travels*, p. 17.

Sion, the mother of us all, is barren, and her *uberous* breasts are dry. Quarles. *Judgment and Mercy*. Sion.

They enjoy that natural *uberty*, and fruitfulness, which, without labouring toil, doth in such plenteous abundance furnish them with all necessary things.

Florio. *Translation of Montaigne*, Anno 1613, p. 104.

UBI'QUITY, } Fr. *ubiquité*; It. *ubiquità*; Sp. *ubiquidad*; Low Lat. *ubiquitas*,
UBI'QUITARY, } from *ubique*, every where, *ubi*,
UBIQUITA'RIAN, } the place where, in which or in
UBIQUA'RIAN, } what.
UBICA'TION, }
UBI'ETY. } A being, or existence, every
where, or in every place, at all times; omnipresent.

Johnson explains, Whereness; ubiety.

No one sequel urged by the Apostles against the Galatians, for joining circumcision with Christ, but may be as well enforced against the Lutherans holding *ubiquity*.

Walton. *Life of Hooker*.

It is impossible for any author of a voluminous book, consisting of several persons and circumstances, (reader, in pleading for Master Fox, I plead for myself) to have such *ubiquitary* intelligence, as to apply the same infallibly to every particular.

Fuller. *Worthies*, vol. i. p. 89. *Barkshire*.

This knight [Sir Philip Sidney] in relation to my book, may be termed an *ubiquitary*, and appear amongst statesmen, souldiers, lawyers, writers. Id. *Ib.* p. 499. *Kent*.

Some *ubiquitaries*, while they hold the possibilitie of conversion and salvation of reprobates, overthrow the doctrine of God's eternal decree, and immutabilitie.

Hall. *Works*, vol. i. fol. 352. Decad. 5, Epistle 4.

The *ubiquitarians* defend their errors, by denying the judgment of reason; and the Macedonians would not have the Deity of the Holy Ghost proved by consequence. Glanvill. *Essay* 5, sec. 2.

Relations, *ubications*, duration, the vulgar philosophy admits to be something; and yet to inquire in what place they are, were gross. Id.

For, besides the court, she's the most eternal visiter of the town; and yet manages her time so well, that she seems *ubiquitary*. Dryden. *Marriage A-la-Mode*, act i. sc. 1.

I remember at a full table in the city, one of these *ubiquitary* wits was entertaining the company with a soliloquy, for so I call it when a man talks to those who do not understand him, concerning wit and humour. Tatler, No. 244.

It seems to me, that the reason you do not apprehend *ubiquity* to be necessarily connected with self-existence, is, because, in the

order of your ideas, you first conceive a being, (a finite being, suppose,) and then conceive self-existence to be a property of that being; as the angles are properties of a triangle, when a triangle exists. Clarke. *Answer to Second Letter*, p. 471.

Have ye, ye sage intendants of the whole,
A *ubiquarian* presence and control,
Elisha's eye, that, when Gehazi stray'd,
Went with him, and saw all the game he play'd.

Cowper. *The Tirocinium*.

UCLOS, a town of the kingdom of Castile, in Spain, the principal seat of the Knights of Santiago; it was anciently called *Urcessa*, and stands at the foot of a hill, surrounded by walls for its defence.

U'DDER, } D. *huyder*, *uyder*, *uder*, *euder*. A. S.

U'DDERED. } *uder*, *udr*. *Uber*, mamma. Kilian adds, it is only applied to the mammæ of beasts.

And what to saue their liues they would haue stuck
To take, now dying drinke; like beasts some sucke
Beasts dugges, and when milke failes, with greedy iaw
Meere blood from their exhausted *udders* draw.

May. *Lucan. Pharsalia*, book iv.

To deck the hallow'd harth with old wood fir'd
Against the husband comes home tir'd;
That penning the glad flock in hurdles by,
Their swelling *udders* doth draw dry.

Jonson. *The Praises of a Countrie Life*.

The first-distended *udders* never fail;
But when they seem exhausted swell the pail.

Dryden. *Virgil. Georgic* 3, v. 483.

_____ Marian loved the swain.
Marian, that soft could stroke the *udder'd* cow,
Or lessen with her sieve the barley mow.

Gay. *Shepherd's Week. Tuesday*.

There thrice within the year the flocks produce;
Nor master there nor shepherd ever feels
A dearth of cheese, of flesh, or of sweet milk
Delicious, drawn from *udders* never dry.

Cowper. *Homer. Odyssey*, book iv. v. 106.

UDORA, in *Botany*, a genus so called by Nuttall from *ὕδωρ*, *water*, in allusion to the natural habitation of the species. It belongs to the class *Triandria*, order *Monogynia*, and the natural family of *Hydrocharidæ*. Generic character: spath sessile, tubular, with an oblique mouth, one-flowered; perianth with an elongated tube, which is combined with the ovary at the base, and a six-parted limb, the lobes oval, the outer three assuming the form of a calyx, and the inner three of a corolla; stamens three, inserted opposite the outer segments of the perianth; anthers cordate, fixed by their bases, with contiguous cells; ovary one-celled, with three parietal placentas; style elongated, connate with the tube of the perianth; stigmas three, alternating with the stamens, cuneiform, rather bifid at apex; berry subtrigonal, one-celled, many-seeded; seeds cylindrical.

A genus composed of annual, caulescent, slender herbs, inhabiting running streams from Canada to the Orinoco. The leaves are verticillate and sessile, linear-lanceolate, serrated; the spaths are axillary; the outer segments of the perianth are purplish, and the inner ones are white. The genus is the same as *Elodea* of L. C. Richard.

UGENTO. UGENTO, a town of Naples, in the Terra d' Otranto, 20 miles South-West of Otranto, and 15 from Gallipoli, South-East ; it is a small place, with a bishopric suffragan of Otranto.

ULANTHA.

U'GLY, } From the A. S. *og-a* ; q. d. *ogelic*,

Frightful ; foul, deformed.

This *ugly* sergeant in the same wise
That he hire doughter caughte, right so he
(Or werse, if men can any werse devise)
Hath kept hire sone, that ful was of beautee.

Chaucer. *The Clerke's Tale*, v. 8550.

Thus vseth the holy scripture to descrybe and paynt the grevous and terryble iudgement of God, by suche greate, *ugsome* and terryble figures.

Udall. *Erasmus. Reuelacion*, ch. xiv. fol. 24.

But suche as be euercomen by temptacyons are verye blynde not perceyunge the *ugsomnes* of synne, also they be deafe not hearunge the fraude of the deuyll, and last they be dombe not speaking and wisely reproving the abhominaciō of it.

Fisher. *Seuen Psalmes. Psalm xxxviii.* part 2.

In every place the *ugsome* sights I saw :
The silence self of night aghast my sprite.

Surrey. *Virgile*, book ii.

In others : fouler deaths had *uglily* displayed their trayling guts.

Sidney. *Arcadia*, book iii. p. 441.

As if the mind were not already sufficientlie bereft of hir image of the diuinitie, but must yet more be clogged and overladen with such a franked case, therewithall to be extinguished outright, which already dwelleth or is buried rather in such an *uglie* sepulchre.

Holinshed. *Chronicles*, vol. v. p. 26. *The Description of Scotland*, ch. xv.

Yet did her face and former parts professe
A faire young maiden, full of comely glee ;
But all her hinder parts did plaine expresse
A monstrous dragon, full of fearfull *uglines*

Spenser. *Faerie Queene*, book vi. can. stan. 10.

The mistresses of our vile affections are so *ugly*, we cannot endure to kiss them but through a veil, either the veil of excuse, or pretence, or darkness ; something to hide their *ugliness* ; and yet even these also are so thin that the filthiness and shame are not hid.

Taylor. *Rule of Conscience*, book i. ch. i. fol. 13.

The monkeys that are in these parts are the *ugliest* I ever saw.

Dampier. *Voyages*, Anno 1676, vol. ii. part ii. ch. ii. p. 59.

HOR. 'Tis false :

You blast the fair with lies because they scorn you,
Hate you like age, like *ugliness* and impotence.

Rowe. *The Fair Penitent*, act ii.

UIST, North and South, islands off the coast of Scotland, on the shore of Inverness-shire. North Uist is 20 miles long, and from 12 to 18 broad, and contains 4603 inhabitants. The land upon the coast is level, but the interior consists of moors with naked and barren hills. The productions are a little barley and oats, but the principal employment of the inhabitants is the making of kelp. This island possesses a small breed of horses. South Uist is separated from North by a narrow arm of the sea. It is 40 miles long, and from 9 to 12 broad, and contains 6890 inhabitants. Besides the produce of North Uist, the island contains a breed of hardy black cattle, and feeds a considerable number of sheep. Both islands are reckoned within the boundary of Inverness-shire.

ULANTHA, in *Botany*, a genus so called by Hooker, from *υλη*, a wood, and *ανθος*, a flower ; habitat of species. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ-Neottieæ*.

Generic character : outer segments of perianth erect, lateral ones obovate, curled, and papillose, upper one ovate flat, the inner ones conform to the lateral ones ; labellum on a short claw, broad-oblong, curled, papillose, with a lamellate disk ; column erect, semiterete ; anther terminal, apiculate ; pollen masses four, recurved at their bases, and cohering at their apices.

A genus separated from *Neottia*, and consists of a solitary species, *U. grandiflora*, a terrestrial orchideous plant, a native of the Antilles ; the stem is erect and leafy ; the leaves are oblong-lanceolate, and striated ; the flowers are large and showy and disposed in spikes.

U'LCERATIVE.

or draw, *quia* *ulcere* *distrahitur*

caro. Vossius.

See the Quotation from Wiseman.

Breathings hard drawne their *ulcer'd* palates teare,
They ope their thirsty mouthes, to drink night's aire,
And wish such showres, as all did lately drowne,
And the dry cloudes their lookes are fixt vpon.

May. *Lucan. Pharsalia*, book iv.

And bloody issues brake (like *ulcers*) from the ground.

Drayton. *Poly-olbion*, song 2.

The dregs of vinegre must of necessitie be much more sharpe, biting, and *ulcerative*, than wine lees.

Holland. *Plinie*, book xxiii. ch. ii.

O, how I hate the monstrousness of time,
Where every servile imitating spirit,
Plagued with an itching leprosy of wit,
In a mere haulting fury, strives to fling
His *ulcerous* body in the Thespian spring,
And straight leaps forth a poet !

Jonson. *Every Man out of his Humour. The Stage*.

Honey, being applied to a sore or *ulcerous* place, at the first doth smart and sting ; but it doth cleanse and mundifie withall, and otherwise is profitable, sweet, and pleasant.

Holland. *Plutarch*, fol. 80.

An *ulcer* is a solution of continuity in a soft part, made by erosion with loss of substance, which loss is in this description presumed to be the effects of the erosion.

Wiseman. *Chirurgical Treatises*, book ii. ch. i.

This is true, understanding the lungs only as an instrument of digestion, and abstracting from an acrid and purulent matter, that mixeth with the blood in such as have their lungs *ulcerated*.

Arbuthnot. *Nature of Aliments*, ch. ii. p. 26.

As to his impatience in bearing affliction, that symptom was altogether ambiguous, and might as likely denote want of fortitude as want of innocence, and proceed as well from the pain of an *ulcerated* body as the anguish of a distracted conscience.

Warburton. *Works*, vol. xi. p. 266. *Remarks on Several Occasional Reflections*, part i. sec. 4.

Where the part hath been long affected with *ulceration*, it is usually weak and out of temper, and is very difficult to cicatrize.

Wiseman. *Surgery*, book ii. ch. ii.

The only reason which can be assigned for this disfranchisement, has a tendency more deeply to *ulcerate* their minds than the act of exclusion itself.

Burke. *Works*, vol. vi. p. 362. *Letter to Sir H. Lawrance, M. P.*

ULEIOTA, in *Zoology*, a genus of *Corticicolous Tetramerous Coleopterous Insects*.

Generic character. Antennæ filiform, at least as long as the body, with lengthy cylindrical joints ; upper lip projecting between the mandibles ; last joint of the palpi sharpish at the tip ; body oblong, much depressed ; tarsi short.

The insects belonging to this genus are very nearly allied to *Cucujus*, from which they are distinguished by Lamarck, by the lengthened, instead of bead-like joints of their antennæ, and by the extremities of their palpi

ULANTHA.

ULEIOTA.

ULEI-
OTA.
—
ULLU-
CUS.

being sharpish instead of truncated. They live beneath the bark of trees. The type of the genus is *Cerambix Planatus*, Lin.

ULEX, in *Botany*, a genus so called by Linnæus from *ac*, a point, in Celtic, in reference to the prickly branches of the species. It belongs to the class *Monadelphica*, order *Decandria*, and the natural family of *Leguminosæ-Papilionaceæ*. Generic character: calyx bibracteate, bipartite, one of the lips three-toothed, the other bidentate; stamens connected; legume oval-oblong, turgid, few-seeded, hardly longer than the calyx.

This genus consists of three or four known species. They are branched shrubs, having the branchlets and leaves spinescent, the flowers are solitary and yellow, and the legumes are villous. The *Ulex Europæus* is the common Furze, Whin, or Gorse, plentiful in commons, heaths, and waste places in most parts of Europe. Provence, however, seems to be the southern boundary of Furze, and northwards it does not grow in Sweden or Russia. Linnæus lamented that he could hardly keep it alive in a greenhouse in Sweden. Many parts of Germany are destitute of Furze. In France it is called *ajonc*, or *jonc marin*, contracted to *jomarin*. Some years ago the seeds of Furze were sown for hedges, and where the soil was light it soon became strong enough for a fence, but in a few years these hedges become naked. Duhamel speaks much in favour of Furze as fodder for cattle. It has been used for fodder in some parts of Britain. The young tops are the parts used, but they require to be bruised by a mill or other machine, before they are given to cattle. There is a very ornamental variety of the Common Furze with double flowers. The *Ulex nanus*, or Dwarf Whin, is found in many parts of England and the west of France, on heaths. The *Ulex Hibernicus*, or Irish Furze, is a very upright plant, well fitted for hedges; but the spines of it are much softer than those of other species, and from this circumstance might be more useful as fodder.

ULIGINOUS, Fr. *uligineux*; It. *uligenoso*; Lat. *uliginosus*, *uligo*, quasi *udiligo*, from *udus*.

Moist, oozy, muddy.

But the impure and *uliginous*, as that which proceeds from stagnated places, is of all other, the most vile and pestilent.

Evelyn. Fumifugium.

ULLOA, in *Botany*, a genus dedicated by Persoon to Antonio Ulloa, a Spanish naturalist. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Solanaceæ*. Generic character: calyx large, inflated, ovate, five-parted, with concave, lanceolate, acute, coloured, persistent segments; corolla tubular, gibbous under the throat, contracted above; the limb small and five-lobed, and the segments rounded and spreading; stamens five, villous at their bases; stigma oblong, somewhat emarginate at apex; berry ovate, girded by the large calyx, two-celled, many-seeded; seeds oblong, reniform.

This genus, which is nearly allied to *Solandra*, consists only of a solitary known species, *U. parasitica*, a native of Peru, in groves. It is a parasitical, frutescent, pendent plant, with oblong, acuminate, alternate, thickish leaves, and dichotomous, pendulous racemes of scarlet flowers and fruit. The plant is said also to be nearly allied to *Tanæcium parasiticum*.

ULLUCUS, in *Botany*, a genus so called by Lozano, from Ulluco, or Melloco, the name of the plant in

Quito. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Portulacæ*. Generic character: calyx of two opposite, roundish, coloured, deciduous sepals; petals five, longer than the calyx, cordate, attenuated at the apex, but connected at their bases into a short tube; stamens five, short, erect; anthers two-celled, erect; ovary nearly globose; style filiform, length of stamens; stigma simple; capsule one-celled, containing a solitary, oblong seed.

Only a single species of this genus is known, the *U. tuberosus*, a native of the province of Quito, in South America. It is a smooth herb, with a tuberous, mucilaginous, edible root. The stem is branched and angular. The leaves are alternate, cordate, quite entire, thick, and petiolate. The flowers are disposed in terminal, simple, drooping racemes; and the pedicels are furnished with very short bracteas.

ULM. See WURTEMBERG.

ULMUS, in *Botany*, a genus so called by Linnæus, from Elm, its name, in Anglo-Saxon, Teutonic, Gothic, and nearly all the dialects of the Celtic. It belongs to the class *Tetra-Pent-Octandria*, order *Digynia*, and the natural family of *Ulmaceæ*. Generic character: flowers hermaphrodite; perianth membranaceous, turbinate campanulate, four, five, or eight cleft; stamens four, five, or eight; ovary ovoid, compressed, two-celled, ovula solitary in the cells, hanging from the top of the dissepiment, anatropous; styles two, divaricately spreading, stigmatose inside; samara membranous, compressed, winged all round, one-seeded; seed inverted.

This genus is composed of numerous species or varieties, the different kinds of Elm; they are shrubs and trees, natives of the temperate parts of the northern hemisphere. The leaves are alternate, serrated, roughish. The flowers rise earlier than the leaves, and in fascicles. Most of the kinds of Elm are valued for their timber; but *U. campestris* and *glabra*, the English and Scotch Elm, are most generally cultivated; the Dutch Elm, *U. suberosa*, is often grafted on *U. glabra*; the Wych Elm, *U. montana*, forms an elegant tree. The English Elm, *U. campestris*, is supposed to have been brought originally from Palestine by the Crusaders.

ULOSTOMA, in *Botany*, a genus so called by D. Don, from *υλος* and *στομα*, a mouth, on account of the throat of the corolla being bearded with long hairs. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Gentianeæ*. Generic character: calyx five-parted; corolla funnel-shaped; limb five-parted; tube bearded with long hairs inside; stamens five, dilated at the base, but attenuated towards the apex; anthers incumbent; ovary fusiform; stigma sessile, two-lobed.

This genus consists of a single known species, *U. filamentosa*, a native of Peru. It is a perennial, herbaceous, tufted plant. The leaves are opposite, decussate, sessile, linear-lanceolate, acute, obscurely three-nerved, with scabrous margins, the radical leaves aggregate. The flowers are umbellate and probably white.

ULOTA, in *Botany*, a genus so called by Mohr, from *υλη*, a wood, on account of the species grown on the bark of trees. It belongs to the class *Cryptogamia*, and order *Musci*. Generic character: calyptra conical, smooth, hairy, lacerately fringed at the base; sporangium terminal, equal at the base; operculum acuminate; peristome simple, having the teeth at first combined by

ULLU-
CUS.
—
ULOTA.

ULOTA. pairs, but at length free and reflexed; the cilia linear between the pairs of teeth, and lying in a horizontal manner inwards.

ULTRA-MARINE. A genus of mosses separated from *Orthotrichum*; they are small tufted plants, usually growing on the bark of trees, rarely on stones or rocks.

ULSTER, one of the four provinces of the kingdom of Ireland, bounded on the East by the Irish sea; North by the Northern Ocean; South-West by the province of Connaught, and South by that of Leinster. The population is 2,293,128. It contains the counties of Donegal, Londonderry, Antrim, Tyrone, Fermanagh, Monaghan, Armagh, Down, and Cavan, which will be found under their respective names, and in the general description of Ireland.

ULTE'RIOR, } Fr. *ultime*; It. *ultimo*; Sp. *ul-*
U'LTIME, } *terior*, *ultimo*; Lat. *ultra*, *ulterior*,
U'LTIMATE, } *ultimus*. *Ultra* Vossius thinks is
U'LTIMATELY. } from the ancient *uls*, and that from
ollus, i. e. *ille*; *ultra sit in illa parte*. In that part.
Ultrior—

Further, more distant, or remote. Ultimate—

Furthest, most distant, or remote, the last; having nothing to follow.

For howsoever distillations do keep the body in cells, and cloysters, without going abroad, yet they give space unto bodies to turn into vapour; to return into liquor; and to separate one part from another: so as nature doth expatiate, although it hath not full liberty; whereby the true and *ultime* operations of heat are not attained. *Bacon. Natural History. Cent. 2, sec. 99.*

The faithful and pious communicants receive the *ultimate* end of his presence, that is, spiritual blessings.

Taylor. Polemical Discourses, fol. 183. Of the Real Presence, sc. 1.

The constantest notion of concoction is, that it should signify the degrees of alteration, of one body into another, from crudity to perfect concoction, which is the *ultimity* of that action, or process. *Bacon. Natural History, sec. 838.*

By reserving still a right of making *ulterior* demands, they reduced the Carthaginians at last to the necessity of abandoning their city, or of continuing the war after they had given up their arms, their machines, and their fleet, in hopes of peace.

Bolingbroke. Works, vol. iv. p. 105. On the Study and Use of History. Letter 8.

Every one of these doctrines has a natural tendency, and a direct and powerful influence, to reform men's lives, and correct their manners. This is the great end, and ultimate design, of all true religion. *Clarke. On the Evidences. Prop. 13.*

Whence comes it [the mind] by that vast store which the busy and boundless fancy of man has painted on it, with an almost endless variety? whence has it all the material of reason and knowledg? To this I answer, in one word, from experience; in that all our knowledg is founded, and from that it *ultimately* derives it self.

Locke. Works, vol. i. fol. 32. On Human Understanding, book ii. ch. i.

No doubt would remain in our minds as to the utility or intention of these parts, although we should be unable to investigate the manner according to which, or the connexion by which, the *ultimate* effect depended upon their action or assistance.

Paley. Natural Theology, ch. i. p. 9.

Of bodily pain, the principal observation, no doubt, is that which we have already made, and already dwelt upon, viz. that it is seldom the object of contrivance; that when it is so, the contrivance rests *ultimately* in good. *Id. Ib. ch. xxvi. p. 426.*

ULTRA, a Latin preposition signifying *beyond*.

ULTRA-MARINE. *Ultra-marinus*.

Beyond the sea; applied to colour, exceeding marine; a brilliant marine.

Ultramarine, or azure, is a very light and a very sweet colour. *Dryden. On Painting, sec. 354.*

There are others, also, which notwithstanding that they are brown, yet cease not to be soft and faint, as the blue of *ultra-marine*. *Id. Ib. sec. 332.*

If the war is carried on in the colonies, he tells them that the

loss of her *ultramarine* dominions lessens her expenses, and ensures her remittances.

Burke. Works, vol. ii. p. 23. On the State of the Nation.

ULTRA-MO'NTANE, beyond the mountains, (montes.)

And those that know any thing of the respects of conclaves, know that he is not papable: first, because he is an *ultra-montane*, of which sort there hath been none these fifty years.

Bacon. Works, vol. ii. fol. 57. Observations on a Libel.

ULTRA-MU'NDANE. *Ultra-mundanus*.

Beyond the world (*mundus*), beyond the habitable globe.

We need not fly to imaginary *ultra-mundane* spaces, to be convinced, that the effects of the power and the wisdom of God are worthy of their causes, and not near adequately understood by us. *Boyle. Works, vol. v. fol. 140. Of the Veneration Man's Intellect owes to God.*

U'LULATE, } Fr. *ululement*; It. *ululare*; Lat.
ULULA'TION. } *ululare*; Gr. *ολολυζ-ειν*.

To howl, to yell.

Troops of jackalls for prey violated the graves, by tearing out the dead; all the while *ululating* in offensive noises.

Sir T. Herbert. Travels, p. 113.

— The people with mad shouts

Thundering now, and now with saddest *ululation*

Flew.

Coleridge. Mahomet.

ULVA, in *Botany*, a genus so called by Linnæus, which is said to be derived from the Celtic word *ul*, water. It belongs to the class *Cryptogamia*, and order *Algæ*. Generic character: frond membranous, of a green colour, plane, but in some cases inflated in the young state; fructification, minute granules, mostly arranged in fours.

Seven species of *Ulva* are natives of Britain, of which three are natives on rocks and stones near the sea, viz., *U. latissima*, *U. lactuca*, and *U. linza*; one a native of stagnant fresh water-pools, *U. bullosa*; and the three other species are terrestrial, growing on walls and rocks. The *U. latissima* and *lactuca* are eaten indiscriminately under the name of *green-laver* or *oyster-green*, being served at table with lemon-juice in the same manner as purple laver. They are said to be antiscorbutic.

ULVERSTON, a town of Lancashire, having a population of 7,741 persons. It is situated near a ridge of hills, and is commonly deemed the port or haven of Furness, having a canal which communicates with Morecombe Bay. It has a market on Monday, and a considerable trade in cotton and canvass, besides exporting corn, limestone, iron ore, and slate. Ulverston is 18 miles from Lancaster, North-West.

UMBEL, } Fr. *umbelle*; from Lat. *um-*
UMBELL'IFEROUS. } *bella*. See the Quotations from Miller.

An *umbella* is the extremity of a stalk or branch, divided into several pedicles or rays, beginning from the same point, and open'd in such a manner as to form an inverted cone.

Miller in v. Umbella.

Umbelliferous plants are such whose flowers are produced in an *umbel*, on the top of the stalks, where they in some manner represent an umbrella. *Id. Ib.*

The flowers are very like to the *Colutea Barbæ Jovis folio flore coccineo Breynii*; of the same scarlet colour, with a large deep purple spot in the vexillum, but much bigger, coming all from the same point after the manner of an *umbel*.

Dampier. Voyages, vol. iii. p. 160.

UMBELLULARIA, in *Zoology*, a genus of *Floating Polyps*.

Generic character. Body free, consisting of a very long simple stem, with polypiferous apex; its axis bony, inarticulate, tetragonal, and covered with a fleshy mem-

UMBEL-
LULA-
RIA.
—
UMBILI-
CAL.

brane; polyps very large, collected in a sort of tuft, each having eight ciliated tentacles.

This genus is distinguished from *Pennatula* by the terminal instead of lateral arrangement of its polyps, and from *Encrinus* by its axis being inarticulate. It is supposed to live in the depths of the sea, but is able to raise itself to the surface, and its motions are believed to be effected by the variation of the bulk of the membrane by which its web is covered. The type of the genus is *Pennatula Encrinus*, Lin.

U'MBER, } *Umbra* is a dark yellow earth, brought

U'MBERED. } from Umbria, in Italy, which being mixed with water, produces such a dusky yellow colour as the gleam of fire by night gives to the countenance. Malone. But the verb adjective in Shakspeare and Pope may mean—shaded; and Steevens produces the two following instances of *Umbra*, *n.* "Under the *umbre* and shadow of King Edward." Caxton. Tully on Old Age—"Under the *umbre* of veryte." The Castell of Labour. And Fr. *ombre* or *umbre*, is umbred or shadowed (a term in blazonry). Cotgrave.

CEL. I'll put my selfe in poore and meane attire,
And with a kinde of *umber* smirch my face.

Shakspeare. *As You Like It*, fol. 187.

Good faith, now, she does blame you extremely, and says
You swore, and told her you had taken the pains
To dye your beard, and *umbre* o'er your face,
Borrowed a suit, and ruff, all for her love;
And then did nothing.

Ben Jonson. *The Alchemist*, act v. sc. 3.

Fire answers fire, and through their paly flames
Each battaile sees the others *umber'd* face.

Shakspeare. *Hen. V.* Chorus 4.

Also being applied as a cataplasme with oyle rosat and milke, it is a *umbretarie* medicine.

Holland. *Plinie*, book xxi. ch. xxix.

Take them out and wash them, they shall still retain their first scent, true Spanish. Theres *ambre* in the *umbre*.

Ben Jonson. *Cynthia's Revels*, act v. sc. 1.

MIR. What a purblinde puppy was I; now I remember him,
All the whole cast on's face, though 'twere *umber'd*,
And mask'd with patches.

Beaumont and Fletcher. *The Wild Goose Chase*, act iii.

Umbra is very sensible and earthy; there is nothing but pure black which can dispute with it.

Dryden on *Painting*, sec. 354.

Full fifty guards each flaming pile attend
Whose *umber'd* arms, by fits, thick flashes send.

Pope. *Homer. Iliad*, book viii.

UMB'ILICAL, } Fr. *umbilical*; It. *umbilico*; Lat.
U'MBLE, or } *umbilicus*, from Gr. *υμφαλικος*, *υμ-*
H'UMBLE, *n.* } *φαλος*, for *ομφαλος*, *media cujus-*
que rei pars, the middle part of any thing. Vossius.

Of or pertaining to the navel.

The French *numbles* d'un cerf; which Cotgrave renders the *numbles* of a stag, Skinner knows not whether from the Lat. *umbilicus*. Lye refers to the A. S. *Thumle*, which Somner interprets;

The bowells, the inwards, the intralls, the *umbles*.

The vessels whereof it [the navel] consisteth, are the *umbilical* vein, which is a branch of the porta, and implanted in the liver of the infant.

Sir Thomas Brown. *Vulgar Errours*, book v. ch. v. p. 291.

But I am obliged to leave this important subject, without telling whose quarters are sever'd, who has the *humbles*, who the haunch, and who the legs of the last stag, that was pull'd down.

Tatler. No. 76.

The liver is fastened in the body by two ligaments; the first, which is large and strong, comes from the covering of the diaphragm, and penetrates the substance of the liver; the second is the *umbilical* vein; which, after birth, degenerates into a ligament.

Paley. *Natural Theology*, ch. xi. p. 168.

UMBILICUS, in *Botany*, a genus so called by De Candolle, from *umbilicus*, the navel, on account of the hollow leaves of some of the species. It belongs to the class *Decandria*, order *Pentagynia*, and the natural family of *Crassulaceæ*. Generic character: calyx five-parted; corolla gamopetalous, five-cleft; lobes ovate, acute, erect, about the length of the tube; stamens ten, inserted in the corolla; scales five, obtuse; carpels five, attenuated at their apices; styles subulate.

Composed of herbs indigenous to the South of Europe, Syria, and Caucasus; the leaves are rosulate or alternate, quite entire, or a little toothed; flowers white or yellow, disposed in branched or simple terminal racemes, never in cymes; there are several species, two of which are natives of Britain, the Common Navel-Wort, *Umbilicus pendulinus*, or *Cotyledon Umbilicus*, and the Yellow Navel-Wort, *Umbilicus erectus*, or *Cotyledon lutea*. The genus has been separated from *Cotyledon*. The species are divided into four sections, all of which would make good genera.

UMBILLICARIA, in *Botany*, a genus so named by Fée, from *umbilicus*, the navel, on account of the umbilicated fronds or thallus. It belongs to the class *Cryptogamia*, order *Lichenes*. Generic character: thallus foliaceous, membranous, pustuled, fixed by the centre, peltate; apothecia orbicular, rather concave, adnate, covered by a black membrane, the disk at length tubercled, with a border of its own substance.

Only a solitary British species is known of this genus; a native of various parts of England, Scotland, and the South of Ireland on rocks, but not very common. It is a greenish-grey lichen, blackish on the margins, and bears copious tufts of black hairs; underneath it is of a brownish-grey colour.

Fr. *ombrage*, *ombrager*, *ombrageux*, *ombrière*, *ombrelle*; It. *ombreggiare*, *ombrella*, *ombratile*. From the Lat. *umbra*, a shade. See Vossius.

A shade, a shadow, a skreen, a cover; any thing casting a shade or shadow, or gloom, overshadowing, obscuring, clouding; and hence applied, to a

gloomy, lurking suspicion, a suspicion of an intended offence or affront; pique, offence,—

Umbratile, shadowy.

Umbriere, an *umbre* or umbrella; a shade or skreen, that part of the helmet that skreens or covers the face.

It is also evident that Saint Peter did not carry himself so as to give the least overture or *umbrage* to make any one suspect he had any such pre-eminence.

Taylor. *Polemical Discourses*, fol. 310. *A Dissuasive from Popery*, part i. sec. 8.

O let me yet the thought of those past times renew,
When as that woody kind, in our *umbrageous* wild,
Whence every living thing save only they exil'd,
In this their world of waste, the sovereign empire sway'd.

Drayton. *Poly-olbion*, song 22.

But lest you should mistake, as some others have been apt to do here, in the present constitution of the court, which is very *ombragious*.

Reliquiæ Wottonianæ, p. 430

The exceeding *umbragiousness* of this tree he compareth to the dark and shadowed life of man, thro' which the sun of justice being not able to pierce, we have all remained in the shadow of death, till it pleased Christ to climb the tree of the cross for our enlightning and redemption.

Raleigh. *History of the World*, book i. ch. iv. sec. 3, fol. 41

UMBILI-
CUS.

UM-
BRAGE.

UM-BRAGE. So I can see whole volumes dispatched by the *umbratical* doctors on all sides: but draw these forth into the just lists; let them appear *sub dio*, and they are changed with the place, like bodies bred in the shade. Ben Jonson. *Discoveries*, p. 167.

For shadows have their figure, motion,
And their *umbratil* action, from the real
Posture and motion of the body's act.

Id. *The Magnetic Lady*, act iii. sc. 3.

He was to wrestle with a queen's declining or rather with her very setting age, which is commonly even of itself the more *umbratious* and apprehensive, as for the most part all horizons are charged with certain vapours towards their evening.

Reliquiæ Wottonianæ, p. 167.

I saw in the court of Spain once,
A lady fall in the king's sight, along;
And there she lay, flat spread, as an *umbrella*.

Ben Jonson. *The Devil is an Ass*, act iv.

ALTEA. Are you at ease now, is your heart at rest,
Now you have got a shadow, an *umbrella*
To keep the scorching world's opinion
From your fair credit.

Beaumont and Fletcher. *Rule a Wife and have a Wife*, act iii.

But the braue mayd would not disarmed be,
But onely vented up her *umbriere*,
And so did let her goodly visage to appere.

Spenser. *Faerie Queene*, book iii. can. 1. stanza 42.

He at his entrance charg'd his powrefull speare
At Arthegall, in midst of his pride;
And therewith smote him on his *umbriere*
So sore, that tomling backe, he downe did slide
Ouer his horses taile about a stride.

Id. *Ib.* book iv. can. 4. stanza 44.

The like is observable in oyled paper, wherein the interstitial divisions being continued by the accession of oyl, it becometh more transparent, and admits the visible rayes with less *umbrosity*.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. i. p. 60.

Let Persian dames the *umbrella's* ribs display,
To guard their beauties from the sunny ray,
Or sweating slaves support the shady load
When eastern monarchs show their state abroad;
Britain in winter only knows its aid
To guard from chilly showers the walking maid.

Gay. *Trivia*, book i.

AUR. It will not be convenient to give him any *umbrage* by seeing me with another person; therefore I will go before.

Dryden. *An Evening's Love*, act iv.

The stealing shower is scarce to patter heard,
By such as wander through the forest walks,
Beneath th' *umbrageous* multitude of leaves.

Thomson. *Spring*.

However, all the sacrifices of old, instituted by God, we may with fuller confidence affirm to have been chiefly preparatory unto, and prefigurative of this most true and perfect sacrifice, by virtue whereof those *umbratich* representations (or insinuations) did obtain their substance, validity and effect.

Barrow. *Works*, vol. ii. fol. 386. *Sermon* 27.

Indeed, speaking in general, the creatures are but *umbratile* (if I may so speak) and arbitrary pictures of the great Creator.

Boyle. *Works*, vol. v. fol. 147. *Of the Veneration Man's Intellect owes to God*.

I had before given directions for an engine of several legs, that could contract or open itself like the top of an *umbrella*, in order to place the petticoat upon it, by which means I might take a leisurely survey of it.

The Tatler, No. 116.

Under this disposition, nothing could be more effectual to quicken his [the Roman magistrate] jealousy and resentment, than the charge of clandestine assemblies; of which, doubtless, the Romans were very jealous, as contrary to their fundamental laws, though not so extravagantly *umbrageous* as our critic's hypothesis obliges him to suppose.

Warburton. *Works*, vol. iv. p. 48. *The Divine Legation, Preface to Edition of 1758*.

But when Aurora, daughter of the day,
Look'd rosy forth, we thrust the threaten'd ship
For safety far within a deep recess
Umbrageous, whither oft the nymphs retir'd
For sport and for repose.

Cowper. *Homer. Odyssey*, book xii. v. 364.

And the soft quiet hamlet where he dwelt
Is one of that complexion which seems made
For those who their mortality have felt,
And sought a refuge from their hopes decay'd
In the deep *umbrage* of a green hill's shade.

Byron. *Childe Harold's Pilgrimage*, can. 4. stanza 32.

The leaves of this tree are also put to various uses; they thatch houses, and make baskets, cups, *umbrellas*, and tobacco-pipes.

Cook. *Voyages*, vol. ii. book iii. ch. ix. p. 256.

UMBRELLA, in *Zoology*, a genus of *Hydrobranchiate Gasteropodous Molluscs*.

Generic character. Body very thick, oval, and furnished with a dorsal shell; foot very large, smooth and flat beneath, every where projecting, cleft in front, and attenuated behind; head indistinct; mouth at the bottom of a funnel-shaped cavity in the anterior cleft of the foot; two pairs of tentacles, the upper posterior pair closely approximated, thick, short, truncated, and cleft throughout their whole length, the interior of the cleft filled with transverse folds; the anterior pair very delicate, broad, in shape of a cock's-comb, supported each by a pedicle on the sides of the mouth; branchial organs foliaceous, disposed in form of a long cord, occupying the whole of the anterior and right side of the groove of separation, between the foot and the mantle, and at its hinder end is the vent; shell exterior, orbicular, somewhat irregular, depressed, or quite flat, its upper surface scarcely distinguished by a very minute tip; edges sharp; internal surface slightly concave, and presenting a callous disc, indented centrally, and encircled with a smooth limb.

The examination of the Mollusc belonging to this shell has been made by Blainville, who, as is his usual practice, changed the name of the genus and applied to it that of *Gastroplox*. Two species are described, one from the Indian seas, *U. Indica*, Lam.; *Patella Umbellata*, Gmel.; and the other from the Mediterranean, *U. Mediterranea*, Lam.

UMBRINA, Cuv. In *Zoology*, a genus of animals belonging to the family *Sciænoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Muzzle little prominent; pores beneath the lower jaw; teeth very fine; opercules spined and dentated; two dorsal fins, of which the second is considerably the most extensive.

This genus has been separated by Cuvier from the *Sciænæ*.

U. Barbata, Cuv.; *Sciæna Cirrhosa*, Lin. This species often attains considerable size, and weighs as much as thirty pounds; it has one large and one small beard beneath the chin at the extremity of the lower jaw; the body and tail are compressed, the back and belly rounded; the scales wide, rhomboidal, and slightly toothed; its general colour is yellow, marked obliquely with stripes, which are blue towards their upper, and silvery towards their lower part; upon the extremity of the opercule a black spot; dorsal fins brown, and the second traversed longitudinally with two white stripes; pectoral, ventral, and caudal blackish; anal reddish. Is found in the Mediterranean, where it is called *ombrino*, as heretofore it was the *Umbra* of the ancients; and is also met with in the Indian seas. It feeds on sea-weed, and probably also on small fish; it spawns only in autumn, depositing its eggs among the sponges which grow near the coast.

U. Aurata, Cuv.; *Pogonathus Aur.*, Lacep. Is also a large fish, has a single beard at its chin, amid four well marked pores; its general colour is golden;

UM-BRAGE.
—
UM-BRINA.

UM-BRINA. ventral and anal fins whitish-yellow, the others brown. Is found in the Rio de la Plata.

UN.

Cuvier also includes in this genus Schneider's *Johnius Saxatilis*, and also the *Lualar-Katchelèe* and *Sarikulla*, described by Russell in his *Fishes of the Coromandel Coast*.

See Cuvier and Valenciennes, *Histoire des Poissons*.

U'MPIRE, } Skinner admires the ingenuity,
U'MPIRE, } but doubts the truth of Minsbew's
U'MPIRAGE, } etymology, from the Fr. *un pere*;
U'MPIRESHIP. } One who, like a father, composes strife, and conciliates peace. Blackstone cites an authority for each of his conjectures.

He is no indifferente *umpeere*, that firste diuideth offices equally bitweene twoo, and afterwarde alloteth bothe offices to one alone.

Jewel. A Replie, &c. part ii. fol. 312.

Perhaps ye wil referre the iudgement of doubtful maters to the Holy Ghoste. We refuse not the arbitrement and *umpiership* of the Holy Ghoste.

Id. Ib. fol. 63.

But one thing I am persuaded of, that no king of Spain, nor bishop of Rome, shall *umpire* or promote any beneficiary, or feodatory king, as they designed to do, even when the Scots queen lived, whom they pretended to cherish.

Bacon. Works, vol. ii. fol. 39. Obs. on a Libel.

I am appealed to by both; an unmeet judge, considering my so deep engagements. But, if my *umperage* may stand, I award an eternall silence to both parts.

Hall. Works, vol. ii. fol. 103. The Reconciliation. To Mr. H. Cholmley.

Therefore sending for them [he] persuaded them to live quietly and peaceably, and to put their questions to reference or *umpirage*, and in it offer'd his own assistance; but the scholars laugh'd at his confident offer to be a moderator in things he understood no more than his spurs did.

Taylor. Rule of Conscience, book iii. ch. iii. fol. 581.

As to all matters of right, the subject stands upon the same ground with his prince, so as to be allowed legally to contest his right with him in his own courts, they being free and open; and judges appointed to *umpire* the matter in contest between them, and to decide where the right lies.

South. Sermon 2, vol. vi. p. 59.

Take no man's word before thine own sense, in what concerns thine own case and character, is an advice deserving our regard and practice: for a man, in questions of this kind, is able to be a skillful *umpire* between himself and others.

Barrow. Sermon 12, vol. iii. p. 358.

If they [the arbitrators] do not agree, it is usual to add, that another person be called in as *umpire*, (*imperator* or *impar*.) to whose sole judgment it is then referred.

Blackstone, book iii. ch. i.

UN. Goth., A. S. and Ger. *Un*; Dut. *On*; Sw. *O*; Dan. *U*. In A. S. it is also written *On*. In Lat. *In*, and in English both *in* and *un*.

An, *en*, *in*, *on*, mean *one*; to *one*, is—to *un-ite*, to join; and hence the augmenting force of *en*, *in*, or *on* (*collectivè unus*.) See EN. But whence its negative force? This question, an attempt must be made to answer.

One (emphatically) means *one*, and no more.

Al-one, is—*one* being *all*; *one*—severed, separated, apart from other, *one*, or more, (numerically.) To *one* is, thus—to be, or cause to be, *al-one*, sole; to sever or separate from all other; to deprive, to disjoin, from all other. We have then thus—

One, *separativè unus*, (opposed to *one*, *collectivè unus*.) denoting, in composition—a separation, a privation, a negation, of the positive meaning of the word to which it is prefixed.

This opposition is not confined to *On*, *en*, *in*; it is found in *dis*; in *dis-sever*,—*dis*, augments the force;

in *dis-unite*,—*dis*, negatives or reverses the meaning. See also To TWIN.

UN.

Un and *in* (neg.) were in many words, and in some still are, used indiscriminately. *Un* has, in numerous instances, most especially in words of Latin origin, given place to *in* (*il*, *im*, *ir*). Our old translators of the Bible, and authors long after them, wrote *un-possible*, and our common people still so speak. Wiclif, translating from the Latin Vulgate, *im-possible*, perhaps introduced *im-possible* into English: but the two modes, *un* and *im*, may be supported by concurrent testimony from Chaucer to Bishop Hall; perhaps still lower. Words with this prefix may be divided into the three following classes.

1. Those which are Privative. 2. Negative. 3. Those which by consequence have obtained a positive signification. 1. The verbs, *e. g.* to *un-arm*, to *un-close*, to *un-cover*, are privative; they express a positive act of privation, and are equivalent in meaning to—to *dis-arm*, to *dis-close*, to *dis-cover*, though they differ in application: of these we have not a great number.

2. The adjective and participles—*un-absurd*, *un-abridged*, &c. &c. are purely negative: they express no act, no thing done; merely the negation or absence of that which is denoted by the more simple terms, *absurd*, *abridged*, to which *un*, is written as a prefix. In such words *un*, has the force of *not*, and may be employed almost as universally. Care ought, however, to be taken that such monsters as *un-walkative*, *un-fattable*, *un-amorousness*, which Bishop Wilkins introduces into his pages, should not be obtruded.

3. Those which by consequence have obtained a positive signification; these are but few: thus *ungraceful*, *unhappy*, import not merely the absence of *gracefulness* or of *happiness*, but the presence of the contrary; *sc.* of awkwardness, of ill-hap, misfortune, distress: these, and the first class (the privative) are placed in one list, and are explained; the second class, the negative (purely so) are placed in another list, and are not explained; it is quite unnecessary to do so. To those which seemed remarkable for antiquity, or novelty, or rarity, &c., the name of the author, by whom used, is subjoined.

A few instances will be found of *Un*, from A. S. *On*, *intensivè*, as *un-bide*, *un-less*, *un-rip*, (*q. v.*) &c.

In Ger., D., &c. these compounds are scanty in comparison with our own.

UN-A'BLE, } We write the *adj.* *un-able*, but the
UNABLENESS, } noun *In*, *sc.* Inability, *q. v.*
UNABI'LITY.

His nose of and his lypes both
He cutte, for he wolde him lothe
Unto the people, and make *unable*.

Gower. Conf. Am. book vi.

For weale I [R. II.] wote, and knowlege, and deme myselfe to
be and haue ben vnsufficyent and *unable*, and also vnprofytable.
Fabyan. Chronycle, Anno 1399.

They, by aduyce of the nobles of the lande, consyderynge the
unableness of Hilderich the kynge, that he was vnsufficient to
rule so great a charge, dyuydid y^e lond of Fraunce atwene them.
Id. Ib.

Least I mighte haue semed to seeke excuse of slouthfulness, or
to refuse paines of wilfulness, rather than to defend my selfe by
unableness: I agreed to their aduice.

Goldinge. Caesar, Ep. Ded.

The harme that heretiques did, they did it vnto such who were
unable to discern betweene sound and deceitfull reasoning.
Hooker. Ecclesiasticall Politie, book iii. sec. 8.

Christ urg'd it as wherewith to justify himself, that he preacht
in public; yet writing is more public than preaching; and more
easy to refutation, if need be, there being so many whose business
and profession meerly it is to be the champions of truth, which if
they neglect, what can be imputed but their sloth or *unability*?

Milton. For the Liberty of Unlicens'd Printing.

UN-ACCE'PTABLE, } Usually applied, when that
UNACCE'PTABLENESS, } which is, or is to be, received,
UNACCE'PTED. } or the motive of the offerer,
is not pleasing, agreeable, or approved of.

[There] were made several private acts, never printed, which
may not be unuseful nor *unacceptable* to mention.

Strype. Ecclesiastical Memoirs. Edward VI., Anno 1549.

To the author and God of our nature, how shall any operation
proceeding in naturall sort, be in that respect *unacceptable*?

Hooker. Ecclesiasticall Politie, book ii. sec. 4.

This disappointment of Pizarro, considering our great debility,
was no *unacceptable* intelligence.

Anson. Voyages, book ii. ch. iv

Restless I followed this obdurate maid
(Swift are the steps that love and anger tread);
By turns put on the suppliant and the lord;
Threaten'd this moment, and the next implor'd;
Offer'd again the *unaccepted* wreath,
And choice of happy love, or instant death.

Prior. Solomon, book ii. *Pleasure.*

UN.
UN-
ACCEPT-
ABLE.

UN-AC-
COUNT-
ABLE.UN-ACCO'UNTABLE, }
UNACCO'UNTABLY. }Countless or uncount-
able, (q. v.) that cannot
be reckoned, calculated, computed, solved, or explained.UNANI-
MOUS.Omission of some of these particulars is pretty strange, and
unaccountable, and concludes our ignorance of the reasons and
menages of Providence; but I suppose nothing else.Glanvill. *Essay* 6.Shew him, by the help of glasses, still more and more of these
fixt lights, and beget in him an apprehension of their *unaccountable*
numbers.Wollaston. *Religion of Nature*, sec. 5The which are alleged, not with intent to imply that God ever
acteth *unaccountably*, or without highest reason, but that some-
times his methods of acting are not fit subjects of our conception
or discussion.Barrow, vol. iii. *Sermon* 23.Our messenger soon returned with an account, that the order
had been written some days, but by an *unaccountable* negligence
not sent.Cook. *First Voyage*, book i. ch. ii.

UN-A'CTED,

UNA'CTIVE,

UNA'CTIVENESS,

UNA'CTUATED.

Unacted: not acted or done,
nor performed, or executed.Now more usually *inactive* and
inactivity, q. v.

Unactuated,—not moved to action, not acted upon.

But for the most part they are very unwieldy and *unactive* with-
all.Hakluyt. *Voyages*, vol. i. p. 496.

Must I

For some offence *unacted* or unknown,
Be tortured thus;—under the frigid zone
Of your contempt.Jordan. *Poems*.That these more curious times they might divorce
From the opinion they are link'd unto,
Of our disable and *unactive* force.Daniel. *Musophilus*.[A religion which in appearance was] teaching peace and *un-
activeness*, and making the souldiers arms in a manner useless,
and untying their military girdle.Taylor. *Rule of Conscience*, book i. ch. iv.The peripatetick matter is a pure *unactuated* power; and this
conceited vacuum a mere receptibility.Glanvill. *Vanity of Dogmatizing*, ch. xvi.That being, which has not the faculties or opportunity neces-
sary to the doing of any thing, is in respect of that thing a being
utterly *unactive*, no agent at all, and therefore as to that act
nothing at all.Wollaston. *Religion of Nature*, sec. 4.Under *unactive* and jealous princes the Roman legates seldom
dared to push the advantages they had gained far enough to pro-
duce a dangerous reputation.Burke. *Abridgment of English History*, book i. ch. iii.UN-ADE'PT, one who is unskilful, inexpert; a
novice.I'll point out to thee
Its various lessons; some that may surprize
An *un-adept* in mysteries of night.Young. *Night* 9.UNALIST. Opposed (by Knox) to pluralists in
the church, or holders of more benefices than one.I do not deny but there are pluralists of great ecclesiastical
merit; but I do deny that in general *pluralists* have greater merit
than *unalists*, or than many in orders who have no living at all;
or that pluralists in general, become pluralists for their ecclesias-
tical merit.Knox. *Spirit of Despotism*, sec. 33.

UNA'NIMOUS,

UNA'NIMOUSLY,

UNANI'MITY.

Fr. *unanime*; It. *unànime*;
Sp. *unanime*; Lat. *unanimis*,
(*unus, animus*,) having one mind.Having one or the same mind or will, opinion or de-
sire; consenting, according.

Unanimieth—is a coinage of Warner

Set many wits withouten variance,
To one accord and *unanimittee*.Hakluyt. *Voyages*, vol. i. p. 206.The reports were no longer uncertain, but the universall and
unanimous belief of all men carried it for certain truth, that a
most invincible armada was rigged and prepared in Spain against
England.Camden. *History of Queen Elizabeth*, Anno 1588.The thing that these men dread, is, lest it be called bread and
Christ's body too, as we affirm it *unanimously* to be.Taylor. *Of the Real Presence*, sec. 3.Sure I am I had peace and comfort at home, in that happy
sense of that generall *unanimity*, and loving correspondence of my
clergy, till the last yeare.Hall. *Specialties, &c. of his Life*.

With marriage, that preferreth vs

And stayes vs in content

Unanimieth weale or woe

As either vs is sent.

Warner. *Albion's England*, book ii. ch. 68.But whoever were the persons that first thought of the sere-
nade, the authors of all countries are *unanimous* in ascribing the
invention to Italy.

Tatler. No. 222.

All senses and faculties of man *unanimously* rejoice in those
emblems of peace, order, harmony, and proportion.Barrow, vol. i. *Sermon* 30.This conduct obliged every one to observe the strictest caution
in any affair of general concern, and it tended to keep up the
exactest harmony and *unanimity* in the several churches.Waterland. *Works*, vol. v. p. 226.

And his control the Taphian race, renown'd

For naval skill, *unanimous* obey.Cowper. *Homer. Odyssey*, book i.They have proceeded from the beginning to this day with great
unanimity in all their affairs.Secker, vol. v. *Sermon* 6.UN-APPA'REL, v. To divest, to unclothe; (met.)
to divest of the cloak of prejudice or ignorance.In Peru, though they were *unappareled* people, according to the
clime, and had some customs very barbarous, yet the government
of the Incas had many parts of humanity and civility.Bacon. *Of an Holy War*.

Of goodness grown that I can study thee;

And by these meditations refin'd,

Can *unapparel* and enlarge my mind.Donne. *Obsequies on Lord Harrington*.

UN-A'RTFUL,

UNA'RTFULLY,

UNARTIFI'CIAL,

UNARTIFI'CIALLY.

Artless:—skilless, rude, sim-
ple; sincere, natural.Unarted—so Feltham renders
—"Sine arte mensa." See IN-

ARTIFICIAL.

The stock of his piece is not made calieuer-wise, but with a
plaine and strait stocke (somewhat like a fouling piece) the
barrel is rudely and *unartificially* made, very heauie, yet shooteth
but a very small bullet.Hakluyt. *Voyages*, vol. i. p. 484.But the material being only turf, and by the rude multitude
unartificially built up without better direction, avail'd them little.Milton. *History of Britain*, book iii.A house thine own, and pleasant soyl,
No strife, small state, a mind at peace,
Free strength, and limbs free from disease,
Wise innocence, friends like and good,
Unarted meat, kind neighbourhood,
No drunken rest, from cares yet free.Feltham, part i. *Res.* 99.I'm sure *unartful* truth lies open
In her mind, as crystal streams their sandy bottom shew.Dryden. *Tempest*, act iii.A cheerful sweetness in his looks he has,
And innocence *unartful* in his face.Congreve. *Juvenal. Satire* 11.Their chiefs went to battle in chariots, not *unartfully* contrived,
nor unskilfully managed.Burke. *An Abridgment of English History*, book i. ch. ii.They have levelled and crushed together all the orders which
they found, even under the coarse *unartificial* arrangement of the
monarchy.Id. *On the French Revolution*.

UN-BACKED. **UN-BA'CKED**, not moved back or backwards; not mounted on the back; not assisted, supported, upheld, encouraged.

UN-BEGUN.

As when a smith and 's man (lame Vulcan's fellowes)
Call'd from the anvil or the buffing bellows,
To clap a well-wrought shoe (for more than pay)
Upon a stubborn nagge of Galloway;
Or *unback'd* jennet, or a Flanders mare,
That at the forge stand snuffing of the ayre.

Browne. Britannia's Pastorals, book i.

First, he for whom thou dost this villany,
Though pleas'd therewith, will not avouch thy fact,
But let the weight of thine own infamy,
Fall on thee unsupported, and *unback'd*.

Daniel. Civil Wars, book iii.

UN-BARK, v. To go out of a bark, *i. e.* a stout or strong vessel.

This being past, the next day after our arriual in the sayd port, we did *unbarke* our selues and went on lande vp to the citie or head towne of the great Canaria, where we remained 18. or 20. dayes.

Hakluyt. Voyages, vol. iii. p. 448.

UN-BARK, v. To strip off the bark, *i. e.* the coat defending or protecting the tree.

It hath been observed, that a branch of a tree, being *unbarked* some space at the bottome, and so set into the ground, hath growen.

Bacon. Naturall Historie, sec. 654.

UN-BAY, v. To free from restraint.

I ought now to loose the reins of my affections, to *unbay* the current of my passions, and live on without boundary or measure.

Norris. Miscellanies.

UN-BEAST, v. To divest of the form, or qualities of a beast.

Thus we the guiltie scourge! Thus thus we our
Revenge advance! such, and so great our powre!
Let him *unbeast* the beast (as heretofore
Phorenis) and her wonten shape restore.

Sandys. Ovid. Metamorphoses, book ii.

UN-BED, v. To move out of bed.

Eels *unbed* themselves, and stir at the noise of thunder.

Walton. Angler.

UN-BEFOOL, v. To restore from the state or condition of a fool; of one fooled or gulled.

A man's way out of error, lies thro' the paths of conviction; and he that recovers a fool must first *unbefool* him to that degree, to persuade him of his folly.

South, vol. vii. *Sermon 8*.

UN-BEGE'T, v. An hyperbole of Beaumont and Fletcher, and also of Dryden.

UN-BEGUI'LE, v. To free from deception, from wily or false allurements or persuasions.

And to the intent thou liue *unbeguiled*, I wyll tell the a secrete.

Golden Boke, ch. 42.

Come, come away from wrong, from craft, from toil,
Possess thine own with right, with truth, with peace;
Break from these snares, thy judgment *unbeguile*,
Free thine own torment, and my grief release.

Daniel. Letter from Octavia to Marcus Antonius.

That he might *unbeguile* and win them, he designed to write a deliberate and sober treatise on the church's power to make canons for the use of ceremonies, and by law to impose an obedience to them, as upon her children.

Walton. Life of Hooker.

Blue-ey'd Minerva free preserves her heart,
A virgin *unbeguil'd* by Cupid's art;
In shining arms the martial maid delights,
O'er war presides, and well-disputed fights.

Congreve. Homer. Hymn to Venus.

UN-BEGU'N. See the Quotation from Gower in *v. BEGIN*.

UN-BELIEF,

UNBELIE'VE, v.

UNBELIE'VE, v.

UNBELIE'VE, v.

UNBELIE'VE, v.

UNBELIE'VE, v.

life; not to think right, not to credit or give credit to, not to place faith or confidence in, or deem trustworthy.

See **DISBELIEVE**.

Unbelief: may be explained—

The mere absence of belief; before or without knowledge; Disbelief, the denial after knowledge or inquiry.

And he did not there many vertues, for the *unbeleve* of hem.

Wiclif. Matthew, ch. xiii.

And he did not many miracles there, for their *unbeleves* sake.

Bible. Anno 1551. Ib.

Jhesus answeride and seide, a thou generacioun *unbeleeful* and weiward, how longe schal I be with you, how longe schal I suffre you? bring ye him hidur to me.

Wiclif. Matthew, ch. xvii.

He that bileueth in the sone, hath euerlastinge lyf: but he that is *unbeleueful* to the sone, schal not se euerlastinge lyf; but the wraththe of God dwellith in him.

Id. Jon. ch. iii.

Wee saie also, that the minister doth execute the authoritie of binding and shutting, as often as he shutteth vp the gate of the kingdome of heauen against *unbeleueing* and stubborn persons, denouncing vnto them Gods vengeaunce, and euerlasting punishment.

Jewel. Replie vnto M. Hardinge, p. 14.

For here was made a foreshewe of the church, that shoulde bee gathered together of the Gentiles, because the synagogue dyd through her *unbeliefe*, repell the ghospell.

Udal. Marke, ch. iii.

This to almighty God hath so been thought good, to thentēt that al creatures maie vnderstand, nothing to be so *unbelieuable* among mē, which the power of God is not able to bring to effecte, if it be his pleasure.

Id. Luke, ch. i.

And thoughe it semed to be a thing *unbeleuable* that was promysed, yet bothe Abraham *beleued*, and God performed.

Id. Dedis, ch. vii.

Doest thou *beleue* so, said the Sophie vnto me? Yea that I do, said I: Oh thou *unbeleueuer*, said he, we haue no neede to haue friendship with the *unbeleueuers*, and so willed me to depart.

Hakluyt. Voyages, vol. i. p. 349.

And I, as did Æneas,
Will on my back, spite of the Myrmidons,
Carry this warlike lady, and through seas
Unknown, and *unbeliev'd*, seek out a land,
Where like a race of noble Amazons
We'll root ourselves and to our endless glory
Live, and despise base men.

Beaumont and Fletcher. The Woman's Prize, act ii. sc. 2.

Which *unbeleueing* man, that is not mov'd
To credit aught, if not by reason prov'd,
And tyes the over-working powre to doe
Nought otherwise than nature reacheth to,
Held as most fabulous.

Browne. Britannia's Pastorals, book ii. s. 4.

Many heare the bookes of God, and *beleue* them not. Howbeit, their *unbeleefe* in that case we may not impute vnto any weakness or vnsufficiency in the meanes which is vsed towards them, but to the wilfull bent of their obstinate hearts against it.

Hooker. Ecclesiasticall Politie, book v. sec. 22.

Religion did first take place in cities, and in that respect was a cause why the name of Pagans, which properly signifieth country people, came to be vsed in common speech for the same that infidels and *unbeleueuers* were.

Id. Ib. sec. 80.

I scarce can think him such a worthless thing,
Unless he praise some monster of a king;
Or virtue, or religion turn to sport,
To please a lewd, or *unbelieving* court.

Pope. Imit. of Horace, book ii. *Ep.* 1.

For the mind doth, by every degree of affected *unbelief*, contract more and more of a general indisposition towards believing.

Atterbury, vol. ii. *Sermon 2*.

UN-BELIEF.

BELIEF.
UN-
BIND.

And it was his settled opinion, that the advancement and increase of natural knowledge, would always be of service to the cause and interest of true religion, in opposition to atheists and unbelievers of all sorts.

Clarke. *On the Attributes. Preface.*

Him answer'd, then, the hero, toil-inured :
My friend! since hopeless of thy lord's return,
Thou art thus resolute in *unbelief*,
I will not merely say, but I will swear
Most truly, that Ulysses comes again.

Cowper. *Homer. Odyssey, book xiv.*

UN-BESEE'M, v. } Ger. *ungezeimend*; to look
UNBESEE'MINGLY, } or appear not, *sc.* like itself;
UNBESEE'MINGNESS. } as it ought to look or appear,
i. e. not to look or appear or be, apt, becoming, decent,
convenient, suitable, appropriate.

For loue, whiche is *vnbeseein*
Of all reason, as men sein,
Through sotie, and through nicetee
Of his voluptuositee.

Gower. *Conf. Am. book viii.*

For he considered, that king John had resolved vpon this point onelie in his heat and furie (which moueth men to vndertake manie an inconuenient enterprise, *vnbeseeing* the person of a common man, much more reprochfull to a prince.)

Holinshed. *Chronicles, King John, Anno 1202.*

Whereas Martin has dedicated his book to Queen Mary, then a virgin, Ponet shewed his uncivil, rude language, *vnbeseeing* the modesty of a virgin to see or hear.

Strype. *Eccl. Mem. Queen Mary, Anno 1556.*

Against the disguise, she had pleaded the *vnbeseeingness* for her person and state; against the journey, the perils of so long and solitary a walk.

Hall. *Cont. Jeroboam's Wife.*

Writing to the dispersed Jews, he calls sinful lusts the will of the Gentiles, as having least control of contrary light in them; and yet the Jews walked in the same, though they had the law as a light and rule for the avoiding of them; and implies, that these lusts were *vnbeseeing* even their former condition as Jews; but much more unsuitable to them, as now, Christians.

Leighton. *Com. on 1 Peter, ch. iv.*

Equity doth exact, and gratitude requireth, and all reason dictateth, that we should be content; or that in being discontented we behaue ourselves very *vnbeseeingly* and unworthily, are very unjust, very ingratefull, and very foolish toward him.

Barrow, vol. iii. *Sermon 6.*

Ah! may'st thou ever be what now thou art,
Nor *vnbesee* the promise of thy spring,
As fair in form, as warm yet pure in heart.

Byron. *To Ianthe.*

UN-BIDE, A. S. *on-bidan, manere*; to stay or remain, or continue.

And the kindly stede of this blisse, is in soch wil medled to *vnvide*, and nedes in that it shuld haue his kindly beyng.

Chaucer. *Testament of Loue, book iii.*

But yet I say, thilke blisse is kindly good, and his kindly place in that will to *vnvide*.

Id. *Ib.*

UN-BIND, v. } D. *ontbinden*; to loose, *sc.* the tie
UNBO'UND. } or fastening; to free, to deliver, from
bond, fastening or confinement; to loose, to set at liberty.

Sore hym of thogte the erle's deth. ac in other half he fonde
Joye in hys herte, for the Contasse of spoushed was *vnbonde*.

R. Gloucester, p. 161.

Tho was he al clene louered, to bynde and *vnbynde*.

Id. p. 318.

Ich parceuede of the power. that Peter hadde to kepe
To bynden and *vnbynden*. as the boke telleth.

Piers Ploughman, p. 7.

Thus haveth Peers power. beo hus pardon payed
To bynde and *vnbynde*. bothe here and elleswer.

Id. p. 376.

But now we ben *unboundun* fro the lawe of deeth in which we weren holdun, so that we seruen in newenesse of spyryt and not in coldnesse of lettre.

Wiclif. *Romaynes, ch. vii.*

Thou art boundun to a wyf, nyle thou seke *unbynding*: thou art *unboundun* fro a wyf, nyle thou seke a wyf.

Wiclif. 1 *Corynth. ch. vii.*

And anon he that was deed, cam out, *boundun* the hondis and feet with *bondis*, and hise face *boundun* with a sudarye, and Jhesus seith to hem, *unbinde* ye him, and suffre ye him to go forth.

Id. *Jon. ch. xi.*

It can make within a little stound
Of sicke folke, hole, fresh, and sound,
And of hole he can make seeke,
He can bind and *vnbinden* eke
That he woll have bounden or *vnbound*.

Chaucer. *Cuckow and the Nighingale.*

For the lawe saith: ther is nothing so good by way of kinde, as a thing to be *unbounde* by him that it was ybounde.

Id. *The Tale of Melibeus.*

Were I *unbounden*, all so mote I the,
I wolde never eft comen in the snare.

Id. *The Marchantes Prologue, v. 8103.*

It is a much lesse thing also, to beleue our self to be bounden to doe a thinge of necessity, w'tout authoritye of scripture, the to think oure self without scripture, *vnbounden* and in no necessitie to doe y^e thying which we fynde commaunded in scripture.

Sir T. More. *Workes, p. 518.*

But she resolv'd no remedy to finde,
Nor better cheare to shew in misery,
Till fortune would her captiue bonds *vnbinde*,
Her sicknesse was not of the body, but the minde.

Spenser. *Faerie Queene, book vi. can. 11.*

So yt by this place ye see pūed by ye plain wordes of Saint Peter, that Christ at his resurreccio dyd lose and *vnbind* paines in hell.

Sir T. More. *Workes, p. 320.*

In vain, though by thir powerful art they binde
Volatil Hermes, and call up *unbound*
In various shapes old Proteus from the sea
Draind through a limbec to his native forme.

Milton. *Paradise Lost, book iii.*

The next morning the cloath being rubb'd off, I *unbound* it, and found the worm broken off, and the hole quite healed up.

Dampier. *Voyages, Anno 1676.*

This riband bind beneath thy breast,
Celestial texture. Thenceforth ev'ry fear
Of death dismiss, and, laying once thy hands
On the firm continent, *unbind* the zone,
Which thou shalt cast far distant from the shore
Into the deep.

Cowper. *Homer. Odyssey, book v.*

UN-BISHOP, v. To be without, to divest of, the rank or character of *bishop*.

For, I must profess that I cannot look upon Titus as so far *unbishop'd* yet, but that he still exhibits to us all the essentials of that jurisdiction, which to this day is claimed for Episcopal.

South, vol. i. *Sermon 5.*

UN-BLE'MISHED, } Blameless, stainless, spot-
UNBLE'MISHABLE, } less, having no blame or cause
UNBLE'MISHING. } of blame; no stain or spot,
to sully, hurt or tarnish—the original soundness, fairness or purity.

The next day after, being the 4 of July, the LL. general caused the town of Cadiz to be set on fire, and razed and defaced so much as they could, the faire cathedral church, and the religious houses only being spared, and left *vnblemished*.

Hakluyt. *Voyages, vol. i. p. 618.*

Said Arthegall; what foule disgrace is this,
To so faire lady, as yee seeme in sight,
To blot your beauty, that *vnblemisht* is,
With so foule blame, as breach of faith once plight,
Or change of loue for any world's delight?

Spenser. *Faerie Queene, book v. can. 11.*

That undeflour'd and *unblemishable* simplicity of the ghospel, not she her self, for that could never be, but a false-whited, a lawny resemblance of her, like that air-born Helena in the fables, made by the sorcery of prelates, instead of calling her disciples from the receipt of custom, is now turn'd publican herself.

Milton. *Reason of Church Government book ii. ch. iii.*

UN-
BIND.

UN-BLE-
MISHED

UN-BLE- From charcoales blown I know sparkes leap apace, but though
MISHED. straw-houses may enkindle by them; yet upon solid coverings
they without danger dye; or if at most they leave a mote behind,
it is but dead, and with the next fair wind *unblemishing* blowes
away. *Feltham. Sermon on Luke, xiv. 20.*

UN-
BOSOM.

With these, at eve,
They cheerful loaded to their tents repair;
Where, all day long in useful care employ'd,
Their kind *unblemish'd* wives the fire prepare.

Thomson. Winter.

But then every one understood this to be a mark of the *unblemished* integrity of that illustrious body, amidst a very general corruption. *Warburton. Divine Legation, (ed. 1742.)*

UN-BODY, *v.* To free, loose, part or depart—from body, or corporal, or material substance.

Emong all this, the fine of the ieopardie
Of Hector gan approachen wonder blive,
The fate would his soule should *vnbodye*,
And shapen had a meane it out to drive.

Chaucer. Troilus and Creseide, book v.

These diseases mowen well by duresse of sorowe, make my life to *vnbodye*, and so for to die.

Id. Testament of Loue, book i.

I neuer founde among them al one reason yet, wherby me thought it püed otherwise, but y^t God may make the bodyly corporall water, able to worke vpon the *vnbodyed* incorporiall soule.

Sir Thomas More. Workes, p. 387.

Herevpon followed a feuer through increasing of a flegmatike humor bred by long rest, that after 14 moneths space *vnbodyed* his ghost.

Holinshed. History of Scotland. Conuall.

Death with most grim and griesly visage seene,
Yet is he nought but parting of the breath;
Ne ought to see, but like a shade to weene,
Vnbodyed, vnsoul'd, vnheard, vnseene.

Spenser. Ferie Queene, book vii. can. 8.

Thus all things are but alter'd, nothing dies;
And here and there th' *vnbodyed* spirit flies,
By time, or force, or sickness dispossess,
And lodges, where it lights, in man or beast.

Dryden. Of the Pythagorean Philosophy.

UN-BONING is Milton's own word; he means—oosening or disjointing their bones.

But since there is such necessity to the hear-say of a tire, a perwig, or a vizard, that plays must have bin seen, what difficulty was there in that? when in the colleges so many of the young divines, and those in next aptitude to divinity, have bin seen so often upon the stage, writhing and *unboning* their clergy limbs to all the antic and dishonest gestures of trinculo's, buffoons, and bawds.

Milton. Apology for Smeclymnus.

UN-BO'NNET, *v.* } Usually explained—with *bonnet*
UNBO'NNETTED. } off (as in *Lear*, act iii. sc. 1, and as in the Quotation from Scott); but the context in Shakspeare (*Othello*) is at variance with such an explanation. To *bonnet*, (*q.v.*) Fr. *bonnetier*, is—to put off his cap to, (Cotgrave,) and is so used in *Coriolanus*. To *cap*—is to touch the *cap*—in token of respect; to raise, take it off. Volumnia exhorts Coriolanus to “go to them—the Commons—with thy *bonnet* in thy hand,”

Unbonnetted then is the reverse, *i. e.* not having put off, taken off the *bonnet*, not “with *bonnet* in hand.”

And my demerites
May speake (*vnbonnetted*) to as proud a fortune
As this that I haue reach'd.

Shakspeare. Othello, act i. sc. 2.

They hastened to bespeak favour by hastily *unbonnetting*, and proffering to hold the bridle and stirrup of the favoured retainer and his attendant.

Scott. Kenilworth, ch. vii.

UN-BO'SOM, *v.* To open the bosom; to unfold, to pour forth, to disclose—the contents of the bosom; to divulge, to reveal—the feelings or passions, the affections, the desires of the heart. See UN-BREAST.

I, before all the daughters of my tribe
And of my nation, chose thee from among
My enemies, lov'd thee, as too well thou knew'st,
Too well, *unbosom'd* all my secrets to thee.

Milton. Samson Agonistes

Or should I thence, hurried on viewless wing,
Take up a weeping on the mountains wild,
The gentle neighbourhood of grove and spring
Would soon *unbosom* all her echoes mild.

Id. On the Passion of Christ.

For who would not refuse
Grief's company, a dull and raw-bon'd spright,
That lanks the cheeks, and pales the freshest sight,
Unbosoming the cheerful breast of all delight?

G. Fletcher. Christ's Victory and Triumph.

Or rose-buds bright,
Unbosoming their breasts against the light.

Id. Christ's Triumph on Earth.

Along these blushing borders, bright with dew,
And in yon mingled wilderness of flowers,
Fair handed Spring *unbosoms* every grace,
Throws out the snow-drop, and the crocus first;
The daisy, primrose, violet darkly blue,
And polyanthus of unnumber'd dyes.

Thomson. Spring.

I have hid my vexation from all mankind; but have now taken pen, ink, and paper, and am resolved to *unbosom* myself to you, and lay before you what grieves me and all the sex.

Spectator, No. 528.

Could I embody, and *unbosom* now,
That which is most within me,—could I wreak
My thoughts upon expression.

Byron. Childe Harold's Pilgrimage, can. 3.

UN-BOY, *v.* To remove from a state of boyhood.

He began to say it was time to *unboy* the prince by putting him into some action and acquaintance with business apart from himself.

Clarendon. History of the Rebellion, vol. ii. p. 559.

UN-BRACE, *v.* To free from hold, bond, or fastening; from that which tightens, strengthens, confines, restrains.

To loosen, to relax, to remit.

Than gan I there mine armes to *vnbrace*,
Up lifyng my handes full mourningly.

Chaucer. The Lamentation of Mary Magdalen.

Stole slylie to my cabin all *unbrac'd*,
Took me in his arms, and kiss'd me twenty times,
Yet still I slept.

Beaumont and Fletcher. The Sea-Voyage, act ii.

And when from sight or from the judgment-seat,
The virtuous Scipio and wise Lælius met,
Unbraced, with him in all light sports they shared,
Till their most frugal suppers were prepared.

Ben Jonson. The Poetaster, act v. sc. 1.

He doth sit like an *unbraced* drum, with one of his heads beaten out.

Id. The Induction. The Stage.

Laughter, while it lasts, slackens and *unbraces* the mind, weakens the faculties, and causes a kind of remissness and dissolution in all the powers of the soul.

Spectator, No. 249.

UN-BREAST, *v.* Equivalent to *unbosom*, (*q.v.*)

Whose sharpest steel the bone and marrow parts,
And with his keenest point *unbreasts* the naked hearts.

P. Fletcher. The Purple Island, c. 12.

Couldst thou unmask their pomp, *unbreast* their heart,
How would'st thou laugh at this rich beggarie!
And learn to hate such happy miserie!

Id. Pisc. Eclogues. Eclogue 4.

Swift without motion, to whose open eye
The hearts of wicked men *unbreasted* lie;
At once absent, and present to them, far, and nigh.

G. Fletcher. Christ's Triumph after Death.

UN-BREATHED, } To *breathe* a horse, is to give
UNBRE'ATHING. } him such exercise as may put
his lungs in wholesome breathing; to give him whole-
some exercise; and hence, *unbreathed* is—

UN-
BOSOM.

UN-
BREATH-
ED.

UN-
BREATH-
ED.

Not exercised, not exerted, not used or employed.
Unbreathing,—not emitting breath or air.

UN-
BUCKLE.

EGE. Hard handed men, that worke in Athens heere,
Which neuer labour'd in their mindes till now;
And now haue toyled their *unbreathed* memories
With this same play, against your nuptiall.
Shakspeare. Midsummer Night's Dream, act v. sc. 1.

BUCK. No, so God helpe me, they spake not a word,
But like dumbe statues, or [un] *breathing* stones,
Star'd each on other, and look'd deadly pale.
Id. Richard III. act iii. sc. 7.

UN-BREECH, *v.* } Not having the *breech* clothed
UNBREECH'D. } or covered; and hence, to *un-*
breech a cannon is to free the *breech* of it from its
fastenings.

———— Looking on the lynes
Of my boyes face, me thoughte I did requoyle
Twentie three yeeres, and saw my selfe *vn-breech'd*,
In my greene veluet coat.
Shakspeare. The Winter's Tale, act i. sc. 2.

GUN. Let the worst come,
I can *unbreech* a cannon, and without much help
Turn her into the heel.
Beaumont and Fletcher. The Double Marriage, act ii.

UN-BRIDLED, } *D. ontbreidelen*. Not held in,
UNBRIDLEDNESS. } or withheld; not restrained, or
moderated, or tempered.
Unbridledness,—the licentiousness, the ungovernable-
ness.

Seeing the manifolde inconuenience
Falling by *unbrideled* prosperitie,
Which is not tempred with mortal prudence.
Imputed to Chaucer. Prologue to the Rem. of Love.

After that they had sung, danced, and turned 3 times, they fell
on running like *unbridled* horses, through the midst of the
thickest woods.
Hakluyt. Voyages, vol. iii. p. 315.

In sober silence now our quiet lips we close;
And with *unbridled* tongues forthwith our secret hearts disclose.
Surrey. Paraphrase on Ecclesiastes, c. 3.

What speedy way of wing my plaints should they lay on,
To 'scape the stormy blast that threaten'd is to me?
Rein those *unbridled* tongues! break that conjured league!
For I decipher'd have amid our town the strife.
Id. Paraphrase on Psalm 55.

Forth was I led, not as I wont afore,
When choice I had to chuse my wandering way;
But whither lucke and loues *unbridled* lore
Would lead me forth on Fancies bit to play.
Spenser. The Shepheard's Calendar. December.

But the event tells us that these remedies [in Sparta, the ephori;
in Rome, the tribunes of the people] either little avail the people,
or brought them to such a licentious and *unbridled* democracy, as
in fine ruin'd themselves with their own excessive power.
Milton. Way to Establish a Free Commonwealth.

The presumption and *unbridledness* of youth requires the press-
ing and binding on of this rule: and it is of undeniable equity,
even written in nature, due to aged persons.
Leighton. Com. on 1 Peter, ch. v.

UN-BUCKLE, *v.* To loose the *buckle*, the (*bend-*
ing.) fastening; (so called from *bug-an*, to *bend*.)

He *unbokeled* hus boteles. and bothe he a tamed
With wyn and with oile.

Piers Plouhman, p. 324.

Our hoste lough and swore, So mote I gon,
This goth aright; *unbokeled* is the male;
Let see now who shal tell another tale:
For trewely this game is wel begonne.

Chaucer. The Milleres Prologue, v. 3117.

I (whom ye al beleue to be some great high man of price) am
vnwoorthy to *unbuckle* the latchet of his shoes.

Udall. Luke, ch. iii.

And why do you wear a sword then? Come *unbuckle*.

BES. My lord.

BAC. *Unbuckle* I say, and give it me.

Beaumont and Fletcher. A King and no King, act iii.

UN-BUILD, *v.* To destroy the *buildings*, the estab-
lished dwelling-places and other structures.

Unbuilt,—not reared or constructed, or raised on
foundations; not established or well founded. Ger.
ungebildet.

If not, I know my strength, and will *unbuild*
This goodly town; be speedy, and be wise, in a reply.

Beaumont and Fletcher. The Maid's Tragedy, act v.

Tuiseo, Gomer's son, from *unbuilt* Babel brought
His people to that place, with most high knowledge fraught,
And under wholesome laws establish'd their abode.

Drayton. Poly-olbion, song 4.

When bare and *unbuilt* conclusions are put into their minds,
they finding not themselves to haue thereof any great certaintie,
imagine that this proceedeth onely from lacke of faith, and that
the Spirit of God doth not worke in them, as it doeth in true
beleueers. *Hooker. Ecclesiasticall Politie*, book ii. sec. 7.

UN-BU'XOME, } *i. e. unboughtsome*, unbowing;
UNBU'XOMELY, } not bowing, bending, compliant,
UNBU'XOMENESS. } or obedient. Ger. *unbiegsam*.

To storme and to scolde. *sclaunders* to make
Both *unbuxom* and bolde.

Piers Plouhman, p. 28.

For ich formest and ferst. to fader and to moder
Haue ybe *unbuxome*. *Id.* p. 88.

For if that thou *vnbuxome* bee
To loue, I not in what degree
Thou shalte thy good worde acheue.

Gower. Conf. Am. book i.

And if them lacketh, that thei wolde,
Anone thei falle in suche a peine,
That euer *vnboxomly* thei pleine
Upon fortune, and curse and crie,
That thei woll not her hertes plie
To suffre, tyll it better fall.

Id. Ib.

The nere this hil was vpon chance
To take his deliuerance,
The more *vnboxomly* he criede.

Id. Ib. book vi.

And though I make no semblaunt,
Myn herte is all disobeisant
And in this wise I me confesse
Of that ye clepe *vnboxomnes*.

Id. Ib. book i.

UN-CALM, *v.* To disturb, or disquiet,—the *calm*,
gentleness, or tranquillity.

CORR. What strange disquiet has *uncalm'd* your breast,
Inhuman fair, to rob the dead of rest?

Dryden. Indian Emperor, act ii. sc. 2.

UN-CAMP, *v.* To remove, drive away, or expel—
from the field of battle, from the lodgement on the field
of battle.

The Britons dispatching messengers round about, to how few
the Romans were reduc'd, what hope of prise and booty, and now
if ever of freeing themselves from the fear of like invasion here-
after, by making these an example, if they could but now *uncamp*
thir enemies. *Milton. History of England*, book ii.

UNCARIA, in *Botany*, a genus so called by Schreber,
from *ογκος*, a *hook*, the old or inferior peduncles being
converted into hooked axillary spines. It belongs to
the class *Pentandria*, order *Monogynia*, and the natural
family of *Rubiaceæ*. Generic character: calyx tubularly
urceolate, with a five-cleft limb; corolla funnel-shaped,
with a slender tube, a naked throat, and five spreading
lobes; anthers five, inclosed or exerted, but always
shorter than the lobes of the corolla; style filiform,
shorter than the lobes of the corolla; stigma oblong or
ovate, tumid, undivided; capsules two-celled, pedicellate,
clavate, attenuated at their bases; seeds numerous, imbric-

UN-
CARIA.UN-
CHARGE.

cate, winged, fixed to oblong placentas, which are adnate to the dissepiment; embryo inverted; albumen fleshy.

Uncaria is composed of several species, principally natives of India. They are scandent shrubs, with opposite or whorled leaves, interpetiolar deciduous stipulas, and axillary and terminal peduncles, each bearing a globular head of flowers. The lower and older peduncles become indurated, and by which the branches hang from neighbouring trees. The genus hardly differs from *Nauclea*, except in the hooked peduncles and pedicellate capsules. The *Uncaria Gambir*, on account of the extract which is prepared from the leaves being called *Gambier* by the Malays, which is one of the drugs, if not the only one, formerly called Terra Japonica in Europe. This extract is chewed by the natives of India mixed with Betle leaf and Areca. The preparation of this extract is simple: the young shoots and leaves are shredded and bruised in water for some hours until a feculum is deposited; this, inspissated in the sun to the consistence of paste, is thrown into moulds of a circular form, and in this state the Gambier is brought to market. But Dr. Wallich has learned, that in other parts of India, to the eastward of the Bay of Bengal, the process is carried on by boiling the leaves and young shoots, evaporating the decoction by fire and the heat of the sun, and when sufficiently inspissated, it is spread out thin and cut into little square cakes, and dried. In the cultivation of the plant a rich soil is preferred. It gives a most luxuriant crop when the rains are frequent, but does not thrive in grounds that are apt to be flooded. The side of a hill is therefore preferred to any other situation. A plantation, after being made, will admit of being cut twice a year for the space of twenty or thirty years without renewal.

UNCARIA, in *Botany*, a genus so called by Burchell, from *ογκος*, a hook, on account of the hooked lobes of the wings of the capsule. It belongs to the class *Didynamia*, order *Angiospermia*, and the natural family of *Pedaliaceæ*. Generic character: calyx five-parted, the segments linear and acute; corolla hypogynous, funnel-shaped, having the tube narrowed at the base; limb five-cleft, with rounded equal segments; stamens four, didynamous, inserted in the tube of the corolla; capsule woody, two-celled, with lobately winged angles; the lobes uncinat; seeds numerous, oblong, angular, wrinkled.

A genus nearly allied to *Pedaliium*, and consists of a solitary known species; it is a herb, a native of the Cape of Good Hope. The stems are prostrate and branched, and beset with numerous white wart-like dots. It is doubtful whether this or the preceding genus of the same name will ultimately stand.

UNCES, *i. e.* Ounces.

What shuld I tellen eche proportion
Of thinges, whiche that we werchen upon,
As on five or six unces, may wel be,
Of silver, or som other quantitee?

Chaucer. *The Chanones Yemannes Tale*, v. 16223.

UN-CHARGE, *v.* To remove the cargo, the burthen, the load or lading; the crime or accusation, laid or imposed;—to withdraw, or retract it.

And whanne we apperiden to Cipre we leften it at the lefthalf and sailiden into Cirie and camen to Tire, for there the schip schulde be unchargid.

Wiclif. *Dedis of the Apostlis*, ch. xxi.

And for his death no winde of blame shall breath,
And euen his mother shall uncharge the practice,
And call it accident.

Shakspeare. *Hamlet*, act iv. sc. 7.

UN-CHARM, *v.* To remove, loose, free from *charm* or enchantment; from rapturous delight; from rapture, from delight.

JUL. Stay, I am uncharm'd,

Farewel thou cursed house, from this hour be
More hated of me than a leprosie.

Beaumont and Fletcher. *The Captain*, act iii. sc. 4.

Conscience, conscience would not let him rest:

I mean, not till possess'd of her he lov'd,

And old, uncharming Catherine was remov'd.

Dryden. *The Hind and the Panther*.

UN-CHARNEL, *v.* To remove a *fleshy* substance, a carcase, or a body interred, from its place of interment.

NEM. Whom would'st thou

Uncharnel?

MAM. One without a tomb—call up

Astarte.

Byron. *Manfred*, act ii. sc. 4.

UN-CHAR'Y, not careful, cautious, or wary.

OL. I haue said too much vnto a hart of stone,

And laid mine honour too vnchary on't.

Shakspeare. *Twelfth Night*, act iii. sc. 4.

UN-CHILD, *v.* To deprive of, a child; to divest of the character of a child or children.

— — — — — Though in this city hee

Hath widdowed and unchilded many a one

Which to this houre bewaile the iniury,

Yet he shall haue a noble memory.

Shakspeare. *Coriolanus*, act v. sc. 5.

Whosoever now dispose of themselves without their parents, they do wilfully *unchild* themselves, and change natural affection for violent.

Hall. *Cont. Samson's Marriage*.

He hath unchilded me of many a son,

All valiant youths, whom he hath slain or sold

To distant isles.

Cowper. *Homer. Iliad*, book xxii.

UN-CHIRO'TONIZE, *v.* Greek. *Chirotonia*, from *χειρ*, the hand, and *τείν-ειν*, to stretch, (says Harrington, who coined this word for his own special purposes,) "is popular suffrage, whether given, as when they speak of Athens, by holding up of hands, or, as when they speak of Rome and other commonwealths, (whose suffrage was not given with this ceremony,) without holding up of hands."—*Oceana*, p. 307; and see *Potter* book i. ch. xvii.

As if Josephus upon that of Samuel,—they have not rejected thee, but they have rejected me that I should not reign over them,—had not said of the people that they *unchirotoniz'd* or unvoted God of the kingdom. Now if they *unchirotoniz'd* or unvoted God of the kingdom, then they had *chirotoniz'd* or voted him to the kingdom; and so not only the doctrine that God was king in Israel by compact or covenant, but the use of the word *chirotonia* also in the sense I understand it, is more antient than Mr. Hobbs.

Harrington. *Oceana*, p. 259.

UN-CHRI'STEN, *v.*

UNCHRI'STIAN, *v.*

UNCHRI'STIAN, *adj.*

UNCHRI'STIANLY, *adj.*

UNCHRI'STIANLY, *ad.*

To *unchristen* (used actively by Milton) is,—to be or cause to be without, to withhold, to deprive of, the ceremony or rite of baptism; to deprive of, to divest of, the character or characteristic qualities of a Christian, *i. e.* faith, charity, &c.

For cristene and uncrisene cleymen it echeone.

Piers Plouhman, p. 17.

Ich Trojanus a trywe knyght. ich take witness of pope

How ich was ded and dampned. to dwellen in helle

For an uncrisene creature.

Id. p. 205.

For cause is there none, why the christian man or christian woman should feare, leste by familiar conuersaciō of the one had with the other that is *unchristened*, eyther of both myght be defiled.

Udall. *1 Corinth*. ch. vii.

UN-
CHARM.UN-
CHRIS-
TEN.

UN-
CHRIS-
TEN.

To which I answered, be you well assured, that we are not indeede all good Christians, for there are in the ship some that hold very *vnchristian* opinions.

Hakluyt. Voyages, vol. ii. p. 152.

UNCI-
NIA.

As they behaued themselues most *vnchristianly* toward their brethren, so and much more vngodly (which I should haue put in the first place) did they towards God. *Id. Ib.* p. 309.

Take al in good part, I hartily beseech you. Construe nothing *uncristenly*; and become again my good lord.

Strype. Ecclesiastical Memoirs. Bishop of Salisbury to Crumwel.

The most part of England in the raigne of king Ethelbird was christened, Kent onely except, which remained long after in mis-beliefe, and *vnchristened*.

Spenser. Shepheard's Calendar. Glossary.

To constrain him further were to *unchristen* him, to unman him, to throw the mountain of Sinai upon him, with the weight of the whole law to boot.

Milton. The Doctrine and Disc. of Divorce, book ii. ch. xxii.

But this king, not content with that which, although in a thing holy, is no holy theft, to attribute to his own making other men's whole prayers, hath as it were unhallow'd and *unchristen'd* the very duty of prayer it self, by borrowing to a christian use prayers offer'd to a heathen god.

Id. An Answer to Eikon Basilike, sec. 1.

For either the hatred of her religion, and her hatred to our religion, will work powerfully against the love of her society, or the love of that will by degrees flatter out all our zealous hatred and forsaking, and soon ensnare us to *unchristianly* compliances.

Id. Tetrachordon.

Boisterous edicts tyrannizing the blessed ordinance of marriage into the quality of a most unnatural and *unchristianly* yoke, have given the flesh this advantage to hate it, and turn aside, oftentimes unwillingly, to all dissolute uncleanness, even till punishment itself is weary of and overcome by the incredible frequency of trading lust and uncontrol'd adulteries.

Id. The Doctrine and Disc. of Divorce, book ii. ch. xx.

UN-CHURCH, v. To deprive of, to withhold, to remove from, deny the possession of, the church, *i. e.* the house of the Lord.

Otherwise there would appear very little and inconsiderable reason, upon trifling or small reasons, to separate and divide from others, and to *unchurch* and *unchristian* them that are not of their company or society.

Hale. Cont. A Discourse of Religion, ch. i.

You say—we hereby *unchurch* the reformed churches abroad.—We answer that this principle of the invalidity of lay baptism, which several of them hold as well as we, does not *unchurch* them, if their want of episcopal ordination doth not, which is a distinct question.

Waterland. Works, vol. x. p. 8.

For this reason [the Greeks] stand utterly *unchurch'd* by the church of Rome, as erring in a prime and fundamental point of faith.

South. Sermon 14. vol. viii.

UNCIAL, applied to letters of a particular form and size. Cotgrave says—that *Lettres onciales* are huge letters, great letters; from *oncial*, weighing an ounce.

If a manuscript is entirely in *uncials*, it may very well be supposed prior to the close of the ninth century.

Astle. Origin and Progress of Writing, ch. v.

UNCINIA, in *Botany*, a genus so called by Persoon, from *ογκιρος*, a hook, on account of the pistilla being propped each by a hooked awn. It belongs to the class *Monoecia*, order *Triandria*, and the natural family of *Cyperaceæ*. Generic character: spike androgynous; upper part male and simple, lower part female, and a little branched; scales imbricate, one-flowered; in the male flowers the perianth is absent, but the stamens are three; in the female flowers the perianth is one-leaved capsular persistent, with a contracted, almost undivided mouth; nut plano-convex, or triangular, inclosed in the perianth; awn hypogynous, hooked, exerted.

Sixteen species of this genus are known, natives of various parts of the globe; they are all tufted rushy

VOL. XXVIII.

herbs, with simple, triangular culms, and terminal, solitary, erect, slender spikes of flowers.

UNCLE, Fr. *oncle*; Lat. *avunculus*; quasi *alter*, seu *exiguus* avus. Vossius.

Correlative in sex to *aunt*, *q. v.*

The erl wende to emperour, & set a doun on kne:
Sire, he seide, al thi wille thou hast thou mygt y se
Of the kyng, that ys myn *uncle*, he ys at thi wille.
Haue merci of hym ich bidde.

R. Gloucester, p. 58.

But first he came craftely to his neuy to be cofedered with him as an *uncle* to take the tuicion faynedly of his neuye.

Joye. Exposition of Daniel, ch. xi.

What times forego Richard the Second's reign;

The fatal causes of this civil war:

His *uncle's* pride; his greedy minions gain,
Gloc'ster's revolt. and death. deliver'd are.

Daniel. Civil Wars, book i.

UN-CLE'AN, *adj.*

UNCLE'ANLY, *adj.*

UNCLEANLINESS.

UNCLEANNESS,

UNCLEANSED.

A. S. *un-clæne*, *un-clænsian*,
Cons. dirty, foul; defiled, polluted.
Not pure or purified or
purged; not free from dirt or
filth, from stain or tinge, mark or trace of dirt, filth or
pollution; from the foulness of sinfulness.

Vor prestes, myd *vnclene* honde & myd lechor's mode
Al soyled, sacryeth Gode's fless & hys blod.

R. Gloucester, p. 351.

Madame, he seyde, vor Gode's loue, ys thys wel y do.
That thou thys *vnclene* lymes handlest & cust so?

Id. p. 435.

Vor me ne mygte hyre neuere yse *vnclennesse* do ene.

Id. p. 434.

And in the synagoge of hem was a man in an *vnclene* spirite,
and he criede out, and seide, what to us and to thee thou Jhesus
of Nazareth?

Wiclif. Mark, ch. i.

And there was in their sinagoge a man vexed with an *vnclene*
spirite, y^e cried saying: let be, what haue we to do with the thou
Jesus of Nazareth?

Bible, Anno 1551.

But as ghe han ghoun ghoure membris to serue to *vnclennesse*
and to wickidnesse into wickidnesse, so now ghyve ghe ghoure
membris to serue to rightwysnesse into hoolynesse.

Wiclif. Romayns, ch. vi.

As ye haue geuen youre members seruauntes to *vnclennes* and to
iniquitie, from iniquity vnto iniquity: euē so now geue youre
mēbers seruauntes vnto ryghtenes, y^e ye may be sanctified.

Bible, Anno 1551.

For God clepide not us into *vnclennesse*, but into hoolynesse,
therfore he that dispisith these thingis dispisith not man but God.

Wiclif. 1 Tessal. ch. iv.

For God hath not called vs vnto *vnclennes*; but vnto holynes.
He therfore that despyseth, despiseth not man, but God.

Bible, Anno, 1551.

For he who so will his handes lime,
Thei must be the more *vnclene*.

Gower. Conf. Am. book ii.

Whan an *vnclene* spirite (q. he) goeth out frō a man, beyng
banished frō his olde hospitall, he walketh in drye and baren
places, seking rest and fyndeth none.

Udall. Mathew, ch. xii.

And princes on the other parte flatter the people, exhibitynge
vnto them shewes to gase vpon, and *vnclenly* playes.

Id. Actes of the Apostles, ch. xii.

I woulde not fall into any *vnclenlines*, which were the greatest
shame that can be for him that should be a teacher of chastitie.

Vives. Instruction of a Christian Woman. Preface.

Herkē O ye Leuites and Prestes: be ye sāctified and make
cleane the house of the Lorde the God of your fathers, and put
awaie all *vnclenes* from the sanctuarie, &c. I prai you what
could he speke more imperiou-li.

Gardner. Of True Obedience, fol. 29.

6 A

UNCI-
NIA.UN-
CLEAN.

UN-
CLEAN.
—
UN-
CLOUD.

He without reuerence, and with an *uncleansed* conscience presumed to come vnto so great a misterie, without due consideration had, with howe great reuerence the body of the Lorde ought to be receyued.
Udall. 1 Corynth. ch. xii.

Diuers of those that couëted to professe such clannesse and puritie of life as passed their powers to obserue, might happilie fall into most horrible *uncleannesse*.
Holinshed. Chronicles. Hen. I. Anno 1102.

I have sometimes wondred how it came to pass, that some of the ancients, men wise and modest, chaste and of sober spirits, have faln into a fond liberty of declamation against *uncleanness*, using such words as bring that sin upon the stage of fancy, and offend sober and chaste ears.

Taylor. Sermons, vol. i. Sermon 22.

It must be owned that Theophrastus appears not to have been possessed of any great delicacy. He pursues his subject so far, as frequently to lead his readers to *uncleanly* scenes.

Knox. Winter Evenings. Evening 50.

UN-CLEW, *v.* To revolve or evolve, to unfold,—to undo.

TIM. A meere satiety of commendations,
If I should pay you for't as 'tis extol'd,
It would *unclew* me quite.

Shakspeare. Timon of Athens, act i. sc. 1

They can the cabinets of kings unscruce,
And hardest intricacies of state *unclew*.

Howell. Letters. Preface.

UN-CLING, *v.* To loose or release from cleaving or adhering, entwining or embracing, or enfolding.

This I admire how possibly it should inhabit so long in the sense of so many disputing theologians, unless it be the lowest lees of a canonical infection liver-grown to their sides; which perhaps will never *uncling*, without the strong abstersive of some heroic magistrate, whose mind, equal to his high office, dares lead him both to know and do without their frivolous case-putting.

Milton. Tetrachordon.

UN-CLO'UD, *v.* } To remove, to free from, co-
UNCLO'UDEDNESS, } ver, or veil; from shade, gloom,
UNCLO'UDY. } obscurity, darkness.

Dark is the day, whē Phœbus face is shrowded,
And weaker sights may wander soone astray:
But whē they see his glorious raies *uncloved*,
With stedly steps they keepe the perfect way.

G. W. On Spenser's Sonnets.

— 'Tis the king
Will have it so, whose breath can still the winds,
Uncloved the sun, charm down the swelling sea,
And stop the fouds of heaven: speak, can it not?
Beaumont and Fletcher. Philaster, act iv.

PHIL. Why that's well: call up
Thy senses, and *uncloved* thy cover'd spirits.
Id. Love's Pilgrimage, act iv. sc. 1.

Strip thou their meretricious seemliness,
And tinfold glitt'ring, bare to ev'ry sight,
That we may loath their inward ugliness;
Or else *uncloved* the soul, whose shady light
Adds a fair lustre to false earthly bliss.
Fletcher. The Purple Island, can. 8.

Now for their demeanor within the church, how have they figur'd and defac'd that, more than angelic brightness, the *uncloved* serenity of Christian religion, with the dark overcasting of superstitious copes and flaminical vestures.

Milton. Reasonableness of Church Government, book ii. ch. ii.

So angels, who, of all created beings, enjoy the *uncloved'st* light, and the most clear knowledge of their Maker, do love him with a constancy so fixed, that in five thousand and some odd centuries of years (effluxed since the creation) they could never see any thing, either in God, or out of him, capable to seduce them to a change.

Boyle. Works, vol. i. p. 264.

And certainly, the love I would persuade, is of a nature, that makes nothing more conducive to it than the greatest *unclovedness* of the eye, and the perfectest illustration of the object; which is such, that the clearest reason is the most advantageous light it can desire to be seen by.

Id. Ib. p. 251.

UN-
CLOUD.
—
UN-
CON-
FOUND.

Now night in silent state begins to rise,
And twinkling orbs bestrow th' *uncloody* skies;
Her borrow'd lustre growing Cynthia lends,
And on the main a glittering path extends.
Gay. Rural Sports, c. 1.

Slow sinks, more lovely ere his rage begun,
Along Morea's hills the setting sun;
Not, as in Northern climes, obscurely bright,
But one *uncloved* blaze of living light!
Byron. The Corsair, can. 3.

UN-COIF, *v.* To remove, to take off or divest of—the coif, (a covering for the head.)

Lorenzo! thou, her majesty's renown'd,
Though *uncoif'd*, counsel, learned in the world!
Who think'st thyself a Murray, with disdain
May'st look on me.
Young. Complaint, Night 8.

UN-COMBINE, *v.* To loose, sever or separate, the coupling, connexion, union, coalescence.

Then when out-breaking vengeance *uncombines*
The ill-join'd plots, so fairly over-cast;
Turns up those huge pretended heaps of shows,
And all these weak illusions overthrows.
Daniel. Civil Wars, book iii.

His purposes untwist as easily as the rude conjuncture of *uncombining* cables in the violence of a northern tempest.
Taylor. Sermons, vol. ii. Sermon 2.

UN-COMMON, } Ger. *ungemein*; Sw. *ogemen*.
UNCO'MMONLY, } Not belonging or pertaining to
UNCO'MMONNESS. } many; not frequently seen or
known. Cons., Rare, scarce, seldom met with.

I mene not that my father is none other than I: but that betwene vs two is no vnlikeness, or any thyng *uncommon* as touching our higher and our diuine nature.

Udall. John, ch. xiv.

I know not why it may not be conjectured, that the kindness they [spirits] have for us, and the appetite of foretelling strange things, and the putting the word upon expectation, which we find is very grateful to our own natures, may not encline them also to give us some general notice of those *uncommon* events which they foresee.

Glanvill. Essay 6.

They are all called by the English subtle jacks, because of this *uncommon* way of building.

Dampier. Voyages. Anno 1676.

But if there be a beauty or *uncommonness* joined with this grandeur, as in a troubled ocean, a heaven adorned with stars and meteors, or a spacious landscape cut out into rivers, woods, rocks, and meadows, the pleasure still grows upon us, as it arises from more than a single principle.

Spectator, No. 412.

They were reported to be gentlemen sent abroad to make observations and discoveries, and were *uncommonly* qualified for that purpose.

Cook. First Voyage, book i. ch. ii.

The land every where about Queen Charlotte's Sound is *uncommonly* mountainous, rising immediately from the sea into large hills with blunted tops.

Id. Third Voyage, book i. ch. viii.

That I have not more diligently sought them, and laboured to introduce more serious discourse into my ordinary visits to you, I am sensible is a fault, which neither the *uncommonness* of such conversation, nor the fear of disgusting persons by it, are sufficient to excuse.

Secker. Works, vol. v. Sermon 9.

UN-CONFOUND, *v.* Not to mix, mingle or blend or involve. To free from mixture.

And against their own discipline, which they boast to be the throne of Christ, [they] absolve him, *unconfound* him, though unconverted, unrepentant, unsensible of all their precious saints and martyrs whose blood they have so oft laid upon his head.

Milton. The Tenure of Kings and Magistrates.

God, therefore, in his infinite wisdom brought them into Egypt, and kept them there during this period; the only place where they could remain, for so long a time, safe and *unconfounded* with the natives.

Warburton. Divine Legation, book iv. sec. 6.

UN-
CONSE-
CRATE.
—
UN-
COUTH.

UN-CO'NSECRATE, *adj.* } Not dedicated or de-
UNCO'NSECRATE, *v.* } voted to *sacred* pur-
poses; not hallowed; not set apart for the service or
honour of.
To *unconsecrate*; to strip, deprive or divest of its
sacred functions, or character.

And diuers times she was houseled in sight of y^e people w^t an
host *vnconsecrate*, and al the peple loking vpō.
Sir Thomas More. Workes, p. 134.

They fear religion with such a fear as loves not, and think the
purity of the gospel too pure for them, and that any uncleanness
is more suitable to their *unconsecrated* estate.

Milton. The Reasonableness of Church Government, book ii.

Should any boisterous, unclean, unqualified invader break in
on those sacred mansions, commit such riots, such burglary upon
heaven:—Heaven must be *unconsecrated* by such violence, cease
to be the palace of God, a place of purity, or of bliss.

Hammond. Works, vol. iv. Sermon 6.

Of this I could give such an instance from something wrote by
a certain prelate of theirs, cardinal and archbishop of Beneventum,
as were enough, not only to astonish all pious ears, but almost to
unconsecrate the very church I speak in.

South. Sermon 11. vol. ii.

A chapel was erected, well-pewed, well-warmed, dedicated, un-
endowed, *un-consecrated*.

Pennant. London, p. 169.

UN-CONSPIRINGNESS, the absence of combi-
nation,—concert, complot, confederacy.

[It is as high, as pious a satisfaction] to find in writers severed
by so many ages, and regions, a harmony, whose dissonances
serve but to manifest the sincerity and *unconspiringness* of the
writers.

Boyle. Works, vol. ii. p. 276.

UN-COUTH, } A. S. *un-cuth*, incognitus, igno-
UNCO'UTHLY, } tus, alienus,—unknown, strange.
UNCO'UTHNESS. } (Somner.) See COUTH, or COULD.

Not known; strange, extraordinary, foreign to our
thoughts, to our customs; awkward, boorish, clumsy.

Who coude tellen you the forme of daunces
So *uncouth*, and so freshe contenaunces,
Swiche subtil lokings and dissimulings,
For dred of jalous mennes apperceivings?
No man but Launcelot, and he is ded.

Chaucer. The Squieres Tale, v. 10598.

For this, and for y^t that the kynge had maryed a woman of
uncowght beleue, well nere all the Brytons forsoke hym and his
werkes.

Fabyan. Chronycle, ch. lxxxiii.

But that so close the cave was and *unkouth*
That none but God was record of his pain,
Else had the wind blown in all Israel's ears
The woeful plaint, and of their king the tears.

Surrey. The Author.

Manie strange woonders and *unketh* sights were seene in the
daies of this Alexander the third.

Holinshed. Historie of Scotland, Anno 1279.

Nothing, but want of use, hath bred a conceit of *uncouthness* in
that, which custom would approve and commend.

Hall. Letter to Mr. W. Struthers.

I have more real anguish in my heart,
Than all their pedant discipline e'er knew.
What charnel has been rifled for these bones?
Py! this is pageantry; they look *uncouthly*.

Rowe. The Fair Penitent, act v.

I was surprised to see some in the habit of Laplanders, who,
notwithstanding the *uncouthness* of their dress, had lately obtained
a place upon the mountain.

Spectator, No. 514.

The dress of a New Zealander is certainly, to a stranger at first
sight, the most *uncouth* that can be imagined.

Cook. First Voyage, book ii. ch. ix.

The *uncouthness* of his language and the quaintness of his
thoughts will not, it is hoped, disgust the delicacy of readers un-
accustomed to the writings of our old divines.

Knox. Cons. on the Lord's Supper. Note.

UN'CTION,
UN'CTIOUS,
UN'CTIOUSNESS,
UN'CTUOUS,
UN'CTUOUSNESS,
UNCTUO'SITY.

Fr. *onction, onctueur, onctuo-*
sitè; It. *unzione, untuòso, untuo-*
sità; Sp. *uncio*; Lat. *unctio*,
from *unctum*, past participle of
ungere, in *unum agere*, because
in *unguents* different substances

UNC-
TION.
—
UN-
CUL-
TURE.

are united, or beaten into one substance.

A rubbing or smearing with oil, or any oily, greasy
substance; (met.) any thing, melting, softening or
soothing.

And then if wee be not onely simple as doves, but also prudent
and wise as serpentes, his inwarde *vnccion* wyl worke with our
diligence.

Sir Thomas More. Workes, p. 763.

Because of the ranke pasture, whose moysture is better digested
in the hearbe or grasse, by continuall and temperate heate of the
sunne, whereby being made more fat and *vnctious*, it is of better
and more stedfast nourishment.

Hakluyt. Voyages, vol. iii. p. 64.

Or if there be no coles, there may a mine of some other *vnctuous*
matter be set on fire.

Holinshed. Description of Britaine, ch. xxiv.

Neither shall I use the help of any such sorceries or enchant-
ments, as *unctions* to make our skins impenetrable.

Ben Jonson. Every Man Out of his Humour, act iv. sc. 4.

The same also in the bruising will grow blacke and be *uncteous*
or fattie, and such lightly is hollow in manner of a sponge.

Holland. Plinie, book xxxiv. ch. xii.

Being cut down green, it burneth (a peculiar privilege of this
wood) clear and bright, as if the sappe therof had a fire-feeding
unctiousness therein.

Fuller. Worthies. Warwickshire.

For that one corps (say they) helpeth to burn and consume the
rest: by reason that a woman's flesh containeth in it I wot not
what *unctuosity* or oylous matter, which quickly taketh fire, and
will burn as light as a torch.

Holland. Plinie, p. 564.

Or whether sulphur, catching fire, feeds on
Its *unctuous* parts, till all the matter gone
The flames no more ascend.

Dryden. Ovid. Metamorphoses, book xv.

That oil, that is a body so mollifying and slippery, and whose
unctuosity makes its moisture so much more difficult to be wasted
or destroyed, than that of water, wine, or other not tenacious
liquors, should be one of the two or three main ingredients, and
the only moist one of a hard and durable cement, is that, which
probably you would very little expect from it.

Boyle. Works, vol. iii. p. 483.

This done, the damsel mounted, but receiv'd,
For *unction* of herself and of her maids,
From the queen's hand, a golden cruse of oil,
Ere yet she went.

Cowper. Homer. Odyssey, book vi.

And Pallas rear'd him; her own *unctuous* fane
She made his habitation, where with bulls
The youth of Athens, and with slaughter'd lambs,
Her annual worship celebrate.

Id. Ib. Iliad, book ii.

UN-CU'LTURE, } Negation of, absence of im-
UNCU'LTIVATED. } provement (by labour), of til-
lage. See INCULT.

Idleness, ill-husbandry, in mistiming, neglect of meet-helps,
unculture, ill choice of seeds.

Hall. Sermons. Psalm 107. v. 34.

The art [dancing] is esteemed only as an amusing trifle; it lies
altogether *uncultivated*, and is unhappily fallen under the imputa-
tion of illiterate and mechanic.

Spectator, No. 334.

Thus blind ignorance was succeeded by a twilight of sense;
this brightened by degrees; at last the sun as it were rose upon
some parts of the commonwealth of learning, and cleared up many
things; and I believe many more will in time be cleared, which,
whatever men think, are yet in their dark and *uncultivated* state.

Wollaston. Religion of Nature, sec. 3.

There is the appearance of but little cultivation; the greater
part of the land is wholly *uncultivated*, and very little care and
labour seem to have been bestowed upon the rest.

Cook. First Voyage, book i. ch. ii.

UN-
CURL.
—
UNDE-
CEIVE.

UN-CURL, *v.* To be or cause to be free from, to remove curls, *i. e.* bendings, turnings, or writhings (of the hair) rings or ringlets; not to bend, or turn.

And his faire locks, that wont with oylment sweet
To be embaulm'd, and sweet out dainty deaw,
He led to growe, and grisely to concrew,
Vncomb'd, *uncurl'd*, and carelessly vnshed.

Spenser. Faerie Queene, book iv. can. 7.

Cling to my neck and wrists, my loving worms,
And cast you round in soft and amorous folds,
Till I do bid *uncurl*.

Ben Jonson. Cynthia's Revels. The Poetaster.

Onely to me two home-bred youths belong,
Unskill'd in any but their mother-tongue;
Alike in feature both, and garb appear,
With honest faces, tho' with *uncurl'd* hair.

Congreve. Juvenal. Satire 11.

— The *uncurling* floods, diffus'd
In glassy breath, seem through delusive lapse
Forgetful of their course.

Thomson. Spring.

UN-CURSE, *v.* To be or cause to be free from,—to remove, a curse, or doom to punishment, torment or torture.

SCROOPE. Sweet Loue [I see] changing his propertie,
Turnes to the sowrest, and most deadly hate:
Againe *uncurse* their soules; their peace is made
With heads, and not with hands.

Shakspeare. Richard II. act iii. sc. 2.

Heaven sure has kept this spot of earth *uncurst*,
To show how all things were created first.

Waller. Battle of the Summer Islands, can. 1.

UN-DAM, *v.* To be or cause to be, free from or without, to remove—a stop, obstruction, hinderance, confinement.

Then when the fiery suns too fiercely play,
And shrivell'd herbs on with'ring stems decay,
The wary ploughman, on the mountain's brow,
Undams his watry store, huge torrents flow;
And, rattling down the rocks large moisture yield,
Temp'ring the thirsty fever of the field.

Dryden. Virgil. Georgics, book i.

UN-DEAF, *v.* To remove deafness; to restore the sense of hearing.

Though Richard my liues counsell would not heare,
My deaths sad tale, may yet *undeafe* his eare.

Shakspeare. Richard II. act ii. sc. 1.

UNDE'CAGON, a figure with eleven angles; and consequently eleven sides. Gr. *ενδεκα*, eleven, and *γωνια*, an angle.

UN-DECEIVE, *v.* } To free from fraud or guile,
UNDECEIVABLE. } or the effects of fraud or guile,
(from error, mistake, delusion.)

Now semeth it to some men, that it may well peradventure happen, that the good men wel beleuing and *undeceived*, be those that beleue the worship of ymages and praying to saites to be ydolatry.

Sir Thomas More. Workes, p. 186.

Then shall we receiue of him whose iudgemētes are sure, and *undeceyueable*, rewardes, according to our desertes.

Udall. 1 Corynth. ch. iv.

Thus much be said in general to his prayers, and in special to that Arcadian prayer us'd in his captivity; enough to *undeceive* us what esteem we are to set upon the rest.

Milton. Answer to Eikon Basilike.

Hold fast, then, my dear friend, this sure anchor of our *undeceivable* hope; and spit in the face of men or devils, that shall go about to slacken your hand.

Hall. Letter concerning falling away from Grace.

No body, saith Cicero, shall ever drive me from the hope of immortality: and, if this my opinion concerning the immortality of the soul should at last prove an error; yet, 'tis a very delightful error; and I will never suffer myself to be *undeceived* in so pleasing an opinion, as long as I live.

Clarke. Evidences. Prop. 4.

This confirmed me in my opinion, and I was just going to leave him, when one of the natives, an intelligent youth, undertook to *undeceive* me.

Cook. Second Voyage, book ii. ch. ii.

UN-DECIDE, *v.* } See INDECISIVE. Undecidable,
UNDECI'DABLE, } Not to be, that cannot or may
UNDECI'DED. } not be, determined, concluded,
adjudged.

To *undecide* (Daniel),—to reverse, or act contrary to a decision.

I must referre it to them that be priuie, and of counsel with the ports: and so leauing this also *undecided*, holde on the way, wherein I am entred.

Hakluyt. Voyages, vol. i. p. 19.

And thrust them on to use the present tide
And flow of this occasion, to regain
Th' enthralled monarch, and to *undecide*
The late concluded act they held for vain.

Daniel. Civil Wars, book vii.

For one thing which we haue left to the order of the church, they had twenty which were *undecided* by the expresse word of God.

Hooker. Ecclesiasticall Politie, book iii. ch. x.

Amongst which said difficulties perhaps there is hardly a greater, and more *undecideable* problem in natural theology, and which has not only exercised but even crucified the greatest wits of all ages, than the reconciling of the immutable certainty of God's fore-knowledge with the freedom and contingency of all human acts, both good and evil, so fore-known by him.

South. Sermon 6. vol. iii.

— The ruffled brine
Roars stormy, they together dash the clouds,
Levyng their equal force with utmost rage;
Long *undecided* lasts the airy strife.

J. Philips. Blenheim.

So doubted he, and *undecided* yet
Stood drawing forth his falchion huge; when lo!
Down sent by Juno, to whom both alike
Were dear, and who alike watch'd over both,
Pallas descended.

Cowper. Homer. Iliad, book i.

UN-DECK, *v.* D. *ongedekt*. To be or cause to be without, to remove or strip off, the cover or array, dress or ornament.

For I haue giuen here my soules consent
T' *undeck* the pompous body of a king.

Shakspeare. Richard II. act iv. sc. 1.

Can England see the best that she can boast
Lie thus ungrac'd, *undeck'd*, and almost lost.

Daniel. Civil Wars, book v.

UN-DEEDED, not having performed any deeds or actions; not signalized by actions.

I cannot strike at wretched kernes, whose armes
Are hyr'd to beare their stauies; either thou, Macbeth,
Or else my sword with an vn battered edge
I sheath againe *vndeeded*.

Shakspeare. Macbeth, act v. sc. 7.

UNDER, D. *onder*; Ger. *under*, *unter*; Sw. *under*; A. S. *under*. Tooke resolves it into *on*, *neder*. (See NETHER, and BENEATH.) Wachter thinks the Ger. may be *nider*, (*inferior*, transposed.) Wilkins, in his *Diagram*, places it in direct opposition to *upon*.

Holland renders, *nec Annibalem maxime hujusce rei, ut fama erat, egentem, locupletari volebant*, "they were unwilling that Annibal, who as the voyce went was at a very great *under* for money, should be enriched thereby."

Under, (much used in composition,) when prefixed to nouns, may be considered an adjective. The *adv.*—beneath, below. The *adj.*—inferior, lower, less, subordinate.

For the maistry nys not a kynge's, ne be he neuer so god,
Ac knyghtes, that *vnder* hym fygteth, and schedeth here blod.

R. Gloucester, p. 57.

UNDE-
CEIVE.
—
UNDER.

UNDER.

Sibriht, that I of told, that the lond had lorn,
That a suynherd slouh *under* a busk of thorn.
Had a kosyn, hight Egabriht. *R. Brunne, p. 14.*

Right vnto the gate with the targe thei gede,
Fightand on a gate, *undir* him the slouh his stede.
Id. p. 183.

He kept his castels, his vitaile, his mone,
Undere the kyng seales, the chance listnes me.
Id. p. 288.

And preche men of Plato, and proven hit by Seneca
That alle thyng *under* hevене. ouhte be in comune.
Piers Plouhman, p. 406.

For why I am a man ordeyned *undir* power, and have knightis
undir me, and I seyh to this go: and he goth: and to an other
come; and he comith: and to my servant do this and he doth it.
Wiclif. Matthew, ch. viii.

For I also myselfe am a man subiect to y^e authoritie of another,
and haue souldiers *under* me, and I say to one go, and he goeth,
and to another come and he cometh: and to my seruaūt, do this,
and he doeth it. *Bible, Anno 1551.*

The centurien sente to him frendis, and seyde, Lord nyle thou
be tranelid, for Y am not worthi that thou entre *undir* my roof.
Wiclif. Luke, ch. vii.

The centurion sente frendes to him, sayinge vnto him: Lorde
trouble not thyselfe: for I am not worthy that thou shouldest
entre *under* my roffe. *Bible, Anno 1551.*

Jhesus answerde and seide to him, bifore that Filip clepide thee,
whanne thou were *undir* the fige tree, I sygh thee.
Wiclif. Jon, ch. i.

Jesus answered, and sayde vnto him: before that Philippe
called thee, when thou waste *under* the fige tree, I sawe the.
Bible, Anno 1551.

He loketh up and down, til he hath found
The clerkes hors, ther as he stood ybound
Behind the mille, *under* a levesell.
Chaucer. The Reves Tale, v. 4058.

So that *under* the clerkes lawe
Men seen the merell all misdrawe.
Gower. Conf. Am. Prologue.

The noble Cesar Julius
Whiche tho was kyng of Rome londe
With great battaile, and strong honde
All Grece, Perse, and Chaldee
Wan, and put *under*. *Id. Ib.*

But a longe time it stode still
Under the Frenche kynges will. *Id. Ib.*

For witte ne strength maie not helpe
And which els wolde him yelpe,
Is rathest throwen *under* foote,
There can no wighte therof do boote.
Id. Ib. book i.

VAN. Here's to you with a heart, my captain's friend,
With a good heart, and if this make us speak
Bold words, anon, 'tis all *under* the rose
Forgotten: drown all memory, when we drink.
Beaumont and Fletcher. Beggar's Bush, act ii. sc. 3.

I in a thicket laid me down on leaves,
Which I had heap'd together, and the gods
O'erwhelm'd my eyelids with a flood of sleep.
There, *under* wither'd leaves, forlorn, I slept
All the long night, the morning, and the noon.
Cowper. Homer. Odyssey, book vii.

UNDER, *adj. e. g.*

UNDER-branch, *Spenser*; -chaps, *Paley*; -conducts,
Reliquiae Wottonianæ; -dawber, *Bp. Taylor*; -fellow;

Paley; -kind, *Dryden*; -labourer; -part; -plain;
-possessor, *Bp. Taylor*; -servant; -sheriff; -side,
Paley; -spheres, *Elegy on Donne*; -suit, *Fuller*;
-tenant; -thing; -verse, *Spenser*; -water, *May*;
-wood; -world, *Daniel*; *Beaum. and Fletcher.*

UNDER-A'CTION, } Action or agent, subordinate
UNDERA'GENT. } to the chief action or agent.

The action of it [the Heroick Poem] is always one, entire and
great. The least and most trivial episodes, or *under-actions*, which
are interwoven in it, are parts either necessary, or convenient to
carry on the main design.

Dryden. Virgil. Aeneid. Dedication.

Their devotion serv'd all along but as an instrument to their
avarice, as a factor or *under-agent* to their extortion.

South. Sermon 4, vol. ii.

UNDER-BEAR, *v.* } To suffer, to support, to
UNDERBEA'RER, } sustain.
UNDERBEA'RING, *n.*

What reuerence he did throw away on slaues;
Wooing poore craftes-men, with the craft of soules,
And patient *under-bearing* of his fortune,
As 'twere to banish their affects with him.

Shakspeare. Richard II. act i. sc. 4.

Envenom him with words, or get thee gone,
And leaue those woes alone, which I alone
Am bound to *under-beare*.

Id. King John, act iii. sc. 1.

Skirts round, *underborne* with a blueish tinsel.

Id. Much Adoe about Nothing, act iii. sc. 4.

UNDER-BOUND, *i. e. bound*, confined, held fast,
below or *beneath*. *Ger. underbinden.*

But the good prince his hand more fit for blowes
With his huge weight the pagan *underbound*;
But he, his disadvantage great that knew,
Let goe his hold, and on his feet vp flew.

Fairefax. Tasso, book xix.

UNDER-BRACE, *v.* To hold, bind, or tie together,
below.

———— The 'broider'd band,
That *underbrac'd* his helmet at the chin,
Strain'd to his smooth neck with a ceaseless force,
Chok'd him. *Cowper. Homer. Iliad, book iii.*

UNDER-BRED. See UNBRED.

An acquaintance, a friend as he call'd himself, enter'd;
An *under-bred*, fine spoken fellow was he,
And he smil'd as he look'd at the venison and me.
Goldsmith. The Haunch of Venison.

UNDER-BUY, *v.* To buy at an *under* or lower
price.

Madam ye have a witty woman.
MAR. Two sir,
Or else ye *underbuy* us.
Beaumont and Fletcher. Valentinian, act ii. sc. 4.

UNDER-CARVED, *cut* or *graved below*.

There like a rich and golden pyramede,
Borne up by statues, shall I reare your head,
Above your *under-carved* ornaments,
And shew, how, to the life, my soule presents
Your forme imprest there.

Ben Jonson. To the Countess of Rutland.

UNDER-CROFT. See the Quotation.

It was supported by three rows of massy clustered pillars, with
ribs diverging from them to support the solemn roof. This was
the parish church. This *under-croft*, as buildings of this sort
were called, had in it several chauntries and monuments.

Pennant. London, p. 496.

UNDER-CRY, *v.* So *Wiclif* renders the Lat. *Inclama-*
mare.

And eftsoone Pilat spak to hem: and wolde delyuere Jhesus.
And thei *undircrieden* [inclamabant] and seiden, crucifie crucifye
him. *Wiclif. Luke, ch. xxiii.*

UNDER-DEA'LING, *i. e. dealing under*, (*sc.*) cloak
or cover of secresy; clandestine.

But he offer'd to go himself in person upon that expedition;
and reckons up many surmises why he thinks they would not
suffer him. But mentions not his *under-dealing* to debauch
armies here at home. *Milton. Answer to Eikon Basilike.*

UNDER-DOLVEN.

UNDER-FOOT.

UNDER-DO'LVEN, delved or dug, below.

Wer ghe witen not what the scripture seith in Elie? hou he preieth God aghens Israel, Lord thei han slayn thi profetis, thei han *underdolen* thine auteris, and I am left aloone and thei seken my lyf.

Wiclif. *Romayns*, ch. xi.

UNDER-FO'NGEN, *v.* To *fong*, *q.v.* is to take.To *underfong*,—to undertake, (*q.v.*)

Common in R. Gloucester, R. Brunne, P. Plouhman; used by Wiclif and Gower, and revived by Spenser.

Vortiger, the luther mon, tho hys sone ded was
Underfong ageyn to hym the kyngdam, alas!

R. Gloucester, p. 123.

Eft Suane, the Danes kyng, this lond did *vnderfonge*,
& eft vntille Edward Suane sent ageyn.

R. Brunne, p. 51.

The Pope and alle prelates, pōentes *underfongen*.

Piers Plouhman, p. 51.

————— For eny speche of selver

What manē mester, oth merchaundise he usede
Er he were *vnderfonge* free.

Id. p. 43.

————— On holy churchie ich thouhte

That *underfong* me atte fount. for on of Godes chosene.

Id. p. 204.

But though we or an aungel of heuene prechide to ghou bisidis that that we han prechid to ghou, he be acursid. As I haue seid bifore, and now eftsoone I seie, if any preche to ghou bisidis that that ghe han [accepistis] *underfongen* he be accursid.

Wiclif. *Galathies*, ch. i.

And whan this kyng was passed thus,
This false tonged Perseus

The regiment hath *vnderfonge*.

Gower. *Conf. Am.* book ii.

And he, whiche wisdom hath purueid,
Of all that to reason belongeth,

With gentill herte it *vnderfongeth*.

Id. *Ib.* book iv.

His name is hight Pollente, rightly so

For that he is so puissant and strong,

That with his powre he all doth ouer-go,

And makes them subiect to his mighty wrong;

And some by sleight he eke doth *vnderfong*.

Spenser. *Faerie Queene*, book v. can. 2.

And if thou algate lust light virelayes,

And looser songs of loue to *vnderfong*;

Who but thy self deserues like poets praise.

Id. *Shepherd's Calendar*. November.

UNDER-FOOT, *adj.* } *i. e.* under the foot; below.

UNDER-FOOT, *ad.* } Debased, dejected, degraded, abject.

For alle that he has said he don *vnderfote*
Tille this werld be, it git no tyme to mote.

R. Brunne, p. 270.

For ther n'ys pore ne riche, ne what state he be,
That he n'ys *undirfote* for his inquite.

Imputed to Chaucer. *Marchantes Second Tale*.

But deadly werre hath his couine

Of pestilence, and of famine,

Of pouertee, and of all wo;

Wherof this worlde we blamen so,

Whiche now the werre hath *vnderfoote*

Til God him selfe therof do boote.

Gower. *Conf. Am.* book iii.

They shall remain in that plight for ever, the basest, the lowermost, the most dejected, most *underfoot*, and down trodden vassals of perdition.

Milton. *Of Reformation in England*, book ii.

What a stupidity then is it, that in marriage, which is the nearest resemblance of our union with Christ, we should deject ourselves to such a sluggish and *underfoot* philosophy, as to esteem the validity of marriage meerly by the flesh, though never so broken and disjointed from love and peace.

Id. *Tetrachordon*.

Lysitheus mounting upon the boord, laied him along on the floor, and there *under-foot* dispatched him.

Holland. *Plutarch*, p. 998.

UNDER-FU'RNISH, *v.* To supply, to furnish, below, lower, or less than, (*sc.*) is needful or appropriate.

Can we suppose God would *underfurnish* man for the state he designed him, and not afford him a soul large enough to pursue his happiness?

Collier. *On Kindness*.

UNDER-GET, *v.* To get under; to understand.

And londes abouten vs habbeth wel *vnder gite*.

R. Gloucester, p. 101.

And natheles he feynede hym, that me *vnder get* yt nogt.

Id. p. 109.

UNDER-GIRD, *v.* To bind, or fasten together below.

And we came vnto an yle named Claudia, and had much worke to come by a bote, which they toke vp and vsed helpe, *vndergerdyng* the ship, fearynge lest we shoulde haue fallen into Syrtis.

Bible, Anno 1551. *Actes*, ch. xxvii.

UNDER-GO, *v.* D. *ondergaan*; Sw. *undergå*, to go, move under, or below; to bear, to carry, to sustain, to support, to suffer, to be subject to. See UNDERWENT.

————— So th' Ægæan wind

With the Tyrrhene: so with th' Ionian

The Adriatike met. How oft in vaine

That day the sea seem'd mountaine's topps t' oreflow,

And yeilding earth that deluge t' *undergoe*.

May. *Lucan. Pharsalia*, book v.

And in the same city, tyrants were to *undergo* legal sentence by the laws of Solon.

Milton. *An Answer to Eikon Basilike*.

The fruit is gathered just before it is perfectly ripe, and being laid in heaps, is closely covered with leaves; in this state it *undergoes* a fermentation, and becomes disagreeably sweet.

Cook. *First Voyage*, book i. ch. xvii.

But here what needed words to blow the fire,
In flame already, and enkindl'd so,
As when it was proclaim'd they might retire,
Who found unwillingness to *undergo*
That vent'rous work?

Daniel. *Civil Wars*, book viii.

And such they were, who might presume t' have done
Much for the king, and honour of the state;
Having the chiefest actions *undergone*
Both foreign and domestical of late.

Id. *Ib.* book iv.

————— Thou didst smile,
Infused with a fortitude from heauen,
When I haue deck'd the sea with drops full salt,
Vnder my burthen groan'd, which rais'd in me
An *undergoing* stomacke, to bear vp
Against what should ensue.

Shakspeare. *The Tempest*, act i. sc. 1.

Esc. If any in Vienna be of worth
To *vndergoe* such ample grace, and honour,
It is Lord Angelo.

Id. *Measure for Measure*, act i. sc. 1.

CASSI. Now know you, Caska, I haue mou'd already
Some certaine of the noblest minded Romans
To *vnder-go*, with me, an enterprize,
Of honorable dangerous consequence.

Id. *Julius Cæsar*, act i. sc. 3.

UNDER-GROUND; *i. e.* under the ground; subterraneous.

The feet of the mole are made for digging; the neck, nose, eyes, ears, and skin, are peculiarly adapted to an *under-ground* life; and this is what I call relation.

Paley. *Natural Theology*, ch. xv.

It is known that the sacred images of the Capitol were not destroyed when injured by time or accident, but were put into certain *underground* depositaries called *savissæ*.

Byron. *Childe Harold*, ch. iv. Note 46.

UNDER-GROWN.

UNDER-GROWN, } Grown, risen, below, sc. the
UNDERGROWTH. } usual height.

UNDER-KEEP.

Undergrowth,—the lower growth; plants growing low, or below others.

Hire mouth ful smale, and therto soft and red,
But sikerly she hadde a fayre forehed.
It was almost a spanne brode I trowe.
For hardily she was not *undergrowe*.

Chaucer. Prologue to the Canterbury Tales, v. 154.

Satan had journied on, pensive and slow;
But further way found none, so thick entwined.
As one continu'd brake, the *undergrowth*
Of shrubs and tangling bushes had perplexed
All path of man or beast that past that way.

Milton. Paradise Lost, book iv.

UNDER-HAND, under cover of the hand; covered, concealed, secret, sinister, clandestine.

At whose departure hence out of the land,
How did the open multitude reveal
The wondrous love they bare him *under-hand*!

Daniel. Civil Wars, book i.

Seeing only such stand ever base and low,
That strike the dead, or mutter *under-hand*:
And as dogs bark at those they do not know,
So they at such they do not understand.

Id. Funeral Poem.

I had my selfe notice of my brothers purpose heerein, and haue
by *under-hand* means laboured to dissuade him from it; but he is
resolute.

Shakspeare. As You Like It, act i. sc. 1.

And having an impertinent dream at this time, that he has
been making the fortune of the family, by an *under-hand* marriage
with the daughter of a man who will crush us all to powder for it.

Vanburgh. The Mistake, act iii. sc. 1.

Under-hand and oblique ways would be studied. The science
of evasion, already tolerably understood, would then be brought to
the greatest perfection.

Burke. On the Present Discontents.

UNDER-HANG, v. To suspend.

Underhung (Jaw), when the under-jaw projects so
as to throw the under row of teeth beyond the upper.

He cometh out otherwhiles with this saying of Antisthenes, for
which he commendeth him, namely, that a man is to be provided
either of wit to understand, or else of a with to *under-hang* himself.

Holland. Plutarch, p. 871.

UNDER-HO'NEST, honest below, sc. what a man
ought to be.

We came to speak with him; you shall not err
If you return, we think him over proud,
And *under-honest*.

Dryden. Troilus and Creseide, act iii. sc. 1.

UN-DER-IVED, not flowed, descended, drawn, de-
duced; not having a source or origin; not originated.

Nor will the doctor's distinction of a derived and *underived*
eternity help him in this matter: for the sense of the word eter-
nity has nothing to do with that distinction, being but one, and
importing neither more nor less than beginningless and endless
duration.

Waterland. Works, vol. ii. p. 327.

There is no instance in any miracle in scripture, which to an
ordinary spectator would necessarily imply the immediate opera-
tion of original, absolute, and *underived* power.

Clarke. On the Evidences. Prop. 14.

Our being is derived from this command; and therefore de-
pends on it still: but he is *underived*; and therefore independant
absolutely.

Secker. Lecture 6. vol. vi.

UNDER-KEEP, v. } To have or hold, under or
UNDERKEE'PER. } below, down.

Hurling his sword away, he lightly leapt
Vpon the beast, that with great cruelty
Rored, and raged to be *under-kept*:
Yet he perforce him held, and strokes vpon him hept.

Spenser. Faerie Queene, book iii. can. 7.

And so much favour he obtained from the *under-keeper*, that
sometimes by removing a board he allowed them to dine and sup
together, and to cheer one another in the Lord, with such simple
fare, as papist charity would allow them.

Strype. Ecclesiastical Memoirs. Henry VIII. Anno 1535.

UNDER-LAY, v. } A. S. *under-leggan*, *under-*
UNDERLIE. } *licgan*; D. *onder-legghe*, *onder-*
igghen.

To lay or lie, put or place or cause to be, below, be-
neath; to support, to sustain.

James earle of Dowglas, James lord Hammilton, the earles of
Murrey and Ormont, the lord of Baluay, and manie other of that
faction, were by publike proclamation made by an herald, com-
manded to appeare by a day to *underlie* the law.

Holinshed. Historie of Scotland. Anno 1452.

That man's faith is well *underlaid*, that upholds itselfe by the
omnipotency of God: thus the father of the faithfull built his
assurance upon the power of the Almighty.

Hall. Cont. Jonathan's Victory.

PACH. Mendoza, come,

Our souls have trode awry in all men's sight,
We'll *underlay* 'em, till they go upright.

Beaumont and Fletcher. Love's Cure, act v. sc. 3.

Thence they beheld an *underlying* vale
Where Flora set her rarest flowres at sale.

Browne. Britannia's Pastorals, book ii, song 2.

In a triangle the base doth differ from the sides thereof, and
yet one and the self same line is both a base and also a side; a
side simply, a base if it chance to be the bottom and *underlie* the
rest.

Hooker. Ecclesiastical Politie, book viii.

Upon the report of this adventure, the country people soon came
with lights to the sepulchre, and discovered that the statue, which
was made of brass, was nothing more than a piece of clock-work;
that the floor of the vault was all loose, and *underlaid* with several
springs, which upon any man's entering, naturally produced that
which had happened.

Spectator, No. 379.

UNDER-LINE, v. In *Strype*,—to have a line drawn,
scored below. In *Wotton*, met.—to direct, or have the
mind directed to, as the eye by lines scored under parti-
cular words.

Towards evening, by a meer chance, in appearance, though
under-lined with a providence, they had a full sight of the Queen
Infanta, and of the Princess Henrietta Maria.

Reliquiae Wottonianae, p. 215.

There is also another memorial of the charge committed by the
king to the said ambassador, dated September 24, [1552], with
lines drawn *under* many of the words and sentences, and a note of
Secretary Cecyl's hand, that what was so *underlined* was to be put
in cypher.

Strype. Ecclesiastical Memoirs. Edward VI. Anno 1552.

UNDERLING, s. an inferior, one subservient, or
depending upon.

Thauh he be here thyn *underling*, in hevene paraunter
He worth rayther receyved.

Piers Ploukman, p. 130.

I wote wel, that there is degree above degree, as reson is, and
skill is, that men do hir devoir, ther as it is due; but certes, ex-
tortion, and despit of your *underlinges*, is dampnable.

Chaucer. The Persones Tale.

That thyng, through which he wend haue stonde,
First him exiled out of londe,
Which was his owne, and from a kynge
Made him to be an *underlyng*.

Gower. Conf. Am. book vi.

And so they had halfe dysdayne at Jesu, that he, who not long
before was taken for an *underlyng* and a persone of no reputa-
cyon, was now sodaynly exalted to highe estymacion and au-
thoritie.

Utall. Marke, ch. vi.

Albeit the husbunde be the wiues gouvernour, yet he is *underlyng*
and subiect to Christe his lorde and maister.

Id. 1 Corinthians, ch. xi.

UNDER-KEEP.

UNDERLING.

UNDER-
LING.

And also [he] presumed to assigne a daie within the which he should reforme those things which he misliked in him, as if he were his subiect and *underling*.

UNDER-
MINIS-
TERED.

Holinshed. Chronicles of England. Edw. II. Anno 1324.

UNDER-MA'STED, -SAILED. Masted or sailed, inadequately, insufficiently.

Some of them say, that she was bigger than the Madre de Dios, and some, that she was lesse: but she was much *undermasted*, and *undersailed*, yet she went well for a ship that was so foule.

Hakluyt. Voyages, vol. ii. p. 201.

UNDER-MEAL. See UNDERN. Mr. Tyrwhitt explains,—1. The dinner of our ancestors. 2. Upon further consideration, that it is the time after the meal of dinner.

For ther as wont to walken was an elf,
Ther walketh now the limitour himself
In *undermeles* in morweninges.

Chaucer. The Wif of Bathes Tale, v. 6457.

COKEs. I think I am furnish'd for cather'ne pears, for one *undermeal*.

Ben Jonson. Bartholomew Fair, act iii. sc. 1.

UNDER-MI'NE, v.

UNDERMI'NER,

UNDERMI'NING, n.

Ger. *underminiren*; D. *on-dermynen*; to draw or lead under or below, *sc.*, a way or passage under or below, a subterraneous way or passage; and hence, to remove, to destroy the foundation, the steadfastness, the security; to ruin.

To the entent that they might come to the walles, to fight hande to hande with them of the towne, and to *undermyne* the walles, thinkynge therby to cōquere it.

Lord Berners. Froissart. Cronycle, vol. i. ch. 436.

That erst we reared up, we *undermine* again;
And shred the sprays whose growth sometime we laboured with pain.

Surrey. Paraphrase on Eccles. ch. iii.

And of that lust possess'd himself he findeth
That hath and doth reverse, and clean turn out
Kings from kingdoms, and cities *undermineth*.

Wyat. Prologue to Penitential Psalms.

These [shapes and spirites] wander vp and downe in caues and *underminings*, and seeme to besturre themselves in all kinde of labor; as, to digge after the veine, to carrie together the oare, &c.

Warton. On Milton. Comus. From Olaus Magnus. 1572.

For people living on plains have commonly all commodities in such plenty, that they are subject to surfeiting and luxury, the greatest enemy and *underminer* of all intellectual operations.

Fuller. Worthies. General.

When I perceiv'd all set on enmity,
As on my enemies, where ever chanc'd,
I us'd hostility, and took the spoil
To pay my *underminers* in their coin.

Milton. Samson Agonistes.

Well then, to obviate any such method of *undermining* Christian practice, it will be necessary to be a little more particular than barely to lay down in brief to love God and one's neighbour; we must add, the true God, the God of Jews and Christians, that very God and none else; and as to neighbour, we must insist upon it that it means, not this or that sect, tribe, party, &c., but all mankind.

Waterland. Works, vol. iv. p. 310.

The meaning and design of those words was Christ's clearing himself from the common imputation that the Scribes and Pharisees loaded him with, of being an *underminer* of the law of Moses.

South. Sermon 5, vol. vii.

It is the wind, or rather the waves raised by the wind, that brings down the bulk of these enormous masses, by grinding one piece against another, and by *undermining* and washing away those parts that lie exposed to the surge of the sea.

Cook. Third Voyage, book iv. ch. ix.

UNDER-MI'NISTERED.

UNDERMI'NISTERING, n.

UNDERMI'NISTRY.

See SUBMINISTER.

Under-ministry; lower, inferior ministry.

So Wiclif renders the Vulgate *subministratum, subminist-*

And I woot that this thing schal come to me into heelthe bi ghoure preier and the [*subministratio*] *undirmynstryng* of the spyryt of Jesus Crist.

Wiclif. Filipensis, ch. i.

No man disseyue ghou willynge to teche in mekenesse and religious of aungelis tho thingis whiche he hath not seen, walkynge veynli bolned with witt of his fleisch, and not holdynge the heed of which al the bodi bi boondis and ioynyngis togidre *undirmynstryd* [*subministratum*] and maad wexith into encressyng of God.

Id. Colocensis, ch. ii.

It became necessary by new introduc'd necessities that there should be rules and measures given in things relating to the church, concerning which God himself had given no commandment; as concerning order in synods and conventions ecclesiastical, the division of ecclesiastical charges, the appointment of *under-ministeries* in the church, &c.

Taylor. Rule of Conscience, book iii. ch. iv.

UNDER-MO'NIED. Fuller means by this quaint word—Taken by corrupt means of money.

Next day he took the two forts of Rise-bank and Newnambridge (wherein the strength of the city consisted); but whether they were undermined or *undermonied* it is not decided, and the last left most suspicious.

Fuller. Worthies. Suffolk.

U'NDERN,

U'NDERMEAL,

U'NDERTIME.

In Goth. *undaurni-mat*, is (Junius) *prandium*; and *underen* is in some northern dialects, *prandere*. Kilian. *Undern* and *underntid* (Wachter), the third hour of the day, with us the ninth. Somner says (from Bede) that three times were allowed for drinking, (ad potandum, *on undern, on mid-dæg, on non*;) and adds, that both Chaucer's interpreters and Verstegan are to be corrected, who by *undern* and *underntide* understand—afternoon. *Undern-sang* (he says) is nine o'clock service—*nonam ante meridiem*. Skinner adopts the same opinion as Verstegan. *Under* is used in A. S. in composition with various words denoting food, a dish or messe, dinner, supper, repast, (Somner;) whence it may be inferred, that *undern* (or *underen*) is formed upon *under*, and used elliptically, or with a subaudition of some noun, *e. g.* tide or time, meal, &c.

In the *Promptorium Parvulorum* (says Gifford) *undermele* is Latinized by *post meridiem*, and he calls it an afternoon's meal, a slight repast after dinner.

Mr. Tyrwhitt says he never met with any etymology of this word *undern*; but the following passage (he thinks) may lead one to suspect that it had some reference to *undernoon*. In the town-book belonging to the corporation of Stanford, 28 Edw. IV. it is ordeyned that no person opyn ther sack, or set ther corn to sale afore hour of ten of the bell, or els the *undernone* bell be rongyng.

Peck. Desid. Cur. vol. i. b. vi. p. 36.

The seuent day of Juny, Whitson euen that tyme,
Died that lady, bituex *vndron* & prime.

R. Brunne, p. 243.

Biteux *vnderon* & noen was the feld alle wonnen.

Id. p. 18.

And in a bed of wortes stille he lay,
Till it was passed *undern* of the day,
Waiting his time on chaunteclere to falle.

Chaucer. Nonnes Preestes Tale, v. 15229.

For Hercules hede of them toke,
Till it was *vnderne* high and more.

Gower. Conf. Am. book v.

The maydenes durst hur not awake,
But bysyde hur mery they can hem make
And lete her slepe tyl after none,
That the *underlyde* was gone.

Sir Orpheo. Ritson, vol. ii.

Tymely as the day can dawne
He led herthorow a feyre schawe
In wodes waste and wylde:
Evyn at *undurne* lyghtyd he.

Le Bone Florence. Id. vol. iii.

UNDER-
MINIS-
TERED.UN-
DERN.

UNDER-NEATH. *UNDER-NEATH*, i. e. on *neder -neath*; and as *neder* and *nether* are the same word, the force of the meaning may be augmented by the composition.

UNDER-PIGHT.

Gif he haue *vnderneithen* whiit, thanne he aboue wereth Black that betokeneth bale, for oure synne.
Piers Plouhman, p. 2.

At Boughton under blee us gan atake
A man that clothed was in clothes blake
And *vnderneith* he wered a white surplis.
Chaucer. Prologue to Chanones Yemannes Tale, v. 16025.

Underneath him my father, bare of wealth,
Into his band young, and near of his blood,
In my prime years unto the wars me sent.
Surrey. Virgile. Æneis, b. ii.

He [justice of peace] (if he be there) deliuereth vp the examination which he tooke of him, and *vnderneath* the names of those whō he hath bound to giue euvidence.

Smith. Commonwealth, book ii. ch. xxvi.

I thought my tongue
Bore thunder *vnderneath*, as much as his.
Beaumont and Fletcher. Philaster, act i.

When *vnderneath* my power my foes have truckl'd
To be a prince, who would not be a cuckoold?
Dryden. Tempest, act iii.

That covert neither rough winds blowing moist
Could penetrate, nor could the noonday sun
Smite through it, or fast falling show'rs pervade,
So thick it was, and *vnderneath*, the ground
With litter of dry foliage strew'd profuse.
Cowper. Homer. Odyssey, book xix.

UNDER-NY'ME, } A. S. *under-niman, suscipere*,
UNDERNY'MING. } to undertake. See NUM. And
further—*subferre, subjicere*, to bring or place, to subject,
sc. to law, to censure, to judgment.

Whiche eretikus ioon in the begynnyng of his gospel *undirnymeth*
and seith, in the bigynning was the sone: and in this book
whanne he seith, I am alpha and oo, that is the bigynnyng and
the ende.
Wiclif. Prolog. to the Apocalyps.

But whanne Petir was comen to Antioche I aghenstood him in
the face, for he was worthi to be *undirnomun*.
Id. Galathies, ch. ii.

Why *underneme* ye not your brethren for their trespass after
the law of the gospel, sith that *vnderneming* is the best that may
be?
Imputed to Chaucer. Jack Upland.

UN-DERO'GATORY. Not taking away or de-
tracting, not diminishing, degrading.

You see the apostle gives it a negative description: and to
create in us apprehensions *underogatory* from what we shall pos-
sess, not only removes our thoughts from all we do enjoy, but
exalts them above all that we can fancy.
Boyce. Works, vol. i. p. 283.

UNDER-PEEP, v. To look under.

The flame o' th' taper
Bowes toward her, and would *vnder-peepe* her lids,
To see th' inclosed lights, now canopied
Vnder these windowes.

Shakspeare. Cymbeline, act ii. sc. 2.

UNDER-PIGHT, i. e. "In *Chaucer*," says Mr.
Tyrwhitt, "he drank, and stuffed his girdle well."
Fixed under or below, as a prop or support; pitched
under or below; supported.

He dranke and wel his girdel *underpight*.

Chaucer. Man of Lawes Tale, v. 5210.

By the obseruance of this law, then were menne so long
stayed, and *vnderpyght*, vntill that was by the ghospell opened,
whiche the lawe in shadowes represented, that yf men wyll nowe
awake, they maye clearlye see euen that put in vre, wherof they
before had but a dreame,

Udall. Galathians, ch. iii.

VOL. XXVIII.

Nor yet repent we our glory, with hope wherof we for this
present tyme are aduanced and *vnderpyght*.

Udall. Romaines, ch. v.

UNDER-PIN, v. To fasten, under or below; to
underprop, q. v.

UNDER-PLOT. A plot under the main plot;
subject, subordinate or subservient to it.

Particularly, the action is so much one, that it is the only of the
kind without episode, or *under-plot*; every scene in the tragedy
conducing to the main design, and every act concluding with a
turn of it.

Dryden. All for Love. Preface.

An *under-plot* may bear such a near relation to the principal
design, as to contribute towards the completion of it, and be con-
cluded by the same catastrophe.

Spectator, No. 40.

UNDER-PRAISE, v. To praise, below, insuffi-
ciently.

In *underpraising* thy deserts,
Here find the first deficiency of our tongue.

Dryden.

UNDER-PRIZE, v. To prize or set a price or
value—below, inferior to; to set an inadequate price or
value.

Yet looke how farre
The substance of my praise doth wrong this shadow
In *vnderprising* it, so farre this shadow
Doth limpe behinde the substance.

Shakspeare. Merchant of Venice, act iii. sc. 2.

Then, if I mistake not,
He scorns to have his work so *underprised*,
That it should need an adjunct in exchange
Of an equal fortune.

Ben Jonson. The Case is Altered, act iii. sc. 3.

UNDER-PROP, v. } To set or place below—a
UNDERPROPPER. } stay, a support; to support,
to sustain.

And therefore, while he doth but tel vs and proue it not, and so
vnderproppeth his assercion w^t it self.

Sir Thomas More. Workes, p. 473.

But he were no propre *vnderpropper* of a lie, that would minish
hys credence w^t affirming all the first and setting a lower lye
therto.

Id. Ib. p. 126.

For this assembling all the peers,
Whose counsels now must *vnderprop* their throne
Against the foe, which not a man but fears.

Drayton. The Battle of Agincourt.

In *underpropping* vines, the forkes would not bee set opposite
against that wind to hinder the blast thereof; a point that is to
be observed in regard of the north wind onely.

Holland. Plinie, book xvii. ch. ii.

UNDER-PROPORTIONED, not in equal or ade-
quate proportions.

To be haughty and to make scanty and *underproportioned* re-
turns of civility, plainly tells people, they must be very mannerly.

Collier. On Pride.

UNDER-PUT, v. To place, to set—below, down;
to submit, to subject.

Greete ghe Prisca and Aquila myne helpers in Crist Jesu whiche
undirputtiden her neckis for my lyf.

Wiclif. Romayns, ch. xvi.

I haue great nouryshyng of thin heale, and that is the sothe
sentence of gouernaunce of the world, that thou bileuest that the
gouerning of it is not subiecte ne *vnderput* to the folie of these
happes aduenturous, but to the reason of God.

Chaucer. Boccius, book i.

And so I saie, though thou bee put to serue thilke iewell,
duryng thy life, yet is that no seruage of *vnderputyng*, but a maner
of traauiling pleasance, to conquere and get that thou haste not.

Id. Testament of Loue, book i.

And as a caldron, *underput* with stone of fire, and wrought
With boyling of a well-fed brawne, up leapes his wave aloft.

Chapman. Homer. Iliad, book xxi.

UNDER-
RATE.
—
UNDER-
SET.

UNDER-RATE, *v.* } To rate, adjudge, esteem,
UNDERRATE, *n.* } estimate, value, below, too

low.

And bring not down the prizes of the mind,
With *under-rating* of yourselves so base;
You that the mightie's doors do crouching find,
To sell yourselves to buy a little grace.

Daniel. Musophilus.

Thy beauties therefore wrong will take
If thou shouldst any bargain make;
To give all, will befit thee well;
But not at *underrates* to sell.

Cowley. The Given Love.

If you'll confess he brought home noble prize,
As you must needs, for you all clapt your hands,
And cry'd inestimable: why do you now
So *under-rate* the value of your purchase?

Dryden. Troilus and Cressida, act ii. sc. I.

During the time of her bloom and beauty [she] was so great a
tyrant to her lovers, so over-valued herself and *under-rated* all
her pretenders, that they have deserted her to a man.

Spectator, No. 372.

But though the common fault is *under-rating* the value of those
who are near and ought to be dear to us, yet present grief on
losing them may possibly overdo it.

Secker. Sermon 9, vol. iii.

UNDER-RE'CKON, *v.* To reckon or calculate be-
low, too low.

So Suidas *under-reckons* it by seven yeares.

Hall. Sermon to Lords of Parliament. Feb. 18, 1634.

UNDER-RE'COMPENSED, not equivalently com-
pensated, paid, rewarded.

In point of pecuniary gain, all things considered, they [ho-
nourable professions] are generally *under-recompensed*, as I shall
endeavour to show by and by.

Smith. Wealth of Nations, book i. ch. x.

UNDER-SAIL, *v.* So Wiclif renders *sub-navigare*.
And see UNDER-MASTED.

And whanne we remoueden fro thenns we *undirsailiden* to Cipre
for that windis weren contrarie. *Wiclif. Dedis, ch. xxvii.*

UNDER-SAY, *v.* To say or speak under; *i. e.* in
dissent, objection, contradiction.

They say they con to heauen the high way:

But by my soule I dare *undersay*

They neuer set foote in that same trode,

But balke the right way, and strayen abroad.

Spenser. Shepheard's Calender. September.

UNDER-SCORE, *v.* To cut, to draw a line or
mark below.

Cranmer *underscored* several principal passages [in the book]
with red ink. *Tucker. Letter to Dr. Kippis.*

UNDER-SEARCHING, searching or seeking (its
way or course) below.

Whilst th' *under-searching* water working on,

Bears proudly down all that was idly done.

Daniel. Civil Wars, book iii.

UNDER-SELL, *v.* To sell below, for a lower sum
or price.

Such now the emulation betwixt these owners to *undersell* one
another, that the commodity is fallen to thirteen pound the ton.

Fuller. Worthies. Yorkshire.

Corporation laws enable the inhabitants of towns to raise their
prices, without fearing to be *undersold* by the free competition of
their own countrymen.

Smith. Wealth of Nations, book i. ch. x.

UNDER-SET, *v.* } D. *ondezetten*; to put or
UNDERSE'TTER, } place under, *sc.* as a prop, or
UNDERSE'TTING. } stay, or support; to support,
to sustain.

And whanne the vessel was *undirsett* so thei weren borun.
Wiclif. Dedis, ch. xxvii.

With scriptures autentike,
My werke woll I ground, *underset*, and fortifie.
Chaucer. Remedie of Loue. Prologue.

He tolde hym eke as for the myne
He wolde ordeine suche engyne,
That thei the werke shuld *undersette*
With tymbre. *Gower. Conf. Am. book v.*

Capys, with some of judgment more discreet,
Will'd it to drown; or *underset* with flame
The suspect present of the Greek's deceit.
Surrey. Virgile. Aeneis, book ii.

Now she had of fatal Lancaster
Seen all the pillars crush'd and ruined,
That *under-set* it. *Daniel. Civil Wars, book viii.*

And in the foure corners were *undersetters* vnder the lauatorye.
Bible, Anno 1551. 1 Kynges, ch. vii.

They have all their *under-settings*, or pedestals, in height a
third part of the whole columnne, comprehending the base and
capital. *Reliquiæ Wottonianæ, p. 22.*

UNDER-SHOT, shot, thrown, driven by something
passing under.

And so the imprisoned water payeth the ransome of dryuing an
undershotte wheele for his enlargement.

Carew. Survey of Cornwall, fol. 26.

UNDER-SI'ZED, sized or of a size, or stature, be-
low the common standard.

They are in general *under-sized*, as are the Mungalians; their
complexion, like theirs, is swarthy.

Cook. Third Voyage, book vi. ch. vii.

UNDER-SONG, A. S. *under-singan, succinere*,
Somner.

"To sing after or lower than another, to follow an-
other in singing."

So ended she; and all the rest around
To her redoubled that her *undersong*,
Which said, their bridale day should not be long.

Spenser. Prothalamion.

But you, O Muses, by soft Chamus sitting,
Your dainty songs unto his murmurs fitting,
Which bears the *under-song* unto your cheerful dittyng.
Fletcher. Purple Island, can. 1.

For time will *under-song* [underfong?] us; and our voice
Woll woxen weake.

Browne. Yonge Willie and Old Wernock.

UNDER-STAND, *v.* } A. S. *understandan*; D
UNDERSTA'NDABLE, } *onderstaan, sub-stare, sub-*
UNDERSTA'NDER, } *sistere, sus-cipere, to stand*
UNDERSTA'NDING, *n.* } under or below, to support
UNDERSTA'NDINGLY. } or uphold, the weight or
burden; to hold, to take, to apprehend, to comprehend,
to conceive. And the—

Understanding,—that which, that faculty which, sus-
tains;—which contains, retains; which apprehends or
comprehends, perceives, receives, or conceives, *sc.* ideas,
thoughts; that which knows, judges; the mind, the
mental faculties.

The kyng of Northumburlonde kyng was ich *understonde*
Of al the lond bi gonde Homber anon into Scotlonde.
R. Gloucester, p. 6.

At myn *understandyng* he wild tak no mede
That was ateynt of wikkednes. *R. Brunne, p. 29.*

He was bothe gode & wys in alle his dedis,
& right *understandyng*, to help at alle nedis.
Id. p. 35.

The kyng wille bot wele, the lawe alle *understandes*,
The hie folk ilk a dele, he did com of bothe the landes.
Id. p. 249.

UNDER-
SET.
—
UNDER-
STAND.

UNDER-
STAND.

William *understode*, that he said reson,
& was next of blode. *R. Brunne*, p. 92.

That oure Lorde ordeynede
Clerkes that aren crowned. of kynde *understondyng*
Sholde noth^r swynke ne swete.

Piers Plouhman, p. 78.

If eny man doth me a bynfet. oth^r helpeth me at nude,
Ich am unkynde ageyns courtesye. ich can nat *understounde* hit.
Id. p. 112.

And yf thu happe quath hue. that thou hitte on clergie
And hast *understondyng*. what he wolde mene
Sey to hym thy self. ower see my bokes. *Id.* p. 189.

Ac thees lewede laborers. of lytel *understondyng*
Selde fallen so foule. and so deepe in synne
As clerkes of holy churche. *Id.* p. 199.

That the prophecie of Ysaye be fulfillid seiynge, with herynge
ye schulen heere and ye schulen not *understonde*, and ye seyng
schulen se and ye schulen not se.

Wiclif. Matthew, ch. xiii.

And in theym is fulfilled the prophecie of Esaias, whiche pro-
phesy sayeth; wyth the eares ye shall heere and shall not *under-*
stande, and with the eyes ye shall se, and shall not perceauie.

Bible, Anno 1551.

And the pees of God that passith al witt kepe ghoure hertis and
understondyngis in Crist Jesus. *Wiclif. Filipensis*, ch. iv.

And the peace of God whych passeth al *understāding*, kepe youre
hertes and myndes in Crist Jesu. *Bible*, Anno 1551.

That he be loved of al the herte, and of al the mynde, and of al
the *understonding*, and of al the soule, and of al the strengthe,
and to love the neyghbore as himself, is grettere than al brente
offringis and sacrifices. *Wiclif. Mark*, ch. xii.

My wit is short, ye may wel *understonde*.

Chaucer. Prologue to Canterbury Tales, v. 749.

As he this *understode* and sigh
Him thought he herde a voice on high
Cryende, and saide abouen all;
Hewe downe this tree, and let it fall.

Gower. Conf. Am. book i.

And *understonde*, that all this paine,
Whiche thou shalt suffre thilke tide,
Is shape all onely for thy pride
Of vaine glorie, and of the sinne,
Whiche thou hast longe stonden in.

Id. Ib.

The prince read the letter a two tymes, the better to *understande*
it. *Lord Berners. Froissart. Cronycle*, vol. i. ch. 235.

And what danger that were, to liue so long comfortlesse, voide
of light, (if the cold killed you not) each man of reason or *under-*
standing may iudge. *Hakluyt. Voyages*, vol. iii. p. 21.

But whom? attentive auditors,
Such as will join their profit with their pleasure,
And come to feed their *understanding* parts.

Ben Jonson. Every Man Out of his Humour. The Stage.

The men that were aboard the same ships were of some farre
countrie, for their language was vnknowne, and not *understandable*
to any man that could be brought to talke with them.

Holinshed. Chronicles of England. Henry III. Anno 1254.

MAR. My sight was a little dim i' th' dark indeed,
So was my feeling cozen'd: yet I'm content;
I am the better *understander* now.

Beaumont and Fletcher. Maid in the Mill, act v.

It is therefore a great ability in a man, out of the words, con-
texture, and other circumstances of language, to deliver himself
from equivocation, and to find out the true meaning of what is
said: and this is it we call *understanding*.

Hobbs. Human Nature, ch. v.

Laz. Your grace doth apprehend me very rightly.

COUNT. Your grace shall find him in your further conference
Grave, wise, courtly and scholar-like, *understandingly*
read

In the necessities of the life of man.

Beaumont and Fletcher. Woman-Hater, act ii.

Sundays also and every evening may be now *understandingly*
spent in the highest matters of theology, and church history an-
tient and modern.

Milton. Of Education.

Were it not for two or three instances in White-Hall, and in
the town, the poets of this age would find so little encouragement
for their labours, and so few *understanders*, that they might have
leisure to turn pamphleteers.

Dryden. The Kind Keeper. Epis. Ded.

Since it is the *understanding* that sets man above the rest of
sensible beings, and gives him all the advantage and dominion
which he has over them; it is certainly a subject, even for its
nobleness, worth our labour to inquire into.

Locke. Of Human Understanding, book i. ch. i.

He [Leonard Digges] was esteemed by those that knew him
in Univ. Coll. a great master of the English language, a perfect
understander of the French and Spanish, a good poet, and no mean
orator.

Wood. Athenæ Oxon. vol. i.

An answer to a treatise concerning the cross in baptism, Oxon.
1605. Which book was held in reverent respect by the best
bishops of the Church, as having the fathers agreeing to scripture
truly urged, and *understandingly* interpreted therein.

Id. Ib. vol. i.

So very disgusting is this kind of enquiry to the generality, that
I have often thought it was for mankind a lucky mistake (for it
was a mistake) which Mr. Locke made when he called his book
an Essay on Human *Understanding*.

Tooke. Letter to Dunning.

UNDER-STATED, stated, estated—below, having
too low or small an estate.

Sir Henry, though heir to his brother Richard after his death,
yet perceiving himself over-titled, or rather *under-stated*, for so high
an honour (the undoubted right whereof rested in him), declined
the assuming thereof. *Fuller. Worthies. Bedfordshire.*

UNDER-STO'CKED, stocked too low, below what
is wanted; supplied, furnished, stored insufficiently.

A new colony must always, for some time, be more *understocked*
in proportion to the extent of its territory, and more under-peopled
in proportion to the extent of its stock, than the greater part of
other countries. *Smith. Wealth of Nations*, book i. ch. ix.

UNDER-STRA'PPER. A strapper, one who straps,
or buckles to his work; sets to it in earnest.

Under-strapper,—a lower workman, a fag.

This was going to the fountain-head at once, not applying to
the *understrappers*.

Goldsmith. The Good Natur'd Man, act ii.

UNDER-TAKE, v. } To take or betake, to move
UNDERTA'KABLE, } or place, set or put under or
UNDERTA'KER, } below, sc. as bearer, sup-
UNDERTA'KING, n. } porter, carrier, sustainer.

To take or assume, the burthen or charge; the per-
formance, the maintenance; to engage to perform; ge-
nerally—

To engage, to pledge, to enterprise, to attempt, to
venture. *Chillingworth.*

The barons said, for thare sake, for tham than praye we,
Thare trespas we *undertake* opon alle our fee.

R. Brunne, p. 60.

The Monenday that felle to be next after the tuelft day,
The kyng of France & he, at the riuer of S. Rymay,
Held a parlement, gode sikernes to make,
That bothe with on assent the way suld *undertake*.

Id. p. 147.

And boxes ben y set forth bounden with yre (iron)

To *undertake* the tool. of untrewes sacrifice

In menyng of miracles. *Piers Plouhman*, p. 5.

And for to *undertake*. to travely for another

And wot nevere whitly. wer he lyve so longe.

Id. p. 53.

As lene was his hors as is a rake,
And he was not right fat, I *undertake*;

But loked holwe, and therto soberly.

Chaucer. Prologue to the Canterbury Tales, v. 291.

UNDER-
STAND.

UNDER-
TAKE.

UNDER-
TAKE.
—
UNDER-
VALUE.

And Charles, for the reuerence
Of God, the cause hath *undertake*,
And with his hoste the waie hath take
Ouer the mountes of Lumbardie.

Gower. *Conf. Am. Prologue.*

Florent this thing hath *undertake*. *Id. Ib. book i.*

I would wish that they, who (God be thanked) are well able to spare that which is required of each one towards the *undertaking* of this aduventure, be well content and willing to imploy the same.

Hakluyt. *Voyages*, vol. iii. p. 185.

Yet could it not sterne Arthegall retaine,
Nor hold from suite of his awowed quest,
Which he had *undertane* to Gloriane.

Spenser. *Faerie Queene*, book v. can. 8.

Yet t' introduce a better government
Instead thereof, if we t' example look,
The *undertakers* have been overtook.

Daniel. *Civil Wars*, book iii.

And yet the *undertakers*, nay, performers,
Of such a brave and glorious enterprize,
Are yet unknown.

Beaumont and Fletcher. *The Double Marriage*, act v.

But [I] have shewed that by forgetting himself, and retracting most of the principal grounds he builds upon, he hath saved me the labour of a confutation: which yet I have not in any place found any such labour or difficulty, but that it was *undertakable* by a man of very mean, that is, of my abilities.

Chillingworth. *Religion of Protestants. Epis. Ded.*

I find you are a general *undertaker*, and have, by your correspondents, or self, an insight into most things; which makes me apply myself to you at present in the sorest calamity that ever befel man.

Spectator. No. 432.

His very mirth is an antidote to all gaiety, and his appearance has a stronger effect on my spirits than an *undertaker's* shop.

Goldsmith. *The Good Natur'd Man*, act i.

These critics, by their very imperfect knowledge of the Hebrew language, which in their time had been a dead language among the Jews themselves for many ages, and by their prejudices against our Saviour, were but ill qualified for their arduous *undertaking*.

Horsley. *Sermon 26*, vol. ii.

UNDER-TIME. See UNDERN.

He comming home at *undertime*, there found
The fairest creature that he euer saw,
Sitting beside his mother vnder ground;
The sight whereof did greatly him adaw.

Spenser. *Faerie Queene*, book iii. can. 7.

UNDER TREASURER OF ENGLAND, *Vice-Thesaurarius Angliæ*, an officer whose duty it was to assist the Lord Treasurer, by chesting up the King's treasure at the end of every term, to take note of the contents of each chest, and see it carried to the King's treasury. In the vacancy of the office of lord treasurer this officer had to do all things in the receipt of revenue performed by the lord treasurer. When the latter great officer is in existence, the chancellor of the exchequer is under treasurer, and he also holds that office when the duties of lord treasurer are performed by commissioners, who are called lords of the treasury. The under treasurer of England is supposed to be an officer appointed in the time of Henry VII., but is by some believed to have a more ancient original. He is mentioned in the Act 39 Elizabeth, c. 7, a statute made "for the more speedy payment of the Queen's Majesty's debts," as "under-treasurer of the exchequer." (Madox, *History and Antiquities of the Exchequer*.)

UNDER-VALUE, *v.* } To estimate or rate the
UNDERVA'LUE, *n.* } worth, or price, below, too
UNDERVALUA'TION, } low; to set too low—a price,
UNDERVA'LUER, } estimation; to esteem too
UNDERVA'LUING, *n.* } little.

ZAB. They are for you, sir;
And *under-value* not the worth you carry,
You are that worthy man.

Beaumont and Fletcher. *Custom of the Country*, act iii. sc. 2.

What conceit soever I have of the price of life, their *undervaluation* of it hath been such, that they have parted with it for nothing; they have run to meet that death which I flee from as formidable and ugly?

Hall. *Christian Moderation*, book i. sec. 14.

And such men they were, as by the kingdom were sent to advise him, not sent to be cavill'd at, because elected, or to be entertain'd by him with an *undervalue* and misprison of their temper, judgment, or affection.

Milton. *Answer to Eikon Basilike*.

My next and last example shall be that *under-valuer* of money, the late provost of Eton [Sir Henry Wotton].

Walton. *Angler*, part i. ch. i.

And as it is a particular disesteem of every knowing person alive, and most injurious to the written labours and monuments of the dead, so to me it seems an *undervaluing* and vilifying of the whole nation.

Milton. *Areopagitica*.

By the means of which we can now crucify the flesh, with the affections and lusts; mortify and subdue all our irregular passions, *undervalue* pleasures, rejoice in afflictions, and walk even as he walked, in humility and patience, in purity and holiness.

Atterbury. *Sermon 6*, vol. iii.

For if men can pervert their judgments so, as to look upon some deviations from the law of God, the great rule of life, as no sins, taking sin strictly and properly, they will proceed to a general *undervaluation* of the nature of sin.

South. *Sermon 5*, vol. vii.

Men know but little of each other's real character and merit, and frequently err by *undervaluing* and overvaluing them.

Knox. *Winter Evenings. Evening 45*.

UNDER-WENT. *Went*, from A. S. *wend-an*, *ire*, to go, is used instead of the past tense *go-ed*, *go-en*. Literally,—

Went under, passed under; met.—suffered, sustained.

The festival, though in some parts of it, as in the general sentence and the beads, it *underwent* some corrections, yet I think it was not laid aside wholly till the reign of king Edward.

Strype. *Ecclesiastical Memoirs. Henry VIII. Anno 1532*.

For some remembrance of the Book of Public and Common Prayer, which about this time *underwent* a diligent inspection and reformation, by some of the bishops, take these short hints of it.

Id. Ib. Edw. VI. Anno 1550.

The sufferings and torments, which the first Christians *underwent* so willingly and bravely, were a strong evidence of the truth of that doctrine, which could inspire its followers with so much courage, constancy, and patience.

Atterbury. *Sermon 3*, vol. i.

Besides this, he [our Saviour] *underwent* the many inconveniences of a low and unsettled condition.

Secker. *Lecture 9*, vol. vi.

UNDER-WORK, *v.* } To work under or be-
UNDERWORK, *n.* } low; below what is needful,
UNDERWO'RKER, } insufficiently; lower or at a
UNDERWO'RKING, *n.* } lower price than others; consequently, it is equivalent to—

To undermine; to work under the foundation, unseen, secretly, clandestinely.

There dost thou struggle with thine own distrust,
And others jealousies their counterplot,
Against some *underworking* pride, that must
Supplanted be, or else thou standest not.

Daniel. *Chorus to Philotus*.

He raiseth in private a new instrument, one Sertorius Macro, and by him *underworketh*, discovers the other's counsels, his means, his ends, &c.

Ben Jonson. *Sejanus. The Argument*.

Notwithstanding all which, Adcnijah, backed by the strength of a Joab, and the gravity of an Abiathar, will *underwork* Solomon, and jostle into the not yet vacant seat of his father David.

Hall. *Cont. Adonijah Defeated*.

Drawing us, by insensible degrees, to sacrifice the public welfare to our own advantage, and to *underwork* and cross the better counsels of more faithful patriots.

Id. Ib. Mysterie of Godliness. Ep.

UNDER-
VALUE.

UNDER-
WORK.

UNDER-
WORK.
—
UN-DO.

What shall I need to suggest unto you the dangerous *underworking* of other sects? secretly endeavouring to spring their hidden mines, to the overthrow, both of the one government and the other.
Hall. Cent. A Modest Offer.

Those that are proper for war, fill up the laborious part of life, and carry on the *underwork* of the nation.
Addison.

But here indeed Athanasius guards against the notion of the Son's being an *underworker*, in the low Arian sense: for otherwise he admits that the Father wrought by and in the Son.
Waterland. Works, vol. iii. p. 320.

UNDER-WRITE, v. } A. S. *under-writ-an, sub-*
UNDERWRITER. } *scribere*; to subscribe, to write below.

An *underwriter*,—a subscriber to certain terms of agreement, to a policy of insurance.

She spoke, or at least writ, English very well, as appears by her letter *under-written*.

Strype. Ecclesiastical Memoirs. Edw. VI. Anno 1552.

Firz. I have enough on't: for an hundred pieces!
Yes, for two hundred, *under-write* me, do.
Your man will take my bond?

Ben Jonson. The Divelle is an Asse, act iii. sc. 1.

But I shall not be troubled with this any more; save that I shall observe that one White, of the Roman perswasion, quoting part of these words, which Bellarmine, and from him the *underwriters* object; of these words in particular affirms that without all controversie they are apocryphal.

Taylor. Of the Real Presence, sec. 12.

UNDERWRITER, in *Law*, is one who undertakes to insure or indemnify another against losses by sea or fire. He is so called from the fact of his signing his name under or at the foot of the policy or instrument by which the insurance is effected.

UNDINA, in *Botany*, a genus so called by Fries, from *undo*, to rise up in waves. It belongs to the class *Cryptogamia*, and order *Algæ*. Generic character: frond gelatinous, subglobose, filled with moniliform threads. Species natives of marshes or the sea.

UN-DISCLO'SE, v. To conceal, to keep close or shut up, covered or concealed; not revealed, or opened, or exposed.

Look, Delia, how w' esteem the half blown rose,
The image of thy blush, and summer's honour!
Whilst yet her tender bud doth *undisclose*
That full of beauty, Time bestows upon her.

Daniel. Son. 36.

Luxurious, others make
The meads their choice, and visit every flower,
And every latent herb: for the sweet task,
To propagate their kinds, and where to wrap,
In what soft beds, their young yet *undisclos'd*,
Employs their tender care.

Thomson. Summer.

Whate'er there be between you *undisclosed*,
This is no time nor fitting place to mar
The mirthful meeting with a wordy war.

Byron. Lara, c. i.

UN-DO, v. } D. *ontdoen*. To do not; to annul or
UNDO'ER, } vacate the effect of any thing, already
UNDO'ING, n. } done; to open that which is shut; to loosen that which is fast; to solve. Consequentially—
To annul; to annihilate, to invalidate; to ruin, to destroy; to demolish. And *undone*—
Not acted or transacted, not effected, not executed; and also, destroyed, ruined.

He *undude* alle luther lawes, that me huld byuore,
And gode lawes brogte vorth.

R. Gloucester, p. 281.

He let crye anon thoru al lond, the vnrygt lawes *vndo*,
That hys fader & hys brother helde, & prisons delynery also.
Id. p. 422.

How Daniel dymnede. and *undude* the dremeles
Of king Nabugodonosor.
Piers Plouhman, p. 163.

The wiche lif and lawe. be hit longe yusede
Hit shal *undon* ous deoveles. and don brynge ous alle.
Id. p. 357.

The window she *undoth*, and that in haste.
Have don (quod she) come off, and spede thee faste,
Lest that our neighebores thee espie.

Chaucer. The Milleres Tale, v. 3726.

After the deathe of this cruelle Sylla, in exaltynge of hym selfe, Julius Cæsar the pitiefull, made dictatour of Rome, and chiefe of the Marians, adnulled and *undidde* all that Sylla had made, and broughte agayne into the aunciente estate the common welthe.
Golden Boke, ch. i.

Thei haue geuen the beautie and richesse for to *vndooe* the.
Id. ch. xx.

[The yeomen] were readie (besides perpetuall shame) to bee in danger of *vndooing* of themselves, and all theirs, if they should shewe any signe of cowardise, or abandon the lord, knight or gentleman of whom they helde theyr living.

Smith. Commonwealth, book i. ch. xxiii.

They sodeynly auoyded the lande, & lafte the foresayd notable sūmes vnpayd, to the great hyderaunce & vtter *vndoyng* of many Englysshe marchautes.

Fabyan. Chronycle, Anno 1404.

Here may be so much wit (though much I fear it)
To *undo* this knotty question.

Baumont and Fletcher. Women Pleas'd, act iv. sc. 1.

Their rich plate set their enemies teeth on water; who for the love and desire thereof, practised by all cunning means their utter *undoing*.

Holland. Plinie, book xxxiii. ch. xi.

He that ventures to be a surely for another, ventures an *undoing* for his sake; and there is not any thing less to be wondered at in common life, than to see such persons *undone*.

South, vol. xi. Sermon 8.

Rewards, that either would to virtue bring
No joy, or be destructive of the thing:
How oft by these at sixty are *undone*
The virtues of a saint at twenty-one!
To whom can riches give repute, or trust,
Content or pleasure, but the good and just?

Pope. Essay on Man. Ep. 4.

Such as making a body exist in several places, causing two and two to make five, annihilating time and space, *undoing* past events, or producing contrary ones.

Search. Light of Nature, vol. ii. part i. ch. xiv.

U'NDULATE, v. } Lat. *undulatus*; from *unda*, a
UNDULA'TION, } wave.
U'NDULATORY, } To move as the waves, back-
U'NDULARY. } ward and forward—in curving,
or bending lines.

In the dread ocean, *undulating* wide,
Beneath the radiant line that girts the globe,
The circling Typhon, whirl'd from point to point,
Exhausting all the rage of all the sky,
And dire Ecnephia reign.

Thomson. Summer.

And o'er the high pil'd hills of fractur'd earth
Wide dash'd the waves in *undulating* vast;
Till, from the centre to the streaming clouds,
A shoreless ocean tumbled round the globe.

Id. Spring.

In corpuscles themselves, it is not all one, as to their effects, whether they move with, or without rotation, and whether in such or such a line, and whether with, or without *undulation*, trembling, or such a kind of consecution.

Boyle. Works, vol. iii. p. 682.

Those little *undulations* of sound, though almost vanishing before they reach'd them, yet still seeming to retain somewhat of their first horror which they had betwixt the fleets.

Dryden. Essay on Dramatic Poesie.

A constant *undulatory* motion is perceived by looking through telescopes.

Arbutnot. On Air.

The blasts and *undulary* breaths thereof maintain no certainty in their course, nor are they numerally feared by navigators.

Brown. Vulgar Errors, book vii ch. xvii.

UN-DO.
—
UNDU-
LATE.

UNDU-
LATE.
—
UN-
EASE.

The Christ is a better character, has more beauty and grace, than is usual with Rubens; the outline remarkably *undulating*, smooth and flowing.

Reynolds. *Journey to Flanders and Holland.*

Dark, like a stormy cloud, uprose the dust
Beneath them, and their *undulating* manes
Play'd in the breezes.

Cowper. *Homer. Iliad*, book xxiii.

The meanest creature is a collection of wonders. The play of the rings in an earth-worm, as it crawls; the *undulatory* motion propagated along the body.

Paley. *Natural Theology*, ch. xvi.

UN-DU'MPISH, v. To remove or relieve heaviness, dullness, sullenness.

When queen Elizabeth was serious (I dare not say sullen) and out of good humour, he [Tarlton, the Jester] could *undumpish* her at his pleasure.

Fuller. *Worthies. Staffordshire.*

UN-DUST. So we use *To dust*; i. e.—

To wipe or clear away the dust; to clear away.

For when we frequently dress up the altar of our hearts, and *undust* it from all these little foulnesses, by degrees we come to be aided ev'n by one weakness of our nature, towards the delivery from others.

W. Montague. *Devoute Essayes*, part ii. *Treatise* 6.

UN-DU'TIFUL, } Not doing or performing that
UNDU'TIFULLY, } which is owed or ought to be
UNDU'TIFULNESS, } done; acting or feeling, contrary
UNDU'TEOUS. } or in opposition to what we
ought to act or feel; not obedient to rule or right, to authority; disobedient.

Other some forgetting themselves, spake more *undutifully* in this behalfe, saying: that they had as leeu be hanged when they came home, as without hope of safetie to seekes to passe, and so to perish amongst the yce.

Hakluyt *Voyages*, vol. iii. p. 83.

[The haie] hath bene by mens ydlenesse and *undutifulnesse*, let alone vntouched, and so neyther serueth the pore to make money of, nor anye cattell to lyue with.

Sir J. Cheeke. *The Hurt of Sedition.*

The church was indeed very severe against such *undutifull* proceedings and rebellions against the supreme naturall power.

Taylor. *Rule of Conscience*, book iii. ch. v.

A question wherein I was vehemently pressed in my late western charge, by some persons of greatest eminency in those parts, upon occasion of some of their children *undutifully* carving for themselves in the choice of their matches.

Hall. *Cases of Conscience*, Dec. 4. Case I.

With the same evidence I argue, that man or wife who hates in wedloc, is perpetually unsociable, unpeaceful, or *undutious*, either not being able, or not willing to perform what the main ends of marriage demand in help and solace, cannot be said to care for who should be dearest in the house.

Milton. *Tetrachordon.*

Searchers of mud and sea-weed! that would swear
The fish had long in Cæsar's ponds been fed,
And from its lerd *undutifully* fled;
So, justly ought to be again restor'd.

Dryden. *Juvenal. Satire* 4.

What friendship could endure, could pass over, could forget, could admit an entire reconciliation, and re-establishment in affection after such heinous indignities, such infidelities, such *undutifulness*, as were those of Adam, of Noah, of David, of Peter?

Barrow, vol. iii. *Sermon* 36.

Undutifulness to an almighty superior, and ingratitude to a gracious benefactor, such as God is.

Secker, vol. ii. *Sermon* 18.

UN-EASE, } See DIS- MIS-EASE. *Uneasy*,—
UNE'ASY, } Not quiet, peaceful, tranquil; not
UNE'ASILY, } free from pain, trouble, difficulty,
UNE'ASINESS. } distress, constraint, confinement;
pained, troubled, constrained, harsh, disagreeable.

Thauh hus glotenye be of good ale. he goth to a cold beddyng
And hus heved unheled *uneisylliche* ywrye.

Piers Plouhman, p. 266.

So verily, each thyng vnsought,
He said as he had knowne my thought,
And told my trouth and mine *vnease*,
But that I couth haue for mine ease,
Though I had studied all a weke.

Chaucer. *Dreame.*

Wherof it is, that he conceiueth,
That ilke *vneasy* maladie,
The whiche is cleped jelousie.

Gower. *Conf. Am.* book v.

[A. Lured] ladde an vncertayne lyfe, and *vneasy*, with fewe folks aboute hym.

Fabyan. *Chronycle*, ch. 172.

This effect [a brasse pot broken in sunder with frozen water in Pontus] being wrought in the parallel of fouretie three degrees in latitude, it was presently counted a place very hardly and *vneasily* to be inhabited for the great colde.

Hakluyt. *Voyages*, vol. iii. p. 54.

Which invasion perhaps, had the heptarchy stood divided as it was, had either not bin attempted, or not *uneasily* resisted.

Milton. *History of England*, book v.

That it [transubstantiation] was a meer stranger to antiquity, will not be deny'd by any sober person, who considers, That it was with so much *uneasiness* entertained, even in the corruptest and most degenerate times, and argued and settled almost 1300 years after Christ.

Taylor. *Diss. from Popery*, part i. ch. i.

This accident to the Tryal's mast, which gave us so much *uneasiness* at that time, on account of the delay it occasioned, was, in all probability, the means of preserving the sloop, and all her crew.

Anson. *Voyages*, book i. ch. ii.

It did not appear to me, that it would have caused a moment's *uneasiness* in the breast of any one, had his [Tupia] death been occasioned by any other means than by sickness.

Cook. *Second Voyage*, book i. ch. x.

UN-EATH. *Eath* or *eth*, is—easy. *Uneath* or *uneth*,—uneasily. See UNEASY.

With that, they heard a roaring hideous sound,
That all the ayre with terrour filled wide,
And seem'd *vneath* to shake the stedfast ground.

Spenser. *Faerie Queene*, book i. can. 11.

So, her *vneath* at last he did reuiue,
That long had lien dead, and made againe aliue.

Id. *Ib.* book vi. can. 11.

GLOST. Tenne is the houre that was appointed me,
To watch the comming of my punisht Duchesse:
Vnneath may shee endure the flintie streets,
To treade them with her tender-feeling feet.

Shakspeare. *2 Part Hen. VI.* act ii. sc. 4.

UN-EDGE, v. To deprive of the edge, acuteness, sharpness; to blunt, to be or cause to be devoid or destitute of sharpness.

Must I be scandal'd by ye,
That hedg'd in all the helps I had to save ye?
That, where there was a valiant weapon stirring,
Both search'd it out, and singl'd it, *unedg'd* it,
For fear it should bite you, am I a coward?

Beaumont and Fletcher. *Humorous Lieutenant*, act ii. sc. 2.

Here our weapons
And bodies that were made for shining brass,
Are both *unedg'd* and old with ease and women.

Id. *Valentinian*, act i. sc. 2.

Vas. Fie, mistress, you are not near the limits of reason: if my lord had a resolution as noble as virtue itself, you take the course to *unedg* it all.

Ford. *'Tis Pity She's a Whore*, act i. sc. 3.

WAR. Pale fear *unedg* their weapons' sharpest points,
And when they draw their arrows to the head,
Numbness shall strike their sinews.

Id. *Perkin Warbeck*, act iv. sc. 5.

UN-E'DIFYING, } (Met.) Not instructing, im-
UNE'DIFIED. } proving, teaching, enlightening.

If (you say) to these we should adde the late alterations in the use of the leiturgy, bringing in loud musick; uncouth, and *unedifying* anthems, a pompous superstitious altar-service; we think

UN-
EASE.
—
UN-EDI-
FYING.

UN-EDI- any indifferent eye will say, this is not the leiturgy established by
FYING. parliament.

Hall. *Answer to Vindication of Smectymnuus*, sec. 3.

UN-
FOLD.

'Tis true, there be a sort of moody, hot-brain'd, and always unedify'd consciences: apt to engage their leaders into great and dangerous affairs past retirement, and then upon a sudden qualm and swimming of their conscience, to betray them basely in the midst of what was chiefly undertaken for their sakes.

Milton. *Answer to Eikon Basilike*, sec. 28.

In a word, in such kind of sermons, there is little spoken, either from the heart, or to the heart; the orator and the auditory tacitly agreeing to deceive themselves; and the conversion of sinners being neither the effect, or the aim of such florid, but unedifying discourses.

Boyle. *Works*, vol. ii. p. 387.

It is not extravagant flights and raptures: it is not unmeaning or unedifying forms and ceremonies: much less is it bitterness against those who differ from you.

Secker. *Sermon on Confirmation*.

UN-ESTA'BLISH, v. To remove from a steady or fixed position.

But the people discerning these abuses, began to call for reformation, in order to which the parliament demanded of the king to un-establish that prelatical government, which without scripture had usurp'd over us.

Milton. *Answer to Eikon Basilike*, sec. 27.

UN-FAIN, not *fain*; not glad; displeased, sorry.

Whilom Wiliam Mortayn therof lord was,
The Courthose is *vnfayn*, him thenk it a trespass.

R. Brunne, p. 100.

The Soudan Saladyn he was fulle *vnfayn*,
He fled with mykelle pyn vnto the mountayn.

Id. p. 191.

His frendes were *vnfayn*, for non wist how he ferd.

Id. p. 300.

UN-FLO'WER, v. To strip of flowers, or flowering plants.

Bring, bring, ye Graces, all your silver flaskets,
Painted with every choicest flow'r that grows,
That I may soon *unflow'r* your fragrant baskets,
To strow the fields with odours where he goes.—
Let whatso'er he treads on be a rose.

G. Fletcher. *Christ's Victory and Triumph*.

UN-FOLD, v. } D. *ontvouwen*; to remove that
UNFO'LDING, n. } which enfolds, or enwraps, or en-
UNFO'LDERESS. } closes; to disclose, to discover, to
reveal, to lay open.

Bot if the bulle *vnfolden* were red among vs here,
Gour hote [word] salle be holden, als dette in that manere.

R. Brunne, p. 284.

And Peers at hus preyer, the pardon *unfolding*.

Piers Plouhman, p. 162.

For the paume hath power, to putten out the joyntes
And to *unfolde* the fuste.

Id. p. 328.

For first he maketh promise for to hold
His ladies counel, and it not *vnfold*.

Chaucer. *The Court of Loue*.

For I ne maie my witte *vnfolde*
To finde o worde of that I meane,

For it is all foryete cleane. Gower. *Conf. Am.* book iv.

The next day they sent embassadours vnto Alexander, whom hee admitted to his presēce & *vnfolding* his woud, (whereby he thought to dyssimule y^e greatnes therof) shewed his legge vnto them.

Brende. *Quintus Curtius*, fol. 190.

Vpon which ground the learned haue, not without cause, adiudged an historie to be the marrow of reason, the creame of experience, the sap of wisdom, the pith of iudgement, the librarie of knowledge, the kernell of policie, the *vnfoldresse* of treacherie, &c.

Holinshed. *Chronicles. Description of Ireland. Ep.*

GENT. Now heaven forbid I should do wrong to you
My dearest wife, and madam; yet give leave
To your poor creature to *unfold* himself.

Beaumont and Fletcher. *The Noble Gentleman*, act i.

MAR. What riddle' this? *unfold* yourself, dear Robin.

Ben Jonson. *The Sad Shepherd*, act ii. sc. 2.

Whoe'er on this reflects, and then beholds,
With strict attention what this book *unfolds*,
With admiration struck, shall question who
So very long could live, so much to know?

Congreve. *To Lady Gethin*.

On the 5th I received a present of three hogs, some fowls, several pieces of cloth, the largest we had seen being fifty yards long, which they *unfolded* and displayed so as to make the greatest shew possible.

Cook. *First Voyage*, book i. ch. xx.

Then at her feet with trembling hope to kneel,
Such as rapt saints and raptur'd lovers feel;
To watch the chaste *unfolding*s of her heart,
In joy to meet, in agony to part.

Crabbe. *Tales of the Hall*, book vii.

UN-FOOL, v. To restore from the state or condition of a fool, of one fooled or gulled.

I, but if proue true (Mr. Page) have you any way then to *vnfoole* me again. Set down the basket, villaine.

Shakspeare. *Merry Wives of Windsor*, act iv. sc. 2.

UN-FRAME, v. } To remove, take away or de-
UNFRA'MABLE, } stroy the form or fashion, shape,
UNFRA'MABLENESS. } mould or model.

A trustie maister would wishe, that (if it could be) his scholer should foorthwith take and vnderstande his wholle science, yet for a time he fourmeth & fashioneth the rude and *vnframed* witte with certain principles, vntil he haue brought him vp to the perfect knowlage of his facultie.

Udal. *John*, ch. vi.

The cause of which their disposition so *vnframeable* vnto societies wherein they liue, is for that they discerne not aright what place and force their seuerall kindes of lawes ought to haue in all their actions.

Hooker. *Ecclesiasticall Politie*, book i. sec. 16.

All those very many passages in the New Testament which either set forth the *unframeableness* of our nature to the doing of any thing that is good, or else ascribe our best performances to the glory of the grace of God, are so many clear confirmations of the truth.

Sanderson in Knox. *Christian Philosophy*.

God's wisdom and infinite knowledge foresees and debates all inconveniences antecedently to every act of volition; and so there can be no new emergent inconvenience that may *unframe* his resolutions and cause a change.

South, vol. xi. *Sermon* 10.

UN-FROCK, v. } To strip or divest of a frock, i. e.
UNFRO'CKING, n. } upper garment or vesture.

Proud Prelate,—I understand you are backward in complying with your agreement: but I would have you know that I who made you what you are can unmake you: and if you do not forthwith fulfil your engagement, by God I will immediately *unfrock* you. Yours as you demean yourself, Elizabeth.

Letter from Queen Elizabeth to the Bishop of Ely.

It is not the *unfrocking* of a priest, the unmitring of a bishop, and the removing him from off the Presbyterian shoulders, that will make us a happy nation.

Milton. *Areopagitica*.

UN-GAIN, having no gain, or profit, or advantage; consequentially, not apt or fit, suitable or convenient, or becoming; awkward, clumsy.

URA. I, but ne'er sir be afred [afraid];

For though she take th' *ungain'st* weas [ways] she can,
I'll ne'er ha't fro' you.

Beaumont and Fletcher. *Cupid's Revenge*, act iv.

Men prize the thing *ungain'd*, more then it is.

Shakspeare. *Troyl. and Cress.* act i. sc. 2.

Fond man, Musophilus, that thus dost spend

In an *ungainful* art thy dearest days,

Tiring thy wits, and toiling to no end,

But to attain that idle smoke of praise!

Daniel. *Musophilus*.

This is the impression of that humbling spirit, which proud heathen nature was never stamp't with, for 'twas not so much their ignorance in which they offended God (though that was also full of guilt, as hath been proved) as their misusing of their knowledge to *ungainly* ends.

Hammond, vol. iv. *Sermon* 13.

UN-
FOLD.

UN-
GAIN.

UN-
GAIN.
—
UN-
GERIA.

Flora had a little beauty, and a great deal of wit; but then she was so *ungainly* in her behaviour, and such a laughing hoyden!

FLIP. Me!

CLAR. Why dost thou stare, and look so *ungainly*;
Don't I speak to be understood?

Vanburgh. The Confederacy, act i. sc. 1.

UN-GENTEE'L, rude, rustic, not polite or polished, elegant or graceful.

To be called profligate, extravagant, intemperate, or even wicked, might be tolerated with patience; but who could bear to live with the epithet of *ungentee'l*? *Knox. Essay, No. 76.*

UN-GE'NTLE, } *Ungentlemanly*,—not having
UNGE'NTLY, } courteousness or urbanity, free-
UNGE'NTLENESS, } dom from vulgarity, (sense of
UNGE'NTLEMANLY. } honour or good faith, in the in-
tercourse of gentlemen.)

For some man hath great riches, but he is ashamed of his *ungentill* lineage. *Chaucer. Boecius, book ii.*

And therefore he that wol been gentil, he mote daunten his fleshe fro vyces that causen *ungentilnesse*.
Id. Testament of Loue, book ii.

She cleped vpon Demophoon,
And saide: Allas thou slowe wight,
There was neuer suche a knighte,
That so through his *ungentilnesse*
Of slouth, and of foryettilnesse
Ayenst his trouthe breketh his steuen.

Gower. Conf. Am. book iv.

But for all he was not called *ungentill*, nor infamed, nor traitour, nor cruell. *Golden Boke, ch. xvii.*

The which forgettyng is as straunge to bee in hym that serueth, as *ungentilnesse* in the lady that is serued. *Id. Letter 15.*

But even as they *ungently* and without desert charged her, so she [Mary] omitted so fully to answer it as the cause required. *Strype. Ecclesiastical Memoirs. Edward VI., Anno 1549.*

What wit have words so prest and forcible,
That may contain my great mishappiness,
And just complaints of his *ungentleness*.

Wyat. Complaint upon Love.

PHE. Youth you haue done me much *ungentlennesse*,
To shew the letter that I write to you.

ROS. I care not if I haue: it is my studie
To seeme despightfull and *ungentle* to you.

Shakspeare. As You Like It, act v. sc. 2.

Wherof not to be sensible, when good and fair in one person meet, argues but a gross and shallow judgement, and withal an *ungentle* and swinish beast.

Milton. Apology for Smectymnuus. Introduction.

Yet she her weary limbes would neuer rest,
But euery hill and dale, each wood and plaine
Did search, sore grieved in her gentle brest,
He so *ungently* left her, whom she loued best.

Spenser. Faerie Queene, book i. can. 2.

In case he do it for the common-wealth and the state, and for the countrey and place where he liveth, it cannot be accounted a vile or *ungentleman-like* service, but a great credit even to be serviceable, ready, and diligent to execute the meanest functions that be. *Holland. Plutarch, p. 300.*

After a cautelous and subtile manner they insinuate themselves and get between them and home, and so defraud and cousen them *ungentlemanly* of their parents love, which is the greatest and fairest portion of their inheritance. *Id. Ib. p. 148.*

Her woeful story, fain she wou'd have told
With hands upheld, but had no hands to hold.
Her head to her *ungentle* keeper bow'd,
She strove to speak, she spoke not, but she low'd.

Dryden. Ovid. Metamorphoses, book i.

UNGERIA, in *Botany*, a genus probably dedicated to some botanist of the name of Unger, by Schott and Endlicher. It belongs to the class *Monadelphia*, order *Polyandria*, and the natural family of *Sterculiaceæ*. Generic character: calyx clavately campanulate, the

limb five-cleft, and somewhat bilabiate, and the segments valvate in æstivation; petals five, the claws of which are equal in height to the tube of the calyx, and inapp pendiculate, with spreading lamina; stameneous tube elongated, connate, with the carpophore urceolately spreading at apex, free and five-cleft, the segments furnished with three anthers on each side on the margin; ovarium stipitate, five-lobed, five-celled; ovula solitary in the cells, ascending on the central placenta; styles five, short, combined; stigmas simple; capsule coriaceous, five-angled, five-celled, with five loculicidal valves, the valves bearing the dissepiments in the middle, and therefore bipartite, and free from the central column; seeds ovate, globose, with a coriaceous smooth testa, and a ventral umbilicus.

This genus consists of a single known species; it is a tree, a native of Norfolk Island, covered with stellate down. The leaves are alternate, petiolate, coriaceous, quite entire, glabrous and shining above, but clothed with glaucous tomentum beneath. The stipules are fugacious. The cymes are terminal, and densely paniced, and the flowers are rose-coloured.

UN-GIRD, *v.* } Ger. *ungegürtet*; D. *ontgördern*; to
UNGI'RT. } remove, or take away, or loosen—the
girth or surrounding band; that which encloses, en-
circles, embraces.

& hii a Sein Suithine's eue, of Jun the verste day,
To him come at Gloucestre as mani man isay,
Unhosed & bare uot, & *ungurt* al so.

R. Gloucester, p. 526.

Barefote and *ungert* Gamelyn
Into the ringe came.

Imputed to Chaucer. Cokes Tale of Gamelyn.

Thā after theyse were set y^e cōsuls or rulers of the towne in gownys w^{out} theyr clokis, *ungyrde*, euery man w^t a corde about his necke, hauyng w^t them the keyis of y^e cytie.

Fabyan. Chronycle, Anno 14.

For thou *ungirdedst* or *girdedst* thy selfe at thyne owne wil and pleasure, and walkedst at libertie whither thou wouldest.

Udal. John, ch. xxi.

After he hath *ungirt* himselfe [let him] *gird* her about the middle with his owne girdle, and unloose the same againe, saying withall this charme, I tied the knot, and I will undoe it againe.

Holland. Plinie, book xxviii. ch. iv.

Was not this he that advised Benhadad, not to boast on the putting on his armour, as in the *ungirding* it; and doth he now promise himselfe peace and victory, before he buckle it on?

Hall. Cont. Ahab and Michaiah.

The word incest is not a scripture word, but wholly heathen; and signified amongst them all unchast and forbidden marriages, such which were not allowed by law and honor: an inauspicious conjunction, in which their goddess of love was not present; marriages made without her girdle, and so *ungirt*, unblest'd.

Taylor. Rule of Conscience, book ii. ch. ii.

UN-GLAD, not cheerful, sad.

If thou my sonne haste ioye had,
Whan thou an other sawe *vnglad*
Shriue the therof.

Gower. Conf. Am. book ii.

With that came in the norice,
Whiche fro childhode hir had kepte,
And asketh, if she had slepte,
And why hir chere was *vnglad*.

Id. Ib. book viii.

UN-GLOVE, *v.* To remove or take off that covering of the hand called a glove.

CLA. 'Tis said you can tell fortunes to come.

LAN. Yes, mistris, and what's past;

Unglove your hand:—by this straight line I see
You have lain crooked.

Beaumont and Fletcher. Lover's Progress, act ii. sc. 1.

And when we were come near his chair, he stood up, holding forth his hand *ungloved*, and in posture of blessing; and we every one of us stooped down, and kissed the hem of his tippet.

Bacon. New Atlantis.

UN-
GERIA.
—
UN-
GLOVE.

UN-GLUE, *v.* To remove that which holds fast, tenaciously, adhesively.

My son, if ever thou look for sound comfort on earth, and salvation in heaven, *unglue* thyself from the world and the vanities of it. *Hull. Christ Mystical, sec. 24.*

UNGNADIA, in *Botany*, a genus dedicated by Endlicher to David ab Ungnad, who travelled in Turkey. It belongs to the class *Enneandria*, order *Monogynia*, and the natural family of *Hippocastaneæ*. Flowers polygamous; calyx five-parted; petals three, unequal, erect, having the claws crested at the apex, and the limbs spreading; stamens nine, combined at the base with the lamina of the torus and stipe of the ovary; filaments filiform, exerted, ascending; ovary stipitate, three-celled; ovula two in each cell, collateral, inserted in the middle of the central placenta; style short, conical; stigma, simple.

A solitary species of this remarkable genus is known; it is a tree, a native of North America. The leaves are exstipitate, imparipinnate, with three pairs of opposite obsoletely crenulated leaflets. The flowers are disposed in lateral corymbose racemes.

UN-GOD, *v.* Ger. *ungöttlich*. To strip or divest of the God-head or divinity or divine nature.

UNGO'DLY, UNGO'DLILY, UNGO'DLINESS. *Ungodly*,—not just to God; not according to, or becomingly reverent towards God; not pious, or holy, or righteous.

He that vseth not his owne, well and charitably, hath much to aunswere for, and shall they be thought not vniust, who not onely take away other mens, but also misvse and waste the same *ungodly*? *Sir J. Cheeke. The Hurt of Sedition.*

Let these therefore be examples set forth, for all kingis, that in the feare of God and for the loue of Cryste they might lerne to auoyde the horrible and terrible plagis of their *ungodlynes*. *Joye. Expositio of Daniel, ch. xi.*

Oh, were we waken'd by this tyranny
T' *ungod* this child again, it could not be
I should love her, who loves not me.

Donne. Love's Deity.

For now this absent lord out of his land,
Gave time to them at home, that had in hand
Th' *ungodly* work, and knew the season when.

Daniel. Civil Wars, book i.

The main drift and purport of which is, to represent the liberal exercising of bounty and mercy, to be the necessary duty, the ordinary practice, and the proper character of a truly pious man; so that performing such acts is a good sign of true piety; and omitting them is a certain argument of *ungodliness*.

Barrow, vol. i. Sermon 31.

God cannot fail on his part, without violating his truth and justice, which would be to destroy his own being, and *un-god* himself.

Scott. Christian Life, part ii. ch. vii.

But I think it is upon such principles, as will leave you no pretence from scripture to object Tritheism to others; nor any just ground for insisting, as you generally do, upon the strict force of the exclusive terms, in order to *ungod* the Son.

Waterland. Works, vol. i. p. 57.

But if Shimei, or a better man, without commission, should presume to denounce curses, he would thereby prove himself an *ungodly* wretch, and a grievous transgressor.

Id. Ib. vol. v. p. 208.

UN-GO'RED. See UNGORGED.

UN-GO'RGED, not gluttonously crammed or fed; not glutted. Present reading of Shakspeare is *ungored*; *q. d.* not stabbed, or pierced, or wounded.

But in my termes of honor
I stand aloofe, and will no reconcilement,
Till by some elder masters of knowne honor,
I haue a voyce, and president of peace
To keepe my name *ungorg'd*.

Shakspeare. Hamlet, act v. sc. 2.

VOL. XXVIII.

The hell-hounds, as *ungorg'd* with flesh and blood
Pursue their prey, and seek their wonted food.

Dryden. Theodore and Honoria.

UN-GRA'CED, UNGRA'CEFUL, UNGRA'CEFULLY, UNGRA'CEFULESS. } Not favoured, honoured, dignified, adorned; not endowed with pleasing qualities or manners; ungraceful; not polished or elegant, or elegantly easy; inelegant, awkward.

Come, be valiant, sister,
She that dares not stand the push o' th' court, dares nothing,
And yet come off *ungraced*.

Beaumont and Fletcher. The Loyal Subject, act iii. sc. 2.

No, no; unsparing Time will proudly send
A warrant unto wrath, that with one frown
Will all these mock'ries of vain-glory rend,
And make them (as before) *ungrac'd*, unknown.

Daniel. Musophilus.

For when that men of merit go *ungrac'd*,
And by her fautors ignorance held in,
And parasites in good men's rooms are plac'd,
Only to sooth the highest in their sin,
From those whose skill and knowledge is debas'd,
There many strange enormities begin.

Drayton. The Barons' Wars, book iv.

To whom thus Raphael answer'd heav'nly meek.
Nor are thy lips *ungraceful*, Sire of men,
Nor tongue ineloquent.

Milton. Paradise Lost, book viii.

Your crowded plains,
Void of their cities; unadorn'd your hills;
Ungrac'd your lakes; your ports to ships unknown.

Thomson. Liberty.

I find I am not in the humour for telling a tale; and nothing in nature is so *ungraceful* as story-telling against the grain.

Tatler. No. 2.

These copiers of men, like those of authors and painters, run into affectations of some oddness, which perhaps was not disagreeable in the original, but sits *ungracefully* on the narrow-souled transcriber.

Spectator. No. 432.

Every one's natural genius should be carried as far as it could, but to attempt the putting another upon him, will be but labour in vain; and what is so plaster'd on, will at least sit but untowardly, and have always hanging to it the *ungracefulness* of constraint and affectation.

Locke. Of Education, sec. 66.

Stranger, not *ungraceful* is thy speech,
Who hast but vindicated in our ears
Thy question'd prowess.

Couper. Homer. Odyssey, book viii.

The child paid no attention to the neat finishing or naturalness of any bit of drapery, but appeared to observe only the *ungracefulness* of the persons represented, and put herself in the posture of every figure which she saw in a forced and awkward situation.

Reynolds, vol. ii. Discourse 11.

UN-GRA'CIOUS, UNGRA'CIOUSLY, UNGRA'CIOUSNESS. } Not favoured, not favourable, kind, or pleasing, agreeable or lively; displeasing, offensive.

Thris that alle mot se the light on Roberd toke,
Vngracious man was he, thris he did forsoke.

R. Brunne, p. 103.

On tho that God lufes lest mishappenynge salle falle,
That kepe not his bihest, thei ere *vngraciouse* alle.

Id. p. 290.

Of tham was ther non that lufed kyng Henry,
To Chestrefeld ilkon the com *vngratiously*.

Id. p. 223.

And fals folke and foundelynges. faitours and lyers,
Ungraciouse to gete good. othere good love of puple.

Piers Plouhman, p. 181.

And that with gyle was gete. *ungraciousliche* be despended.

Id. p. 279.

Also there were a certayne of the same *vngracious* peple by-twene Parys and Noyon.

Berners. Froissart. Cronycle, vol. i. ch. 182.

CIOUS.

UN-HAIR.

If noo remedye maye bee elles hadde but of Almyghtye God whose mageste I *vngracious* synner haue so ofte and so greuously offended, heapyng synne vpon synne, howe shall he so lyghtly haue mercy vppon me.

Fisher. *Seuen Psalmes*. Ps. 51. part i.

And for all his falshed bothe before that in thefte and than in treason to, Christe abode stil with him among his other apostles: and his *vngraciousnes* letted not, but that of that companye (as euyl as hee was) yet one he was.

Sir T. More. *Workes*, p. 1311.

Now let the woman turne to her selfe, and consider her owne *vngraciousnes*, she shal feare and abhorre her selfe, nor take rest day nor night.

Fives. *Instruction of a Christian Woman*. book i. ch. vii.

Yet n'ould she stent
Her bitter rayling and foule revilement,
But still provok't her sonne to wreake her wrong;
But nathelesse he did her still torment,
And catching hold of her *vngratious* tongue,
Thereon an iron lock did fasten firme and strong.

Spenser. *Faerie Queene*, book ii. can. 4.

A sinful hatred is a state of *ungraciousness* with God, and sin is possessed of our love and choice.

Taylor. *On Repentance*, ch. v. sec. 3.

Have thy children a due sense of religion? they will be pleased that thou hast made a pious disposal of such a part of thy fortunes, as will sanctify and secure the rest to them: are they *ungracious* and dissolute? thou hast the less reason in thy charitable distributions to regard them.

Atterbury, vol. ii. *Sermon 7*.

They are unavoidably drawn, by the alacrity of their own heuiness, into the very centers of Malmsbury and Rome: from whence indeed they derived their birth: but are I know not how, *ungraciously* ashamed of their progenitors.

Warburton. *Alliance*, book i.

U'NGUENT, } Fr. *onguent*; It. *unguento*; Sp.
U'NGUINOUS. } *unguento*; Lat. *unguentum*, from
ungere (*unum agere*. See ANOINT.)

Ointment; a compound of substances, one of which is oily or greasy.

And if a man make a gash or incision in any of them, they yeeld from within a certain bloody liquor, or gum, yea, and there issueth from the torch staves made of them, an oylous humour, which shineth again, because they are so fatty and *unguinous*.

Holland. *Plutarch*, p. 554.

Who would not take offence, to see a face
All daub'd, and dripping with the melted grease;
And tho' your *unguents* bear th' Athenian name,
The wool's unsav'ry scent is still the same.

Congreve. *Ovid*. *Art of Love*, book iii.

Soon as the water in the singing brass
Simmer'd, they bath'd him; and with limpid oil
Anointed; filling, next, his ruddy wounds
With *unguent* mellow'd by nine circling years,
They stretch'd him on his bed.

Cowper. *Homer*. *Iliad*, book xviii.

UNGULINA, in Zoology, a genus of *Tenuipede Conchiferous Molluscs*.

Generic Character. Shell longitudinal or transverse, rounded above, nearly equilateral, valves not gaping; upon each a short subbifid hinge-tooth, with an oblong marginal depression, divided by a contraction into two, which receive the ligament, thus placed internally.

This genus was founded by Daudin, and is remarkable for the ligamentous depressions which are placed as it were at the end of each other, but being so near the edge the ligament attached in them is seen externally. Two species are described, of which *U. Oblonga*, Daud., is the type.

UN-HAIR, v. To strip off or remove the hair.

Hence horrible villaine, or Ile spurne thine eyes
Like balls before thee: Ile *vnhaire* thine head.

Shakspeare. *Anthony and Cleopatra*, act ii. sc. 5.

UN-HALLOW. Ger. *unheilig*; D. *ont-heilegd*; Sw. *ohelgad*.

To *unhallow*,—to desecrate; to apply to unholy purposes.

Ac vorth chyrche *vnhalwed* was, theruor hym was wo.

R. Gloucester, p. 349.

But nowe wyll not Tyndal sette a strawe the more by the annoynt- yng with holye oyle, then by smeryng with *vnhalowed* butter, but yf menne tell hym some farther thing therby that maye edify his soule and make it better.

Sir T. More. *Workes*, p. 375.

Shall we esteem and reckon how it heeds
Our works, that his own vows *unhalloweth*?

Daniel. *Musophilus*.

Vile traitors, hold off your *unhallow'd* hands,
His brow upon it majesty still bears.

Drayton. *The Barons' Wars*, sec 36.

Stay, what art thou, that in this strange attire,
Dar'st kindle stranger and *unhallow'd* fire
Upon this altar?

Ben Jonson. *King James's Entertainment*.

The mystical and blessed unity of marriage can be no way more *unhallow'd* and profan'd, than by the forcible uniting of such dis- unions and separations.

Milton. *Tetrachordon*.

But this king, not content with that which, although in a thing holy, is no holy theft, to attribute to his own making other men's whole prayers, hath as it were *unhallow'd* and unchristen'd the very duty of prayer it self, by borrowing to a Christian use prayers offer'd to a heathen God.

Id. *Answer to Eikon Basilike*, sec. 1.

By the invocation of his [God] name, all our actions, it seems, are *unhallowed* and profane, if not accompanied with devotion.

Barrow, vol. iii. *Sermon 1*.

UN-HAND, v.

UNHA'NDLED.

UNHA'NDY.

To remove, to loose, to set free
from, hold or seizure.

Unhandled,—not touched, or
used to the hand, not managed. Unhandy; not adroit,
not dexterous, clumsy.

EVAD. Unhand me, and learn manners, such another
Forgetfulness forfeits your life.

Beaumont and Fletcher. *The Maid's Tragedy*, act iv.

ROS. Child of my flesh,

And not of my fair unspotted mind,

Un-hand this monster.

Id. *Sea Voyage*, act ii.

For doe but note a wilde and wanton heard,

Or race of youthful and *vnhandled* colts,

Fetching mad bounds, bellowing and neighing loud.

Shakspeare. *Merchant of Venice*, act v. sc. 1.

Cardinall Campeius,

Is stolne away to Rome, hath 'tane no leaue,

Has left the cause o' th' king *vnhandled*, and

Is posted as the agent of our Cardinall,

To second all his plot. Id. *Hen. VIII*. act iii. sc. 2.

UN-HA'NDSOME,

UNHA'NDSOMELY,

UNHA'NDSOMENESS.

Not *handily* or dexterously
made or done; not suited, or
becoming, or convenient; not
graceful, liberal, ingenuous; not well favoured; shabby,
mean.

Now at his last goyng, when he to Gascoyn went,
Ge sette a certeyn thing, at gour bothe assent,
& that suld holden be. euer withouten ende,
Thouh brak that certeynte wikkedly & *vnhende*.

R. Brunne, p. 259.

Our men taking weapon quicklye draue theym back into the woods, and after they had slayne a great number of them, they folowed them so farre in somewhat *vnhandsome* places, that they lost a few of their company.

Goldinge. *Cæsar*, fol. 83.

Ye hold your enemy in a place *vnhandsome* and of disaduauntage.

Id. *Ib*. fol. 151.

I know she loves him,

His memory beyond the hope of —

Beyond the Indies in his mouldy cabinets,

But 'tis her *unhandsome* fate.

Beaumont and Fletcher. *Night Walker*, act i.

UN-
HAL-
LOW.
—
UN-
HAND-
SOME.

UN-
HAND-
SOME.

Then the intermedial evil to a wise and religious person is like *unhandsome* and ill-tasted physick, it is against nature in the taking and in its operating.

Taylor. *Rule of Conscience*, book i. ch. v.

UNHAP.

And this was not *unhandsomely* intimated by the word sometimes used by the Greek church, calling the publick liturgie *Ευχολογιον παντακιον*, which signifies prayers, made for the use of the idiotæ, or private persons, as the word is contradistinguished from the rulers of the church.

Id. *Set Forms of Liturgie*, sec. 92.

Then we shall see things as they are, the evil circumstances and the crooked intentions, the adherent *unhandsomeness* and the direct crimes.

Id. vol. i. *Sermon* 3.

Let our actions to God and their circumstances be supposed to be done towards men, and we should scorn ourselves; and how then can we expect God should not scorn us, and reject our prayer, when we have done all the dishonour to him and with all the *unhandsomeness* in the world?

Id. *Ib.* *Sermon* 4.

Why all this shifting and shuffling, if a man were not conscious of a bad cause, and of his acting an *unhandsome* part?

Waterland. *Works*, vol. v. p. 304.

You would be very unwilling to hear those, whom you respect, *unhandsomely* spoken of: therefore speak *unhandsomely* of no one, whom it is possible any other person may respect.

Secker, vol. iv. *Sermon* 13.

UN-HANG, v. D. *onhangen*; to remove from a hanging or pendant position.

Some in Parys sayde; it is pytie these vnthriftes be *vnchanged* or drowned, for tellyng of suche lies.

Berners. *Froissart. Cronycle*, vol. ii. ch. 218.

Their cables do oftentimes breake, and their ruthers are *vnchanged*, the cause thereof is by reason the shippes doe ride but in little water, yet goeth there a great sea.

Hakluyt. *Voyages*, vol. iii. p. 552.

Wicked swaines, that bear me spight,
In the gloomy vaile of night,
Of my fold will draw the pegges,
Or else breake my lambkins' legges:
Or *unhang* my weather's bell.

UNHA'PPIED,

UNHA'PPILY,

UNHA'PPINESS.

miserable.

Not having or bringing (good) luck or fortune; not lucky, or fortunate, or successful; feeling the consequences of bad fortune or calamity; calamitous, wretched,

Whan thei had slayn & brent, robbed toun & feld,
To Dunbar alle thei went, als ther *vnhap* wild.

R. Brunne, p. 273.

Now certes frend I drede of thine *vnhappe*.

A *Ballade*, imputed to Chaucer.

But he was slaine alas, the more harme is,
Unhappily at Thebes all to rathe,
Polimite, and many a man to scathe.

Chaucer. *Troilus and Creseide*, book v.

And thou Cupide
Whiche loues cause haste for to guide,
I wote nowe well, that ye be blynde,
Of thilke *vnhap*, whiche I now finde.

Gower. *Conf. Am.* book iii.

This fire cart he droue to lowe,
And fireth all the worlde aboute,
Wherof thei weren all in doute:
And to the god for helpe criden
Of such *vnhappes*, as betiden.

Id. *Ib.* book iv.

This maide, whiche disguised was,
All priuely the softe paas
Goth through the large towne vnknowe,
Till that she cam within a throwe,
Where that she liked for to dwell,
As thylke *vnhappy* fresshe well.

Id. *Ib.* book iii.

He crieth, he wepeth, he seith therefore
Alas that euer was I bore,
That this *vnhappy* destinee
So wofully comth in by mee.

Id. *Ib.* book vi.

And at the last *vnhappy*lie

This hert his owne houndes slough.

Gower. *Conf. Am.* book i.

Your fayre house of Andrehen, the whiche hath cost you so moch, and that ye so well loued, is brent; brent, quoth the erle; ye surely sir, quod he, and howe so, quoth the erle; Sir, by *vnhappe*, as it is sayde.

Berners. *Froissart. Cronycle*, vol. i. ch. 351.

Yet can it not be then denied,

It is as certain as thy creed,

Thy great *vnhap* thou canst not hide;

Unhappy then! why art thou not dead?

Wyatt. *Despair counsels the Unhappy Lover*, &c.

Wherefore the foresayde lordis, seyng the myschyfe that dayly encreasyd by occasyon of this *vnhappy* man, toke theyr counsayll together at Lyncolne and there concludyd to voyde hym agayne out of Englande.

Fabyan. *Chronycle*, Anno 1312.

This *vnhappy* wether for the Englysshemen fell well for them in the cyte, who toke no hede of that bushment, for they were nat ware therof.

Berners. *Froissart. Cronycle*, vol. i. ch. 340.

Sir, ye may se the *vnhappy*nes of them of this contrey and their nature.

Id. *Ib.* ch. 392.

In a pelting chafe he flings me the sponge-full of colors that he had wiped out, full against that *unhappy* place of the table which had put him to all this trouble: but see what came of it! the sponge left the colours behind, in better order than hee could have laid them, and in truth, as well as his heart could wish.

Holland. *Plinie*, book xxxv. ch. x.

You haue mis-led a prince, a royall king,
A happie gentleman in blood, and lineaments,
By you *vnhappy*, and disfigur'd cleane.

Shakspeare. *Richard II.* act iii. sc. 1.

Worc'ster (who had escap'd *unhappily*
His death in battle) on a scaffold dies.

Daniel. *Civil Wars*, book iv.

Fortune her gifts may variously dispose,
And these be happy call'd, *unhappy* those;
But Heav'n's just balance equal will appear,
While those are plac'd in Hope, and these in Fear.

Pope. *Essay on Man*, Epistle 4.

Since no retreat can be impervious to his eye, no corner so much out of the way, as not to be within his plan, no doubt there is to every wrong and vitious act a suitable degree of *unhappiness* and punishment annex, which the criminal will be sure to meet with some time or other.

Wollaston. *Religion of Nature*, sec. 6.

And again, what does the wicked man lose? That happiness, which the virtuous gain as such; and he sinks, beside, into some degree of the *unhappiness* of that future state: of which one may say in general, that it may be as much greater than the *unhappiness* or sufferings of this world, as the happiness and joys of that are above those of this.

Id. *Ib.* sec. 9.

Would I were offspring of some happier sire,
Ordain'd in calm possession of his own
To reach the verge of life. But now, alas!
I am the rumour'd offspring of a man
Of all mankind *unhappiest*.

Cowper. *Homer. Odyssey*, book i.

They began the attack with their paddles, and with stones and other offensive weapons that were in the boat, so vigorously, that we were obliged to fire upon them in our own defence; four were *unhappily* killed.

Cook. *First Voyage*, book ii. ch. i.

UNHEA'LTHFULNESS, n.

UNHEA'LTHY,

UNHEA'LTHILY,

UNHEA'LTHINESS,

UNHEA'LABEL.

To *unheal*, is—to uncover; Ger. *ungeheilet*.

Unhealable,—that cannot be covered, recovered, or cured; or restored to a whole or sound state.

Unhealthy,—not according, or agreeable, or favourable to, not having, health, or soundness, or sanity of the natural functions of the body, (met. of the mind;) not wholesome.

He ariuede at South hampton, as tho wynd hym had y lad.
Tho our kyng herde her of, he was somdel a drad,
Leste he for *vnheal* [ill] y come.

R. Gloucester, p. 91.

UN-
HEAL.

He sede ofte in hys deth *vnēl*, ar he were dede,
Alas! alas! of Englonde ne con ych non rede.
R. Gloucester, p. 443.

So hole he was of body ek, that he ney lay neuere vaste
Syk in hys bed vor none *vnēl*, bote in hys deth *vnēl* atte laste.
Id. p. 377.

Princes ouer al aboute of eche kyndom
Speke hym *vnēl*, & hatede hym for hys swikedom.
Id. p. 110.

Thauh hus gloteny be of good ale. he goth to a cold beddyng
And hus heved *un heled* uneisyliche ywrye.
Piers Plouhman, p. 266.

And whanne thei myghten not brynge him to Jhesus for the
puple thei *unhiliden* the roof where he was, and openyde it and
thei leeten down the bed in whiche the syk man in palesye lay.
Wiclif. Mark, ch. ii.

His housis werein *unhelid*
And full evilly dight.
Imputed to Chaucer. Cokes Tale of Gamelyn.

And thervpon yafe suche counseile
Towarde his kinge, whiche was *unheile*
Wherof to be the better lered
He thinketh to maken hym afered.
Gower. Conf. Am. book i.

In some places this riuer is very *vnhealthfull* and full of noy-
some wormes; but the first place thereupon which the Spaniards
doe inhabite called Mompox is exceeding healthfull.
Hakluyt. Voyages, vol. iii. p. 781.

The towne was situated in a waterie soile, and subiect much to
raine, very *vnhealthy* as any place in the Indies, hauing great
store of oranges, plantans, cassauy-roots and such other fruits;
but very dangerous to be eaten for breeding of diseases.
Id. Ib. p. 587.

The whiles their snowy limbes, as through a vele,
So through the crystall waues appeared plaine:
Then suddainly both would themselues *vnhele*,
And th' amorous sweet spoyles to greedy eyes reuele.
Spenser. Faerie Queene, book ii. can. 12.

Next, did Sir Triamond vnto their sight
The face of his deare Canacee *vnheale*;
Whose beauties beame eftsoones did shine so bright,
That daz'd the eyes of all, as with exceeding light.
Id. Ib. book iv. can. 5.

There should the swallow see new life embrace
Dead ashes, and the grave *unheal* his face,
To let the living from his bowels creep,
Unable longer his own dead to keep.
G. Fletcher. Christ's Triumph after Death.

The best way haply it were altogether to avoid an house and
not therein at all to dwell, which is close, without fresh air, dark,
standing bleak and cold, or otherwise *unhealthfull*.
Holland. Plutarch, p. 110.

Experiment solitary touching the healthfulness or *unhealthful-*
ness of the southern winds.
Bacon. Naturall Historie, sec. 786.

Then mists from marishes, and grounds whose veynes
Were conduit pipes to many a christall spring:
From standing pooles and fens were following
Unhealthy fogs.
Browne. Britannia's Pastorals, book ii.

Which proving but of bad nourishment in the concoction, as it
was heedless in the devouring, puffs up *unhealthily* a certain big
face of pretended learning, mistaken among credulous men for the
wholesome habit of soundness and good constitution.

Milton. Doctrine and Disc. of Divorce. Preface.

He in his youth was afflicted in an *unhealable* sprain in his hip.
Fuller. Worthies. Warwickshire.

Our men who had been very *healthy* till now, began to fall down
apace in fevers. Whether it was the badness of the water, or the
unhealthiness of the town was the cause of it, we did not know.

Dampier. Voyages, Anno 1685.

With whom whoever, tho' a fav'rite spake,
At every sentence set his life at stake,
Tho' the discourse were of no weightier things,
Than sultry summers or *unhealthfull* springs.
Dryden. Juvenal. Satire 4.

But the town is a most wretched place, and extremely *un-*
healthy, for the air about it is so pent up by the hills that it has
scarcely any circulation.

Anson. Voyages, book ii. ch. x.

In less than a week, we were sensible of the *unhealthiness* of the
climate; and in less than a month half the ship's company were
unable to do their duty.

Cook. First Voyage, book iii. ch. xi.

UN-HEARD. *Unheard* sawciness (Shakspeare),
Theobald reads,—*unhair'd* (q. d.) *unbearded*, the sawci-
ness of *beardless* boys.

Nor is it no cause to kepe the corps of scripture out of the
handes of anye christen people so many yeres fastly conformed in
fayth, because Christ and hys apostles vsed suche prouision in
their vtterance of so strage and *unherd* misteries.

Sir Thomas More. Workes, p. 245.

This *vn-heard* sawciness and boyish troopes,
The king doth smile at.

Shakspeare. King John, act iv. sc. 2.

These pitchy curtains drew 'twixt earth and heaven,
And as Night's chariot through the ayre was driven,
Clamour grew dumb, *unheard* was shepheard's song,
And silence girt the woods; no warbling tongue
Talk'd to the echo.

Browne. Britannia's Pastorals, book ii. s. 1.

— If you would *unheard* of things express,
Invent new words; we can indulge a muse,
Until the licence rise to an abuse.

Creech. Horace. Art of Poetry.

UN-HEART, *v.* To take away heart or courage; to
discourage. See DISHEARTEN.

MENE. Ile vndertak't:

I thinke hee'l heare me. Yet to bite his lip,
And humme at good Coriolanus, much *vnhearts* mee.
Shakspeare. Coriolanus, act v. sc. 1.

UN-HERST. Stripped of their ornaments. Upton
says,—took from the herse or temporary monument
whereon they were hung.

Then from him reft his shield, and it r'enverst,
And blotted out his armes with falshood blent,
And himselfe baffuld, and his armes *vnherst*,
And broke his sword in twaine, and all his armour sperst.
Spenser. Faerie Queene, book v. can. 3.

UN-HIDE, *v.* To remove or take away that which
covers or conceals.

Are thy lines broke? or are thy trammels tore?
If thou desir'st my help, *unhide* the sore.

P. Fletcher. Piscatory Eclogues. Eclogue 5.

There best, where most with ravin I may meet;
Which here, though plenteous, all too little seems
To stuff this maw, this vast *unhide-bound* corps.

Milton. Paradise Lost, book x.

UN-HINGE, *v.* To remove from that on which it
hangs or depends; by which it is sustained or sup-
ported; is held firm or steady; on which it turns; to
destroy the balance or equipoise.

Whose injuries betray'd me into treason,
Effac'd my loyalty, *unhing'd* my faith,
And hurry'd me from hopes of heaven to hell.

Dryden. Don Sebastian, act iv. sc. 1.

Thus human life *unhing'd* to ruin reel'd,
And giddy Reason totter'd on her throne.

Thomson. Liberty.

Old chief! he said, thy dauntless spirit asks
As firm a knee. But time *unhinges* all.

Cowper. Homer. Iliad, book iv.

UN-HOARD, *v.* To take away or remove from the
store; the place where any thing is laid for safety, or
security.

Or as a thief bent to *unhoord* the cash
Of some rich burgher, whose substantial dores,
Cross-barr'd and bolted fast, fear no assault,
In at the window climbs, or o're the tiles.

Milton. Paradise Lost, book iv.

UN-
HEAL.UN-
HOARD.

UN-HOLY, } D. *onheilig*; Ger. *unheilig*; Sw. *ohelig*. Not sacred, consecrated, de-
UNHO'LILY, } voted to religion or religious or
UNHO'LINESS. } pious uses; not religious or pious, or godly; profane, impious.

But eschewe thou *unhooli* and veyne spechis, for whi tho profiten mych to unfeithfulnesse, and the word of hem crepith as a cauker.
Wiclif. 2 Tymo, ch. ii.

The life is swete, and that he kepeth,
So that the feith *vnholye* slepeth.

Gower. Conf. Am. book v.

The Jewes cal that common whiche is vncleane and *vnholy*, abhorring al impuritie, and endeuyng in no wise to seme to haue any where any maner of vncleane or fylthy thyng.

Udal. Marke, ch. vii.

Nor now lykewyse the vyces of vicious folke in Christes church, can not lette, but that hys catholyke church of which they be part, is for their *vnholynes*, his holy catholyke church: with whiche he hathe promysed to bee vnto the ende of the world.

Sir Thomas More. Workes, p. 1311.

Nothing shall enter into the New Jerusalem that is defiled or *unholy*; nothing but perfect purity is there; not a spot of sinful pollution, not a wrinkle of the whole man.

Leighton. Comment on 1 Peter, ii. 24.

Thus to the law of representing and commemorating the death of our dearest Lord by the celebration of his last supper, it is necessarily appendant and included that we should come worthily prepared, lest that which is holy be given to dogs, and holy things be handled *unholity*.

Taylor. Rule of Conscience, book ii. ch. iii.

One of the chief matrimonial ends is said to seek a holy seed; but where an unfit marriage administers continual cause of hatred and distemper, there, it was heard before, cannot choose but much *unholiness* abide.

Milton. Tetrachordon.

Silent, exult, O ancient matron dear!
Shout not, be still. *Unholy* is the voice
Of loud thanksgiving over slaughter'd men.

Cowper. Homer. Odyssey, book xxii.

UN-HOOD, *v.* To remove or take away the hood or covering of the head, of the eyes.

Falconer, take care, oppose thy well trained steed,
And slily stalk; *unhood* thy falcon bold,
Observe at feed the unsuspecting team
Paddling with oary feet.

Somerville. Field Sports.

UN-HOOP, *v.* To remove the hoop; that which holds, confines or surrounds.

But if they stoop
To neighbour wares, when merchants do *unhoop*
Voluminous barrels.

Donne. Upon Mr. Thomas Coryat's Crudities.

UN-HORSE, *v.* To fall, to throw, from a horse; to dismount.

With swerde in honde on hym he felle,
And smote hym with a deathes wounde,
That he *vnhorsed* fell to grounde.

Gower. Conf. Am. book iii.

If any of the were sore wounded or *vnhorsed*, theis guarded him about.

Goldinge. Cæsar, fol 40.

2 GENT. Thanks to our folly,
That spur'd us on; we were indeed hedg'd round in't;
And ev'n beyond the hand of succour, beaten
Unhors'd, disarm'd.

Beaumont and Fletcher. Humorous Lieutenant, act ii. sc. 4.

And [Singin who led the Worcestershire men] came at length where Constantine himself fought, *unhors'd* him, and us'd all means to take him alive.

Milton. History of England, book v.

The knights *unhors'd*, on foot renew the fight;
The glitt'ring fauchions cast a gleaming light:
Hauberks and helms are hew'd with many a wound;
Out spins the streaming blood, and dies the ground.

Dryden. Palamon and Arcite, book iii.

Burke need not have regretted that its days are over, though Maria Antoinette was quite as chaste, as most of those in whose honours lances were shivered, and knights *unhorsed*.

Byron. Childe Harold. Preface.

UN-HU'MAN, } Now *In*, (q. v.) *Unhumanized*,
UNHU'MANIZED. } deprived, destitute of the nature or qualities of man; the feelings, the natural, kind feelings of man.

That they themselves should infallibly have their turns in the course and circulation of divine justice, and be strictly reckoned with for their intolerable pride, their insatiable avarice, and their *unhuman* and remorseless cruelty, shewn in the spoil and waste they had made upon all nations round about them for the propagation of their empire.

South, vol. xi. Sermon 2.

Purity is ridiculed and set at nought, as a sour, unsocial, *unhumanized* virtue; is called austerity, preciseness, puritanism, or any thing but what it really is.

Porteus, vol. ii. Sermon 6.

U'NICORNE, } Fr. *unicorne*; It. *unicòrno*; Sp.
UNICO'RNOUS. } *unicornio*; Lat. *unicornis*.

An animal having one horn only, (*unum cornu*.)

Venym is defended by the horne of an *vnicorne*.

Golden Boke, ch. 43.

The lion king, the elephant,
The maiden *unicorne* was there.

Spenser. An Eligie for Astrophell.

Nature in other cornigorous animals, hath placed the horns higher and reclining, as in bucks; in some inverted upwards, as in the rhinoceros, the Indian ass, and *unicornous* beetles.

Brown. Vulgar Errors, book v. ch. xix.

Yet supposing those names to stand for complex abstract ideas that contained no inconsistency in them, the essence of a mermaid is as intelligible as that of a man; and the idea of an *unicorn* as certain, steady, and permanent as that of a horse.

Locke. Of Human Understanding, book iii. ch. iii.

UN-I'DELL. Chaucer seems to use this word more strongly than to express the mere absence or negation of idleness; (*sc.*)—

Laborious, industrious.

Thou reader mayst thy self full well divine
That soche a wo my wit can not define,
Unidell for to write it should I swinke,
Whan that my wit is weie it to thinke.

Chaucer. Troilus and Cressida, book v.

U'NIFORM, } Fr. *uniforme*; It. *uniforme*; Sp.
UNIFO'RMITY, } *uniforme*; Lat. *uniformis*, of one
UNIFO'RMLY, } form (*una forma*).
UNIFO'RMNESS. } Having one form, frame, or

fashion; shape, or make; one general appearance; keeping or preserving one mode or manner, plan, method or design; one constant or consistent method, course, or tenor.

The ordinance of these sacraments is Goddes worke, the verie author of them, who as he is himselfe *vniforme*, as saint James sayth without alteration, so as David sayth, his workes be true, whiche is as much as *vniforme*, for truth and *vniforme* answerith together.

Gardner. Explication. Of Catholique Fayth, fol. 5.

Whereupon proceded Salamons most wise iudgmēt, which hath this lesson in it, euer where contention is, on that parte to be the truth, where all saynges and doynge appeare *vniformely* consonante to the truth pretended.

Id. Ib.

But for *vniformitie* of building, orderlie compaction, and politike regiment, the towne of Cambridge, as the newer workmanship, exceedeth that of Oxford.

Holnshed. Description of England, book ii. ch. iii.

They giue it gentle heats (after they haue spread it there verie thin abroad) till it be drie, and in the meane while they turne it often, that it may be *vniformely* drie.

Id. Ib. ch. vi.

Sometimes there are many parts of a law, and sometimes it is *uniform*, and hath in it but one duty.

Taylor. Rule of Conscience, book iii. ch. vi.

The direction of all their progressive motions, both of the primary and secondary planets, *uniformly* from west to east, (when by the motion of comets it appears there was no necessity but that they might as easily have moved in all imaginable transverse directions,) is an evident proof that these things are solely the effect of wisdom and choice.

Clarke. *On the Attributes. Proposition 9.*

Analogies, harmonies, and agreements are discovered in the works of nature, and the particular effects explained, that is, reduced to general rules, which rules grounded on the analogy, and *uniformness* observed in the production of natural effects, are most agreeable, and sought after by the mind.

Berkley. *Of Human Knowledge*, part i. sec. 105.

Their skins were so *uniformly* covered with dirt, that it was very difficult to ascertain their true colour.

Cook. *First Voyage*, book iii. ch. vi.

UNIFORMITY, *Uniformitas*. The Acts of Uniformity so called, are those of 1 Eliz., c. 2, and the 12 and 13 Chas. II., c. 4, by which "the uniformity of public prayers and administration of sacraments, and other rites and ceremonies" in the church of England is enjoined.

UNIFORMITY OF PROCESS, see WRIT.

UN-IMMORTAL. To make *unimmortal*; i. e. to make those mortal who were immortal.

This said, they both betook them several wayes,
Both to destroy, or *unimmortal* make
All kinds, and for destruction to mature
Sooner or later.

Milton. *Paradise Lost*, book x.

UN-IMPROVED. Not censured, blamed or re-proved.

Now sir, young Fortinbras,
Of *unimproved* mettle, hot and full,
Hath in the skirts of Norway, heere and there,
Shark'd vp a list of landlesse resolute,
For foode and diet, to some enterprize
That hath a stomacke in't.

Shakspeare. *Hamlet*, act i. sc. 1.

UNIO, in Zoology, a genus of *Lamellipede Conchiferous Molluscs*.

Generic character. Shell transverse, equivalve, its edges unequal, unattached, its dorsal projections deprived of their epidermis; posterior muscular impression compound; hinge upon each valve double-toothed, the cardinal one short, irregular, single or divided into two, and substriated; the other long, compressed, lateral, and extended below the corslet; ligament exterior; body of the animal of very variable form, generally thick, inclosed in a mantle with thick edges, simple or fringed at the posterior extremity of the branchial cavity, a small imperfect siphon furnished with two rows of longish cirrhi; mouth large, transverse; labial appendages wide and rather oval; terminal orifices of the ovaries at the fore and upper part of the abdomen.

This genus was founded by Bruguière on some freshwater *Conchifera*, which Linnæus had confused with the Mussels (*Mya*), although the latter are distinguished by being marine, by their form, their hinge, the position of their ligament, and the animal they inclose. Lamarck observes, that externally they resemble the *Anodonta*, excepting in their greater thickness and in the shape of their hinge being less complicated. These indeed constitute the only differences between the genera, the animal of both agreeing completely, and hence Poli has included them under the one genus, *Lymnoderme*. They live in the rivers of almost all parts of the world, buried in the mud, with the back of their valves turned downwards. Many of them produce very fine pearls. This numerous genus is divided by Lamarck into two sections: 1. Those in which the cardinal tooth is short, thick, not crested, but substriated, as in *U. Elongata*,

Lam.; *Mya Margaritifera*, of Da Costa. 2. Those in which the cardinal tooth is short, compressed, raised, and often crest-shaped, as *U. Pictorum*, Lam.; *Mya Pict.*, Lin. De Blainville, however, objects to this division, thinking that the form of the tooth is not a sufficient character for that purpose.

UNIOLA, in Botany, a genus so called by Linnæus, from *unus*, one, in consequence of the united glumes. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: spikelets many-flowered; flowers distich, lower ones abortive, consisting of a single palea, the rest hermaphrodite; glumes two-keeled, mutic, nearly equal; paleæ two, lower one carinately compressed, upper one bicarinated, the keels winged, the wings usually loose at apex, and diverging; scales two, bifid; stamens one to three; ovarium sessile, glabrous; styles two-terminal; stigmas plumose; caryopsis free.

Eight or ten species of *Uniola* are known; they are North American grasses, with broadish flat leaves, and branched panicles of pedicellate spikelets, which are compressed and articulated with the pedicels.

Fr. *union*, *unir*; It. *unione*, *unire*; Sp. *union*, *unir*; Lat. *unire*, from *unus*; Gr. *εἷς*, one. (See ONE.) To unite,—

To be, or cause to be, or become —one; to collect, associate, to join —into one, into one or a single substance or body; to conjoin, to combine, to coalesce, to concur.

A unit is—one, sole, single thing.

Union,—the conjunction into one of more than one.

In an hote hervest. wenne ich hadde myn hele
And lymes to labore with. and lovede wel fare
And no dede to do. bote drynke and to slepe
In hele and in unite.

Piers Plouhman, p. 75.

Consider that my conning is dis-able
To write to you the figure *uniable*.

Imputed to Chaucer. *The Craft of Louers*.

Wherof men knowe redily
The high almighty trinitee,
Whiche is a god in *vnitee*.

Gower. *Conf. Am.* book vi.

They taste not the very true and sincere delectation, whiche groweth by a certayne *union* and perfect agreement, by the conjunction and ioyning together of our soules with almightie God.

Fisher. *A Godlie Treatise*, &c.

Than Benedyc aunswered and said: the *vnyon* of the churche I desyre, and I haue taken great payne therin.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. 233.

Wherefore the English and French, with forces and mindes *united*, sayled ouer into Africa, who when they approached vnto the shore were repelled by the barbarians from landing.

Hakluyt. *Voyages*, vol. ii. p. 69.

The emperoure taryed vpon vii wekys and odde dayes in Englande, whiche after some wryters, was to thentent to set an *vnyte* and rest atwene the Frenshe kynge and kynge Henry.

Fabyan. *Chronycle. Anno* 1415.

For all the townes were in *vnite* and of one acorde agaynst hym.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. 403.

Then her grace marched forward toward Gracious strete, where was erected a goodly pageant and a sumptuous, which was the *vnitinge* of the twoo houses of Yorke and Lancaster.

Fabyan. *Chronycle. Anno* 1558.

Excommunication cuts the refractory sinner from the communion or religious intercourse of the church; he is not to be reckoned as a brother, or a relative in our religious friendship and *union*.

Taylor. *Rule of Conscience*, book iii. ch. iv.

But body and spirit stand at such a distance in their essentiall compositions, that to suppose an *uniter* of a middle constitution,

UNIO.
—
UNION.

UNION.

that should partake of some of the qualities of both, is unwarranted by any of our faculties; yea, most absonous to our reasons. *Glanvil. Vanity of Dogmatizing*, ch. iii. sec. 3.

This was the cause of mens uniting themselves at the first in politique societies, which societies could not bee without government, nor government without a distinct kind of law from that which hath beene already declared.

Hooker. Ecclesiasticall Politie, book i. sec. 10.

The bigots of the popish party cried out against us vehemently, and enquired, where is your church of England, since you have no unity? for your ecclesiastic head of unity, your bishops, are gone.

Taylor. Sermon 4. vol. iii. To the Reader.

And yet it is without all peradventure that all laws which are commonly called natural are most reasonable, they are perfective of nature, unitive of societies, necessary to common life, and therefore most agreeable to reason.

Id. Rule of Conscience, book ii. ch. i.

Let then all the pretenders to peace, procure to simplify and unifie their desires by this single address to the will and order of God.

W. Montague. Devoute Essayes, part ii. Treatise 8.

Self-love and social at her birth began,

Union the bond of all things, and of man.

Pope. Essay on Man. Ep. 3.

[We were] ignorant that the time drew near, when the squadron would be separated never to unite again, and that this day of our passage was the last chearful day that the greatest part of us would ever live to enjoy.

Anson. Voyages, book i. ch. vi.

Now of substances also, there are two sorts of ideas; one of single substances, as they exist separately, as of a man or a sheep; the other of several of those put together, as an army of men, or flock of sheep; which collective ideas of several substances thus put together, are as much each of them one single idea, as that of a man, or an unit.

Locke. Of Human Understanding, book ii. ch. xii.

The great collective idea of all bodies whatsoever, signified by the name world, is as much one idea, as the idea of any the least particle of matter in it; it sufficing to the unity of any idea, that it be considered as one representation or picture, though made up of ever so many particulars.

Id. Ib. ch. xxiv.

From hence it follows, that the unity of God, is a true and real, not figurative unity.

Clarke. On the Attributes. Prop. 3.

Parts separated and disjoined, are to be brought together gently and equally, that they may touch one another, and so be prepared for union.

Wiseman. Surgery, book v. ch. i.

Let the bond

Of mutual firm accord, as heretofore,

Unite them, and let wealth and peace abound.

Cowper. Homer. Odyssey, book xxiv.

By some unitarians the scripture is acknowledged only in part. When this is the case, the debate ends at once: the trinitarian insists on the belief of the whole canonical body of scripture.

Gilpin. Sermons. Hint 90.

UNION, ACTS OF, between England and Scotland, and between Great Britain and Ireland. As the subject matter of these important acts has been already treated of in the historical department of this work, a very few words will here be necessary. Sir Edward Coke, in his fourth Institute, observes upon the great similarity between the laws of England and Scotland, and conjectures that the common law of each was originally the same, and the statute 1 James I., c. 1, declares, that "these two mighty, famous and ancient kingdoms" were formerly one. On the accession of that monarch, then James VI. of Scotland, to the throne of England, the crowns became united, and though an union of the kingdoms had been projected, still they remained separate and distinct for upwards of a century. In the reigns of Charles II. and James II. commissioners were appointed to treat with commissioners of Scotland concerning the Union, but the work was actually brought about in that of Queen Anne. The act 1 Anne, stat. 1, c. 14,

UNION.

ordained articles to be settled by commissioners for the Union of the two kingdoms, and other matters relating thereto, and by 5 Anne, c. 8, the Union itself was effected, England and Scotland thenceforth being termed Great Britain. With regard to Ireland, that, until the 1st of January, 1801, was a separate and distinct kingdom. In the year 1800, after a great debate in the Parliaments of both kingdoms, the Union of the kingdoms of Great Britain and Ireland was effected by the acts 39 and 40 Geo. III., c. 67, of the British Parliament, and by the 40 Geo. III., c. 38, of the Irish Parliament; and England, Scotland and Ireland were, from the 1st of January following, declared to be united into one kingdom, by the name of the United Kingdom of Great Britain and Ireland.

UNION OF CHURCHES, in Law, is the combining and consolidating of two churches into one. It is also where one church is made subject to another, and one man is rector of both; and where a conventual church is made a cathedral. In the first case, if two churches were so mean that the tithes could not afford a competent provision for each incumbent, the ordinary, patron and incumbents might unite them at common law, before any statute was made for that purpose; and in such case it was agreed which patron should present first; for though, by the union, the incumbency of one church was lost, yet the patronage remained, and each patron might have a *quare impedit* upon a disturbance to present it in his turn. The licence of the king is not necessary to an union, as it is to the appropriation of advowsons; because an appropriation is a mortmain, and the patronage of the advowson is lost, and by consequence all first fruits and tenths, whereas in an union those consequences do not follow.

The three statutes in existence relating to unions of churches are the 37 Henry VIII. c. 21; the 17 Charles II. c. 3, and the 4 and 5 Will. and Mary, c. 12. By the first it was enacted that, with the assent of the ordinary, patron and incumbent, two churches lying not above a mile distant one from the other, and whereof the value of the one is not above 6*l.* a-year in the king's books of first fruits, may be united into one. By the Act of Charles II. it is declared that in cities and corporation towns, it shall be lawful for the bishop, patrons, and mayors or chief magistrates of the place to unite churches therein; but where the income of the churches united exceeds 100*l.* a-year, the major part of the parishioners are to consent to the same; and after the union made, the patrons of the churches united shall present by turns to that church only which shall be presentative, in such order as shall be agreed; and notwithstanding the union, each of the parishes shall continue distinct as to rates and charges, though the tithes are to be paid to the incumbent of the united church. A union made of churches of greater yearly value than mentioned in the 37 Hen. VIII. was held good at common law; and by the canon law, the ordinary with consent of the patron might make an union of churches, of what value soever; so by the statute with the assent of the king. The Act of William and Mary was passed on account of questions arising concerning repairs; for when two parochial churches were thus united, the reparations continued several, wherefore if either of these churches was demolished, the inhabitants of the parish in which the church was demolished were not obliged to contribute to the repairs of the other church. By this Act, therefore, it was directed that where any churches

UNION. have been united by virtue of 17 Cha. II. c. 3, and one of them is demolished; if the other church shall be out of repair, the parishioners of the parish whose church is down shall pay in proportion towards the charge of such repairs.

UNI'PAROUS, bearing or bringing forth one at a birth, (*partus*.)

Others make good the paucity of their breed with the duration of their dayes, whereof there want not examples in animals *uniparous*.

Sir Thomas Brown. Vulgar Errours, book vi. ch. vi.

UNI'QUE, *n.* From *Fr. adj. unique*. Single, singular; one, only, alone.

The success, therefore, of Mahometanism stands not in the way of this important conclusion; that the propagation of Christianity, in the manner and under the circumstances in which it was propagated, is an *unique* in the history of the species.

Paley. Evidences of Christianity, part ii. ch. ix.

U'NISON, *n.* } *Fr. unisson, unissonant*; *It. uni-*

U'NISON, *adj.* } *sono.*

UNI'SONOUS. } One single sound; concurrence, concord, agreement of sound; generally—concord, agreement.

Not suffering her shrill waters, as they run,
Tun'd with a whistling gale in *unison*;
To tell as high they priz'd the border'd vale,
As the quick lennet or sweet nightingale.

Browne. Britannia's Pastorals, book i. s. 2.

— All organs of sweet stop,
All sounds on fret by string or golden wire
Temper'd soft tunings, intermixt with voice
Choral or *unison*. *Milton. Paradise Lost*, book vii.

And in all exigencies of his children, he is overcome with their complaints, and cannot hold out against their moanings; he may, as Joseph, seem strange for a while, but cannot act that strangeness long; his heart moves and sounds to theirs, gives the echo to their griefs and groans, as they say of two strings that are perfect *unisons*, touch the one the other also sounds.

Leighton. Com. on 1 Peter, ch. iii.

That both these parties [papists and puritans] should so exactly keep time together in troubling it [Government] if there were not something of peculiar harmony, or rather a kind of *unison* correspondence between them, requires a more than ordinary reach of understanding to conceive. *South. Sermon* 1. vol. vi.

A work which warms our passions, and hurries us on with the rapid vehemence of its style, may be read once or twice with pleasure; but it is the more tranquil style which is most frequently in *unison* with our minds. *Knox. Essay*, No. 28.

These apt notes (to sing the Psalms withall) were about 40 tunes of one part only, and in one *unisonous* key.

Warton. History of English Poetry, vol. i. p. 171.

UNISON.
—
UNITED STATES.

UNITED STATES.

UNITED STATES of North America, a confederated republic of many states, with local assemblies, privileges, and jurisdictions, under one elective head, chosen for effecting certain defined objects by the entire union, and acting with a general congress of deputies, the individuals forming which are sent from each state in proportion to the number of the people which they represent. The republic was formed in 1783, of colonial territory for ever wrested from the British crown, and divided into thirteen states, the independence of which was acknowledged by Great Britain, namely, New Hampshire, Massachusetts, Rhode Island, Providence, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, the Carolinas and Georgia. Subsequently to this treaty other territory was acquired by negotiation or purchase from France, Spain, and the Indian tribes, and the republic was classed in three grand divisions as follows:—

Territorial Divisions.

Southern States { Maryland.
Virginia.
Kentucky.
North Carolina.
Tennessee.
South Carolina.
Georgia.
Middle States. { New York.
New Jersey.
Pennsylvania.
Delaware.
North West Territory.

The New England States { Vermont.
New Hampshire.
Massachusetts.
Maine.
Rhode Island.
Connecticut.

New acquirements succeeded these divisions, and have given room to the following classification, which at present comprises the existing provinces of this vast republic, that now numbers 28 states and 1 district, so named, to which may be added Winconsin, making, in addition to the foregoing enumerated states, (the "North West Territory" being omitted,) the states of Alabama, Mississippi, Louisiana, Ohio, Indiana, Illinois, Missouri, Michigan, Arkansas, and Florida territory, with the district of Columbia. The population of all, except Winconsin, in 1830, was estimated at 13,860,702, including 2,009,043 slaves, as follow:—

	1790.	1810.	1830.	Slaves 1830.
New Hampshire	141,899	214,360	269,328	3
Massachusetts	378,717	472,040	610,408	1
Rhode Island	69,110	77,031	97,199	17
Connecticut	238,141	262,042	297,675	25
New York	340,120	959,949	1,918,688	75
Pennsylvania	434,373	810,091	1,348,233	403
New Jersey	184,139	249,555	320,823	2,254
Delaware	59,096	72,674	76,748	3,292

Population.

This much may suffice for the population of the United States in 1830; but as the population doubles itself in twenty-five years, and in 1791 was reckoned at 3,929,827, including 697,697 slaves, this would give 7,900,000 for the population of these states in 1816. In 1830, with the additional territory, the population reached 12,860,702 by a census then taken; this makes the probable number in 1841 about 16,500,000, reckoning according to the estimated rate of increase.

Superficies. The foregoing population is spread over a territory so great, that the number of persons to each square mile is very inconsiderable. When the superficies was confined to the designation of the New England, Middle and Southern states, as already remarked, it was computed to contain a million of square miles, or 589,000,000 acres of land, and 51,000,000 of water: to this computation are now to be added the additional territories and states mentioned afterwards, an extent of surface truly enormous, as may be judged from its being nearly 1,100 miles from North to South, and from the Columbia River in the Pacific to the boundary of New Brunswick on the Atlantic, fully 3,500 miles from East to West. Except a portion belonging to New Mexico, which, on the South-West of Louisiana, trenches upon the angle, it stretches down below the 30th degree of latitude, and one half is very little known.

Extent.

Besides the European population, or the descendants of emigrants from England, and those continually entering and taking up their abode in the Union from foreign nations, there is within the limits of the United States a numerous body of aboriginal Indians. One or two tribes of these have taken to cultivate the ground, and are rapidly intermingling with the white population, so that they must soon disappear. Other tribes have been annihilated, by the vices and diseases introduced among them by civilized men, having been induced to cede their hunting-lands to the United States government for

annual sums of money, payment in goods, and frequently by unjust means. The number of these tribes yet in Indian existence, from the St. Lawrence to the gulf of Mexico, is supposed to number about 50,000 souls. There were, East of the Mississippi, 28 different nations known to be the inhabitants of the states, the most noted of which were the Cherokees, Chicasaws, Chactaws, Creeks, Delawares, Miamis, Illinois, Outagamis, Sioux, Chipewas, Outawas, Wyandots, and the Six Nations to the West of the Mississippi. The number of tribes is not ascertained, although a considerable number have been seen and are recognized by name between the Great River and the Rocky Mountains which run almost parallel with the shores of the Pacific. The first colonists found the present states each with its tribe or tribes of occupants. Thus Maryland was inhabited by the Susquehannoes, who were afterwards destroyed by the Iroquois assisted by four nations, the Nauticoelas, Canoes, Tateloos, and Monekans. The last survivors of the Iroquois have been seen recently begging alms for their support. The Aberginians resided in Massachusetts. The Mohigans lived between the Thames and Connecticut rivers. No trace of the Lenapes who received William Penn now exists. The Pequods and the Narragansets, the last a most ingenious race, who furnished 2000 warriors in 1675; the Womponags, whose chief Massasoiet gave his name to Massachusetts;—these and other tribes are all now nearly extinct. In Virginia, the Powhattans, Manohoces and Monacans were found, and to them belonged a territory of 8000 square miles; yet of forty powerful tribes there, not as many individuals remain to witness the extinction of their races by the Europeans. In almost all the other states, the history of the Indians has terminated in a similar manner; no treaties with them are observed, particularly in the South, and they are driven off their hunting-lands, their own property, and forced from their own soil and the tombs of their fathers

UNITED into more remote wilds by the superior power of the STATES. whites, whose law towards them is that of power alone.

Coloniza-
tion.

The colonization of America, first attempted unsuccessfully by the gallant Sir Walter Raleigh in 1585, was begun successfully in 1608, by the foundation of James Town on James River, more correctly the Powhatten River, and the same year the French colonized Quebec. It was in 1620 that the town of Plymouth, the first place in New England, was successfully founded, and five years afterwards the first cattle ever seen there were imported from England. This colony was in fact the leader of all the others, and thus comprised New Hampshire, Maine, Connecticut, and subsequently Rhode Island, as well as Massachusetts. Under the name of Plymouth, Massachusetts, Connecticut, and New England, a plan of the Indian tribes having been discovered for their extirpation, an alliance for defence was formed, and the idea of a congress had birth, in two commissioners who were delegated from each colony, annually chosen, and considered as the representatives of the colonies of New England. The powers delegated to these representatives were nearly the same as some others called Articles of Confederation, agreed upon by the United States in 1678. They subsisted until 1686, when a commission from the tyrant James II. annulled them all except that of Connecticut. The civil wars appear to have interrupted the progress of colonization for a time. Under the previous reign, principally in consequence of religious persecution, 21,000 persons emigrated in 298 vessels. In the reign of Charles II. the Dutch took possession of the country adjacent to the Hudson River, discovered by and so called from the unfortunate navigator of that name, and they erected forts. They built a town called New Amsterdam, and traded with the Indians for furs. Charles II., on the dispute breaking out with Holland, sent an expedition, and, taking possession of New Amsterdam, transferred it to his brother, and named it *New York*. The principal fort erected by the Dutch, called Orange, was then named Albany. A part of the territory thus taken from the Dutch was ceded by the Duke of York to other proprietors, and styled *New Jersey*. *Maryland* was granted by charter from Charles I. to Baron Baltimore of Ireland, in 1632, and colonized with persecuted catholic gentlemen of rank and fortune, in the hope of liberty of conscience. The government was then vested in the proprietary, all which was changed by the result of the war of the revolution, when the government was assumed by the province and the estates of the heir of Lord Baltimore confiscated. *Vermont* began to be settled in 1764. *Delaware* was colonized by the Lord De la War, who was instrumental in founding the colony of *Virginia*. This last was colonized by charter dated 1606, granted by James I. to a body of gentlemen, for what was styled the "first or Southern colony of Virginia." The second or Northern was composed of individuals belonging to Plymouth, Bristol, and Exeter, and was really the colony of New England, but at that time all the colonies in North America were known under the general name of Virginia, which was bestowed upon them in honour of Queen Elizabeth. *Carolina* was colonized next after Maryland by some adventurers who emigrated thither from Massachusetts and settled near Cape Fear, and the complete settlement of the state was completed by a charter from Charles II., obtained, under the ridiculous pretence of propagating the gospel among the Indians, by some of the rapacious courtiers of that time.

They thus, under a false plea, managed to obtain a grant of an immense country lying between the 31° and 36° of latitude, and in 1663 this was made a province under the name of *Carolina*, the Duke of Albemarle, Lords Clarendon, Craven, Berkeley, Ashley, Sir G. Carteret, Sir J. Colleton and Sir W. Berkley being made absolute lords proprietors for ever, save in their allegiance to the crown. *Pennsylvania* was colonized by William Penn, who had already purchased a portion of New Jersey. He petitioned Charles II. in 1680, for a grant of lands lying North of the Delaware, to compensate him for a debt due to him from the crown, stating that, by settling a province, he might in time be able to repay his claim himself. Penn endeavoured to guard against the exertions of the royal prerogative by a clause exempting from taxation upon that sole authority; this the law-officers of the crown would not allow to pass. At last this difficulty was overcome by its being stipulated, on the king's behalf, by himself and for his successors,—“that no custom or other contribution shall be laid on the inhabitants or their estates, unless by the consent of the proprietary, or governor, or assembly, or by Act of Parliament in England.” In 1681 the charter was granted. *Georgia* was colonized by General Oglethorpe, under a Parliamentary grant in 1733. By the end of 1734, in all 800 colonists had been sent out, and the colony rapidly increased, while a further sum of money was granted it by Parliament for public works. *Kentucky* was first settled by Daniel Boon, at the town of Boonsborough, in 1769, but even in 1775 the colonists had not completely established themselves, since for several years afterwards they had great difficulty in maintaining themselves against the Indians. *Tennessee* was not permanently settled until 1774. *Ohio* was first colonized by 47 persons from Massachusetts in 1788, and admitted to the Union in 1802. *Indiana* was received into the Union in 1816, having then 60,000 inhabitants, and about the same time the states of *Alabama*, *Mississippi*, *Missouri*, *Illinois*, and *Louisiana*, principally taken out of the ceded territory of Louisiana obtained of France in 1803, and further divided into the *Arkansas* and the *Missouri* states. *Florida*, a territory not yet admitted to the dignity of a state, was ceded by the Spaniards to the United States. *Michigan*, on the borders of the lake of that name, is but recently begun to be peopled. The district of *Columbia* consists of a portion of two other states, taken for the purpose of forming a territory round Washington, the capital of America; it is only ten miles square.

The constitutions of the states differ from each other as Citizen-well as the title in holding the land: for, in the state of ship. Maine, persons who have purchased real estates during alienage, and who become naturalized, are entitled to hold as natural born citizens; and aliens who intend to become citizens, and die before admission, may bequeath the same. Alien widows of citizens are entitled to dower; and aliens may claim a share of an estate. In Vermont, every person who settles, and takes an oath of allegiance, is entitled to all the political privileges of that state. After one year's residence he may hold, will, and devise real estate, but cannot be elected to any government office until after two years' residence. In Massachusetts, an alien woman may take dower, and aliens may claim a distributive share of an estate. In Connecticut, the superior court, on the petition of a foreigner who has resided in the state six months, may empower such

UNITED
STATES.

UNITED STATES.

person to receive and hold land for all purposes, as if he were a citizen. Aliens who come to reside in any town in the state gain a settlement by the vote of the inhabitants, or consent of the civil authority, or select men of the town. In New York, lands may be taken and held in fee by aliens, and they may sell, mortgage and devise (but not demise or lease the same) as if they were native citizens. This power continues for six years after taking the oath; and if an alien die within that period, his heirs, being inhabitants of the United States, take by descent, as if he had been a citizen. An alien who has not declared his intention to become a citizen cannot become an executor. In New Jersey, the restraints upon aliens holding real estate are entirely removed. In Pennsylvania, alien friends may purchase real estate not exceeding 5,000 acres, and may have and hold the same equally with natural born citizens. They may also hold or dispose of real estate, by will or otherwise, in as ample a manner as citizens. In Delaware, aliens who have declared their intention to become citizens are capable of holding and devising lands as if they were citizens. The alien kindred of such aliens, if residing in the state, may take under the intestate law. In Maryland, aliens residing in the state may hold and devise property as if they were citizens, provided they declare their intention to become citizens within one year after possessing such property, and become citizens within one year after the probationary five years shall have expired. If an alien die before such time, and even before he make his declaration, and within the year, his lands descend as if he were a citizen. In Virginia, alien friends, after making declaration of their intention to become citizens, may hold and devise lands and real estate as if they were citizens. But the persons to whom they devise or will the property must reside in the state within five years. In North Carolina it is similar to Virginia. In South Carolina the law is the same as in New York. In Georgia, alien friends who declare and enrol their names in the office of the superior court, possess the same rights with regard to property as citizens, if resident. But no alien can be an executor or administrator. In Tennessee, when any person dies intestate without issue, and possessed of real or personal estate, it descends to such persons as are next of kin resident within the United States, to the perpetual exclusion of aliens. In Kentucky, alien friends who reside in the Commonwealth two years may, after that period, during the continuance of their residence, receive, hold, and pass real estate as citizens. In Indiana, alien friends may hold real estates as citizens, on declaring their intention to become citizens of the United States. In Missouri, aliens who have declared their intention to become citizens of the United States may hold and dispose of real estates as citizens. In Ohio, Illinois, Michigan, and Louisiana, the disabilities of aliens to take, hold and transmit real property are entirely removed. But aliens not resident in any part of the United States are subject in the last mentioned state to pay a duty of ten per cent. on all sums which may be due to them as heirs, legatees, or donees. In Alabama, the regulations for aliens holding property are similar to those of Georgia. In Arkansas, nearly all the disabilities of aliens are removed; Wisconsin and Florida are, as yet, only territories. In them aliens may hold, sell, or will property, either real or personal.

Climate.

The climate of America is extremely varied, particularly on the east of the River Mississippi. In New

England, and on the shores of the Atlantic, the extremes of heat and cold are very considerable, sometimes 30° and more in a few hours, indeed very far beyond any thing experienced in the Old World in the same parallel of latitude. In New England, the North-West, West, and South-West are the prevalent winds; the East and North-East are disagreeable, and blow very frequently in the spring. The thermometer descends to 25° below zero, and rises in summer to 100° . In the Middle states, the temperature is more variable, and the transitions from heat to cold very rapid, while in the Southern the heats are long and intense, and storms, thunder and lightning are frequent. The Western states bordering upon the Mississippi have a better temperature, it being far more equable. Thus in Kentucky snow very seldom falls deep, or lies long upon the ground. The winter does not begin until Christmas, is always over in three months, and seldom lasts longer than two. Fahrenheit seldom rises above 80° , or falls below 35° , and the changes of the seasons are gradual. Summer continues until the middle of October, and mild autumn weather until Christmas. Spring begins at the end of February, and in March the buds begin, so that by the middle of April the foliage of the forest is fully expanded, which is a fortnight earlier than in Virginia or Maryland. The heat of Georgia and West Florida is very great, while the winters are mild, the thermometer ranging in winter from 40° to 60° , and in summer from 76° to 90° . The summer South winds are remarkably unhealthy; the East wind is warmest in winter and coolest in summer. Snow is observed to fall frequently in Virginia, and after a warm day in the North-East, ice is frequently found over the ponds at night. Even in New York, in lat. $39^{\circ} 45'$, the rivers are frozen sometimes for four months in the year, and in summer the heat is almost insupportable. The climate mends upon crossing the Alleghany chain of mountains, and to the West becomes much more temperate, offering nothing like the extremes experienced to the Eastward as far as the ocean. On the shores of the Ohio, the temperature is equable and the shores healthy, except where there are marshes or swamps, when the intermittent fever makes its appearance, the same that, no doubt, in the more intense heats to the Southward, and about New Orleans in particular, is increased by the more potent solar influence and ranker vegetation to a degree of intensity bordering upon and frequently changing into the common yellow fever, so fatally experienced there at particular times when the season is most propitious for its development. At Mobile, which may serve within a very trifling difference for all the territory bordering upon the ocean in the more Southern states, the temperature is high, so that maize not planted until July will fully ripen. In the shade, at the middle of April, the thermometer ranges, between midnight and noon, from 71° to 80° ; in May, from 67° to 80° ; in June from 70° to 90° ; in July, from 74° to 94° , the mean of July is 85° ; in August 87° ; in September the range is from 78° to 92° , the mean about 84° ; in January the thermometer has been known as low as 34° at 8 A.M. and 52° at noon, while some days in February it has ranged from 62° to 79° , the coldest day being 43° and 56° respectively, while on a very hot February day it has been known to be 71° in the shade. The warmest day in March is often 86° . The peach blossom is generally gone by the 2nd of April. Such a climate, and there is a vast extent of it in the South of the United States,

UNITED STATES.

Temperature.

UNITED STATES.

must be unfavourable, amid swamps and marshes, to human life. Bilious fevers are common, and on the banks of rivers and edges of marshes, none but negroes can safely take up a residence. The white inhabitants can only be found in health upon the loftiest elevations of the surface.

Antiquities.

Vestiges of inhabitants possessed of different habits from the existing Indian tribes are visible in some of the Western states. In the state of Ohio, which is about as large as Ireland, and North of the river of that name, there are remnants of encampments, respecting which modern Indian tradition is silent. These military works, for military they evidently are, consist of ramparts and mounds overgrown by forests, beneath which reposes a depth of vegetable mould nearly equal to that on the surrounding surface of the country. They are scattered over the whole surface of that state more particularly, and covered by some of the finest and oldest timber of the denser forests. About half a mile from the junction of the Muskingum with the Ohio, one of these works, called "the Tower," incloses a square of about forty acres. What is left of the wall or mound is six and ten feet high, and from twenty-five to thirty wide at the base, with three openings like gateways on each side, that in the centre on each side of the square being largest. From the centre outlet on one side are parallel walls, 231 feet distant from each other, and still twenty-one feet high on the inside, though outside only a fourth part of the height; thus forming a passage which extends 360 feet in length towards lower ground, once, it is probable, to the bank of the river, increasing in height as they descend. The bottom is crowned in the centre in the manner of a well made turnpike road. Within the centre square of the encampment are smaller forts in the angles, together with circular mounds apparently defending the openings. One of these, outside the smallest of the internal forts, measures 115 feet in circumference, and is even now 30 feet high, surrounded with a ditch five feet deep and 15 wide, and defended by a parapet four feet high, through which is an opening 20 feet wide. Bones have been found in the mounds, arrow-heads, earthenware, and plates of copper that seemed to be parts of armour. Yet these walls are not comparable to some about 90 miles further off. Trees whose concentric circles have numbered nearly a thousand years have been discovered growing upon decayed stumps of others that were eight or nine feet in diameter, lying upon these wrecks of the labour of extinct races. None of the modern Indian tribes possess in their belligerent resources the remotest resemblance to such arts of defence. Their whole system of warfare is offensive and utterly at variance with them. These banks of the Ohio no Europeans had ever visited, and if the ancestors of Montezuma from the South penetrated so far from Mexico, it is difficult to account for the utter extinction of all traces of them over the vast tract which intervenes between the torrid frontier of the Mexican empire, and the temperate North shore of the Ohio, over which space no such encampments are reputed to exist. That an unknown people, who had made progress in the art of defence very superior to the modern Indians, did once inhabit this part of the United States, remote from the ocean, and its relics buried beneath forests that for ages were untrodden but by the bear and buffalo, and the solitary step of the Indian hunters, is all that can now be affirmed with certainty. Extinct animal races are also discovered, relics of the mammoth are common, and are

most frequently found near salt-springs where animals still resort to lick the salt. UNITED STATES.

The American descendant of Europeans is strongly tinctured by the habits and climate in the North and South of the states. In New England, where industry alone can thrive, and the climate is severe, where the love of thrift extinguishes the love of pleasure, and sobriety and religion have a dominant influence, the manners of the early English settlers still prevail, and in remoter districts are said to be little dissimilar from what they were in the days of Cromwell and the first Stuarts. Coldness and reserve, strictness of manners and a zeal for religion often little tempered by discretion, conceal at the same time many solid virtues, and mark the resolute character of the men who sought freedom in the woods, and fought out a republic. The Southern American, on the other hand, employs others to do his work, makes his life one of dissipation and pleasure, falls into immoralities which the New Englander regards with horror, and in a climate where indulgence accelerates the stroke of death, lives as if he were to live for ever. The love of liberty too is less felt in the southern than in the northern states, for there the plague-spot of slavery marks both white and black.

The rivers and lakes of the United States are numerous and important. In size they are among the largest in the world. The Missouri, rising far towards the Rocky Mountains in the West, runs more than 2000 miles before it falls into the Mississippi unbroken by rapids, and navigable the whole way. The Mississippi, which is said to rise in lat. $48^{\circ} 16'$ N. long. $23^{\circ} 17'$ W., and to be navigable for 300 miles above the falls of St. Anthony in lat. 45° N., here only, according to some authorities, assumes its Indian name, which means the "Father of Waters." From the falls of St. Anthony to the mouth of the Missouri, it runs 870 miles, receiving the river St. Croix, navigable 200 miles; the Sotoux, 80; the Buffalo, 100; the Black river, 100; the Winconsin, 300; the Rivière de la Moine, 50; the Rivière de la Roche, and the Illinois, 450; then follows the Missouri, navigable for 2000, about 25 miles below the Illinois, and having a course of nearly 3000 miles. After this junction, the "Father of Rivers" becomes turbid, but has 15 feet of water to where it receives the Ohio, which is three-quarters of a mile broad at its mouth, formed by the junction of the Allegany and Monongahela rivers, at Pittsburgh, 1,188 miles distant. Below the junction of the Ohio to New Orleans, the Mississippi runs 1,009 miles more, and receives many more large rivers, among them the St. Thomas, Osage, the White river, the Arkansas, navigable 800 miles, with a course of 2,200; the Yazoo, Red river, Big Black river, and many others. Except a small portage of four miles, there is a water-communication by the Mississippi and Illinois, from the ocean at the mouths of the Mississippi, in the Gulf of Florida, to Lake Michigan, and from thence by Lake Superior, and the lakes through the canal, round the Falls of Niagara, to Quebec and the ocean by the St. Lawrence, or into the heart of the United States by rivers or canals which fall into the lakes. Besides the St. Lawrence river, which is the outlet of the great lakes, some partly and others wholly within the limits of the United States, up which the tide ascends for 400 miles, falling into the sea with a mouth 90 miles wide, receiving numerous lesser rivers, there is the Connecticut river, which falls into the Atlantic in the Eastern part of the United States, Rivers and lakes.

Manners.

UNITED STATES.

Rivers.

separating in its course the states of Vermont and New Hampshire from Lower Canada, navigable for 50 miles only, but having a course of 300. The Hudson river, in New York, running North and South, and navigable for sloops to Albany, above which the tide flows, being 160 miles from New York. The Mohawk, which empties itself into the Hudson after a course of 110 miles. The Delaware, navigable for a 74 gun ship 120 miles from the sea, and for large vessels to the Trenton Falls, 35 miles higher, its course for canvas being 300 miles. The Susquehannah, in the state of Pennsylvania, afterwards forming the noble bay called the Chesapeak, in Maryland and Virginia. The Skuyskill, falling into the Delaware. The Potomac in Virginia, rising near the Allegany Mountains, up which the tide flows from the Chesapeak for 400 miles, when it ceases to be navigable from rapids; it receives in its course the Shenandoah, a considerable river. Other rivers in the Eastern states are the Roanoke, James, Rappahannock, York, and Great Kenaway, Pedee, Savannah, Alatamaha, which flow into the Atlantic. The Apalachicola, the Alabama, Pearl and other large rivers which flow into the Gulf of Mexico; while the rivers which empty themselves into the larger streams are numerous and of great length of course, such as the Tennessee, Cumberland, Wabash, and Miami, forming the most wonderful inland navigation on the globe. Nor are the lakes less extensive in proportion, some being divided, as those of Superior, Huron, Erie, and Ontario, with Canada, or as Michigan and Champlain, wholly within the United States territory. Lake Superior is 380 miles long, and 120 broad; Lake Huron 800 miles in circuit, and Michigan 270 miles long, by 60 broad; Ontario and Erie are nearly the same in size, being about 400 miles in circuit; Lake Champlain is 78 miles long, and varying from 3 to 14 in width. Besides lakes, there are large swamps only partially covered with water, which is seen near their centre, while a vast circumference around is a species of marsh. Such are the Dismal Swamp in Curritock county in Virginia, and the Great Dismal Swamp. This last extends from North to South about 30 miles by 10 wide, and is partly in Virginia state, and partly in North Carolina; and from it five considerable rivers flow, their sources being beneath this vast bog which trembles beneath the feet, every impression from which is filled with water as soon as made. The borders of the swamp are overgrown with bamboo briars 10 or 12 feet high; and trees of great density of foliage render some part of the tract such a mass of deep shade, that neither bird, beast, reptile, nor insect are found to inhabit it, the air being full of noxious vapour from the slime beneath propagating miasma. In the centre is a lake, called Drummond's Lake, seven miles long. In East Florida, another extensive swamp exists, called "Ekanfanoka Swamp."

Mountains.

The mountains of the United States of North America are not remarkable for their elevation. The most important are those denominated the Apalachian range, which extends from South-West to North-East, commencing on the North of Georgia, through the Western territory of Virginia, being, with its collateral branches, from 70 to 150 miles wide, and proceeding through Pennsylvania and across the Hudson river, until the main branch terminates in New Brunswick, in all occupying a space of 900 miles in length. The collateral branches are the Cumberland, Bald, White Oak, Black,

and Stone Mountains. This range is also denominated the Allegany, though this name is more properly confined to the Northern part of a central range which divides the Atlantic rivers from the Western waters. Their height no where exceeds 3000 feet. On the extreme South, the Apalachians give rise to several rivers, as to the Saluda, which falls into the Sanpee, and to the Apalachicola. The Tennessee and Cumberland rivers have their sources among them, and more Westerly the Alabama and the Ohio itself through the Monongahela and Allegany rivers, which are fed from the Western side. Even the rocks of Niagara are supposed to be a branch from the chains of this vast range, which divides the waters which fall into the Atlantic from those which run into the Mississippi. The blue ridge of this range traverses Maryland, Pennsylvania, and New Jersey, and forms the high lands broken at West Point on the Hudson river. The mountains of this ridge are little more than a range of very high hills. They are not seen until approached very near, and their ascent is gradual, but the ravines among them are very deep and precipitous, so as to bar all passage across them. The summits form a line with none of the variation common with hills in general, and their rugged sides are next the Mississippi, or more correctly face the West. In one place the ridge is broken, at a place called Wind Gap; for nearly a mile in width, tremendously rugged, and the lower parts appearing to have been subjected to the action of water for a long period of time. Through this it is supposed the River Delaware once ran, though now it passes about 15 miles off to the North-West by another fissure in the ridge. These form probably the most connected ridge of mountains on the globe, and in one place they afford the grandest scene that can be conceived, just where the Potowmac and Shenandoah meet, and flow through this pass to the Westward. Near Keyssel the Blue Mountains have a lateral ridge, called the Peaked Mountains, which extend about 60 miles, until lost in the Allegany range. In the division of the range between the James and Staunton rivers, are other peaks, which some aver are the highest in North America, but it is supposed this is an error, and that they do not reach above 2400 feet. These ridges throw out lateral ranges of trifling elevation, covered with a red soil and extremely fruitful. Ochre and mundic are discovered in them. The rocks throughout the whole chain are granite for the most part, and extremely beautiful. Freestone and feldspar also occur in them, and a grey rock containing magnesia. No limestone is found on the Eastern side, but on the West it runs along the whole ridge of the Blue Mountains, divided into beds which pass in the same direction as the mountains and sea coast, from North-East to South-West. Iron and copper, and near Wilksbarra iron and coal occur, plentifully. Oyster shells are found petrified in abundance, and entire oyster banks, one 50 acres in extent, containing a different oyster from the common, and much larger, are seen 60 miles from the ocean. The North Mountains, Endless Mountains, Jackson's or Warm Spring Mountains, and others close to ridges of small account, shoot out from the Alleganies, not far from where the Blue Ridge joins them. North of the Potowmac, they take the name of the Tuscarora, and contain not only at their bases, but on their tops, immense masses of schist, with the impressions of numberless varieties of shells. On the North and North-East these branches of the Alleganies may be traced to

UNITED STATES.

Mountains.

UNITED
STATES.
Mountains.

the Catskill and Oneida ridges. The main range of the Allegany, that is, the central range, is unbroken by any river. All those hitherto spoken of as caused by water are lateral ridges. The road across the central ridge is very steep and covered with enormous stones.

The Allegany divides, in the Southern portion of Virginia, into Peter's Mountains, which unite it with the Cumberland and Great Western range, and the main ridge which comes up through South Carolina. Here occur numerous subordinate ranges, including the Laurel Mountains and a double ridge called the Chestnut. The Cumberland Mountains in Tennessee are intersected with vast beds of ferruginous schist, the laminæ exceedingly friable. On the Eastern side of the chain at Knoxville, there are iron and lead mines. West of the Laurel Mountains, through the whole of Kentucky, the base is calcareous stone covered with vegetable mould. On the banks of the Kentucky and other rivers, this limestone is discovered 300 feet thick, and unbroken. The Laurel Mountains, except some petty elevations, are the Western limits of the Allegany chain. Some of these smaller elevations border the Ohio in the State of Virginia, and the left bank of that river rises in some places to 900 and 1,200 feet.

In the district of Maine, elevations occur called the Land's Height, which extend to the head of the Connecticut river, and unite with the White Mountains in New Hampshire; the highest mountains in New England are visible 60 or 80 miles off; their elevation does not exceed 3,000 feet. The Green Mountains extend from the borders of Lower Canada to the Hudson's river, terminating at Housatonic. Other mountainous tracts are met with on the Western shore of Lake Champlain. The Catskill Mountains stretch North-West and South-East from Schare to Hudson's river. On the Southern extremity of New York are the highlands which confine the Hudson river, and render its course one of the most beautiful in the world. All of the more elevated of these last mountain elevations are composed of granite; the others of schist in different states of perfectness, of slate, feldspar, hard sandstone, and calcareous stone of different degrees of purity. About nine miles from New York a good copper-mine has been worked; the ore is found in a species of sandstone and sometimes in pudding-stone.

Of the mountains in the country Westward of the Mississippi, in the territory of the United States, very little is known that can be substantiated. The Southern and South-Western part of the United States is generally level, or only elevated to a trifling degree in a few sites. Vast tracts on both shores of the Mississippi are so level as to be continually overflowed by that mighty river upon its rising, and towards its mouth the banks raised by the river on each shore, in the likeness of ridges, carry the waters above the plains on both sides, until becoming overflowed a deluge spreads over them, depositing at its subsidence millions of timber trees brought down by the Mississippi and Missouri, in a course of 3,000 miles, the contributions of their own and the vast tributary rivers which flow into them. Upon the retirement of the waters, the vast beds of timber, thus left, becoming heavy, water-soaked, and buried in slime, form strata of coal, it is presumable, for future generations of men, when the earth's surface is more elevated over them, and half the Gulf of Florida becomes dry land. In the Southern part of the United States, more than in the Northern, there is evidence of a much later

formation of the land than in the Old World, every thing being marked with the evidence of rapid progression. The shores of Alabama, Louisiana, and Florida, bordering upon the ocean, are vast swamps with very little elevation above the oceanic level. Volney, in his observations upon America, suggests, from the appearance of the surface in the Western part of the United States, that the whole country from a range of mountains below the Falls of Niagara as far as Pittsburgh, bordering upon Lake Erie, comprising portions of the Ohio and Pennsylvania states, was once an immense lake, and that by some convulsion of nature, the barrier of hills was rent to the base, and the waters drained off, while the floods entering from the higher grounds formed the present Ohio river.

In Louisiana, between 34° and 35° of latitude, on a Hot creek which falls into the Ouachitta river, there are hot springs. Hot springs situated in the midst of a country which is marked by volcanic appearances of considerable activity. This is the only part of the states where such appearances have been witnessed. One of the mountains has been seen in a state of eruption, and lava observed to flow from it, which was accompanied by an explosion, and the sensation of an earthquake. These springs are said to reach the boiling point, and meat is speedily cooked in them. The waters are observed to diminish in dry seasons, and increase their quantity in wet ones. Some state their heat at only 150° of Fahrenheit in place of 212°, the boiling point. The number of springs is six; trees grow near them, having their roots continually exposed to a heat of 130°. In this part of the states there are vast natural prairies or meadows, producing strong, thick herbage, utterly destitute of trees, which is supposed to arise from the Indian custom of setting fire to the grass in dry seasons, and thus destroying any that might chance to sprout up.

The agricultural produce of the United States, North and South, seems to be marked in growth by the course of the Ohio river, in the same way as we distinguished the character of the cultivation of the soil, through the line of slave employment. In Kentucky and Tennessee begin the culture of tobacco to a large breadth, and in the Southern part at about 37° Fahrenheit. Cotton and rice are raised down quite to the Gulf of Florida, together with all kinds of produce which are naturalized in low marshy hot districts, not at all favourable to the health of man. North of the Ohio, wheat is grown of excellent quality, and in great abundance, as well as maize. The line of the Ohio towards Pittsburgh, carried across the Eastern states to the Atlantic, about the parallel of 39° 50', marks the division between the free and slave states throughout the whole empire. In the Eastern states the climate is more in extremes, and less favourable to agriculture than in the Western. East of the Hudson river is the worst agricultural division of the Eastern states. The ground is rocky and the soil of little depth. The seasons are severe and the springs ungenial. Near the banks of the Hudson the soil improves. Yet this unpromising tract was the leader of American freedom, being inhabited by the industrious, hardy New England race. As the Westward is approached, the land gains in fertility, although the climate is still severe and extremely fluctuating. In Ohio and Indiana the climate is more uniform and temperate. The productions of the soil are mostly those of the mother country throughout these Northern states, with the addition of maize and tobacco. In the Southern states

UNITED
STATES.

Agriculture.

UNITED STATES.

Cotton.

cotton, rice, sugar, flax and indigo are the principal productions. Cotton is grown principally in the states bordering on the Mississippi and the Gulf of Mexico. The cotton crop is generally ready in October for the merchants who export it, many of whom reside in New Orleans. The product of the cotton harvest, upon the average, is about 445,000,000lbs., valued at 36,191,105 dollars, the largest quantities being produced in the states of Mississippi, Alabama, and Georgia, the two former producing not less than 85,000,000lbs. each, the last 75,000,000lbs. The agriculture of America can only extend itself in a soil yet unbroken by man, and continual sales of land in a state of nature are taking place tendered by the government to purchasers. In 1836 no less than 25,000,000 of dollars were received for lands so disposed of. The trees which cover such lands very thickly all over the American continent are "girdled," that is, the tree is cut deeply into all round, the operation causing it to die immediately. Corn is then harrowed in between the trees, which are left to decay and fall by their own weakness: in other cases the land is cleared by cutting down the tree a foot or two from the ground, and burning the trunks and branches if not wanted for other purposes. The stumps are left for a year or two, until they are decayed sufficiently to be removed by horses or oxen pulling them out of the ground. A very small portion of land comparatively is cleared away and got at once into a state fit for perfect husbandry management. Wheat sown in this mode will return from 25 to 35 bushels per acre. Oats, barley, rye, pease, Indian corn, and potatoes, in addition to wheat, are the staple crops of the farmer in the Northern states. Turnips in many places return well, and artificial grasses are attended to where the situation will admit, with much success. The United States is not a country of pasturage so much as of tillage, although in some of the states there are extensive natural meadows covered with herbage, and admirably adapted to the purpose of the grazier. Where these occur, they are generally brought into tillage, as they save the labour and expense of clearing off the timber. The labour of the agriculturist is various and severe. He buys his land in the forest state, erects a hut of logs, clearing away the underwood with his bill-hook, and burning it. The trees are then cut down, and into lengths of 20 feet, morticed at the angles and laid upon each other horizontally, until the height of eight feet is attained, one gable end being built up of stone or mud, containing a fire-place. Clay or moss is put into the interstices of the logs to exclude the wind. The roof is made of thin boards called shingle, laid upon rafters in the common mode. The floor is either the natural earth, or a portion next the hearth is flagged, and the rest boarded. A stool or two, a few pots and pans, a mattress, blankets, and a coverlid, complete the furniture of the settler until he has brought into cultivation a tolerable portion of land, and has a good return of crops, when he proceeds to build a more substantial dwelling, and to rally round him some of the comforts of civilized man. A group of settlers in a spot where local circumstances invite forms a village, which, if well situated near a river or place of traffic, grows into a town, and thus congregations of settlers form places that become important in the state where they arise, having an origin wholly dissimilar from those towns which are marked out for a population beforehand, and beginning with the necessary depots of stores and town buildings, invite the settler, generally the

mechanic or dealer, to take up his abode within their precincts. Such is the general picture of the advance of the frontier settlers to the Westward, one continually "locating," as it is termed, in the solitude of the forest beyond the other, rolling forward like an ocean wave. Already the Mississippi is passed, and a line of states is absorbed into the Union, on the Western shore; and thus state after state will continue to be formed until the Pacific, nearly 3,000 miles distant, limits the tide of human existence, and forces it to condense and cultivate less rudely than when labour is dear, and land comparatively of small value.

While the agriculture of the United States is the great trust of the people, there is no lack of commercial enterprise. The produce of the land is a marketable commodity of great importance, given in exchange for the manufactured goods of foreign countries, of which the Americans stand in need from their population being too scanty to afford the requisite number of mechanics. The land demands the attention of all the manual power that can be spared, and returns the larger profit. The articles of export are the produce of the American waters, such as fish and oil; of the forests, timber, ashes, furs, pitch and similar things; and agricultural produce. From 1803 to 1830, the agricultural productions formed about three quarters of the value of the whole exports, but since 1830 the proportion has been greatly increased by the enormous augmentation in the growth of cotton. Thus in Alabama in 1821, cotton to the value of 108,960 dollars only was exported: in 1838 the value had increased to the enormous amount of 9,688,244 dollars: in other Southern cotton-growing states the income was proportionally great. Taking the increase from 1814 to 1838, the total quantity of cotton cultivation has augmented from 70,000,000lbs. to 445,000,000lbs.; the value from 2,683,000 dollars in 1814, to 36,191,105 dollars in 1838. In 1837-8 Great Britain alone took from the United States 1,165,155 bales of cotton, averaging 372lbs. per bale, or 433,437,660lbs; France in that year took 321,480 bales; other countries 88,994, and America herself consumed 246,063 bales. The average return of the cotton crop for five years, or from 1833-4 to 1837-8, was 1,408,961 bales. This amount of one article of agricultural produce has no doubt continued to increase in quantity and value. The ocean produce constitutes about one thirtieth of the value of the United States exports, and those of the forests one eighteenth. The exports of the United States in 1800 were in value 70,971,780 dollars, and in 1836, the highest of any subsequent year to 1838 inclusive, they were 128,663,040 dollars. The imports in 1836 were 189,980,035 dollars, which in 1838 had fallen to 113,717,406. The tonnage of America, valued at 972,492 dollars in 1800, rose to 1,995,639 in 1838. The great commercial exchange of the United States is with Great Britain and her dependencies, to which, in 1838, she exported of her produce 58,843,412 dollars in value, and imported from thence 49,051,270. The next in importance is with France and her colonies, her exports being 16,252,413 to France, and her imports from that country 18,087,149 dollars in value. Finally, with Great Britain and the whole world the products of America exported, almost wholly agricultural, stand, to Great Britain, 58,843,412; to the rest of the world, 49,643,204. Total exports, 108,486,66 dollars. The imports in exchange from all the world, England inclusive, reach 113,717,404 dollars.

The wonderful increase in the agricultural productions

course.

Canals.

Railroads.

of the United States has been effected by causes brought to its aid through internal improvements. Canals and railroads are numerous, and of stupendous dimensions. Intersected with large and small rivers innumerable, and having lakes that possess secure harbours in many places, a trifling aid from art was all that was necessary to perfect a complete system of internal navigation. This system being combined by nature, its perfection in many cases has been so obvious, that it could not be overlooked the moment a population was sufficiently condensed to render the labour facile for its completion. One example out of many may be given of the benefit accruing from seizing the advantages which nature has spontaneously offered in a country where all her operations are so superior in magnitude to those of the Old World. New Orleans, in lat. 30°, lies a little way up the mouth of the Mississippi, contiguous to the Gulf of Florida. From New Orleans, by the Mississippi to the mouth of the Illinois river, which is in lat. 38° 30', is 1,009 miles. The Illinois, having a course to the South-West, has its source very near Lake Michigan, its length being about 450 miles. A portage of four miles only intervened between its waters and those of the Chicago river, which flowed into Lake Michigan. There was thence a navigation, with but small interruption, from New Orleans through the lakes Michigan, Superior, Huron, and Erie, to the canal leading into the Hudson, and so on to New York and the Atlantic, or through Lake Erie into Ontario, round the Niagara Falls, by the canal into lake Ontario and so to Quebec and the St. Lawrence—the largest internal navigation in the world. So much has been placed upon the importance of this enormous interior circuit, that a large canal, 60 feet wide above and 36 at the bottom, is executing parallel with the head portion of the Illinois of nearly 100 miles in length, to take considerable vessels from New Orleans into the great lakes, at the expense of 8,654,337 dollars, 20 miles being through solid limestone. To give an example of the magnitude of some of the canal undertakings of the United States, that which connects the Hudson with Lake Erie is sufficient. This canal is 372 miles long, connecting the valley of the Hudson with Lake Erie, and was opened in 1820. The first year its tolls were 5,437 dollars; in 1838 they had mounted to 1,481,601. The canal is 40 feet wide at the top and 28 at the bottom. Its great success had induced the further enlargement of the work to 70 feet wide and seven deep, at a further cost of 15,000,000 of dollars. The lateral canals connected with this main trunk, and executed with it, extend nearly 300 miles more, or in all, 656 miles in length. The original cost was 11,962,711 dollars. This may suffice to exhibit the extent of the canal system of the United States. The railroads are upon a scale of equal magnitude. Thus the New York and Erie railroad, which commences at Tappan on the Hudson, and terminates at Dunkirk on Lake Erie, is 481 miles in length, and if extended to New York as proposed, will reach 505 miles. The expense is 6,000,000 of dollars. The aggregate railroads finished or commenced in the state of New York alone extend 1,156 miles; those authorized to be begun, 1,704 more—the total cost will be 52,129,000 dollars. The real and personal estate of the state of New York was estimated, in 1837, at 627,544,784 dollars.

In Pennsylvania, to connect Philadelphia with Lake Erie, a route is executing of 118 miles by railroad, 28 on

the Ohio river, and 378 by canals. Total distance, 524 miles. UNITED STATES.

The expenses of the foregoing and similar works are defrayed by the states in which they are carried on, assisted now and then by a grant from the general government, when the undertaking is of universal advantage, or connected with general utility. Each state being a separate self-governed body, and exclusively directing its own local concerns, it soon became evident that what was more particularly connected with internal communication, and with education, must emanate from each state, and the expenses be borne by local taxation, in order to pay the interest of the loans required for such purposes, or the differences between the profits returned and the amount of interest due when deficiencies occurred. In further aid of this object, local or state banks were established and loans were advanced for public works, which contributed largely to the active prosecution of state undertakings, by which rapid communications were effected, and marketable produce directed upon the points most advantageous for the sale. These undertakings laid a debt upon every state, for the interest of which its local taxes were pledged. The total debts of twenty of the states, as nearly as could be ascertained in 1838, were 183,064,385 dollars. Of the amount raised in this mode between 1835 and 1838, about 40,000,000 was appropriated to establish state banks, and 68,000,000 for internal improvements. The following appropriations of the sums due from the state of Pennsylvania may serve to show how the existing debts were contracted in all the states composing the Union:—

	Dollars.
Loans not pertaining to canals and railroads	1,680,000
Loan for Eastern Penitentiary	120,000
Loan for Union Canal Company	200,000
Temporary loan per Act June 16th, 1836	200,000
Ditto ditto April 4th, 1838	800,000
Turnpike and State roads	69,302·72
Bridges	82,512·50
Colleges, academies	525,000
Common schools	616,511·61
Penitentiaries	21,314·98
Geological survey, Miscellaneous	231,088·05
Appropriations for internal improvements	532,057·01
Debts pertaining to canals and railroads	22,229,003·32
Debt due to United States on account of surplus revenue	2,867,514·78
Total	30,174,304·97

The realized property of the States in 1837 was 31,652,306·09 dollars; the ordinary income 1,729,364·90 dollars; the ordinary expenditure 2,878,407·49. The sums devoted to education only sufficed to educate 23,592 children at the public expense, while New York educated 507,105 from the same source. District schools in the slave states were almost unattainable among the whites, owing to the thinness of the population. The obvious difference between the Northern States and the Southern States in their energy, habits of business, and intelligence, are thus very remarkable. Industry and thrift prevail in the North, while idleness and luxury in the South tend to moral degradation, principally owing to the system of slavery, the enervating heat and the recklessness inspired Slavery.

by living amid unwholesome swamps, with the consciousness of the uncertainty of life, which, strange to say, appears to prompt to immorality, and to lessen those habits, which are marked by the proprieties of civilized life. Riches acquired by the degradations which slavery inflicts are seldom of that solid benefit which accrues from riches obtained at the first hand.

Minerals.

To the foregoing account of the agricultural produce of the United States of America, it may be added that the South contains traces of most of the metals. Gold is found in Virginia to a considerable amount annually, and in small quantities in other parts of the Union. Lead and copper are also found, while iron and coal are abundant in many parts. At Pittsburgh, situated where the Alleghany and Monongahela rivers join and form the Ohio, there are most extensive iron-works. The hills on the shores of both those rivers, as well as on the Ohio, contain a boundless resource of coal and iron. Limestone is abundant; granite and sandstone are plentiful. There are alluviums of great extent in the South on the banks of rivers; sea-sand extends all the way from Long Island to Florida, and seems to rest upon granite. From the mouth of the St. Lawrence to Long Island, granite prevails, occasionally mingled, in New Hampshire and in Maine, with sand and limestone. The Mohawk river seems to divide the sandstone from the granite, yet the latter appears on the Susquehanna, and some is found in blocks at the foot of the Virginia Mountains. The Katskill Mountains exhibit sandstone, while the calcareous strata extend from the Apalachian chain to the Mississippi in horizontal beds. The geology of the United States is yet a new subject, except in its general features. Rock salt and salt-springs are numerous, the latter denominated "salt-licks."

At George Town, 38 miles below Pittsburgh, gold has been found. On the Great Kenaway river there are mines of lead of considerable value, and the same on the Rock river which falls into the Mississippi. Iron abounds in Kentucky as well as in Ohio. Saltpetre is found in numerous caverns on the Missouri, but the mineral riches of the United States remain to be explored in the more extended sense, since those which accident alone has revealed are few. Scientific inquiries on a large scale require more leisure than a newly inhabited country can find individuals patriotic enough to undertake, where profits of a more certain character are otherwise attainable.

The government.

The basis of Government of the United States sprung originally from the Congress of the four New England States, which was formed in 1643. The United States declared their own independence, and published articles of confederation, the basis of the present republican state, in 1776, which were afterwards modified. In 1789 the government was vested in a president and two councils. The president is chosen for four years. The senate, or superior council, consists of two senators from each state, chosen every six years, in such a manner that two-thirds are always old members, one-third retiring every two years. The second council, or Chamber of Representatives, is elected every second year. These form what is called "the Congress of the United States." They possess delegated powers, to impose and collect taxes, pay debts, and provide for the defence of the United States; to borrow money; to regulate commerce with foreigners; to make laws for naturalization and bankruptcy; to coin money and regulate its

The Congress.

VOL. XXVIII.

value, and settle weights and measures; to make laws for punishing forgers or coiners; to establish post-offices and post-roads; to grant patents and encourage arts and sciences; to constitute inferior tribunals; to define and punish piracy and felony, or make laws for the same; to declare war and regulate the consequences of such declaration; to raise and support armies, but not to grant money for this object for more than two years; to provide a navy and make laws for naval and military government; to provide for executing the laws of the Union, repelling invasions and suppressing insurrection, for organizing and settling the militia, and training and exercising exclusive legislation over the district, ten miles square, which is the seat of government, and over all places purchased and set apart for forts, magazines, docks or arsenals; and finally, to make all laws necessary for carrying into effect the foregoing and all other powers, vested in the government of the United States. The president is, *ex officio*, Commander-in-Chief of the navy, army, and militia. He reprieves and pardons, except in cases of impeachment. He makes treaties with the concurrence of two-thirds of the senators, and nominates, with the same concurrence, the ambassadors, consuls, judges of the supreme court, and all other officers whose posts are not specially provided for in the constitution; but he cannot make new offices, though the congress may vest that power in him alone, or in conjunction with others. He may fill up vacancies in the senate during a recess, and on extraordinary occasions convene both houses and adjourn them to such time as he thinks proper. He is to receive foreign ministers, see that the laws are executed, and commission all officers.

UNITED STATES.

The laws of the United States concern federal and state jurisdiction, the latter consisting of what is not expressly reserved to or forbidden by the former. The laws are administered by judicial and ministerial officers, in both cases. The supreme court consists of a chief justice and five associate justices, who sit at the seat of government. The empire is divided into five circuits, each composed of a certain number of districts; and a circuit court, at which a judge of the supreme court and a district judge preside, sits twice a year in each district. Every state is further erected into a federal district in which a district judge presides four times a year. The laws are those of England, and partake of the same tedious prolixity; and though it was natural to expect the evils of such a practice would be remedied in a new empire, the influence of the lawyers, often senators and representatives, and an innumerable number of practitioners, succeed in preventing a step which must interfere with their profits.

Laws.

The American army consists of 5,000 regulars, raised for three years. The militia, disposable in case of invasion, is reckoned at 300,000. The navy, though not numerous, consists of very powerful and effective ships of war. The commercial seamen are reckoned at 70,000. The revenue fluctuates. The national debt having been paid off, the surplus has been repaid back to the different states in the way of loan. The assemblies of the states have authority to make laws upon all their internal affairs concerning all such matters as do not contravene the functions of the general government. The provisions of each state in this respect are by no means uniform, and in many cases are opposed to each other, owing to local causes or predispositions arising from the state of society, the prevalence of slavery, or

State legislation.

UNITED STATES. difference of climate and pursuit, but all stand on the same footing before the supreme legislature.

UNITY OF POSSESSION, *unitas possessionis*, in Law, is where a man has a right to two estates, and holds them together jointly in his own hands; as if a man take a lease of lands from another at a certain rent, and after he buys the fee-simple, this is an unity of possession, by which the lease is extinguished, because that he who had before the occupation only for his rent, is now become lord and owner of the land. Both joint tenants and tenants in common hold by unity of possession, but the estates of the former must necessarily have commenced at one and the same time; whilst those of the latter may have been created at different periods, and there may be between them an entire disunion of interest and title as well as of time.

These be the contentes of M. Hardinges clew, and thus substantially hath he prooued the antiquitie, and *vniersalitie* of his masse.

Jewell. Reply vnto M. Hardinge, p. 93.

There be many nowe a days in famouse scholes and *vniersities*, whiche be so moche gyuen to the study of tongues only, that whan they write epistels, they seme to the reder, that lyke to a trumpet they make a soun without any purpose.

Sir Thomas Elyot. The Governour, book i. ch. xiii.

O for a clap of thunder now, as loud
As to be heard throughout the *universe*,
To tell the world the fact, and to applaud it!

Ben Jonson. Catiline, act i. sc. 1.

For Catholic in Greek signifies *universal*: and the Christian church was so call'd, as consisting of all nations to whom the gospel was to be preach'd, in contradistinction to the Jewish church, which consisted for the most part of Jews only.

Milton. Of Toleration.

Our learned antiquary [Mr. Cambden] mentioning his death, the modesty and other virtues of Mr. Hooker, and magnifying his books, wished, that for the honour of this, and benefit of other nations, they were turned into the *universal* language.

Walton. Life of Hooker.

The appellations that be *universal*, and common to many things, are not always given to all the particulars (as they ought to be) for like conceptions, and like considerations in them all; which is the cause of many of them are not of constant signification, but bring into our mind other thoughts than those for which they were ordained, and these are called equivocal.

Hobbs. Human Nature, ch. v.

The rules that God hath set men to live by, are *universally* just, and there is an *universal* obligation upon all men to obey them.

Leighton. Com. on 1 Peter, ch. ii.

God sends not ill; if rightly understood,
All partial ill is *universal* good.

Pope. Essay on Man. Ep. 4.

But you require an answer positive,
Which yet, when I demand, you dare not give,
For fallacies in *universals* live.

Dryden. The Hind and the Panther.

The same colour being observed to-day in chalk or snow, which the mind yesterday received from milk, it considers that appearance alone, makes it a representative of all that kind; and having given it the same whiteness, it by that sound signifies the same quality, wheresoever to be imagined or met with: and thus *universals*, whether ideas or terms, are made.

Locke. Of Human Understanding, book ii. ch. xi.

For a modern free-thinker is an *universalist* in speculation; any proposition whatsoever he's ready to decide; every day de quolibet ente, as our author here professes.

Bentley. On Free Thinking, sec. 3.

Words are general, as has been said, when used for signs or general ideas, and so are applicable indifferently to many particular things: but *universality* belongs not to things themselves, which are all of them particular in their existence; even those words and ideas, which in their signification are general.

Locke. Of Human Understanding, book iii. ch. iii.

One of the grand difficulties, that he, who would be highly virtuous, must expect to surmount and conquer, is the temptation, that is afforded by the *universality* of vicious customs and examples.

Boyle. Works, vol. v. p. 558.

As it resembled a royal court in regard of those many noblemen and persons of quality that lived in it, so one might esteem it an *university*, for those many accomplished men in all kinds of knowledge and good learning that were his domesticks.

Strype. Ecclesiastical Memoirs. Henry VIII. Anno 1530.

Shame not, now, my son!
Thine and my brave forefathers, whose exploits
Have shar'd so long, such *universal* praise.

All such incorporations [of trades] were antiently called *Universities*; which indeed is the proper Latin name for any incorporation whatever. The *University* of smiths, the *University* of taylor, &c., are expressions, which we commonly meet with in the old Charters of antient towns.

Smith. *Wealth of Nations*, book v. ch. i.

The present *universities* of Europe were originally, the greater part of them, ecclesiastical corporations, instituted for the education of churchmen. They were founded by the authority of the

pope; and were so entirely under his immediate protection, that their members, whether masters or students, had all of them what was then called the benefit of clergy, that is, were exempted from the civil jurisdiction of the countries in which their respective *universities* were situated, and were amenable only to the ecclesiastical tribunals. What was taught in the greater part of those *universities* was suitable to the end of their institutions, either theology, or something that was merely preparatory to theology.

U N I V E R S I T Y.

UNIVERSITY, an assemblage of colleges or schools of instruction in the higher departments of literature, commonly united under a charter of incorporation, and a uniform system of government; so called because the whole circle of sciences and liberal arts was supposed to be taught in it, or because all its members formed one general association.

Little, if any, analogy can be traced between our Universities and the philosophical schools of the ancients. Athens, for example, was a celebrated seat of learning, many students being attracted thither by the reputation of the philosophers and teachers who made it their residence. There was, however, no bond of association between the different schools, and consequently neither organized form of government nor unity of purpose. Establishments for public instruction in various branches of knowledge were indeed patronized by the later Roman emperors, who, in some cases, allowed regular salaries to the teachers; but those institutions were more properly endowed schools than universities, in the present acceptation of the term. After the downfall of the Roman empire the office of teaching was almost exclusively vested in the clergy; and it is from the episcopal and monastic schools of the middle ages that collegiate establishments and universities appear to have been derived. Attempts have been made to claim an earlier origin for some of our European Universities than the evidence that has hitherto been adduced seems to warrant. For example, the foundation of the University of Paris has been attributed to the Emperor Charlemagne, who is said to have assembled celebrated teachers from England and other countries, to have assigned them habitations and permanent endowments, and, in short, to have formed them into an organized and incorporated society, with provision for a regular succession. It has, however, been clearly shown by Pasquier, Du Tillet, and other well-informed French authors, that, though Charlemagne was a promoter of such learning as existed in his age, and patronized the episcopal and monastic schools in various parts of his empire, he founded nothing entitled to be called a University, and that no trace of any institution of the kind is to be met with in the barbarous and turbulent period of the later Carlovingian monarchs. The city of Paris does not seem to have enjoyed particular eminence as a place of instruction till the close of the XIth Century, when Geoffroy de Boulogne, Chancellor of France and Bishop of Paris, established secular schools, which flourished under a succession of able teachers, more particularly Roscelinus, William of Champeaux, and Abaelard, and attracted scholars from all parts of Europe. About the middle of the XIIth Century the number of the teachers and pupils, the multiplicity of studies, and the diversity of nations, rendered some kind

of general organization necessary; and the masters of the separate schools voluntarily formed an association under a head chosen by the entire body. The increasing importance of the schools attracted the attention of the kings of France and of the pontiffs; and in 1215 a body of statutes for their government was drawn up by Robert de Corceon, or Courçon, legate of the Holy See. Celestine III. had previously issued a bull granting them various important privileges; and in a subsequent one, of Gregory IX., dated 1231, we find distinct mention of the four faculties of arts, theology, medicine and civil law. The favourable intentions of the popes were warmly seconded by Philip Augustus, who espoused the part of the students in the feuds which arose between them and the citizens, and confirmed to them the important privilege of being exempt from all secular jurisdiction in criminal cases. Thus it appears that this celebrated University was not properly constituted as such till the XIIIth Century, and that it gradually became so, more by the force of circumstances than through any preconceived plan.

The University of Bologna claims the next rank to that of Paris in point of antiquity. Schools appear to have existed there at an early period; and it is said that public law was one of the branches of science more especially cultivated there in the XIth Century. It did not, however, attain any particular eminence as a place of education till the commencement of the century following, when the lectures of Irnerius on the Roman law attracted students from all parts of Europe. The study of the canon law was introduced nearly at the same period; and in the course of the XIIIth Century there were many eminent professors of medicine. It is remarkable that there was no regular school of theology at Bologna before A. D. 1362, when Innocent VI., as a mark of special favour for the university, permitted it to be taught, and established a regular faculty of theology on the model of that at Paris. The University of Salerno appears also to have existed at a comparatively early period, but it never obtained celebrity in any department excepting that of medicine.

The history of the origin and progress of our English Universities is very obscure, and has been rendered still more so by the efforts that have been made to give them a higher antiquity than they can justly claim. The common tradition respecting that of Oxford, tenaciously asserted by some of its historians, is, that it was founded by the illustrious Alfred. But the passage in Asser's Life of Alfred, adduced as the authority for this supposed foundation, is a notorious interpolation, and admitted to be so by all judicious critics. All that is known with certainty is, that a school existed at Oxford in the time of Edward the Confessor, where instructions, according to the testimony of Ingulfus, were

UNIVERSITY.

given in rhetoric and certain portions of the works of Aristotle; and that, under Henry I. and his immediate successors, there were teachers of theology, who gave expository lectures on the Holy Scriptures. That Oxford was a place of some eminence as a seat of learning at this period may be inferred from a statement of Giraldus Cambrensis, to the effect that there was in his time great rivalry between the *legistæ*, or students of the Roman law, recently introduced from Italy by Vacarius, and the scholars of arts, who complained that the study of philosophy was unduly neglected in consequence of the favour shown to the new science of law. It may be collected from scattered notices in the reigns of Henry II. and Richard I., that the reputation of Oxford as a seat of learning kept steadily increasing during the latter half of the XIIth Century, and that the circle of sciences taught there was gradually enlarged, so as even to attract many students from France and other parts of the continent. The first recorded instance of its being actually called a University occurs in a document of the time of King John, bearing the date A. D. 1201: but it is uncertain whether the term denotes an actual incorporation by public authority, or merely a voluntary association of teachers and pupils. A royal charter, subsequently granted by John, was probably the first step towards rendering the university a really public institution, recognized and protected by the state. Its privileges were confirmed and gradually enlarged by succeeding monarchs, and in process of time it was formally recognized as an authorized place of public instruction by the see of Rome. In the Clementine Constitutions, promulgated A. D. 1311, Oxford is mentioned along with Paris, Bologna, and Salamanca; and various regulations are laid down respecting the professors and graduates of those establishments. As far, therefore, as it can be ascertained from the scanty evidence in our possession, it appears that, for practical purposes, Oxford already existed as a university before the middle of the XIIth Century, and that it was formally constituted as such by royal charter at the beginning of the XIIIth, or possibly somewhat earlier.

Our early information respecting the foundation of the University of Cambridge is still more scanty. The commonly received tradition of its origin is furnished by Petrus Blesensis, who states that Joffredus, abbot of Croyland, successor to the historian Ingulfus, sent over to Cotenham, near Cambridge, a monk named Gislebert and three others, who repaired daily to Cambridge and gave public instructions in grammar, logic, and rhetoric in a barn which they hired for the occasion. In less than two years the number of their scholars increased so considerably that no single edifice could contain them; upon which they dispersed themselves in different parts of the town. Little is known of the progress of Cambridge during the remainder of the XIIth Century; but it is inferred that it was a place of some consequence as a seat of education at the commencement of the XIIIth, from the circumstance that many students of Oxford removed thither A. D. 1209, in consequence of some severities exercised by the command of King John. The term University is applied to Cambridge in an instrument dated 1223; and many public letters of Henry III. are extant, relating to the authority of the chancellor and masters, and specifying various customs and privileges of the university. It appears probable, therefore, that it was at that time regularly incorporated; but the first formal charter now

extant is of the twentieth year of Edward I., which, according to the usual practice, was renewed, and from time to time enlarged by his successors. Edward II. (about A. D. 1317) confirmed the charter which he had previously given, at the same time granting some additional privileges; and in order to place the authority of the University on a firmer basis, he applied for a confirmation of it from the pope. A bull was accordingly granted by John XXII., in the second year of his pontificate, confirming all privileges previously given, either by the holy see or by former kings of England, and prescribing that thenceforth Cambridge shall be accounted a University; that every faculty shall be maintained there; and that it shall enjoy all rights which a University legitimately constituted can and ought to enjoy. Cambridge was thus formally placed on a footing with Paris, Padua, Salamanca, and the other leading European foundations. The charters and other privileges of Oxford and Cambridge were finally ratified by the Act for the incorporation of the two Universities, passed in the 13th of Elizabeth, at which time a body of statutes was drawn up for Cambridge, which may be regarded as the basis of its present constitution. The Oxford statutes were remodelled by Archbishop Laud A. D. 1636, and this code of laws may be considered as substantially still in force.

Most of the great European Universities established during the XIIIth and two following Centuries were constituted after the example either of Paris or Bologna. The most eminent ones in France were Montpellier, instituted A. D. 1284; Orleans, 1305; Nantes, 1460; Bordeaux, 1472; none of which ever approached the rank or celebrity of the metropolitan academy. In Italy, the celebrated University of Padua was formed about 1222, by an association of scholars, who fled from Bologna on account of the civil commotions of that period. Its progress from this casual commencement appears to have been rapid, as, six years later, it was already divided into nations, and had four distinct rectors. The University of Naples, established about 1224 by Frederick II., differed from all others in being purely a royal foundation; but notwithstanding the encouragement given to it by Frederick and his successors, it never attained any great eminence as a seminary of learning. The other Italian universities of the XIIIth and XIVth Centuries were Rome, A. D. 1245; Perugia, 1307; Pisa, 1333; Sienna, 1380; Palermo, 1394. Turin, Florence, and Parma date their rise from the XVth Century, and several others had no existence prior to the XVIIth. In Spain and Portugal, Salamanca was incorporated 1250; Coimbra, 1279; Lisbon, 1490; Valladolid, 1346; Huesca, 1354; Saragossa, 1474; and Alcalá de Henares, 1499. Seville, Granada, Ossuna, Barcelona, and several others belong to a later period. The progress of literary institutions in the north of Europe was more slow, and for more than a century the youth of Germany had to seek an academical education in France or Italy. The first German University, if one established among a Slavonic population may be so called, was that of Prague in Bohemia, which was founded about 1348, in a great measure upon the model of Paris. As a seminary of learning it attained considerable eminence, though its prosperity was not a little chequered by the unfortunate civil and religious commotions of the age; and it was remarkable for the independence which it long maintained from regal and papal jurisdiction. When the influence of the

UNIVERSITY.

UNIVERSITY. revival of letters began to be generally felt, the establishment of new Universities in Germany became a necessary consequence of the increasing desire for knowledge. Vienna, founded 1365, Heidelberg, Cologne, Erfurt, Leipsic, Rostock, Freyburg, Greifswald, Treves, Ingolstadt, Tübingen, Mentz, and Basle successively arose in the XIVth and XVth Centuries; and these were followed by others too numerous to be here particularized, in the XVIth and XVIIth. Wittemberg, afterwards the cradle of the Reformation, was founded in 1502, and Marburg, the first University originally Protestant, in 1527. The calamitous period of the Thirty Years' War was peculiarly destructive to the German Universities, especially to those which had embraced the reformed doctrines. Their teachers and students were dispersed, and their revenues destroyed, so that, at the restoration of peace, it was no easy matter to reorganize them. Several were merged in other kindred establishments, and a number became totally extinct. The Universities of Denmark, Sweden, Poland, and Holland are of various dates, from the XVth to the XVIIIth Century, and there are none in Russia Proper of earlier foundation than the commencement of the XIXth.

During the XIIIth and XIVth Centuries the kingdom of Scotland was destitute of a national university, and, in some measure to supply the defect, Scottish colleges were founded at Oxford and Paris. The first attempt made to remedy this state of things was by Wardlaw, bishop of St. Andrews, then the ecclesiastical metropolis of Scotland, who took steps to organize a regular University in that city, and to obtain a bull of confirmation from Pope Benedict XIII. This bull, dated 1413, and subsequently confirmed by James I., declares St. Andrews to be a *studium generale* for instruction in theology, the canon and civil law, medicine, and the liberal arts; and, what is remarkable, it bestows on the bishop the power of conferring degrees in those faculties, thus, virtually constituting him, *ex officio*, Chancellor of the University. The University of Glasgow was established in the year 1450, by Pope Nicholas V., at the instance of William Turnbull, Archbishop of Glasgow. Its constitution was, in all essential points, analogous to that of St. Andrews. The University of Aberdeen was founded on 1494, by a bull of Alexander VI., obtained at the solicitation of James IV., who wished the northern districts of his kingdom to enjoy the proper facilities for obtaining a liberal education. Its constitution was modelled in a great measure upon that of the University of Paris. Marischal College, in New Aberdeen, is of Protestant origin, being founded by the earl marshal, with the royal sanction, in 1593. As might be expected, its constitution differed materially from that of the older Roman Catholic foundations; and one important point of distinction was that its members, out of the precincts of the college, were subject to the jurisdiction of the local magistrates. The same remark applies to the University of Edinburgh, founded by James VI., the jurisdiction over which is, in all essential points, in the hands of the provost, magistrates, and council of the city. These functionaries are not only patrons of the institution, but are moreover invested with nearly supreme authority as superintendents and directors; and in this respect the constitution of the University of Edinburgh differs from that of nearly every other.

The University of Dublin owes its origin to Arch-

bishop Loftus, who, about 1592, prevailed on the corporation of Dublin to grant lands and tenements for the site of a college, and subsequently obtained a charter from Queen Elizabeth. Owing to the inadequacy of its revenues, it struggled with many difficulties till the reign of James I., who endowed it with valuable lands in Ulster, and with a pension from the exchequer. Though only consisting of a single college (Trinity), it possesses all the privileges of a University, and may be regarded as containing within itself all the elements necessary for the constitution of one. The remaining Universities in the British islands are of very recent formation. The University of London was established by royal charter in 1836: it consists of two separate establishments, King's College and University College, both locally situated in the metropolis. The first educates its members according to the principles of the establishment, the latter embraces within its sphere all religious sects without distinction. The University of Durham originated in the wish to provide an academical education, at a moderate expense, for the inhabitants of the remote northern counties. The funds were provided by the munificence of the Bishop and Chapter of Durham; and the establishment was incorporated by royal charter in 1837. Its constitution bears great analogy to those of Oxford and Cambridge, with the important addition of an Engineering Class, and more extended provision for instruction in modern languages.

Out of Europe.—Universities scarcely exist anywhere except in countries settled by Europeans. Harvard University, in Massachusetts, founded 1738, is the most considerable one in North America. The University of Mexico was tolerably flourishing during the early part of the XVIIIth Century; but it is to be feared that the revolution has given a serious blow to its prosperity. Bishop's College at Calcutta, founded by Dr. Middleton, its first diocesan, is a valuable seminary of education, but scarcely entitled to rank as a University.

The importance attached at an early period to the great academical foundations, and the influence which they exercised upon the manners and opinions of the age, may be estimated, among other indications, by the powerful interest taken in them by the Roman pontiffs, and by the privileges which they from time to time conferred upon them. The rulers of the papal see were never deficient in worldly wisdom, and they had the sagacity to perceive that institutions which were rapidly becoming the exclusive fountains of such liberal knowledge as was at that time accessible, must in time impart a new tone to the whole mass of civilized society, and that it was of the highest consequence to give them a suitable direction, and bind them as firmly as possible to the interests of the church. During the XIIIth and two following Centuries, the influence of the great European Universities was relatively greater than it is at present, from the fact that they then possessed a monopoly of public instruction. They were neither exposed to the competition of public nor private schools, and elementary books of science were either totally unknown or out of the reach of the multitude. The time devoted to study was therefore necessarily longer than at present, and education was prized in proportion to the time and pains which it cost to acquire it; while those who attained the rank of academical teachers knew that the age depended upon their oral communications for instruction, and that they therefore occupied a most important position in society. Though the invention of

UNIVERSITY.

UNIVERSITY.

printing, the reformation, and other circumstances need- less to particularize, have greatly modified this state of things, the influence still exercised by Universities is far from trivial. The highest and most influential classes regularly resort to them as repositories of the best instruction that can be obtained; they invariably become attached to the institution and to the systems there pursued, and their manners and opinions receive a tincture which never forsakes them in after life. The honours and distinctions there acquired generally prove the stepping-stones to corresponding ones in active life, and a man's future position in society may generally be estimated with tolerable accuracy from observing his career at the University.

Much of the instruction communicated by the Universities of the middle ages was necessarily of an elementary cast, as, excepting the monastic schools, whose sphere of action was generally limited, there were no other places or opportunities of acquiring it. The entire circle of instruction was held to consist of two courses—the Trivium, comprising grammar, logic, and rhetoric, and the Quadrivium, consisting of arithmetic, geometry, astronomy, and music,—the conjunction of which forms the seven liberal arts. From what we know of the state of science in the middle ages, it may be presumed that few, if any, of the foregoing were studied in a very comprehensive manner in the XIth and XIIth Centuries; nevertheless the majority of students contented themselves with the trivium, and the person who had gone through the entire circle was regarded as a prodigy of learning. This routine, constituting what is called the “faculty of arts,” as it was the most ancient, continued for a long time the sole object of pursuit; and it was not till the distinguished teachers already mentioned began at Paris to give lectures in theology and scholastic philosophy, that any material addition was made to it. Their instructions and those of their successors led to the formation of a regular faculty of theology about the middle of the XIIIth Century, which was soon followed by the establishment of the faculties of medicine and law. The last mentioned was, at Paris, for a long time confined to the ecclesiastical or canon law, the study of the civil law being prohibited at a very early period by the popes, who wished to render their own jurisdiction paramount to that of the civil magistrates as far as they possibly could. The faculty of arts had a special connection with the church of St. Genevieve, and is supposed by some writers to have originated in the school attached to that church. On account of the great and continually increasing numbers of students in arts, it was found expedient, at an early period, to divide it into four nations, corresponding to particular divisions of Europe, the natives of which, whether teachers or students, were enrolled in a separate body, without regard to their particular pursuits. Each nation had a Procurator elected from among its own members, whose duty it was to defend the rights and privileges of the nation, to preside at its meetings, and attend to the due observation of the acts and statutes. Each also had subdivisions corresponding to its provinces and dioceses, and at the head of each province was a Dean, whose office it was to assist and advise the procurator. The choice of a Rector was originally in the whole body of the four nations; but, on account of the discontents and disturbances attendant upon this popular system, it was, by general consent, delegated to the procurators, and,

towards the close of the XIIIth Century, to a body of electors specially appointed. The rector could only be chosen from the faculty of arts; his appointment was for three months, but at the expiration of that term, he might be re-elected if approved by his constituents. He presided at the general meetings of the University, had the custody of its registers, and the administration of its funds, and consequently held an office of great responsibility and importance.

The office of Chancellor of the University appears to have arisen out of that of the chancellors appointed by the bishops in their respective dioceses, to preside in their courts and maintain discipline within the limits of the episcopal jurisdiction. Among other powers claimed by the chancellors, as delegated from the bishop, was that of granting licences to teach in the diocese; and when the great monasteries had succeeded in obtaining exemption from episcopal jurisdiction, the abbots claimed the same right of appointing teachers in all places subject to their authority. As the University of Paris was locally situated both in the diocese of Paris and the precincts of the abbey of St. Genevieve, there arose a twofold claim to the appointment of chancellor, which was settled by each party appointing one; and in order to avoid collision, the chancellor of St. Genevieve was at the head of the faculty of arts, and the bishop's chancellor was placed over those of theology, law, and medicine, with an acknowledged precedence as to the University at large. Each chose his own deputy or vice-chancellor, and appointed annual examiners for degrees; but neither had the power of interfering in the internal government of the institution. In many Universities, the bishops, perceiving the power and dignity attached to the office of Chancellor, did not delegate it to others, but kept the administration of it in their own hands.

The origin of academical degrees is involved in great obscurity, and there is some controversy as to the particular University where they were first conferred; but the common opinion, and, as it appears, the most probable one, is that they were first granted at Paris. The higher titles seem to have been, in the first instance, merely personal, as for example, the term *Doctor* did not at first denote a person solemnly inaugurated to a permanent dignity, irrespective of the functions he might then or afterwards exercise, but simply meant one actually employed in the business of teaching. The titles of *Doctor*, *Master*, and *Professor* were originally synonymous: in process of time the distinction was made of applying the term *Master* to teachers in the faculty of arts, and *Doctor* to instructors in law, medicine, and theology. When the initiatory rank of *Bachelors*, or young men who had passed the first period of their probation, was instituted, the successive designations which an academician might bear were entitled *steps* or *degrees*, and began to be formally conferred upon the members of the University, according to a certain established routine. After two years' study of grammar and philosophy, the student became a *Determiner*, that is to say, he formally entered upon a further course of study to qualify him for the first degree. The statutable age for this step was *twelve years*, which sufficiently shows the elementary nature of the instruction then given in the great seminaries of learning. In three years and a half he was, if found competent by the examiners, admitted to the degree of *Bachelor*, and might then become candidate for the higher title of

UNIVERSITY.

UNIVERSITY.

Master, to obtain which it was necessary to devote three years and a half more to the study of philosophy, and to undergo the ordeal of several examinations. If he passed through those with credit, he was presented to the Chancellor as deserving of a licence to teach the seven liberal arts, was publicly and solemnly declared Master, and became entitled to enter upon his career as a recognized instructor. In process of time the masters began to be divided into two classes, namely *Regents*, that is, *Teachers*, and *Non-regents*, who, on account of having devoted a certain specified time to the task of instruction, or from some other cause, were held to be exempt from that obligation. After obtaining the Master's degree, a further probation of nine years, to be occupied in the study of theology and of the Holy Scriptures, was required in order to become Doctor in Divinity, which dignity was conferred by the Chancellor and the faculty in conjunction. A shorter probation was required from doctors in the other faculties of law and medicine. A decretal of Pope Alexander III. required the faculties to teach in the University, corresponding to the degrees of a subsequent period, to be conferred gratuitously; but as the main support of the professors and dignitaries arose from the contributions from pupils and fees on promotions, this law was superseded, and a regular scale of fees fixed for the various degrees. In the University of Paris the governing powers were exercised by the associated Masters or Professors, who constituted the real academical corporation, the students and inferior graduates being only their subjects. At Bologna, on the contrary, the whole body of the students chose academical officers, to whom the professors themselves were subject. The whole University was divided into two great classes—the *Citramontanes*, or natives of Italy, and *Ultramontanes*, or foreigners—which were again subdivided into a number of nations or provinces. At the head of the institution of law, which was long the leading object of study at Bologna, was the Rector, who took precedence of all the other officers. He was chosen annually by the retiring rector, the counsellors of the different nations, and a certain number of electors deputed by the University at large. He possessed jurisdiction over the members of the University in matters civil and criminal, and had the power of punishing even the professors by fine or expulsion. The Germans alone were exempt from his authority, having the privilege of being governed by procurators of their own. During the XIIIth and two following Centuries each great division of the University had its separate rector; subsequently only one was appointed for the entire body. There were at Bologna, as at Paris, two chancellors, the archdeacon of Bologna being at the head of the school of law, and the bishop acting as chancellor of the faculty of theology. The office of the Counsellors or representatives of the nations was to defend the rights and privileges of their respective constituents, and, in their collective capacity, to assist the rector and form his deliberative council.

There is no certain evidence as to the time when academical degrees were first conferred. They were conferred either in civil or in canon law; and sometimes the same person took a double degree, becoming what was called *Doctor utriusque juris*. Six years' study were required from a canonist, and eight from a civilian. If the candidate passed his first examination, which was held privately, he was admitted as *Licentiate*, in other

words, he obtained a licence to present himself in due course of time for the public and final examination; after undergoing which in a satisfactory manner, he was formally inaugurated *Doctor*. At first the public examination followed close upon the private one, but afterwards a stated period of some length was required to elapse between them, and thus the title of *Licentiate* became a sort of a degree. The faculty of arts appears never to have attained any great consequence at Bologna, and that of theology was of comparatively late introduction. In both the routine for degrees was much the same as at Paris and other great European Universities. The University of Bologna, though greatly fallen from its former consequence, still holds a high rank among the academical institutions of Italy, especially for the study of law, and of mathematical and physical science.

This slight sketch of those two celebrated seats of learning may give a general idea of the constitution of the other continental Universities, nearly all of them being organized on the model either of Paris or Bologna. The English Universities were evidently formed after the example of Paris, the different faculties and the system of instruction and graduation being exactly analogous in each. The division into nations never took place, owing probably to the paucity of foreign students. There was, at an early period, a prospect of a similar distinction being established at Cambridge between northern and southern men, but by the judicious conduct of the authorities, the feuds between them were happily suppressed. The system of necessary education, both at Oxford and Cambridge, may be described as collegiate and tutorial. Every student must be enrolled as a member of some given college, and obtain the more essential portion of his instruction within its walls. The earliest colleges date from the XIIIth Century, and were instituted with the view of providing suitable lodging for the students, contributing something towards the maintenance of the poorer ones, and exercising a proper superintendence over their moral and religious conduct. Besides the colleges, there were, in the middle ages, many *hospitia*, or halls, originally voluntary associations of individuals under a graduate chosen by themselves, in houses rented from the citizens. The irregularities and dissensions consequent upon this system, compared with the superior organization of the colleges, gradually led to its discontinuance, and, in process of time, the halls either became extinct, merged themselves in the colleges, or adopted the same system of government.

In the University of Oxford there is some variety in the constitution of the different colleges, but they may be described in general terms as consisting of a Head, variously designated as Provost, Master, Rector, Principal, or Warden, a body of Fellows, in whom the governing power is substantially vested, a certain number of officers, and those graduates who keep their names on the books. The College Tutors are selected from among the Fellows; they are usually three or five in number, and divide the business of public tuition among them. The instruction given is a combination of catechetical or class lectures, with private supervision, and weekly exercises in composition, Greek, Latin, and English. There are also private tutors, who, though not formally recognized by the University, bear an important part in the business of instruction. They do not interfere with the public lectures of the college, but assist their pupils

UNIVERSITY.

UNIVERSITY.

in turning them to the best practical account, direct their private studies, and prepare them for their degrees or honours, if they aspire to the latter distinction. At the close of the college lectures for each term, there is a formal examination of the individual students, by the head and tutors, technically called *collections* or *terminals*, and usually occupying several days.

Candidates for the degree of Bachelor of Arts are required, in their sixth or eighth term, to undergo a preliminary examination, called *responsions*, that is, to answer questions publicly proposed by the masters of the schools, in order to try their proficiency in the Greek and Latin languages, the rudiments of logic, and the elementary branches of geometry. This examination is technically termed the *little-go*, and to have failed three times in passing it is usually considered a disqualification from further pursuing the student's academical career. There are two public examinations in the year, one in Michaelmas term and one at Easter. The subjects to which they extend are the principles of religion, including, (1.) a competent knowledge of the Gospels in the original tongue, the history of the Old and New Testament, the Thirty-nine Articles, and the evidences of religion. (2.) The *literæ humaniores*, or classics, comprising the Greek and Latin languages and authors, ancient history, rhetoric and poetry, moral and political science, logic, and Latin and English composition; and lastly, the elements of the mathematical and physical sciences. The examiners have a discretionary power of dispensing with or modifying certain parts of the above course. They are, however, bound to examine all candidates for an ordinary degree in at least three Greek or Latin classical writers, in logic, or the first four books of Euclid, and to ascertain their proficiency in translating from English into Latin. With respect to the principles and rudiments of religion, they possess no discretion; and a failure in this part of the examination disqualifies the candidate for his degree, without regard to his other attainments.

The aspirants to honours are required to embrace a wider field, and are subjected to a more varied and strict examination. Honours may be taken either in classical literature, or in mathematics, or in both. The candidate for classical honours is allowed to select his own books for examination, generally amounting to fourteen or sixteen works of standard Greek and Latin authors. The authors commonly chosen are Herodotus, Thucydides, Livy, Sophocles, Horace, Virgil, and the Rhetoric and Ethics of Aristotle, with portions of Cicero, Homer, Pindar, Euripides, or the Greek orators, according to inclination. The examination in mathematics comprises geometry, algebra, Newton's Principia, mechanics, hydrostatics, astronomy, and optics. When the examinations are concluded, those who have distinguished themselves by proving their proficiency in a wider range than that necessary for a mere degree, are distributed in alphabetical order into four classes, under the two divisions of *literæ humaniores* and *disciplinæ mathematicæ et physicæ*. A fifth class gives the number, without mentioning the names of those who, though they have obtained the *testimonium* necessary for their degree, are not judged worthy of any honourable distinction. To obtain the highest honours in both classics and mathematics, or take what is termed a *double first class*, is the greatest distinction that a student is capable of acquiring.

The time of probation required for the degree of

Bachelor of Arts is sixteen terms, twelve of which, or about three years, most be in actual residence. For the degree of Master of Arts twelve additional terms are required after graduating as bachelor. As the essentials of a liberal education are supposed to be secured by the probation for the first degree, continued residence is not requisite for becoming Master, and the examinations for the degree are chiefly *pro forma*. A Master becomes a Regent after the act subsequent to his degree, and thereby obtains the privilege of voting in convocation. He has also the right of voting at the election of the members for the University in Parliament, and a suffrage in the appointment of certain professors. The professors, as such, have no particular power or influence in the University. They are graduates with annual salaries, appointed to give lectures in particular branches of knowledge. The regius professors are appointed by the Crown, the others according to the directions of the respective founders. Excepting one or two instances, attendance upon their lectures is not considered compulsory; they are considered accessaries to the general business of education, and are attended by voluntary students, according to their respective tastes and pursuits.

Cambridge. The general organization of the University of Cambridge does not substantially differ from that of Oxford. The chief point of distinction consists in the superior prominence given to mathematical studies; proficiency in which constitutes the principal passport to the honours and emoluments of the academy. The year is divided into three terms, occupying somewhat less than seven months in the twelve. The degree of Bachelor of Arts requires a probation of twelve terms, ten of which must be in *bonâ fide* residence. Three years additional are required as the preparation for Master of Arts; and for those who proceed in theology, seven years' standing as M.A. is required in order to obtain the degree of Bachelor in Divinity, and five additional, or twelve, as Master, for the degree of Doctor. The system of public examinations differs in several respects from that pursued at Oxford. They take place in the Lent term of each year, and are conducted by the moderators and by examiners appointed by the Senate. The first University, or "previous" examination takes place in the Lent of the second year from the commencement of academical residence, and is chiefly confined to Paley's Evidences, the elements of Scriptural knowledge, one Greek and one Latin author, of which notice is previously given. When the examination is over, the candidates are divided into two classes: those who have distinguished themselves by their proficiency, and those who have barely passed the ordeal. A certificate of having passed this examination is indispensable for the Bachelor's degree. In the Lent term of his third year the student is required to *keep an act*, which is a kind of public disputation on three given questions: two mathematical or physical, and one metaphysical or moral. The office of the keeper of the act, technically termed the *respondent*, is to maintain the propositions which he has advanced in a kind of thesis, and to answer the objections of the *opponents*, who are three students of similar standing and attainments, deputed to find arguments on the other side. The disputation is carried on in Latin, and the moderator who presides endeavours, by suitable questions, to ascertain the talents and acquirements of the different parties. Besides these, there are also college-examinations, held yearly

UNIVERSITY.

UNIVERSITY. or half-yearly, in which the students are classed according to proficiency, and those who particularly distinguish themselves obtain prizes.

In the Senate-house examination all the men of proper standing for the degree of Bachelor of Arts are brought into competition at the same time. They are divided into six classes, determined by the exercises of the preceding year, and occasionally by the report of the college tutor. The first four classes are understood to be candidates for honours, the remaining two are merely applicants for an ordinary degree. The examination of the aspirants to honours chiefly turns on mathematical and physical science. It lasts eight days, the first five of which are exclusively devoted to mathematics. At the commencement, questions are proposed to the four classes in common; on the fifth and subsequent days a distinction is made between the first and last two, questions of greater difficulty and importance being proposed to the former exclusively. On the sixth day the classes are examined in logic, divinity, and moral philosophy. The mathematical examination is resumed the day following; and on the eighth day the names of the successful candidates are published, arranged according to the order of merit, in three classes, respectively entitled *Wranglers*, *Senior Optimes*, and *Junior Optimes*. The one at the head of the list is termed *Senior Wrangler* of the year, and the obtaining this position is considered the highest academical honour that the University can bestow.

The examination of the candidates of the fifth and sixth classes embraces a uniform set of subjects and exercises, supposed to be suitable to their average attainments. It lasts six days, and is conducted by means of questions on printed papers. They relate chiefly to Euclid's Elements, arithmetic, algebra, with some of the elementary parts of natural philosophy, a few classical authors, Paley's Evidences, and Locke's Essay on Human Understanding. The names of those who obtain their degree are arranged numerically according to merit, but are not published in the calendar.

In addition to this general examination there is also one in classical learning, commonly called the *classical tripos*. It takes place on the fourth Monday after admission to the bachelor's degree, and continues five days. It is a voluntary competition, but only those who have obtained mathematical honours are admissible to it. Translations of passages from the principal Greek and Latin authors are required, with answers to questions on points of history, criticism, philosophy, &c. arising out of them, but no original composition. The names of those who pass this examination with credit are arranged in three classes, according to the order of merit. Both at Oxford and Cambridge a certain high degree of proficiency is considered as a step to a fellowship, and consequently to an academical provision for life.

The University of Dublin is organized much on the same general principles as the great English Universities, with a number of differences in the details of education, which our space will not allow us to particularize. Similar systems have been adopted at King's College and the University of Durham, with the addition of professorships in various branches of modern science and accomplishments. The Scottish Universities are organized on a different system, the most con-

spicuous feature of which is the paramount importance and authority of the body of professors who constitute the *Senatus Academicus*, or governing body, who are the only recognized fountains of instruction, and the sole examiners in their respective departments. The University of Edinburgh occupies a somewhat anomalous position, being, as we have already observed, under the absolute jurisdiction of the Town Council, a section of which, under the name of the College Committee, has the control of the revenues, and even claims the right of regulating the conditions of graduation, the nature of the studies to be pursued, and the methods of instruction. In point of fact, however, the details of discipline and education are left to the Professors, who, in conjunction with the Principal, form the Academical Senate. New professorships in various branches of science have been recently established at Edinburgh and Glasgow, most of them by the Crown. The majority of students at Edinburgh belong to the medical school, which has long enjoyed a high reputation; though the numbers attending it have lately decreased, chiefly on account of the excellent medical institutions formed in London and several of the great English provincial towns.

Prior to the Reformation, the constitution and course of study of the German Universities bore a general analogy to those of the University of Paris. After that event the faculties continued for a long time nearly on the same footing, with such changes in theology and ecclesiastical law as the adoption of the new doctrines rendered requisite. Still, however, the great Protestant confessions were adopted as fixed standards, and conformity to them was expected both from teachers and students. Towards the latter end of the last century a disposition began to manifest itself to get rid of all restraints of system, and to establish perfect freedom of opinion and instruction both in religion and philosophy. This has been carried to a greater extent in some institutions than in others; but altogether there has been a tendency on the part of the German Protestant Universities to adopt what they call the "free system," or, in other words, to allow the Professors, who are, as in the Scottish Universities, the governing body, to model the academical routine according to their own sentiments, and to make their lectures the vehicles of such views of religion, morality, and philosophy as they may choose to convey. The same freedom is also claimed in matters of discipline. The principle inculcated, and to a great extent acted upon, is, not only that there is no University control over the private and social conduct of the student, but that he is entitled to the entire direction of his own pursuits, and is free to devote his attention to such academical studies, or such portions of them, as he pleases. Every student, therefore, determines of himself what lectures he will attend; nor is he in general called upon to show what advantage he may have derived from them till his final examination for his degree. The consequence of this freedom, joined with the national fondness for speculative pursuits, is, that the lectures most likely to be practically beneficial are in a great measure neglected, and that the great resort is to those Professors who introduce new and strange systems of philosophy or theology, such as in Germany are perpetually arising and supplanting each other. It has also a tendency to corrupt and lower the general standard of education, since it induces the Professors, the sole authorized channels of instruction to adapt themselves

UNIVERSITY.

UNIVERSITY. to the prevailing tone, and to teach not what is best in itself, but what is most likely to be acceptable to their hearers. Notwithstanding the complacency with which the Germans in general view the "free system" as the peculiar pride and honour of their country, there are sober-minded men among themselves who do not scruple to express their dissatisfaction at many of its principal points. They denounce the system of conveying instruction exclusively by professorial lectures as in itself essentially defective, and maintain that a great deal of time is lost in transcribing indifferent lectures which might be much more profitably employed. They declare that the total want of discipline and control is productive of mischievous effects, both in a literary and a national point of view; that the absence of personal intercourse between the Professors and students, and the consequent want of friendly counsel and guidance, is a serious evil; and that the tutorial system of the great English Universities affords advantages in this respect which cannot be realized in those of Germany as they are at present constituted.

There has lately been a good deal of controversy on this point in our own country. It is maintained by those who espouse one side of the question, that professorial lectures do not constitute a sufficiently prominent or integral part of the instruction given in the great English Universities, and that the systems pursued in Scotland and Germany are preferable in this respect, as being more analogous to the ancient constitution of things. We conceive, however, that the question is not so much what was the ancient order of things, as what is most suitable to the present state and requirements of society. When Universities were first established, instruction was necessarily communicated by oral lectures delivered to large classes, because, owing to the total want of elementary books, there was no other method of imparting it; and the paucity of teachers in proportion to the vast number of students, rendered a system of individual teaching and minute personal inspection totally impossible. But instruction communicated in such a way must necessarily be imperfect; and we hold it next to impracticable to teach mathematics, or classics, or any other branch of science requiring severe thought, or close and constant application, in a satisfactory manner by such a process. Dull and careless hearers would learn next to nothing from oral lectures, and students of a better description could not learn all that it is desirable for them to know. As subsidiary to the general system of academical tuition, lectures by able Professors may be, and doubtless are, found to be of admirable use. They are excellent methods of teaching the fundamental principles and philosophy of

science, and they furnish opportunities of acquiring, at a small sacrifice of time, a sufficient tincture of such branches of knowledge as may be considered the accessories of a liberal education. The University lectures on chemistry, botany, geology, and similar sciences, are, in fact, attended by considerable numbers of voluntary and attentive students, who have thus an opportunity of laying a foundation of knowledge, on which a further superstructure may afterwards be erected, if their pursuits and inclinations prompt them to do so. The mathematical and Greek lectures at Cambridge have also served to give an impetus and high tone to those departments, of which the whole University has felt the benefit. But admitting that students of first rate talents and unbounded thirst for knowledge could profitably derive their entire education from those sources, with the aid of suitable books, still it must be remembered that a great proportion of the general mass consists of persons of slow apprehension or moderate capacity, who nevertheless ought not to be overlooked. It is important both to themselves and to the public that they should receive the best training of which they are capable; and many minds of an apparently inferior order have latent powers which judicious cultivation may turn to good account. But this, it is evident, can only be effected by methods combining regular personal intercourse, patient attention, and careful guidance under difficulties; things which would be out of the question under a merely professorial system of tuition. However plausible an entirely voluntary system may be in theory, it is but ill adapted to English habits and ideas, and would infallibly be found pernicious in practice. The great mass of our University students are not, it must be remembered, full-grown, independent citizens, but youths under discipline, placed under the control of persons supposed to be wiser and better informed than themselves, and to whose directions it is both their duty and their interest to conform. The training to which they are there subjected is merely an extension of that previously received under parents and schoolmasters, and if something of a compulsory system is necessary in one case, it is equally so in the other.

Further information on the subject of Universities in general will be found in Meiners, *History of European Academies*; Savigny, *History of the Roman Law in the Middle Ages*, and the *Dissertations* of Itter and Curingius. For the French and Italian Universities the reader may consult Du Boulay, *Historia Academiae Parisiensis*, and Tiraboschi, *Storia della Letteratura Italiana*. Much information respecting those of England will be found in Wood, *Athenæ Oxonienses*, and Dyer, *History of the University of Cambridge*.

UNI/VOCAL, } Fr. *univoque*,—simple, of one only
UNI/VOCALLY, } sense or signification. (Cotgrave.)
UNIVOCATION. } It. *univoco*; Sp. *univoco*; Lat. *univocus*, (*una vox*.)

Having one sense or meaning; one purpose or tendency.

But if this fear be instanced in a matter of religion, it will be apt to multiply eternal scruples, and they are equivocal effects of a good meaning, but are proper and *univocal* enemies to piety and a wise religion.

Taylor. *Polemical Discourses*.

For there is no difference in the manner of the commandment;

and the precept hath not the head of a man and the arm of a tree, and the foot of a mountain, but it is *univocal* and simple, and proper, and if there be any difference it must be discovered by some clear light from without.

Taylor. *Rule of Conscience*, book ii. ch. iii.

They are commonly the true mothers, the *univocal* parents of their productions, otherwise than it is in fear and drunkenness and ignorance; for these produce things of a nature different from their immediate principles, as drunkenness produces effects of anger, &c. that is, it is the occasion of them, not the proper mother.

Id. *Ib*.

Yea, their very owne word shall stop their owne mouth, for how

UNIVO- is sin *univocally* distinguished into veniall and mortall, if the
CAL. veniall bee no sinne? and the wages of every sinne is death
Hall. No Peace with Rome, sec. 13.

UN-JUST. Very being itself not predicating *univocally* touching him and
any created being and intellect, and will, as we attribute them to
God, are, as we may reasonably think, not only of a perfection
infinitely transcending any created intellect and will, but of an-
other kind and nature from it.

Hale. Origination of Mankind, p. 16.

Univocal words are such as signify but one idea, or at least but
one sort of thing; the words book, bible, fish, house, elephant,
may be called *univocal* words, for I know not that they signify
any thing else but those ideas to which they are generally affixed.

Watts. Logick, book i. ch. iv.

The *univocation* of Tartar cities with those of Israel, concurring
with the former reason from the place and country whither they
were sometime transplanted by the Assyrians, doth plainly shew
that the Israelitish people have been there

Whiston. Memoirs, 1749, p. 583.

UN-JUST,	} We now write <i>injustice</i> , (q.v.) Fr. <i>injuste</i> ; It. <i>in-</i> <i>giusto</i> ; Sp. <i>injusto</i> ; Lat. <i>injustus</i> , (in, priv. and <i>jus-</i> <i>tus</i> , ordered.)
UNJU'STLY,	
UNJU'STNESS,	
UNJU'STICE,	
UNJU'STIFIABLE,	
UNJU'STIFIABLY,	
UNJU'STIFIABLENESS.	

Against or contrary to law
or order, the laws of religion
or morality, of God or man; not equitable, not righte-
ous; wrongful, wicked.

For God is not *unjust* that he forghete ghoure werke and loue
whiche ghe han schewid in his name, for ghe han mynstrid to
seintis and mynystren.

Wiclif. Ebrewis, ch. vi.

And whanne he was cursid, he curside not, whanne he suffride
he manaside not, but he bitook hymself to him that denyde him
unjustly.

Id. Ib.

He that vseth not his owne, well and charitably, hath much to
aunswere for, and shall they be thought not *unjust*, who not onely
take away other mens, but also misvse and waste the same vn-
godlye?

Sir J. Cheeke. The Hurt of Sedition.

Ye haue robbed euery honest house, and spoyled them *unjustly*,
and pitiously wroonge pore men being no offenders, to their vter
vndoing, and yet ye thinke ye haue not broken the king's lawes.

Id. Ib.

We all make complaint of the iniquitie of our times; not
unjustly; for the dayes are euill.

Hooker. Ecclesiasticall Politie, book i. sec. 10.

Doubtless it is a pious and religious intent, to endeavour to free
God from all imputation of unnecessary rigour, and his justice
from seeming *unjustice*, and seeming congruity.

Hales. Remains. Sermons. Romans, ch. xiv. v. 1.

One of the great instances to prove the Roman religion to be
new; not primitive, nor apostolick, is the foolish and *unjustifiable*
doctrine of indulgences.

Taylor. Of Repentance, book ii. ch. i.

So drives self-love thro' just and thro' *unjust*,
To one man's pow'r, ambition, lucre, lust.

Pope. Essay on Man. Ep. 3.

Even the desire of obtaining any thing *unjustly* is evil; because
to desire to do evil by the terms again, is an evil or criminal
desire.

Wollaston. Religion of Nature, sec. 6.

To measure the justness, or *unjustness* of this deceit, I change
the supposition of persons with him.

Hale. Cont. Of Doing as we would be done to.

Some are morally evil, as impiety, disobedience to God, malice,
hatred, envy, cruelty, *unjustice* towards men.

Id. Ib.

They [passions and appetites] are not to proceed from *unjusti-*
fiable causes, or terminate in wrong objects; not to be unseason-
able or immoderate.

Wollaston. Religion of Nature, sec. 9.

It must be consider'd, that had he [Lot] not allowed himself to
drink to excess, it had not been in the power of his daughters to
deceive him. The daughters indeed, without this expedient, could
not have attain'd their end; but then the *unjustifiableness* of the

means desecrates the means, even tho' it were good and laudable UN-JUST.
before.

Marchant. Exposition of the Book of Genesis, ch. xx.

The earnest desire that every one feels to make others believe
what he believes himself, is a strong temptation to support it by
unjustifiable evidence.

Cook. First Voyage, book iii. ch. xii.

But to charge their guilt on christianity, would not to be like
censuring the legal constitution of any government, because they,
who rebel against it, behave *unjustifiably*.

Secker. Sermon 13. vol. v.

When this people has acted unwisely and *unjustifiably* in its
favour [religious natural establishment] (as in some instances they
have done most certainly) in their very errors you will at least
discover their zeal.

UNKI'NDRED.

Unnatural; not suited to,
adapted to, proper for, beneficial
to, the nature or kind; not con-
genial; not having natural feel-
ings—feelings pertaining or be-
longing, convenient or becoming
to, their common nature or kind; not feeling for each
other, not compassionate or sympathetic, not benevolent;
not humane. See INHUMAN, HUMAN.

Unkindred,—not of the same kin or kind.

And bidde of me wat thou wolt, and ich wol the grante y wis,
For elles ich were *unkynde*, gef it to grante ys.

R. Gloucester, p. 115.

Ac thyn sustren schulle habbe al, for here herte ys *kynde*,
And thou for thyn *unkyndenesse* be out of al my mynde.

Id. p. 31.

Malcome of Scotland kyng git on Ingland ran,
The kyng had him auanced, he was an *unkynd* man.

R. Brunne, p. 62.

Aren none hardur ne hongryour. than men of holy churche
Averouse and yuele willed wanne thei ben avauanced
And *unkynde* to hur kynne.

Piers Plouhman, p. 22.

If eny man doth me a bynset. oth' heipeth me at nude
Ich am *unkynde* ageyns courtesye.

Id. p. 112.

Unkynde and unknowing quath Crist. and with a rop smot hem
And overe turnede in the temple. here tables and here stalles
And drof hem out alle. that ther bowten a solde.

Id. p. 312.

To comforty hym and Conscience. yf thei come in place
Ther *unkyndnesse* and covetyse.

Id. p. 252.

For *unkyndenesse* queyncheth hym. that he nat shyne
Ne brenne ne blast cleer. for blowynge of *unkyndenesse*.

Id. p. 332.

UN-
KIND.

For *unkyndnesse* is contrarie of alle *kynne* reson.
Piers Plouhman, p. 338.

But wite thou this thing, that in the laste daies perilouse tymes
schulen neighhe, and men schulen be louynge hemsilff, coueitouse,
high of berynge, proude, blasfemeris; not obedient to fadir and
modir, *unkynde*, cursid, withouten affeccoun, &c.

Wiclif. 2 *Tymo.* ch. iii.

This vnderstād that in the laste dayes shall come perilous tymes.
For the menne shal be louers of their owne selues, couetous, bosters,
proude, cursed speakers, disobediēt to father and mother, vnthanke-
ful, vnholly, *unkind*, truce breakers, &c.

Bible, Anno 1551.

So was hire herte shette in hire distresse,
Whan she remembered his *unkindnesse*.

Chaucer. *The Man of Lawes Tale*, v. 54.

And for he hath destourbed kinde,
And was so to nature *unkinde*,
Unkindeliche he was transformed,
That he, whiche erst a man was formed,
In to a woman was forshape.

Gower. *Conf. Am.* book iii.

Thing which was *ayen kinde* wrought,
Unkyndliche it was abought,
The childe his owne fader slough,
That was *vnkyndship* enough.

Id. *Ib.* book vi.

He is *vnkynde*, whiche denyeth to haue receyued any benefite,
that in dede he had receyued, he is *vnkynde*, that dissimuleth, he
is *vnkynde*, that recompenseth not: but he is moste *vnkynde*, that
forgetteth.

Sir Thomas Elyot. *The Governour*, book ii. ch. xiii.

But moste displeasyd Leyr the *vnkyndnesse* of his. ii. daughters
consyderynge theyr wordes to hym before spoken and sworne, and
nowe found and prouyd them all contrary.

Fabyan. *Chronycle*, ch. xv.

Other of the lordys and nobles of Fraunce wolde not be agreable,
that a woman shulde enheryte so great a kyngedome: by meane
whereof *vnkyndnesse* kyndelyd atwene the kyng and the sayde
duke.

Id. *Ib.* p. 433.

Not to requyte one good tourne for another, is counted a detest-
able *unkindnesse* euen among the heathen and the publicans.

Udall. *Matthew*, ch. v.

We shall perceiue and knowe the gretnes of his [David's] sinne
so muche the better and soner, yf hys greate *vnkyndnes* shewed
agaynste God almighty that was so beneficiall vnto him be made
open and knowen vnto vs.

Fisher. *Seuen Psalmes*. *Psalm* 6.

O! whither dost thou tend, my *unkind* son?
What mischief dost thou go about to bring
To her, whose genius thou here look'st upon,
Thy mother-country, whence thyself didst spring?

Daniel. *Civil Wars*, book i.

Here flowes a billow, there another meetes:
Each, on each side the skiffe, *unkindely* greetes.

Browne. *Britannia's Pastorals*, book i. song 2.

O most poor pitied of men!
Had thy cold pencil kiss'd her pen,
Thou could'st not so *unkindly* err,
To show us this faint shade for her.

Crashaw. *The Flaming Heart*.

What is it then but that desire which God put into Adam in
paradise before he knew the sin of incontinence; that desire that
God saw it was not good that man should be left alone to burn in,
the desire and longing to put off an *unkindly* solitariness by unit-
ing another body, but not without a fit soul, to his in the chearful
society of wedloc?

Milton. *Doctrine and Disc. of Divorce*, book i. ch. iv.

For I begin to forget all my hate,
And tak't *unkindly* that mine enemy
Should use me so extraordinarily scurvily.

MEL. I shall melt too, if you begin to take
Unkindnesses: I never meant you hurt.

Beaumont and Fletcher. *The Maid's Tragedy*, act iv.

Unkindnesse past, they gan of solace treat,
And bathe in pleasance of the ioyous shade.
Which shielded them against the boyling heate.

Spenser. *Faerie Queene*, book i. can. 7.

I haue often heard chiefe of our citty complaining of the vnfruit-
fullnesse of the earth, and sometimes againe of the *vnkindlinesse*
of the weather now for a good space hurtfull to the fruites.

Hakewill. *Apologie*, book ii. sec. 3.

Each beast, each insect, happy in its own,
Is heav'n *unkind* to man, and man alone?

Pope. *Essay on Man*. *Epistle* 1.

Mine is the privy pois'ning, I command
Unkindly seasons, and ungrateful land.

Dryden. *Palamon and Arcite*.

My friendship only aims at your advantage,
Would point you out a way to peace and honour,
And in return of this, your rage *unkindly*
Loads me with injuries.

Rowe. *The Ambitious Step-Mother*, act ii.

Ah! what a little time to love is lent.
Yet half that time is in *unkindness* spent.

Dryden. *The Rival Ladies*, act v. sc. 3.

Since then from thee at first it came,
To thee tho' clogg'd, it points its flame;
And conscious of superior birth,
Despises this *unkindred* earth.

Rowe. *Ambitious Step-Mother*, act iii.

— A crown! which slighted,
And left in scorn by you, shall soon be sought,
And find a joyful wearer; one, perhaps,
Of blood, *unkindred* to your royal house,
And fix its glories in another line.

Id. *Lady Jane Gray*, act iii.

UN-KING, v. } D. *ontkoningen*. To cause not to
UNKI'NGLY. } be a king; to divest of kingly, regal,
or royal authority.

God saue King Henry, *vn-king'd* Richard sayes,
And send him many yeeres of sunshine dayes.

Shakspeare. *Richard II.* act iv. sc. 1.

That the Scots were a free nation, made king whom they freely
chuse, and with the same freedom *un king'd* him if they saw cause,
by right of ancient laws and ceremonies yet remaining, and old
customs yet among the high-landers in chusing the head of their
clans or families.

Milton. *Tenure of Kings and Magistrates*.

CYM. Our subjects [sir]
Will not endure his yoke: and for our selfe
To shew lesse soueraignty, they then must needs
Appeare *vn-kinglike*.

Shakspeare. *Cymbeline*, act iii. sc. 5.

They on the other side finding themselves in a high dignity,
neither founded by scripture, nor allowed by reformation, nor sup-
ported by any spiritual gift or grace of their own, knew it their
best course to have dependence only upon him: and wrought his
fancy by degrees to that degenerate and *unkingly* perswasion of
no bishop, no king.

Milton. *Answer to Eikon Basilike*, sec. 17.

The king himself came to be in effect first *unking'd*, and all his
royalties torn from him.

South. *Sermon* 2. vol. v.

— Oft regardless
Of plighted faith, with most *un-kingly* baseness,
H' has ta'en the advantage of their absent arms,
Without a war proclaim'd, or cause pretended,
To waste with sword and fire their fruitful fields.

Rowe. *Tamerlane*, act i.

— Shall they
To Gallia yield? yield to a land that bends,
Deprest and broke, beneath the will of one?
Of one who, should th' *unkingly* thirst of gold,
Of tyrant passions, or ambition, prompt,
Calls locusts armies o'er the blasted land.

Thomson. *Liberty*.

That government therefore is bound to interfere, and to *unking*
these tyrants, is to me self evident.

Cowper to Unwin, Jan. 3, 1784.

Shocked at the naked attempt, he [Louis XIV.] had recourse,
for a palliation of his conduct, to an *unkingly* denial of the fact,
which made against him.

Burke. *Tracts on the Popery Laws*.

UN-
KIND.UN-
KING.

UN-KISS. UN-KISS, v. } D. *ongekust*; Sw. *okyst*.
 UNKI'SSED. } To unkiss, in Shakspeare, is,—to
 UN-LADE. take away the effect of a kiss; alluding to the ceremony
 of an oath—kissing the book.
Unkissed, not kissed.

And for men saine vnkowen *vnkiste*,
 Hir thome she holt in hir fiste
 So close within hir owne honde,
 That there wynneth no man londe.

Gower. *Conf. Am.* book ii

Whoever be that man that shall *unkiss*
 This sacred print next, may he prove more thrifty
 In this world's just applause, not more desertful!
 Ford. *Perkin Warbeck*, act v. sc. 3.

Let me *vn-kisse* the oath 'twixt thee, and mee,
 And yet not so, for with a *kisse* 'twas made.

Shakspeare. *Richard II.* act v. sc. 1.

Foule breath is noisome, therefore I will depart *vn-kist*.
Id. *Much Adoe about Nothing*, act v. sc. 2.

UN-KNO'TTED, } *Unknotted*—not *knit*, or *knotted*.
 UNKNO'TTY. } *Unknotty*. Free from knots.

All homogeneall, simple, single, pure, pervious, *unknotted*, un-
 coacted, nothing existing but those eight universall orders.

More. *Song of the Soul. To the Reader.*

The brittle hasel, ash, whose speares we prayse,
Vnknottie firre, the solace shading planes.

Sandys. *Ovid. Metamorphoses*, book x.

UN-LACE, v. To remove that which catcheth,
 holdeth, tieth, fasteneth; the catch, hold, tie, or fasten-
 ing.

In Shakspeare, "that you *vnlace* your reputation
 thus;" to *vnlace* is (in Tooke's opinion)—to *unless* or
 onles; to dismiss, to loosen.

And prechide and seyde a strengier than I schal come after me
 and I am not worthi to knele down and *vnlace* his schoon.

Wiclif. *Marke*, ch. iii.

She, with the mole all in her hands devout,
 Standing near th' altar, bare of the one foot,
 With vesture loose, the bands *vnaced* all,
 Bent for to die, calls the gods to record,
 And guilty stars eke of her destiny.

Surrey. *Virgile. Aeneis*, book iv.

Whom when he sawe before his foote prostrated,
 He to her lept, with deadly dreadfull looke,
 And her sunshiny helmet soone *vnaced*,
 Thinking at once both head and helmet to haue raced.

Spenser. *Faerie Queene*, book v. can. 5.

What's the matter
 That you *vnlace* your reputation thus,
 And spend your rich opinion, for the name
 Of a night-brawler?

Shakspeare. *Othello*, act ii. sc. 3.

A sound no time can steal; a sweet perfume
 No winds can scatter, an entire embrace,
 That no satiety can e'er *vnlace*.

G. Fletcher. *Christ's Triumph after Death*.

His buckler held him under, while he press'd
 With both his knees above, his panting breast,
Unlac'd his helm: about his chin the twist
 He ty'd; and soon the strangled soul dismiss'd.

Dryden. *Ovid. Metamorphoses*, book xii.

However, I am not sure if they do not sometimes *vnlace* that
 part of the sail from the yard which is between the tack and mast
 head, and so shift both sail and boom leeward of the mast.

Cook. *Second Voyage*, book iii. ch. ii.

UN-LADE, v. D. *ontlaaden*, to remove, take out,
 or away—the load or burthen, the weight, the freight,
 the cargo.

The ordinary charges for transporting of goods from Narue to
 Newles by way as aforesaid, besides the spoile by so often lading
 and *vnloading* cariage by land, and the dangers of the seas, pirates.

Hakluyt. *Voyages*, vol. i. p. 416

My pupill's hungry.

LEA. Pray ye sir, *vnlade* me.

LOP. I'll refresh ye sir;

When ye want, you know your exchequer.

Beaumont and Fletcher. *The Spanish Curate*, act ii. sc. 1.

Nor yet content with the wonted room of his margent, but he
 must cut out large flocks and creeks into his text to *vnlade* the
 foolish frigate of his unseasonable authorities.

Milton. *Apology for Smectymnuus*, sec. 8.

Thither, let all th' industrious bees repair,

Unlade their thighs, and leave their honey there.

Congreve. *Mourning Muse of Alexis*.

The galleys soon

Unladen of their freight, some barter'd brass,

Some steel, or oxen, or their hides, for wine,

And some their captives.

Cowper. *Homer. Iliad*, book vii.

UN-LAPT, not folded or turned over, infolded or
 inwrapt.

Speech being like to tapestry, which if it be folded vp, sheweth
 but part of that which is wrought, and being *vnlapd* and laid open,
 sheweth plainly to the eye all the work that is in it.

Hooker. *Walter Travers' Sup. to the Councell*.

UN-LAUGH, v. A word coined by Sir T. More for
 his own purpose.

Tindall must of reason gyue vs leaue to laugh at hys proude
 inuented folye. I shall vpon reasonable warning *vnlaughe* agayn
 it all.

Sir T. More. *Workes*, p. 684.

UN-LAY, v. To unlaid a cable is to untwist the
 folds in which it is *laid* together.

After working up all our junk and old shrouds, to make twice-
laid cordage, we were at last obliged to *vnlay* a cable to work into
 running rigging.

Anson. *Voyages*, book ii. ch. ii.

UN-LEARN, v. D. *ontleeren*. Gower writes, to

UNLE'ARNED, } *unlere*. See LERE.

UNLE'ARNEDLY. } To refuse, to reject, to put away,
 knowledge, or any thing already learned.

A nyce herte, fie for shame.

A coward herte of loue *vnlered*,

Wherof arte thou so sore afared!

Gower. *Conf. Am.* book iv.

Hitherto pertaineth the precept of clemencie and mercy for
 kinges, which is to do well to the good men, decerning the good
 and lerned from the euil & *vnlered*, & to moderate the punish-
 ments of the tractable and curable, and to suppress the obstinate
 vncurable.

Joye. *Exposicion of Daniel*, ch. i.

An vnlettered mā myght be ashamed to write so *vnlearnedly*,
 and a mad man woulde almoste waxe red for shame, to wryte in
 some thinges so frantikely.

Sir Thomas More. *Works*, p. 1037.

And adulation now is spent so nigh,

As that it hath no colours to express

That which it would, that now we must be fain

T' *vnlearn* that art, and labour to be plain.

Daniel. *A Panegyric Congratulatory*.

For as for the *vnlearned*, in private, nothing more usual with
 them then to take offence at our dissensions, and to become more
 uncertain and unjoynted upon the hearing of any question discust.

Hales. *Rem. Ser. Romans* xiv. 1

That a single innocence might not be oppress'd and over-born
 by a crew of mouths, for the restoring of a law and doctrine falsly
 and *vnlearnedly* reputed new and scandalous, God, that I may ever
 magnify and record this his goodness, hath unexpectedly rais'd up
 as it were from the dead, more than one famous light of the first
 reformation to bear witness with me.

Milton. *The Judgment of Martin Bucer*.

The immortality of the soul has been commonly believed in all
 ages and in all places, by the *vnlearned* part of all civilized people
 and by the almost general consent of all the most barbarous
 nations under heaven.

Clarke. *On the Evidences*, Prop. 4.

He [Pope] used to say, that he had been seven years (that is
 from twenty to twenty seven) in *vnlearning* all he had been acquir-
 ing for twice that time.

Pope. *Imitations of Horace*, book ii. Ep. 2. Notes.

UN-
LADE.

UN-
LEARN.

UN-LESS. **UN-LESS**, (see **ONLESS**.) is (Tooke), A. S. *Onles*, *dimitte*, imperative of the verb *on-lesan*, to dismiss. *Les*, (q. v.) the imp. of *les-an*, is sometimes used by our old writers. A great variety of examples is produced to show that *onles*, *onlesse*, was the common mode of writing; and Tooke believes Tyndall to have been one of the first who wrote the word with an *u*. In the *Bible*, 1551, it is written with *o*; in the collection of his *Works*, 1573, with *u*. In *Barnes*, published with Tyndall, *onles*.

The scripture was geven, that we may applye the medicine of the scripture, every man to his own sores, *unlesse* then we entende to be idle disputers and braulers about vaine wordes.

Tyndall. *Prologue before the Five Books of Moses*.

Onles it be lucre, whiche a gentyl wit littel estemeth.

Sir T. Elyot. *The Governour*, book i. ch. xiv.

Saincte Augustine sayd well when he noted these wordes of Christ, verely verely *onlesse* ye eat the flesh of the Sonne of man, &c. to be a figuratiue speache.

Gardner. *Explication of True Catholique Fayth*, fol. 8.

They did forbyd to appele to the court of Rome *onles* the king gaue licence. Barnes. *Workes*, p. 201.

Seeing then no man can pleade eloquently, *unlesse* he be able first to speake, it followeth that abilitie of speech is in this case a thing most necessary.

Hooker. *Ecclesiasticall Politie*, book i. sec. 14.

Till he who bore the eagle of the tenth legion, yet in the gallies, first beseeching his gods, said thus aloud, Leap down souldiers, *unless* ye mean to betray your ensigne; I for my part will perform what I owe to the common-wealth and my general.

Milton. *History of England*, book ii.

And must no egg in Japhet's face be thrown,
Because the deed he forg'd was not my own?
Must never patriot then declaim at gin,
Unless, good man! he has been fairly in.

Pope. *Ep. to Sat. Dialogue 2*.

Nor me the foot-path pleases more: my foot
Shall none of all thy min'string maidens touch,
Unless there be some ancient matron grave
Among them, who hath pangs of heart endur'd
Num'rous, and keen as I have felt myself;
Her I refuse not.

Cowper. *Homer. Odyssey*, book xix.

UN-LETTED, not letted or lated, retarded, hindered, impeded.

And song full low and softly,
Three songs in her harmony,
Unletted of every wight.

Chaucer. *Dreame*.

UN-LIMBER, not easily bent, flexible or pliant.

To which temper more septentrional *unlimber* nations have not yet bent themselves.

Reliquiæ Wottonianæ, p. 246.

UN-LIVE, v. } To unlive our former life is—to
UNLIVELINESS. } live in opposition to it, to the rules
of it; to annul the effects of it.

Unliveliness,—want of life or vivacity, of animation or spirit.

The soberest and best govern'd men are least practis'd in these affairs; and who knows not that the bashful muteness of a virgin may oftentimes hide all the *unliveliness* and natural sloth which is really unfit for conversation.

Milton. *Doctrine and Disc. of Divorce*, book i. ch. iii.

And if we would endeavour after an unmixed knowledge; we must *unlive* our former lives, and (inverting the practise of Penelope) undo in the day of our more advanc'd understandings, what we had spun in the night of our infant-ignorance.

Glanvill. *Vanity of Dogmatizing*, ch. viii.

It will be better to see, that we must *unlive* our former life, and undo all we have done; that we must renounce the principles we have avowed, we must root out the habits we have planted, we must forsake the paths which we have beaten and so long trod in, if ever we will be happy.

Barrow, vol. iii. *Sermon 17*.

Many entertain principles which they defy by their practices,

and *unlive* all that they have believed; so that that which was intended for the cure of sin, by accident becomes its aggravation.

South, vol. vii. *Sermon 5*.

UN-LOOSE, v. } See **LOOSE**. A. S. *on-lesan*, di-
UNLOO'SEN. } *mittere*. *Un* is here the A. S. *On*,

aug.

To let go, or free from hold or fastening.

To remit, to dismiss; to untie, to unbind; to relax.

Seriauntes hii semede, that serven atte the barre

To plede for penyes. and poundes the lawe

And nat for oure Lordes love. *unlose* hure lyppe ones.

Piers Plouhman, p. 8.

At the ende of these foure or five dayes. they *unloose* him and put one of the females vnto him, and giue them meate and drinke, and in eight dayes he is become tame.

Hakluyt. *Voyages*, vol. ii. p. 235.

The maryage notwithstandinge is not conformed, vntyll at night that the husbände putteth a ryng on the finger of his wife, and *unloseth* her girdell.

Sir T. Elyot. *The Governour*, book ii. ch. xii.

He with his hands strave to *unloose* the knots,

(Whose sacred fillets all-besprinkled were

With filth of gory blood, and venom rank.)

Surrey. *Virgile. Æneis*, book ii.

If you swear you will not procure a dispensation, you can as well be dispens'd with for that perjury as the other; and you cannot be tied so fast, but the pope can *unloose* you.

Taylor. *Dissuasive from Popery*, part i. ch. iii. sec. ii.

But when mysterious Superstition came,
And with her civil sister leagu'd, involv'd
In study'd darkness the desponding mind;
Then tyrant Power the righteous scourge *unloos'd*,
For yielded reason speaks the soul a slave.

Thomson. *Liberty*.

Fix them [religious, virtuous, manly principles] deeply in your bosom, and let them go with you *unloosened* and unaltered to the grave.

Knox. *Essay*, No. 2.

UN-LUST, n. } D. *onlustig*. We should now say,—
UNLUSTY. } *Listless, listlessness*.

Thei toke vpon hem suche penance,
There was no songe, there was no daunce,
But euery myrthe and melodie
To hem was then a maladie.
For *unlust* of that auenture
There was no man whiche toke tonsure.

Gower. *Conf. Am.* book viii.

And thus his yonge *unlusty* life

He driueth fourth so as he maie.

Id. *Ib.* book ii.

Therefore, I say, whosoever they be that do find *unlust* and tediousness to do good, may opinion with themselves, that they be none of God's children.

Strype. *Ecclesiastical Memoirs. Originals*, Anno 1555, No. 44.

UN-LUSTROUS. The old folio reads,—*Illustrious*; the correction is ascribed to Rowe. Steevens refers to "Lack-lustre eye," in *As You Like It*.

———— Joyne gripes, with hands
Made hard with houely falshood (falshood as
With labour;) then by peeping in an eye
Base and *illustrious* as the smoakie light
That's fed with stinking tallow.

Shakspeare. *Cymbeline*, act i. sc. 7.

UN-MAKE, v. } To cause not to be, not to live or
UNMA'KABLE. } exist; to take away, to destroy the
form or frame, shape or mould, the composition or construction.

Who set the imperial crowne vpon the emperoure Henry the sixthes heade, not with his hande, but with his foote; and with the same foote againe caste the same crowne of, saieng withal, hee had power to make emperours, and to *unmake* them againe at his pleasure?

Jewell. *A Replie vnto M. Hardinge*, p. 418.

Hee put his company in remembrance of a pinnesse of five tunne burthen, which hee had within his shippe, which was carryed

UN-
LIVE.

UN-
MAKE.

UN-MAKE. in pieces, and *unmade* vp for the vse of those which should inhabit there the whole yeere.

Hakluyt. *Voyages*, vol. iii. p. 87.

UN-MASK.

That is to say if the principles of bodies are unalterable, they are also *unmakable*, by any but a divine power.

Grew. *Cosmo. Sacra*, book i. ch. ii.

God, when he makes the prophet, does not *unmake* the man. He leaves all his faculties in the natural state, to enable him to judge of his inspirations, whether they be of divine original or no.

Locke. *Of Human Understanding*, book iv. ch. xix.

UN-MAN, v. } To take away, strip, or deprive of
UNMAN'LY, } men, or of the qualities of man—
UNMA'NFULLY, } his virtue, strength, fortitude,
UNMA'NHOOD. } courage.

Unmanly is also equivalent to *inhuman*.

—— Sothe him saied Pandarus
That for to slaen himself, might he not win
But bothe done *unmanhode* and a sinne.

Chaucer. *Troil. and Cres.* book i.

That Paris now, with his *unmanly* sort
With mitred hats, with ointed bush and beard
His rape enjoyth. Surrey. *Virgile. Æneis*, book iv.

To constrain him further were to unchristen him, to *unman* him,
to throw the mountain of Sinai upon him, with the weight of the whole law to boot.

Milton. *Doctrine and Disc. of Divorce*, book ii. ch. xxii.

These daughters by appointment of Danaus on the marriage-night having murder'd all ther husbands, except Linceus, whom his wives loyalty sav'd, were by him at the suit of his wife thir sister, not put to death, but turn'd out to sea in a ship *unmann'd*; of which whole sex they had incur'd the hate.

Id. *History of England*, book i.

—— Live, live, my matchless son,
Blest in thy father's blessing; much more blest
In thine own vertues: let me dew thy cheeks
With my *unmanly* tears.

Beaumont and Fletcher. *The Laws of Candy*, act v.

Yet so they dy'd not *unmanfully*, but turning oft upon thir enemies, by the advantage of an upper ground, put them down by heaps, and fill'd up a great ditch with their carcasses.

Milton. *History of England*, book vi.

All mocking and scoffing at religion, all jesting and turning arguments of reason into drollery and ridicule, is the most *unmanly* and unreasonable thing in the world.

Clarke. *On the Attributes. Introduction.*

And, fearing my escape, invit'st thou me,
To share thy couch, with fraudulent design
First to unarm, and to *unman* me next?

Cowper. *Homer. Odyssey*, book x.

First then, with fears *unmanly* he possess'd
The heart of Hector; mounting to his seat
He turn'd to flight himself, and bade his host
Fly also.

Id. *Ib. Iliad*, book xvi.

UN-MA'NTLE, v. To take off, to divest, the cloak, or covering. *Unmantling*,—

Removing, withdrawing the closing or contraction—of their overspreading brows.

Leicester affected to resist when she strove to take his cloak from him. "Nay," she said, "but I will *unmantle* you."

Scott. *Kenilworth*, ch. vii.

UN-MASK, v. } Sw. *Omaskeræd*. To remove, or
UNMA'SKING, n. } strip off—the mask, or cover worn as a disguise; to remove the veil or concealment.

—— You are
Observ'd, against the gravity long maintain'd
In Italy, (where to see a maid *unmasqu'd*
Is held a blemish) to be over-frequent
In giving or receiving visits.

Beaumont and Fletcher. *Fair Maid of the Inn*, act i.

I fear no mood stamp'd in a private brow,
When I am pleas'd t' *unmask* a public vice.

Ben Jonson. *Every Man out of his Humour. The Stage.*

A great light (as the sun's sudden *unmasking*) being seene upon this discovery. Browne. *The Inner Temple Masque.*

Yet will I not insist on that which may seem to be the cause on God's part; as his judgment on our sins, the trial of his own, the *unmasking* of hypocrites.

Milton. *Of Reformation in England*, book i.

UN-MERCIED, }
UNME'RCIFUL, }
UNME'RCIFULLY, }
UNME'RCIFULNESS, }
UNME'RCILESS. }

Unmerciless, (Joye) — the prefix *un* seems intended to augment the force of the negative termination *less*. So *Unremorse-less* (q. v.) by Cowley.

And for he was to loue strange,
He wolde not his herte change
To be benigne and fauorable
To loue but *unmerciable*.

Gower. *Conf. Am.* book iii.

A laieman maie not accuse a prieste of fornication. This is that extremitie, and *unmerciful* rigoure, M. Hardinge, that ye shewe your priestes in these cases.

Jewell. *A Replie vnto M. Hardinge*, p. 365.

Now ye see the great diligence of these enuieuse hypocrites, ye see their deceites, *unmerciless* murther, and ingratitude.

Joye. *Exposicion of Daniel*, ch. v.

Out fly the Irish, and with sword and fire
Unmercied havock of the English made.

Drayton. *Miseries of Queen Margaret.*

Hear me (the child of shame now) hear thou helper,
And take my wrongs into thy hands, thou justice
Done by unmindful man, *unmerciful*,
Against his master done, against thy order;
And raise againe thou father of all honor,
The poor despis'd, but yet thy noblest creature.

Beaumont and Fletcher. *Moral Representations.*

The first [hinderance to our prayers] is *unmercifulness*—He that takes mercy from a man is like him that takes an altar from the temple; the temple is of no use without an altar, and the man cannot pray without mercy—God never can hear the prayers of an *unmerciful* man.

Taylor, vol. i. *Sermon* 4.

Full fiercely layd the Amazon about,
And dealt her blowes *unmercifully* sore:
Which Britomart withstood with courage stout,
And them repaide againe with double more.

Spenser. *Faerie Queene*, book v. can. 7.

This was highly resented by the Spaniards, who found out the person that had used the porter so *unmercifully*, and treated him in the same manner, as if the indignity had been done to their own noses.

Tatler, No. 260.

Whether such losses may not have been inflicted by God, as a just punishment of our former avarice and *unmercifulness*, when we had it more in our power than now (and yet had it as little in our will) to be charitable.

Atterbury, vol. ii. *Sermon* 7.

Perhaps some stop might be put to this *unmerciful* prosecution, if all would seriously reflect, that whoever pays a visit that is not desired, or talks longer than the hearer is willing to attend, is guilty of an injury which he cannot repair, and takes away that which he cannot give.

Idler, No. 14.

The others attacked the poles; and, having beat them most *unmercifully*, returned to their places.

Cook. *Third Voyage*, book ii. ch. ix.

UN-MOULD, v. To take away or destroy the form, shape or feature.

—— Whose pleasing poison
The visage quite transforms of him that drinks.
And the inglorious likeness of a beast
Fixes instead, *unmolding* reason's mintage
Character'd in the face.

Milton. *Comus.*

UN-MU'FFLE, v. To remove or take away, that which covers or conceals.

E. Br. *Unmuffle* ye faint stars, and thou fair moon,
That wont'st to love the traveller's benizon.

Milton. *Comus.*

UN-NERVE, v. } To deprive of strength or
UNNE'RVATE, a. } vigour, might, force, or power.

Pyrrhus at Priam drives, in rage strikes wide:
But with the whiffe and winde of his fell sword,
Th' *unnerued* fals. Shakspeare. *Hamlet*, act ii. sc. 2.

UN-MASK.

UN-NERVE.

UN- NERVE. Scaliger calls them fine and lively in Musæus; but abject *unnervate*, and unharmonious in Homer. *Broome.*

UNONA. Our forefathers have cleared the country, and levelled and illuminated the roads; but let not the facility of travelling *unnerv* our resolution, or lull us to an indolent and inglorious repose.

Knox. Letter to a Young Nobleman.

Government was *unnerved*, confounded, and in a manner suspended. *Burke. Letter to a Noble Lord, (1796.)*

UN-NETH, } *Un-eath*, or uneasy. See EATH.

UNNE'THES. } Not easily;—not without trouble or difficulty; or distress.

And Trahen, & muche of hys folk, y wended ney to dethe,
Flowe to se to heore schippes, and of scapede *vnnethe*.

R. Gloucester, p. 88.

& slouh bothe fader & sonne, women lete thei gon,
Hors & hondes thei ete, *vnnethis* skaped non.

R. Brunne, p. 75.

The wrath was so grete bituex thise kynges tuo,
Unnethis acorde thei schete, but thus with mykelle wo.

Id. p. 270.

And thei seinge these thingis *unnethis* swagiden the peple that
thei offriden not to hem. *Wiclif. Dedis, ch. xiv.*

The miller that for-dronken was all pale,
So that *unethes* upon his hors he sat,
He n'old avalen neither hood ne hat.

Chaucer. The Milleres Prologue, v. 3124.

The remenant of folke about

Unnethes stonden in any dout

To werre eche other. *Gower. Conf. Am. book iii.*

Sithe this vngracious braunche of wrath springeth out of the
cursed rote of pryde and settinge muche by our selfe, so secretly
lurking in oure hearte, that *vnnethe* we can perceyue it our selfe,
lette vs pull vppe well y^e roote, and surely the braunch of wrathe
shall soone wither awaye. *Sir T. More. Workes, p. 87.*

They being occupied with the other Saxons before, and now as-
sailed of these behind, they had *vnneth* roome for anie aduantage
to turne their weapons.

Holinshed. Historie of Scotland. Donegall.

Diggon, I am so stiffe and so stanke,
That *vnneth* may I stand any more.

Spenser. Shepheard's Calender. September.

You shal not see them wandering abroad but two and two
together, the male and female, as if they were yoked together; and
vnneth, or not at all, can they live alone without their mate.

Holland. Plinie, book viii.

UN-OIL, *v.* To remove or wipe or rub away the
oil.

And a tight maid, ere he for wine can ask,
Guesses his meaning, and *unoi*ls the flask.

Dryden. Juvenal. Satire 8.

His wounded ears complaints eternal fill,
As *unoi*l'd hinges, querulously shrill.

Young. Love of Fame. Satire 6.

From whence, my guest! should thy belief arise,
That I deserve past other of my sex
The praise of wisdom, if unbath'd, *unoi*l'd,
Ill-clad, thou sojourn here?

Cowper. Homer. Odyssey, book xix.

UNONA, in *Botany*, a genus so called by Linnæus,
from *uno*, to unite, on account of the stamens being
united to the ovaria. It belongs to the class *Polyan-*
dria, order *Polygynia*, and the natural family of *Ano-*
naceæ. Generic character: calyx of three, very rarely
of four, ovate sepals, which are connected at the base;
corolla of six petals, of which the three inner ones are
the smallest; stamens indefinite; carpels numerous,
indehiscent, stipitate, one or many-celled, even or toro-
lose; seeds disposed in a single row in each cell.

Composed of tropical trees and shrubs; the branches
of some species are climbing; the leaves of all are quite
entire; the peduncles are usually axillary, one or many-

flowered, and generally furnished with bractæas; the
flowers of nearly all are aromatic; the bark and fruit
are intensely aromatic, and somewhat acrid and stimu-
lating; the fruit of some of the species is edible. The
seeds of *Unona Æthiopica* have an aromatic, pungent
taste, and were formerly, but now more rarely, sold in
shops, under the names of Ethiopian pepper, Guinea
pepper, Negro pepper, and *Piper Æthiopicum*. The
fruit of *Unona aromatica* is acrid and aromatic, and is
used as a condiment instead of pepper by the negroes
of Guiana. The roots and bark of *Unona Musaria* are
used in the cure of colic in the Moluccas; the bark is
also used for making musical instruments. There is a
sweet-scented greenish oil obtained from the roots of
Unona Narum by distillation, in Malabar, which is used
in the cure of various diseases.

UN-PARADISE, *v.* To remove from any place, or
state, or condition, of excessive happiness; to destroy or
deprive of excessive happiness.

Now did I find myself *unparadis'd*,
From those pure fields of my so clean beginning:
Now I perceiv'd how ill I was advis'd,
My flesh gan loath the new-felt touch of sinning.

Daniel. Complaint of Rosamond.

O ye blest scenes of permanent delight!
Full, above measure! lasting, beyond bound!
A perpetuity of bliss is bliss.
Could you, so rich in rapture, fear an end,
That ghastly thought would drink up all your joy,
And quite *unparadise* the realms of light.

Young. Complaint. Night 1.

This vice [envy] which is always prevalent in a bad heart, turns
all the brighter prospects of life into darkness, the fairest into
deformity, and would of itself be sufficient to *unparadise* an Eden.

Knox, vol. i. Sermon 4.

UN-PARCHED. *Un* is used augmentatively.
Perished or destroyed, (by heat, by drought;) dried up
or withered.

Which when I lose, O may at once my tongue
Lose this same busy speaking art,
Unparch'd, her vocal arteries unstrung,
No more acquainted with my heart,
On my dry palate's roof to rest
A wither'd leaf, an idle guest.

Crashaw. On Psalm 13

UN-PERPLE'X, *v.* To free from, to remove entan-
glement, intricacy, embarrassment.

This ecstasy doth *unperplex*
(We said) and tell us what we love.

Donne. The Ecstasy.

That being understood and fully mastered, proceed to the next
adjoining part yet unknown, simple, *unperplexed* proposition
belonging to the matter in hand, and tending to the clearing what
is principally designed.

Locke. Conduct of the Understanding, sec. 39.

UN-PLIGHT, *v.* To unfold, to explain.

It is a wondre that I desire to tell, and therefore *vnneth* may I
unpliten [*explicare*] my sentence with wordes.

Chaucer. Boecius, book iii.

But if the thriuyng soule ne *unpliteth* [*explicat*] nothyng, that
is to saine, ne dooeth thyng by his proper mouing.

Id. Ib. book v.

UN-PLUMB, *v.* To take out of—to deprive of—the
lead, *i. e.* leaden coffins.

Their turpitude purveys to their malice; and they *unplumb* the
dead for bullets to assassinate the living.

Burke. Letter to a Noble Lord, (1796.)

UN-PLUME, *v.* To strip or divest of plumes, of
pride or conceit; to humble.

In the most ordinary phænomena in nature, we shall find
enough to shame confidence, and *unplume* dogmatizing.

Glanvill.

UNONA
UN-
PLUME.

UN-POISON. **UN-PO'ISON, v.** To strip, divest of, purify from—poisonous, venomous, contagiously noxious qualities.

UN-QUICK. Had the parochial clergy frequently and warmly insisted upon [them] to their respective congregations, and to the younger part of them especially; such a course could not, but in a short time, have *unpoisoned* their perverted minds, and rectified their false notions.
South, vol. v. Sermon 1.

UN-PO'RTUOUS. Having no ports or harbours.

These harbours of the British dominions are the *ports* of France. They are of no use but to protect an enemy from our best allies, the storms of Heaven, and his own rashness. Had the west of Ireland been an *unportuous* coast, the French naval power would have been undone.

Burke. On a Regicide Peace. Letter 3.

UN-PO'WER. Want of power; weakness.

And nat of the *unpower* of God, that he nys ful of myghte To amenden al that amys is.
Piers Plouhman, p. 336.

If you say yes, than putttest thou on Christ (that is the wise-dome of God the father) *vnkunning, vnpower, or euill will.*
Imputed to Chaucer. Jack Upland.

UN-PRAY, v. See the Quotation.

The freeness and purity of his obedience carried him on to it, and made him as it were *unpray* what he had before *prayed*.
Hale. Cont., vol. i. Christ Crucified.

UN-PREDI'CT, v. To gainsay or contradict any thing foretold.

Means I must use thou say'st, prediction else Will *unpredict*, and fail me of the throne.

Milton. Paradise Regained, book iii.

UN-PRIEST, v. } To deprive or divest of the sta-
UNPRI'ESTLY. } tion, or character of priest or presbyter.

But if he be a laye man, he shal lose his fredome, that is to saye, if he were a secular prest, or one *vnprest* by them, he shuld clerly lose his benefyce, prebende, or other lyuyng.
Bale. English Volaries, fol. 64.

Or [whether they] do haunt and use common games or playes, or behave themselves otherwyse *unpriestly* and unsemely.
Strype. Ecclesiastical Memoirs. Art. of Inquiry for Boner.

Leo neither dissolves the matrimony, nor excommunicates him, only *unpriests* him.

Milton. Martin Bucer on Divorce, ch. xxiv.

The people, enraged at his *unpriestly* conduct, would have torn him to pieces; when he retired to Lambeth, and, by way of expiation, rebuilt it with great magnificence.

Pennant. London.

UN-QUAI'LED. (*Un, aug.*) Quelled, or killed.

So grieve, (that never healthy, ever sicke,
That froward scholler to arithmeticke,
Who doth devision and subtraction flie,
And chiefly learns to add and multiply)
In longest journeys hath the strongest strength,
And is at hand, suppress, *unquail'd* at length.

Browne. Britannia's Pastorals, book i. s. 4.

UN-QUEEN, v. To strip off, to divest of, the rank of queen.

— Embalme me,
Then lay me forth (although *vnqueen'd*) yet like
A queene, and daughter to a king interre me.

Shakspeare. Hen. VIII. act iv. sc. 2.

UN-QUICK, not lively, or enlivened, or spirited, or animated; not active or sharp.

Lists not to eat; still muses; sleeps unsound,
His senses droop, his steady eye *unquick*;
And much he ails, and yet he is not sick.

Daniel. Civil Wars, book iii.

So every fœtus bears a secret hoard,
With sleeping, unexpanded issue stor'd;
Which numerous, but *unquicken'd* progeny,
Clasp'd and inwrapt within each other lie.

Blackmore. Creation, book vi.

VOL. XXVIII.

UN-RA'VEL, v. To *ravel* and to *unravel*, have by usage been greatly confused in their application. To *ravel* is to tear (*reave*) or pull asunder, (*sc.*) any thing involved or complicate; and thus,—to unfold, to disclose. And to *unravel* is—

1. To involve or complicate; to disorder.

But to *ravel* is also,—to tear or pull asunder (*sc.*) any thing whole or entire, into shreds, into ragged particles; and hence,—to pull or put into disorder or confusion; to confuse, to perplex, to entangle. And to *unravel*,—

2. To remove the confusion or perplexity; to disentangle, to place in order; to make clear or plain, to evolve.

In each case *un* may be neg.; but see To UNREAVE, and To UNRIP.

A religion that would change the face of things, and would also pierce into the secrets of the soul, and *unravel* all the intrigues of hearts, and reform all evil manners, and break vile habits into gentleness and counsel.

Taylor. Rule of Conscience, book i. ch. iv.

If they shall retire to folly, and *unravel* all their holy vows, and commit those evils from which they formerly run as from a fire or inundation, their case hath it in so many evils, that they have great reason to fear the anger of God, and concerning the final issue of their souls.

Id. vol. ii. Sermon 8.

The catastrophe, the Grecians call'd *disi*, the French le *denouement*, and we the discovery or *unravelling* of the plot.

Dryden. Essay on Dramatic Poesie.

— Old Penelope's tale
Inverted: has *unravell'd* all by day,
That he has done by night.

Id. Spanish Fryar, act i.

In an eternity, what scenes shall strike!
Adventures thicken! novelties surprise!
What webs of wonder shall *unravel*, there!

Young. Complaint. Night 6.

We are fallen into so profane, and sceptical an age, which takes a pleasure and a pride in *unravelling* almost all the received principles both of religion and reason.

Tillotson, vol. i. Sermon 1.

The precept of Aristotle and Horace, that the *unravelling* of the plot should not proceed from a miracle, or the appearance of a God, has place only in Dramatic poetry not in the Epic.

Pope. Homer. Odyssey. View of the Epic Poem, s. 7.

A man might have seen, that the justness of *unravelling* depended on the reality of the clew: which too, though dignified by the name of clew, is indeed no other than a number of odd ends, that wanted to be made consistent, rather than to be *unravell'd*.

Warburton. Divine Legation, book iii. sec. 6.

That great chain of causes, which linking one to another even to the throne of God himself, can never be *unravell'd* by any industry of ours.

Burke. On the Sublime and Beautiful, part iv. sec. 1.

Vain thought! that hour of ne'er *unravell'd* gloom

Came not again, or Lara could assume

A seeming of forgetfulness.
Byron. Lara, c. i.

UN-REA'SON, v. To deprive or divest of reason or reasonableness.

Lo, than will and *vnreason* bringeth a man from the blisse of grace, whiche thing of pure kinde, euery man ought to shonne and to eschew, and to the knot of wil and reason confirme.

Chaucer. Test of Loue, book iii.

However a man may for a while please himself in such objections against his Creator, and seem to himself to *unreason* the equity of God's proceedings; yet there will be a time when the sinner shall stand clearly convinced of the righteousness of God's dealings in his final departure from him.

South, vol. xi. Sermon 10.

UN-REAVE. See UNRAVEL, UNRIP, and UNRIVE. *Un*, in *Spenser*, appears to be the A. S. *On, aug.* and *Unreave, (i. e. en- or un-reave,)* to mean,—

UN-
REAVE.

To *reave* or *rive*, or *tear into*; *tear asunder*.
In *Hall*, *un. neg.*—*untorn, unrent*.

UN-
REST.

Penelope for her Ulysses sake,
deuiz'd a web her wooers to deceave:
in which the worke that shee all day did make,
the same at night she did again *unreave*.

Spenser. Sonnet 23.

Couldst thou think that a cottage not too strongly built, and
standing so bleak in the very mouth of the winds, could for any
long time hold tight and *unreav'd*?

Hall. Balm of Gilead, sec. 9.

UN-REMO'RSELESS, used by Cowley as more than
equivalent to *Remorseless*; with the prefix *un*, aug-
menting the force of the termination *less*.

The Roman Tully's pleasing eloquence,
Which in the ears did lock up every sense
Of the rapt hearer; his mellifluous breath
Could not at all charm *unremorseless* death.

Cowley. Elegy on Mr. Richard Clarke.

UN-RESPE'CT,

UNRESPE'CTED,

UNRESPE'CTING.

UNRESPE'CTIVE.

See IRRESPECTIVE. Unrespect,
i. e. disrespect, *q. v.*

And now lastly, Ammon his son neglects the frame, embeazels
the furniture of this holy place: the very pile began to complaine
of age and *unrespect*.

Hall. Cont. Josiah's Reformation.

It was a fault, she durst presume to question our Saviour of some
kinde of *unrespect* to her toyle, Lord dost thou not care?

Id. Ib. Martha and Mary.

Which wounds, with grief, poor *unrespected* zeal,
When grace holds no proportion in the parts.

Daniel. Civil Wars, book ii.

Celestial fire, and *unrespecting* pow'rs!
Which pity not the wounds made by their might;
Show'd in these lines the work of careful hours,
The sacrifice here offer'd to her sight.

Id. Sonnet 56.

RICH. I will conuerse with iron-witted fooles,
And *unrespectiue* boyes.

Shakspeare. Rich. III. act iv. sc. 2.

How unjustly hath the presumption of blasphemous cavillers
been wont to cast the envy of their condemnation meerly upon the
absolute will of an *unrespectiue* power, as if the damnation of the
creature where onely of a supream will, not of a just merit.

Hall. Select Thoughts.

Full sixty years the world has been her trade,
The wisest fool much time has ever made.
From loveless youth to *unrespected* age,
No passion gratify'd except her rage.

Pope. Moral Essays. Ep. 2.

But where gay palaces in pomp arise,
And gilded theatres invade the skies,
Nations shall wake, whose *unrespected* bones
Support the pride of their luxurious sons.

Young. The Last Day, book ii.

UN-REST, *n.*

UNRE'STING,

UNRE'STFUL,

UNRE'STFULNESS,

UNRE'STY.

Unresting,—not staying or
remaining in peace or tranquil-
lity; in stillness or repose; in
quiet, in content. (*Restless*.)
Unrest—disquiet.

— And now wolde [he] by gynne
He were *unworast* of hus worde. that wisse is of trewethe.

Piers Ploughman, p. 356.

She shewed wel, for no worldly *unrest*
A wif, as of hireself, no thing ne sholde
Wille in effect, but as hire husbond wolde.

Chaucer. The Clerkes Tale, v. 8596.

But for as much as me mote nedes like
All that you list, I dare nat plaine more,
But humbly, with sorowfull sighes sike,
You write I mine *vnrestie* sorowes sore
Fro day to day.

Id. Troil. and Cres. book v.

To faint and to fresh the pausacion,—
Vnto *vnresty*, both rest and remedy,
Fruitful to all tho' that in her affie.

Imputed to Chaucer. A Ballade in Commendation of Our Lady.

And sometime be we suffered for to seke
Upon a man, and don his soale *unreste*
And not his body.

Id. The Freres Tale, v. 7078

But when I made my count, with how great care of mind
And hearts *unrest*, thus I had sought so wasteful fruit to find;
Then was I stricken straight with that abused fire,
To glory in that goodly wit that compass'd my desire.

Surrey. Paraphrase on Ecclesiastes, ch. ii.

He shal with his peacible order (if it wer obserued) bryng the
worlde in that case, y^t good peacible folke that fayn wold liue in
peace, should not for suche inquiete & *vnrestfull* wretches
without some ruffle liue in peace long.

Sir T. More. Workes, p. 961.

Whiche put the said Vortiger to great *vnrestfulness*, & y^e more
for that, y^t he wyst nat, nor knew nat in whom he myght put his
trust & cofydence in.

Fabyan. Chronycle, ch. lxxxii.

And let *unresting* Charity believe
That then thy oath with thy intent agreed.

Daniel. Civil Wars, book i.

There looking forth, she in her hart did find
Many vaine fancies, working her *vnrest*;
And sent her winged thoughts, more swift then wind,
To beare vnto her loue the message of her mind.

Spenser. Faerie Queene, book v. can. 6.

Th' affront we have met here
We'l think upon hereafter, 'twere unfit
To cherish any thought to breed *unrest*,
Or to our selves, or to our nuptial feast.

Beaumont and Fletcher. Little French Lawyer, act i.

But ay the ruthless driver goads them on,
And ay of barking dogs the bitter throng
Makes them renew their unmelodious moan;
Ne ever find they rest from their *unresting* fone.

Thomson. Castle of Indolence, c. ii.

But fever'd in her sleep she seems,
And red her cheek with troubled dreams,
And mutters she in her *unrest*
A name she dare not breathe by day.

Byron. Parisina, s. 5.

UN-RI'DDLE, *v.* } To remove, to free from, in-
UNRI'DDLER. } volution, entanglement or per-
plexity.

Many justly admired, that either a bishop could be so small in
person, or a child so great in clothes; though since all is *unrid-
dled*.

Fuller. Worthies. Wiltshire.

It is excellent to hear a man discourse the hidden things of
nature, and *unriddle* the perplexities of human notices and mis-
takes.

Taylor, vol. i. Sermon 11.

Ye safe *unriddlers* of the stars, pray tell,
By what name shall I stamp my miracle?

Lovelace. Lucasta. To Mr. E. R.

Lys. Still more and more mysterious: but I have gain'd one of
her women that shall *unriddle* it.

Dryden. Secret-Love, act i. sc. 3.

Por. Placidius here

And fair Valeria, new depriv'd of breath?
Who can *unriddle* this dumb show of death?

Id. Tyrannick Love, act v.

This design once admitted, *unriddles* the mystery of the whole
conduct of the emperour's ministers with regard to France.

Burke. On the French Revolution.

UN-RIGHT,

UNRI'GHTFUL,

UNRI'GHTFULLY,

UNRI'GHTFULNESS,

UNRI'GHTEOUS,

UNRI'GHTEOUSLY,

UNRI'GHTEOUSNESS,

UNRI'GHTWISENESS.

Unright is used by our old
authors adjectively, adverbially,
substantively, and ver-
bally; equivalent to—

Wrong, unjust, wrongly,
unjustly. Wrong, injustice.
To do wrong, to injure.

Unrightwise, or (*wise* cor-
rupted into *eous*) *vnrighteous*, is—not rightly wise, just,
or pious; not holy or godly;—or unjust, impious, un-
holy, ungodly.

UN-
REST.UN-
RIGHT.

UN-
RIGHT.

He nom verst myd *vnrygt*, & brogte that lond in wo.
R. Gloucester, p. 196.

And seide he myghte me nat a soile. bote ich sulver hadde
To restitue resonabliche. for al *vnryghtful* wynnynge.
Piers Plouhman, p. 202.

And some to ryde and reckevere. that *vnryghtfulliche* was wonne.
Id. p. 378.

For the wraththe of God is schewid fro heuene on al unpitē &
wickidnesse of tho men that with holden the treuthe of God in
vnrightwysnesse.
Wiclif. Romayns, ch. i.

For the wrath of God appeareth frō heuene agaynst al vngod-
lynes and *vnryghteousnes* of men whyche wytholde the trueth in
vnryghteousnes.
Bible, Anno 1551. Ib.

But these ben as unresounable beestis kyndeli into taking and
into deeth. blasfemyng in these thingis that thei knowen not, and
schulen perische in her corrupcioun and resseyue the hire of
vnrightwysnesse.
Wiclif. 2 Peter, ch. ii.

But these as brute beastes, naturally made to be takē and de-
stroyed, speake euil, of that they know not, and shal perysh
through their owne destruccion, and receaue the rewarde of *vnryght-*
eousnes.
Bible, Anno 1551. Ib.

He that spekith of hymself, sekith his owne glorye: but he that
sekith the glorye of him that sente him, is sothfast, and *vnright-*
wysnesse is not in him.
Wiclif. Jon, ch. vii.

He that speaketh of him self, seketh his owne prayse. But he
that seketh his prayse that sent him, the same is true, and no
vnrightwysnesse is in him.
Bible, Anno 1551. Ib.

As king royall, he [Phebus] rode vpon a chare,
The which Pheton sometime gided *vnright*,
The brightnesse of his face whan it was bare,
Non might behold, for persing of his sight.
Chaucer. Testament of Creseide.

Right so, though that her forme were absent,
The pleasaunce of her forme was present,
But nathelesse, nat pleasaunce, but delite,
Or an *vnrightfull* talent with despite,
For maugre her, she shall my lemman be.
Id. Legende of Lucrece.

And eke the same Plato liuyng, his maister Socrates, deserved
victorie of *vnrightfull* death in my presence.
Id. Boecius, book i.

And folke of wicked maners, sitten in high chaires, and
ennoyng folke treden (and that *vnrightfully*) on the neckes of
holy men.
Id. Ib.

Wherefore I saie, euery wight hauynge this *rightwysnesse*,
rightfull is, and yet therefore I feeel not in my conscience, that to
all *rightfull* is behoten the blisse euerlasting, but to hem that been
rightfull, withouten any *vnrightfulnessse*.
Id. Testament of Loue, book iii.

Yet rather than he shulde spede,
I wolde suche tales sprede
To my ladie, if that I might,
That I shuld all his loue *vnright*.
Gower. Conf. Am. book ii.

— All though it were *vnright*
There is no peine for him dight.
Id. Ib.

— Better it were to redresse
At home the great *vnrightwysnesse*,
Than for to warre in strange place,
And lese at home her owne grace.
Id. Ib. book vi.

He was so faithfull and iust that no fawlt or *vnright* coude thei
fynde in him.
Joye. Expositioun of Daniel, ch. xii.

[John] did repell the false suspicion that thei had touching
himself, whiche might haue hindered the glorie of Christe among
the people: & boldly contemning the glorie of an *vnrightfull*
title, did confesse y^t he was not Messias (as many thought he
had been).
Udall. John, ch. i.

Which was not only entended by wisdom, but also set on
with speede, & so entred into a due considering of al states, that
none should haue iust cause to grudge against the other, when as
euery thing *rightfully* had, nothing could be but *vnrightfully*
grudged at.
Sir J. Cheeke. The Hurt of Sedition.

All the chyldren of men are *vnryghteous*, and all their wurkes
are wycked, and there is no truthe in them.
Bale. Apologie, fol. 58.

But that euery thing that we haue done, as farre foorth as it
hath proceaded onely of our selues, is more worthy to be called
synne and *vnryghteousnes*, than any acte of vertue and godlyness.
Fisher. A Godlie Treatise, &c.

UN-
RIGHT.

UN-SAD.

For what in most English writers vseth to be loose, and as it
were *vnright*, in this author is well grounded, finely framed, and
stronglie trussed vp together.

Spenser. Shepheard's Calendar

He shall thinke, that thou which know'st the way
To plant *vnrightfull* kings, wilt know againe,
Being ne're so little vrg'd another way,
To pluck him headlong from the vsurped thrones.
Shakspeare. Rich. II. act v. sc. 1.

Octavius here leapt into his room,
And it vsurped by *vnrighteous* doome.
Spenser. Faerie Queene, book ii. can. 10.

Or else it [the soul] sits repining, even to atheism, finding
itself hardly dealt with, but misdeeming the cause to be in God's
law, which is in man's *vnrighteous* ignorance.

Milton. Doctrine and Disc. of Divorce, book i. ch. ix.

As the inherent *vnrighteousness* consequent upon Adam's sin is
not included in God's condemning, so neither is the inherent
righteousness proceeding from our Saviour's obedience contained
in God's justifying them.
Barrow, vol. ii. *Sermon 5.*

And whether they do not by false imputations, and cruel
mockings, the only weapons which they have at command, per-
secute most *vnrighteously*, (without any pretence of conscience to
oblige them to it) both Christian faith, and natural piety, without
sparing in several instances even moral virtue.

Secker, vol. iii. *Sermon 18.*

UN-RIP, v. *Un*, negative, is here improper. It
may be as in *un-less*, the A. S. *on*,—though the verb
on-hrypp-an, (to *enrip*), is not found in our A. S. lex-
icous; and thus to *un-rip*, will be—

To rip into; to tear, cut, or slit into; and, conse-
quentially, to lay open or bare.

And of federbeddes *rypped* the tekys & helde theym in the
wynde, y^t the fethers myght be blowyn away and loste for euer,
& *vnryppyd* the howse in dyuers places that the rayne and other
wederynge myght entre.

Fabyan. Chronycle. Philip IV. Anno 20.

This told, yet more I urge him to reveal,
To lose no time, whilst I *unrip'd* the seal.
Drayton. Henry II. to Rosamond.

— Now, though thy breath doth strike me dead
(Which know it may) I have *unript* my breast.
Beaumont and Fletcher. Philaster, act i.

UN-RI/VET, v. To remove or destroy that which
rivets or clenches firmly:—in armour, the points by
which the arms are fitted and fastened (Minshew.)

Their cuirates are *unriveted* with blows,
With horrid wounds their breasts and faces slasht;
There drops a cheek, and there falls off a nose,
And in one's face his fellow's brains are dasht.
Drayton. Battle of Agincourt.

No man can blame a captive if he would be free; and if he may
untie the knot of a cord wherewith he was bound; why may he
not *unrivet*, or grate an iron wherewith he is fettered?

Hall. Cases of Conscience, Dec. 2. Case 5.

UN-RUDE. *Un* seems here to be used as in *unrip*,
(A. S. *on*,) augmentatively and not negatively, unless
we are to take the speaker and not poet as authority.

Because my husband put him into a few rags, and now see how
the *unrude* rascal backbites him!

Ben Jonson. Every Man out of his Humour, act iv. sc. 1.

They have need o' mending: *unrude* people they are, your
courtiers.
Id. Masque of Christmas.

UN-SAD, } See SAD. *Unsad* is—unsteady;
UNSA'DDEN, v. } consequentially, fickle.
UNSA'DNESS. } *Unsadness*, (Wiclif)—infirmity, or
infirmness; consequentially, weakness (as in the Mod.
Ver.)

UN-SAD. For he witnessith, that thou art a preeste withouten ende bi the ordre of Melchisedech: that repreuyng of the maundement bifore goynge is maad for the *unsadnesse* [infirmity] and unprofyt of it.
Wiclif. Ebrewis, ch. vii.

O stormy peple, *unsad*, and ever untrew,
 And undiscrète, and changing as a fane,
 Delighting ever in rombel that is newe,
 For like the mone waxen ye and wane.

Chaucer. The Clerkes Tale, v. 8872.

Musick *unsaddens* the melancholy, quickens the dull, awaketh the drowsy.
Whitlock. Manners of the English, p. 483.

UN-SAY, *v.* Not to utter, or give utterance to; not to speak or tell, relate or rehearse; to gainsay; to deny any thing before said.

Though thei be content to *saye* sometime the fyftene psalmes, and ouer that the psalmes of the passion to, if they finde them all faire sette out in order at length: yet wil they rather leaue the all *unsayed*, then turne backe to seke them out in other parties of their primer.

Sir T. More. Workes, p. 931.

Death! I recant, and say, *unsaid* by me
 Whate'er hath slipt, that might diminish thee:
 Spiritual treason, atheism 't is to say,
 That any can thy summons disobey.

Donne. On Mistress Boulstred.

[My contemporaries have] a most happy art in saying and *unsaying*, giving hints of intelligence, and interpretations of indifferent actions, to the great disturbance of the brains of ordinary readers.

Tatler, No. 178.

It means that you can say and *unsay* things at pleasure.

Goldsmith. She Stoops to Conquer, act v.

UN-SCA'LY, } *Unscaly*,—having no scales, *i. e.*
 UNSCA'LED, } small separate pieces, (forming the
 UNSCA'LEABLE. } cover or coat of a fish); *unscaling*.

Unscaling (Milton),—removing, clearing away, the scales or small particles growing over the eye and impeding vision.

Unscaleable,—that cannot be climbed (by ladder, of separate steps;) that cannot be ascended.

Now had the king appointed for euerie one of their chambers one man apparelled in garments pretilie deuised and made of fish skins *vnskaled*.

Holinshed. Historie of Scotland. Alpine.

————— Your isle, which stands
 As Neptunes parke, ribb'd, and pal'd in
 With oakes *vnskaleable*, and roaring waters,
 With sands that will not bear your enemies boates,
 But suck them vp to th' top-mast.

Shakspeare. Cymbeline, act iii. sc. 1.

Methinks I see her as an eagle muing her mighty youth, and kindling her undaz'd eyes at the ful mid-day beam; purging and *unscaling* her long-abused sight at the fountain itself of heavenly radiance.

Milton. Areopagitica.

Red speckled trouts, the salmon's silver jowl,
 The jointed lobster, and *unscaly* soal.

Gay. Trivia, book ii.

UN-SCIENCE. Not knowledge; ignorance.

If that any wighte wene a thyng, to been otherwise than it is, it nis not onely *vnscience* [non modo scientia non est] but it is deceiuable opinion, full diuers and farre fro the sothe of science.

Chaucer. Boecius, book v.

UN-SCREW, *v.* The dramatist means,—to loosen that which is wound or twisted close or tight.

————— I should curse my fortune
 Even at the highest, to be made the ginne
 To *unscrew* a mother's love unto her son.

Beaumont and Fletcher. Queen of Corinth, act iii. sc. 1.

They can the cabinets of kings *unscru*,
 And hardest intricacies of state unclue.

Howell. Verses. Preface to Letter.

UN-SEAL, *v.* D. *ontzegelen*. To remove the seal, *i. e.* that which closes (any thing intended to be kept

safe or secret) or keeps shut; thus, to open, to discover or disclose.

Than Symonye and Cyvyle. stod forth bothe
 And *unseeld* that feffement.

Piers Plouhman, p. 27.

Seilde is the poure ryght riche. bote of hus ryght heritage
 He wynneth nat whit whyghtes fals, ne whit *unselide* measures.
Id. p. 269.

So he toke the letters *vnsealed*, and retourne into Englande agayne assoone as he might.

Berners. Froissart. Cronycle, vol. i. ch. 425.

If this preserve thee not, I must *unseal*
 Another mystery.

Beaumont and Fletcher. The Coronation, act ii.

CET. Are your eyes yet *unseel'd*? dare they look day
 In the dull face?

Ben Jonson. Catiline, act i. sc. 1.

Thrice warn'd awake, said he; relief is late,
 The deed is done; but thou revenge my fate;
 Tardy of aid, *unseal* thy heavy eyes,
 Awake, and with the dawning day arise.

Dryden. Cock and the Fox.

Now, gentle spirit, use thy utmost art;
Unseal her eyes; and this way lead her steps.

Id. King Arthur, act iii.

Whom Nestor welcom'd, charging high the cup
 With wine of richest sort, which she, who kept
 That treasure, now in the eleventh year
 First broach'd, *unscaling* the delicious juice.

Cowper. Homer. Odyssey, book iii.

UN-SE'AM, *v.* To destroy, to sever, the juncture formed by sewing; generally—to sever, to slit, to cut open.

Which neu r shooke hands, nor bad farewell to him,
 Till he *vnseam'd* him from the naue to th' chops,
 And fix'd his head vpon our battlements.

Shakspeare. Macbeth, act i. sc. 2.

But look thee, Martius, not a vein runs here
 From head to foot, but Sophocles would *unseame*, and
 Like a spring garden shoot his scornfull blood
 Into their eyes, durst come to tread on him.

Beaumont and Fletcher. Moral Representations.

One gallant steed is stretch'd a mangled corse;
 Another, hideous sight! *unseam'd* appears,
 His gory chest unveils life's panting source;
 Though death-struck, still his feeble frame he rears;
 Staggering, but stemming all, his lord unharm'd he bears.

Byron. Childe Harold, c. 1.

UN-SEE'MING, } Not looking or appearing (*sc.*
 UNSEE'MLY, } as it ought to look or appear;)
 UNSEE'MLINESS. } not suitable or becoming or comely; not pleasing to see or perceive.

Thei did a foule trespas, it was *vnseemly* thing.

R. Brunne, p. 171.

And that *unsemyng* Sufraunce ne seele goure pryveie lettres.
Piers Plouhman, p. 74.

And if he liue, he mote him bynde
 To suche one, whiche of all kynde
 Of women is the *vnsemeleste*.

Gower. Conf. Am. book i.

In stede of circumcision, cutte out of the mynde superfluous and *vnsemyng* desyres.

Udall. Romaines, ch. xii.

And [he] prayed his wyfe of help in y^t tyme of nede, and y^t she wold, i al y^t she myghte, make her selfe as fowle & as *vnsemy* as she coude.

Fabyan. Chronycle, ch. 194.

Lette them quietly worke also, getting their liuyng with their owne handes, rather than to be greuouse vnto other with shameles crauinges & *vnsemeles*.

Udall. 2 Thess. ch. iii.

O! all is gone: and all that goodly glee
 Which wont to be the glory of gay wits,
 Is layd abed, and no where now to see;
 And in her roome *vnseemly* sorrow sits.

Spenser. Teares of the Muses.

UN-
SEAL.
—
UN-
SEEM-
ING.

UN-
SEEM-
ING.

Here he [Gardiner] fel into such a great rage, as was told me [Mountain] by one of his own men, as was *unseeming* for a bishop; and with great speed sent for the knight marshal.

Strype. Eccles. Mem. Queen Mary, (1554.)

UN-SEX.

PRIN. You doe the king my father too much wrong,
And wrong the reputation of your name,
In so *unseeming* to confesse receyt
Of that which hath so faithfully beene paid.

Shakspeare. Loues Labour Lost, act ii. sc. 1.

There is an *unseemly* accident happening otherwiles to the head, and disgraceth it much, called Alopecia, when as the haire unnaturally falleth off.

Holland. Plinie, book xxv. ch. xi.

An *unseemly* reflection upon what are emphatically called the sacrifices of God, in that very place, as vastly preferable to material sacrifices.

Waterland. Works, vol. viii. p. 183.

He city-ward his king
Led on, in form a squalid beggar old,
Halting, and in *unseemly* garb attir'd.

Cowper. Homer. Odyssey, book xvii.

UN-SETTLE, v. } To remove from its place or
UNSETTLEDNESS, } position; to loosen from its
UNSETTLEMENT. } hold, from its firmness; to
shake its steadfastness or constancy, or equability, (met.)
the firmness, resolution, decision.

The Spaniard is not so simple, *unsettled* and *uncertaine* in his determinations, as to build them on our breath, or to make our papers our bulwarks.

Hakluyt. Voyages, vol. iii. p. 667.

Dauid supposed that it could not stand with the duetie which he owed vnto God, to set himselfe in an house of cedar trees, and to behold the arke of the Lord's covenant *unsettled*.

Hooker. Ecclesiasticall Politie, book ii. sec. 6.

They [transitory parlements] are much likelier continually to *unsettle* rather than to settle a free government, to breed commotions, changes, novelties and uncertainties.

Milton. Way to establish a Free Com.

The difficulty was not in the stile, but in the subject matter; nor there indeed, as they are in themselves, so much as by the ignorance and instability, or *unsettledness* of foolish people.

Taylor. Dissuasive from Popery, part ii. sec. 2.

This news made our *unsettled* crew wish, that they had been persuaded to accept of Captain Eaton's company on reasonable terms.

Dampier. Voyages, Anno 1684.

[I leave it to be considered] whether it would not be well that the use of words were made plain and direct, and that language, which was given us for the improvement of knowledge and bond of society, should not be employed to darken truth, and *unsettle* people's rights; to raise mists, and render unintelligible both morality and religion?

Locke. Human Understanding, book iii. ch. x.

[St. Paul] whose life was spent in continual agitation and *unsettledness*, in all hardships of travel and labour and care, in extreme sufferance of all pains both of body and mind.

Barrow, vol. iii. Sermon 15.

The not doing of which, I am sure, has ruined the peace of this poor church, and shook it into such *unsettlements*, that the youngest person alive is not like to see it recovered to its full strength, vigour and establishment.

South, vol. x. Sermon 9.

What the prophet Elijah said to the Israelites belongs equally to all of this *unsettled* character: How long halt ye between two opinions? if the Lord be God, follow him: but if Baal, then follow him.

Secker, vol. ii. Sermon 18.

UN-SEX, v. To remove or destroy the distinguishing characteristics of sex.

Come you spirits
That tend on mortall thoughts, *unsex* me here,
And fill me from the crowne to the toe, top-full
Of direst crueltie: make thick my blood,
Stop vp th' accesse, and passage to remorse,
That no compunctious visitings of nature
Shake my fell purpose, nor keepe peace betweene
Th' effect, and hit [it].

Shakspeare. Macbeth, act i. sc. 5.

Is it for this the Spanish maid, aroused,
Hangs on the willow her unstrung guitar,
And, all *unsex'd*, the anlace hath espoused,
Sung the loud song, and dared the deed of war?

Byron. Childe Harold, can. 1.

UN-SEX.

UN-
SHROUD

UN-SHAPE, v. To put out of shape, or form, or order; to deform, to disorder, to discompose.

She groneth dailye in bringing forth children yet *vnshapen*, and vnperfeite, vntil thei shall haue receiued the spirite of the gospel, and vntil Christ bee brought to perfect *shape* in them.

Udall. Luke, ch. vii.

ANG. Good night.

This deede *vnshapes* me quite, makes me vnpregnant
And dull to all proceedings.

Shakspeare. Measure for Measure, act iv. sc. 4.

Her speech is nothing,
Yet the *vnshaped* vse of it doth moue
The hearers to collection.

Id. Hamlet, act iv. sc. 5.

UN-SHED. In Spenser, *on-shed*, or *en-shed*. Or—
unsevered, unseparated. (See UNRIP, UNREAVE.) In
Byron, not dispersed, not spilt.

And his faire locks, that wont with oyntment sweet
To be embaulm'd, and sweat out dainty deaw,
He set to growe, and griesly to concrew,
Vncomb'd, vncurl'd, and carelesly *vnshed*.

Spenser. Faerie Queene, book iv. can. 7.

Upon her face there was the tint of grief,
The settled shadow of an inward strife,
And an unquiet drooping of the eye
As if its lid was charged with *unshed* tears.

Byron. The Dreame.

UN-SHIP, v. To remove from, bear or carry or cast out of, a ship, (q. v.) or vessel.

Than the kynge of Cyper passed the see, and arryued at Douer, and there taried two dayes and refresshed hym tyll all hys cariage was *vnshypped*.

Berners. Froissart. Cronycle, vol. i. ch. 218.

But when wee would haue entred into an harbour, the land being very high on euery side, there came such flawes of winde and terrible whirlwinds, that we were not able to beare in, but by violence were constrained to take the sea agayne, our pinnesse being *vnshipt*.

Hakluyt. Voyages, vol. i. p. 235.

They anchoring there at first but to refresh their fleet,
Yet saw those savage men so rudely them to greet,
Unshipt their warlike youth, advancing to the shore.

Drayton. Poly-olbion, song 1.

The people in the boats made several attempts to lay hold of him; but he, as often, dived under the boat, and at last having *unshipped* the rudder, which rendered her ungovernable, by this means he got clear off.

Cook. Second Voyage, book ii. ch. ii.

UN-SHOUT, v. To remove, to destroy (the effects of) a shout or a noise, shot or thrown forth.

Vnshoot the noise that banish d Martins;
Repeale him, with the welcome of his mother:
Cry welcome ladies, welcome.

Shakspeare. Coriolanus, act v. sc. 4.

UN-SHRIVE, v. To *shrive* is—to hear confessions and enjoin penance. (Somner.) And unshrived—unconfessed.

By ther service soche wollin live,
And trust that othir to tresure;
Though all ther parishe die *unshrive*
Thei woll nat givin a rose floure.

Imputed to Chaucer. Plowman's Tale.

UN-SHROUD, v. To discover or uncover; to disclose.

At length the piercing Sun his beames *unshroues*.
And with his arrows the idle fog doth chase:
The broken mist lies melted all in tears.

P. Fletcher. Purple Island, c. 12.

UN-
SHUT.
—
UN-
SOFT.

UN-SHUT, *v.* To throw open; to open.

This noble knight, this January the old
Swiche deintee hath in it to walke and pley,
That he wol suffre no wight bere the key,
Sauf he himself, for of the smal wicket
He bare alway of silver a cliket,
With which whan that him list he it *unshette*.

Chaucer. *The Marchantes Tale*, v. 9922.

For he the dore *vnshette*
So priuely, that none it herde.

Gower. *Conf. Am.* book vi.

Goe say that the plaguy—spirituall—leprousie of sinne rising
up in the foreheads of many in that church, *unshut* up, uncovered,
(yea, wilfully let loose) infects all both persons and things
amongst them.

Hall. *An Apologie against Brownists*, sec. 55.

UN-SIN, *v.* } *Unsinning*,—not doing or acting
UNSI'NNING. } wrong or in disobedience to the laws of
God; (not violating or neglecting them.)

Sometimes it [works] is taken for a perfect, actual, *unsinning*
obedience, sometimes for a sincere endeavour to please God.

Taylor, vol. iii. *Sermon* 3.

But it is to be wondered at, how repentance can again in favour
as with an offended God; since when a sin is past, grief may
lessen it, but not *unsin* it.

Feltham, part i. *Research* 89.

UN-SI'NEW, *v.* } To deprive of strength, might,
UNSI'NEWY. } firmness, vigour, energy.

In case any thing is excusable in them, it is not in regard of
themselves, but in comparison with some other formless, *unsinewy*
writings.

Strype. *Ecclesiastical Memoirs*. Edward VI. (from Hayward.)

This skill wherewith you have so cunning been,
Unsinews all your pow'rs, unmans you quite.

Daniel. *Musophilus*.

KING. O for two special reasons,
Which may to you [perhaps] seeme much *vsinnewed*,
And yet to me they are strong.

Shakspeare. *Hamlet*, act v. sc. 7.

I said before, and I repeat it now, that the affected purity of the
French, has *unsinew'd* their heroick verse.

Dryden. *Virgil*. *Dedication*.

We never knew this vain expence, before
Th' effeminated Grecians brought it o'er;
Now toys and trifles from their Athens come,
And dates and pepper have *unsinew'd* Rome.

Id. *Persius*. *Satire* 6.

UN-SLUICE, *v.* To open the sluice (*claus-us*),
that which closes or shuts up.

Now lofty Calidon in ruines lies;
All ages, all degrees *unsluice* their eyes;
And heav'n and earth resound with murmurs, groans and cries.

Dryden. *Ovid*. *Metamorphoses*, book viii.

UN-SOFT, } Not gentle, soothing, delicate,
UNSO'FTENED. } pliant.

Unsoftened,—Not mollified, soothed, assuaged,
melted.

Whiche thicke bristles of his berd *unsoft*,
Like to the skin of houndfish, sharp as brere.

Chaucer. *The Marchantes Tale*, v. 9699.

My wofull herte is so to beate,
That all my wittes ben *vnsofte*.

Gower. *Conf. Am.* book iii.

Ah, God shield, man, that I should clime,
and learne to looke aloft;
This reade is rife, that oftentime
great numbers fall *vnsoft*.

Spenser. *Shepherd's Calendar*. July.

Even this infamous person is thought a fitter object of mercy,
than Jesus; and now, impatient of delay, and *unsoftened* by all
these applications, they cry out, more vehemently than ever,
Crucify him, crucify him.

Atterbury, vol. iii. *Sermon* 5.

UN-SOW, or } This very old word is very common UN-SOW
UNSE'w, *v.* } in speech, though not till now re- UN-
ceived into an English dictionary. SPHERE.

To remove; to destroy that which sews or is sowed
or joined together by intersertion, (*sc.* of string, thread,
&c.)

Hue sholde *unsywe* hure smok. and sette ther an heire
To afaiten hure flesch. that fers was to synne.

Piers Plouhman, p. 87.

Unsowed was the body soone,
As he that knewe, what was to doone.

Gower. *Conf. Am.* book viii.

But the bare ground, with hoary mosse bestrowed,
Must be their bed, their pillow was *unsowed*,
And the fruits of the forrest was their feast:
For, their bad Stuard neither plough'd nor sowed,
Ne fed on flesh.

Spenser. *Faerie Queene*, book vi. can. 4.

UN-SPEAK, *v.* } To recant any thing spoken.
UNSPÉ'AKABLE, } *Unspeakable*,—that may not be
UNSPÉ'AKABLY. } spoken, uttered, or told, or ex-
pressed; above or beyond the powers of speech or
utterance.

Leat it come to your remembraunce again, how that of al these
thinges which haue now been doen, he leaft not any one point
vnspoke of, or vntold aforehand whan he was yet in Galilee.

Udal. *Luke*, ch. xxiv.

And the morow after brought them with great honor to Cantur-
burie, where they were with due reuerence and *vnspokeable* ioy
receiued of archbishop Richard.

Holinshed. *Chronicles of England*. Henry II., Anno 1129.

And therefore if a man wyll ryghtly thynke of God him selfe, let
his mynde ouerrunne all worldly creatures, and conceiue him
onlye alone whiche is highest, best, most excellent, most mightei,
and him that, without exception, doth *vnspokeably* excede all
other thinges.

Fisher. *A Godlie Treatise*, &c.

For euen now
I put myselfe to thy direction, and
Vnspeake mine owne detraction.

Shakspeare. *Macbeth*, act iv. sc. 3.

O huge and most *vnspokeable* impression
Of loues deepe wound, that pierst the pitious hart
Of that deare Lord with so entire affection,
And sharply launching euery inner part,
Dolours of death into his soule did dart.

Spenser. *An Hymne of Heauenly Loue*.

What is this, besides tyranny, but to turn nature upside down,
to make both religion, and the mind of man wait upon the slavish
errands of the body, and not the body to follow either the sanctity
or the sovereignty of the mind, *unspeakably* wrong'd, and with all
equity complaining?

Milton. *Tetrachordon*.

It must be certainly a state *unspeakably* anxious and uncomfort-
able to find one's self dragged to the grave, without knowing
whether the last trumpet shall call him thence to heaven, or to
hell.

Boyle. *Works*, vol. ii. p. 380.

Nevertheless the very sound of a miserable or an insensible
Deity is shocking to the ear and repugnant to all our notions, nor
was there ever any one who admitted the being of a God that did
not conceive him *unspeakably* happy.

Search. *Light of Nature*, vol. ii. part i. ch. xv.

Well, Madam, what if, after all this sparring,
We both agree, like friends, to end our jarring?
And that our friendship may remain unbroken,
What if we leave the epilogue *unspoken*?

Goldsmith. *Epilogue to the Sisters*.

UN-SPHERE, *v.* To remove, to withdraw from
the sphere, orb, or globe.

HER. Verely?

You put me off with limber vovves: but I,
Though you would seek t *unsphere* the stars with oaths,
Should yet say, sir, no going.

Shakspeare. *Winter's Tale*, act i. sc. 2.

UN-
SPHERE.
—
UN-
STRAIN.

Where I may oft out-watch the bear,
With thrice great Hermes, or *unsphere*
The spirit of Plato, to unfold
What worlds, or what vast regions hold
The immortal mind, that hath forsook
Her mansion in this fleshly nook.

Milton. *Il Penseroso*.

UN-SPIN, v. To undo the spinning.

Oh cruell fates! the which so soone,
his vitall thred *vnsponne*.

Holinshed. *Historie of Scotland, Anno 1577*.

UN-SPIRIT, v.

UNSPIRITUAL,

UNSPIRITUALIZE, v.

See To DISPIRIT. To re-
move, take away, or deprive
of spirit, heart, or courage.
Unspiritualize,—to deprive of spirituality, or a supe-
riority to, a disregard of, carnal or worldly things.

What could the frailty of Arcadius
Suggest, to *unspirit* him so much, as not
To fly to her embraces.

Beaumont and Fletcher. *Coronation, act iii*.

An ox will relish the tender flesh of kids with as much gust and
appetite, as an *unspiritual* and unsanctified man will do the dis-
courses of angels or of an apostle, if he should come to preach the
secrets of the gospel.

Taylor, vol. ii. *Sermon 1*.

Now there are several enjoyments in themselves very lawful,
and yet such, as upon a free unwary use of them, will by degrees
certainly indispose and *unspiritualize* the mind, dulling its appe-
tite, and taking off its edge and relish to the things of God.

South, vol. vi. *Sermon 7*.

And Circumstance, that *unspiritual* god
And miscreator, makes and helps along
Our coming evils with a crutch-like rod,
Whose touch turns Hope to dust,—the dust we all have trod.

Byron. *Childe Harold, can. 4*.

UNSTABLISHED, } So Chaucer renders the Lat.
i. e. EN-STABLISHED. } *constitutam*; the *un*, augmen-
tative, as in *unloose, unrip, &c.*

UN-STATE, v. To divest, or deprive of rank or
quality.

Eno. Yes like enough: hye battel'd Cæsar will
Vnstate his happinesse, and be stag'd to' th' shew
Against a sword.

Shakspeare. *Anthony and Cleopatra, act iii. sc. 11*.

UN-STOCK, v. To remove, to deprive of that
which sticks, fixes, or holds fixed or fast; or by which
any thing is held fixed or fast.

Thus whan he hath his cofer loken,
It shall not after ben *vnstoken*,
But whan he list to haue a sight
Of golde, howe that he shineth bright,
That he theron maie loke and muse.

Gower. *Conf. Am. book v*.

The Trojans fast
Fell to their work, from the shore to *unstock*
High rigged ships.

Surrey. *Virgile. Æneis, book iv*.

Wee came to an anker in foule ground and lost the same, and
lay all that night a drift, because we had nowe but two ankers left
vs, which were *vnstocked* and in hold.

Hakluyt. *Voyages, vol. ii. p. 107*.

UN-STRAIN, v. To undo or remove the tightness,
the close contraction.

Then, to prison of the night
Did condemn those sisters bright,
There for ever to remain,
'Less they could the knot *unstrain*
Of a riddle, which she put
Darker, than where they are shut.

Ben Jonson. *Love freed from Folly*.

The fearless British priests, under an aged oak,
Taking a milk-white bull, *unstrained* with the yoke,
And with an ax of gold, from that Jove sacred tree
The mistleto cut down: then with a bended knee
On th' unhew'd altar laid, put to the hallow'd fires.

Drayton. *Poly-olbion, song 9*.

UN-
STRING.
—
UN-
TANGLE

UN-STRING, v. To remove, to take away, loose
or relax—the string, or cord.

Or mute harpes untun'd, *unstrung*,
Up we hung
On greene willowes neere beside us;
Where we sitting all forlorne,
Thus in scorne
Our proud spoylers 'gan deride us.

Donne, *Psalm 137*.

Still would the willing muse aspire,
With transport still her strains prolong;
But fear *unstrings* the trembling lyre,
And admiration stops her song.

Congreve. *Ode to Queen Anna*.

He has disarmed his afflictions, *unstrung* his miseries: and
though he has not the proper happiness of the world, yet he has
the greatest that is to be enjoyed in it.

South, vol. ii. *Sermon 12*.

The thing is possible, but still the instruments might play in
concert. But if ours be *unstrung*, yours will be hung up on a peg:
and both will be mute for ever.

Burke. *Letter to Thomas Burgh, Esq.*

UN-SU'RGING. Not rising, not moving in waves.

But as a ship, that in a quiet calm
Floats up and down on the *unsurging* seas,
By some rough gust, which some ill star doth raise,
Is driven back into the troubled main;
Even so was I.

Drayton. *Legend of Matilda the Fair*.

UN-SWATHE, v. To remove, to loosen, to revolve
the bonds or fillets wound or folded round.

Why truly my bedfellows left me about an hour before day,
and told me, if I would be good and lie still, they would send
somebody to take me up as soon as it was time for me to rise.
Accordingly about nine o'clock in the morning an old woman
came to *unswathe* me.

Spectator, No. 90.

UN-SWEAT, v. } In Milton,—to remove, to dry—
UNSWE'ATING. } the moisture exuded or evaporated
from the skin, the perspiration. In Dryden,—not ex-
uding or evaporating; not perspiring.

The interim of *unsweating* themselves regularly, and convenient
rest before meat, may both with profit and delight be taken up in
recreating and composing their travail'd spirits with the solemn
and divine harmonies of music heard or learn'd.

Milton. *Of Education*.

Call for a fire, their winter cloaths they take:
Begin but you to shiver, and they shake:
In frost and snow, if you complain of heat,
They rub th' *unsweating* brow, and swear they sweat.

Dryden. *Juvenal. Satire 3*.

UN-SWELL, v. To sink from a tumid or turgid
state; to subside.

But tho began his herte alite *vnswell*.

Chaucer. *Troilus and Creseide, book v*.

UN-TACK, v. To remove that which tacks, takes
or holds; to loosen, to dissolve.

Sir, the little ado which methinks I find in *untacking* these
pleasant sophisms, put me into the mood to tell you a tale e'er I
proceed further, and Menenius Agrippa speed us.

Milton. *Reformation in England, book ii*.

It [faith] alone can *untack* our minds and affections from this
world, rearing our souls from earth, and fixing them in heaven.

Barrow, vol. ii. *Sermon 3*.

If they should *untack* the bill, and separate one from the other,
then the House of Commons would have insisted on a maxim that
was now settled among them, as a fundamental principle never to
be departed from, that the Lords cannot alter a money bill, but
must either pass it or reject it as it is sent to them.

Burnet. *Own Time, Anno 1705*.

UN-TANGLE, v. To remove, to loosen that which
ties, folds, involves, intricates, or perplexes; to remove
or do away intricacy or perplexity.

UN-
TANGLE.UN-
THRIFT.

My care now
Must be to *untangle* this division,
That our most equal flames may be united.
Beaumont and Fletcher. Fair Maid of the Inn, act iii.
Yet hold! if Leonora's innocent, she may *untangle* all.
Vanburgh. False Friend, act iii.

UN-TENT, *v.* To remove from a tent, or extended covering.

AGA. Why will he not vpon our faire request,
Vntent his person, and share the ayre with vs?
Shakspeare. Troilus and Cresseida, act ii. sc. 3.

UN-THINK, *v.* To remove, to dismiss a thought: to think otherwise than heretofore.

Before
His highnesse shall speake in, I do beseech
You (gracious madam) to *vnthinke* your speaking;
And to say so no more.
Id. Hen. VIII., act ii. sc. 4.

UN-THREAD, *v.* To revolve that which threadeth, knitteth, holds together.

Far other arms and other weapons must
Be those that quell the might of hellish charms:
He with his bare wand can *unthread* thy joints,
And crumble all thy sinews:
Milton. Comus.

UN-THRIFT, *s.*

UNTHRIFTY,

UNTHRIFTILY,

UNTHRIFTINESS,

UNTHRIFTFULLY,

UNTHRIFTIHEAD,

UNTHRIVING.

Unthrift,—one who gathers
not, hoards not, keeps not;
who is not frugal, provident,
cautious, careful; who is
lavish, wasteful, profuse, prodigal.

Unthriving,—not hoarding

or acquiring; not prospering or succeeding.

Creseide with a sigh, right in this wise
Answerde, I wis, my dere herte trew,
We may well steale away, as ye devise,
And finden such *vnthrifty* waies new.

Chaucer. Troilus and Cresseide, book iv.

God forbid that nise *vnthrifty* thought shoulde come in thy
mynde thy wittes to trouble, sithen euery thyng in commynge is
contingent.
Id. Testament of Loue, book i.

For louers ben the folke that ben on liue,
That most disease haue, and most *vnthrive*,
And most endure sorrow, wo, and care.

Id. Cuckoo and the Nightingale.

Therefore dooe not thou thinke that he is returned home to thee
the same manne that he was: but thinke hym of an *vnthrift* to
be new borne an honest and a well disposed manne.

Udall. Luke, ch. xv.

Beysdes theis, a great multitude of *vnthrifts* and cut throtes
were flocked thither out of all Gallia.

Goldinge. Cæsar, fol. 76.

Some in Parys sayde: it is pytie these *vnthriftes* be vnchanged
or drowned, for tellyng of suche lies.

Berners. Froissart. Cronycle, vol. ii. ch. 218.

Except suche rybaudes, and *vnthriftye* people, as desyred
nothyng but yuell and noyse, all the other (gladye they sayde)
wolde haue rest and peace, what soeuer came therof.

Id. Ib. vol. i. ch. 386.

Therefore consider in thy mind, not what hee hath said, that
hath liked thee, but what hee hath spoken, that hath disliked
thee: as if he had either done or said ought piuishly, foolishly,
foul, horrible, abhominable, lewdly, *vnthriftelie*, madly, vngratiously:
and by that that cometh forth, make coniecture, what
lieth hid secretly, and closelie within.

Vives. Instruction of a Christian Woman, ch. xiv.

Admytte thy wyfe be of croked condicions, or a nyce wanton,
or genen to other *vnthriftynesse*: destroye her not with ragyng
crueltie, but heale her and amende her with sobre lenitie.

Udall. Ephesians, ch. v.

You therefore if ye be sure, and have God in your sleeve to call
you to his grace at last, venture hardily by mine example vpon
naughty *vnthriftiness*, in trust of his goodness; and besides the
shame, I dare lay ten to one ye shall perish in the adventure.

Wyat. Letter 1. To his Son.

An other no lesse is, that such plentie of vittayle, as was
aboundantly in euery quarter, for the reliefe of vs all, is now all
wastfully and *vnthriftyfully* spent, in mainteyning you vnlawfull
rebelles.
Sir J. Cheeke. Hurt of Sedition.

And gossip mine I'll keep you sure hereafter
From gadding out again, with boys and *unthrifts*.

Beaumont and Fletcher. Knight of the Burning Pestle, act iv.

In somuch that manie of them [yeomen] are able and doo buie
the lands of *vnthriftie* gentlemen.

Holinshed. Description of England, book ii. ch. vi.

Full many mischiefes follow cruell Wrath;
Abhorred bloodshed, and tumultuous strife,
Vnmanly murder, and *vnthrifty* scath,
Bitter despight, with rancours rustie knife,
And fretting grieve the enemy of life.

Spenser. Faerie Queene, book i. can. 4.

That are your words of credit. Keepe your names
For your next meale; this you are sure of. Why
Will you part with them, here *unthriftyly*?

Ben Jonson, Epigram 7.

And after them a rude, confused rout
Of persons flockt, whose names is hard to read:
Emongst them was sterne Strife, and Anger stout,
Vnquiet Care, and fond *vnthriftied*.

Spenser. Faerie Queene, book iii. can. 12.

God's familie admitteth of no dwarfes (which are *unthriving*
and stand at a stay) but men of measures.

Hall. Meditations and Vowes, Cent. 1. No. 44.

There are very many ways for a good man to become unblessed,
and *unthriving* in his prayers, and he cannot be secure unless he
be in the state of grace, and his spirit be quiet, and his mind be
attentive, and his society be lawful, and his desires be earnest
and passionate, and his deuotions persevering.

Taylor, vol. i. Sermon 6.

BER. *Unthrifts* will starve if we before-hand give,
I'll see you shall have just enough to live.

Dryden. Tyrannick Love, act ii. sc. 1.

Thus, as some fawning usurer does feed
With present sums th' unwary *unthrift's* need.

Id. 1 Part Conquest of Granada, act i.

He therefore that is such a niggard of his time, that he grudgeth
to withhold any part thereof from his worldly occasions, deeming
all time cast away that is laid out in waiting vpon God, is really
most *unthrifty* and prodigal thereof.

Barrow, vol. i. Sermon 7.

It is therefore the greatest want of policy, the worst ill-hus-
bandry and *unthriftiness* that can be, to be sparing this way
[bounty to the poor], he that useth it cannot be *thriving*; he must
spend vpon the main stock, and may be sure to get nothing con-
siderable.

Id. Ib. Sermon 31.

UN-THRONE, *v.* See DETHRONE. To remove
from a throne or seat; seat of eminence, of royalty.

He takes vpon him by Papal sentence to *unthrone* Chilpericus
the rightful king of France, and gives the kingdom to Pepin for no
other cause, but that he seem'd to him the more active man.

Milton. Reformation in England, book ii.

Either to *disinthrone* the king of Heav'n
We warr, if warr be best, or to regain
Our own right lost: him to *unthrone* we then
May hope when everlasting fate shall yield
To fickle chance, and chaos iudge the strife.

Id. Paradise Lost, book ii.

Qu. I came not here to be advis'd by you:
But charge you by that pow'r which once you own'd,
And which is still my right, ev'n when *unthron'd*;
That whatsoe'er the states resolve of me,
You never more think of Candiope.

Dryden. Secret Love, act v.

UN-TIME, *i. e.* not a good, fit, or seasonable time.

And also resonable houre for to ete by mesure, that is to say,
a man shal not ete in *untime*, ne sit the longer at the table, for he
fasteth.

Chaucer. Persones Tale, v. 386.

UN-TO, on or in to.

Vnto the se side chaced thei Sir Lowys,
He durst not abide, no turne Thebald his vis [visage].
R. Brunne, p. 104.

UN-
THRIFT

UN-TO.

UN-TO.
—
UN-TO-
WARD.

& geldes vp alle the bondes of homage & feaute,
Saue the right that may falle of ancestres olde,
Unto ther heires alle to haf & to holde.
R. Brunne, p. 260.

I graunt it you, quod she, and right anone
This formel eagle spake in this degree :
Almighty quene, *unto* this year be done
I aske respite for to avisen mee.
And after that to have my choice all free.
Chaucer. Assembly of Fowles.

Whan I out of my peine awooke,
And caste vp many a pitous looke
Unto the heauen.
Gower. Conf. Am. book i.

But for all this
Unto my preest, whiche cometh anone,
I woll thou tell it one and one.
Id. Ib.

He leyth downe his one eare all plat
Unto the grounde, and halt it fast.
Id. Ib.

Jesus began to speake *unto* the people of John : To se what,
wet ye out into the wyldernes ? went ye out to se a reede shaken
wyth the wynde ?
Bible, Anno 1551. Matthew, ch. xi.

For *unto* whome muche is geuen, of him shal be much required.
Id. Luke, ch. xii.

This being therefore presupposed, from that knowne relation
which God hath *unto* vs, as *unto* children, and *unto* all good
things as *unto* effects, whereof himselfe is the principall cause,
these axiomes and lawes naturall concerning our dutie haue arisen.
Hooker. Ecclesiasticall Politie, book i. sec. 8.

By which Astrologers, as well
As those in heav'n above, can tell
What strange events they do foreshew
Unto her under-world below.
Butler. Hudibras, part ii. can. 2.

And I'd be loth to have you break
An ancient custom for a freak,
Or innovation introduce
In place of things of antique use ;
To free your heels by any course,
That might b' unwholsome to your spurs ;
Which if I should consent *unto*,
It is not in my pow'r to do.
Id. Ib. can. 1.

UN-TOOTH, v. } To deprive of teeth.
UNTO'OTHSOME, } *Untoothsome*,—not agree-
UNTO'OTHSOMENESS. } able or pleasing to the tooth ;
i. e. the taste, the palate.

What philosopher durst haue enterpryse to propounne suche
thynges as these, so ferre contrarye to all mennes opinion or think-
yng, and thynges so *untoothsome* for menne to bee fonde on, or to
make anie great countenance *unto*.
Udall. Luke. Preface.

The hony of the island Corsica of all other is counted most
unpleasant and *untoothsome*.

Holland. Plinie, book xiii. ch. iv.

I speak not of Popish mock-fasts : in change, not in forbearance,
in change of courser cates of the land, for the curious dainties of
the water, of the flesh of beasts for the flesh of fish ; of *untooth-*
some morsells for *sorbitiunculae delicatae*, as Hierome calts them.

Hall. Sermon before the King. March 30, 1628.

So as the dogge, in stead of a beast, findes now nothing but a
ball of prickles, to wound his jawes ; and goes away crying from
so *untoothsome* a prey.

Id. Occasional Meditations. Meditation 123.

Those things which in their nature were not edible, (at least,
to an Israelite) were now both deare, and dainty. The asse was
(besides the *untoothsomnesse*) an impure creature.

Hall. Cont. Samariaes Famine Relieved.

But ah, beware !
For I intend thee mischief, and to dash
With both hands ev'ry grinder from thy gums,
As men *untooth* a pig pilf'ring the corn.

Cowper. Homer. Odyssey, book xviii.

UN-TO'WARD, } In Gower,—*unto-ward*, equi-
UNTO'WARDLY, } valent to—*toward*. In the rest,
UNTO'WARDNESS. } —*Untoward* is—
Not coming to, acceding to, yielding or complying ;
VOL. XXVIII.

not docile or tractable, or manageable ; averse, perverse, UN-TO-
awkward. WARD.

Ye father ofte it hath ben so,
That whan I am my ladie fro,
And thynke *untowarde* hir drawe,
Than cast I many a newe lawe,
And all the worlde tourne vp so downe.

Gower. Conf. Am. book iv.

The last of this diuision
Stant *untowarde* Septemtrion.
Id. Ib. book vii.

Thou shalte goe afore him to prepaire mennes heartes to the
receiuyng of suche a great saluacion, leste if the same coming of
the Lorde shoulde fynde the heartes of menne slouthfully slug-
gyng, and vtterly *untoward*, the health that is now offred, might
percase be turned into a manyfold castyng away and perishing of
the solle.
Udall. Luke, ch. i.

For ye report that rawe and ragged clause whych ye have *unto-*
wardly torne out of hys xxi. homely, in the second tome, to be in
the vi. epistle.
Bale. Apologie, fol. 147.

We intend no further to instant or press him thereof, but ever-
more continuing our good mind and affection to join with him (his
said *untowardness* and coldness in that behalf notwithstanding.)

Wyat. By the King, (Henry VIII.) Letter 18.

Such is the *untoward* constitution of our nature, that we doe
neither perfectly vnderstand the way and knowledge of the Lord,
nor stedfastly imbrace it, when it is vnderstood ; nor gratically
viter it, when imbraced ; nor peaceably maintaine it, when it is
vttered.
Hooker. A Discourse of Justification, sec. 39.

Which as many as use, worke their own mischiefe and destruc-
tion, dancing (as the proverbe saith) a dance *untowardly* about a
pits brinke, or jesting with edged tooles.

Holland. Plutarch, p. 89.

Even in trees as well as in other living creatures, there is a cer-
taine infelicitie, which may be well tearmed, a dwarfish *untoward-*
nesse.

Id. Plinie, book xii. ch. ii.

Let me embrace my friend.

ROSE. How *untowardly* he returns the salute.

Dryden. Sir Martin Marr-all, act ii.

UN-TREAD, v. } D. *onbetreeden* ; Ger. *unbetreten*,
UNTRO'DDEN. } to tread back again ; to pass back
the same way or road. *Untrodden*—

Not passed on foot ; not walked or trampled on ;
where no *path* has been made.

Where is the horse that does *untread* againe
His tedious measures with the vnabated fire,
That he did pace them first : all things that are,
Are with more spirit chased then enioy'd.

Shakspeare. Merchant of Venice, act ii. sc. 6.

SAL. We do beleuee thee, and beshrew my soule,
But I do loue the fauour, and the forme
Of this most faire occasion, by the which
We will *untread* the steps of damned flight.

Id. King John, act v. sc. 4.

(Those scatter'd troops from Barnet that escap'd,) Through *untrod* grounds, in many a tedious hour,
Flock to her daily.

Drayton. Miseries of Queen Margaret.

— Methinks the downs are sweeter,
And the young company of swains far meeter,
Than those forsaken and *untrodden* places.

Beaumont and Fletcher. Faithful Shepherdess, act i.

The most frequented once, and noisie part
Of Thebes, now midnight silence reigns even here,
And grass *untrodden* springs beneath our feet.

Dryden. Oedipus, act i.

No fleecy flocks dwell there, nor plough is known,
But the unseeded and unfurrow'd soil
Year after year, a wilderness by man
Untrodden, food for blatant goats supply'd.

Cowper. Homer. Odyssey, book ix.

UN-TRIMMED, corruptly so written for *entrimmed*,
as *unrip* for *enrip*, (and see also UN-STABLISHED.) In
A. S. *on-trimman*, to trim, (q. v.) The A. S. has its *on*,
negative and also augmentative, like the Lat. *in* ; thus
on-lihtan is to enlighten, *on-tyan* is to untye ; and in

UNTRIMMED. this word *untrim*, on, aug. has been converted into our neg. form *un*. The commentators on *Shakspeare*, not aware of this, are quite at fault. In *Ford* it is not clear whether Bianca meant to scoff at the finical or slovenly appearance of her husband's beard.

CEN. O Lewis, stand fast, the deuil tempts thee heere,
In likeness of a new *untrimmed* bride.
Shakspeare. King John, act iii. sc. 1.

BIAN. Can you imagine, sir, the name of Duke
Could make a crooked leg, a scrambling foot,
A tolerable face, a wearish hand,
A bloodless lip, or such an *untrimmed* beard
As yours, fit for a lady's pleasure?
Ford. Love's Sacrifice, act v. sc. 1.

UN-TROUBLE, v. } To remove, to free from,
UNTROUBLED, } to divest of—trouble or vexa-
UNTROUBLEDNESS. } tion, distress, molestation,
anxious or unpleasing labour or toil.

Then with the sunne, take sir your timely rest,
And with new day new worke at once begin:
Untroubled night (they say) giues counsell best.
Spenser. Faerie Queene, book i. can. 1

— Leave the thoughts
Of this vain world, forget your flesh and blood,
And make your spirit an *untroubled* way
To pass to what it ought.
Beaumont and Fletcher. Love's Pilgrimage, act iv. sc. 2.

Art thou *troubled* with fears, enemies, and snares? *untrouble*
thyself of that for he is with thee.
Leighton. Com. on 1 Peter, ch. v.

He hath rifled all the sects of the old philosophers, robb'd each
of them of his master-piece; the sceptick of his indifference and
untroubledness, &c. *Hammond. Works*, vol. iv. p. 479.

Ever chearful in her behaviour, but withal ever calm and even,
her satisfaction, like a deep *untroubled* stream, ran out, without
any of that violence, or noise, which sometimes the shallowest
pleasures do most abound in.

Atterbury. Sermon 6. vol. i.

UN-TRUSS, v. } To remove or deprive of the
UNTRUSSER, } truss or package; of that which
UNTRUSSING, n. } packs, binds, or bundles, or closes
up. To unpack, untie, undo,

Till at length he was slaine at Edessa, a citie in Mesopotamia,
by one of his owne souldiers, as he was about to *untrusse* his points,
&c. *Holinshed. Historie of England*, book iv. ch. xxii.

BRI. Well done, well done, give me my night-cap. So. Quick,
quick, *untruss* me.
Beaumont and Fletcher. Elder Brother, act iv. sc. 4.

Welcome, gentlemen: and how dost thou, thou grand scourge,
or second *untruss* of the time.
Ben Jonson. Every Man Out of his Humour, act ii. sc. 1.

Such as on stages play, such as we see
The Dryads painted, whom wilde satyres loue,
Whose armes halfe naked; lockes *untrussed* bee,
With buskins laced on their legs aboue,
And silken robes tuckt short aboue their knee;
Such seem'd the Siluian daughters of this groue,
Saue that in stead of shafts and boughes of tree,
She bore a lute, a harpe of citterne sheene.

Fairefax. Godfrey of Boulogne, book xviii.

Neither shall you, at any time, ambitiously affecting the title of
the *untrussers* or whippers of the age, suffer the itch of writing
to over-run your performance in libel.

Ben Jonson. The Poetaster, act v. sc. 1.

Come, we'll go see how far forward our journeyman is toward
the *untrussing* of him. *Id. Ib.* act iv. sc. 5.

UN-TUNE, v. } To remove or destroy an ex-
UNTUNEABLE, } tended continuity of sound, of
UNTUNEABLY. } sounds in consent or concert, in
harmony or concord; to disable from the production of
such sounds; to relax the strings.

Or be the shepheards which doe serue her laesie.
That they list not their mery pipes apply,
Or be their pipes *untunable* and craesie,
That they cannot her honour worthily?

Spenser. Colin Clout's come home againe.

Pardon (bright excellence!) an *untun'd* string,
That in thy ears thus keeps a murmuring;
O! speak a lowly muse's pardon.

Crashaw. Upon the Duke of York's Death.

As one broken link dissolves the union of the whole chain, and
one jarring *untuned* string spoils the whole musick, so is every
sin that seizes upon a portion of our affections; if we love one,
that one destroys the acceptance of all the rest.

Taylor. Sermon 12. vol. i.

He who sees not this argument how plainly it deserves to
divorce any *untunable*, or unatoneable matrimony, sees little.

Milton. Tetrachordon.

An odious and unpleasant thing it is, to hear a hen keep a
creaking or cackling, and a cow untowardly and *untunably* crying.

Holland. Plutarch, p. 586.

On other occasions we have drawn two words into one, which
has likewise very much *untuned* our language, and clogged it with
consonants, as "mayn't, can't, shan't, won't," and the like, for
"may not, can not, shall not, will not, &c."

Spectator, No. 135.

Their poetry then was made up almost entirely of monosyllables;
which, when they came together in any cluster, are certainly the
most harsh *untuneable* things in the world.

Waller. Preface to Poems, (ed. 1690.)

UN-TWINE, v. } To roll back, to revolve; any
UNTWIST, v. } thing convolved, (any thing twained,
or twined.)

This knot (saith our author) might be *untwined* with more faci-
lity thus. *Holinshed. The Sundrie Inuasions of Ireland.*

When Age and Death call'd for the score,
No surfeits were to reckon for;
Death tore not (therefore) but sans strife
Gently *untwin'd* his thread of life.

Crashaw. Ep. on Mr. Ashton.

For strait his arrows lose their golden heads, and shed their
purple feathers, his silken braids *untwine*, and slip their knots.

Milton. Doctrine and Disc. of Divorce, book i. ch. vi.

Which made them eftsoones feare
the dayes of Pirrha should,
Of creatures spoile the earth,
their fatall threds *untwist*.

Spenser. Muse of Thestylis.

DUTCH. Tis a witch sure,
And by her means he came to *untwist* this riddle.
Beaumont and Fletcher. Woman Pleas'd, act v. sc. 1.

The saints deceiv'd, shall be a sweet mistake,
Hand up thy soul for mine, and mine for thine

EMP. No, I'll *untwist* you:

I have occasion for your stay on earth.

Dryden. Don Sebastian, act iii. sc. 1.

Ev'n light itself, which every thing displays,
Shone undiscover'd, till his brighter mind
Untwisted all the shining robe of day.

Thomson. To Sir Isaac Newton.

But still the solar light is not less real in the rainbow where it's
rays become thus *untwisted*, and each differing thread distinctly
seen in its effect, than while they remained united and incorporated
with one another in the sun.

Warburton. Divine Legation, book ii. Appendix.

UN-VA'LUABLE, } See INVALIDED. In the word
UNVA'LUED. } *invalided*, the *in* is emphatical
or augmentative; and so *unvalued* (see UNRIP) used to
denote—

Much valued, highly prized, esteemed highly, or to
be of great worth.

And Unvaluable:—that cannot be valued: *i. e.* of too
much worth to have a *value* or price set upon it; ines-
timable.

UN-
TUNE.
—
UN-
VALU-
ABLE.

UN-
VALU-
ABLE.UN-
WARP.

Mongst which, therein a siluer dish did ly
two golden apples of *unvalued* price :
For passing those which Hercules came by,
or those which Atalanta did entice.
Spenser. Son. 77.

CLA. Here I swear to thee,
By the *unvalued* love I bear this beauty,
(And kiss the book too) never to be recreant,
To honour ye, to truly love, and serve ye.
Beaumont and Fletcher. Woman Pleased, act ii. sc. 6.

Chryses, the priest, came to the fleet to buy
For presents of *unvalued* price his daughter's liberty.
Chapman. Homer. Iliad, book i.

Out of the east jewels of worth she brings,
Th' *unvalued* diamond of her sparkling eye.
Browne. Britannia's Pastorals, book ii. s. 3.

No home for her confesses she
But where she may a martyr be.
She'll to the Moors and trade with them,
For this *unvalued* diadem.
Crashaw. Hymn to St. Teresa.

SIR MOTH. I will tell you, sister,
I cannot cry his caract up enough ;
He is *unvaluable*.
Ben Jonson. Magnetic Lady, act i. sc. 1.

And from my father [I] received such a character of his learn-
ing, humility, and other virtues, that, like jewels of *unvaluable*
price, they still cast such a lustre, as envy or the rust of time shall
never darken.
King. Letter to Mr. Walton.

True it is, that a good name is *unvaluable* ; and all the pelf in
the world is not an equal ransom for it.
South. Sermon 9. vol. x.

UN-VEIL, *v.* } To remove or divest of cover,
UNVEILEDLY, } skreen, shade or concealment.
UNVEILER, *n.* }

The providence that's in a watchfull state,
Keepes place with thought ; and almost like the gods,
Doe thoughts *unvail* in their dumbe cradles.
Shakspeare. Troilus and Creseide, act iii. sc. 3.

—— Hesperus that led
The starrie host, rode brightest, till the moon
Rising in clouded maiestie, at length
Apparent queen *unvaild* her peerless light,
And o'er the dark her silver mantle threw.
Milton. Paradise Lost, book iv.

Oh, speak! *unveil* this mystery of sorrow,
And draw the dismal scene, at once, to sight.
Rowe. Tamerlane, act ii.

For these [the divine books] want not excellencies, but only
skilful *unvailers*.
Boyle. Works, vol. iv. p. 18.

Not knowing what use you will make of what has been *unveil-*
edly communicated to you, I was unwilling that some things,
which had cost me pains, should fall into any man's hands, that
scorns to purchase knowledge with pains.
Id. lb.

UN-VOTE, *v.* To revoke or recall a vote.

This was so sacred a rule, that many of those who voted with
the court the day before, expressed their indignation against it,
as subverting the very constitution of parliaments, if things might
be thus voted and *unvoted* again from day to day.
Burnet. Own Time. Queen Anne. Anno 1711.

UN-WAPPERED. Grose says,—*wapper'd*, *i. e.*
restless or fatigued, is spoken of a sick person, in Glou-
cestershire.

Unwappered may be,—unwearied ; not fatigued.

—— We come towards the gods
Young, and *unwapper'd*, not halting under crimes
Many and stale.
Beaumont and Fletcher. Two Noble Kinsmen, act v. sc. 4.

UN-WARP, *v.* To bend back any thing warped.

When the bark [of the cork-tree] is off, they *unwarp* it before
the fire, and press it even.
Evelyn. Sylva, book ii. ch. v.

And oft conducted by historic truth,
You tread the long extent of backward time :
Planning, with warm benevolence of mind,
And honest zeal *unwarp'd* by party-rage,
Britannia's weal.
Thomson. Spring.

UN-WEA'RY, *v.* To rest, to repose, to restore, to
relieve, from weariness.

And for the act which remains of the opera, I believe I shall
have no leysure to mind it, after I have done what I proposed : for
my business here is to *unweary* my selfe, after my studyes, not to
drudge.

Dryden. Letter to Mr. J. Tonson. September, 1684.

UN-WIELDY, *v.* } Not easy to manage or com-
UNWI'ELDILY, } mand,—to use, to move, to exert
UNWI'ELDINESS, } in action ; too bulky or heavy
UNWI'ELDSOME. } for action or motion.

Age *unwieldie* may not fight nor flee.
Chaucer. Remedie of Loue. Prologue.

Our olde limes mow wel ben *unwilde*,
But will ne shal not faillen, that is sothe.
Id. The Reves Prologue.

The wine can make a creple sterte,
And a deliuer man *unwilde*.
It maketh a blynde man to behelde,
And a bright eyed seme derke.
Gower. Conf. Am. book vii.

Thus said the aged man, and therewithall,
Forceless he cast his weak *unwieldy* dart.
Surrey. Virgile. Æneis, book ii.

But for the most part they are very *unwieldy* and vnactiue with-
all.
Hakluyt. Voyages, vol. i. p. 496.

Mountaines of yce tenne thousand times scaping them scarce
one yuch, which to haue stricken had bene their present destruc-
tion, considering the swift course and way of the ships, and the
unwieldnesse of them to stay and turne as a man would wish.
Id. lb. vol. iii. p. 79.

Meane-while the saluage man, when he beheld
That huge great fool oppressing th' other knight,
Whom with his weight *unwieldy* downe he held,
He flew vpon him, like a greedy kight
Vnto some carrion offered to his sight.
Spenser. Faerie Queene, book vi. can. 8.

[Augustus] out of a wholesome state-maxim, as som say, to
moderate and bound the empire from growing vast and *unweildie*,
made no attempt against the Britains.

Milton. History of Britain, book ii.

To what a cumbersome *unwieldiness*
And burthenous corpulence my love had grown.
Donne. Love's Diet.

Alexander being ready to take his journey to go conquer India,
perceiving that his army was very heavy and *unwieldsome* to
remove, for the wonderfull carriage and spoils they had with them :
the carts one morning being loaden, he first burnt his own car-
riage and next his friends, and then commanded that they should
also set the carriage of the Macedonians on fire.
North. Plutarch, p. 582.

She [Poverty] likewise represented to him the several advan-
tages which she bestowed upon her votaries in regard to their
shape, their health, and their activity, by preserving them from
gouts, dropsies, *unwieldiness*, and intemperance.

Spectator, No. 464.

When I consider the weight of a man's body, the *unwieldiness*
of wings sufficiently large to buoy him up, and the inability of his
arms to flutter them fast enough, I cannot conceive the possibility
of his ever practising that manner of travelling.

Search. Light of Nature, vol. i. part i. ch. xiv.

UN-WISH, *v.* } To recal a wish ; to wish any thing
UNWI'SHED. } —before wished for—to be denied,
or taken away.

Not looked desirously after, not desired.

HER. So will I grow, so liue, so die my lord.
Ere I will yeeld my virgin patent vp
Vnto his lordship, whose *unwished* yoake,
My soule consents not to giue soueraignty.
Shakspeare. Midsummer Night's Dreame, act i. sc. 1.

UN-
WARP
—
UN-
WISH.

UN-
WISH.
—
UN-
WOR-
SHIP.

To desire there were no God, were plainly to *unwish* their own being; which must needs be annihilated in the subtraction of that essence, which substantially supported them, and restrains them from regression into nothing.

Brown. Vulgar Errours, book i. ch. x.

— You seem much surprised.

OSM. At your return so soon and unexpected!

ZARA. And so *unwish'd*, unwanted too, it seems.

Congreve. Mourning Bride, act iii.

UN-WI'T, *s.*

Ger. *unwissend*.

UNWI'TTING, *v.*

Unwit,—ignorance, folly.

UNWI'TTINGLY,

Unwitting,—not knowing or

UNWI'TTY.

kenning, perceiving, discerning,

judging, or adjudging.

And seyde woman *unwittiglych*, wrought hast thou ofte.

Piers Plouhman, p. 44.

I am maad *unwitti*, ghe constreynyden me. for I oughte to be commendid of ghou, for I dide no thing lesse than thei that ben apostlis aboue maner.

Wiclif. 2 Corynth, ch. xii.

[Him] that made me coueiten and purchase

Mine owne death, him wite I, that I die,

And mine *vnwit* that ever I clambe so hie.

Chaucer. Com. of Mars and Venus.

The sayd Constance, of pure deuocion that he hadde to God and seyn Amphiabyll, made hym selfe a monke, *vnwyttynge* the kyng his fader, and other his frends.

Fabyan. Chronycle, ch. lxxxii.

A gentilman, one of the counsaile of kyng Xerxes named Zopirus, a man of notable wysedome, *vnwyttynge* to any persone, did cutte of his owne eares and nose, and pryuely departed towarde Babylon.

Sir Thomas Elyot. The Governour, b. iii.

Thou blinded god, quoth I, forgive me this offence,

Unwittingly I went about to malice thy pretence.

Surrey. Having defied the Power of Loue, &c.

But if an alphabetical servility must be still urged, it may so fall out, that the true church may *unwittingly* use as much cruelty in forbidding to divorce, as the church of antichrist doth wilfully in forbidding to marry.

Milton. Doctrine and Disc. of Divorce, book i. ch. xiv.

I crave your lordship's pardon, your sudden apprehension on my steps made me to frame an answer *unwitting* and unworthy your respect.

Beaumont and Fletcher. Honest Man's Fortune, act ii.

How now, Ovid! Law cases in verse?

OVID. In troth I know not; they run from my pen *unwittingly*, if they be verse.

Ben Jonson. Poetaster, act i. sc. 1.

I know not whether Lewis the Eleventh shewed himselfe *unwitty*, but in the charge which hee gave to his sonne, to learne no more Latine, but, *Qui nescit dissimulare, nescit vivere*; and would this alone teach him to rule well?

Hall. Quo Vadis, sec. 10.

This man was wanton and merry, *unwittily* and ungracefully merry.

Cowley.

UN-WI'TCH, *v.* To remove the effects of witchcraft or sorcery; to disenchant.

And there are not a few who are persuaded for certaine, that even the very serpents as they may bee burnt by enchauntment, so they can *unwitch* themselves.

Holland. Plinie, book xxviii. ch. ii.

I was fascinated, by Jupiter; fascinated; but I will be *unwitch'd*, and revenged by law.

Ben Jonson. Every Man in his Humour, act iii. sc. 7.

UN-WO'RMWOODED, jests without bitterness.

Divinity should not lascivate. *Unwormwooded* jests I like well; but they are fitter for the tavern, then the majesty of a temple.

Feltham, part i. *Res.* 20.

UN-WO'RSHIP, *v.*

Not to think or deem wor-

UNWO'RSHIP, *n.*

thy; not to respect or regard

UNWO'RSHIPFUL.

as worthy; to think unworthy;

not to honour or revere, or make or perform offerings or offices of honour or reverence; not to honour; to dishonour.

UN-
WOR-
SHIP.
—
UP.

Thou that hast glorie in the lawe, *unworschipist* [inhonoras] God bi brekyng of the lawe.

Wiclif. Romayns, ch. ii.

"Why than," (quod I) "suffre ye soche wronge, and moun whan ye list, lightly all soche yuels abate, me semeth to you it is a great *vnwurschip*."

Chaucer. Testament of Loue, book ii.

Yet this wicked Nero had great lorshippe. And yafe whilome to the reuerent senatours the *vnworschyppfull* seates of dignities.

Id. Boecius, book iii.

The kinge answerd, it waes to smalle

For him, whiche was a lorde rialle,

So yeue a man so litell thinge.

It were *vnworschip* in a kyng.

Gower. Conf. Am. book vii.

Great quantite of Cristen people [were] put to deth, and the holye seruyce of God lefte, and holye church *vnworschyppyd* and vnhonouryd, w^t many great enormyties.

Fabyan. Chronycle, Edw. III. Anno 1339.

— He resolv'd

With all his legions to dislodge, and leave

Unworsipt, unbeyed, the throne supream.

Milton. Paradise Lost, book v.

UNXIA, in *Botany*, a genus so called by the younger Linnæus, from *ungo*, to perfume, because the plant exhales an odour like camphor. It belongs to the class *Syngenesia*, order *Necessaria*, and the natural family of *Compositæ-Senecionideæ-Melampodineæ*. Generic character: heads monoecious, many-flowered; the flowers of the ray are five in number, ligulate, and female, small and ovate; those of the disk male, tubular, and five-toothed; involucre roundish, of five ovate scales; receptacle naked; achenia of the ray ovate, hard, compressed, quite smooth, and bald, with a lateral areola.

Of this genus two species are known, *U. camphorata*, and *U. hirsuta*, the first a native of Surinam, and the second of Cayenne; they are dichotomous herbs. The leaves are opposite, hairy, oblong-obovate, acuminate, rounded at the base, five-nerved, and villous; the heads of flowers are axillary, on short peduncles. The *U. camphorata* has a strong smell of camphor, and hence it is called Camphor plant in Surinam.

UP,

UPON,

UPPER,

UPPEREST,

UPMOST,

UPPER-MOST,

UPWARD.

Sw. *up*; D. and Dan. *op*; Ger.

auf; A. S. *up*; Goth. *uf*. See

OVER. A. S. *uf-an*, *ufan*, *ufa*.

Altus,—upon, *up*. *Ufera*, *ofere*,

ofer, altior,—Over or upper; Gr.

υπ-ερ. *Ufemært*, altissimus,—up-

most, uppermost, upperest, or overest.

Tooke. And see Jamieson, *Hermes Scythicus*, ch. ix.

Up is, in Chaucer, (*up* peril of my life,)—used where we should now use *on* or *upon*; and *vpon*—(he had *upon* a courtesy of green,) where we should now say merely *on*.

Up-on is always connected (affixed or prefixed) with words expressing or implying, either literally or metaphorically,—

A ground, foundation; standing-place, resting-place, support, or the like.

Up-so-down is now usually written—*upside-down*. Gower writes *up so and down*. Vives—*upset down*. See UPSET.

And lette rere *vp* chirches in al the lond a bowte.

R. Gloucester, p. 143.

His folk went *vpto* lond, him seluen was the last,

To bank ouer the sond, plankes thei ouer kast.

R. Brunne, p. 70.

Lo, the aungel of the Lord apperide to Joseph in sleep, and seyde, rise *up*, and take the child and his modir and fle into Egypt.

Wiclif. Matthew, ch. ii.

And Jesus seyng the peple, wente *up* into an hil.

Id. Ib. ch. v.

UP.

And in the gardin at the sonne uprest
She walketh *up* and down wher as hire list.
Chaucer. The Knightes Tale, v. 1056.

Some drope of pitie thurgh thy gentillesse
Upon us wretched wimmen let now falle. *Id. Ib.*

But with these reliques, whanne that he fonde
A poure persone dwelling *up* on lond
Upon a day he gat him more moneie
Than that the persone gat in monethes tweie.
Id. Prologue, v. 704.

His office naturel ay wol it [fire] hold
Up peril of my lif, til that it die.
Chaucer. Wif of Bathes Tale, v. 6727.

He had *upon* a courtesy of grene
An hat *upon* his hed with frenges blacke.
Id. The Freres Tale, v. 6964.

And with this word *upper* to sore
He began. *Id. House of Fame, book ii.*

And betwene these two letters, there were seen degrees nobly
wrought in maner of ladders, by which degrees menne might
climben from the netherest letter, to the *upperest*.
Id. Boecius, book i.

I maie not stretch *vp* to the heuen
Myn honde ne set al in euen
This worlde which euer is in balance.
Gower. Conf. Am. book i.

Whan I out of my peine awooke
And caste *vp* many a pitous looke. *Id. Ib.*

The hare in peace stode with the hounde
And euery man *vpon* this grounde.
Id. Ib. Prologue.

He sawe *vpon* the grene gras
The faire floures freshe springe. *Id. Ib. book i.*

To studie *vpon* the worldes lore
Sufficeth nought. *Id. Ib. Prologue.*

But she ran *vp* so and downe. *Id. Ib. book v.*

He saith also that they were hanged with a great rope, that
they might not quickly be strangled, to endure the more pain,
when they should be cut down and ripped *up*.
Strype. Ecclesiastical Memoirs. Henry VIII. Anno 1535.

He therefore leadeth away the Lord Jesus from the hygh
mountaine vnto the citie of Hierusalem, and there setteth hym
euen *vpon* the *vppermoste* pinnacle of the temple.
Udall. Erasmus. Luke, ch. iv.

For all that commeth in consultation either in the *vpper* house
or in the nether house, is put in writing first in paper, which
being once reade, he that will, riseth *vp* and speaketh with it or
against it: and so one after another so long as they shall think
good. *Sir T. Smith. Common-wealth, book ii. ch. iii.*

— This earth you tread *upon*
(A dowry as you hope with this fair princess,
Whose memory I bow to) was not left
By my dead father (Oh, I had a father)
To your inheritance, and I *up* and living,
Having my self about me and my sword
Beaumont and Fletcher. Philaster, act i.

Up with the jocund lark (too long we take our rest)
Whilst yet the blushing dawn out of the chearful east
Is ushering forth the day to light the muse along.
Drayton. Poly-olbion, song 3.

It is a most unseemly and unpleasant thing to see a man's life
full of *ups* and downs, one step like a Christian, and another like
a worldling; it cannot choose but pain himself, and mar the edi-
fication of others.

Leighton. Commentary on 1 Peter, ch. i.

— But 'tis a common prooffe,
That lowlynesse is young ambitions ladder,
Whereto the climber *vpward* turnes his face:
But when he once attaines the *vpmost* round,
He then *vnto* the ladder turnes his backe,
Lookes in the clouds, scorning the base degrees
By which he did ascend.

Shakspeare. Julius Cæsar, act ii. sc. 1.

They, not over-wise, brought word that the dukes army were
most of them priests; for they saw their faces all over shav'n;

the English then useing to let grow on their *upper-lip* large mus-
tachios, as did anciently the Britains.

Milton. History of England, book vi.

The mistress drives my counsels to the leeward;
Now I must edge *upon* a point of wind;
And make slow way, recovering more and more,
Till I can bring my vessel safe ashore.

Dryden. Cleomenes, act iii. sc. i.

The manner of making a canoa is, after cutting down a large
long tree, and squaring the *upper-most* side, and then turning
it upon the flat side, to shape the opposite side for the bottom.

Dampier. Voyages. Anno 1685.

And in order to render the ships stiffer, and to enable them to
carry more sail abroad, and to prevent their straining their *upper-*
works in hard gales of wind, each captain had orders given him
to strike down some of their great guns into the hold.

Anson. Voyages, book i. ch. v.

— Deiphobus had snatch'd
His splendid casque, but swift as fiery May
Meriones transpierc'd his *upper* arm,
And from his hand down fell the sounding spoil.

Cowper. Homer. Iliad, b. xiii.

UP-BAR, *v.* To take *up*, or *out* the bar;—To unbar;
and so Todd reads.

Whom when the watch that kept continuall ward
Saw coming home; all voyd of doubtfull feare,
He running downe, the gate to him *vpbard*;
Whom straight the prince ensuing, in together far'd.

Spenser. Faerie Queene, book iv. can. 9.

UP-BRAID, *v.* A. S. *up-ge-bræd-an*, *expro-*
UPBRA'IDER. *brare, objicere*, (Skinner thinks,) *brare*,
UPBRA'IDING, *n.* from A. S. *up*, and *ge-bræd-an*,
UPBRA'IDINGLY, *dilatate, ampliare*, to dilate, to
UPBRA'Y, *v.* amplify (broad); and thus—to
UPBRA'Y, *s.* extend beyond desert, to exagger-
rate; but the A. S. is also used, consequentially, *exten-*
dere, extrahere, string-ere, to extend, to draw out—
"He is sword *ge-bræd*," he drew out his sword. And
the words *abraid* and *braid*, *qq. v.*, have been shown to
be applied to any sudden, violent action; an assault,
attack, &c. Hence *up-braid* may mean, as above ex-
plained—

To make an assault or attack upon (the conduct, cha-
racter, &c.); to assail bitterly, contemptuously, reproach-
fully, revilingly; to treat with contumely or scorn; to
contemn, to reproach, to revile; to charge with any
thing reproachful, or deserving reproach; any thing dis-
graceful, discreditable, shameful.

That schame has git non ende, no that *vpbraidyn*,
That on France salle lende, for falsnes of ther kyng.

R. Brunne, p. 318.

UP.

UP-
BRAID.

UP-
BRAID.

And the theves that weren crucified with him *upbraydeden* [ex-probrabant] him of the same thing.

Wiclif. *Matthew*, ch. xxvii.

UP-
CHEER.

And if ony of you nedeth wisdom axe he of God which giueth to alle men largeli and *upbreideth* not, and it schal be ghoun to hym.

Id. *James*, ch. i.

O Pandarus, that in dremes for to trist
Me blamed hast, and wont art oft *upbreide*,
Now mayst thou seen thyself, if that thee list,
How trew is now thy nece, bright Creseide.

Chaucer. *Troilus and Creseide*, book v.

But this opinion, bred by the sottishnes of the comon people, hath hitherto (as I hope) bene sufficiently ouerthrowen as a thing foolish and vaine, and as being deuised for the *upbrayding* of our nation.

Hakluyt. *Voyages*, vol. i. p. 562.

At last, proud Radigund with fell despight,
Hauing by chaunce espyde aduantage neare,
Let driue at her with all his dreadfull might,
And thus *upbrayding*, said.

Spenser. *Faerie Queene*, book v. can. 7.

And his true loue faire Psyche with him playes;
Fair Psyche to him lately reconcyl'd,
After long troubles and vnmeet *upbrayes*.

Id. *Ib.* book iii. can. 6.

But Scudamour himselve did soone vp-raise,
And mounting light, his foe for lying long *upbraies*.

Id. *Ib.* book iv. can. 1.

One tongue doth pray,
The other curse. The hearts do ne're agree
But felly one another do *upbray*.

More. *Psychozoia*, book ii.

It were a thing monstrously absurd and contradictory to give the parliament a legislative power, and then to *upbraid* them for transgressing old establishments.

Milton. *Answer to Eikon Basilike*, sec. 19.

He discourages the weak, and weakens the hands of the strong, and by *upbraiding* their weariness, tempts them to turn it into rashness or despair.

Taylor. *Sermon* 20, vol. ii.

The latter [he that comes to the sovereignty by the suffrage of the people] hath no *upbraid*ers, but was raised by them that sought to be defended from oppression; whose end is both the easier and the honester to satisfy.

Ben Jonson. *Discoveries*.

He is *upbraidingly* called a poet, as if it were a contemptible nick-name.

Id. *Ib.*

The dauphin and duchess of Burgundy, as they went to the opera, were surrounded by crowds of people, who *upbraided* them with their neglect of the general calamity, in going to diversions, when the whole people were ready to perish for want of bread.

Tatler, No. 10.

AXA. Yet I will listen, fair unkind *upbraider*,
Yet I will listen to thy charming accents,
Altho' they make me curse my fame and fortune,
My laurel wreaths, and all the glorious trophies,
For which the valiant bleed.

Rowe. *Tamerlane*, act i.

CAL. Then am I doom'd to live, and bear your triumph?
To groan beneath your scorn and fierce *upbraidings*,
Daily to be reproach'd, and have my misery
At morn, at noon, at night told over to me.

Id. *Fair Penitent*, act iv.

Of this Thales it is reported, that being *upbraidingly* demanded, what advantage the professors of astrology could derive from the knowledge of it; he astrologically foreseeing what a year it would prove for olives, before any wonted signs of it did appear to husbandmen, engrossed, by giving earnest, the greater part of the olives, which the next should afford to Chios and Miletus.

Boyle. *Works*, vol. ii. p. 64.

UP-BREED, *v.* To nurse or nourish to rear, to train up.

Those were no Britains borne, but strangers vnto them, being both borne and *upbred* in a forren countrie.

Holinshed. *Historie of Scotland*. Conranus.

UP-CHEER, *v.* To raise up (*sc.* the drooping spirits); to enliven, to encourage, to inspirit.

Who comming forth yet full of late affray,
Sir Calidore *vp-cheard* and to her teld
All this accord, to which he Crudor had compeld.

Spenser. *Faerie Queene*, book vi. can. 1.

UPENEUS, the Greek name of an unknown fish, Cuv. In *Zoology*, a genus of animals belonging to the family *Percoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Opercule furnished with a little spine; preopercule spineless; upper and lower jaw both armed with teeth; no tessellated teeth in the vomer, but sometimes two little tufts of very fine teeth, and occasionally also in the palate; branchial rays four; body covered with broad scales, which readily fall; an air-bladder.

This genus has been separated by Cuvier from *Mullus*, which has neither spine on the opercule, nor teeth in the upper jaw, but has tessellated teeth on the vomer; and is also devoid of air-bladder. All the species are natives of hot climates, and Cuvier divides them into two sections, one having a narrow band of very fine teeth in each jaw, which are further subdivided, as parts of the palate are armed with teeth, or are toothless, and the other having a single row of distinct and conical teeth.

SECT. I.

A. *With delicate teeth in both jaws, on the vomer and on the palate bones.*

U. Vittatus, Cuv. and Valenc., *Mullus Vitt.*, Forsk. Eight or nine inches in length, and of similar form to our Striped Red Mullet; each jaw has a narrow band of very fine teeth; similar teeth exist also on the front of the vomer, and in a band on the palate bones; the profile of the head slightly and regularly convex; back brownish, slightly tinged with vinous, and marked with two longitudinal silvery lines; sides and belly silvery, with a slight golden tinge, the former separated from the back by a longitudinal golden streak; first dorsal fin sharp, as deep as the body, its tip, a band across its middle and sometimes another at its base, black; the second obliquely marked with one blackish band, and sometimes with three; caudal fin forked, and marked with four bands on its upper and three on its lower lobe; other fins white. It is found in the Red Sea, and is called by the Arabs *Aboudagn*, or the bearded father; also on the coast of Orixia, where it is known as the *Bandi-gooli-Vinda*, and at Pondicherry by the name of *Naveri*. It has also been taken off the Society Isles, and off the Isles of Sonda.

In this section Cuvier includes,

U. Sulphureus, Cuv. and Valenc. From the straits of Sonda.

U. Tæniopterus, Cuv. and Valenc. Very common on the coast of Trincomalee; and

U. Vlamingii, Cuv. and Valenc. From Queen Charlotte's Straits.

B. *Teeth in the jaws and on the vomer, but none on the palate.*

U. Porosus, Cuv. and Valenc. About seven inches long; short, thick, and as it were humped at the first dorsal fin; its muzzle, slightly convex, is more lengthy; the suborbital region, and the parts encircling the eye, as also the front of the muzzle, studded with numerous small pores; it has some broad scales with seven notches at their base; second dorsal fin lengthy, but not pointed. Is found in the rivers of New Zealand.

UP-
CHEERUP-
NEUS.

UPE-
NEUS.UP-
HOLD.

C. Fine teeth in both jaws only, but not in the palate.

U. Flavolineatus, Cuv. and Valenc. Eight or nine inches long; teeth so small that they can only be felt, not seen; profile convex; upper parts of the body brown, inclining to bluish, under parts silvery white, the two separated by a longitudinal golden streak; and one or two similar lines pass from the eye towards the muzzle; dorsal fins yellowish towards their tip; caudal rufous, the other fins whitish. Is found on the coast of the Isle of France, sometimes very common and sometimes but in small numbers; it is considered as the best fish they obtain. It is taken also at the Moluccas, the Society Islands, and in the Red Sea.

U. Zeylonicus, Cuv. and Valenc. Is very common off the coast of Trincomalee.

U. Japonicus, Cuv. and Valenc., *Mullus Jap.*, Houtt. From Japan.

SECT. II.

Teeth distinct and in a single row; none on the palate.

U. Auriflamma, Cuv. and Valenc., *Mullus Aurifl.*, Forsk. Has the teeth small and numerous; the sides of the head have some yellow markings; back bronze brown, with a broad longitudinal golden band on each side of the middle of the body, and beneath the tail other two almost faded; upon the tail above the lateral line a little black spot; dorsal and caudal fins yellow, the others white. Is found in the Red Sea.

U. Barberinus, Cuv. and Valenc., *Mullus Barberinus*, Lacep. From Bouton Straits.

U. Lateristrigus, Cuv. and Valenc.

U. Russelii, Cuv. and Valenc. Found at Vizagapatam, and called *Rahtee-gooli-vinda*.

U. Waigiensis, Cuv. and Valenc. Taken off the Island of Hawaie.

U. Malabaricus, Cuv. and Valenc. From the Malabar coast.

U. Bifasciatus et Trifasciatus, Cuv. and Valenc., *Mullus Bif. et Trif.*, Lacep. From the Indian Seas and from the South Atlantic.

U. Chryserydros, Cuv. and Valenc., *Mullus Radiatus*, Shaw. Common on the coasts of the Isle of France, and on the Coromandel coast.

U. Cyclostomus, Cuv. and Valenc., *Mullus Cycl.*, Lacep. Taken off the Sechelles Islands.

U. Cinnabarinus, Cuv. and Valenc. Taken off Ceylon.

To this section also belong the following species from the Atlantic:

U. Maculatus, Cuv. and Valenc., *Mullus Mac.*, Bl. Found off the coasts of Brazil and Martinique; also at Cuba.

U. Punctatus, Cuv. and Valenc., *U. Martinicus*, Cuv. and Valenc. From Martinique.

U. Balteatus, Cuv. and Valenc.

U. Pragensis, Cuv. and Valenc. From Cape de Verd Islands.

See Bloch, *Histoire Naturelle des Poissons*; Cuvier and Valenciennes, *Histoire Naturelle des Poissons*.

UP-HOLD, v.

Dut. *op-houden*.

UPHOLDER,

To bear or carry up; to support,

UPHOLDSTER,

to sustain.

UPHOLSTERER,

Upholder,—a bearer or carrier,

UPHOLSTERY.

supporter, sustainer; a bearer at a

funeral; one who provides furniture for funerals; gen.—One who provides any articles of furniture; one who buys and sells furniture.

It is variously written,—*Up-holder*, *up-holderer*, *upholdster*, *upholsterer*.

And of *upholders* an hep. herly by the morwe.

Piers Plouhman, p. 106.

Upholderes on the hul. shullen have hit to selle.

Id. p. 213.

Doe not you, I saye, whiles you thus stablyshe and *vpholde* your own commaundementes, disanull and put oute of place Goddes commaundementes?

Udall. Marke, ch. vii.

And also that they shuld *vpholde* and maynteyne for theyr kyng and ruler, hym that the kyng shulde admytte and chose, and none other.

Fabyan. Chronycle. Anno 1296.

The reader is bid [in the preface to the "Disclosing of the Canon of the Popish Mass"], "to lift up his eyes and behold the abomination of idolatry so shamefully used in those days, and not only used, but with force and maine fortified and *upholden* with fire and faggot, crudelity and strength; and so sore *upholden*, that the eternal word of God is clearly banished."

Strype. Eccles. Mem. Edw. VI. Anno 1547.

With constant zeale, and courage bold,

After long paines and labours manifold,

He found the meanes that prisoner vp to reare;

Whose feeble thighes, vnable to *uphold*

His pined corse, him scarce to light could beare.

Spenser. Faerie Queene, book i. can. 8.

An earnest and a zealous *vpholder* of his countrie, in all attempts rather respecting the publike weale than his priuat gaine.

Holinshed. Chronicles of Ireland, Anno 1546.

But they that are ungrateful to the great Maker and *Upholder* of it [the world] and regardless of him; what wonder if they take no notice of the advantage they receive by the concernment of his children in the worlde.

Leighton. Com. on 1 Pet. ch. iii.

The idea then we have, to which we give the general name substance, being nothing but the supposed, but unknown support of those qualities we find existing, which we imagine cannot subsist, "sine re substantie," without something to support them, we call that support *substantia*; which, according to the true import of the word, is in plain English, standing under or *upholding*.

Locke. Human Understanding, book ii. ch. xxiii.

Let Ireland tell, how wit *upheld* her cause,
Her trade supported, and supply'd her laws;
And leave on Swift this grateful verse ingrav'd,
The rights a court attack'd, a poet sav'd.

Pope. Imitation of Horace, book ii. *Ep.* 1.

Where the brass knocker, wrapt in flannel band
Forbids the thunder of the footman's hand.
The *upholder*, rueful harbinger of death,
Waits with impatience for the dying breath.
As vultures o'er the camp, with hovering flight
Snuff up the future carnage of the fight.

Gay. Trivia, book ii.

Which is valued by the clerk of the wardrobe of beds, the keeper of the wardrobe at Richmond, and an *upholster* at London, at 61*l.* 7*s.* 2*d.*

Strype. Memorials, book ii. ch. xxx.

"They were placed," said he, "in an handsome apartment at an *upholsterer's* in King-street, Covent-garden."

Tatler, No. 171.

UP-LAND, } A. S. *upland*, *uplandisch-man*.

UPLANDISH, } High land; land lying high up in the country, in the upper parts, remote from the more populous, civilized, urbane parts; and thus—*Upland*, adj. and *uplandish*, are used to denote—

Rural, rustic, rude, uncivilized.

Taking away with him the *vpland*, or countrey people that should haue tilled the ground, & might easily haue bene kept in order, without any danger, by other good policies, he was driuen afterwards many yeres together, to vitaille the countrey (specially the great townes) out of his owne countrey of Russia.

Hakluyt. Voyages, vol. i. p. 485.

UP-
RIGHT.

For if they may measure their obedience by the measure of theyr owne profite as Tindal telleth vs: they shal soone seke occasion of sedicion, and therof do thesself also more harme in one day then should their ruler in many yeares, all wer he right vnprofitable in dede, as appeared by the *uplandishe* Lutheranes in Almayn.

Sir T. More. *Workes*, p. 364.

Wherby was signified that there should be in some partes of the worlde so *vplandishe* and cruell people, that they would at the first brout, by reason of theyr natural crueltie, refuse and abhorre the doctryne of the ghospelle.

Udall. *Marke*, ch. v.

Sometimes with secure delight
The *upland* hamlets will invite
Where the merry bells ring round
And the jocund rebeckes sound.

Milton. *L'Allegro*.

The side where the town of Villa de Mose stands, is a sort of grey sandy earth; and the whole country, the *upland* I mean, seems to be much the same: but the low land is of a black deep mould, and in some places very strong clay.

Dampier. *Voyages*, Anno 1676.

Far to the right where Apennine ascends,
Bright as the summer, Italy extends;
Its *uplands* sloping deck the mountain's side,
Woods over woods in gay theatric pride.

Goldsmith. *The Traveller*.

UPPER RHINE. This is now an obsolete name, and was formerly applied to a Circle of Germany, which extended across the Rhine, from the border of old Lorraine in France, Southward to the circle of Lower Saxony, nearly intersected by the Palatinate of the Rhine. The superficies was 8500 square miles, including the Landgravate of Hesse, Wetteravia, the Counties of Catzenellenbogen and Waldeck, Frankfort, and the territories of Fulda, Spire, Worms, Zweibrücken, and Montbelliard.

UPPINGHAM, in Rutlandshire, a small town built upon an eminence, six miles South of Oakham, having a market on Wednesday, and a population of 1757.

UP-RIGHT, *adj.* } A. S. *up-rihte*; Dut. *op-recht*;
U'PRIGHT, *n.* } Ger. *auff-recht*, *erectus*, erect;
U'PRIGHTLY, } and (met.) with no inclination or
U'PRIGHTNESS. } tendency to wrong.

Erect or straight up, raised straight up, extended, straight; (met.) just, honest, honourable; of unbending, undeviating, justice (rectitude), integrity.

And Poul biheelde him and sigh that he hadde feith that he schulde be maad saaf, & seide with a greet voice, rise thou *upright* on thi feet: and he lippide and walkide.

Wiclif. *Dedis*, ch. xiv.

[Paule] behelde him, and perceaued that he had fayth to be whole, and sayd with a loud voyce: stande *vpryght* on thi fete. And he sterte vp, and walked.

UP-SET.

UP-SO-DOWN.

For of the false Moabites,
Forth with the strength of Amonites
Of that thei were first misget,
The people of God was ofte *vpset*
In Israell and in Judee.

Gower. *Conf. Am.* book viii.

For loue first of all troubleth and tosseth all thing *vpset-downe*
at his lust.

Vives. *Instruction of a Christian Woman*, book i. ch. xiv.

UP-SEY, Dut. *opsee*, over sea; applied to an ine-
briating, fuddling liquor, or any thing affected by it.

PRIG. And very fit it should be, thou and Ferret,
And Ginks to sing the song: I for the structure,
Which is the bowl.

HIG. Which must be *up-sey* English,
Strong, lusty, London beer: let's think more of it.
Beaumont and Fletcher. The Beggar's Bush, act iv. sc. 5.

I do not like the fulness of your eye;
It hath a heavy cast, 'tis *upsee* Dutch.

Ben Jonson. *Alchemist*, act iv. sc. 4.

UP-SHOT, } A cast up; the account, the amount,
UPSHOOTING. } the sum—cast up; the amount, sum,
or summit.

King Henrie the fift in his beginning thought it a meere
scofferie to pursue anie fallow deere with hounds or greihounds,
but supposed himselfe alwaies to haue doone a sufficient act when
he had tired them by his owne trauell on foote, and so killed them
with his hands in the *upshot* of that exercise and end of his
recreation.

Holinshed. *Description of England*, book ii. ch. iv.

With which he kindleth his ambitious spright
To like desire and praise of noble fame,
The onely *up-shot* where-to he doth aime.

Spenser. *Mother Hubbard's Tale*.

The painted floures, the trees *upshooting* hie
The dales for shade, the hills for breathing space.

Id. *Faerie Queene*, book ii. can. 12.

What marvel then if he thought it no diminution of himself, as
oft as he saw his time, to be importunate for treaties, when he
sought them only, as by the *upshot* appear'd, to get opportunities?
Milton. *Answer to Eikon Basilike*, sec. 18.

The fearfullest plagues God still reserves for the *upshot*: all the
former do but make way for the last.

Hall. *Cont. Plagues of Egypt*.

I am a woman of condition, not now three and twenty, and have
had proposals from at least ten different men, and the greater
number of them have upon the *upshot* refused me.

Spectator, No. 528.

The *upshot* is that upon comparing those pleasures, which are
the natural effects of virtue with those sufferings, which are the
natural effects of ill constitution or other calamity, these are many,
very many times found to exceed: and *e contrario*, upon balancing
those evils, which are the genuine effects of vice, against the
advantages resulting from a fortunate estate, these may often be
found to outdo the other.

Wollaston. *Religion of Nature*, sec. 9.

UP-SITTING, *n.* Dut. *op-sittlen*, insidere, to sit
upon. A sitting *up*.

COUNT. Farewell my Lord, I was entreated to invite your lord-
ship to a lady's *upsitting*.

Beaumont and Fletcher. *Woman-Hater*, act ii.

UP-SO-DOWN, } See UP.
UP-SIDE-DOWN. }

And al the multitude of hem arisen: and ledden him to Pilat.
And thei bigunnen to accuse him: and seiden, we han founden
this turnynge *upsodown* oure folk.

Wiclif. *Luke*, ch. xxiii.

But Saul, which is seid also Poul, was fillid with the Hooli
Goost and biheelde in to hym and seide, a thou ful of al gile and
als falsnesse, thou sone of the deuel, thou enemye of al rightwis-
nesse, thou leeuyst not to turne *upsodown* the rightfull weies of the
Lord.

Id. *Dedis*, ch. xiii.

And how *vpso doune* is this thing, that we seen that the betidyng
of temporal thynges, is cause of the eternal prescience.

VOL. XXVIII.

And vpon this diuision
The londe was tourned *vp so downe*.

Gower. *Conf. Am.* book ii.

This ought a kynge well vnderstonde,
As he whiche is to lawe swore,
That if the lawe be forloze
Withouten execucion,

It maketh a londe turne *vp so down*. Id. *Ib.* book vii.

And y^t now we make the fassiō of Cristēdom. to seme al turned
quite *upsodown*.

Sir T. More. *Works*, p. 110.

SIR GREG. No not to me, the edge of her tongue is taken off,
Gives me very good words, turn'd *up-side-down* to me
And we live as quietly as two tortoises.

Beaumont and Fletcher. *Wit at several Weapons*, act v.

Was any man ever to that degree *sui juris*, so much his own
master, as that he might lawfully prey upon mankind, bear down
all that stood in his way, and turn all things *upside-down*?

Milton. *A Defence of the People of England*.

There is no question but these young Machiavels will, in a little
time, turn their colledge *upside down* with plots and stratagems.
Spectator, No. 305.

UP-SPURNER, one who casts up indignantly;
(met.) a scorner, a contemner, a disdain.

And howe wretchedly Pompeius that *upspurner* of the erth
perished, Lucanus describeth it.

Joye. *Exposicion of Daniel*, ch. iv.

UP-STADID, Dut. *op-staen*. Kept, propped, held up.

But when of him no answere she receiued,
But saw him senselesse by the squire *vp-staid*,
She weened well, that then she was betraid.

Spenser. *Faerie Queene*, book iv. can. 9.

UP-START, *v.* } To move up suddenly, jump or
U'PSTART, *a.* } leap (as if suddenly stirred).

U'PSTART, *s.* } An *upstart*,—one suddenly raised
or risen, become eminent or conspicuous.

Their dam *upstart*, out of her den effraid,
And rushed forth, hurling her hideous taile
About her cursed head, whose folds displaid
Were stretcht now forth at length without entraile.

Spenser. *Faerie Queene*, book i. can. 1.

And where they had a common speech at Rome, to call them
upstarts that were no gentlemen born, but did rise by vertue: it
fortuned Cato to be called one of them.

North. *Plutarch*, p. 289.

ARR. It is a note

Of *upstart* greatness, to observe and watch
For these poor trifles, which the noble mind
Neglects and scorns.

Ben Jonson. *Sejanus*, act v. sc. 8.

Thirsil *upstarting* from his fearless bed,
Where useless nights he safe and quiet rests,
Unhous'd his bleating flock, and quickly thence
Hasting to his expecting audience,
Thus with sad verse began their grieved minds incense.

P. Fletcher. *Purple Island*, ch. vii.

Thus while he spoke, the virgin from the ground
Upstart fresh, already clos'd the wound,
And unconcern'd for all she felt before
Precipitates her flight along the shore.

Dryden. *Theodore and Honoria*.

This note was made to meet with the common reproach then
given to the religion reformed, that it was a new *upstart* religion,
and called the new learning.

Strype. *Eccles. Mem. Hen. VIII.*

Would it not be an insufferable thing for a learned professor,
and that which his scarlet would blush at, to have his authority of
forty years standing wrought out of hard rock Greek and Latin,
with no small expence of time and candle, and confirmed by
general tradition and a reverend beard, in an instant overturned by
an *upstart* novelist?

Locke. *Human Understanding*, book iv. ch. xx.

So saying, the might of Vulcan loos'd the snare,
And they, detain'd by those coercive bands
No longer, from the couch *upstarting*, flew,
Mars into Thrace, and to her Paphian home
The queen of smiles.

Cowper. *Homer. Odyssey*, book viii.

UP-SO-DOWN.

UP-START.

UP-STIR. UP-STIR, *n.* insurrection, commotion, disturbance.

UPUPA. Euen in the time when your profite was sought, and better redresse was entended, then your *vpstirres* and vnquietnesse coulde obtaine.
Sir J. Cheeke. The Hurt of Sedition.

UPTON, a town of England, in the county of Worcester, standing on the Severn, with a population of 2343, having a market on Thursday. It is 11 miles South of Worcester, and 111 W. N. W. from London.

UPUPA, from the Greek *εποψ*, Linn.; *Hoopoe*, Penn. In *Zoology*, a genus of animals belonging to the family *Tenuirostres*, order *Passeres*, class *Aves*.

Generic character. Head furnished with a crest, consisting of a double row of long feathers, capable of elevation or depression at will; beak very long and slender, compressed, trigonal and slightly arched; nostrils basal, lateral, ovoid, surmounted by the frontal feathers; wings of moderate length, their fourth and fifth quills longest; tail square, and consisting of ten quills; toes three in front, with short, slightly curved claws, and one behind with the claw nearly straight.

But two species of Hoopoes are known, of which one is European.

U. Epops, Linn.; *la Huppe*, Buff.; *Common Hoopoe*, Penn. About eleven inches in length, beak flesh-coloured at the base and black towards the tip; irides brown; feathers of the crest (which is arched) rufous tipped with black; sides of the head, neck, chest, and belly pale buff; back crossed with three half circular bands inclining downwards, two of which are black, with an intervening white one; shoulders and carpal joints pale brown: wing-coverts black, with a transverse bar of buffy white, primary quills black, with a broad white band, secondary and tertial also black, with four or five narrow white bands, some of the latter edged and tipped with pale buff, and the last tertial with an obliquely longitudinal stripe on its inner web; rump white; tail-quills black, with a well marked white patch about their middle, but gradually approaching the tip towards the outer edge of the tail, and thus forming a semilunar band; upper tail-coverts white at their base and black at the tips; under tail-coverts entirely white; legs and toes brown, with black claws. The female differs little from the male, except in the crest being much shorter and the colours of the plumage less clear. When the young first leave the nest, their crest is very short, and the extremities of its feathers black with white tips; the whole plumage is tinged with ashy; the bands on the wings less distinct and more yellowish; the belly and thighs streaked with dusky, and the white band on the tail nearer the rump. The Hoopoe is found throughout the year on the northern coast of Africa; is common in Italy from May to September; and is found throughout Europe at different times of the year, but principally towards the south; it, however, migrates northward, and visits Germany, England, Holland, and other northern climes; but in this country it appears generally in the autumn, after breeding time has passed. They build in the holes of trees, and less frequently in the crevices of rocks and walls, a nest, consisting of a few bents of grass, lined with feathers, which is remarkably fetid, and in it are deposited four or five eggs of an uniform pale lavender. They moult only once a year. Temminck observes that the Hoopoes are occupied on the ground, as the Creepers are on trees and walls, running along the meadows and other moist places, grubbing up the larvæ there concealed. More rarely they may be seen swinging on

the branches of trees, and picking insects from the under surface of the leaves. They are occasionally taken and tamed, and become very familiar, but are preserved with great difficulty. They walk gracefully, but perform some droll actions, frequently tapping the floor with their beak, so that, says Beckstein, they seem as if they walk with a stick, at the same time shaking their crest, wings, and tail. They are fond of basking in the sun, and express their enjoyment by uttering, in a quivering tone, the syllables, *vec, vec, vec*. Their call for another is a sharp note, and occasionally they utter a sound closely resembling the words *hoop, hoop, hoop*, breathed out so softly, but so rapidly, says Mr. Yarrell, as to remind the hearer of the note of the dove; but when angered, these syllables are sharply expressed. The latter writer also states that the Hoopoe rubs himself in the sand at the bottom of its cage, dusting itself like the Larks, but taking great care, when feeding, to shake off any sand or gravel which may stick to its food.

U. Cristatella, Vieill., *African Hoopoe*. Nine inches in length; beak black, with its base greyish; crest deep rufous, edged with black; other parts of the head, the neck, upper part of the back, lesser wing-coverts, and under parts of the body also rufous, but paler on the belly and thighs; rump white; first eight alar quills completely black, and the following seven white, from the base to the middle, after which the white forms a narrow band terminating in rufous, the remaining parts of these feathers black; the three quills nearest the body deep brown edged with rufous; tail-quills deep black, with a broad transverse white band; under tail-coverts rufous, tipped with white; legs deep black. This species is found in Africa from Malimba to the Cape of Good Hope, and has nearly the same habits and cry as the former species.

See Linnæi, *Systema Naturæ* à Gmelin; Temminck, *Manuel d'Ornithologie*; Vieillot, *Galerie des Oiseaux*; Yarrell, *British Birds*.

To want the strength of bulls, the fur of bears.

Pope. *Essay on Man*. Ep. 1.

URALEPIS, in *Botany*, a genus so called by Nuttall, from *ουρα*, a tail, and *λεπιδ*, a scale, in allusion to the awned scales. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: spikes many-flowered; flowers hermaphrodite, distich, worn away at their apices; glumes two, a little keeled, mutic, unequal, shorter than the flowers; paleæ two, lower one three-nerved, concave, bifid at their apices, the segments often furnished with a subulate tooth on the outside, and awned between the segments, the awn short, subulate, flattened and straight, the superior one bicarinate; scales two, roundish-truncate; stamens three; ovarium stipitate, glabrous, styles two, terminal; stigmas plumose; caryopsis terete, or plano-convex.

This genus consists of creeping North American grasses, with narrow, keeled, or convolute leaves, and having the spikes disposed in racemes or panicles at the tops of the culms.

URANIA, in *Botany*, a genus so called by Schreber, from *ουρανιος*, sublime, on account of the stateliness of the plant. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Musaceæ*. Generic character: perianth epigynous; outer segments equal, keeled in front; inner ones a little smaller, lateral ones equal, approximate, clasping the stamens; stamens six, all perfect; ovarium inferior, three-celled; ovula numerous, fixed to the central placenta, horizontal, anatropous, two series in each cell; style thickish; stigma funnel-shaped, subclavate, with six short teeth at the apex; capsule woody, three-celled, with three loculicidal valves; seeds numerous, depressedly spherical, with an umbilical tubercle in the middle, and covered by pulpy blue aril; testa smooth, fuliginous; embryo orthotropous, fungous-formed; albumen rather horny.

Of this genus, which is identical with *Ravenala* of Adanson, only one certain species is known, *Urania speciosa*, a stately plant, a native of Madagascar, having a stem and leaves like that of *Musa*. The leaves are broad, alternate, and distich; the peduncles are terminal and distich; the flowers are bracteolate, and disposed in alternate bunches in the axils of spaths. The *Urania Guianensis* of Richard is a noble plant, a native of Guiana, and the North of Brazil, particularly in Maranham, in the swampy parts of woods, but this plant will most likely form the type of a new genus intermediate between *Urania* and *Heliconia*.

URANIA, in *Zoology*, a genus of *Papilionid Lepidopterous Insects*.

Generic character. Antennæ filiform, very slender, setaceous, and arched at their tips; two palpi, long, slender, with their third joint naked; all the wings recumbent when at rest; hind legs armed each with four spines.

This genus, established by Fabricius, resembles *Hesperia* in the spines on the hind legs, but is distinguished by its slender, curved, setaceous antennæ, and its long palpi with their naked third joint. They are all Indian or American. The type of the genus is *Papilio Leilus*, Lin.

URANODON, from the Greek *ουραν*, a palate, and *οδον*, a tooth, Illig.; *Bottlehead*, Dale. In *Zoology*, a

genus of animals belonging to the family *Cetacea* Ordina, order *Cetacea*, class *Mammalia*.

Generic character. Forehead high, very convex, and rising suddenly from the snout; lower jaw larger and longer than the upper; palate studded with horny tubercles, but not true teeth, of which there are only two in the front of the lower jaw, not always apparent above the gums; eyes large, and rather above the line of the lips; blow-hole crescent-shaped; body lengthy, and its greatest girth in the region of the pectoral fins, which are small and oval; dorsal fin far behind the middle of the body, lanceolate, pointed, and inclining backwards; skin smooth and glossy.

Of this genus, which has also been described by Lacepede under the name *Hyperoodon*, but one species is known.

U. Bidens, Illig.; *Bottlehead*, Dale. Varying from twenty to twenty-five feet in length; its skin smooth and glossy; blackish, lead-coloured above, and whitish beneath. It is occasionally found in the British Channel, and extends up into the North Sea. The animal described by Hunter, under the name of Bottle-nose Whale with two teeth, in the *Philosophical Transactions*, 1787, was taken in the Thames at London. Jenyns observes, that "this species has been unnecessarily split into several by many authors: it probably embraces all the following of Desmarest's *Mammalogie*, viz., *Delphinus Chemnitzianus*, *Hunteri*, *Edentulus*, *Hyperoodon*, and *Sowerbeyi*." According to Pennant, they are very tame, follow ships a long way, and make but little noise in blowing.

See Illiger, *Prodromus Mammalium*; Cuvier, *Règne Animal*; Pennant, *British Zoology*; Jenyns, *Manual of British Vertebrate Animals*.

URANOSCOPUS, from the Greek *ουρανος*, the heaven, and *σκοπεω*, I survey, Linn. In *Zoology*, a genus of animals belonging to the family *Percoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Head large, cubical, as broad as its length, and flattened above, rough and shagreened; eyes on its upper surface, and looking upwards; sub-orbital bones large, and connected with tympanal bone; within the mouth, which is vertical, in front of the tongue, a long narrow, whiplike, extensile, fleshy process; teeth, in the upper jaw, cardlike and in three rows, of which those in the middle of the hind row are largest; a little band of small teeth at each angle of the vomer, and three or four larger ones on the outer edge of each palate bone; in the lower jaw a single row of six teeth on each side, strong, pointed, and wide apart, with smaller very minute ones in the midst; branchial rays six; shoulder armed with a more or less strong spine; preopercule crenulated; first dorsal fin small, and sometimes scarcely separate from the second, which, as well as the anal fin, is long; pectoral fins large; ventrals beneath the throat, and their spine concealed within the first soft ray; lateral line rises towards the back, and runs closely beneath the base of the second dorsal fin; vent very far forward.

The great size of the suborbital bones in this genus gives the cheeks at first sight the appearance of being mailed, as in the *Scorpenæ*, *Cotii*, and *Triglæ*, but it does not articulate as in them with the ascending edge of the preopercule, but only with a bony plate above, and forming part of the tympanal bone. They approach very closely to the Weevers, *Trachini*, in the large size of their pectoral fins, in the position of the ventrals

URANO-
DON.

URANO-
SCOPUS.

URANO-
SCOPUS.
URBINO.

beneath the throat, in the small size of their first dorsal fin, in the very forward position of the vent, and in the oblique bands of scales on the sides of the body; but they are readily distinguished by their large cubical head as broad as its length and flattened above, and by the shoulder-bone, and not the opercule, being armed with a spine suitable for an offensive or defensive weapon. They are generally solitary, bury themselves in the mud, and play the whiplike process from their mouth for the purpose of attracting small fish within their reach.

One species, *U. Scaber*, Lin., about a foot long, is found in the Mediterranean, and also in the Indian seas: Cuvier also enumerates the following, all from India.

<i>U. Affinis</i> , Cuv.	In which the first or spiny dorsal fin is separated from the second or soft one.

<i>U. Cirrhosus</i> , Ib.	
<i>U. Maculatus</i> , Forst.	
<i>U. Lævis</i> , Schn.	

See Bloch, *Ichthyologia à Schneider*; Cuvier et Valenciennes, *Histoire Naturelle des Poissons*.

URARIA, in *Botany*, a genus so called by Desvaux, but the meaning of which is not explained by him. It belongs to the class *Diadelphia*, order *Decandria*, and the natural family of *Leguminosæ-Papilionaceæ*. Generic character: calyx deeply five-cleft, with setaceous segments; corolla papilionaceous; stamens diadelphous; legume composed of a few one-seeded joints, which are bent back into plaits, and nestling within the calyx.

Composed of tropical herbs rarely shrubs, with imparipinnate, ternate, or simple leaves, and stipellate leaflets; the stipules are lanceolate, membranaceous, and acuminate, striated lengthwise, the upper ones answering the purpose of bracteas to the flowers, but soon fall off; the pedicels are one-flowered, rising in pairs from the axils of the bracteas, and form long, dense, simple racemes. *U. picta*, the *Hedysarum pictum*, is the most common species.

URBA'NE, } Fr. *urbanité*; It. *urbano*, *urbanita*;

URBA'NITY. } Sp. *urbano*, *urbanidad*; Lat. *urbanus*; of or pertaining to a city (*urbs*).

Civil, civilized, polite, polished, courteous, or courtly, gentle or genteel.

Now as touching their *urbanity* it is much unlike unto ours in Japan, and unto that of Europe; howbeit under two principal kinds the rule of their *urbanity* or courtesie may be comprehended: whereof one is observed betwene equals, and the other betwene superiours and inferiours.

Hakluyt. *Voyages, &c.*, vol. ii. part ii. p. 96. *A Description of China*.

So will they keep their measures true,
And make still their proportions new,
Till all become one harmony,
Of honour, and of courtesy,
True valour and *urbanity*.

Ben Jonson. *Love Restored*.

You cannot read and taste his [Horace] beauties, without improving your *urbanity* of manners, together with your knowledge of polite literature.

Knox. *Works*, vol. v. p. 10. *Letter to a Young Nobleman*. Letter 5.

Moral doctrine (says Casaubon), and *urbanity*, or well-mannered wit, are the two things which constitute the Roman satire.

Dryden. *Juvenal*. *Dedication*.

URBINO, an Italian province, also the capital city

of the duchy so named, situated in the states of the Pope, the seat of an archbishopric, and possessing a noble palace, in which the dukes of Urbino formerly resided. The inhabitants denominate the duchy of Urbino, "the State." It comprehends the duchy, the county of Monte Feltro, the county and territory of Gabio, the lordship of Pezaro, and vicariate of Senigaglia, being 22 leagues long by 17 broad. The capital is well built, and is situated upon a mountain between the rivers Metro and Foglia, eight leagues South of Rimini. The province is unhealthy, owing to malaria, but abundantly fertile, and the fishery is abundant. Urbino possesses numerous manufactories of pottery, and is said to abound in game of all kinds.

URCEOLA, in *Botany*, a genus so called by Roxburgh from *urceolus*, a little pitcher, in allusion to the form of the corolla. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Apocynæ*. Generic character: calyx five-toothed; corolla urceolate, with a coarctate, naked throat, and a five-toothed limb; stamens five, inclosed, inserted in the bottom of the tube of the corolla; anthers sagittate, nearly sessile; style crowned by an ovate stigma, which is furnished with an annular margin; hypogynous ring inclosing the ovary; follicles two, coriaceous, nearly globose, rather compressed, half two-valved; seeds numerous, reniform, immersed in fleshy pulp.

Composed of climbing shrubs, yielding a milky juice, inhabiting the tropical parts of Asia; the leaves are opposite, oblong, roughish; flowers minute, dirty green, hairy on the outside, disposed in terminal, much branched panicles. The milky juice yielded by some of the species is one of the kinds of Caoutchouc or Indian rubber.

URCEOLARIA, in *Botany*, a genus so called by Acharius, from *urceolus*, a little pitcher, from the hollowed form of the apothecia: it belongs to the class *Cryptogamia*, order *Lichenes*. Generic character: thallus crustaceous, spreading, adnate, uniform; apothecia orbicular, the disk concave, coloured, and immersed in the crust, the border formed of the crust, and of the same colour.

Of this genus six species are natives of Britain, inhabitants of rocks and stones; they are brownish, greenish, or greyish, naked and tessellated lichens. The names of the British species are *U. scruposa*, *gibbosa*, *calcareæ*, *cinerea*, *Acharii*, and *rufescens*.

URCEOLARIA, in *Zoology*, a genus of *Rotiferous Ciliated Polyps*.

Generic character. Body free, contractile, urceolated, sometimes lengthy, and without either tail or pedicle; mouth terminal, dilated, and furnished with rotatory cilia.

This genus was separated by Lamarck from the *Vorticellæ* of Müller to include all those species in which both tail and peduncle were deficient. They are the smallest of the *Rotiferous Polyps*. They are constantly swimming about in the water, twisting and turning with great celerity. They can either project or retract their rotatory organs, which are placed anteriorly, and play them with much quickness. The type of the genus is *Vorticella Viridis* of Müller.

URCEOLINA, in *Botany*, a genus so called by Herbert from *urceolus*, a pitcher, on account of the form of the corona of the perianth. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Amaryllideæ*. Generic character: perianth with a straight, slender, nearly cylindrical tube, which

URBINO.
URCEO-
LINA.

URCEO- is enlarged at the mouth; a ventricosely campanulate
LINA. limb, and a more or less perfect corona; stamens six;
URED. anthers incumbent; style one; stigma dilated; ova-
rium pendulous, ovate, trisulcate, three-celled; capsule
three-celled; seeds numerous, black.

This genus is separated from *Crinum*, and is nearly allied to *Leperiza*, *Oporanthus*, and *Clinanthus*, and consists of two known species, *U. pendula*, the *Crinum urceolatum* of Ruiz and Payon, and *U. fulva*, both natives of Peru, in woods. The bulbs are roundish; the leaves and scapes are æstival, the first are broad, petiolate, and the latter are solid; the peduncles are curved; the flowers are pendulous, in one species yellow, and in the other fulvous.

URCHIN. Fr. *hérisson*; It. *riccio*; Sp. *erizo*; Lat. *erinaceus*; Gr. *χῆρ*. Met.—*Urchins* are Cross, fractious, peevish, mischievous children.

Like sharpe *vrchons* his haire was grow.

Chaucer. *Romant of the Rose*, fol. 130.

But the fift troupe most horrible of hew,
And fierce of force, was dreadfull to report;
For, some like snayles, some did like spiders shew,
And some like vgly *vrchins* thicke and short.

Spenser. *Faerie Queene*, book ii. can. 11, stanza 13.

Some [fish] are armed with shels, some with hard skales, and diuers round as a ball skinned like an *yrcheon* or hedghog,
Holinshed. *Chronicles*, vol. v. p. 15. *Description of Scotland*, ch. 9.

The fox in Æsop's fables would not suffer the *urchin* to take off the tiques that were settled upon her body; for if (quoth she) thou take away these that be already full, there will come other hungry ones in their place.

Holland. *Plutarch*, fol. 323.

Of the same sort that crabs be, are the *urchins* of the sea called echini; and these instead of feet have certain pointed prickles. Their manner of going is to roll themselves up and tumble round.

CROAKER. You did indeed dissemble, you *urchin* you; but where's the girl that wont dissemble for an husband?

Goldsmith. *Good Natured Man*, act ii.

URE, Skinner thinks is contracted from *usura*, usage. See USE.

If that I might in any wise espy,
What was the cause of his deedly wo,
Or why that he so pitously gan cry
On his fortune and on *ure* also,
With all my might I layd an eare to.

Chaucer. *Comedy of the Black Knight*, p. 339.

And in my selfe I me assured,
That in my body I was well *ured*,
Sith I might haue such a grace,
To see the ladies and the place.

Id. *Chaucer's Dream*, p. 379.

Whider in deed don,
Or meekely feined to our instruction,
Let clerkes determine, but this am I sure,
Much like thing I haue had in *vre*.

Imputed to Chaucer. *Rem. of Love*, p. 540.

URE. Lat. *urius*; Gr. *οὔρος*. See the Quotations.

The third kind is of the that are named *ures*. Theis are of bignes somewhat lesse than elephantes, in kind and color and shape like a bull.

Goldinge. *Cæsar. Commentaries*, fol. 163.

As for the plowing with *vres* (which I suppose to be vnlikelie) because they are (in mine opinion) vntameable and alkes a thing commonlie vsed in the east countries; here is no place to speak of it, since we want these kind of beasts.

Holinshed. *Description of England*, book iii. ch. iv.

URED. in Botany, a genus so called by Persoon, from *uro*, to burn. It belongs to the class *Cryptogamia*, and order *Fungi*. Generic character: sporidia free, aggregate, covered by the epidermis of living plants.

Of this genus a great number of species are natives of Britain; they are chiefly found under the epidermis of various plants, and their specific names are generally derived from the plants on which they grow.

URENA, in Botany, a genus latinized from *Uren*, the Malabar name of one of the species. It belongs to the class *Monadelphia*, order *Polyandria*, and the natural family of *Malvaceæ*. Generic character: calyx five-cleft, girded by a five-cleft involucrel, which is combined to the middle; anthers numerous on the top of the tube; stigmas ten; carpels five, capsular, one-seeded, connivent, generally echinated by prickles, which are radiate at their apices.

This genus is composed of suffruticose branching plants, natives within the tropics. The leaves are undivided, and three or five-lobed, and generally furnished with glands on the nerves on the under surface. The flowers are small and of a red colour, and rise from the axils of the leaves.

URGE, } Fr. *urger*; It. *urgere*; Sp. *urgente*;
U'RGENT, } Lat. *urgere*; (from the Gr. *εργον*,
U'RGENCY, } *opus, opus excitare, aut stimulare*),
U'RGER. } to rouse, to spur on to work. Vossius.

To press on, in any work or labour; to excite, to stimulate, to encourage, to be earnest in pressing forward, or persevering; to labour earnestly; to pursue—to seek—eagerly; to impress, to impel.

And therefore the Jewes called more *urgently* vpon the matier, vnwittynly doing thereby service to the thing that God appointed; that is, to haue this sacrifice made in time conuenient, and in due season.

Udall. *Erasmus. John*, ch. xix. fol. 510.

And [he] *urged* the tribute, saying if it were worth but one haire, that he would not remit it.

Hakluyt. *Voyages, &c.*, vol. i. p. 225. *The Genealogy of the Duke of Moscovy*.

During the two houres of those two dayes the heat is very *urgent*, and so perhaps it will be in foure or fiue dayes more, an houre euery day, vntill the sunne in his proper motion haue crossed the equinoctiall.

Id. *Ib.*, vol. iii. p. 49. *Temperature of Regions*.

Anger and pitty, in his manly brest,
Urge, yet restraine his teares.

Browne. *British Pastorals*, book ii. sec. 4.

Yet take heed, worthy Maximus, all ears
Hear not with that distinction mine do, few
You'll find admonishers, but *urgers* of your actions.

Beaumont and Fletcher. *Valentinian*, act i. sc. 3.

The second is, when of diuers things euill, all being not euitable, wee are permitted to take one; which one sauing only in case of so great *urgency* were not otherwise to bee taken; as in the matter of diuorce amongst the iewes.

Hooker. *Ecclesiasticall Politie*, book i. sec. viii. fol. 20.

If the Sultan understands that any man has money, if it be but twenty dollars, which is a great matter among them, he will send to borrow so much money, pretending *urgent* occasions for it; and they dare not deny him.

Dampier. *Voyages*, vol. i. ch. xii. p. 335. Anno 1686.

Lo hapless Tydeus, whose ill-fated hand
Had slain his brother, leaves his native land,
And, seiz'd with horror, in the shades of night,
Thro' the thick deserts headlong *urg'd* his flight.

Pope. *Thebais of Statius*, book i. ver. 558.

Were a probable way suggested to us of acquiring great wealth, honour, or pleasure, should we not quickly run about it? could we contentedly sleep, till we had brought the business to a sure or hopeful issue? and why with less expedition or *urgency* should we pursue the certain means of our present security and comfort, of our final salvation and happiness?

Barrow. *Sermon 16*, vol. iii. p. 168.

But time is *urgent*; haste we to consult
Priest, prophet, or interpreter of dreams
(For dreams are also of Jove) that we may learn
What crime of ours Apollo thus resents.

Cowper. *Homer. Iliad*, book i. ver. 74.

URED.

URGE.

URGEL.
—
URIA.

URGEL, a city of Spain, in the province of Catalonia; it is a bishop's see, and stands on the Sagea, in a rich plain, near vine-covered mountains. It has a population of 3200 persons, and is distant North-North-West from Barcelona, about 78 miles.

URGINEA, in *Botany*, a genus so called by Steinhil, from *υργινον*, the Greek name of a plant. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Asphodeleæ*. Generic character: perianth six-parted, spreading; stamens six, inserted in the base of the segments of the perianth; filaments equal, subulate; ovary three-celled; ovula numerous, disposed in two series on each cell, ascending; style filiform; stigma obtuse; capsule bluntly trigonal; seeds numerous, ascending, compressed, with a spongy black loose testa.

A genus separated from *Scilla*, and contains only a single known species, *U. maritima*, the officinal Squill; it is a bulbous rooted plant, a native of Europe and the Mediterranean. The racemes terminate the scapes, and the pedicels are bibracteate.

URIA, Briss.; *Guillemot*, Penn. In *Zoology*, a genus of animals belonging to the family *Brachypteri*, order *Palmipedes*, class *Aves*.

Generic character. Beak of moderate length or short, stout, straight, pointed, and compressed; upper mandible slightly curved towards the tip; lower mandible more or less angular; nostrils basal, lateral, concave, and longitudinal, half covered with a feathered membrane, and undivided; wings short, the first quill longest; legs short, retracted into the belly; tarsi slender; three toes in front completely webbed; no hind toe.

The birds forming this genus have a general resemblance to the Divers, *Colymbi* of Linnæus, from which, however, they were separated by Brisson, on account of the absence of the hind toe, and the shortness of their wings. Their flight is but for short distance, and only just above the surface of the water. They dive extremely well, using their wings as a pair of oars, and continue under water for a considerable time, where they are engaged in pursuit of fish, which they follow with great speed. They live in high northern latitudes, in large flocks, migrating southwards during winter, but rarely below Great Britain; and keep constantly by the sea-side or upon the ice, only coming to land at breeding time, when they deposit their usually single egg in some hole or crevice of a rock without the preparation of a nest. They moult twice a year, and there is but little difference between the sexes. Some ornithologists have divided them into two distinct genera, but the sections proposed by Temminck seem to be sufficient without further division.

a. *True Guillemots*, with the beak longer than the head.

U. Troile, Lath.; *Colymbus Troile*, Lin.; *le Guillemot à capuchon*, Tem.; *Foolish Guillemot*, Penn. About eighteen inches long; beak much compressed throughout its whole length, and much longer than the head, of an ashy black colour; interior of the mouth livid yellow; irides brown. In winter the top of the head, the space between the eye and beak, a longitudinal band behind the eyes, and all the upper parts velvet-black with an ashy tinge, which, descending on the sides of the neck, forms a sort of collar towards the chest; under parts and tips of the secondary alar quills white; occiput greyish-white, spreading on each side into a white patch above the dark stripe behind the eyes; feet and toes

yellowish-brown, the back of the tarsi and the membranes black. In summer, the head, ocular regions, throat, and upper part of the neck pitchy brown, and the interior of the mouth bright yellow. The first year's birds are distinguished from the old ones in their winter plumage, by the shortness of their beak, by the indistinctness of the post ocular streak, by the white under parts being less pure, and the lower part of the neck being more ashy brown; their tarsi and toes are livid yellowish, and the membranes brown. This species inhabits the Arctic regions, and is found throughout the year on the borders of the Baltic, on the coast of Holland, and on various parts of the British coast. During winter large flocks descend from the higher latitudes to warmer regions; and very rarely it is found on inland lakes. They feed on fish, particularly on pilchards, also on marine insects, small bivalve molluscs, and very rarely crustaceans. They breed together in large flocks, in cliffs and rocky islands, and, without making nests, merely deposit one very large egg, of an oblong and pointed form, greenish or bluish, marked with large spots and irregular streaks of deep black.

U. Lacrymans, Tem.; *Weeping Guillemot*. Fifteen or sixteen inches long; beak ashy black; inside of mouth yellow; irides brown: it differs from the last species in having the eyes surrounded with a circle of small, slender, close set white feathers, and a narrow white streak passing back above the temples. In the summer plumage the head, cheeks, and upper part of the front of the neck are smoky brown; and the white ocular circle and streak very conspicuous. This species is very common at the Feroe Isles, and has been taken off the banks of Newfoundland; two specimens have been also shot on the coast of Picardy. Its egg is greenish-yellow with numerous close black lines and zigzags.

U. Brunnichii, Sab.; *le Guillemot à gros bec*, Tem.; *Wide-Beaked Guillemot*. Eighteen inches long; beak blackish-blue, as long as the head, dilated, and wide at the base, which is pale blue; head and upper parts deep black; throat and front of the neck black tinged with brownish; under parts white, and stretching up into the neck in the form of an arrow-head; secondary alar quills tipped with white; tarsi and toes green; membranes greenish-black. In its winter plumage the neck is white. Faber and Graber, after a residence both in Feroe and Iceland, assert that the last two species are merely varieties of the first. Thieuermann, on the contrary, insists upon their being distinct, and states that there is always a determinate difference in the colour of their eggs. Is a native of the Polar Seas, and very common at Davis Straits, on the coast of Greenland and Spitzbergen, and in Hudson's Bay. It deposits, like the preceding species, a single egg, the ground colour of which is very pale green marked with a few blackish spots.

U. Grylle, Lath.; *Col. Grylle*, Gmel.; *le Guillemot à miroir blanc*, Tem.; *le petit Guillemot Noir*, Buff.; *Black Guillemot*, Penn. Thirteen inches and a half in length; beak black; interior of the mouth pale reddish; irides brown; top of the head, nape, and all the upper parts deep black, excepting a large white space on the middle of each wing, formed by the white, great, and middle coverts; cheeks and all the under parts from the beak to the tail pure white; legs pale reddish. In the summer plumage the male is entirely deep black, excepting the large white spot on the wing; the beak black, and its inside bright red, as are also the legs. The female is less deep black, and the spot on the

URIA.

URIA. wings smaller. Inhabits the same countries as the last species, and remains throughout the year in the Hebrides and Orkney Islands; in the winter descends along the coasts of the Atlantic. Feeds on small fishes, lobsters, and marine crabs. Lays one oblong egg, of a pale ash colour or white marked with large and small black and ashy spots, close set at one end.

b. Rotches, with the beak much shorter than the head.

U. Alle, Tem. ; *Alca Alle*, Brunn. ; *le petit Guillemot Femelle*, Buff. ; *Little Auk*, Penn. ; *Common Rotche*, Flem. Nearly nine inches in length; beak only half the length of the head, thick, slightly arched, and black; top of the head, ocular regions, nape, sides of the chest, and all the upper parts black, excepting the secondary alar quills, which are tipped with white, and three or four longitudinal white bands on the great coverts next the body; throat, front and sides of the neck, and under parts white; on the sides of the head little blackish streaks varying the white, which stretches out on the back of the head in a very narrow indistinct band; tarsi and toes yellowish-brown; membranes greenish-brown. In the summer plumage the head, cheeks, throat, and upper part of the neck are deep black. Occasionally varieties are noticed entirely white; such were described by Brunnich as a distinct species, by the name of *Alca Candida*. Is a native of the Polar regions, where it breeds, and is very numerous; in winter it is sometimes found on the British shores. It lays two eggs in a hole or crevice of a rock, of a pale bluish-green, most commonly spotless, but sometimes spotted with black. It feeds on marine insects and crustaceans. This species has been formed by Vieillot into his genus *Mergulus*, the name applied to it by Ray, and he has been followed by both Flemming and Jenyns, principally on account of the slight variation in the form of the beak; but if this division be requisite, it will be, as Temminck has justly observed, not difficult to prove that, in the greater number of genera at present adopted, we must convert nearly all the species into genera, and incumber the system with some hundreds of names in addition. This species seems only at the extreme verge of the Guillemots, and forming a ready transition to the genus *Phaleris*.

U'RINAL, }
U'RINARY, }
U'RINATIVE, } Water driven out (from animals.)
U'RINOSE. }

I pray to God so save thy gentil corps,
And eke thyn *urinals*, and thy jordanes.

Chaucer. *Pardoner's Tale*, v. 12240.

And we find also, that places where men *urine* commonly have some smell of violets; and *urine*, if one hath eaten nutmeg, hath so too.

Bacon. *Natural History*, sec. 835.

These follies are within you, and shine through you like the water in an *urinall*.

Shakspeare. *Gentlemen of Verona*, act ii. sc. 1, fol. 23.

As hot, as at the muster
Of all your night-tubs, when the carts doe cluster,
Who shall discharge first his merd-*urinous* load.

Ben Jonson. *Epigram* 134.

The urachus or ligamentous passage is derived from the bottom of the bladder, whereby it dischargeth the waterish and *urinary* part of its contents.

Sir Thomas Brown. *Vulgar Errours*, book v. ch. v.

Those medicines being opening and piercing, do fortifie the operation of the liver, in sending down the wheyey part of the blood to the reines. For medicines *urivative* do not work by rejection, and indigestion, as solutive do. *Id.* *Ib.* sec. 43.

In the kidneys there should be such innumerable little siphons or tubes conveying the *urinous* particles to the pelvis and ureters, first discover'd by Bellini, and illustrated by Malpighi.

Ray. *On the Creation*, part ii. p. 334.

URN, *n.* } Fr. *urne*; It. *urna*; Sp. *urna*; Lat. *urn*, *v.* } *urna*; a vessel for dipping (into the water), from *urinare*. See *ante*, **URINATOR**.

Cotgrave calls it "a narrow necked pot or pitcher of earth, to fetch or keep water in." Also used for various other purposes; to contain the ashes of the dead; to receive the names of candidates, votes, &c.

The poudre in which min herte shall turn
That pray I thee thou take and it conserve
In a vessell that men clepeth an *urne*
Of gold.

Chaucer. *Troilus and Creseide*, book v.

And some of hem with *urnes* made of gold,
Whan the ashes fully were made cold,
To enclose of hem of great affection,
And beare hem home vnto hir region.

Imputed to Chaucer. *Story of Thebes*, part iii. p. 605.

If fortune grant recourse to Italy,
Not here shall these so sacred ashes ly;
But from my hand Cornelia shall take,
And *urne* thy reliques.

May. *Lucan. Pharsalia*, book viii.

He will not suffer us to burn their bones,
To *urne* their ashes, nor to take th' offence
Of mortal loathsomness from the blest eye
Of holy Phæbus, but infects the winds
With stench of our slain lords.

Beaumont and Fletcher. *Two Noble Kinsmen*, act i. sc. 1.

UROCHLOA, in *Botany*, a genus so called by Palisot de Beauvois, from *ουρα*, a tail, and *χλοα*, a grass, on account of the tail-like spikes. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: spikes two-flowered, lower flower neuter, upper one hermaphrodite; glumes two, concave, mutic, unequal; neuter flower of one mutic palea, hermaphrodite flower of two concave paleæ, the lower one of which is mucronately awned at the apex; scales two, subtrilobed; stamens three; ovarium sessile; styles two, terminal; stigmas pencil-formed; caryopsis elliptic, compressed, free between the paleæ.

A genus separated from *Panicum*, and consists of several species; they are flat-leaved, tropical grasses. The spikes are twin, digitate or racemose; the rachis generally clothed with diaphanous bristles.

UROMASTIX, from the Greek *ουρα*, a tail, and *μαστιξ*, a whip, Merr. In *Zoology*, a genus of animals

URINE.

UROMAS-
TIX.

UROMAS-
TIX.

belonging to the family *Iguanida*, order *Sauria*, class *Reptilia*.

Generic character. Head flat and triangular; muzzle short, and arched from behind forwards, with the nostrils lateral, and inclined backwards; three or four intermaxillary teeth united together by age; tongue thick, triangular, and slightly cleft at the tip; upon the sides, and beneath the neck some longitudinal folds, but no contraction; trunk lengthy, depressed, and covered with little united scales; tail as long as the rest of the body, flattened, and very broad, except its posterior third, which becomes conical, the whole surrounded with verticillated spines; limbs short and stout, and on the inside of each thigh a line of pores reaching to the front of the vent.

This genus, often called *Bastard Stellions*, is distinguished from the *Stellions* by the flatness of its head, by the smoothness of its scales, and by the pores on its thighs. The four teeth in the intermaxillary bone of the young animal become subsequently consolidated into a single one. The scales on the trunk are generally small, rhomboidal, smooth, equal sized, and slightly imbricated, but occasionally there are found little granular scales, intermingled with others of larger size. The toes are large, short, cylindrical, covered above with one row, and on the sides with two rows of rhomboidal scales, the first four toes of each foot graduated. The scales covering the tail are quadrilateral, and of these the upper are almost all surmounted with a triangular spine on one of their hind corners. They may be divided into two sections.

- a. *With the scaly covering of the tail consisting of a sequence of rings, formed by large oblong, quadrilateral scales, of which the upper are wide and spiny, and the under narrow and spineless.*

Of these some have the scaly circlets of the same breadth in their entire circumference, so that the transverse bands of plates below are not separate from each other.

U. Spinipes, Merr.; *Stellio Spinipes*, Daud. From two to three feet in length; the scales vary in form as regards their position: thus those on the throat and upper part of the body, though generally circular, differ as to their size, being small near the mesial line, and thence diminishing till they become extremely minute; upon the belly and insides of the limbs, the scales, nearly square, are twice as large as those of the back, whilst those of the paws, head and fore limbs are very minute; the outer surface of the thighs is covered principally with scales similar to those of the back, but on the middle there are some much larger, and instead of being flat, are prominent, conical, and spiny; a few similar scales are also discernible on the flanks; the under part of the tail at its base is covered with square scales like those of the belly, but farther away are of much larger size, and towards the tip are large, the posterior part of each exhibiting a conical pointed eminence, directed backwards like a spine; the scales on the upper part and sides of the tail are largest, being four or five lines long and two wide, but in other respects resemble the former, except in their spines being very blunt near the base, but gradually become more pointed towards the tip of the tail. Upon the back the scales are ranged in regular longitudinal rows, not very discernible; upon the belly they are transverse and dis-

tinged, but still more so upon the tail; upon the hind legs some of the scales are strongly spined. The general colour is bright grass-green. The animal is principally found in Upper Egypt and in the Desert, living in holes under ground. It is known to the Arabs by the name *Dabb*, and is often brought to Cairo by the conjurors, and employed in their tricks.

U. Ornatus, Rupp., eleven inches and two-thirds in length, and distinguished from the preceding species by the scales being larger, fewer, and flatter, which around the ears, on the neck, and sides of the back, and on the fore legs, are not spiny; by the scales on the upper surface of the tail being narrower towards the segments, and by those beneath at the base consisting only of a single row with blunted points; head dusky-grass-green, inclining to yellowish, and duskily marbled on the sides; body green with reddish-violet shadings, and six or seven irregular, broad, entire or broken citron yellow, transverse bands, in which the scales are distinguished by their dusky spottings; tail pale green, inclining to reddish; legs dusky grass-green, marbled with yellow; toes greyish-brown. Is found on the eastern coast of the Red Sea.

U. Dispar, Rupp. About a foot long; the scales of the body larger than in *U. Ornatus*, upper parts in the male smoky black, in the female cinereous yellow; under parts straw coloured; scales on the under surface of the tail dentated, and disposed in numerous series. It is common in the West of Africa, at Ambrical, where it is called *Dendene*, and at Dongola. Others have the scales of the tail much wider above than beneath, where they alternate with one or two transverse bands of oblong quadrangular scales.

- b. *With the scaly covering of the tail consisting above of transverse bands, of compressed conical tubercles with sharp points, and separated from each other by two, three, four, or even five rows of scales, either granular or quadrilateral and carinated; below of numerous smooth, square, imbricated scales.*

U. Reticulatus, Cuv. About two feet and a half long; muzzle very short, and much arched; femoral pores from thirteen to sixteen on each side; tubercles on the upper part of the thighs very small, few, and far apart; upper surface of the tail convex. Upper parts greyish, reticulated with brown; under parts yellowish-white; lower part of the neck marbled with brown; and the front of each shoulder spotted with black; the front of the base of each thigh marked also with a large black spot; upon the sides of the head some vertical brown bands; greatest parts of the tail and also the claws yellowish.

See Merrem, *Tentamen Systematis Amphibiorum*; Geoffroy St. Hilaire in *Histoire Naturelle de l'Egypte*; Cuvier, *Règne Animal*; Rüppell, *Atlas zu der Reise im Nordlichen Afrika*.

UROPETALUM, in Botany, a genus so called by Ker from *ουρα*, a tail, and *πεταλον*, a petal, in reference to the manner in which the divisions of the flower are lengthened out. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Liliaceæ*. Generic character: perianth coloured, funnel-shaped, deeply six-cleft, the segments spreading and lengthened out at their apices, the inner three shorter than the outer three; stamens six, seated in the throat of the perianth, inclosed; filaments dilated at their bases;

UROMAS-

UROPE-
TALUM.

UROPE- ovula horizontal, one series in each cell; style straight,
TALUM. trigonal; stigma bluntish; capsule membranous, acutely
triquetrous, three-celled, dehiscing by three loculicidal
URUS. valves at the apex; seeds numerous, horizontal, com-
pressed with a black crustaceous testa.

This genus consists of bulbous rooted plants, natives of South Africa. The leaves are broad and striated; the flowers are small and greenish, and are disposed in simple racemes at the tops of the scapes. The bracteas exceed the pedicels in length.

UROPHYLLUM, in *Botany*, a genus so called by Dr. Jack, from *ovpa*, a tail, and *φυλλον*, a leaf, because of the leaves ending in long taper points. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Rubiaceæ*. Generic character: calyx with an ovate tube, and a campanulate, five-cleft limb; corolla funnel-shaped, with a bearded throat, and a five-parted limb, which is valvate in æstivation; stamens five, shorter than the limb of the corolla; anthers linear; stigma thick, five-lobed; ovary terminated by a glandular disk; berry globose, five-celled, many-seeded; seeds minute, marked by pentagonal pores.

Two species of this genus are known, *U. villosum*, and *U. glabrum*, both natives of Pulo Penang; they are erect shrubs. The leaves are oblong-lanceolate, ending each in a long taper point, on short petioles; the stipulas are oblong, acute, and deciduous; the peduncles are axillary, short, bearing verticillate heads of flowers; the bracteas are numerous and acute, surrounding the heads of flowers; the corollas are greenish.

UROPODA, in *Zoology*, a genus of *Acaridan Arachnids*.

Generic character. Mouth opening at the middle under the front edge of the body; sucker and palpi not apparent; no distinct eyes; body oval, rounded posteriorly; the back coriaceous and slightly convex; a long filament attached to the vent; eight short legs.

By means of its anal thread it attaches itself to the bodies of coleopterous insects. The type of the genus is *U. vegetans*, Latr.

UROSPERMUM, in *Botany*, a genus so called by Jussieu, from *ovpa*, a tail, and *σπέρμα*, a seed, on account of the rostrate achenia. It belongs to the class *Syngenesia*, order *Æqualis*, and the natural family of *Compositæ-Cichoraceæ*. Generic character: heads many-flowered, homogamous; involucre of eight scales, in one series, connate at their bases; receptacle rather convex, chaffless, foveolate; corollas ligulate; achenia uniform, sessile, rostrate, muricated, each furnished with a long beak, which is inflated at the base,

and separated inside by a transverse dissepiment from the embryo; pappus uniform, in one series, plumose.

A genus nearly allied to *Arnopogon*, and consists of several known species; they are all glabrous, dichotomous herbs, natives of the region of the Mediterranean, with alternate, half stem-clasping leaves, which are more or less pinnatifid, and heads of yellow flowers, which are supported by long peduncles.

UROSTELMA, in *Botany*, a genus so called by Bunge, from *ovpa*, a tail, and *στελμα*, a crown, on account of the gynostegium being furnished with tails. It belongs to the class *Pentandria*, order *Digynia*, and the natural family of *Asclepiadææ*. Generic character: calyx five-parted, with lanceolate, acute segments; corolla campanulate, deeply five-cleft, the segments villous inside, and at length revolute; corona simple, five-lobed; gynostegium furnished with five membranous processes, and each of these processes is furnished with a long filiform appendage, which is pentagonal at the base; pollen masses twin, solid, pendulous; follicles muricated; seeds comose.

A single species of this genus is only known, *U. Chinnensis*, a native of the North of China. It is a climbing shrub, with cordate, undulated, acuminate leaves, and axillary, pedunculate racemes of pale, dirty reddish-white flowers.

URSINIA, in *Botany*, a genus so named by Gærtner, from *ursus*, a bear, on account of the rough involucre. It belongs to the class *Syngenesia*, order *Frustaneæ*, and the natural family of *Compositæ-Senecionideæ-HeleNieæ*. Generic character: heads many-flowered, radiate, flowers of the ray ligulate in one series, neuter, those of the disk five-toothed and hermaphrodite; receptacle paleaceous, the paleæ scarious and clasping the flowers, usually truncate at their apices; involucre campanulate, of many series of imbricated scales, which are scarious at their apices; style with truncate, nearly cuneated branches; anthers tipped each by a somewhat cordate appendage; achenia obovate, turbinate, quite glabrous, attenuated at their bases, and furnished with five small nervules; pappus double, the exterior five laminæ are large and obovate, milk coloured, and twisted, as in *Sphenogyne*, the inner five are self-coloured threads, which are combined at their bases.

A genus nearly allied to *Sphenogyne*, and consists of a considerable number of species, all natives of South Africa, in the neighbourhood of the Cape of Good Hope: they are either herbs or shrubs, with pinnate or bipinnate leaves; the scales of the involucre are generally terminated by scarious appendages.

URO-
SPER-
MUM.

URSUS.

U R S U S.

URSUS, Linn.; *Bear*, Penn. In *Zoology*, a genus of animals belonging to the tribe *Plantigrada*, family *Carnivora*, order *Sarcophaga*, class *Mammalia*.

Generic character. Head somewhat cylindrical; muzzle projecting; snout broad, and, together with the lips, more or less projectile; tongue long and soft; incisive teeth in each jaw six, the outer upper ones stronger and more pointed; cuspid strong and conical; molar teeth four to six in the upper, and four to seven in the lower jaw, of these from one to three in the upper, and from one to four in the lower jaw, small, spurious, and deciduous; the next tooth on each side in each jaw a

true sectorial molar, and behind these two very large tubercular teeth of a squarish form; ears of moderate size, and rounded; body bulky, fat, and more or less furred with down at the roots; feet plantigrade, with five distinct toes; soles bare and callous; claws curved and sharp; two pectoral and four ventral teats; tail short.

Although in size equalling the largest of the predacious animals, as the Lion and Tiger, the Bears are the least carnivorous of the whole order, and in accordance with this is their system of dentition, for instead of all their molar teeth being sectorial and shutting within

URSUS. each other like a pair of scissors, the crowns of the hinder two in each jaw on each side are tubercular, and their connection with other carnivorous animals is shown merely by a tooth in front of these, which is only a little more sectorial than the rest. The spurious molar teeth between these and the cuspid are deciduous, sometimes more and at other times fewer, being shed early and leaving corresponding gaps; and in one species at least not all the incisives are permanent. All these circumstances indicate the disposition to frugivorous habits, which is the character of the genus, with the exception of a single species. They are all furnished with projectile lips, some even are capable of great protrusion, so as to form a kind of proboscis. The cartilages of the nose are also very movable, and participate in this projection. The general aspect of Bears is heavy, their body bulky, limbs thick, and their motions awkward and shuffling upon the ground, although they get along at a tolerably brisk pace; but the greater number of them are better suited for climbing trees, their descent from which is however less ready, as they come down breech foremost. The breadth of their forehead, their narrow muzzle, and their generally lively though small eyes, somewhat relieve their otherwise heavy appearance. Bears are extremely cautious, and avoid whatever they are unacquainted with, or if induced to approach, come slowly towards and examine it with great care before meddling with it. Generally they are shy and little inclined to fight, except when pressed by hunger or when in company with their young and attacked. When, however, compelled to act on the defensive, they are very courageous and little disposed to avoid a rencontre, but rising upon their hind limbs endeavour to hug their opponent in their arms, and tear him to pieces with their teeth and claws. Most of the species inhabiting cold climates retire to dens, where they sleep through the greater part of the winter, and during this time the female produces her young. Bears are capable of a certain degree of education, and can be taught to perform particular motions at the word of command, hence they appear to have been for many ages and in all countries great favourites of the populace, who are amused by their grotesque antics. Where Bears are numerous they become considerable articles of commerce for the sake of the valuable furs which they afford; and they are either taken in snares or shot, preference being given to the latter method where possible, on account of the danger the hunter is otherwise exposed to; but even shooting is by no means free from danger.

U. Arctos, Lin.; *l'Ours brun de l'Europe*, Cuv.; *Brown Bear*, Penn. About four feet in length and two and a half in height; with the forehead rising suddenly behind the eyes and becoming regularly convex, but not very high; in summer its fur is more smooth and silky, but in winter is longer and woolly; its colour is brown, with the tips of the hairs inclining to fawn colour or yellow, specially upon the head and front of the body. In the young of this species, the fur is of a more ashy greyish-brown, and upon the shoulders has a beautiful white band, which, as age advances, gradually becomes yellow, and disappears; but traces of it remain for two, three, or more years, and hence it has been described as a distinct species, by the name of *Collared Bear*; Cuvier, however, is satisfied that it is only a young Brown Bear. This animal was formerly found throughout Europe as low as the Alps and the Pyrenees, but has long since been extirpated from the British Isles, and

from the interior of Holland, France, and Germany; it is, however, still common in the Alps of both Switzerland and Savoy, in the mountain forests of Bohemia, Poland, and Russia, and extends across Asia in great numbers, in Siberia, and as far as Kamtschatka and Japan; perhaps also in America and Africa. Oken says, that in their fifth year they mate; the female goes with young seven months, and produces one, two, or three cubs, which are perfectly well formed, and about eight inches long; they remain blind for a month, and continue to suck during three months. Except during the short breeding season, they live solitarily, some resorting to their winter retreats, from whence the female does not emerge till her young are able to follow her. They feed generally on pulse, roots, and of potatoes they are very fond, also on berries, and to honey they are extremely partial, in search of which they climb the trees, regardless of the stings of the bees. They also hunt after ant-hills, being very partial to those insects, probably on account of their acidity, as acid fruits, particularly barberries and sorb-apples are great favourites. Occasionally also they prey on cattle and carrion, but this generally after rousing from their winter sleep, when they are very ravenous. At this time, as also when in company with their cubs, they are approached with danger; and in their attacks they raise themselves on their hind legs and endeavour to catch their prey, and hug it closely with their powerful fore legs till destroyed or tear it with their claws. Their gait is slow and trailing; they do not run nor swim far, but move well on their hind legs, and readily climb trees, from which they descend backwards. During summer they become very fat, and on the first frost retire to their winter abode, either in a hollow tree, in the cleft of a rock, or in a sort of hut, which they build of branches, leaves, and moss, where they soon fall asleep, and continue till enticed out by the return of spring, when they make their appearance very thin and hungry. They live very well upon bread, as upon it alone to the amount of eight pounds a day they are fed in the Garden of Plants in Paris, and also in the public garden at Berne. Bears have lived for forty-seven years upon bread, varied however with such unripe fruit as is brought to market, and which, according to the regulations of the town, is confiscated to their use.

Cuvier considers the Pyrenean Bear, described by his brother, in which the fur is more tawny and yellow, and the whole head of a golden fawn colour, with whitish ears, to be merely a variety of this species. And of two Polish specimens he had seen, one nearly resembled the Brown Bear, whilst in the other the fur was more uniform, close, much less woolly, and more silky or velvet-like, with its brown colour quite free from any tinge of yellow, but the head greyish-brown with a reddish tinge between the ears; and when viewed askance the fur seems to have a whitish gloss. He thinks it probable that the *Silver Bear* of the Polish naturalists belongs to this peculiar race.

Cuvier has described, in his *Ossements Fossiles* from a specimen which he dissected, an individual, to which he gives the name of the *Black Bear of Europe*, and which he considers different from the Brown species just described. He says, that it is of larger size, that the fur is blackish-brown, pretty thick, inclined to woolliness, and long, especially about the belly and thighs; that the top of the nose is pale tawny, and the rest of the muzzle tawny rufous-brown; and that its skull is so

URSUS.

URSUS. remarkably flat as to be visible through the fur. This latter character he considers very distinctive, and, together with the large size of its temporal pits and the development of the ridges for the attachment of the temporal muscles, lead to the supposition that its habits are more carnivorous. He is ignorant, however, of its usual residence. Steller, in his *Beschreibung von dem Lande Kamtschatka*, speaks of a Black species which prowls about in large herds, and would soon render the whole land destitute of human beings were they not more tame and peaceable than elsewhere. In spring time they descend from the brooks in the mountains, to which they had resorted for pasture, and placing themselves at the mouths of rivers, drag the fish ashore, and when these are plentiful only eat the head. Pallas, in his *Zoographia*, states, that in Siberia, Bears are distinguished into Ant Bears and Carrion Bears, but without ground; they vary merely in colour, black, brown, and reddish; and as to temper, they differ according to the time of year, age, and abundance or want of food. In Switzerland they distinguish a large black species, which is more gentle, and a smaller reddish one, which is more savage, and is called the *Honey Bear*. Both live in the thickest woods, and only sally forth at night in search of prey; the former prefers ant-hills, but the latter occasionally attacks cattle-folds.

As to the *Norwegian Bear* of five weeks old, described by Fred. Cuvier, it is rather bold to make of so young an animal a distinct species.

Blainville's observations upon the specific differences of Bears throw considerable doubt, even if they do not disprove the characteristic distinctions assigned by Cuvier to the European Bears. He says, "the differences which the species of Bears exhibit in relation to their skeleton are not considerable, and scarcely apply but to some shades of form, and very rarely to the number of the bones. This is at least certain as regards all the varieties or species which many zoologists believe they have distinguished in Europe. In the skeletons of the Black Bear of Europe, of the Norwegian Bear, of the Bears of Poland, of the Alps, of the Pyrenees, and of the Asturias, which I have examined, I have really found no difference which can be opposed to those exhibited by individuals of different age or sex, or which have lived under more or less favourable circumstances." And after noticing Cuvier's statement, that in the Brown Bear the forehead is more full, both in the longitudinal and transverse direction, whilst in the Black Bear of Europe it is flattened and even hollowed transversely; and that in the former the sagittal crest does not commence but close to the occipital, whilst in the latter it begins much further forwards, by the union of the crests forming the boundaries of the temporal pits, he observes, "but these differences, even were they found remarkable in a sufficiently large number of individuals, cannot certainly be considered specific. So that, if it be certain, as Cuvier says, that he has noticed the forehead rounded in individuals of the Brown species of different sex and age, it would then only be an individual difference."

U. Americanus, Pall.; *l'Ours noir de l'Amérique Septentrionale*, F. Cuv.; *American Black Bear*, Richards. Rarely exceeds five feet in length; the head is shorter and narrower, though the space between the ears is wider, and the forehead more arched than in the European Black Bear of Cuvier, though less than in the Brown Bear; nose continuous in nearly the same line as the forehead, and rather arched; ears tall, oval,

rounded at their tip, and far apart; the zygomatic arches of the cheeks less convex than in the former, and the spaces for the temporal muscles consequently smaller; the small teeth behind the cuspid more numerous than in the European species; palms and soles of the feet very short comparatively with the Brown Bear; fur of the whole body short, smooth, straight, and shining black; and upon each side of the muzzle, which is deep brown above, a yellowish-brown patch; tail more distinct. This is the smallest species of the American Bears, and inhabits every wooded district from the Atlantic to the Pacific, and from Carolina to the shores of the Arctic Sea; but is more numerous inland than near the coast. Its food consists principally of various kinds of berries, but these failing, it eats roots, insects, fish, eggs, and such birds or beasts as fall in its way; but it does not eat animal food by choice, according to Richardson. Those living in the Fur Countries hibernate in dens, under fallen trees, beneath which they scratch away the soil, and, retiring to it at the commencement of a snow-storm, are soon covered up. But in more southern districts, where the timber is larger, a hollow tree becomes their winter residence; and in either case there they remain till the greater part of the snow is gone. Their hibernation differs in length therefore in reference to this circumstance, and thus in 65° N. lat. Richardson states that it lasts from the beginning of October to the first or second week in May; whilst on the northern coast of Lake Huron it is two or three months less. The cubs are produced in the beginning of January, from one to five in number, probably according to the age of the parent, and though at other times very timid, yet at this period is fierce and dangerous. According to Henry's account, the female does not, like the male, reside in a den; but so soon as her cubs are able to climb, mounts up with them into the upper part of a tree, and there remains through the winter, by which her offspring are secure from the attacks of wolves or other animals. The native tribes of North America have great veneration for the Bear, only attack it after certain ceremonies, and even when dead, make an exculpatory speech for the violence they have committed in destroying it.

U. Cinereus, Desm.; *l'Ours terrible ou Gris*, F. Cuv.; *Grisly Bear*, Lewis and Clark. Is the largest of the genus, measuring nine feet in length, and even more, and said to exceed eight hundred pounds in weight; it is distinguished from the Brown and Black species by its shorter, more conical ears being placed farther apart; by its long claws compressed like the incisive teeth of a squirrel, broad on the upper surface nearly to the tip, but chamfered away beneath, and projecting far beyond the fur of the foot; soles of the feet longer, and the heels broader than in the Brown Bear: forehead broad, flattish, and in nearly the same line as the nose, but in the older animals the superciliary ridges are very prominent: tail very short; fur long, generally dark brown, but paler at the tips; in summer the flanks are generally lighter; whole muzzle pale, without any dark central stripe. This species inhabits the Rocky Mountains, and plains to their eastward, extending as high as 61° N. lat., and perhaps higher; southward they are found as low as Mexico; but, according to Drummond, they are most numerous in the woody districts on the eastern base of the Rocky Mountains. The Grisly Bears are carnivorous, but also occasionally

URSUS.

eat vegetables, and are very fond of the roots of some species of *Psoralea* and *Hedysarum*, and also the fruits of the bird cherry, choke cherry, and *Hippophae Canadensis*. The pregnant females and young animals hibernate in dens, of which Mackenzie mentions one ten feet in width, five feet high, and six long; but the old males often come out during winter in search of food, and, from their great weight, their footsteps are often marked by the cracking and sinking of the crust of snow to the extent of a yard or more around the spot on which they have trod. Their ferocity is very great, and they are so powerful, as to be able to drag the carcase of a buffalo, weighing about a thousand pounds, to a considerable distance. The Grisly Bear had been known to the fur traders long before the travels of Lewis and Clark, and mentioned by the early French writers, under the name of *Ours Blanc*, in consequence of the interpreters mistranslating the Indian word, signifying hoary or light coloured.

U. Labiatus, Blainv.; *Bradypus Ursiformis*, Shaw; *Prochilus Ursinus*, Illig.; *le Jongleur*, F. Cuv.; *Ursine Sloth*, Penn.; *Juggler Bear*. Nearly five feet in length, and two feet eight inches in height at the shoulder; has the head large, broad, conical, and projecting gradually into a long muzzle, of which the snout or cartilage of the nose consists of a broad and nearly flat plate, which is very movable; the lips long and thick, of which the lower is longest, and capable of projection, retraction, and lateral motion. This great length of the lips especially, together with the presumed deficiency of the incisive teeth, led Illiger to form of this species his genus *Prochilus*. The skull is remarkable for the great elevation of the upper part of the forehead, which is otherwise convex transversely, and slants suddenly, more, however, in front than behind, so that the greatest width of the skull is above the auditory apertures, rather than at the forehead; the nasal bones are highest between the frontal; and the sides of the muzzle little arched, and even flat in front of the zygomatic or cheek arches; the lower jaw is generally wide, and its lower edge sinuous. The incisive teeth four in the upper, and six in the lower jaw, of which the central two stand more forwards than the others, are occasionally shed early, and hence were supposed by Shaw, who first described the animal, to be deficient, and he therefore placed it among the Sloths, although he observes "its general appearance has a striking resemblance to the Common Bear." The face is covered with short, close fur; but it suddenly rises and becomes bushy upon the skull to the height of the ears, which are about two inches in length, thus considerably increasing the apparent size of the head; the body is lengthy, and the legs long, but being concealed by the very thick, crisy and long fur, which nearly reaches the ground when the animal is old, these proportions are disguised; the tail is about two inches in length. The general colour is deep shining black, excepting the snout, and a spot above each eye, which are yellowish-white; upon the chest is a V shaped patch of the same colour, the branches of which rise up towards the neck. This animal is found in the sand-hills at Patna in Bengal, and also in the mountains of Silhet, usually in pairs, with one or two cubs, which, when in danger, mount on their dam's back. In the Mahratta country it is known by the name *Assail*; and, being more intelligent and docile, is educated and carried about for the amusement of the populace by the jugglers; hence the specific

name applied to it by Fred. Cuvier. It burrows with its claws and lives in caverns; feeds on white ants, also on honey, rice, and the fruit of the palm, *Borassus Flabelliformis*. In confinement it appeared to be gentle and good-natured; but when irritated, uttered a short abrupt roar, ending in a whining tone, expressive of impatience. It was moderately lively, and had a habit of turning itself frequently round, as if for amusement, like a dog about lying down to sleep.

The true generic place of this animal was long unknown; Shaw and Pennant both considered it a Sloth, from the presumed absence of incisive teeth, and Illiger formed it into the genus *Prochilus*, from the size of its lips. Although Blainville first gave a distinct description of it, and, placing it among the Bears, applied to it the specific term *Labiatus*, yet his paper in the *Bulletin des Sciences par la Société Philomathique de Paris*, did not appear till 1816; whilst, on the other hand, Bewick observes in his *History of Quadrupeds*, (fifth edition, Newcastle, 1807, p. 293,) "its features and leading characters seem to be so strong, as to leave no room for doubt with respect to its rank in the animal creation; and from the striking correspondence of parts observed between it and the Common Bear, we are induced to dispose of them in the same class. We are the more confirmed in this opinion, from an attentive examination of its disposition and manners; notwithstanding it seems to differ in some of those characteristics which have been pointed out by naturalists as the guides to a regular and systematic arrangement." Buchanan also, in his *Journey from Madras through the Countries of Mysore, &c.* published in 1807, states that this pretended Sloth is none other than a Bear of the Indian mountains.

The two following species have been placed by Horsfield in his subgenus *Helarctos*, or Equinoctial Bears, of which he considers the principal characters to be, the almost globular form of the skull, its breadth almost equalling its length; the large molar teeth placed so close to the cuspid, that no intervening gap exists; the very long projectile tongue, at least in one species; the large loose projecting upper lip, which has great resemblance to that of *U. Labiatus*, although of less size and less extensile; the stout, well-proportioned body, with short legs; the feet equal to only a tenth of the animal's entire length; the claws of extreme length, and the fur short and smooth. Horsfield says their food is almost exclusively vegetable, and that they are attracted to inhabited districts by their fondness for the young protruding summits of the cocoa trees. In their wild state their lengthy tongue is peculiarly fitted for feeding on honey, which is abundantly supplied by the various species of indigenous bees.

U. Malayanus, Raffl.; *Malay Bear*. Three feet eight inches in length; head short, conical, very gradually attenuated, obtuse, and broad between the ears. Blainville says that the skull of this species is as round as that of a cat; that the upper part of its forehead is remarkably full; that it has no sagittal crest, and that the occipital is very slightly developed; nose terminating in a fleshy elongation of an oblong form covering the nostrils, which are round, and separated by a narrow septum; lips thin and defined, bounded by a series of short stiff hairs; gape extending as far back as lines dropped from the anterior corners of the eyes, which are placed far forward, are vivid, prominent, and have dark irides; ears very short, and terminating abruptly, as if cropped, and the hair about the auditory passage dis-

URSUS.

URSUS. posed like a funnel; neck of moderate length, and slightly contracted at the nape; body oblong, robust, elevated at the shoulders, and slightly descending towards the rump, upon which is a short tail, composed of attenuated bristles about an inch in length; limbs robust; feet covered with thick hair above, but the soles naked, and the fore feet rather longer than the hind ones, which are also rather narrower; claws very long, strongly compressed and arched, sharp, rounded above, grooved beneath, and horn coloured; fur glossy, short and thick, smooth, decumbent, and close to the skin on every part excepting the upper part of the head, neck, and shoulders, where it is slightly frizzled. General colour jet black, excepting the muzzle, before the eyes, which is dusky-grey, and a white semilunar mark, with its branches extending on the sides of the chest. Is a native of Sumatra, and Sir Stamford Raffles says; "when taken young they become very tame. One lived two years in my possession. He was brought up in the nursery with the children; and when admitted to my table, as was frequently the case, gave a proof of his taste by refusing to eat any fruit but mangosteens, or to drink any wine but champagne. The only time I ever knew him out of humour was on an occasion when no champagne was forthcoming. It was naturally of a playful and affectionate disposition, and it was never found necessary to chain or chastise him. It was usual for this Bear, the cat, the dog, and a small blue mountain bird or Lory of New Holland, to mess together, and to eat out of the same dish. His favourite playfellow was the dog, whose teasing and worrying was always borne and returned with the utmost good humour and playfulness. As he grew up, he became a very powerful animal; and in his rambles in the garden, he would lay hold of the largest plantains, the stems of which he could scarcely embrace, and tear them up by the roots." This species is known to the Malays by the name of *Bruang*.

U. Eurypilus, Cuv.; *Helarct. Eurysp.* Horsef; *Bornean Bear*. Three feet nine inches in length; its skull, in comparison with that of other Bears, is of great size, its contour above nearly hemispherical, and on the sides it expands obliquely outwards; the forehead rises in an arch immediately behind the nose; the eyes are placed very forwards, but the ears very far back, at the hind part of the skull; in front of the eyes the face is contracted; the nose large, considerably elevated, and passing with uniform breadth to the extremity, slightly truncated, and having a lateral notch communicating with the nostrils, which can be expanded at the animal's pleasure; the apertures of the nostrils are oblong, directed forwards, and divided by a narrow septum: the upper lip is lax and fleshy, somewhat pendulous, and capable of lateral contraction and projection forwards like a proboscis; it partially conceals the lower lip, which is small and compressed; and both lips are covered within with transverse fleshy rugosities and warts; the eyes are small and dull, with violet irides tinged with opaline, and very minute pupils; ears short, oblong, obtuse, directed backwards, and appearing as if truncated; the auditory passages hidden by a tuft of short hair. The gape is considerable, and the animal frequently opens its jaws widely as if yawning, thrusting out its long, narrow, slender tongue to the length of a foot. The neck is short and thick; the body cylindrical and bulky, abruptly rounded towards the stout short thighs, whilst the anterior limbs are more long and

slender. The tail is about two inches in length, of which one-half consists of a tuft of stiff hairs extending beyond the bone. The claws are very long, strongly arched, somewhat grooved beneath, rounded above, narrow at the base, and gradually tapering towards their tips, which are transversely truncated. The fur is short, closely applied to the skin, and rather rigid, with scanty down at the base; very short on the forehead, and gradually rising to the crown, where they are dense, nearly erect, and very soft. The general colour is glossy deep black; the muzzle and ocular regions yellowish-brown; upon the front of the neck is a broad, orange-yellow, irregularly quadrangular patch, with a deep notch in front, and slightly curved sides; at the insertion of each claw is a tuft of bristly hairs, forming together a transverse grey band across each paw. This species is a native of Borneo, but of its habits in a state of nature nothing is known. In confinement at the Tower of London it displayed generally much gentleness of disposition and sagacity if well treated, but resenting unkindness, and having been irritated, refused to be courted whilst the offender remained in sight. Although apparently heavy and stupid, most of its senses, specially of sight and scent, are very acute. Its power over the fleshy extremity of the nose is very great; by expanding the lateral apertures of the nostrils, it protrudes the upper lip, thrusting it forwards like a proboscis. Whilst eating, it utters a coarse but not unpleasant whining sound, alternating it with a low grunting noise; but when teased, it suddenly raises its voice, and emits at intervals harsh and grating sounds. It was extremely voracious, being at all times ready to eat, and this gluttony cost it its life, for it died about ten minutes after having overgorged itself at breakfast. Duvaucel places the following species in proximity to the *U. Labiatus* and *Malayanus*, but no observation is made as to the form of its lips.

U. Thibetanus, F. Cuv.; *Thibet Bear*. Has the head flat, the forehead and muzzle forming a nearly straight line, muzzle rather thick and lengthy, with a full upper lip; ears very large; neck thick; body compact and limbs heavy; claws comparatively short; fur smooth on the muzzle, but becoming shaggy on the back of the head from the base of the ears downwards; its general colour deep black, excepting the lower lip, which is white, and a Y-shaped patch on the chest, of which the two front branches are situated in front of the shoulders, and the stem passes between the legs to the middle of the belly. It is found in the mountains of Nepaul and Sylhet.

U. Ornatus, F. Cuv.; *Cordilleras Bear*. Three and a half feet in length, and fifteen inches high at the shoulder; muzzle short and white; around the eyes a brownish-yellow ring; cheeks, under part of the neck and the chest white; all the other parts shining black; fur soft. This species, of which Fred. Cuvier's description is only that of a young animal, is found in the Cordilleras; its existence seems to have been doubted by Cuvier, but Blainville mentions a skull in the Paris Museum, which has so great resemblance to that of the Malay Bear, as at first sight to be mistaken for it, but it exhibits characteristic differences in the nasal bones being less wide, in the zygomatic arches being wider and more arched, and in the coronoid process of the lower jaw having its sharp edge hollowed and curved back into a sharp point, and its front convex.

U. Maritimus, Lin.; *l'Ours blanc*, Buff.; *Polar*

URSUS. *Bear*, Penn. From seven to eight and a half feet in length, and from four feet three to nine inches in height. It is characterized by the narrowness and flatness of its skull, from which the forehead and profile of the face run in a nearly straight line to the thick muzzle; indeed Cuvier remarks, that its skull, far from being elevated above the face, seems on the contrary depressed, and in fact is more cylindrical, more approaching the form of the skull of the Polecat and Martin; by the shortness of its ears; by its neck being twice so long and as thick as the head; by the great length of its body in proportion to its height; by the length and breadth of its feet, of which the hind ones equal one-sixth of the length of the trunk. The fur, which is yellowish-white, is very thick, long, fine, and woolly on the hinder parts, belly, and legs, but short and even upon the head, neck, and upper part of the back; the soles are almost completely covered with long hair, and the thick short black claws are but slightly curved. The naked extremity of the muzzle, the margins of the eyelids and the tongue black; the lips purplish-black, and the inside of the mouth pale violet; eyes brown. The Polar Bear is a native of the Arctic Regions, and has been found in higher latitudes than any other quadruped, having been seen by Sir Edward Parry as high as 82° N. lat. They descend southwards as low as the 55th parallel. According to Pennant, they are frequent on all the coasts of the Frozen Ocean, from the mouth of the Ob eastwards, and abound most about the estuaries of the Jenesei and Lena, and in the unfrequented islands of Nova Zembla, Chany, and Spitzbergen, where they usually winter; it is also found within Baffin's Bay, in Hudson's Bay, in Greenland, and Labrador. How far westwards it extends is not fully ascertained; Parry found it in Barrow's Straits, as far as Melville Island, and the Esquimaux west of Mackenzie's River informed him that they occasionally visited that coast. It is not known on the coast between Mackenzie and Copper Mine River, neither in the White Sea nor on the islands in Behring's Straits, nor on the Tchuktki Noss, or Great Cape jutting into the sea north of Kamtschatka, nor in that country. In Siberia they are never seen farther south than Mangasea. The Polar Bear never resorts to the woods, as do other Bears, except when it accidentally loses its way in the fog, but constantly lives upon the sea-coast, or upon the ice-fields, with which it is not unfrequently drifted far from land, and thus often transported from Greenland to Iceland and Norway, where it commits great ravages amongst the flocks. It is fearless of cold, and seems indeed to enjoy itself most where the cold is most severe. It swims, makes long leaps in the water, and dives extremely well; and Sabine mentions having seen one midway between the shores (forty miles apart) of Barrow's Straits, although there was no ice in sight upon which it could have rested. Its pace on the ice when at full speed is described by Lyon as a kind of shuffle, as quick as the sharp gallop of a horse. The Polar Bear is carnivorous, and feeds either on the floating carcasses of dead whales and fish, or on living seals and other marine animals, and even on the Walrus. Their scent is very fine, and they are often attracted from a great distance by the smell of turning kreng or refuse of whale blubber. On finding a seal, Captain Lyon says, "the Bear gets quietly into the water, and swims to leeward of him, from whence, by frequent short dives, he silently makes his approaches, and so arranges his

distance, that at the last dive he comes to the spot where the seal is lying. If the poor animal attempts to escape by rolling into the water, he falls into the Bear's clutches; if, on the contrary, he lies still, his destroyer makes a powerful spring, kills him on the ice, and devours him at his leisure." They feed also on land animals, birds, and eggs, and when pressed by hunger even on berries and fruits. As to the hybernation of both sexes there is some doubt. According to Le Roy's account of four Russian seamen, who passed six winters in Spitzbergen, and that of Barentz's wintering in Nova Zembla, the Bears disappeared with the sun, and returned on his reappearance,—in the one case, after an absence of four, and in the other of three months; but Richardson thinks this rather depended on their going to sea in search of food, than that they hybernated during this period, as Bears were seen by Captain Parry throughout the two winters he remained on the coast of Melville Peninsula, and the Esquimaux of those parts derived much of their food from the males which were roaming about during the winter. Graham and Hearne agree very remarkably in their statements on this point. Both say that the He Bear wanders about the marshes and adjacent parts till November, and then goes out to sea, and preys upon seals, whilst the female retires under the declivity of a rock or the foot of a bank, not unfrequently thirty miles from the sea, where the snow soon drifts over her to a great depth; a small hole however being left at the dome of the den for the admission of air. There she remains from December to March without food, and about Christmas produces two cubs. These, when they leave their winter retreat in spring, Hearne says, are not larger than rabbits, and their footsteps not bigger than a crown piece; but Graham states, that at this time they are as large as a shepherd's dog. They are led down to the sea-side by their dam to feed on seals and sea-weed, and when tired, are safely borne upon their parent's back. In addition to this, Captain Lyon was informed by an intelligent Esquimaux, that the females which are not pregnant roam about like the males through the winter. The Bear and the young, which leave her only after they have attained considerable size, are mutually much attached, and whilst with them she is very ferocious; her extreme leanness and hunger when she first emerges from her den is also an additional reason for her fierceness. But at other times Bears are inoffensive and prefer getting away to resenting the attacks made upon them. In the course of the summer they become very fat, as much as a hundred pounds of fat being occasionally taken from a single beast. The Greenlanders feed on their flesh, which is coarse and white, and has somewhat the flavour of mutton. The skin is used for making seats, boots, shoes, and gloves, and the tendons when split serve for sewing threads.

Of the nine described fossil species of Bears which have been discovered in the caverns of Europe, Blainville says that, "after a comparison of the numerous elements existing in our collections, both of the bones of living Bears, and those of the Cavern Bears from all parts of Europe, I consider that the latter are derived from one single species, the same which still exists in Europe, but attaining a size almost gigantic in comparison with the race which has ceased to exist in the most secluded parts of the Alps and Pyrenees, and little differing from the size of the Bear of the North-East of America. The male includes the species *U. Giganteus*,

URSUS.

URSUS.

GUAY.

Spelæus Major, Pitorrii, and Neschersensis; and the female *U. Arctoides, Leodiensis*: in the variety of the greatest size, as in that of the second, the male is represented by *U. Spelæus Minor*, and the female by *U. Priscus*. But besides this species, another still smaller and very different is recognized, which seems to represent in Europe the *U. Ornatus* of South America, and *U. Malayanus* of Southern Asia, viz., *U. Arvernensis*, the same perhaps as *U. Etruscus*, which formerly living in Southern Europe, has left its traces in a loose diluvial soil perhaps more ancient than that of the caverns. *U. Sivalensis* must probably be referred to *U. Labiatus*; as must to *U. Ornatus* the cuspid teeth found in the Brazils, and to *U. Americanus* the bones of the caverns of North-Eastern America, which is indeed certain as regards the latter species from what Dr. Harlan has said. Hence it would seem that of the bones of Bears pre-

served on the surface of the earth, and even now collected in so different situations, the greater part belong to the species actually living in the country where they are found, and that one species alone has ceased to exist; a species which in Europe completes the genus, as in Asia and America; a species less powerful, and inhabiting that part of Europe most anciently civilized, and at the same time perhaps most largely peopled, which may have hastened their disappearance from the number of animals still existing at the present time."

See Linnæi *Systema Naturæ* à Gmelin; Pennant, *History of Quadrupeds and Arctic Zoology*; Cuvier (F.) and Geoffroy, *Histoire Naturelle des Mammifères*; Cuvier, *Ossements Fossiles*; Horsfield, *Zoological Researches*, and in *Zoological Journal*, vol. ii.; Richardson, *Fauna Boreali-Americana*; Blainville, *Ostéographie*.

URTICA, in *Botany*, a genus called so by Tournefort, from *uro*, to burn, from the stinging qualities of the species. It belongs to the class *Mono-Dioecia*, order *Tetra-Pentandria*, and the natural family of *Urticaceæ*. Generic character: flowers monoecious or dioecious, spicate, or glomerately capitate. Male flower; perianth regular, green, four or five-cleft, valvate in æstivation; stamens four or five opposite the segments of the perianth; filaments filiform; anthers elliptic, incumbent; ovarium rudimentary: female flower; perianth four-leaved, outer two the smallest and sometimes abortive, inner two persistent and sometimes baccate; ovarium free, one-celled; ovulum one, erect, orthotropous; stigma sessile, subcapitate, villous, pencil-formed or filiform; achenia oblong, rather compressed, smooth or tubercled, naked or inclosed in the baccate perianth; seed erect; testa combined with the epicarp.

Of this genus a great number of species are known: they are annual, perennial, or suffrutescent herbs, beset with stinging hairs; the leaves are alternate or opposite, deeply serrated; the flowers are small and insignificant, and generally disposed in axillary panicles or racemes, rarely in heads. *Urtica dioica* is the Common Nettle.

URTICATION. This seems to be a word coined by Bishop Taylor, and by him only used; from Lat. *urtica*, a nettle; and intended to denote merely—

Stingings.

And as a body may be said to be lustful though it be asleep, or eating, without the sense of actual *urtications* and violence, by reason of its constitution: so may the soul by the reason of its habit, that is, its vicious principle and base effect of sin, be hated by God, and condemn'd upon that account.

Taylor. *Polemical Discourses*, fol. 668.

URUGUAY or URAGUAY, a river of South America, rising among mountains in the province of Rio Grande do Sul, and flowing Westward, in its way inundating vast tracts of level country: then taking a course South-South-West, running 690 miles, and joining the Paraguay river, it forms one of the branches that unite with the Parana, and take afterwards the name of the La Plata. Also the name of a province of Brazil, bounded on the North by that of San Paulo, on the West by that of Parana, and on the South and East by that of Rio Grande do Sul. St. Michael is the capital, and the only place of note in the province, which is 230 miles long by 170 broad; very little of the

interior is known. The Paraguay, or Matte tea, is the only article exported from this province, in common with Paraguay, which last was originally included in the provinces of Uruguay, Parana, and the South-West part of Rio Grande do Sul, until a revolution effected by Dr. Francia, twenty-five years ago, since which the respective boundaries of all these provinces have been altered, but the particular lines of the new limits are yet undefined.

URVILLEA, in *Botany*, a genus dedicated by Kunth to Capt. Dumont D'Urville, of the French navy, an acute botanist. It belongs to the class *Octandria*, order *Monogynia*, and the natural family of *Sapindaceæ*. Generic character: calyx of five sepals, the three outer ones are the smallest; petals four, each furnished with a scale above the base, the two lower ones remote from the stamens, the scales of the two lowest petals ending in reflexed appendages; glands four, on the disk, opposite the petals, the two lowest ones the largest; stamens eight, connate around the base of the ovarium; style trifid, the segments longitudinally stigmatose inside; capsule membranaceous, three-winged, inflated a little in the middle, three-celled, or composed of three one-celled indehiscent carpels, which are each furnished with a wing on the back; seeds globose, the top of the funicle expanded into a two-lobed arch at apex.

Composed of climbing or twining tendrilled shrubs, natives of the tropical parts of America. The leaves are ternate; the flowers are disposed in spike-formed racemes; the flowers are white; the genus is nearly allied to *Cardiospermum* and *Serjania*.

USE.

Nor was this excellent man a stranger to the more light and airy parts of learning, as music and poetry; all which he had digested, and made *useful*.
Walton. Life of Hooker.

True and brave friendships are between worthy persons; and there is in mankind no degree of unworthiness, but is also a degree of *usefulness*, and by every thing by which a man is excellent, I may be profited.
Taylor. Of Friendship.

Let your deeds
Make answer to me; *useless* are all words,
Till you have writ performance with your swords.
Beaumont and Fletcher. Love's Cure, act i. sc. 1.

Pity! to build, without a son or wife,
Why, you'll enjoy it only all your life.
Well, if the *use* be mine, can it concern one,
Whether the name belong to Pope or Vernon?
Pope. Imitation of Horace, book ii. Satire 2, v. 165.

Stokesley of London took him aside in the gallery at Lambeth, at their departure from the archbishop (who stood against them), and was very earnest with him for the *usages* of the church, when it seems Cranmer had well nigh persuaded him on the other side.

Strype. Ecclesiastical Memoirs. Henry VIII. Anno 1538. book i. ch. xlii. p. 521.

Nature never makes excellent things for mean or no *uses*; and it is hardly to be conceived, that our infinitely wise Creator should make so admirable a faculty which comes nearest the excellency of his own incomprehensible being, to be so idle and *uselessly* employed, at least a part of its time here, as to think constantly, without remembering any of those thoughts, without doing any good to itself or others, or being any way *useful* to any other part of the creation.

Locke. Works, vol. i. fol. 36. On Human Understanding, book ii. ch. i. sec. 15.

Without it [industry] we cannot in any state act decently, or *usefully*, either to the benefit and satisfaction of others, or to our own advantage and comfort

Barrow. Sermon 19, vol. iii. p. 277.

"The act of perspicuous, as far forth as perspicuous," is another peripatetic definition of a simple idea; which, though not more absurd than the former of motion, yet betrays its *uselessness* and insignificance more plainly, because experience will easily convince any one, that it cannot make the meaning of the word light (which it pretends to define) at all understood by a blind man.

Locke. On Human Understanding, book iii. ch. iv. sec. 10.

There are many companies, sports, and recreations, (I shall not mention particulars,) no doubt in themselves very lawful; but yet they may chance to prove the bane of the bold *user* of them.

South. Sermon 11. vol. vi. p. 390.

These trees commonly grow here, as indeed *usually* where-ever they grow, in a champain dry ground, such at least as is not drowned or morassy.

Dampier. Voyages, vol. ii. ch. vii. p. 124.

So that, absolutely speaking, in this strict and philosophical sense; either nothing is miraculous, namely, if we have respect to the power of God; or, if we regard our own power and understanding, then almost every thing, as well what we call natural, as what we call supernatural, is in this sense really miraculous; and 'tis only *usualness* or unusualness that makes the distinction.
Clarke. Evidence of Natural and Revealed Religion. Proposition 14, p. 375.

Still you will say perhaps, that, explain and limit it as we will, it is very hard after all, that in order to obey God, and demonstrate our love to him, we must disobey the dictates of the strongest and *usefullest* principle he hath planted in our nature, the love of ourselves, and adopt others, often of very undeserving characters in our room.

Secker. Works, vol. i. p. 258. Sermon 16.

The concluding book of scripture, the Revelation of St. John, is accused of obscurity, and consequently of *uselessness*, perhaps beyond any other.

Id. Ib., vol. vi. p. 332. Sermon 31.

I would, my son, that thou wouldst *use* the power,
Which thy discretion gives thee, to control
And manage all!

Cowper. Homer. Odyssey, book xix. v. 25.

USE AND OCCUPATION, in *Law*, the occupation and beneficial enjoyment of lands or tenements under a contract, express or implied, for which an action on the case for damages may be maintained. By the statute

VOL. XXVIII.

USES.

11 Geo. II., c. 19, it was enacted (sec. 14), that it should be lawful for the landlord, where an agreement to let is not by deed, to recover a reasonable satisfaction for the tenements occupied, in an action on the case, for the use and occupation of what was held. And if, in evidence on the trial, any parol demise, or agreement, not by deed, whereon a rent certain was reserved, should appear, the plaintiff might make use thereof as an evidence of the *quantum* of the damages. This Act, in the case of houses, lands, &c. gives a right of action against the occupier for rent, without the necessity of setting forth the particulars of the demise. But it only gives a remedy when there is no demise by deed. If, however, there be an agreement for a lease, the landlord may recover; as also where a lease is made by deed and the lease expires, and the tenant holds over, the landlord may recover for the subsequent occupation of the lessee or his under-tenant, in an action of assumpsit. The action for use and occupation is founded on a contract, and unless there be a contract express or implied, it cannot be maintained, nor can it be brought where the title to the premises is in dispute, ejectment being the proper action to try such title. Where an express contract can be proved between the parties, the defendant is liable, whether he occupies the premises or not, for the action lies for a constructive as well as an actual occupation. So where there is no other contract than is to be inferred from the fact of occupation, as tenant by permission of the plaintiff, the defendant is liable. And if there be an agreement to let land to one, and that person permits a third party to occupy, the landlord may recover the rent against the party with whom he agreed, in an action for use and occupation. But there must be an occupation by some one, for a party who has agreed to become tenant, but does not enter, is not liable. There must also be a beneficial enjoyment, for if the tenement be not fit for comfortable occupation the plaintiff cannot recover. But where premises have been demised for a term, the landlord may recover, in an action for use and occupation, the rent accruing due after the premises are burnt, and of course are not longer inhabited by the tenant. And if a tenant quits without any regular determination of the demise, the action will lie against him; but the action will not lie if the premises are let with the knowledge of the plaintiff for an immoral purpose. *Comyn's Landlord and Tenant*, and *Woodfall's Landlord and Tenant*, and the authorities cited in each.

USES, SUPERSTITIOUS. A devise or grant of lands, or bequest or gift of goods to superstitious uses, is where the devise, grant, bequest, or gift is to find or maintain a chaplain or priest to pray for the souls of the dead; or a lamp in a chapel, or a stipendiary priest, or the like. By the statute 23 Hen. VIII., c. 10, it is declared that all future grants of land for obits, chauntries, or the like, for any term longer than twenty years, shall be void, and by the Act 1 Edw. VI. c. 14, all such devises, &c. are declared to be superstitious uses, and the lands and goods so devised, &c. are forfeited to the king. Any such, or similar gifts, however, would probably, independent of these statutes, fall within the Mortmain Acts, (See MORTMAIN;) or, when not within the reach of any of them, would be deemed superstitious by the Courts of Equity, and set aside; or those courts would consider the devisee as a trustee for such persons as would be entitled if there were no such devise.

USES.

USES AND TRUSTS. Use, *usus*, is, in application of Law, the profit or benefit of lands and tenements, or a trust and confidence reposed in a man for the holding of lands, that he to whose use the trust is made shall take the profits thereof. Trust, *fiducia, confidentia*. A trust is a confidence which one man reposes in another; but as generally used in law, it is a right to receive the profits of land, and to dispose of the land itself, in many cases, for particular purposes, as directed by the lawful owner, or pointed out by settlement or other instrument, or that deed of conveyance which created the trust. A trust is but a new name given to an use.

"Uses and trusts are, in their original," says Blackstone, "of a nature very similar, or rather exactly the same; answering more to the *fidei commissum*, than the *usus fructus* of the civil law, which latter was the temporary right of using a thing without having the ultimate property or full dominion of the substance. But in our law a use was a confidence reposed in another, who was tenant of the land, or *terre-tenant*, that he should dispose of the land, according to the intention of *cestui-que-use*, or him to whose use it was granted, and suffer him to take the profits. As if a feoffment was made to A and his heirs, for the use of (or in trust for) B and his heirs; here, at the common law, A the *terre-tenant* had the legal property and possession of the land, but B, the *cestui-que-use*, was, in conscience and equity, to have the profits and disposal of it."

This notion was originally introduced into England, about the end of the reign of Edward III., by foreign ecclesiastics, as a means of evading the Statutes of Mortmain, by which religious houses were prevented from holding lands, and the law which precluded the devise of lands. Grants were made, not to religious houses directly, but to the use of religious houses, and the chancellors, usually ecclesiastics, held such grants to be binding in conscience, and their execution as compellable in the Court of Chancery. So too grants were made of lands by dying persons, not directly, it is true; but it having been held that if a man enfeoffed another to his own use, and so was possessed of the use only, he might devise the use by will, though he could not so deal with the land itself. But in the following reign these evasions were crushed so far as related to religious houses. The idea once introduced was applied to many useful purposes; it removed the restraint of alienations by will, and permitted the owner of lands in his lifetime to make various designations of their profits as prudence, or justice, or family convenience might from time to time require. The long wars in France, and the civil commotions between the houses of York and Lancaster, caused uses to be nearly universal; through the desire that men had, when their lives were continually in hazard, of providing for their children by will, and of securing their estates from forfeiture, when each of the contending parties, as they became uppermost, alternately attainted the other. It having been held, as we have seen, that the use might be devised by last will and testament, and it having been also determined that uses were not liable to any of the feudal burthens, and particularly did not escheat for felony or other defect of blood, these were the causes why, at the period last mentioned, they came into almost universal application.

The doctrine of uses, when once the plain simple rules of the ancient law were departed from, led to many inconveniences, to remedy which various statutes

were enacted during the reigns of Edward III., Richard II., Henry IV., Henry VI., Richard III., and Henry VII., all of which tended to consider *cestui-que-use*, or him to whose use the land was granted, as the real owner of the estate, and at length that idea was carried into full effect by the Act 27 Henry VIII., c. 10, usually called *the Statute of Uses*, or in conveyances and pleadings, *the Statute for transferring Uses into possession*; by this it was enacted that "when any person shall be seized of lands, &c. to the use, confidence or trust, of any other person or body politic, the person or corporation entitled to the use, in fee simple, fee tail, for life, or years, or otherwise, shall from thenceforth stand and be seized or possessed of the land, &c. of and in the like estates, as they have in the use, trust, or confidence; and that the estate of the person so seized to uses shall be deemed to be in him or them, that have the use, in such quality, manner, form, and condition, as they had before in the use." The statute thus executes the use, as the lawyers term it; that is, it conveys the possession to the use, and transfers the use into possession; thereby making *cestui-que-use* complete owner of the lands and tenements, as well at law as in equity.

The statute having thus not abolished the conveyance to uses, but only annihilated the intervening estate of the feoffee, and turned the interest of *cestui-que-use* into a legal instead of an equitable ownership, the courts of common law began to take cognizance of uses instead of sending the party to seek his relief in chancery. The use and the land being convertible terms, the estate of the *cestui-que-use*, who was now become *terre-tenant* also, became liable to forfeiture and other burthens, and was no longer devisable by will. The courts of common law soon allowed many modifications of uses, but as they had held that "no use could be limited on a use," and that the statute did not extend to terms of years, of which the termor is possessed, and not seized, the doctrine of uses was revived under the denomination of trusts. As no use could be limited on a use, if lands were conveyed to A and his heirs, to the use of B and his heirs, in trust for, or to the use of C and his heirs, the use to B was executed by the statute, and the trust or use of C was mere nullity; and if lands were conveyed to A for 1000 years, or any other term to the use of, or in trust for, B, the use was not executed by the statute, but was left at common law. In the first case, it was clear that B was never intended by the parties to have any beneficial interest, but in the second B was as clearly intended to have the beneficial interest, and was expressly driven into the Court of Chancery to seek his remedy, wherefore that Court determined that although there were uses which the statute did not execute, still they were trusts in equity which in conscience ought to be performed. Those courts, therefore, took cognizance of such cases, but in their new jurisdiction wisely avoided the evils so much complained of in uses. They considered, and still consider, that a trust estate is equivalent to the legal ownership, governed by the same rules of property, and liable to every charge in equity, which the other is subject to in law. By a long series of uniform decisions, for now near a century past, with some assistance from the legislature, they have raised a system of rational jurisprudence, by which trusts are made to answer in general all the beneficial ends of uses, without their inconvenience or frauds. The trustee is considered as

to the class *Monandria*, order *Monogynia*, and the natural family of *Loganiaceæ*. Generic character: calyx four-cleft, the fourth or outer segment very large and petal-formed; corolla salver-shaped, four-parted; stamen one; capsule oblong, two-celled, divisible into two valves, which open inside, with a fleshy placenta in each division; seeds numerous, imbricate, with winged margins.

Only a single species is known of *Usteria*, the *U. Guineensis*, a native of Guinea. It is a glabrous shrub, with opposite, purplish branches, and opposite roundish-ovate, entire leaves, which are about two inches long. The flowers are disposed in terminal corymbs. The stipular sheaths are reduced to nearly obsolete margins.

USTICA, a small island in the Mediterranean, 35 miles North of Palermo, on the coast of Sicily, in lat. 38° 43' N., long. 13° 6' E. It has only been inhabited for about a century, and possesses no springs of fresh water, but the inhabitants use rain water preserved in tanks or cisterns. Wheat and barley are plentifully produced on the island, which possesses several manufactories of soda.

USTULATION, Lat. *ustulatus*, past participle of *ustulare*, to burn all around, formed upon *ustum*, past participle of *urere*, to burn.

A burning.

As giving all our goods to the poor hinders us from making provision for our relatives, a state of celibate exposes us to a perpetual *ustulation*.

Taylor. *Rule of Conscience*, book iii. c. iv. fol. 671.

It is not certain that they took the better part when they chose *ustulation* before marriage, expressly against the apostle.

Id. *Ib.* fol. 675.

USUFRUCT, } Fr. *usufruit*; It. *usufrutto*;
USUFRUCTUARY. } Sp. *usufruto*.

The use, employment, or possession of the fruit, produce or profit.

But if in the marriage hee haue a childe by her, which is heard once to cry, whether the childe liue or die, the husband shall haue the *usufruite* of her landes, (that is the profit of them during his life) and that is called the curtesie of England.

Smith. *Common-wealth*, book iii. ch. viii. p. 134.

Laws indeed have introduced a way of speaking, by which the property and the *usufruct* are distinguish'd; but in truth the *usufructuary* has a temporary, or limited property; and the proprietary has a perpetual *usufruct*, either at present, or in reversion.

Wollaston. *Religion of Nature*, sec. 6. fol. 137.

Thanne duryng this parliament kyng Edward was proclaymed *usurper* of the crowne.

Fabyan. Chronycle, p. 660. Anno 1471.

And the *usurping* of a few, as of the senators after the death of Tarquinius, and before the succession of the tribunate, and manifestly in the Decemvirate, but more perniciously in the Triumvirate of Cæsar, Crassus, and Pompeius.

Smith. Common-wealth, book i. ch. iv. p. 4.

Euerie one which either by flattering had got riches together, as by seditious partaking was had by estimation, sought to haue the gouernement, and to *usurp* the title of king.

Holinshed. Chronicles, vol. i. p. 656. History of England, book vi. ch. viii.

But whether these gouernors (whose names we haue recited) were kings or rather rulers of the common wealth, or tyrants and *usurpers* of the gouernment by force, it is vncerteine.

Id. Ib. book iii. ch. x. p. 464.

That the assignation of such offices, and appropriating them to the ministry of certain persons may be a cancel to secure the inclosures of the clerical orders from the *usurpings* and invasions of pretending and unhallowed spirits.

Taylor. Polemical Discourse. Preface.

As conquest may be called a foreign *usurpation*, so *usurpation* is a kind of domestick conquest, with this difference, that an *usurper* can never have right on his side, it being no *usurpation*, but where one is got into the possession of what another has a right to.

Locke. Works, vol. ii. fol. 213. Of Civil Government, ch. xvii.

Too well I know her blandishments to gain,
Usurper-like, till settled in her reign;
Then proudly she insults, and gives you cares
And jealousies; short hopes, and long despairs.

Dryden. Conquest of Granada. First Part, act iii.

Then answer thus Ulysses wise return'd:
Yes,—and I would that vengeance from the gods
Might pay their insolence, who thus *usurp*
Dominion here, and in another's house,
With no respect of right, or dread of shame,
Much evil daily work, and purpose more.

Cowper. Homer. Odyssey, book ii. ver. 198.

USURY, (*Usura*,) in *Law*, is money given for the use of money. Lord Coke, 3 *Institute* 151, defines it to be the gain of any thing by contract above the principal, or that which was lent, exacted in consideration of the loan thereof, whether it be money, or any other thing. By some writers usury is said to be the profit exacted for a loan made to a person in want and distress; but properly it consists in extorting a rate for money beyond what is allowed by positive law. In early times the letting of money out at interest, or upon usury, was visited by severe penalties, it being against the common law. Public convenience, however, was too strong for positive enactment, and though various statutes were passed for the suppression of the practice, the legality of taking interest upon loans was at length recognized by the statute 37 Hen. VIII. c. 9, by which 10 per cent. was allowed as the legal rate of interest. This act was, however, in effect repealed in the following reign, for by the statute 5 or 6 Edw. VI. c. 20, all persons were forbid "to lend or forbear by any device for any usury, increase, lucre or gain whatsoever," under certain penalties. The steady progress of commerce rendered the revival of the law of Henry VIII. advisable, and accordingly by the 13 Eliz. c. 8, that step was taken. The rate of interest continued for many years at 10 per cent.: but by the 21 Jac. I. c. 17, the same was reduced to 8 per cent., and during the Commonwealth it was further lowered to 6 per cent., which reduction was re-enacted by the 12 Car. II. c. 13, and

finally by the 12 Anne, stat. 2, c. 16. the rate of interest was reduced to 5 per cent., at which it now remains. **USURY.** By this Act it was enacted that "no person shall take, directly or indirectly, for loan of any money, or any thing, above the value of 5*l.* for the forbearance of 100*l.* for a year, and so proportionably for a greater or less sum; and all bonds, contracts, and assurances made for payment of any principal sum to be lent on usury, above the rate of 5*l.* per cent., shall be utterly void: and whoever shall take, accept or receive, by way of corrupt bargain, loan, &c., a greater interest, shall forfeit treble the money borrowed, one-half of the penalty to the prosecutor, the other to the crown. The early statutes treat usury as a crime of deep abomination, and even those which legalized the taking of interest carefully declare, as does that of Elizabeth, "that all usury, being forbidden by the laws of God, is sin and detestable;" and that of James the First seems to be extremely tender in its morality, for it says that "nothing in the laws shall be construed to allow the practice of usury in point of religion or conscience." Notwithstanding the Act of Queen Anne, it is enacted by the statute 58 Geo. III. c. 93, that a bill of exchange, though given for an usurious consideration, or upon an usurious contract, shall not be void in the hands of an innocent person who has given value for it, and has not notice of the usury; and by the Act 3 and 4 Wm. IV. c. 98, bills and notes, not exceeding three months' date, or not having more than that time to run, may be discounted at any rate of interest that may be agreed on without incurring the penalties of usury; and this was further extended by statute 1 Vict. c. 80, by which bills and notes not having more than twelve months to run, were exempted from the operation of the usury acts until January 1st, 1840; and now by statute 2 and 3 Vict. c. 37, continued till January 1st, 1843, by 3 and 4 Vict. c. 83, bills and notes not having longer than twelve months to run, and contracts for the loan or forbearance of money, above 10*l.*, are exempted from the usury laws; provided that nothing in the Act contained should extend to the loan or forbearance of any money upon security of any lands, tenements or hereditaments, or any estate or interest therein.

Notwithstanding these several positive laws relating to matters in this country, if a contract which carries interest be made in a foreign country, our courts will direct the payment of interest according to the law of the country in which the contract was made; and thus even as much as 12 per cent. has been allowed, on the ground that interest of money depends on local circumstances, and the refusal to enforce such contracts would put a stop to foreign trade. By statutes 14 Geo. III. c. 79, and 2 Geo. IV. c. 51, all *bonâ fide* mortgages and securities on estates or property in Ireland, or the plantations, bearing interest not exceeding 6 per cent., were declared legal, though executed in Great Britain; and now under the 3 Geo. IV. c. 47, securities made in Great Britain on estates in Ireland or the colonies, with interest not exceeding the rate of interest payable by the law of the country where the estate is situate, are also declared legal and valid.

To constitute the offence of usury, it is not necessary that money should be actually advanced, but any contrivance or pretence whatever to gain more than legal interest, where it is the intent of the parties to contract for a loan, will be usury. But the question of usury, or whether the contract is a colour and pretence for an usurious loan, or is a fair and honest transaction, must,

USURY.
—
UTEN-
SIL.

under all the circumstances, be determined by a jury. To make usury, there must be either a direct loan, and a taking of more than legal interest for the forbearance of payment; or there must be some device for the purpose of concealing or evading the appearance of a loan and forbearance, where in fact it was such. Loans, however, upon contingencies, are not usurious on account of the risk incurred. Thus, the grant of an annuity for lives, exceeding the rate allowed for interest, in consideration of a certain sum of money, is not within the statutes against usury, for the lives may not continue so long as that the lender may receive back the whole of his money and lawful interest. So of an annuity on condition, the condition may be broken, and the principal money be not repaid. The loan of money produced by the sale of stock, or valued with reference to the price of stock at the time of the loan, on an agreement that the borrower shall, at a certain day, replace, or purchase, stock to the amount of the stock sold, or purchaseable at the time of the loan, with such interest in the mean time as the stock itself might have produced, is not usurious; not even if there is a condition in the alternative to repay the money on a subsequent day; unless the transaction be colourable, and a mere device to obtain more than the legal interest.

As usury, with some few exceptions, avoids every security into which it enters, it follows that none such can be enforced at law; and advantage may be taken of such securities, by pleading the statute in bar to actions brought on them to recover the sum secured. But though the securities are void, the debt is not destroyed, if it were originally good and lawful. Thus if an usurious security be given for a legal subsisting debt, although the security is void, the debt is not extinguished. Besides the remedy against usury at law, there is a relief in equity, but there the relief differs from that at law. In equity, it is a maxim that he who would have equity must do equity, and the court therefore will only grant relief upon the terms of the party seeking its aid consenting to pay what is really due.

We have seen that, under the statute of Queen Anne, the penalties for usury are heavy. It has been doubted whether, since that Act, usury is an offence at common law, though the better opinion seems to be that it is, and that an indictment will still lie. But as the informer, under the Act, reaps so large a profit by the penalty, there is no modern instance of an indictment for this offence. *Plowden on Usury; Comyn on Usury; Blackstone's Commentaries.*

UTANIA, in *Botany*, a genus so named by G. Don, from *Tjankuda-Utan*, the vernacular name of the plant in Java. It belongs to the class *Didynamia*, order *Angiospermia*, and the natural family of *Cyrtandraceæ*. Generic character: calyx five-cleft, with imbricate, persistent segments; corolla funnel-shaped, with a five-lobed, nearly equal limb; stamens five, exserted; anthers incumbent, bifid at the base; style erect; stigma capitate; fruit baccate, olive-formed; lobes of fleshy dissepiment revolute, seminiferous; seeds naked.

Only a single species of *Utania* is known, *U. morindæfolia*, a native of Java: it is a branched shrub, with rather large, oval, quite entire, glabrous, undulated leaves. The panicles of flowers are terminal and drooping, and the pedicels are subcorymbose; the plant is the same as *Kuhlia morindæfolia* of Blume.

UTENSIL, Fr. *utensil*; Sp. *utensilios*; Lat. *utensilia* (*ab utendo*).

Any article necessary for *use*.

They bete out the heddes and let the wyne ronne in the stretes, and al formys, stolys, and other *utensilis* in the howse by theym foundyn, all to brake in peces.

Fabyan. Chronycle, p. 414. *Philip IV. Anno 20*

But if he can go beyond this limit, then it can have no natural limit, but may extend to sumptuousness, to ornaments of churches, to rich *utensils*, to splendor, to majesty; for all that is decent enough, and in some circumstances very fit.

Taylor. Rule of Conscience, book iii. ch. iv. fol. 597.

The inhabitants of Egypt doe use the root in stead of wood, not for fewell onely, but also to make thereof sundrie vessels and *utensils* in an house.

Holland. Plinie, book xiii. c. xi.

Multitudes [were] employing themselves upon ingenious handicrafts with the souls of departed *utensils*, for that is the name which in the Indian language they give their tools when they are burnt or broken.

Spectator, No. 56.

Of all the *utensils* which necessity and ingenuity have concurred to produce among other savage nations, they saw only a basket to carry in the hand, a satchel to hang at the back, and the bladder of some beast to hold water, which the natives drink through a hole that is made near the top for that purpose.

Cook. Voyages, vol. i. book i. ch. v. p. 56.

UTERINE, Fr. *uterin*; It. *uterino*; Sp. *uterino*; Lat. *uterinus*, of or pertaining to the womb (*uterus*).

As for women, their inward parts are answerable to mens in all these respects abovesaid; and besides they have by themselves adjoyning close unto the bladder, another little bag or purse; whereupon it is called in Latine *uterus*; and it hath another name beside, to wit, *loci*; which we call the matrice, the mother, or the wombe; and in other creatures it is tearmed *vulva*.

Holland. Plinie, book xi. ch. 37.

Sulphur; in regard whereof, they dry, resolve, mollifie, attract, and are good for *uterine* effects, proceeding from cold and windy humours.

Fuller. Worthies, vol. ii. p. 279. *Somersetshire*.

Walter Pope, *uterine* brother to Dr. John Wilkins, sometime bishop of Chester, was born at Faulsley in Northamptonshire.

Wood. Athenæ Oxon., vol. ii. fol. 1094.

UTILITY, Fr. *utilité*; It. *utilita*; Sp. *utilidad*; Lat. *utilitas*, from *utilis*, that may be used. See *USE*, *USEFULNESS*.

Utilitarian, substantive and adjective, are words in common use.

The *utilities* to knowe the ascencions of sygnes in the right circle is this.

Chaucer. Con. of the Astrolabie, p. 462.

For suche is the beneficial goodness of God, that he whiche gaue vs muche before, doeth in most ample wise augment his giftes, because he right wel perceyneth, that whatsoeuer was geuen, the same is distributed and bestowed to the great *utilitie* of manye.

Udall. Erasmus. Marke, ch. iv. fol. 139.

Where, I say, the attractive pleasure and sweetnesse of speech is not without some fruit, nor void of *utility*, there let us bring in withall the reason of philosophy, and make a good medly of pleasure and profit together.

Holland. Plutarch, fol. 16.

Others have contended, that all difference of good and evil, and all obligations of morality, ought to be founded originally upon considerations of publick *utility*.

Clarke. Evidences on Natural and Revealed Religion, p. 225. *Prop. 1.*

In common life we may observe, that the circumstance of *utility* is always appealed to; nor is it supposed that a greater eulogy can be given to any man, than to display his usefulness to the public, and to enumerate the services which he has performed to mankind and to society.

Hume. On the Principles of Morals, part i. sec. 5.

A theory founded on *utility*, therefore, requires that we should cultivate, as excitements to practice, those other habitual dispositions which we know by experience to be generally the source of actions beneficial to ourselves and our fellows; habits of feeling, productive of habits of virtuous conduct, and in their turns strengthened by the re-action of these last.

Sir James Mackintosh. Progress of Ethical Philosophy, sec. 6.

UTRICULARIA, in *Botany*, a genus so called by Linnæus from *utriculus*, a little bladder, on account of the leaves being furnished with numerous aeriferous vesicles. It belongs to the class *Diandria*, order *Monogynia*, and the natural family of *Utriculariæ*. Generic character: calyx of two undivided equal sepals; corolla hypogynous, personate, spurred at the base in front, and almost destitute of a tube, upper lip short and bifid; lower one longer, with a prominent palate; stamens two, inserted in the upper lip of the corolla; filaments incurved, antheriferous inside at apex; anthers one-celled, cohering, simple, or didymously constricted, dehiscing lengthwise; ovarium one-celled, with a basilar, globose placenta; style short, thick; stigma bilabiate, the upper lip very short and obsolete, the lower lip lamelliform, and dilated; capsule globose, one-celled, at length opening irregularly; seeds numerous, free, on a basilar, globose placenta, each with a basilar umbilicus.

This genus consists of a few species; they are either aquatic, floating, or creeping marsh plants, natives of Europe, North America, and New Holland. The radical or submersed leaves of the aquatic species are multifid, and furnished with numerous aeriferous vesicles, hence the English generic name, Bladderwort. The marsh or creeping species have the radical leaves crowded and undivided, with sometimes a few radical vesicles. The scapes are naked, or furnished with a few scales, or vesicle-formed leaves; the flowers are usually yellow, and disposed in spikes or racemes, sel-

dom solitary. Three species are natives of ditches and pools in Britain, viz. *U. vulgaris*, *intermedia*, and *minor*.

Then, on the *utmost* headland of the coast
We timber fell'd, and sorrowing o'er the dead,
Water'd his fun'ral rites with many tears.

Id. Ib. book xii. v. 12.

UVARIA, in *Botany*, a genus so named by Linnæus, from *uva*, a cluster of grapes, on account of the resemblance in the clusters of the fruit. It belongs to the class *Polyandria*, order *Polygynia*. and the natural family of *Anonaceæ*. Generic character: calyx of three ovate-cordate sepals which are connected at the base; corolla of six oval petals, of which the three outer ones are smallest; anthers indefinite, covering the hemispherical receptacle; ovaries numerous, generally villous; carpels numerous, baccate, fleshy, usually globose, many-celled and many-seeded; seeds disposed in two rows in each cell.

Composed of tropical trees and shrubs with erect or sarmentose branches; the leaves are entire; the peduncles are axillary, solitary, or by twos and threes, opposite the leaves or lateral, bearing one to four flowers, jointed in the middle, and usually furnished with bracteas. The fruit of several of the species are edible.

UVEDALIA, in *Botany*, a genus dedicated by R. Brown, to — Uvedale, LL.D., who had a fine botanic garden at Enfield, where he cultivated many exotic plants in the time of Plukenet and Petiver. It belongs to the class *Didynamia*, order *Angiospermia*, and the natural family of *Scrophularineæ*. Generic character: calyx prismatic, five-toothed; corolla ringent; upper lip two-lobed, lower lip trifid, having the middle segment unlike the lateral ones, bigibbous at the base; stamens four, didynamous; lobes of anthers divaricate; stigma flattened; capsule inclosed, two-celled, four-valved; the dissepiment formed from the inflexed margins of the valves, and inserted in the central placenta.

Only a single species of this genus is yet known, *U. linearis*; it is an herb with opposite leaves, one-flowered, axillary, and terminal, bractless peduncles, and blue corollas; the plant is a native of the tropical parts of New Holland, and is nearly allied to *Mimulus*.

UVEOUS, Fr. *uvé*; It. *uvea*. Cotgrave calls it the grapie membrane, (Lat. *uvea*, a grape) teamed so because it resembles the skin of a black grape.

The *uveous* coat or iris of the eye hath a muscous power, and can dilate and contract that round hole in it, called the pupil or sight of the eye.

Ray. On the Creation, part ii. p. 291.

UVULARIA, in *Botany*, a genus so called by Linnæus, from the plants having been formerly used in the cure of diseases of the uvula. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Melanthaceæ*. Generic character: perianth coloured, deciduous, of six subunguiculate segments, each of which is furnished with a nectariferous chink at its base; the segments connive into the form of a bell; stamens six, hypogynous; anthers bursting outwardly; ovarium nearly globose; ovula numerous, two rows in

UVULA- each cell; style central, simple; stigmas three, revo-
RIA. lute; capsule three-celled, three-valved; valves septi-
ferous in the middle; seeds few, subglobose, with a
fleshy umbilicus.

VACANT POSSESSION. This genus consists of six or seven known species; they are herbs with fleshy roots, natives of North America and the mountainous parts of India; the stems are simple or branched; the leaves are broadish, nerved, stem-clasping or sessile; the peduncles are axillary, solitary, and one-flowered, each furnished with a bractea in the middle; the flowers are drooping, and generally yellow in colour.

U'XORIOUS, } Lat. *uxorius*, of or pertaining to
U'XORIOUSLY, } a wife (*uxor*). Usually denoting,—
U'XORIOUSNESS. } Too fond of a wife, too yielding,
conceding, and complying to a wife.

But he's an ass that will be so *uxurious* to tie his affections to one circle.
Ben Jonson. Silent Woman, act iv. sc. 1.

Trust nothing that the boy lets fall,
My lords, he hath plots upon you all.
A pensioner unto your wives,
To keep you in *uxorious* gyves.

Id. Time Vindicated.

What if I had writ as your friend the author of the aforesaid Mime, *Mundus alter et idem*, to have been ravish'd like some young Cephalus or Hylas, by a troop of camping housewives in

Viraginea, and that he was there forced to swear himself an *uxurious* varlet.

Milton. Works, vol. i. fol. 109. *An Apology for Smectymnus*.

If thou art thus *uxoriously* inclin'd,
To bear thy bondage with a willing mind,
Prepare thy neck, and put it in the yoke,
But for no mercy from thy woman look.

Dryden. Juvenal. Satire 6. v. 292.

To say nothing of the carnality and *uxuriousness* of the Jews.
More. Mysteries of Godliness, p. 100. Anno 1660.

UZERCHE, a small town in the department of the Corrèze in France, upon a very steep rock, at the foot of which runs the river Vézère. It is the chief of an arrondissement, seven leagues North-West of Tulle; and is well built, containing 2,710 inhabitants.

UZES, a very ancient town of the department of the Gard, in France, and a place of great antiquity. It contains 5,620 inhabitants, and is the chief place of an arrondissement reckoning 98 communes. The town stands among mountains on the little river Cluzan, and the hill side on which it is built is the source of the springs which formerly supplied the city of Nismes, by the celebrated Roman aqueduct, called the Pont de Gard. There is near the town a noble park and superb terrace, belonging to the episcopal palace. Its only manufactures of note are silk and bonnets.

VACATE.

V.

V is framed (says Wilkins) by a kind of straining or percolation of the breath through a chink between the lower lip and upper teeth, with some kind of murmur. F is the correspondent mute. See F, B, P.

VACANT POSSESSION, in Law, is where a tenant has entirely abandoned the premises which he held, for if he still retains the virtual possession of them, though he has ceased to occupy, the possession cannot be treated as vacant, but the landlord must proceed by ejectment in the ordinary way. If a tenant locks up the house, and leaves it empty, that has been determined by the courts to be a vacant possession, and the landlord entitled to treat it as such. But where there is anything, however trifling, left on the premises, the landlord cannot proceed as in the case of vacant possession. The mode of proceeding in ejectment on a vacant possession is pointed out in the books of practice. See Adam's *Ejectment*; Tidd's *Practice*; but many difficulties are surmounted by the statutes 11th Geo. II. c. 19, and 57 Geo. III. c. 52, by the former of which it is enacted that if any tenant holding tenements at rack-rent, or where the rent reserved is three-fourths of the yearly value of the premises, who shall be in arrear one year's rent, shall desert the same, or leave them uncultivated, or unoccupied, so as no sufficient distress can be had, two justices (having no interest in the premises) may go upon and view the same, and affix on the most notorious part, notice in writing what day, at the distance of fourteen days at the least, they will return to take a second view; and if on such second view, the tenant, or some person on his behalf, shall not appear and pay the arrears, and there shall not be a sufficient distress on the premises, the justices may put the landlord in possession. By the second named

VOL. XXVIII.

statute, this remedy is extended to cases where half year's rent is in arrears.

VACA'TE, v. } Fr. *vaquer*, vacant; It. *vacare*,
VACA'TION, } vacante; Sp. *vacar*, vacante; Lat.
VA'CANT, } vacare, to clear or free from.
VA'CANCY, }
VACU'ITY, } To clear or free from, to empty,
VA'CUIST, } or cause to be empty or void; to
VA'CUOUS, } void, to annul or annihilate; to
VA'CUOUSNESS. } leave or quit the occupation or
possession; and Vacant, met.—
Free or clear; empty, unoccupied, unemployed.

Vacuous is equivalent to vacant: but is not in common use.

& per Steuen þe kȳng bifor þe clergie suore,
þat if a biſshopricke vacant wer þe se,
þe kȳng, no non of his, suld chalange þat of fe.

R. Brunne, p. 110.

For ye shall vnderstāde that, at those dayes, they [plees] were kepte in diuerse placys of Englande, whyche nowe been holden at Westmynster, and iudgys ordeyned to kepe a cyrcuyte as nowe they kepe the syzys in the tyme of *vacacyon*.

Fabyan. Chronycle, p. 344. Anno 1258.

He dooeth not onely thynke this in his minde, I wil haue a toure: but before he caste any foundation, he wil with good laisure at a vacaunt time sitte down and caste his peneworthes in his minde, what charges will bee requisite for the finishing of such a toure.

Udall. Erasmus. Luke xiv. fol. 325.

The pope had accursed the English people, because they suffred the bishops sees to be vacant so long a time.

Holinshed. Chronicles, v. i. p. 683. *The Hist. of Eng.* v. vi. c. xviii.

An industrious husbandman, tradesman, scholar, will never want business for occasional *vacancies*, and *horæ subcisiuæ*.

Hale. Contem. Of the Redemption of Time.

— And for three months before,
No intrim, not a minutes *vacancie*,
Both day and night did we keepe companie.

Shakspeare. Twelfth Night, fol. 273, act v. sc. 1.

6 M

VACATE.

VACCA-
RIA.

And Anthony
Enthron'd i th' market-place, did sit alone,
Whisling to th' ayre: which but for *vacancie*.
Had gone to gaze on Cleopatra too,
And made a gap in nature.
Shakspeare. Anthony and Cleopatra, fol. 347, act i. sc. 2.

Men if wee view them in their spring, are at the first
without vnderstanding or knowledge at all. Neuerthelesse from
this viter *vacuitie* they grow by degrees, till they come at length
to be euen as the angels them selues are.

Hooker. Ecclesiasticall Politie, book i. sec. 6, fol. 12.

My overshadowing spirit and might with thee
I send along,—ride forth, and bid the deep
Within appointed bounds be heav'n and earth,
Boundless the deep, because I am who fill
Infinitude, not *vacuous* the space.

Milton. Paradise Lost, book vii.

For nothing nauseateth the minde so soon, as an emptiness of
thoughts, bespoken and fitted for her entertainment, since in their
vacuousness, the winds and vapours of tediousness and displicence
rise and fume out of our imagination into our spirits.

Mountague. Dev. Essays, part i. Treat. ix. sec. 5, p. 352.

Here there was a *vacant* seat prepared for the commodore, in
which he was placed on his arrival.

Anson. Voyages, book iii. ch. x. fol. 536.

Were men as intent upon this, as they are on things of lower
concernment, there are none so enslav'd to the necessities of life,
who might not find many *vacancies* that might be husbanded to
this advantage of their knowledge.

Locke. Works, v. i. fol. 336. *On Hum. Und.* b. iv. c. xx. s. 3.

But experience shews on the contrary; that the resistance of all
fluids is not equal, there being large spaces in which no sensible
resistance at all is made to the swiftest and most lasting motion
of the solidest bodies. Therefore all space is not filled with
matter; but, of necessary consequence, there must be a *vacuum*.

Clarke. On the Attributes, prop. 3.

For if, notwithstanding the absence of the air, it should appear
by the effects, that a stream of other matter capable to set visible
bodies a moving, should issue out at the pipe of the compressed
bellows, it would also appear that there may be [a much subtler
body than common air, and as yet unobserved by the *vacuists*.

Boyle. Works, vol. iii. fol. 251. *The Spring of the Air*.

Meanwhile Opinion gilds with varying rays
Those painted clouds that beautify our days;
Each want of happiness by Hope supply'd,
And each *vacuity* of Sense by Pride.

Pope. Essay on Man, Epis. ii. v. 283.

These superfluous parts (which might be spared, without pre-
judice to the movement of the watch,) even if we were completely
assured that they were such, would not *vacate* the reasoning
which we had instituted concerning other parts.

Paley. Natural Theology, c. i. p. 9.

He landed them in safety, and conducted them to their com-
panions, among whom he remarked the same *vacant* indifference,
as in those who had been on board.

Cook. Voyages, vol. i. ch. iii. p. 47.

However pleased people may appear, they commonly retire
from the company in which these [noise and laughter] have formed
the only entertainment with an unsatisfied and uneasy *vacuity*,
and sometimes with disgust and disagreeable reflection.

Knox. Works, vol. ii. p. 29. *Essay 133. On Buffoon. in Conversation.*

VACCARIA, in *Botany*, a genus so called by Medikus,
from *Vaccarius*, a cow-herd. The plant is said to be sought
after by cow-herds, because it was believed to excite the
lacteal secretions in cows. It belongs to the class *Decan-*
dria, order *Digynia*, and the natural family of *Caryophyl-*
leæ. Generic character: calyx bractless, ovate-pyramidal,
pentagonal, five-toothed, large in the fructiferous state,
and five-winged; petals five, obovate, denticulated, naked,
with narrow claws, inserted on a thick, short, hypogynous
carphophore; stamens ten, inserted with the petals;
ovarium two or three-celled at bottom, and one-celled at
top, the cells incompletely two-celled; ovula numerous;
styles two, rarely three, stigmatose inside; capsule ovate,

crustaceous, ending in four or six teeth at apex; seeds **VACCA-**
globose, granulate, with a ventral umbilicus; embryo **RIA.**
annular.

A genus separated from *Saponaria*, and consists of a
single known species, the *Saponaria vaccaria* of Linnæus. **VACHEL-**
It is a glabrous, annual herb; the leaves are opposite, **LIA.**
oblong and connate at the base. The stem is divided
into an ample corymbiferous cyme, and the flowers are
rose-colour.

VACCI'NE, v. } These words are of very modern
VA'CCINATE, } formation: from the inoculation of
VACCINA'TION. } human beings with the *variolaë*
vaccinæ, or cow-pox: a disease discovered in some of
the western counties of England, particularly Gloucestershire. Dr. Jenner's *Inquiry* was first published in 1798.

VACCINIUM, in *Botany*, so called by Linnæus; it
is an ancient Latin name, whether of a berry or a
flower has always been a dispute among critics, as well
as the etymology of the word. It belongs to the class
Octo-Decandria, order *Monogynia*, and the natural family
of *Ericaceæ-Vacciniæ*. Generic character: calyx four
or five-toothed; corolla urceolate or campanulate,
more or less deeply four or five-cleft, with a reflexed
limb; stamens eight or ten, hypogynous; anthers
two-horned, dehiscing at the summits, and some-
times furnished on the back with two spreading spurs
or bristles; style longer than the stamens; stigma ob-
tuse; berry globose, depressed at top, many-seeded.

The species of *Vaccinium* are mostly confined to
Europe and North America, but are peculiarly abundant
in the latter country: they are shrubby, gemmaceous,
evergreen, or deciduous plants; the bud scales are
generally persistent at the bases of the small branches.
The leaves are alternate, membranous, often full of
resinous dots; the flowers are pedicellate, either soli-
tary, or in racemes or tufts, drooping, inodorous, gene-
rally very elegant, and tinted with various shades of
red or pink, never blue, and scarcely ever yellowish.
The berries are black, purple, bluish, or red, generally
eatable, though not always pleasant nor wholesome in a
crude state. The Whortleberry, Bilberry, or Bleaberry,
is the *Vaccinium myrtillus*; the Great Bilberry is *Vacci-*
nium uliginosum, and the Cowberry is *Vaccinium vitis*
Ideæ, all natives of Britain.

VACHELLIA, in *Botany*, a genus dedicated by
Wright and Arnott to the Rev. H. G. H. Vachell, who
has lately made the botany of China better known to
Europeans, by means of specimens. It belongs to the
class *Polygamia*, order *Monoecia*; and the natural family
of *Leguminosæ-Mimoseæ*; flower polygamous; calyx
five-toothed, corolla inserted in the bottom of the calyx,
gamopetalous, tubular, five-cleft; the segments valvate
in æstivation; stamens numerous, inserted with the
petals; filaments filiform, free; anthers subglobose, two-
celled; ovarium sessile; style filiform; stigma obtuse;
legume cylindrical, turgid, filled with pulp, scarcely
dehiscent; seeds in two rows.

A genus separated from *Acacia*, and consists of a
solitary species, *V. Farnesiana*, the *Acacia Farnesiana*.
It is a small tree, armed with stipular spines, a native of
India; the leaves are alternate, bipinnate, with four or
eight pairs of pinnæ, having a gland on the petiole
below the lower pair; the leaflets are numerous,
linear, and smoothish, but the petioles and peduncles are
pubescent; the flowers are in axillary, pedunculate,
nearly globose heads, and rise either by twos or threes.

VACIL-
LATE.

VA'CILLATE, v. }

Fr. *vaciller*; It. *vacillare*;

VACILLA'TION.

} Sp. *vacilar*; Lat. *vacillare*.

VADIUM.

To wag or waggle, (q. v.)

To wag, to waver; to move to and from; to have an unsteady or inconstant motion or action; to be unsteady, or inconstant.

I knew a man, saith he, that after much temptation concerning one of the articles of belief, was suddenly brought into so great light of truth and certainty, that there was left no remainders of doubt, no *vacillation*, but much clearness and serenity, by the command of him that overrules the waves, &c.

Hall. *Works*, vol. iii. fol. 572. *The Peace-Maker*, sec. 15.

The ministry of the muscles [is] to answer all the motions of the legs and thighs, and at the same time to keep the body upright, and prevent its falling, by readily assisting against every *vacillation* thereof.

Derham. *Physico-Theology*, book v. ch. ii.

But whilst it [a spheroid] turns upon an axis which is not permanent (and the number of those we have seen infinitely exceeds the number of the other), it is always liable to shift and *vacillate* from one axis to another, with a corresponding change in the inclination of its poles.

Paley. *Natural Theology*, ch. xxii. p. 333.

They [the bones of the feet] are put in action by every slip or *vacillation* of the body, and seem to assist in restoring its balance.

Id. *Ib.* ch. xi. p. 179.

VADE, v. Lat. *vad-ere*; Gr. *εαδ-ειν*; to go; to pass; to escape; to vanish; (to evade, q. v.)

As who would saie, that when he departed, the onelie shield, defense and comfort of the commonwealth was *vaded* and gone.

Holinshed. *Chronicles*, vol. ii. p. 848. *Rich. III.* Anno 1399.

Like sunny beames,
That in a cloud their light did long time stay,
Their vapour *vaded*, shew their golden gleames,
And through the present ayre shoot forth their azure streames.

Spenser. *Faerie Queene*, book iii. can. 9. st. 20.

How-euer gay their blossome or their blade
Doe flourish now, they into dust shall *vade*.

Id. *Ib.* book v. can. 2. st. 40.

Then, with me, Willie, ay sing care away.
It's wood to be fore-pind with wastefull carke
In many a noyfull stoure of willing bale
For *vading* toyes.

Browne. *Eclogue*. Willie Wernock.

VADIUM, in *Law*, is a gage or pledge. Estates are sometimes held in gage or pledge, and they are of two kinds, *vivum vadium*, or living pledge; and *mortuum vadium*, dead pledge, or mortgage. *Vivum vadium*, or living pledge, is when a man borrows a sum of another and grants him an estate to hold till the rents and profits shall repay the sum so borrowed. This is an estate conditioned to be void as soon as such sum is raised, and is now called a Welch mortgage. In this case the land or pledge is said to be living: it subsists, and survives the debt; and immediately on the discharge of that, results back to the borrower. *Mortuum vadium*, dead pledge or mortgage, on the other hand, is where a man borrows of another a sum, and grants him an estate, with a condition, that if the borrower, called the mortgagor, shall repay to the lender or mortgagee, the sum on a certain day mentioned in the deed, that then the mortgagor may re-enter on the estate, or that the mortgagee shall reconvey the same; or if the grant were for a term of years, that the term should cease. In this case, if the money is not paid on the day specified, the land put in pledge is, by law, dead and gone from the borrower or mortgagor, and the mortgagee or lender has no longer a conditional, but an absolute estate. But so long as the estate continues conditional, that is, between the time of lending the money, and the time allotted for payment, the mortgagee or lender is called

tenant in mortgage. See, for further information on VADIUM. this head, MORTGAGE.

VA'GABOND, adj. }

Fr. *vagabond*, *vagabonder*;

VA'GABOND, n. }

It. *vagabondo*, *vagabondare*;

Sp. *vagabundo*; low Lat. *vagabundus*, *qui non habet domicilium, sed hodie hic, et cras alibi*. Ducange.

A wanderer; a vagrant, q. v.

But how so it was vnto men of honeste, to *vaconbondys* and other that lokyd for pylfry and ryfflynge, it was a great occasyon and styrynge.

Fabyan. *Chron.* p. 630. Anno 1456.

Dubtles—the author of this libell—was some *vagabond* huckster or pedler.

Hakluyt. *Voyages*, &c. vol. i. p. 586. *The true State of Island*.

The third [sort] consisteth of thyrftlesse poore, as the riotour that hath consumed all, the *vagabond* that will abide no where, but runneth vp and downe from place to place (as it were seeking worke and finding none), and finallie the roge and strumpet.

Holinshed. *Chron.* vol. i. p. 307. *The Description of England*, book ii. chap. x.

To Heav'n thir prayers

Flew up, nor misd the way, by envious windes ;

Blown *vagabond* or frustrate: in they passd

Dimentionless through heav'nly dores.

Milton. *Paradise Lost*, book xi. v.

In the time of Frezier and Shelvoche, this place served only as a retreat to *vagabonds* and outlaws, who fled thither from all parts of Brazil.

Anson. *Voyages*, book i. ch. v. p. 62.

Of late (for reasons which shall be hereafter mentioned) these honest *vagabonds* have been obliged to receive amongst them a new colony, and to submit to new laws and new forms of government.

Id. *Ib.* p. 63.

Why—what a brainsick *vagabond* art thou !

Who neither to the smithy wilt, for sleep,

Nor to the public portico repair.

Cowper. *Homer. Odyssey*, book xviii. v. 392.

VAGABOND, *vagabundus*, in *Law*, one that wanders about, and has no certain dwelling; an idle fellow. See VAGRANTS.

VAGA'RY, n. }

Fr. *vaguer*, to *vagary*; to wander,

VA'GRANT, adj. }

to roam; Cotgrave: It. *vagare*;

VA'GRANT, n. }

Sp. *vagar*; Lat. *vagare*, to wander.

See EVAGATION. Vagrant is—A wanderer, a roamer. See the Quotation from Blackstone. A *vagary*—

A wandering or roaming; applied met. to a quick motion or flitting to and fro; a caprice, a whim, a freak.

The first taken from the verie name itselfe, for that the worde Turk signifieth a shepherd or one that followeth a *vagrant* and wilde kinde of life.

Hakluyt. *Voyages*, &c. vol. i. p. 490. *The Borderers vpon Russia*.

The Irish enimie spieng that the citizens were accustomed to fetch such od *vagaries*, especiallie on the holie daies.

Holinshed. *Chronicles*, vol. vi. p. 24. *The Description of Ireland*, c. iii.

Doct. That intemperate surfet of her eye, hath distemper'd the Other senses, that may return and settle again to Execute their preordained faculties, but they are Now in a most extravagant *vagary*.

Beaumont & Fletcher. *The Two Noble Kinsmen*, act iv. sc. 3.

Shall wee, that did not in the warre adhere

To Pompey, now prouoke the conqueror?

Vagrant through all the world, hopelesse of all

He seekes with what lands ruine hee may fall.

May. *Lucan. Pharsalia*, book viii.

As for me, if I sit down in my great chair and begin to ponder, the *vagaries* of a child are not more ridiculous than the circumstances which are heaped up in my memory; fine gowns, country-dances, &c.

Spectator, No. 260.

To be banished from one's native soil, secluded from all comforts of friendly acquaintance, divested irrevocably of great estate and dignity; becoming a *vagrant* and a servant in vile employment, in a strange countrey, every man would be apt to deem a wretched condition.

Barrow. *Sermon xv.* vol. iii. p. 231.

VAGARY. Nature delighteth in ease, in quiet, in liberty; therefore did he spend his days in continual labour, in restless travel, in endless *vagrancy*, going about doing good.

**VAGI-
NALIS.**

Barrow. Sermons, vol. iii. sec. iv. p. 382.

From my heart I pity the condition of a respectable servant of the publick, like this war minister, obliged in his old age to pledge their assembly in their civick cups, and to enter with a hoary head into all the fantastick *vagaries* of these juvenile politicians.

Burke. Works, vol. v. p. 384. *Reflections on the Revolution in France.*

The civil law expelled all sturdy *vagrants* from the city: and, in our own law, all idle persons or vagabonds, whom our ancient statutes describe to be "such as wake on the night, and sleep on the day, and haunt customable taverns, and ale-houses, and routs about; and no man wot from whence they come, nor whither they go."

Blackstone. Commentaries, book iv. chap. xiii.

He shall by office prosecute them for the offences of idleness, drunkenness, quarrelling, gaming, or *vagrancy* in the Supreme Court.

Burke. Works, vol. ix. p. 315. *Sketch of the Negro Code.*

VAGIENT, Fr. *vagir*, to cry like a child; Cotgrave. Sp. *vagir*; Lat. *vagire*.

—The cradle of the Cretan Jove

And guardians of his *vagient* infancy.

More. Song of the Soul (1647), book iii. c. iv. st. 42.

VAGINALIS, from the Latin *vagina*, a sheath, Lath; *Sheathbill*. In *Zoology*, a genus of animals belonging to the order *Grallæ*, class *Aves*.

Generic character. Beak strong, thick, hard, conically convex, compressed, and curved towards the tip; the upper mandible half covered from its base with a longitudinally folded and movable horny sheath, projecting a little beyond the anterior edge of which, in the middle, are the nostrils; lower mandible smooth, and forming an open angle: wings of moderate length, the second quill-feather longest, and the bend of the wing tuberculated: legs of moderate length; only a small part of the tibiae naked; toes edged with a rudimentary membrane; the middle and outer one half-webbed, the inner connected only at the base.

The proper place for this remarkable genus appears to be disputed by naturalists. Latham places it among his order of *Water-Birds with cloven feet*, immediately after the *Gallinules*. Cuvier also puts it among his *Waders*, following the *Gallinules*, but not in the same family, noting it as one of "three genera (*Vaginalis*, *Glareola*, and *Phænicopterus*) which it is difficult to associate with others, and that they must be considered as forming little individual families." Temminck places it as the second genus in his *Web-footed order*; whilst, on the other hand, Swainson, differing entirely from the authors above quoted, holds it to belong to the *Rasorial Order*, and inserts it at the end of the family *Columbidæ*. Oken also includes it in his *Rasorial Order*, but places it with *Glareola* and *Palamedea* in his tribe *Marsh-hens*.

V. Alba. Lath. *White Sheathbill*. From fifteen to eighteen inches in length, and about the size of a large pigeon; base of the beak black, space between the beak and eyes, and around the latter, covered with white or pale orange warty excrescences, but one above the eye brown or black; irides dull leaden: entire plumage white, tubercle on the bend of the wing blunt and blackish, legs reddish, claws black. This remarkable bird was first discovered at New Zealand by Forster, who gave it the name *Chionis*: it has since been found at Kerguelen and Staaten Land, and more recently on the Falkland Islands, subject to some trifling variation as regards the colour of the beak and legs, perhaps dependent on age. Forster says they frequent the sea-shores in flocks, feeding on shell-fish and carrion;

but those observed by Lesson at Falkland Isles sat almost always singly on the rocks, or only in small parties, were very shy, and flew heavily.

See Forster, *Voyage*; Latham, *General History of Birds*; Cuvier, *Règne Animal*; Temminck, *Manuel d'Ornithologie*.

VAGINICOLA, in *Zoology*, a genus of *Vibratile Polyps*.

Generic character. Body inclosed in a transparent, unattached sheath, very small, ovate or oblong, ciliated in front, and furnished with a tail behind.

The type of this genus of Lamarck's is *Trichoda Inquilina* of Müller, and they live in the sea. Milne Edwards observes that their organization is very different from that of the other animalcules belonging to Lamarck's *Vibratile Polyps*, and considers that they ought to be placed among the Polygastric Infusories, as they are furnished with a curved intestine encircled with stomachic vesicles, and furnished with a distinct mouth and vent, although these are closely approximated.

VAGINIPENNOUS, Fr. *vagine*; It. *vagina*; Lat. *vagina*, a sheath, and *penna*, a feather.

Having the feathers or wings covered with a sheath or case.

Some fly with two wings, as birds and many insects, some with four, as all farinaceous or mealy-winged animals, as butter-flies, and moths: all *vaginipennous* or sheath-winged insects, as beetles, and dorrs.

Sir Thomas Brown. Vulgar Errours, book iii. chap. xv. p. 176.

VAGRANTS, *vagrantes*, in *Law*, the same as vagabonds. By many early statutes, severe and brutal punishments were inflicted upon persons in a state of vagrancy. By that of 22 Hen. VIII. c. 12, a vagrant, after being whipped, was to take an oath to return to the place where he was born, or where he had last dwelt before the punishment, for the space of three years, and there labour as a true man ought to do; and by 27 Hen. VIII. c. 25, for a second offence, to the whipping was added the cutting off of the gristle of the right ear, and for a third offence, death. After the dissolution of the monasteries, when those who had sought and received relief from such institutions could no longer gain it, the statutory enactments seem to have exercised the ingenuity of our statesmen. The penalty of death was too abhorrent even for those times, for a second act of vagrancy the secondary punishment was therefore refined upon. A vagabond, by statute 1 Edw. VI. c. 3, was to be marked with a hot iron on the breast with the letter V, and to be a slave for two years to the person who took him. He was to be kept on bread and water, or small drink; and made to work by beating, chaining or otherwise, at any work however vile. If he absented himself for fourteen days, he was to be marked on the forehead or cheek with the letter S, and adjudged a slave to his master for ever; and if he ran away a second time, was declared guilty of felony. Children of the age of five years, and under fourteen, were adjudged to the apprehenders until twenty-one, if females; or twenty-four, if males; to be treated as slaves, and if they beat or wounded their masters, or conspired with others to do so, they were to suffer as felons; unless the party injured agreed to take them as slaves for ever. This Act was repealed in the reign of Elizabeth, and the former statute re-enacted, and in the subsequent reigns various provisions were made relating to the offence of vagrancy.

Vagrants, by Act 17 Geo. II. c. 5, were divided into idle and disorderly persons, rogues and vagabonds,

VAGI
NALIS

VA-
GRANTS.

VA-
GRANTS.

and incorrigible rogues, and those classes, or offences, the commission of which point out who come within them respectively, are named in the statute. The present Vagrant Act is the 5th Geo. IV. c. 83, by which all provisions theretofore made relative to idle and disorderly persons, rogues and vagabonds, incorrigible rogues, or other vagrants in England, are repealed. *Idle and disorderly persons* by this Act are those who, being able to work, wilfully refuse to do so, whereby they and their families become chargeable to the parish; returning to, and becoming chargeable to a parish after having been legally removed; petty chapmen and pedlars wandering and trading without legal authority; prostitutes behaving riotously or indecently in the streets, or public places, and beggars in the public streets, and those who procure children to beg; all of whom are punishable by imprisonment for a month with hard labour. *Rogues and vagabonds* are those who, having been convicted of any of the foregoing offences, again commit any of them; fortune-tellers; persons wandering abroad, and sleeping in the open air; exposing indecent prints or pictures in the public streets, (and by statute 1 Vict. c. 38, in any shop or house;) indecent exposure of the person, with intent to insult any female; exposing deformities in the public streets; persons getting charitable subscriptions by fraud; those who run away or leave their families chargeable to the parish; gambling in public places; persons having housebreaking instruments in their possession with felonious intent, or being upon premises with unlawful design; suspected persons, or reputed thieves frequenting canals, or roads, or streets, with intent to commit felony, and persons resisting their apprehension as idle and disorderly persons, and being convicted of being such—all of whom are liable, on conviction, to three months' imprisonment with hard labour. *Incorrigible rogues* are those who, convicted of any of the foregoing offences, break out of prison before their term of imprisonment expires; those who, before convicted as rogues and vagabonds, commit offences of the same nature, and persons resisting their apprehension as rogues and vagabonds, and being convicted of being such, all of whom may be committed till the next quarter-sessions, when they may be further imprisoned for a year, and, if not females, may be whipped.

Scotch and Irish vagrants may be removed from England, if they have not gained a settlement there, to Scotland or Ireland, by virtue of the statute 7 Wm. IV. c. 10; and by virtue of the Act 11 Geo. IV. and 1 Wm. IV. c. 5, those born in Jersey and Guernsey may in like manner be removed, if they have not gained a settlement in this country.

From a parliamentary return printed in 1836, it appears that out of the county rates, the sum expended in England and Wales in the year 1792 on vagrants was £16,807, and in 1832 it amounted to £28,723.

Many interesting particulars relating to the habits of persons who lead a life of vagrancy were collected by commissioners who were appointed in 1836 by William IV. to inquire as to the best means of establishing an efficient constabulary force in the counties of England and Wales, for the prevention of offences, the detection and punishment of criminals, the due protection of property, and the more regular observance of the laws of the realm. The commission was revived by her present majesty, and a report was published some time in the year 1839. The number of vagrants annually committed to prison is

about 18,000; it appears that there is "a low lodging-house in every village for travellers; they tell the people that they are travelling to find work, but pray to God that they may never get it. They tell each other what houses are *good*, and arrange their districts, so as not to interfere with each other. Every tramper is accompanied by his fancy girl or his wife: these women seldom beg; they sometimes disguise themselves as gipsies and go fortune-telling; it is very profitable; they watch for the master and mistress to leave the house, and then try to get hold of the servants; they beg anything, and if a silver spoon is in their way, they will not *tumble over it*. The price of their bed is three-pence, always two in a bed; sometimes ten or fifteen in a room. Among the classes of vagrants are men who go about almost naked, begging clothes and food, which they sell; they get about three shillings a-day; ring-droppers, who sometimes make 20s. or 25s. a-day; travelling-tinkers make the sham gold rings out of brass buttons; fellows who collect rags for their master, which they leave him to pay for; fellows in decent apparel with quack medicines, sold at from 10s. down to sixpence a bottle, according to the credulity of the party, made of salt and water, some tea, and coloured green with nettle-tops, or compounded of any other rubbish near at hand; they sometimes obtain as much as £2 per week; men in shabby genteel attire, who have been *better off*, this is very profitable if well managed; some carry begging letters, which they get on payment of 1s. each: fortune-tellers; real beggars; *prigs* who go in couples; match-sellers; ballad-singers; fellows who boil up fat and a little soap over night, run it out in a cloth, and sell it next morning for Windsor soap; they drive a good trade; fellows seeking umbrellas to mend, who will make a clean sweep of all the umbrellas in a village before dinner."

The investigation made by the commissioners was of a most searching description, (though perhaps the Report is sometimes a little harsh,) and one of the conclusions at which they arrived, which bears directly upon the subject under notice, is thus expressed. "Having investigated the general causes of depredation, of vagrancy, and mendicancy, as developed by examinations of the previous lives of criminals and vagrants in the gaols, we find that in scarcely any cases is it ascribable to the pressure of unavoidable want or destitution; and that in the great mass of cases it arises from the temptation of obtaining property with a less degree of labour than by regular industry, which they are enabled to do, by the impunity occasioned by the absence of the proper constitutional protection to the subject."

VAGUE, *v. s. & a.* } Fr. *vague, vaguer*; It. *vagare*,
VA'GUELY, } Sp. *vagar*; Lat. *vag-are*, to wan-
VA'GUENESS. } der, to roam. See VAGRANT.

To wander, to roam, to stray, to err; and *Vague*, *adj.* (Lat. *vagus*.) Wandering, unsettled, unsteady, uncertain, unsure, indeterminate, indefinite

So as the Scots had some leasure to plaie their *vagues*, and follow their accustomed manner.

Holinshed. *Chronicles*, vol. v. p. 524. *Historie of Scotland*. An. 1542

But to use the right terme indeed, and to speake according to the very truth, she doth *vague* and wander as banished, chased, and driven by the divine laws and statutes to and fro, until such time as it setleth to a body.

Holland. *Plutarch*, fol. 231. *Of Banishment*.

These small bodies being huddled perforce one upon another, leave a large void space, to *vague* and range abroad.

VA-
GRANTS.
VAGUE.

VAGUE. *Vague* and insignificant forms of speech and abuse of language have so long passed for mysteries of science; and hard and misapplied words, with little or no meaning, have, by prescription, such a right to be mistaken for deep learning and height of speculation, that it will not be easy to persuade, either those who speak, or those who hear them, that they are but the covers of ignorance, and hindrance of true knowledge.

Locke. *On Human Understanding. To the Reader.*

In his address to his assembled chiefs,
Sweet to the ear, but brief was the harangue
Of Menelaus, neither loosely *vague*,
Nor wordy, though he were the younger man.

Cowper. *Homer. Iliad*, book iii. v. 239.

This law has been styled, and (notwithstanding the objections of some writers to the *vagueness* of the language) appears to have been styled with great propriety, "The Law of Nature."

Mackintosh. *On the Study of the Law of Nature*, p. 8.

VAHIA, in *Botany*, a genus so called by Lamarck, probably from the vernacular name of the plant. It is the same as the *Urceola* of Roxburgh, but not of Vandelii. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Apocynæ*. Generic character: calyx small, five-parted; corolla funnel-shaped, with an elongated tube, which is ventricose at the base, and a five-cleft limb; corolla urceolate; ovary girded by an entire urceolus; stamens inserted in the bottom of the corolla; anthers sagittate; follicles two, one-celled, two-valved; seeds numerous, imbedded in the pulp.

A genus consisting of a solitary known species, *V. gummifer*, a native of Madagascar and the East Indies: it is a glabrous tree, with opposite leaves, and terminal cymes of flowers. The juice which this tree yields is one of those which constitute Indian-rubber or caoutchouc.

VAHLIA, in *Botany*, a genus dedicated by Thunberg to Martin Vahl, professor of Botany at Copenhagen, and author of several botanical works. It belongs to the class *Pentandria*, order *Digynia*, and the natural family of *Saxifragaceæ*. Generic character: tube of calyx adhering to the ovary, limb five-parted, persistent, with a valvate æstivation; petals five, spreading, undivided, shorter than the calyx; stamens five; anthers versatile, styles two, capitate at their apices; capsule one-celled, two-valved, truncate at the apex, five-furrowed, crowned by the limb of the calyx, many-seeded; placentas loose, hanging from the top of the cavity of the cell; seed convex outside and concave on the inside.

About seven species of *Vahlia* are known; they are rather villous, somewhat dichotomous herbs, natives of Africa. The leaves are opposite and without stipulas, linear or lanceolate. The flowers are white, axillary and pedicellate; the pedicels are twin, one-flowered and short.

VAIL, *v.* } See **AVALE**; Fr. *avalier*, to let, put, lay,

VAIL, *n.* } or fall down, to let fall down. Cotgrave. From D. *vallen*; Ger. *fallen*; A. S. *feallan*, to fall, or cause to fall.

To fall, to drop, to put, to lay down, to lower, to depress, to sink; to submit, (to *fail*).

Vail, the *n.*, Mr. Malone affirms is a mere abridgment of *avail*, and produces an instance of the word so written, (40s. with the *availes*, &c.); it is—

"Any casual emolument," any gain, profit, &c. that may *fall* in.

pore Brittrik bare him so in bat ilk bataile,
pe dede gede Danes to, pe Noreis gan him *vaille*.

R. Brunne, p. 10.

When the emperors sister, the spouse of Spaine, with a fleete of an 130. sailes, stoutly and proudly passed the narrow seas, your lordship accompanied with ten ships onelie of her Maesties Naue Roiall, enuironed their fleet in most strange and warrelike sort, enforced them to stooppe gallant, and to *vaille* their bonets for the queene of England.

Hakluyt. *Voyages*, &c. vol. i. *The Epis. Dedic.*

This said; the virgin gan her beavoire *vale*,
And thank'd him first, and thus began her tale.

Fairefax. *Godfrey of Boulogne*, book xx. st. 48.

She hit him, where with gold and rich aumaile,
His diademe did on his helmet flame;
She broke and cleft the crown; and caus'd him *vaille*
His proud and lofty top. *Id. Ib.* book xx. st. 42.

Every one that does not know cries, What nobleman is that? all the gallants on the stage use *vail* to me, kiss their hand, offer me their places.

Beaumont and Fletcher. *The Woman Hater*, act i. sc. 3.

I will propose in your pledge, sir, the health of that honourable countess, and the sweet lady that sat by her, sir.

2 Cur. I do *vail* to it with reverence.

Ben Jonson. *Every Man out of his Humour*, act v. sc. 4.

I know you were one could keep
The buttery-hatch still lock'd, and save the chippings,
Sell the dole beer to aqua-vitæ men,
The which, together with your Christmas *vails*
At post-and-pair, your letting out of counters,
Made you a pretty stock, some twenty marks.

Id. The Alchemist, act i. sc. 1.

As for *veiling* bonnet before great rulers and magistrats, or within their sight, Varro saith, it was a fashion at first not commanded for any reverence or honour thereby to be done unto governours, but for health sake; and namely, that mens heads might be more firme and hardie, by the ordinarie use and custome of being bare.

Holland. *Plinie*, book xxviii. chap. vi.

The haughty Cambrian hills:—
Did seem in great disdain the bold affront to take
That any petty hill, upon the English side,
Should dare not (with a crouch) to *vale* unto their price

Drayton. *Poly-olbion*, s. 12.

But since our knights and senators account
To what their sordid begging *vails* amount,
Judge what a wretched share the poor attends,
Whose whole subsistence on those alms depends!

Dryden. *Juvenal*, sat. 1.

VAIL, *v.* } See **AVAIL**; **PREVAIL**.

VAILABLE. } To have value, force, or effect; influence or power; to serve, aid, or assist.

About a king good counsaile is preise,
About all other things most *vailable*.

Chaucer. *A Ballad to King Henry IV.* p. 549.

Through this science [physike] it is full sought
Which *vailleth* and which *vailleth* nought.

Gower. *Conf. Am.* book vii.

Pitee is the foundement
Of euery kynges regimete,
If it be medled with Justice,
Thei two remeuen all vice,
And ben of vertue most *vailable*
To make a kynges roylme stable.

Id. Ib. book vii. fol. 167.

For in a kyng, if so befall
That his pitee be ferme and stable,
To all the londe it is *vailable*
Onely through grace of his persone.

Id. Ib. fol. 71.

And if thou wylte not, it should *vayle* to glorifie me as a friende.
Guldene Boke, let. viii.

But with more awe the Souldier might bee kept in more strait obedience, without which neuer captaine can doe any thing *vailable* in the warres.

Smith. *Common-wealth*, book ii. chap. iv. p. 57.

VAILLANTIA, in *Botany*, a genus dedicated by Micheli to Sebastien Vaillant, a French botanist. It belongs to the class *Polygamia*, order *Monoecia*, and

VAIL.

VAIL.

LANTIA.

VAIL-
LANTIA.
—
VAIN.

the natural family of *Rubiaceæ*. Generic character: flowers by threes, middle one fertile, and hermaphrodite, lateral ones male, and combined with the middle one; calyx with an ovate tube, and a denticulated, persistent limb, the denticulations numerous, irregular and stiff; corollas rotate, male ones trifid, but the hermaphrodite one is quadrid; stamens three or four; styles two in the hermaphrodite flower; stigmas capitate; fruit three-horned, in consequence of the ovaria of three flowers being combined, the lateral horns are sterile, but the middle one contains two ovula, but generally only containing one seed at maturity.

This genus only consists of two genuine species, *V. muralis*, and *V. hispida*, both natives of the south of Europe. They are annual, branched herbs; the stems are trigonal; the leaves are four in a whorl; the flowers are three in each axil, therefore they appear six in a whorl; they are small, and of a yellow colour.

VAIMURE, Fr. *avant-mure*. An avant-mure, forewall, out-wall, or outward-wall. Cotgrave.

The one and twentieth day of June they put fire to the mine of the turrett of the arsenall, whereas Giambelat Bey took charge, who with great ruine rent in sunder a most great and thicke wall, and so opened the same, that he threw downe more then halfe thereof, breaking also one part of the *vaimure*, made before to vpholde the assault.

Hakluyt. Voyages, &c., vol. ii. p. 124. The Loss of Flammagusta.

They brought their hangings, cortaines, carpets, euen to their very sheets, to make and stuffe vp their foresayd sacks, a very good and ready way to make vp againe their *vaimures*, the which were thrown doune with the fury of the artillery.

Id. Ib.

On the west side was a great rampire or bank, very steep without and within, and like to a *vamure* of a fortress; by the *vamure* the ditches were twenty-four deep.

Sir T. Wyatt. Description of a Feat of Arms. Anno 1525.

So many ladders to the earth they threwe
That well they seem'd a mount thereof to make,
Or else some *vamure* fit to save the towne,
Instead of that the Christians late beat downe.

Fairefax. Godfrey of Boulogne, book xi. s. 64.

VAIN, *adj.* } Fr. *vain*; It. *vano*; Sp. *vano*;
VA'INLY, } It. *vanagloria*; Sp. *vanagloria*;
VA'INNESS, } Lat. *vanus*, for which Vossius
VA'INITY, } proposes various etymologies.
VA'INGLORY, } Tooke derives it from the A. S.
VAINGLO'RIOUS, } *fyn-igean*, to wither, to fade,
VAINGLO'RIOUSLY. } to pass away, to faint. It may
be more immediately from the A. S. verb, *wan-ian*, to
wane, to fall away; the Fr. *adj. vain* is—

"Faint, weak, feeble, forceless;" Cotgrave; fruitless, frustrate, idle, trifling, frivolous, rejoicing in trifles, ostentatious of, displaying, trifles, or decorations. And see the Quotation from Cogan.

Be we not maad coueitouse of *veyn glorie*, stiryng eche other to wraththe or hauynge enuye eche to other.

Wiclif. Galathies, ch. v.

Let vs not be *vaine glorious* prouokynge one another, and enuyng one another.

Bible, 1551.

No man disseyue ghou willynge to teche in mekenesse and religioun of aungelis tho thingis whiche he hath not seen, walkynge *veynli* bolned with witt of his fleisch.

Wiclif. Colocensis, ch. ii.

And thei speken in pride of *vanytee*, and disseyuen in desires of fleisch of lecherie hem that scapen a litle.

Id. 2 Peter, ch. ii.

For when they haue spokē the swelling wordes of *vanitie*, they beguyle with wantonness thorowe the lustes of the fleshe, them that were clene escaped.

Bible, 1551.

Therefore I seie and wnesse this thing in the lord, that ghe walke not now as hethene men walken in the *vanyte* of her witt.

Wiclif. Effesies, ch. iv.

Thys I say therfore and testifie in the Lord, that ye hence forth walke not as other Gentylys walke, in *vanyte* of theyr mynde.

Bible, 1551.

Vaine-glorie is for to have pompe, and delit in his temporal highnesse, and glorie him in his worldly estate.

Chaucer. The Persones Tale, fol. 313.

The heauen is far, the worlde is nigh,
And *vaine glorie* is eke so sligh,
Whiche couetise hath now withholde,
That thei none other thinge beholde,
But only that thei mighten winne.

Gower. Conf. Am. Prol., fol. 3.

My father as touchend of all,
I maie not well, ne noughten shall,
Of *vaine glorie* excuse mee.

Id. Ib. book i. fol. 23.

But yet ne ferde I not the bet
Thus was my glorie in *vaine* beset
Of all the ioy that I made.

Id. Ib.

And all was this the cause why.
That while he stode in his noblesse,
He shulde his *vanitee* represse
With suche wordes as he herde.

Id. Ib. book vii. fol. 155.

And therefore hee which since the ouerthrowe of Darius had left consultation with the deuiners and prophetes, turned him self agayn to the *vanitie* and supersticion of men, willing Aristader (to whom he was addicted in beliefe) that he should trye out by sacrifice what hys successe should be.

Brende. Quintus Curtius, book vii. fol. 194.

Whiche lacke of charytie and desire of *veyn glory* causeth many good actes and dedys to dye and growe out of minde.

Fabyan. Chronycle, p. 666. Anno 1478.

The Spaniards, according to their vsuall maner, fill the world with their *vain-glorious* vaunts, making great apparance of victories, when on the contrary, themselues are most commonly and shamefully beaten and dishonoured.

Hakluyt. Voyages, &c., vol. ii. p. ii. p. 169. Sir Rich. Greenuill.

Let it therefore no more enter into your heartes to thinke with your selues *vain gloriously*.

Udall. Erasmus. Luke, ch. iii. fol. 242.

Supplies beyond necessity of the present, are apt to make us either *vainly* profuse, or *vainly* confident.

Hale. Cont. vol. ii. p. 237. Meditation upon the Lord's Prayer

And leauing home, to royall court I sought;
Where I did sell myselfe for yearly hire,
And in the princes garden daily wrought;
There I behelde such *vainenesse*, as I neuer thought.

Spenser. Faerie Queene, book vi. can. 9. st. 24.

O how great *vainenesse* is it then to scorne
The weake, that hath the strong so oft forlorne!

Id. Vis. of the Worlds Vanitie, st. 6.

All their exhortations were to set light of the things in this world, to count riches and honors *vanitie*, and in token thereof not onely to seek neither, but if men were possessors of both, euen to cast away the one and resigne the other that all men might see their vnfaigned conuersion vnto Christ.

Hooker. Ecclesiasticall Politie. Pref. sec. 8.

Let him tell that he takes in every day, as much wine as would refresh the sorrows of 40 languishing prisoners; or let him set up his *vain-glorious* triumph, that he hath knock'd down Damalis with the 25th bottle, and hath out-feasted Anthony or Cleopatra's luxury.

Taylor. Sermon 16, vol. 1.

Is there, who, lock'd from ink and paper, scrawls
With desp'rate charcoal round his darken'd walls?
All fly to Twit'nam, and, in humble strain,
Apply to me, to keep them mad or *vain*.

Pope. Prologue to Satires, vol. xix.

Yet hence the poor are cloth'd, the hungry fed;
Health to himself, and to his infants bread
The lab'rer bears: what his hard heart denies,
His charitable *vanity* supplies.

Id. Epistle iv. ver. 169

VAIN.

VAIN

VALE.

Full sure he thought Troy's fatal hour arriv'd.
Vain thought! He knew not the designs of Jove;
That both to Greeks and Trojans he ordain'd
Hard conflict yet, and agonies and groans.
Cowper. Homer. Iliad, book ii. v. 43.

Neptune, that speech *vain-glorious* hearing, grasp'd
His trident, and the huge Gyræan rock
Smiting indignant, dash'd it half away.
Id. Ib. Odyssey, book iv. v. 609.

Vanity is that species of pride, which, while it presumes upon a degree of superiority in some particular articles, fondly courts the applause of every one within its sphere of action; seeking every occasion to display some talent or some supposed excellency.
Cogan. On the Passions, p. 75.

VAISON, France, a small town in the department of Vaucluse, standing on the left bank of the Ouvèze, seven leagues E.N.E. of Orange. It was the Vasio of the Romans, and its environs exhibit many remarkable remains of antiquity.

VA'LANCE, or } It. *valenzana del letto*; perhaps
VA'LENCE, } (Skinner) from *Valentia*; a town
VA'LENCY. } so called both in France and Spain.
Florio calls it—

A kind of saye, serge or stuff to make curtains for beds with.

Valiant, in the first folio of Shakspeare, has been altered by the editors to *valanced*, which Mr. Malone explains, "fringed with a beard."

The remnaunt, couered well to my paie,
Right with a little kercheffe of *Valence*,
There was no thicker clothe of defence.

Chaucer. The Assembly of Fowls, p. 332.

And at the four corners four banners of saints beaten in fine gold upon damask; with a majesty there over of rich cloth of tissue, and *vallance* of black silk, and fringe of black silk and gold.

Strype. Eccles. Mem. and Funeral Solemnities of K. Hen. VIII.

Fine linnen, Turkey cushions bost with pearle,

Vallens of Venice gold, in needle worke.

Shakspeare. Taming of the Shrew, act ii. sc. 2. fol. 217.

O my olde friend! thy face is *valiant* since I saw thee last: coms't thou to beard me in Denmarke?

Id. Hamlet, act ii. sc. 2, fol. 263.

But you, loud sirs, who through your curls look big,
Critics in plume and white *vallancy* wig,
Who lolling on our foremost benches sit,
And still charge first, the true forlorn of wit.

Dryden. Epilogue 3.

VALE, } Fr. *vallée*; It. *valle*; Sp. *valle*; Lat.
VA'LLY. } *vallis*, for which Vossius proposes three different etymologies; the most plausible of which is the Gr. *βαλλ-ειν*, *deicere*, *demittere*, to cast or put down; but its true origin seems to be the D. *vallen*; Ger. *fallen*; A.S. *feall-an*. See VAIL, ante, and AVALE.

Applied to—

Ground surrounded by eminences: ground lying in a bottom, lying low in relation to that adjoining or encompassing it.

þo he com ney Canterbury, in a *valei* þere by syde
He sey þe emperoures ost, ysprad aboutewyde.

This messenger tooke leue and went
Upon his way, and neuer he stent
Till he came to the darke *valley*,
That stant betweene rockes twey.

Chaucer. The Dream of Chaucer, p. 321.

And eke beneth the *valeie*,
Where thylke riuer, as men maie seie
(Whiche Ladon hight) made his cours
He was the chiefe of gouernours
Of hem, that kepten tame beastes.

Gower. Conf. Am. book v. fol. 89.

Let your cōpany departe if they lyst, for I promyse you by couenaunt, the armes ones doone bytwene you and me, I shall bringe you into the *vales* of Chierbourg without damage or parell.

Berners. Froissart. Cronycle, vol. i. ch. 374, p. 620.

For the space of thirtie miles rowing, and more, it is as broad as the Thames betwixt Greenwich and the Isle of dogges, in some place more, and in some lesse: the current runneth as strong, being entred so high into the riuer, as at London bridge vpon a *vale* water.

Hakluyt. Voyages, &c. vol. iii. p. 237. *M. Ralfe Lane.*

As sone as part of our army was entred into a great *valley*, sodenly they shewed themselves on both sides the *valley*, and began to assaile the hindermost of vs.

Goldinge. Caesar. Comm. book v. fol. 128.

I might here intreat of the famous *vallies* in England, of which one is called the *vale* of Whitehorse, another of Eouesham, commonlie taken for the granary of Worcestershire, the third of Ailesbirie that goeth by Tame, &c.

Holinshead. Chronicles, vol. i. p. 188. *The Description of Britaine*, ch. xviii.

Whose causeway parts the *vale* with shady rows?

Whose seats the weary traveller's repose?

Pope. Epistle iii. v. 259.

And [we] entred our selves under the conduct of our new guide, who immediately led us away, and crost another river, and enter'd into a large *valley* of the fattest land I did ever take notice of.

Dampier. Voyages, vol. i. ch. ii. p. 18. *Anno 1681.*

On the 3rd, Mr. Banks set out early in the morning, with some Indian guides, to trace our river up the *valley* from whence it issues, and examine how far its banks were inhabited.

Cook. Voyages, vol. i. book i. ch. xvi. p. 163.

VALEDI'CTION, } From the Lat. *valedicere*;
VALEDI'CTORY. } *vale*, farewell, and *dicere*, to say; to say or bid farewell.

A saying, or bidding to farewell: a farewell.

When he went forth of his colledge on any journey for any long continuance, he alwayes took this solemn *valediction* of the fellows: "I commend you to the love of God, and to the hatred of popery and superstition."

Fuller. Worthies of England. Shropshire.

Let us leave this grateful clerk in his quiet grave, and return to Mr. Hooker himself, continuing our observations of his Christian behaviour in this place, where he gave a holy *valediction* to all the pleasures and allurements of earth.

Walton. Life of Hooker.

They are things which I may lose while I live, but I am sure I cannot keep them when I die; and if they take their farewell sooner, they do but their kind; and, at best, do but little anticipate their last and necessary *valediction*.

Hale. Cont. vol. ii. *A Preparative against Afflictions.*

The shore was thronged with crowds of people, that followed him to the water's edge,—studious to pay to their popular chief governor every *valedictory* honour that their zeal and attention could devise.

Cumberland. Memoirs.

VALENCE, anciently Valentia, a town of France in the department of the Drôme, with a population of 10,285. It was the capital of the Segalauni, a people of Narbonnese Gaul; it is situated upon a rock on the left bank of the Rhone. The buildings are generally mean, and of only middling dimensions. Valence is divided into the high and low town, and the burgh. There are no public buildings of note, except the prefecture, which has fine gardens. There is a library of 14,000 volumes, a theatre, and a public walk by the Rhone, from which is a magnificent prospect. Valence has a citadel of some strength, and in the cathedral is

ZUELIA.

the tomb of Pope Pius VI.; it is a bishopric, the court of assize is held there, and it also possesses a tribunal of the first instance. There is in this city a society of agriculture, and of the arts. It carries on some silk manufactures of little moment, and is a depot for the wines of the Rhone. Valence stands $27\frac{1}{2}$ leagues S. by E. of Lyons, and $146\frac{1}{2}$ S.E. of Paris.

VALENCIA, a city of Spain, in the province of that name.

VALENCIENNES, a strong town of France, in the department of the Nord, containing 19,840 inhabitants; it is situated at the confluence of the Escaut and Rhonelle, which aids its security as a military position, and allows three-fourths of its circumference to be inundated. It was fortified by Vauban. It is built of brick for the most part, and the streets have been much improved since 1793, when it was bombarded, and one quarter of the town entirely destroyed. There is a public library, containing 8,000 volumes, a gallery of pictures, and a museum of natural history, a theatre, hospital, and arsenal. Valenciennes possesses manufactures of linen, gauze, lace, cotton, metallic cloths, pottery, and corn brandy. It is 52 leagues N.N.E. of Paris, and 9 leagues E. of Douay.

VALENCY, a small town in the department of the Indre, in France, on the river Nahon, 9 leagues N.N.W. of Chateauroux, containing 2,710 inhabitants. It has a noble chateau, with a fine park and gardens.

VALENTIANA, in *Botany*, a genus so called by Rafinesque, but the derivation is not given by him. It belongs to the class *Tetrandria*, order *Monogynia*, and the natural family of *Caprifoliaceæ*. Generic character: calyx having the tube adhering to the ovary, and the limb eight-parted and nearly equal; stamens four, epipetalous, nearly equal; style filiform; stigma two-lobed; fruit two-celled.

Only a single species of this genus is known, a native of Abyssinia; it is a twining shrub. The leaves are opposite, petiolate, somewhat sagittate, a little serrated, and acute. The flowers are axillary, solitary, hibracteate; the bracteas are cordate and winged on the outside. According to Rafinesque, *Valentiana* is nearly allied to *Linnæa*, but the plant is altogether unknown to other botanists.

VALENTINE, met., a letter; a person seen, selected, on Valentine's day, Feb. 14.

For, on a day, when Cupid kept his court,
As he is wont at each Saint *Valentide*,
Vnto the which all lovers doe resort,
That of their loves successe they there may make report.
Spenser. Faerie Queene, book vi. can. 7, st. 32.

VALENTINIA, in *Botany*, a genus dedicated by Swartz to Michael Richard Valentini, a German botanist, and author of *Prodromus Historiæ Hessicæ*. It belongs to the class *Octandria*, order *Monogynia*, and the natural family of *Sapindaceæ*. Generic character: calyx five-parted, coloured, spreading, persistent; petals wanting; stamens eight; ovary roundish; style one; capsule baccate, pulpy inside, opening at length by three or four revolute valves; seeds three or four, oblong.

Only a single species of this genus is known, *V. ilicifolia*, a native of Hispaniola and Cuba. It is a shrub with alternate, holy-like leaves; the flowers are scarlet and disposed in umbels. The genus is said to be nearly allied to *Thouinia* and *Schleichera*.

VALENZUELIA, in *Botany*, a genus dedicated by

Bertero probably to some botanist of the name of Valenzuela. It belongs to the class *Octandria*, order *Monogynia*, and the natural family of *Sapindaceæ*. Generic character: calyx unequal at the base, deeply five-cleft; segments rather unequal; petals four, rarely with an upper or fifth one present, furnished each with a bifid, cucullate scale at the base, which is crested at the apex; disk incomplete, four-lobed; stamens eight, rarely seven or six, eccentric, surrounding the base of the ovary, free, filiform; anthers inserted by the back; ovary sessile, three-lobed, three-celled; ovula solitary in the cells, erect from the central angle; style filiform; stigma tridentate; capsule membranous, inflated, three-lobed, or one or two-lobed from abortion, one or three-celled, one to three-valved; seeds erect, exarillate, solitary in the cells.

Of this genus only one species is known; it is a small tree, a native of Chili. The leaves are opposite, decussate, simple, oblong-lanceolate, three-nerved, quite entire, on short petioles, exstipulate; the peduncles are axillary and solitary, one or two-flowered.

VALERIAN, Fr. *valeriane*; It. *valeriana*. So called of *valere*, to avail, because of its great virtues, or of Valerius, who first used it in physic.

Valerian then he [the hermit] crops, and purposely doth stamp,
T'apply unto the place, that's haled with the cramp.
Drayton. Poly-olbion, song 13.

VALERIANA, in *Botany*, a genus so called by Necker, according to some, after one Valerius, who is said to have used the plant first in medicine, and by others from *valere*, to be in health, from the medicinal qualities of *V. officinalis*. It belongs to the class *Triandria*, order *Monogynia*, and the natural family of *Valerianææ*. Generic character: limb of calyx involute at the time of flowering, but afterwards it unfolds itself into a deciduous pappus, which is composed of many plumose bristles; corolla with an obconical or cylindrical tube, which is equal or gibbous at the base, but never spurred, usually with a bluntly five-cleft limb, rarely three-cleft; stamens three; fruit indehiscent, one-celled, and one-seeded at maturity.

This genus consists of numerous species; they are mostly herbs, rarely subshrubs; the leaves are variable even in the same plant; the flowers are in terminal corymbs, heads, or panicles, usually white, very rarely blue, rose-coloured, or yellow. Eastern nations procure the roots of *V. Celtica* from the mountains of Austria to aromatize their baths. The roots of *V. Hardwickii* are used medicinally by the natives of Nepaul, and those of *V. officinalis* are used medicinally in Europe. It possesses antispasmodic qualities in an eminent degree. It is well known that cats are extremely fond of the root, and, according to Dr. Stokes, rats are equally fond of them, so that rat-catchers often use it to draw the rats together.

VALERIANELLA, in *Botany*, a genus named by Mœnch, being only a diminutive of *Valeriana*. It belongs to the class *Triandria*, order *Monogynia*, and the natural family of *Valerianææ*. Generic character: limb of calyx toothed, persistent; corolla spurless, regular, five-lobed; stamens three; stigma almost undivided or trifid; fruit three-celled, rather membranous, indehiscent, crowned by the toothed or accrete limb of the calyx.

Valerianella consists of numerous species; they are all annual herbs, natives of the temperate parts of the globe. The stems are forked at the top; the leaves are

VALEN-
ZUELIA.VALERI-
ANELLA.

VALERI- undivided or toothed at the base, or the superior ones
ANELLA. are pinnatifid; the flowers are generally disposed in fas-
— ciated corymbs, they are bracteate, small and white, rarely
VA- rose-coloured or blue, but they are solitary in the forks
LIANT. of the corymb. Several of the species are cultivated
for winter and early spring salads, under the name of
corn-salad or lamb's lettuce, particularly *Valerianella*
olitoria.

VALET, (see VARLET,) Fr. *valet*. Generally—
A hireling.

In recompence whereof, the king made him his *valet* (equiva-
lent to what afterward was called Gentleman of the Bedchamber).
Fuller. Worthies, vol. ii. p. 522. *Yorkshire*.

But I'm afraid the *valet de chambre* has told him all: for they
are very busy together at this moment.

Vanburgh. The Provoked Wife, act v.

I dare say you remember a shrewd remark of a writer, whose
name I cannot recollect, That no great man ever appeared great
in the eyes of his *valet-de-chambre*.

Knox. Works, vol. i. p. 168. *Essay* 32.

VALETUDINARY, } Fr. *valetudinaire*; Lat.
VALETUDINARIAN, *adj.* } *valetudinarius*; from the
VALETUDINARIAN, *n.* } Lat. *valetudo*, strength,
VALETUDINARIANNESS. } health, (see VALID) : applied
generally to the bodily state or condition, and hence—
Valetudinarian—

One whose bodily state or condition requires care or
cure; an unhealthy, sickly, infirm person.

For physic is either curative or preventive; preventive we call
that which by purging noxious humors, and the causes of dis-
eases, preventeth sickness in the healthy, or the recourse thereof
in the *valetudinary*.

Sir Thomas Brown. Vulgar Errours, book iv. ch. xiii. p. 282.

This opportunity of shifting our abode from the warmer and
more vaporous air of the valleys, to the colder and more subtile
air of the hills to the vales, is an admirable easement, refresh-
ment, and great benefit to the *valetudinarian*, feeble part of man-
kind; affording those an easy and comfortable life who would
otherwise live miserably, languish, and pine away.

Derham. Physico-Theology, book iii. ch. iv. p. 72.

I am one of that sickly tribe who are commonly known by the
name of *valetudinarians*; and do confess to you, that I first con-
tracted this ill habit of body, or rather of mind, by the study of
physic.

Spectator, No. 25.

But if there be an habitual thinness, leanness, tenderness, and
valetudinarianness, there must be some dyscrasy in the juices, or im-
becility in the solids.

Cheyne. Method of Cure, part ii. ch. iv.

There are books which pretend to render every man his own
physician; and they have done great mischief to the weak and
valetudinary.

Knox. Works, vol. i. p. 34. *Letters to a Young Nobleman*,
lett. 16.

Abstemiousness has been carried to a pernicious extreme by the
present age. Dr. Cheyne's books contributed to introduce it, and
Dr. Cadogan's pamphlet on the gout rendered it universal among
valetudinarians.

Captayne ther was sir Henry Pennefort, who was well beloued
for his troweth and *valyantesse*.

Berners. Froissart. Cronycle, vol. i. ch. lxvi. p. 83.

There was a sore and hard bataile and well fought; men of
armes proued well there their *valyātise* and prowes.

Id. Ib. ch. 317. p. 439.

LOVE. There he goes,

That was the fairest hope the French court bred,

The worthiest and the sweetest temper'd spirit,

The truest and the *valiantest*, the best of judgment.

Beaumont and Fletcher. The Noble Gentleman, act i.

GENT. That's my poor virtue, sir,

And parcel *valiant*; but it's hard to be perfect.

Id. The Nice Valour, act iv.

While he calls Gideon *valiant*, he makes him so. How could he
be but *valiant*, that had God with him! The godlesse man may
be careless, but cannot be other than cowardly.

Hall. Works, vol. i. p. 191. *Cont. Gideon's Calling*.

Yet if thou wilt renounce thy miscreance,

And my true liegeman yield thy selfe for aye,

Life will I graunt thee for thy *valiance*,

And all thy wrongs will wipe out of my souenaunce.

Spenser. Faerie Queene, book ii. can. 8. st. 51.

Thrice happy man, said then the Briton knight,

Whom gracious lot, and thy great *valiaunce*

Haue made a souldier of that Princesse bright,

Which with her bounty and glad counfenaunce

Doth blesse her sernaunts, and them high aduaunce.

Id. Ib. can. 9. st. 5.

She should bear a son, that should be famous for his *valiancy*,
for his strength of body, and for his happy success.

North. Plutarch, p. 16.

Locrinus with his brother Camber, in reuenge of their other bro-
thers death, and for the recouerie of the kingdome, gathered their
powers together, and coming against the said king of the
Hunnes, by the *valiance* of their people they discomfited him in
battell.

Holinshed. Chronicles, vol. i. p. 444. *The History of England*.

I was by thee, and looked how thou wouldst demean thyself in
thy combat. Who would not fight *valiantly*, when he fights in
the eye of his prince?

Hall. Works, vol. i. *Serm.* 37.

Picks quarrels for to show his *valiantise*.

Bp. Hall. Sgt. iv. book iv.

Plutarch's observation concerning Cæsar's soldiers, that they who in service under other commanders did not exceed the ordinary rate of courage, nor excell their fellows, did yet when he led them become irresistibly *valiant*, being animated and inspired by his unparallel'd gallantry.

Barrow. Serm. 2. vol. iii. p. 136.

Before the battle began, he [Muli Moluc] was carried through all the ranks of his army in an open litter, as they stood drawn up in array, encouraging them to fight *valiantly* in defence of their religion and country.

Spectator, No. 349.

Godlike Achilles, *valiant* as thou art,
Wouldst thou be subtle too? But me no fraud
Shall overreach or art persuade, of thine.

Couper. Homer. Iliad, book i. v. 156.

However, just as the cattle were putting into the boat, one of Etary's followers *valiantly* opposed any exchange whatever being made.

Cook. Voyages, vol. vi. book iii. ch. iii. p. 51.

VA'RID, } Fr. *valide*; It. *valido*; Sp. *valido*;
VAL'DITY. } Lat. *validus*, from *val-ere*; *ουλ-ειν*, from
Ionic *ουλος*, for *ολος*, *sanus*, *integer*, sound, whole or
entire. Vossius.

Sound, firm, strong, of great or full force or efficacy,
forceful, powerful, efficient.

To deliuer in our name and for vs, sufficient and effectual
letters and instruments, and to require letters and instruments of
the like *validitie* and effect of the other part.

Hakluyt. Voyages, &c. vol. i. p. 456. *Sir Jerome Bowes*.

Perhaps more *valid* armes,
Weapons more violent, when next we meet,
May serve to better us, and worse our foes,
Or equal what between us made the odds,
In nature none.

Milton. Paradise Lost, book vi. v. 438.

They are tied in conscience to verifie this contract, if all these
conditions were observed which could make the act *valid* in the
law of nature, because no civil law can evacuate a natural.

Taylor. Rule of Conscience, book iii. ch. i. fol. 454.

Nature as much as is possible inclineth vnto *validities* and pre-
servations.

Hooker. Ecclesiasticall Politie, book v. fol. 327, sec. 62.

By meanes whereof one and the same star seemeth to rise in
sundrie times in diverse countries, and appeareth sooner or later
to some than to others; and therefore the cause depending there-
upon is not in all places of like *validitie*, nor sheweth the same
effects alwaies at the same times.

Holland. Plinie, book xviii. ch. xxv.

O behold this ring,
Whose high respect and rich *validitie*
Did lacke a parallel.

Shakspeare. All's Well that Ends Well, act v. sc. 3, fol. 253.

That even miracles themselves, "can never render a founda-
tion *valid*, which is in itself invalid; can never make a false in-
ference true; can never make a prophecy fulfilled, which is not
fulfilled."

Clarke. Evidences, prop. 14.

We must acknowledge that bonds of resignation on demand
have been declared by the temporal judges *valid*, and not simo-
niacal.

Archbishop Secker. Works, vol. v. p. 365. *Charge*.

It being my interest, as well as my inclination, to pay court to
all the great men, without making inquiry into the *validity* of
their assumed titles, I invited Poulaho on board.

Cook. Voyages, vol. v. book ii. ch. vi. p. 300.

VALLADOLID, a city of Spain, in the province of
Leon. It is well built, surrounded with walls, and it
has several squares adorned with fountains. This city
is a bishop's see, and possesses a university of some
fame. The market-place is 700 paces in circumference;
the monasteries and convents are numerous, in parti-
cular that of the Dominicans, which possesses a magni-

ficent church. The kings of Spain once resided in Val-
ladolid, and their palace yet remains, and is of great size.
The environs of the city are covered with gardens and
vineyards; the river Escurva passes close to the city.
Valladolid has a population of 20,000, and is 100
leagues North-North-West of Madrid, lat. 41° 42' N.,
long. 4° 47' W. *Valladolid* is also the name of the
chief city of Honduras, in New Spain, North America,
in lat. 14° 10' N., long. 51° 21' W.

VALLARIS, in *Botany*, a genus so called by Bur-
mann, from *vallo*, to inclose, because of one of the
species being used for fences in Java. It belongs to
the class *Pentandria*, order *Monogynia*, and the na-
tural family of *Apocynæ*. Generic character: calyx
five-parted; corolla salver-shaped, with a five-cleft
obtusely limb, and a scaleless throat and tube; stamens
five, exerted, inserted in the throat, very short, fur-
nished each with a fleshy swelling on the outside at
their apices; anthers sagittate, cohering by their middle
to the stigma; ovarium two-celled; style filiform;
stigma conical, furnished with a pearl-like gland on
the back; hypogynous scales five, connate at their
bases, and ciliated at their apices.

Several species of this genus are known, all natives
of Asia; they are all climbing shrubs, with opposite
leaves. The peduncles are interpetiolar or terminal;
the flowers are sweet-scented, and disposed in tricho-
tomous corymbs, yellow or white.

VALLA'TION, } See CIRCUMVALLATION. Lat.

VALLA'TORY. } *vallatus*, fortified or surrounded
with fortifications, *walled*. The Lat. *vallum*, Tooke
derives from the A. S. *wil-an*, to join together, to con-
solidate, to cement.

A fortification, a rampart, an entrenchment.

Mention is made in Ezekiel of a measuring-reed of six cubits:—
with such differences of reeds, *vallatory*, sagittary, scriptory, and
others, they might be furnished in Judea.

Sir Thomas Brown. Miscel. p. 82

The *vallation* south-west of Dorchester in this county, called
Dyke-hills, consisting of two ridges or borders, with an interme-
diate trench, although so near a Roman town and road, is not
Roman, but, I imagine, Saxon or Danish.

Warton. History of Kiddingington, p. 70.

VALLEA, in *Botany*, a genus dedicated by Mutis
to Robert Valley, of Rouen, who has given a commen-
tary on the works of Pliny. It belongs to the class
Polyandria, order *Monogynia*, and the natural family of
Elæocarpeæ. Generic character: calyx of five sepals;
petals five, trifid; gland of receptacle forming a ring
round the ovarium; scales five, adnate under the claws
of the petals; stamens from thirty to forty in number;
anthers mutic, bursting at the top; style furrowed;
capsule four or five-valved, four or five-celled; valves
muricated, spreading; cells two-seeded.

Three species of *Vallea* are known to botanists, all of
which are natives of South America; they are small
trees, with alternate, cordate-stalked leaves, and kidney-
shaped stipules; the flowers are white.

VALLERY EN CAUX, ST., a maritime town of
the Seine Inférieure, in France, containing 5,200 in-
habitants, surrounded on the land side by fine pas-
turages. It is 14 leagues North-West of Rouen.

VALLERY SUR SOMME, a small seaport town
in the arrondissement of Abbeville, department of the
Somme, built on the right bank of the river Somme,
facing Crotoy. The tide rises 12 feet at the town, and
vessels of 300 tons can unlade there. The number

DOLID.
—
VALLE-
RY SUR
SOMME.

VALLE- of inhabitants is 3,350. Vallery is $4\frac{1}{2}$ leagues from
RY SUR Abbeville, West-North-West.

SOMME. VALLESIA, in *Botany*, a genus dedicated by Ruiz
VALLO- and Pavon to T. Vallesio, physician to Philip II. of Spain.
TA. It belongs to the class *Pentandria*, order *Monogynia*,
and the natural family of *Apocynæ*. Generic charac-
ter: calyx small, five-parted, persistent; corolla salver-
shaped, with a slender, elongated tube, a widened hairy
throat, and oblique segments; stamens five, inclosed;
anthers ovate, sagittate, free; ovaria two; style didy-
mous; stigma subclavate; drupes two, distinct, rather
clavate, containing each a one-celled, one-seeded, fibry,
striated nut; embryo straight, central.

Four species are known of this genus, all natives of
the tropical parts of America; they are small glabrous
trees, or large shrubs. The leaves are alternate, and
destitute of glands; the peduncles are opposite, the
leaves dichotomous and many-flowered; the flowers are
small and white.

VALLISNERIA, in *Botany*, a genus dedicated by
Linnaeus to Antonio Vallisneri, an Italian botanist. It
belongs to the class *Dioecia*, order *Decandria*, and
the natural family of *Hydrocarideæ*. Generic char-
acter: flowers dioecious: male flower, spadix conical, co-
vering the flowers; spathe inclosed; perianth tripartite;
stamens two; female flower, spathe one-leaved, one-
flowered; perianth three or six-parted; stigmas three,
bifid, and sometimes appendiculate outside; berry one-
celled, cylindrical, many-seeded; seeds parietal.

Two species of this singular species are known—*V.*
spiralis, a native of ditches and lakes in the South of
Europe, as well as in some other parts of the globe, and
V. nana, a native of New Holland. In both species the
female scapes are spiral, and the leaves narrow and
grassy. The male flowers, as soon as fully expanded,
separate from their scapes and float upon the surface of
the water, for the purpose of impregnating the female
blossoms, which are sometimes at a considerable dis-
tance from the males. When the fruit is ripe, the spire
of the female scapes contracts, that the seeds may be
deposited in the mud below.

VALLON, a town of France in the department of
the Ardeche, four leagues from Argentières. It is remark-
able for a natural bridge near it, called the Pont d'Arc,
over the Ardeche. Two mountains, separated at the
bases, meet above over the river, and form an arch of
grey marble 200 feet above the water, and 165 feet span,
used as the common road between the Cevennes and
Viverrais for ages; nor is there any spot near where it is
possible to construct such a connection by art, owing to
the height of the precipices. The vicinity of Vallon is
also remarkable for one of the most wonderful natural
grottos in the world.

VALLOTA, in *Botany*, a genus dedicated by Her-
bert to Pierre Vallot, a French botanist. It belongs to
the class *Hexandria*, order *Monogynia*, and the natural
family of *Amaryllideæ*. Generic character: perianth
coloured, funnel-shaped, having the tube ribbed inside,
the throat wide, and the segments of the limb unequal;
stamens six, inserted in the throat of the corolla, con-
nivent, alternate ones shorter; style declinate; stigma
trigonal, undivided; capsule membranaceous, triquetrous,
three-celled, with three loculicidal valves; seeds nume-
rous, compressed, black, foliaceously winged, disposed
in two ranks in each cell.

A genus separated from *Amaryllis*, consisting of
a single known species, *V. purpurea*, a bulbous plant, a

native of the Cape of Good Hope. The leaves are
distich and persistent; the scapes are hollow; the
flowers are disposed three or four in an umbel, and the
spaths are bifid; the colour of the flowers is purple.

VALONIA, in *Botany*, a genus so called by Agardh,
who does not give any derivation. It belongs to the
class *Cryptogamia*, and order *Algæ*. Generic charac-
ter: frond membranaceous, hyaline, saccate, or cylin-
drical, the inner surface covered with green powder.

A genus of marine plants.

VALOR MARITAGII, *value of marriage*, in *Law*,
means the interest which a guardian had, in former
times, in bestowing a ward in marriage. Under the
ancient tenures, while an infant was in ward, the
guardian had the power of tendering him or her a suit-
able match, without disparagement or inequality,
which, if the infants refused, they forfeited the va-
lue of the marriage to their guardian, that is, so
much as a jury would assess, or any one would *bonâ*
fide give to the guardian for such an alliance. And if
the infants married themselves without the guardians'
consent, they forfeited double the value. No express
notice of this incident of the ancient feudal tenures is
to be found earlier than the statute of *Merton*, c. 6, 7.
20 Henry III. By the charter of Henry I., a daughter
of any of the king's tenants was not, even in the life-
time of her father, to be married without the king's
privity, because otherwise she might marry a public
enemy; but the king was to take nothing for his con-
sent, nor could he restrain the father from marrying her
to any that was not such enemy. Nothing is men-
tioned in this charter of the marriage of males, nor
does it give any colour or countenance to any private
profit from the marriage of females. The great barons,
however, decided, upon a construction of *Magna Charta*,
that they had the absolute power over the marriages of
females and males too; and this power became in time
to be considered a very valuable consequence of tenure,
and at last was resisted as one of the most grievous of the
feudal burthens. On the abolition of the feudal tenures
by the statute 12 Car. II. c. 24, it ceased. Glanville;
Bracton; Spelman *On Feuds*; Blackstone, *Commen-*
taries.

VAL'LOUR, } Fr. *valeur*, *valeureux*; It. *valore*,
VA'LOROUS, } *valoroso*; Sp. *valor*, *valeroso*; Lat.
VA'LOROUSLY. } *valor*; of questionable authority. The
Fr. *n. valeur* or *valoir* is the worth or value, (anciently
written *valure*,) price or estimation, and hence the ad-
jective is applied as equivalent to *vaillant*, and our
English noun—Valour, worth in arms.

Boldness, bravery, courage.

Now for þi grete *valow*, I ask þe a bone,
þat or we grante trew, fight we als so sone,
þat on non oþer side body so bolde to be,
On fote ne hors ride, to socour me no þe.

R. Brunne, p. 196

In which voiage his [duke Robert] *valorous* hart at all assaies
(when any service should be shewed) was most manifestlie per-
ceiued, to his high fame and renowme among the princes and
nobilitie there and then assembled..

Holinshed. *Chronicles*, vol. ii. p. 37. William Rufus.

But gathering force, and courage *valorous*,
Encountred him in battaile well ordaind,
In which him vanquisht she to flie constraind.

Spenser. *Faerie Queene*, book ii. can. 10. st. 8.

They [besiegers] break up the siege, and left the besieged at
liberty to fetch in booty out of the country adjoining; which
they *valourously* and stoutly performed, wounding James himself.
Camden. *History of Queen Elizabeth*, 1579, book ii. fol. 239.

VALLO-
TA.

Too late we brought him aid, and drove them back,
Ere that his frantic *valor* had provok'd
The death he seem'd to wish for from their swords.
Rowe. Fair Penitent, act v.

My mother much rever'd! no wine for me;
Quench not my *valour*, steal not from my limbs
Their needful force with draughts of luscious wine.
Cowper. Homer. Iliad, book vi. ver. 298.

There was a Trojan leader, Podes, son
Of old Eetion, *valorous* and rich,
Whom Hector most of all his Trojan friends
Respected, in convivial pleasures sweet
His chos'n companion.

Id. Ib. book xvii. ver. 677.

VALUABLE CONSIDERATION. The consideration, *consideratio*, in *Law*, is the material cause, *quid*, or *pro quo*, of any contract, without which it will not be effectual or binding. This consideration is either expressed, as when a man bargains to give so much for a thing bought, or it is implied, when the law itself enforces the consideration; as where a man goes to an inn and eats and drinks or otherwise uses the house, the law presumes he means to pay for his food and accommodation, though there is no express contract for it. As to contracts, a consideration is the reason which moves the contracting party to enter into them, and this consideration must be a thing lawful in itself, or else the contract is void. Considerations are divided into such as are termed *good*, and such as are called *valuable*. A good consideration is that of blood, or natural affection between near relations; the satisfaction accruing from which the law esteems an equivalent for whatever benefit may accrue from one relation to another. But this consideration fails when it is for the purposes of fraud. A contract for a valuable consideration, as for marriage, for money, for work done, or for other reciprocal contracts, can never be impeached at law; and if it be of a sufficiently adequate value is never set aside in equity, for the person contracted with has given an equivalent in recompense, and is, therefore, as much an owner or creditor as any other person. In short, the distinction between a good and a valuable consideration is, that the former consists of such as blood, or of natural love and affection, as when a man grants an estate to a near relation from motives of generosity, prudence, and natural duty; and that the latter consists of such a consideration as money, marriage, or the like.

VA' LUE, or
VALU'RE, *n.*
VA' LUE, *v.*
VA' LUABLE,
VA' LUABLENESS,
VALUA'TION,
VALUA'TOR,
VA' LUELESS,
VA' LUER.

Fr. *valuer*, *valoir*; It. *valere*;
Sp. *valor*, from Lat. *valere*, to be
sound, whole, or entire (See VA-
LID, VALOUR); to be worth or
worthy.

The worth, the estimated or
rated worth, the estimation, rate,
price.

perfor þe duke him dight, as man of grete *value*
Robert Beleyse with myght, þe sege þei wend remue.
R. Brunne, p. 100.

And to him came there meny,
To aske theyr det,
But none could get,
The *valour* of a peny.

Sir Thomas More. A Mery Jest, &c.

The same day ther was offred and gyuen well to the *value* of
thre thousande frakes.

Berners. Froissart. Cronycle, vol. i. ch. 442. p. 778.

The marchants haue all one house or magason, which house
they call Godon which is made of bricke, and there they put all

their goods of any *valure*, to saue them from the often mischances
that there happen to houses made of such stuffe.

Hakluyt. Voyages, &c. vol. ii. p. 234. M. Cæsar Frederick.

On the other side, the king's officers will giue no licence to
make ordinance thereof; whereupon the mines lie unlaboured,
and of no *valuation*.

Id. Ib. vol. iii. p. 466. Henry Hawks.

Of hewen stone the porch was fairely wrought,
Stone more of *valer*, and more smooth and fine,
Then iet or marble farre from Ireland brought.

Spenser. Faerie Queene, book ii. can. 9. st. 24

I doubt not, but by his fame and renowme in learning, shall be
answerable to his desert and *valure* in writing.

Holinshed. Chronicles, vol. vi. p. 64. The Description of Ireland, ch. vii.

If there be either vndeniable apparance that so it doth, or
reason such as cannot deceiue, then scripture-prooffe (no doubt)
in strength and *value* exceedeth all.

Hooker. Ecclesiasticall Politie, book ii. sec. 7. fol. 76.

The party that with most boldness and vehemence declaims
against them [ceremonies] is *valued* by them as a most precious
man, a man of zeal and courage, and needs little else to justify
and magnify him with his party.

Hale. Cont. vol. i. p. 450. A Discourse of Religion.

Such peace granted contrary to the rigour of the gospel, con-
trary to the law of our Lord and God, doth but under colour of
merciful relaxation deceive sinners, and by soft handling destroy
them, a grace dangerous for the giver; and to him which
receiveth it nothing at all *valuable*.

Hooker. Ecclesiasticall Politie, book vi. fol. 328.

There be which write, that the numbring of men and of places,
the *valuation* of goods and substance, as well in cattell as red-
die monie, was not taken till about the xix. yeere of this kings
reigne.

Holinshed. Chronicles, vol. ii. p. 22. William the Conqueror. Anno 1084.

CONST. You haue beguil'd me with a counterfeit
Resembling maiesty, which being touch'd and tride,
Proues *valuelesse*.

Shakspeare. King John, act iii. sc. 1. fol. 9.

A man of excellent parts; though he who rod post to tell him
so, might come too late to bring him tidings thereof; being such
a *valuer* of himself, that he swelled every drop of his ability into
a bubble by his vain ostentation.

Fuller. Worthies, vol. ii. p. 82. The Worthies of England. London.

Of whom [a careful physician] most men are willing to make
use, thankful for their care, great *valuers* of their skill.

Taylor. Serm. 25, vol. ix. fol. 249.

The Grand Canary is an island much superior to Teneriffe
both in bulk and *value*; but this gentleman chooses rather to re-
side in this his native island.

Dampier. Voyages, Anno 1699.

Authors, like coins, grow dear as they grow old;
It is the rust we *value*, not the gold.

Pope. Horace, book ii. epis. i. ver. 35.

These were the principal goods on board her; but we found be-
sides, what was to us much more *valuable* than the rest of the
cargoe: This was some trunks of wrought plate, and twenty-
three ferons of dollars, each weighing upwards of 200lb. aver-
dupois.

Anson. Voyages, book ii. ch. iv. p. 224.

It was not without much trouble, as well as surprize, that I
heard the incomparable Theodora's merit so much injured, as to
have the *valuableness* of my life put into the balance with that of
her's, nay, and made to preponderate.

Boyle. Works, vol. v. fol. 265. The Martyrdom of Theodora

The *valuableness* of my principal aim may attone for running
some little hazard of giving offence in the manner of pursuing it

Id. Ib. part iii. ch. xxvii. p. 346.

I am therefore at a loss, what kind of *valuators* the bishops
will make use of.

Swift. Considerations upon two Bills.

Besides, there lies a nearer way for good qualities to arrive at
their *valuableness*: for we find the very sight of them raising an
esteem in the beholder without staying for the benefits to be
received from them.

Search. Light of Nature, vol. i. part ii. ch. xxiv. p. 134.

VALUE.

VALUE.

VAMP.

They would learn a higher *valuation* of themselves, and feel how justly the son of Sirach had directed: Glorify thy soul in meekness, and give it honour according to the dignity thereof.

Archbishop Secker. *Works*, vol. iv. p. 88. *Serm.* 7.

VALUE, *valentia*, *valor*, and price, *pretium*. A distinction has been made in *Law* between the terms value and price. Where a party brings an action of trespass against another for the taking away of live cattle, or any particular thing, he would say that the defendant took them away *pretii* so much; but if the action were for the taking of things without life, it would be *ad valentiam*, so that live cattle are to be prized at such a price as the owner of them esteems them to be worth; but dead things are to be reckoned at the value of the market, which may be certainly known. If the action were for coin, if the coin were not current, it would be *pretii*, but of common coin, current, it would be neither *pretii*, nor *ad valentiam*, for the value and price thereof is certain and notorious. Before the distinction between grand and petit larceny was removed by statute 7 and 8 Geo. IV. c. 29, it was important to state in an indictment for the offence of larceny, the value of the goods or things, for if the goods or things stolen amounted in value to twelve pence, the offence amounted to grand larceny; if under that amount, to petit larceny.

VALVE, Fr. *valve*; Lat. *valvæ*, *quasi volvæ*, *quia introrsum revolvantur*: folding, *sc.* doors or shutters, Vossius; who well distinguishes the *valvæ* from the *bifores*.

A folding door or shutter; a cover, folding, or lapping, and refolding, over the apertures.

Then the vessels we call arteries, which carry from the heart to the several parts, have *valves* which open outwards like trap-doors, and give the blood a free passage out of the heart, but will not suffer it to return back again thither, and the veins, which bring it back from the several members to the heart, have *valves* and trap-doors which open inwards, so as to give way unto the blood to run into the heart, but prevent it running back again that way.

Ray. *On the Creation*, part ii. p. 315.

The heat dilating, and the cold contracting those little tubes, supposing there be *valves* in them, it is easy to be conceived how the circulation is performed in plants where it is not required to be so rapid and quick as in animals.

Locke. *Elements of Natural Philosophy*, ch. ix.

In ev'ry tower
Strong *valves* and solid shall afford free pass
(Thrown open) to the chariot and its steeds.

Cowper. *Homer. Iliad*, book vii. v. 351.

The way of preventing a reflux of the fluid, in both these cases, is to fix *valves*, which, like flood-gates, may open a way to the stream in one direction, and shut up the passage against it in another.

Paley. *Natural Theology*, ch. x. p. 140.

VAMP, *n.* } The Fr. *avant*, the van or fore-part,

VAMP, *v.* } is frequently corrupted into *vam*, as *vambrace*, *vamure*, (*vam-mure*.) And Skinner thinks that the vamp of the boot or shoe is the fore or front, and consequently the upper part of it, the upper leather, and that to *vamp* boots is—to repair them by the addition of new upper leather. The Sp. *avampies*—the short splatterdash, or gaiter, has probably the same origin. Hence to *vamp*, generally—

To patch old with new; to give anything that is old, worn out, or threadbare,—a new face or appearance.

Sutton, of Salisbury. Tradition and an old pamphlet (newly *vamped* with two additions) make him a great clothier.

Fuller. *Worthies*, vol. ii. p. 453. *The Worthies of England. Wiltshire.*

You, Corporal Curry-Comb, what will your fighting
Profit the common-wealth? do you hope to triumph,
Or dare your *vamping* valour, goodman cobbler,
Clap a new soul to th' kingdom?

Beaumont and Fletcher. *Bonduca*, act i. sc. 2.

CHAM. Rise then, and get you gone, and let me hear of you
As of an advocate new *vampt*.

Beaumont and Fletcher. *The Little French Lawyer*, act iv.

They wrote on subjects on which they were well informed, and they treated them fully: they maintained the dignity of history, and thought it beneath them to *vamp* up old traditions, like the writers of their age and country, and to be the trumpeters of a lying antiquity.

Lord Bolingbroke. *Works*, vol. iii. p. 416. *On the Study of History.*

VAN, *n.*, the Fr. *avant*; It. *avante*; D. *van*, *fore*, *before*, and the Ger. *von*, *from*, are the same word. The Fr. etymologists endeavour to trace the Fr. and Ital. prepositions to the Lat. preposition *ante*. Wachter attempts no etymology. Though in D. and Ger. *van*, or *von*, are used merely as prepositions, in English *van* is a noun, and means—

The front, the fore-part. See VAUNT.

And her *vantward* was to broke.

R. Gloucester, p. 362.

The *vaunt wardes* hem mette vorst, as rygte was to done.

Id. p. 437.

On þe brigge were alle þe *vamward* & þe rere,
Under þam þe brigge gan falle down in þe riwere.

R. Brunne, p. 204.

Elde þe hore, was in þe *vauntward*.

Piers Plouhman. *Vision*, p. 397.

He than sette forth his waye; commaundyng his *vawnewarde*
to kepe their iourney towarde Paris.

Fabyan. *Chronycle*, p. 179. ch. 181.

And when our *vauntgard* was passed the towne, our rergard
gaue an assault thereunto, and tooke the same.

Holinshed. *Chronicles*, vol. ii. p. 641. *Edward III.*

EL. LO. Th'art in a good beginning; come, who leads? Sir
Roger, you shall have the *van*: lead the way.

Beaumont and Fletcher. *The Scornful Lady*, act v.

And whilst the front of the French *vanguard* makes
Upon the English, thinking them to rout,
Their horses run upon the armed stakes,
And being wounded, turn themselves about.

Drayton. *The Battle of Agincourt*, fol. 16.

The earl of Ewe, in war that had been bred
These mighty men the mighty *vaward* led.

Id. *Ib.* fol. 15.

But the most part of them [diseases] have their *vant-curieurs* as
it were, their messengers, and trumpets; namely, crudities of
stomach, wearinesse, and heavinesse over all the body.

Holland. *Plutarch*, fol. 506. *Precepts of Health.*

Nor vain (said Merion) are our martial toils!
We too can boast of no ignoble spoils.
But those my ship contains; whence distant far
I fight conspicuous in the *van* of war.

Pope. *Homer. Iliad*, book viii.

Till fiery flashes in the *van*
Proclaim too sure the robber-clan
Have well-secured the only way
Could now avail the promis'd prey.

Byron. *The Giaour*.

VAN, *n.* } Fr. *van*, *vanner*; It. *vanno*; D. and

VAN, *v.* } Ger. *wanne*. A. S. *fanne*, from the Lat. *vannus*, say the etymologists, and the Lat. *vannus* from the Gr. *βαλλ-ειν*, to throw or cast, *ob jactationem et succussionem vanni*, because the corn is *winnowed* by the stroke, the blow or blast of the air; but the origin is probably northern. See WINNOW and WIND. To *van*, (or *fan*), *q. v.*

To act upon with the wind, to beat with the wind: and
a *van*—

Anything that catches or holds the wind, that beats
or strikes the wind; *sc.* a wing, a sail.

VAMP.

VAN.

VAN. As for the winnowing, *vanning*, and laying up either of corne or pulse, they would have done in the old moone, about the last quarter. *Holland, Plinie, book xviii. ch. xxii.*
 VANDEL-LIA. The corne which in the *vanning* lieth lowest is the best.

Bacon. Natural History. Cent. 7. sec. 671.

At last his sail-broad *vannes*
 He spreads for flight, and in the surging smook
 Uplifted spurns the ground.

Milton. Paradise Lost, book ii. ver. 927.

So Satan fell, and strait a fiery globe
 Of angels on full sail of wing flew nigh,
 Who on their plummy *vans* receiv'd him soft
 From his uneasie station, and upbore
 As on a floating couch through the blithe air,
 Then in a flowry valley set him down
 On a green bank.

Id. Paradise Regained, book iv. ver. 578.

Light was the wound; but in the sinew hung
 The point; and his disabled wing unstrung.
 He wheel'd in air, and stretch'd his *vans* in vain;
 His *vans* no longer could his flight sustain;
 For while one gather'd wind, one unsupply'd
 Hung drooping down, nor pois'd his other side.

Dryden. Ovid. Metamorphoses, book xii.

VANCOUVERIA, in *Botany*, a genus dedicated to the celebrated circumnavigator, Vancouver, by De-caisne. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Berberideæ*. Generic character: calyx bibracteolate, of six deciduous, coloured sepals; petals six, opposite the sepals, reflexed, oblong-ovovate, cucullate at apex, adnate each to a spatulate concave appendage inside at the base; stamens six, hypogynous, opposite the petals, with flattened filaments and introrse, apiculated anthers; ovarium oblong, glandular, one-celled; ovula numerous; style cylindrical; stigma obliquely capitate, perforated; fruit follicular.

A genus separated from *Epimedium*, consisting of a single known species. It is a perennial herb, a native of the North-West coast of America. The leaves are radical and triternate, with oblique bluntly three or five-lobed leaflets, covered with glandular hairs; the scapes are purple, and loosely racemose. It is the *Epimedium hexandrum* of Hooker.

VANDA, in *Botany*, a genus so called by R. Brown, from the Hindoo name of *V. Roxburghii*. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ-Vandææ*. Generic character: perianth spreading, the outer segments nearly equal in length to the inner ones; labellum continuous with the base of the column, saccate or obovately calcarate, somewhat three-lobed, the middle lobe fleshy; column short, thick, free, with an obtuse rostellum; anther two-celled; pollen masses two, obliquely two-lobed, with a linear caudicula, and a roundish gland.

Composed of caulescent epiphytes; natives of the tropical parts of Asia. The leaves are distich, coriaceous; the spikes of flowers are opposite the leaves, and the flowers are showy.

VANDELLIA, in *Botany*, a genus dedicated by P. Browne to Dominico Vandelli, once professor of natural history at Lisbon. It belongs to the class *Didynamia*, order *Angiospermia*, and the natural family of *Scrophularineæ*. Generic character: calyx tubular or campanulate, nearly equal, five-toothed or five-parted; corolla with an exerted tube, and a five-cleft bilabiate limb; upper lip the shortest; stamens four, didynamous, the two lower filaments inserted at the base of the lower lip, furnished each with a tooth-formed or filiform appendage at the base; anthers cohering by pairs, two-celled; style crowned by a flattened bilamellate or simple stigma;

capsule globose, oblong, or linear, two-valved, the valves entire and membranous, with flat margins; dissepiment parallel, placentiferous, at length free.

This genus consists of a considerable number of species, principally natives of the East Indies and other parts of Asia. They are either glabrous or hairy herbs; the stems are tetragonal; the leaves are opposite and usually toothed; the flowers are axillary, opposite or in fascicles, the upper ones generally forming racemes; the corollas are generally either blue or white.

VANE, A. S. *fana*; Ger. *fane*; D. *vaene*; *vexillum*. A standard, an ensign, Somner; who adds, hence our *fane* and *vane*, *pro tritone*.

Chaucer writes it *fane*, *q. v.* and see VAN.

Anything placed to catch the *wind*, and move as it blows.

MAR. Lost, lost again; the wild rage of my blood
 Doth, ocean-like, oreflow the shallow shore
 Of my weak virtue: my desire's a *vane*,
 That the last breath from her turns every way.

Beaumont and Fletcher. Moral Rep.

The quadrant was eagerly seized, but on examination it unluckily wanted *vanes*, and therefore in its present state was altogether useless; however, fortune still continuing in a favourable mood, it was not long before a person through curiosity pulling out the drawer of an old table, which had been driven on shore, found therein some *vanes*, which fitted the quadrant very well.

Anson. Voyages, book iii. ch. iii. p. 439.

But the artificial part of a feather is the beard, or, as it is sometimes I believe called, the *vane*.

Paley. Natural Philosophy, ch. xii. p. 188.

VANE, WEATHER, a flat metallic plate, turning on a pivot, usually placed on church-towers or other elevated buildings, to show the direction of the wind.

The vane on churches and maypoles has commonly the form of a cock; whence the appellation *weathercock*. The reason of this practice is not clearly known; but it is supposed to be a relic of some heathen superstition. The cocks Fialara and Vidhofnir are enumerated among the mythologic beings of the Edda; but too briefly and obscurely to convey any definite information. The Wends, after their conversion, are accused by the German annalists of placing *weathercocks* over their crosses, which seems to imply that some superstitious feeling was connected with the symbol. The practice is, at all events, of considerable antiquity. Guibert mentions it as a thing usual in the XIIth Century; and 200 years earlier, the heathen Hungarians, who invaded South Germany, are said by Eckhard to have regarded the cock on the steeple at St. Gallen as the deity of the place. In a manuscript in the British Museum, (Harl. 3222,) apparently of the Xth Century, there is a chapter *De Gallo super ecclesiam posito*, which however gives a very orthodox interpretation of it, as symbolical of a doctor of the church, who ought to resemble the cock in vigilance, in rousing the slothful, &c. Gregory I. also compares a preacher of the word to the cock, as well as to a "speculator in altitudine," but does not say any thing of the practice of placing the symbol over churches.

The vane used on shipboard is a thin slip of bunting, sewed on a wooden stock, which turns on a pivot, called the spindle. It is commonly placed at the mast-head, or some other conspicuous situation. The dog-vane is a light piece of packthread, to which are attached thin slices of cork stuck with feathers, and serves to show the steersman the direction of the wind in the night-time, or in light winds.

VAN-
DELLIA.
—
VANE.

VANE.
—
VANEL-
LUS.

Sliding vanes are also fitted to various mathematical and astronomical instruments, in order to adjust the sights during observations.

VANELLUS, Bechst.; *Lapwing*, Penn. In *Zoology*, a genus of animals belonging to the family *Pressirostres*, order *Grallæ*, class *Aves*.

Generic character. Beak short, slender, straight, compressed; and the tip of both mandibles swelling, the base of the upper one very wide from the lengthening of the nasal grooves; nostrils lateral, pierced in the membrane of the grooves; wings pointed or large, their first quill longest, or the first three regularly graduated, but much shorter than the fourth and fifth, which are longest; in some species the bend of the wing armed with a long sharp spur; legs slender, having three toes in front and one behind, almost rudimental, and not touching the ground, the middle and outer toes connected by a very short membrane.

This genus is distinguished from the *Charadrii*, with which they are allied by the similarity of their beak, by the existence of a very small hind toe, which never reaches the ground, and is sometimes scarcely discernible; its presence, however, led Linnæus to include these birds in his genus *Tringa*, and it connects the genus with the other four-toed Waders. They are migratory, leaving in cold weather and returning sometimes as early as February, travelling in large flocks by the union of many coveys. They inhabit marshy districts, both in the neighbourhood of the sea and fresh waters, feeding on worms, insects and their larvæ, and slugs. Those which are found in this country moult twice a year, and there is not any distinction in the plumage of the sexes; but whether the foreign species are subject to a double moult is unknown. Cuvier divides the genus into two by the names *Squatarola* and *Vanellus*. Temminck, however, thinks its division into two sections sufficient.

a. Bastard Lapwings.—*Squatarolæ*, Cuv.

Have the beak nearly as long as the head, with the nasal pits short, as in the *Ædicnemi*; the wings acuminate, and the first quills very long; hind toe very short and rudimental.
